THE WORLD
WILL ONLY BE AS
GOOD AS THE
ENERGIES
THAT DRIVE IT...
Because good energy is everything
That's why, at Suzlon, we bring good energies to work.
Three decades ago, we pioneered wind energy in India.
With that expertise, we are now advancing the future of all
renewable technologies.
Wind, solar, storage.
We create, manage, and deliver
end-to-end good energy solutions.
Built on digital pathways.
So energies are always good. Always smart.
Today, as the world stands at the cusp of a high-energy future,
we, at Suzlon, are all set to power it.
We are leading and orchestrating the new energy ecosystem,
ensuring the progress of people and organisations is
unstoppable.
We are constantly creating good energies
to make the new world work.
Good energies
that work

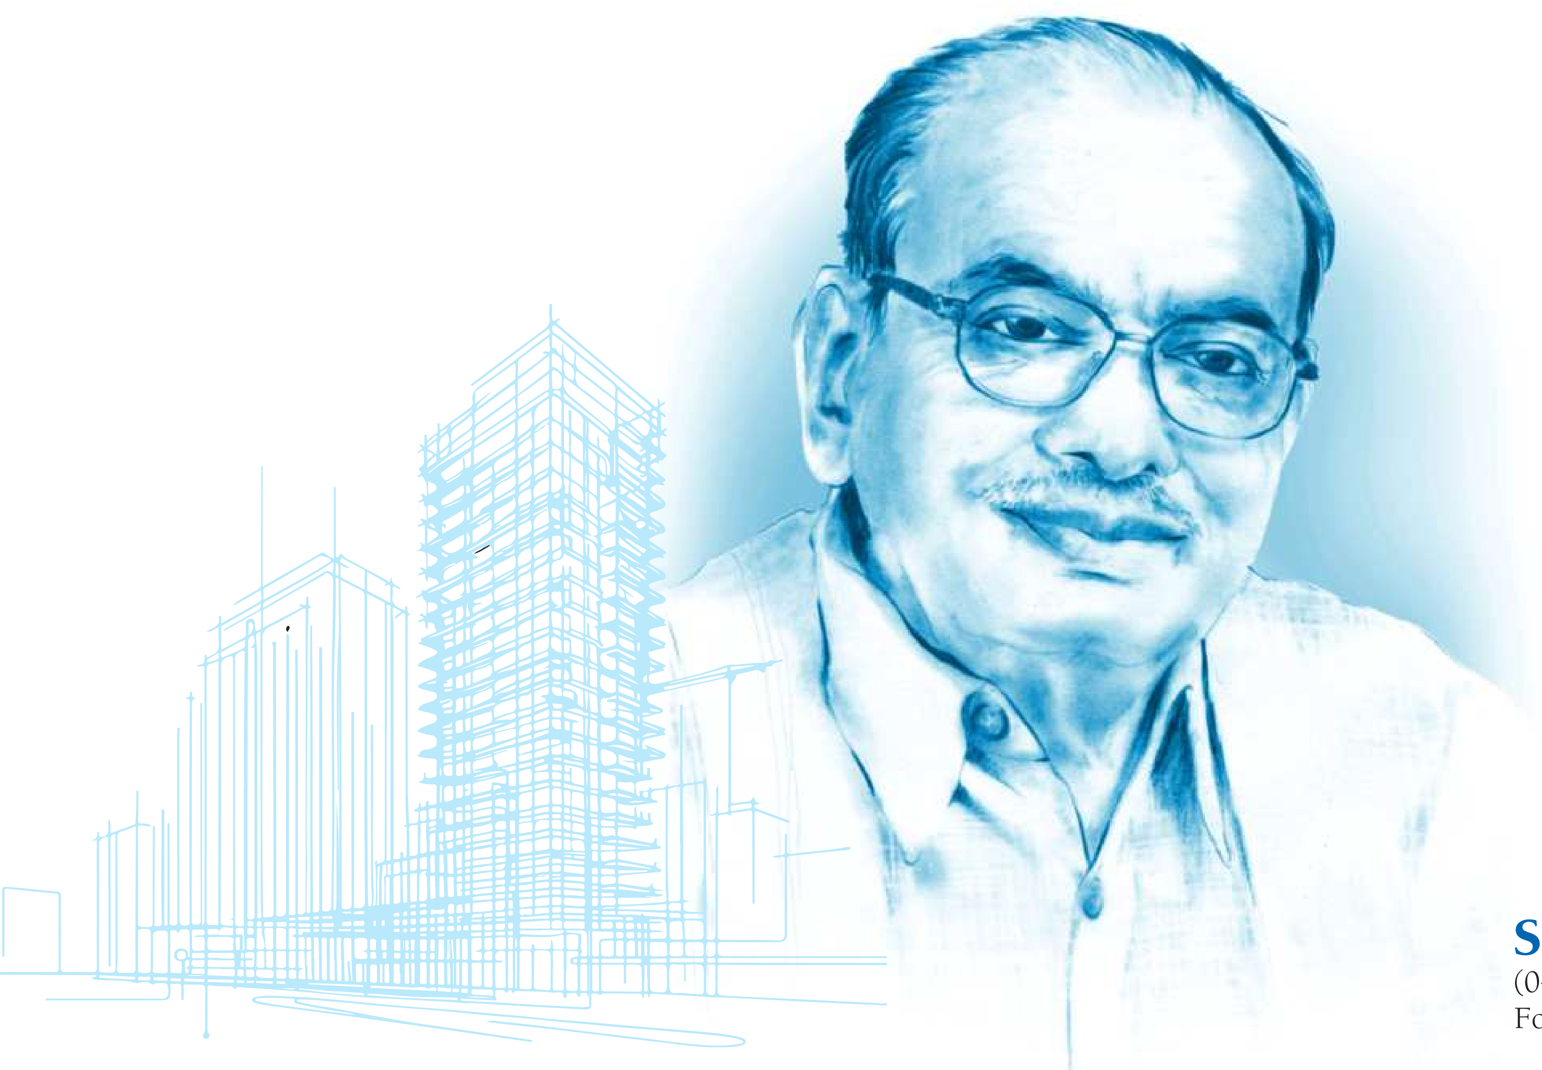
Marching towards 70 YEARS ANNIVERSARY URC Building Values

Honoring the Visionary Who Built Values into Every Foundation



> *For any Society or Organization to become strong and stable, the bottom of the pyramid has to be strong.*
>
> *The dignity of individuals at every level needs to be respected.*

Shri U. R. Chinnusamy
(04.06.1931 - 24.02.2009)
Founder Chairman, URC Group

A Journey of Grit and Vision

Born on June 4, 1931, in the remote village of Unjappalayam, Shri U.R. Chinnusamy rose from humble beginnings to become a titan of the Indian construction industry. With only a primary education but an unmatched work ethic, he entered the industry in 1948 and founded his partnership firm, URC & Co, at the age of just 25.

An ardent Gandhian, he grew the organization from a small-scale contractor into URC Construction (P) Ltd, a name now synonymous with excellence across India's infrastructure landscape.

Engineering Excellence, Rooted in Integrity

Shri URC's life was a testament to the belief that profit and purpose can coexist. Under his leadership, the company achieved steady financial growth through quality consciousness, timely completion of projects and diversified expertise, spanning from Metros and Airports to Power, Railways, and Industrial complexes.

Beyond Infrastructure: A Philanthropic Legacy

Long before corporate responsibility was mandated, Shri URC was a pioneer of social service. His commitment to the "bottom of the pyramid" lives on through the URC Educational and Charitable Trust (est. 1995), which provides quality education to underprivileged children through the URC Palaniammal Matriculation Higher Secondary School.

Our Pledge

Today, we honor the man whose integrity and pioneering spirit remain our guiding legacy. From the precision of Metros and Airports to the scale of Power, Railways, and Data Centers, his values of fairness and quality continue to direct every project we deliver. On this occasion, we pledge to uphold his ideals and continue the journey he began over 70 years ago.

A MODERN TRIBUTE TO OUR ROOTS

A 3D Printed Bus Shelter dedicated to the villagers of **Kudumiampalayam**, reflecting our Founder's vision of community spirit and innovation.

Centre clears over ₹9,500 cr vehicle replacement scheme for Delhi-NCR

CLEAN DRIVE. Programme targets older trucks and buses to reduce emissions and accelerate cleaner mobility

Rohit Vaid
New Delhi

To reduce air pollution and accelerate the adoption of cleaner transport technologies in the Delhi-NCR region, the Centre has approved a ₹9,585-crore vehicle replacement scheme.

The Union Cabinet cleared the two-year programme aimed at incentivising owners of older trucks and buses to replace them with Bharat Stage-VI (BS-VI) compliant vehicles or electric vehicles (EVs).

The scheme has a total financial outlay of ₹9,585 crore, including ₹5,041 crore from the Central government and an estimated ₹1,601 crore in tax concessions from participating States, said an official communique.

The programme is expected to benefit around 2.07 lakh vehicle owners across the region. The scheme will cover around 1.91 lakh trucks and 16,329 buses currently operating under BS-IV or earlier emission standards.

REGIONAL IMPACT. The programme is expected to benefit around 2.07 lakh vehicle owners across the region. It will cover around 1.91 lakh trucks and 16,329 buses

The approval comes amid concerns over air quality in the Delhi-NCR region, particularly during winter.

KEY POLLUTANT

According to a study by the Automotive Research Association of India and The Energy and Resources Institute, the transport sector contributes 14 per cent of PM2.5 emissions, 40 per cent of carbon monoxide emissions and 63 per cent of nitrogen oxide emissions in the region. Of this, trucks and buses account for 36 per cent of PM2.5 emissions despite representing only 3 per cent of the total vehicle fleet.

According to the communique, a single pre-BS heavy-duty vehicle emits pollution equivalent to 14 BS-VI-compliant vehicles, while a BS-IV vehicle emits 2.7 times more emissions than a BS-VI counterpart.

Consequently, the replacement of older vehicles is expected to reduce vehicular pollution across the region.

SCHEME BENEFITS

Under the programme, owners of BS-III and older vehicles will be required to scrap their vehicles at registered scrapping facilities, while BS-IV vehicles may either be scrapped or sold outside the NCR in non-national clean air programme cities and towns.

Vehicle owners will then be required to purchase and register BS-VI-compliant or electric vehicles within the NCR region.

In Delhi, light goods vehicles purchased under the scheme must be electric, while buses will be permitted only under BS-VI compressed natural gas (CNG) or electric vehicle categories.

The Centre will provide a 5 per cent interest subvention on vehicle loans for five years, monthly fuel vouchers of up to ₹4,800 depending on vehicle category and lump-sum incentives for electric vehicle purchases or certificate of deposit trading.

Besides, the participating States will waive registration fees and provide motor vehicle tax concessions of up to 100 per cent for new vehicles and 50 per cent for used vehicles for a period of 10 years. Furthermore, the State governments will waive pending liabilities on old vehicles participating in the scheme.

Additionally, participating automobile manufacturers will offer discounts of 8 per cent on ex-showroom vehicle prices. The Central government benefits will continue for five years from the registration date of the replacement vehicle, extending support beyond the scheme's two-year enrolment period.

IMPLEMENTATION

The implementation will be carried out through an integrated digital platform that will facilitate eligibility verification, interest subvention claims, fuel voucher credits and monitoring of pollution reduction outcomes.

Benefits provided by the Centre will continue for five years from the registration date of the replacement vehicle. It will be monitored by an empowered committee chaired by the Cabinet Secretary, while District Collectors and District Magistrates will oversee implementation at the local level.

USTR proposes 12.5 per cent penalty tariff on Indian goods in Section 301 forced labour findings

Amiti Sen
New Delhi

In what could add pressure on New Delhi to conclude a bilateral trade deal with the US early and "lock-in" tariff rates at about 18 per cent, the US Trade Representative (USTR) office, in its Section 301 findings on forced labour shared on Tuesday, observed that India has failed to effectively enforce forced labour import prohibition and proposed new tariffs of 12.5 per cent on most Indian goods.

TARIFF TIGHTROPE. Pressure has intensified on New Delhi to conclude a bilateral trade deal and 'lock in' the tariffs

The proposed penalties on Bangladesh, Pakistan, Indonesia, Cambodia and Malaysia, are lower at 10 per cent. The report for the second Section 301 investigation involving India, focussing on excess capacities, is also expected soon, which may result in additional penalties.

DEAL RUSH

India, in its response, said it remains engaged with the US on the matter as part of Section 301 proceedings. "India is also parallelly engaged with the US for finalisation of a framework agreement as was announced on February 2, 2026, and in accordance with the joint statement released on February 7 2026," according to a Commerce Department statement.

A US trade team is currently in India negotiating the first tranche of the India-US bilateral trade agreement (BTA) and is hoping to convince India to accept the broad components announced in the framework deal in February this year. As part of the framework, the US had proposed to impose additional tariffs of 18 per cent on India, which it is now suggesting would be a locked-in rate to insulate New Delhi from higher tariffs under Section 301, sources said.

"Whatever the US tariffs that India agrees on, whether 18 per cent or lower, it wants an assurance that these would be lower than those on competing developing countries such as Vietnam, Bangladesh, Indonesia and Malaysia. Otherwise, it will be difficult to justify the deal politically and economically," a source tracking the matter said.

It is important for India to get such assurance of a competitive advantage to balance Washington's demand that New Delhi should eliminate or reduce import tariffs on all industrial products and a large number of agricultural items, as well as address non-tariff barriers.

"For economies that impose a forced labour import prohibition; have taken on commitments related to forced labour import prohibitions through an agreement on reciprocal trade; or have imposed a partial regime with the effect of preventing the importation of certain forced labour goods, the trade representative proposes 10 per cent as the rate of additional duties. For all other economies, the trade representative proposes 12.5 per cent as the rate of additional duties," the USTR Section 301 findings report noted, explaining the proposed duties.

TARIFF BREAKDOWN

The USTR has also proposed a textile mechanism that would allow for a certain volume of apparel and textile imports from certain economies to enter the US at a reduced Section 301 tariff rate. Of the 60 countries investigated, those that received the lowest 10 per cent tariffs include the EU, the UK, Mexico, Canada, El Salvador, Argentina, Ecuador, Guatemala, and Taiwan.

The rest of the countries being investigated, including India and China, have been subject to a proposed 12.5 per cent penalty.

The USTR has invited written comments from interested persons with respect to the proposed actions to be taken in the investigations by July 6 and requests for personal appearances by June 22. The hearings will be held on July 7. Comments have been sought on the specific products to be subject to increased duties, including whether products should be retained or removed from the scope of the action, or whether products currently listed in Annex A (list of essential items excluded from the penal tariffs) should be added to the scope of the action.

EXPIRY LOOMS

US global tariffs of 10 per cent imposed on all countries for 90 days by the Trump regime after the US Supreme Court invalidated the reciprocal tariffs (at 25 per cent on India) will lapse on July 24, 2026.

Washington wants Section 301 determinations to occur before that, so the new tariffs could replace the global 10 per cent levies.

US-India trade deal 99% done, will be win-win: Gor

Our Bureau
Mumbai

Washington is hopeful that a trade deal with India will be concluded in the next several weeks, US Ambassador Sergio Gor, said here on Wednesday.

"We are very optimistic. We are 99 per cent there and are working on the last one per cent. To put it in perspective, we have been working on this deal for one and a half years. European Union's deal with India took almost 19 years to get done," Gor said on the sidelines of the Citi India conference.

"You have two like-minded partners — the US and India — that want the deal to get done. It will be a win-win situation for both countries, and we are excited to get it across the finish line," he said.

TEAMS TO MEET GOYAL

A team of US government officials led by its Deputy Trade Negotiator is in India and is holding talks with Indian government officials. On Thursday, they will meet Commerce Minister Piyush Goyal.

Gor said President Donald Trump feels strongly about his relationship with India and his friendship with Prime Minister Narendra Modi. "This is one of the reasons why the trade deal has advanced so fast. It is because the President holds India and its leadership in such high regard," he said.

Gor, a close associate of President Trump, was named the US Ambassador to India last year.

He said that under the Trump administration, the US is working very closely with India in various areas, ranging from AI, supply chains, and pharmaceuticals, among others. He said the US and India are pushing their partnership to new levels, citing the example of opportunities in civil nuclear co-operation.

US Ambassador to India Sergio Gor at the Citi India Conference 2026 in Mumbai on Wednesday ANI

"We are looking forward to decades of future cooperation between our civil nuclear sectors. Such long-term investments will require support from the financial services sector," Gor said in his address at the conference.

'RECKLESS' IRAN

Asked if the US could have handled the Iranian crisis maturely, as it is causing hardships globally, Gor said the regime in Tehran is reckless. "Iran attacked each of its neighbours. We cannot let Iran have a nuclear weapon, and that is a red line for us," he said.

Gor also blamed Iran for blocking the Strait of Hormuz. "Ships that have nothing to do with the conflict should be allowed to move. Several Indians have been unfortunately killed," he added.

By 2030, India will require ₹200 lakh crore in financing, says SBI Chairman CS Setty

Our Bureau
Mumbai

India will require unprecedented scale of financing over the coming decades, with internal assessments pegging incremental investment requirement of nearly ₹200 lakh crore by 2030 and ₹450 lakh crore by 2047, according to SBI Chairman Challa Sreenivasulu Setty.

These investments will be required across infrastructure, manufacturing, energy transition, urban development, MSMEs and innovation, Setty said at the Citi Investor Conference.

GROWTH BLUEPRINT

"For banks to support India's aspirations, they must evolve. The future banking model must be built on key pillars, ensuring access to banking services across every segment of society and economy... integrating environmental, social and governance considerations into financing decisions and operations, maintaining the highest standards of governance, consumer protection and risk management," he said.

> Global economic order is being redesigned in real time, with supply chains shifting and manufacturing being reconfigured
>
> **CHALLA SREENIVASULU SETTY**
> Chairman, SBI

Setty said the global economic order is being redesigned in real time, with supply chains shifting, and manufacturing being reconfigured.

"Technology is redefining productivity. New growth centres are emerging. India enters this scenario from a position of strength," Setty said. Green finance will become another defining opportunity.

GROWTH STORY

While the journey to Viksit Bharat will be challenging, the SBI chief emphasised that "it is also one of the most compelling growth stories of our time. India has already demonstrated how (financial) inclusion can be achieved at scale".

"The banking sector will be at the heart of the transformation not merely as providers of credit but as mobilisers of savings, enablers of entrepreneurship, allocators of capital and partners in national development," Setty said.

IT sector headwinds leave a mixed mark on CEO remuneration in FY26

Variable payouts and stock-linked rewards shape executive remuneration trends

Sanjana B
Bengaluru

A challenging business environment marked by weak client spending, geopolitical uncertainty and lower variable payouts had a mixed impact on CEO compensation at India's leading IT companies in FY26, even as employee salary growth remained muted across the sector.

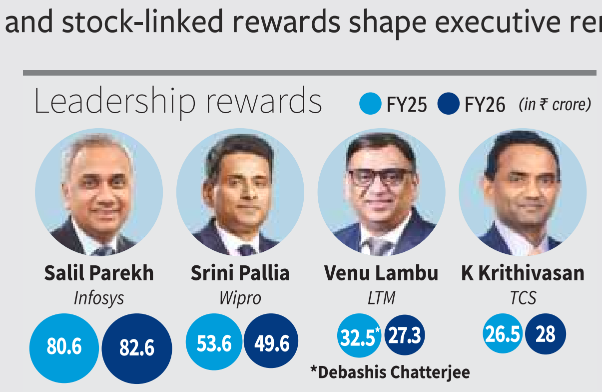
CEO compensation trends were mixed across India's top IT services firms. As per the company's annual reports, the remuneration of Infosys CEO and MD Salil Parekh rose 2.5 per cent to ₹82.6 crore from ₹80.6 crore in FY25, while TCS CEO and MD K Krithivasan's pay increased 6.3 per cent to ₹28 crore. In contrast, Wipro CEO and MD Srini Pallia's remuneration declined 7.5 per cent to ₹49.6 crore from ₹53.6 crore a year earlier.

LTM CEO and MD Venu Lambu's remuneration stood at ₹27.26 crore in FY26 compared with ₹32.54 crore paid to former CEO and MD Debashis Chatterjee in FY25, although the figures are not directly comparable due to the leadership transition during the year.

WAGE DIVIDE

The gap between CEO and employee pay remained significant across the IT sector in FY26. Parekh's remuneration was 742 times the company's median employee remuneration, the highest among the three firms.

Krithivasan earned 332.8 times the median employee pay, while Lambu's remuneration was 158.4 times the median salary of employees. The figures highlight the wide disparity between executive and employee compensation, even as salary hikes for the broader workforce remained moderate during the year. TCS, in its annual report, said median employee remuneration increased 5.1 per cent in FY26. Junior and mid-level employees in India received annual salary hikes of 4.5-7 per cent, with top performers getting double-digit increments, while total compensation growth, including promotions and other revisions, ranged between 5 per cent and 8 per cent. Employees in overseas markets received wage increases of 1.5-6 per cent, in line with local market conditions.



In LTM, the median remuneration of the company's employees in FY26 was ₹17 lakh, a decrease of 1.20 per cent. "During the year, the IT industry operated in an environment marked by heightened geopolitical developments, macroeconomic volatility, and a rapid evolution of technology, including increased adoption of artificial intelligence and automation. Keeping this in mind, LTM focussed on prudently balancing revenue growth, cost management, and continued investment in critical capabilities, while maintaining workforce stability," the company noted in its annual report.

THREE COMPONENTS

Executive compensation in the IT industry typically comprises three components: fixed pay, variable pay, and stock-linked compensation. While companies are not reducing fixed salaries, the variable component has come under pressure because many firms are falling short of their performance targets.

This has a greater impact at the CEO and senior leadership levels, where variable pay forms a larger share of total compensation, said Pareekh Jain, Founder and CEO, EIIR Trend.

Services PMI surges to 59.8 in May, highest since Nov, on robust demand

Our Bureau
New Delhi

With strong demand, private sector businesses did well in May as the Purchasing Managers' Index (PMI) for Services rose to 59.8 against 58.8 in April, the strongest rate of expansion since last November, S&P Global reported on Wednesday.

"India's Services PMI signalled an expansion in business activity in May, supported by a continued rise in new business. External demand for India's services also grew at a faster pace, rebounding after a sharp decline in April. Input cost inflation eased, which in turn reduced pressure on selling prices," said Pranjul Bhandari, Chief India Economist at HSBC.

PMI is derived from the responses of 400 service sector companies. The sectors covered include consumer (excluding retail), transport, information, communication, finance, insurance, real estate and business services.

S&P Global attributed strengthening demand for services such as freight, digital solutions, e-commerce, entertainment and IT for the higher PMI. These also have a positive impact on payroll numbers.

"The overall rate of job creation was solid and the second-fastest in just under a year [behind April], but fewer than 7 per cent of panellists signalled greater hiring and the vast majority indicated no change in headcounts," it said.

In cybersecurity boost, India gets access to Anthropic Claude Mythos

AI POWER. The LLM is a specialised model that can scan code and identify security issues

Sindhu Hariharan
Chennai

In a boost for the country's cybersecurity systems, India has obtained access to Claude Mythos Preview, Anthropic's advanced AI model to detect and fix security vulnerabilities, as the AI giant opens up Mythos to more organisations across the world.

A government official confirmed to *businessline* that public and private organisations in India, mainly across the spheres of cybersecurity and the financial services domain, now have access to Claude Mythos.

Anthropic announced the wider rollout of Project Glasswing, the underlying programme to Claude, in a note, but it did not name the countries. "We're not disclosing the specific organisations or the list of countries publicly, but we can confirm the expansion includes organisations from India," an Anthropic spokesperson told *businessline*.

ACCESS CONTROLLED

Overall, the access is said to be tightly controlled for Indian organisations — both public and private — that defend critical infrastructure or those that build or operate systems across core sectors such as power, water, healthcare, communications and financial services, as well as national security organisations.

BOOSTING CONTROLS

Anthropic's Claude Mythos is not just a Large Language Model but a specialised model that can scan code and help identify security vulnerabilities in it. With many of India's critical public infrastructure platforms being legacy in nature, this is expected to help strengthen controls.

In early April, the AI giant had announced that around 50 partners, including launch partners Amazon Web Services, Apple, Cisco, CrowdStrike, Google, NVIDIA and others, had access to Claude Mythos Preview. Since then, it has been deploying the model to scan their codebases for vulnerabilities, and these partners have so far found more than 10,000 high or critical-severity security flaws.

"...We're extending the partnership to approximately 150 new organisations. Each one will need to meet our security requirements before they gain access. The organisations in this new group are based in more than 15 countries, and most provide critical infrastructure to many more," Anthropic said in its note. "For most partners, we estimate that a major attack could affect more than 100 million people, with important ramifications for both global and national security," it added.

This comes at a time when security vulnerabilities around India's public technology infrastructure, such as the platforms of the Central Board of Secondary Education (CBSE), have been flagged by ethical hackers and cybersecurity enthusiasts.

RESILIENCE TO LEVERAGE

When Mythos first launched in April, various arms of the government, including the Finance Ministry, had flagged risks posed by the model and urged financial institutions to strengthen defences. The RBI has also been analysing Claude Mythos in sync with global regulators.

The move also comes a day after Anthropic filed for an initial public offering that could value the company at more than $1 trillion.

FUTURE FIRST

- The move is part of Anthropic plan to expand Project Glasswing
- A government official confirmed that India has got Mythos access
- An Anthropic spokesperson said access has been prioritised to organisations working on critical public infrastructure
- Globally, around 150 organisations are expected to gain access to the model now

Cabinet approves ₹10,000 cr ATF Price Stabilisation Fund

Rohit Vaid
New Delhi

In a relief to the airline sector which is grappling with elevated fuel costs as the West Asia crisis drags on, the Centre on Wednesday approved a one-time budgetary support of up to ₹10,000 crore to establish a Price Stabilisation Fund (PSF) for aviation turbine fuel (ATF).

The Union Cabinet on Wednesday approved the creation of the fund for State-owned oil marketing companies (OMCs) in the form of interest-free advance to stabilise the ATF price for scheduled carriers operating both domestic and international services.

HOW IT WILL WORK

Under the approved mechanism, OMCs will be compensated whenever the prevailing import-parity ATF price exceeds a benchmark price determined under the scheme. The arrangement is intended to provide predictability in fuel costs and to ensure that the airlines are not exposed to sudden spikes in global fuel prices.

Participating airlines will enter into agreements with OMCs, under which ATF procurement will be routed exclusively through the State-owned fuel retailers for up to three years, subject to annual review.

PRICE SPIRAL. The fund, in the form of an interest-free advance to oil marketing companies, will help them stabilise ATF prices to ensure airlines' operations are not disrupted KRISHNAN VV

RECOVERY MECHANISM

The Cabinet approved a recovery and true-up mechanism under which the benefit extended to the OMCs will be recovered and returned to the Consolidated Fund of India when international ATF prices moderate.

According to an official communique, the arrangement will be operational until the entire support amount is recovered and settled.

A monitoring committee, comprising representatives from the Ministries of Civil Aviation, and Petroleum and Natural Gas, as also the Department of Expenditure will oversee the implementation, claim verification, reconciliation and settlement.

All claims and recoveries under the scheme will be subject to audit, the communique said. The arrangement may be extended beyond the initial period if the corpus remains unsettled, it said.

The approval comes at a time when airlines continue to face mounting fuel-related cost pressures. International ATF prices have risen nearly 2.5 times from ₹60.50 per litre in March 2026 to ₹142 per litre in May with the escalation of the West Asia crisis. ATF accounts for nearly 40 per cent of airlines' operating costs and can rise to as much as 60 per cent during periods of extreme fuel volatility.

As of now, domestic ATF prices have remained subject to government intervention. However, airlines continue to procure fuel for international operations at import-parity prices, exposing them to elevated costs.

The existing ATF price cap mechanism for domestic operations is a temporary arrangement and has resulted in losses for OMCs.

Apple agrees to submit India financials to CCI

New Delhi: Apple has agreed to submit the financials of its India business to the Competition Commission of India (CCI), the country's anti-trust body, as part of an investigation that found the US firm abused its market position, taking the long-delayed case a step closer to a potential penalty decision, an agency order shows. A confidential CCI order, reviewed by Reuters, showed Apple last month agreed to supply its India financials. REUTERS

JSW Steel bets $20 billion on infra boom over seven years

GROWING TRACTION. Sees domestic demand crossing 80 per cent to over 300 mt

Our Bureau
Mumbai

JSW Steel plans to invest nearly $20 billion over the next seven years, as the company bets India has entered a prolonged infrastructure and manufacturing expansion cycle that could drive domestic steel demand up by more than 80 per cent to over 300 million tonnes (mt) from about 165 mt currently.

Speaking at the Citi India Conference 2026, Jayant Acharya, Managing Director, JSW Steel, said the company's expansion plans, translating to roughly $3 billion in annual investments, are based on the view that India has entered a "nation-building" phase driven by infrastructure creation, urbanisation, manufacturing growth and rising domestic consumption.

"One of the strongest indicators supporting that conviction," Acharya said, "is India's rising per-capita steel consumption, which has now crossed 115 kg."

> In the last five years, steel growth versus GDP growth has moved to around 1.5 times, compared with about one time or lower earlier
>
> **JAYANT ACHARYA**
> Managing Director, JSW Steel

Historically, countries such as China, Japan and South Korea have seen rapid acceleration in steel demand once per-capita consumption crossed the 100-kg threshold. "In the last five years, steel growth versus GDP growth has moved to around 1.5 times, compared with about one time or lower earlier," Acharya said, pointing to the increasing intensity of infrastructure and industrial activity in the economy.

That shift is significant because steel demand has traditionally tracked GDP growth more closely and typically rises sharply during heavy infrastructure and manufacturing build-out phases.

INFRA EXPANSION

Acharya said India's infrastructure expansion — spanning roads, railways, urban construction and industrial projects — would remain one of the biggest long-term drivers of steel demand.

Public-sector capital expenditure has already created the initial momentum, he said, while healthier corporate and banking sector balance sheets are now helping revive private-sector investment.

"The ability to invest is better and as capacity utilisation reaches higher levels, people are getting the confidence to reinvest," Acharya said.

He also pointed to India's rising middle class, urbanisation and growing infrastructure consumption as long-term structural drivers that are still at a relatively early stage.

JSW's expansion strategy is not limited to adding raw steel capacity; Acharya said India would also need domestic capabilities in specialised categories such as electrical steel, packaging steel and advanced high-strength steel used in automotive manufacturing and energy-transition sectors.

FINANCIAL DISCIPLINE

Acharya said the company remained focused on maintaining financial resilience amid geopolitical uncertainty and supply-chain disruptions. JSW Steel maintains liquidity buffers equivalent to around three-four months through cash reserves and undrawn credit lines, while also pursuing partnerships and joint ventures with global steel players for future expansion projects.

The company has also significantly deleveraged its balance sheet in recent years to prepare for the next investment cycle.

While Acharya acknowledged that global risks were becoming "more volatile, more uncertain and more non-linear," he said companies needed to remain focused on long-term structural opportunities rather than short-term disruptions.

Health insurance coverage crosses 60% of households, says NFHS

Yashaswani Chauhan
New Delhi

Health insurance coverage in India has expanded sharply over the past two decades, with the share of households having at least one member covered under a health insurance or financing scheme rising from just 4.8 per cent in 2005-06 to 60.2 per cent in 2023-24, according to the National Family Health Survey.

DATA FOCUS.

The pace of expansion accelerated after 2015-16, when coverage stood at 28.7 per cent, rising to 41 per cent in 2019-21. "The rise in coverage is largely the result of sustained government intervention through schemes such as Rashtriya Swasthya Bima Yojana (RSBY) and later Ayushman Bharat PM-JAY, along with growing awareness of healthcare costs and improved enrolment systems," said Nochiketa Dixit, Managing Director, Corporate Solutions & Retail, EDME Insurance Broker.

The rise in coverage has, however, not been uniform across States. Haryana recorded the largest increase among the States analysed, with household coverage rising from 25.7 per cent in 2019-21 to 68.3 per cent in 2023-24, a jump of nearly 166 per cent.

West Bengal also saw coverage more than double, increasing from 33.7 per cent to 88.2 per cent during the same period.

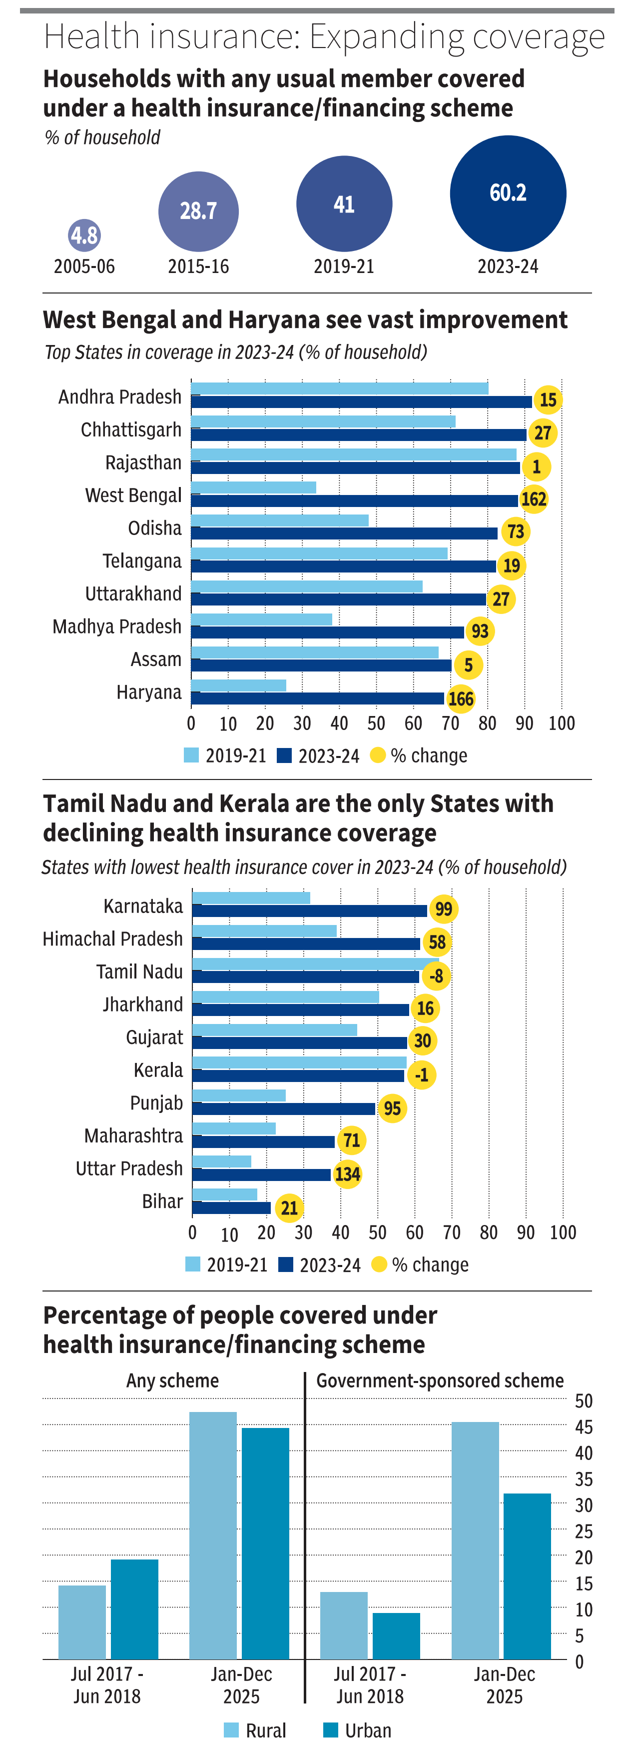
In contrast, Tamil Nadu and Kerala were the only States to record declines in coverage, with insurance penetration falling 8.1 per cent and 1.2 per cent, respectively.

According to Ramkumar Subramanian, Partner, Grant Thornton Bharat, these differences partly reflect varying timelines in adoption and penetration.

"That's because of late adoption by States such as Haryana and West Bengal compared to Tamil Nadu and Kerala. Tamil Nadu and Kerala have better public health-care systems compared to the other two States, making West Bengal and Haryana reliant on health insurance coverage," he said.

RURAL COVERAGE

Government-backed schemes have played a significant role in expanding coverage, particularly in rural areas. The share of rural residents covered under any health insurance or financing scheme increased from 14.1 per cent in 2017-18 to 47.4 per cent in 2025. Coverage under the government-sponsored schemes alone rose from 12.9 per cent to 45.5 per cent over the same period.



Source: NFHS, NSS

Arun Ramamurthy, Co-Founder, Staywell.health, noted that the expansion of government-sponsored coverage in rural areas represents an important step towards reducing financial barriers to healthcare, especially for low-income households.

As of August 2024, more than 34.7 crore Ayushman cards had been issued under AB-PMJAY. The scheme has authorised 7.37 crore hospital admissions worth over ₹1 lakh crore and covers 1,949 healthcare procedures through more than 29,000 empanelled hospitals.

However, experts noted that coverage remains weak among middle-income households, many of whom are ineligible for government schemes but cannot afford comprehensive private insurance, leaving them reliant on savings or group insurance for coverage.

Marico focusing on building FMCG's largest D2C business as sector faces digital disruption

Our Bureau
Mumbai

For decades, the fast-moving consumer goods (FMCG) industry was built on two powerful advantages — distribution reach and advertising muscle. Companies that controlled retail shelves and television airtime controlled the market. Harsh Mariwala, Chairman, Marico, now believes that this model is now rapidly breaking down.

Speaking at the Citi India Conference 2026, Mariwala said the FMCG major is reshaping itself to build what he described as the largest D2C business in its categories, as digital-native brands, quick commerce and AI fundamentally rewrite the rules of India's consumer market.

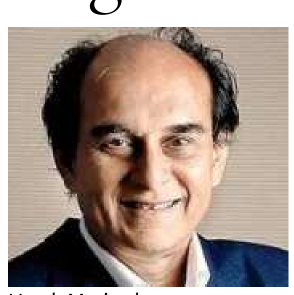
"You cannot build a moat on investment and distribution any more," Mariwala said. "The moat now has to be built on better digital marketing and sharper consumer insight."

His comments reflect a growing reality confronting India's legacy FMCG giants — the traditional barriers that once protected large consumer companies are weakening as smaller digital-first brands scale nationally through social media, quick-commerce platforms and outsourced logistics networks at a fraction of historical costs.

"Until recently, FMCG was considered the most defensive sector, you needed huge distribution infrastructure and massive advertising spend. We thought we were sitting very high," Mariwala said.

INSURGENT BRANDS

"I call them Insurgent Brands, they are the challengers, and this is the new reality," he said, referring to the growing number of digital-first brands taking share across beauty, nutrition and personal-care categories.



Harsh Mariwala, Chairman, Marico

Mariwala said differentiation and identifying categories had become even more critical in the digital era, where consumer switching costs are lower and new brands emerge rapidly. He cited Parachute's small-sachet packs as an example of how strong brands can preserve consumer loyalty even during commodity inflation by limiting absolute price increases for consumers.

MARICO'S RESPONSE

The company created a separate D2C structure with dedicated teams and operating systems designed for faster product launches and rapid experimentation. "Digital business is very different from traditional business in terms of agility, innovation and speed of response. It has to be managed differently," he said. "The aspiration is to be the largest D2C company in its categories."

The shift reflects a broader transformation underway across India's FMCG sector, where companies built around long product cycles and distributor-led retail networks are redesigning themselves for quick commerce and digital consumption.

REDRAWING PLAYBOOK

Mariwala argued that one of the biggest barriers to innovation inside large companies was fear of failure, making experimentation critical in modern FMCG businesses. He added that innovation increasingly depends on identifying "latent" consumer needs before they become mainstream trends.

Mariwala said technology and artificial intelligence are rapidly changing FMCG operations. Marico has begun using algorithm-driven sales routing systems to improve field-force productivity and AI-led advertising tools to create localised campaigns at significantly lower costs.

"We can do it for a few lakhs rather than crores," he said, referring to AI-generated advertising content for smaller markets. According to him, the bigger challenge for incumbents was organisational adaptability rather than technology adoption itself. "The pace of change is unlike anything I have seen in four decades," he said. "The roadmap has to change every few months, because the world changes every few months."

He also said aspirational consumer trends in India were increasingly emerging from Asian markets such as Korea rather than only from western markets. "Consumer trends are no longer coming only from the West," he said. "If you are watching Seoul, you are late."

Nestlé India maintains ₹2,000 cr capex

Our Bureau
Mumbai

Nestlé India Chairman and Managing Director Manish Tiwary said the top end of India's consumer market continues to remain resilient despite pressure on urban middle-class spending, as the company maintains annual capital expenditure of more than ₹2,000 crore to expand domestic manufacturing.

Speaking at the Citi India Conference 2026, Tiwary described India as an increasingly "three-speed" consumption market, where affluent consumers continue to spend aggressively, rural demand remains structurally healthy and middle-income urban households are turning more cautious amid inflationary pressures.

"In my opinion, the consumer growth story is as intact and as solid as it has ever been," Tiwary said. "The challenge is more in the urban middle."

Tiwary said the top 30-40 million consumers in India continue to show strong spending appetite across sectors such as automobiles, housing and premium consumption, while rural India has continued to outpace urban markets over the past three years.

The pressure point, according to him, remains middle-income urban consumers whose real income

growth has lagged inflation, prompting a "wait-and-watch" approach towards discretionary purchases.

"Real earnings growth has not kept pace. That's where we see a little wait-and-watch, where consumers could push off discretionary expenditure," he said.

DEEPENS INVESTMENT

Despite the uneven demand environment, Nestlé India is continuing to deepen investments in local manufacturing and supply chains, including setting up its tenth factory in Odisha, signalling that the company sees the current slowdown as cyclical rather than structural.

Tiwary also acknowledged that a growing share of India's consumption growth is increasingly being captured by unlisted, regional and digital-native brands, a trend that is reshaping competition in the FMCG sector and fragmenting categories once dominated by large companies.

"The share that large companies have conceded is real," he said, referring to the sharp rise in smaller and insurgent brands across categories such as personal care.

He cited the sunscreen market as an example of how dramatically consumer markets have fragmented over the past decade. "Ten years ago, there were probably five brands of sunscreen lotion in this country; today, there are 200," he said.

Tiwary said the shift also explains why India's broader GDP growth has increasingly diverged from the earnings growth reported by many listed consumer companies.

"Much of that GDP growth is being captured by unlisted, regional and insurgent brands," he said.

CONSUMER VOICE, AI

Drawing on his decade-long experience at Amazon before returning to FMCG, Tiwary said Nestlé sees artificial intelligence primarily as a productivity and workflow optimisation tool rather than a replacement for jobs.

"My aspiration is to move from 40-50 per cent busy work and 50 per cent impact work to 90 per cent impact work," he said.

On concerns around jobs, Tiwary said expanding manufacturing capacity would itself generate employment across construction and factory operations.

Metabolic health crisis rapidly emerging beneath India's demographic advantage

Our Bureau
Mumbai

The young population may be powering the country's economic growth story, but a worsening metabolic health crisis is rapidly emerging beneath that demographic advantage, a reality Apollo Hospitals says is driving its ₹8,000-crore healthcare expansion strategy.

"Twenty two per cent of young India is metabolically unwell," Apollo Hospitals' Managing Director Suneeta Reddy said. "There is a short window to reverse this," Reddy said, speaking at the Citi India Conference 2026.

"The hospital chain's preventive healthcare programmes were increasingly detecting pre-diabetes, cardiac risks and advanced liver disease among younger Indians even as rising insurance penetration and healthcare access expand long-term demand for organised medical infrastructure," she said.

Apollo's findings are based on nearly 150 million preventive healthcare checks conducted by the group, which Reddy said increasingly reveal serious lifestyle-linked illnesses among younger age-groups.

Reddy said India's healthcare demand story was increasingly being shaped by a younger population coming

Suneeta Reddy, MD, Apollo Hospitals

under growing metabolic and lifestyle-health pressure, alongside rising insurance penetration and expanding access to organised healthcare.

HEALTHCARE GAP

Reddy said India currently has around 1.5 hospital beds per 1,000 people against the World Health Organisation benchmark of three beds. "Close to 1.9 million hospital beds, 67 per cent are in the private sector, but only 12 per cent of that capacity is organised and linked to measured clinical outcomes and standardised protocols, she said. All corporate hospitals together added only around 50,000 beds last year. That is nowhere near enough to serve India's middle-class," Reddy said.

The infrastructure gap, she indicated, was a key reason Apollo continues to invest aggressively in hospitals, digital healthcare and preventive-care ecosystems.

"The why is more important than the how much," she said, referring to Apollo's ₹8,000-crore investment programme.

Reddy said rising health insurance penetration was becoming one of the biggest demand multipliers for organised healthcare in India. "About 70 per cent of India is now covered by either a government insurance programme or a corporate insurance scheme," Reddy said, adding that insurance-linked volume growth alone contributed 9 per cent growth in the last quarter.

DIGITAL HEALTHCARE

The pandemic also accelerated Apollo's shift towards remote monitoring, at-home care and digital consultations beyond traditional hospital settings. Reddy said Apollo's digital-health infrastructure, which accelerated during the Covid, is increasingly shaping how the company approaches diagnostics, remote consultations and monitoring outside hospital settings.

Apollo's Clinical Intelligence Engine can answer nearly 70-80 per cent of tele-consultation queries with around 98 per cent accuracy, she said. Apollo is also working with Microsoft on cardiac risk modelling and disease reversal programmes.

No major impact of W. Asia conflict on asset quality so far, says SBI Chairman

Our Bureau
Mumbai

There has been no major impact of the West Asia conflict on asset quality so far and credit demand seems to be robust, said SBI Chairman Challa Sreenivasulu Setty.

The RBI's latest data on credit growth bears out Setty's statement. As on May 29, 2026, all scheduled banks' credit grew by a solid 16 per cent year on year.

"We have not seen any major impact of the West Asia conflict on asset quality so far. But we have to be watchful. Credit demand seems to be robust. Growth seems to be robust across sectors. We have not seen any demand constraints at this juncture," the SBI chief said on the sidelines of Citi India Conference 2026.

STRONG PIPELINE

At the bank's financial results presser on May 8, Setty retained a 13-15 per cent credit growth projection for FY27, with the corporate credit pipeline being strong at ₹5.50 lakh crore and likely demand for loans of up to ₹80,000 crore from MSMEs and the aviation sector under the government's Emergency Credit Line Guarantee Scheme (ECLGS).

Challa Sreenivasulu Setty, Chairman, SBI

Referring to the government's efficient fiscal management and proactive approach, Setty noted that the Emergency Credit Line Guarantee Scheme was launched after banks told the government that while the West Asia conflict may not be as intense as the Covid pandemic, it is diversified in terms of its impact on the economy and the most vulnerable segment would be the small enterprises and businesses.

TECH DIGEST.

ASUS unveils its 2026 AI-driven PC line-up

ASUS is positioning AI as a core layer across its 2026 device portfolio, spanning creator laptops, Copilot+ PCs, desktops and a new agentic assistant. At the high end, the ProArt P16 and P14 introduce NVIDIA's RTX Spark platform to ASUS creator laptops, enabling local AI processing at scale.

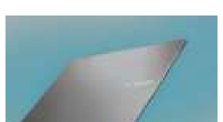
With up to 1 petaflop of AI performance and large unified memory, these systems target developers and content creators building or running AI-driven workflows directly on-device. Supporting software such as ProArt Creator Hub, MuseTree and StoryCube extends this into resource management and generative content pipelines.

In the mainstream segment, Zenbook 14 and Vivobook S series devices adopt Intel, AMD and Snapdragon platforms with dedicated NPUs, delivering up to 50 and 45 TOPS of AI performance respectively.

ASUS also introduces Zenni Claw, an AI assistant designed for practical, agent-based workflows with hybrid local-cloud processing to balance performance and privacy.

MSI's COMPUTEX 2026 line-up focuses on AI PCs

MSI used COMPUTEX 2026 to showcase a hardware line-up centred on high-performance computing, AI integration and new form factors, including handheld gaming and creator-focused devices.



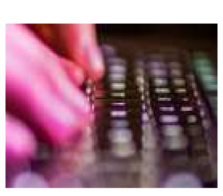
A key reveal was the Claw 8 EX AI+, the first gaming handheld powered by Intel's Arc G3 Extreme platform, designed specifically for portable gaming. It targets AAA performance within a power-efficient handheld architecture, signalling increased competition in the dedicated gaming handheld category.

On the creator side, the Prestige N16 Flip AI+ introduces NVIDIA's RTX Spark platform in a thin-and-light convertible. It integrates RTX-based AI tooling with a UHD+ OLED display, high colour accuracy and stylus support, meant for hybrid workflows across content creation, AI development and general productivity.

MSI has also expanded into design-led hardware with limited and themed editions, including the Titan 18 HX Dragon Edition and the Prestige 14 Flip AI+ Vincent van Gogh model.

AMD pushes platform longevity at Computex 2026

AMD's COMPUTEX 2026 announcements were based on extending platform lifecycles and expanding access to its 3D V-Cache gaming performance across price tiers.



A key update is the extension of Socket AM5 support through 2029, continuing AMD's multi-generation platform approach previously seen with AM4. This allows users to upgrade processors without replacing motherboards, reducing total system cost over time and improving upgrade flexibility.

On the processor side, AMD introduced the Ryzen 7 7700X3D, bringing 3D V-Cache to a wider AM5 audience. With eight cores and over 100 MB of cache, it targets high-performance gaming with improved latency and frame consistency at a more accessible price point. In parallel, AMD marked a decade of AM4 with a limited Ryzen 7 5800X3D anniversary edition.

In graphics, the Radeon RX 9070 GRE expands RDNA 4 architecture into a broader segment, targeting 1440 p gaming with improved ray tracing and AI-assisted features.

2026 Apple Design Awards winners revealed

Apple announced the winners of the 2026 Apple Design Awards, honouring 12 outstanding apps and games. This year's winners include teams from around the world whose work demonstrates innovation, artistry and technical achievement in app and game design. Winners were selected from 36 global finalists. One app and one game were recognised across six categories, including Delight and Fun, Inclusivity, Innovation, Interaction, Social Impact, and Visuals and Graphics. The winners across categories are: Delight and Fun — grug (app) and Is This Seat Taken? (game); Inclusivity — Guitar Wiz (app) and Pine Hearts (game); Innovation — NBA: Live Games & Scores (app) and Blue Prince (game); Interaction — Moonlitt: Moon Phase Tracker (app) and Sago Mini Jinja's Garden (game); Social Impact — Primary: News in Depth (app) and Consume Me (game); Visuals and Graphics — Tide Guide: Charts & Tables (app) and Cyberpunk 2077: Ultimate Edition (game).

The winners will be recognised at Apple's Worldwide Developers Conference 2026, which will be held from June 8-12.

Everyday power, stunning display, premium pricing

SAMSUNG GALAXY BOOK6 PRO. Thin, light and capable, the Galaxy Book6 Pro is built for productivity with a strong ecosystem edge

BIJOY GHOSH

Siddharth Mathew Cherian

Samsung, a dominant force in the smartphone space, makes a more measured but noteworthy appearance in the laptop market each year with its Galaxy Book line-up. For 2026, the company has refreshed its portfolio with the Galaxy Book6 series, which includes the Galaxy Book6, Galaxy Book6 Pro and the top-end Galaxy Book6 Ultra.

Sitting right in the sweet spot is the Galaxy Book6 Pro — a mid-range flagship that promises a balance of performance and portability. I spent some time with it, and here's what stood out for the better and for the worse.

DESIGN

The Galaxy Book6 Pro feels solidly built. Its aluminium chassis, finished in grey, adds to the premium feel while resisting smudges. Weighing 1.24 kg and measuring just 1.16 cm thick, it ticks all the right boxes for a well-built Ultrabook designed with portability in mind.

The lid shows little to no flex and opens easily with one hand. Rounded corners and a smooth finish ensure comfort in everyday use, with the palm rest and lower chassis never digging into your hands.

DISPLAY

The Galaxy Book6 Pro features a 14-inch Dynamic AMOLED 2X touchscreen with a sharp 2880 × 1800 (WQXGA+) resolution. The anti-reflective coating helps cut glare and improves visibility, while the panel delivers vibrant colours, crisp detail and a smooth viewing experience. It is slightly glossy but does a good job of keeping fingerprints and smudges at bay.

The AMOLED panel truly shines as a media consumption display, with colours that pop yet remain natural, good contrast levels and sharp text. Watching the latest season of *SWAT* on Netflix, action sequences — whether in daylight or at night — come alive with excellent contrast and accurate colour reproduction.

VISUAL DELIGHT. The AMOLED panel truly shines as a media consumption display, with colours that pop yet remain natural, good contrast levels and sharp text BIJOY GHOSH

SOUND

The dual downward-firing speakers are surprisingly good. They offer impressive depth across the soundstage, whether it's the vocals in Sarah Black's *Maname* or the high-octane action sequences in *Extraction 2* on Netflix.

Volume is decent too, coming close to competitors, though it still has some ground to cover when it comes to filling larger rooms.

PORTS & KEYBOARD

The laptop offers a solid selection of ports, with an HDMI 2.1 and two Thunderbolt 4 ports on the left, alongside a USB Type-A 3.2 port and a headphone/mic combo jack on the right. While the overall selection is adequate, the right side feels a bit underutilised and could have accommodated an additional Thunderbolt 4 Type-C port.

The keyboard, however, is a slight let-down. It has a shallow feel with limited key travel, though it remains reasonably tactile and quiet in use. With four levels of backlighting, it works well for late-night sessions but overall, it doesn't quite match the premium feel of the rest of the device. The 2 MP webcam helps for video calls in a pinch with decent picture quality.

PERFORMANCE

The Samsung Galaxy Book6 Pro runs on Windows 11 Home and is powered by the Intel Core Ultra X7 358H processor, paired with 32 GB of RAM and 1 TB of storage. In day-to-day use, it delivers solid multitasking and reliable productivity performance.

In Cinebench 2026, the laptop scored 446 in single-core and 1,058 in multi-core tests. These figures are strong for an Ultrabook focused on productivity and office workloads, though it still trails Apple's 8-core M2 chips, which continue to hold an edge in raw performance.

Video editing on Adobe Premiere Pro was smooth enough for light to moderate workloads. As a part-time creator device, it handled a nearly 9-minute video with text overlays, exporting it in about a minute — quick enough to wrap up between short breaks at work or home.

The Galaxy Book6 Pro is equipped with Intel Arc B390 graphics, which means it isn't built for intensive gaming. That said, it can comfortably deliver upwards of 90 FPS in *Counter-Strike 2* and handle casual titles such as *Minecraft* without issue.

Thermals are well managed, though the metal chassis does get slightly warm around the bottom vent area under load. The dual-fan setup does a good job of keeping things cool while remaining relatively quiet during productivity tasks, light video editing and casual gaming.

On the software side, the laptop runs Windows 11 with Samsung's ecosystem apps like Samsung Notes, Samsung Pass, SmartThings and Device Care, enabling seamless cross-device functionality. AI features such as AI Select and AI Cut Out are particularly useful, allowing quick object isolation and background removal without relying on dedicated editing tools. The addition of natural language search also makes locating files far more intuitive, removing the need to remember exact filenames.

BATTERY

The Galaxy Book6 Pro packs a 67 Wh battery, in line with most Ultrabooks in this category. In real-world use, it delivers around 7-9 hours for everyday tasks such as writing, music playback and video streaming. Under heavier workloads such as light video editing or casual gaming, battery life drops to roughly 1.5 to 2 hours, which is still respectable for its class.

The bundled 65 W fast charger performs well, taking the laptop from 0 to 100 percent in about 1 hour and 10 minutes, quick enough to top up during short breaks.

VERDICT

The Samsung Galaxy Book6 Pro brings together the best of both worlds — a functional yet capable Ultrabook with a great display, decent audio, access to Samsung's wider ecosystem and enough performance for occasional heavy workloads.

At ₹2,19,990 for the unit reviewed, it does face stiff competition, with similarly spec options like the Asus ZenBook S14 or even the MacBook Air 13 (M5) coming in at a lower price.

That said, if you're already invested in the Samsung ecosystem and want to extend that seamless experience to your laptop, the Galaxy Book6 Pro offers a compelling mix of design and performance in a premium package.

SNAPSHOT

Price: ₹2,19,990
Pros: Great display, well built, good performance package
Cons: On the pricey side, average loudness with volume

Delightfully analog

FUJIFILM INSTAX MINI 13. Just aim, shoot and print

Ashwin Rajagopalan

Analog seems to be having its moment, and instant photography is no exception. At a time when AI-processed images iron out every visible flaw, some users are embracing the beauty of flaws and intentional photography where film rolls are used with more thought. The Fujifilm Instax Mini 13 is part camera and part lifestyle accessory. An instant camera that hasn't changed much over the years with a value proposition that's unaltered. At a time when all memories are captured digitally, this is a throwback to a time when physical photos were treasured. Should the Mini 13 be on your radar in 2026? As I found out, that's not an easy question to answer.

QUALITY SETUP. The camera is kitted with a 60 mm f/12.7 lens, automatic exposure and a close-up mode for subjects 0.3 m to 0.5 m away

DESIGN

The Mini 13 doesn't change much over it's predecessors. It sticks to the same design template that exudes a playful, pop-art type design aesthetic. It's almost like a fashion accessory that won't look out of place at a pool deck or a nightclub. The camera comes in a choice of five pastel colours (purple, pink, green, blue and white). We checked out the blue version, which might well be the pick of the lot with its sky blue hues. The Mini 13 looks more funky than its predecessor with its pillowy design and intentional curves. It makes the camera easy to clasp and use.

I'd urge you to add the strap (that's bundled in the box) that makes the camera easy to cart around. At about 350 g, it's very portable. For perspective, the iPhone 17 Pro Max weighs around 233 g (without a case) but you can't slip the Mini 13 into your jeans. There's no tripod mount that could have added to the versatility of this camera. The exteriors are not waterproof, you might be able to find a third-party waterproof case or a hard shell for rain protection.

SET UP AND USE

You'll barely need a minute to get things underway. Load the batteries (two AA batteries are part of the retail package) and a 10-film pack. Just twist the lens ring and the camera comes on. Next aim, shoot and it automatically prints an image that takes about 90 seconds to fully develop. And no, don't shake the print even if you've seen people do that before. It might lead to the image being unevenly developed. The important thing to note is that the Mini 13 is the entry-level camera in Fujifilm's portfolio and is a standalone device. There's no Bluetooth or Wi-Fi connectivity. This means that you can't share images you've snapped digitally, directly via Bluetooth or Wi-Fi to other devices. Neither can this double up as a printer like some other cameras that allow you send images digitally that you can print.

The companion Instax app doesn't hook up with the camera. You can use it to scan prints from the camera and the app can organise it. I found myself using my iPhone camera to scan prints but the app is worth installing if you're likely to shoot a lot of prints and let the app organise it into theme-based folders.

CAMERA EXPERIENCE

If you're used to shooting images or videos primarily for your Instagram feed on Portrait mode, you'll find the Mini 13 even more easier to use. The design of the camera works better for portrait orientation images. The location of the shutter button makes it easier to hit on this mode. The camera experience is more geared towards this image orientation. There's no screen and you have to lean on the viewfinder unless you're snapping selfies where the selfie mirror comes into the equation. The camera is kitted with a 60 mm f/12.7 lens, automatic exposure and a close-up mode for subjects 0.3 m to 0.5 m away. You get prints that are about the size of a credit card. You can load an Instax Mini-size film pack (10 photos) to get started.

I found that the camera works best for close-up subjects. It's perfect to capture those fun moments with friends or family. The camera isn't geared for portrait photography although you might be okay with images shot with your friends at a dimly lit bar because they capture the moment instantly. There's no option to disable the flash, every single image is shot with the flash.

One of the key upgrades over the Mini 12 is a built-in self-timer (you get a choice of a 2-second or a 10-second timer) that you can activate by rotating the lever built into the shutter button. The AA batteries typically last for 100 photos or 10 Instax Mini-size film packs. These packs (for 10 photos) typically cost around ₹700– ₹750 which roughly translates to about ₹70-75 per print.

VERDICT

It's easy to recommend the Fuji Instax Mini 13 if you're looking at your first brush with an instant camera but that recommendation does come with a few caveats. The Instax Mini 12 is available at ₹7,499 (The Mini 13 costs ₹8,499) and only misses out on the timer and a newer design. You might also want to consider a hybrid from Fuji's line if you want to go deeper. The Mini 13 works well to capture travel or city landscapes or moments with friends (works best for 2 people in a frame). It has limitations in terms of image quality but it's not competing with a pro cam or a mobile shooter. This one's for fun, nostalgia and those candid moments.

SNAPSHOT

Price: ₹8,499
Pros: Quirky design, fun to use, instant prints, nod to the analog lifestyle
Cons: Image quality, always-on flash

QUICKLY.

'W. Asia energy supply cut will slam global economy'

Frankfurt: Prolonged disruption of energy supplies from West Asia due to the Iran war would deal a severe blow to the global economy, sending some countries into recession and spreading inflation and higher unemployment, said the Organisation for Economic Cooperation and Development (OECD) in a report. The hardest hit would be Asian economies that depend on crude oil, fuel and natural gas from the Gulf, supplies that have been largely choked off by the closure of the Strait of Hormuz. The consequences of high energy prices and inflation would be felt around the world, added the report. PTI

Services PMI surged to 59.8 in May, the highest since November

ON THE RISE. Demand strengthens for freight, digital solutions, e-commerce, entertainment and IT: S&P Global

Our Bureau
New Delhi

With strong demand, private sector businesses did well in May as the Purchasing Managers' Index (PMI) for services rose to 59.8 against 58.8 in April, the strongest rate of expansion since last November, S&P Global reported on Wednesday.

"India's services PMI signalled an expansion in business activity in May, supported by a continued rise in new business. External demand for India's services also grew at a faster pace, rebounding after a sharp decline in April. Input cost inflation eased, which in turn reduced pressure on selling prices," said Pranjul Bhandari, Chief India Economist at HSBC.

GOOD SHOW. Overall rate of job creation was solid, said S&P

PMI is derived from the responses of 400 service sector companies. The sectors covered include consumer (excluding retail), transport, information, communication, finance, insurance, real estate and business services.

S&P Global attributed strengthening demand for services such as freight, digital solutions, e-commerce, entertainment and IT for the higher PMI. These also have a positive impact on payroll numbers.

"The overall rate of job creation was solid and the second-fastest in just under a year [behind April], but fewer than 7 per cent of panellists signalled greater hiring and the vast majority indicated no change in headcounts," it said.

"Although cost pressures remained historically high across India's service economy, they receded to their lowest in four months, which supported a moderate increase in selling prices that was the softest since January," it added.

BUSINESS VOLUMES

Further, there was a negligible uptick in outstanding business volumes at Indian service providers in May, as seasonally adjusted index registered only fractionally above the neutral mark of 50.0. On the 12-month outlook for business activity, services firms collectively expressed optimism. They generally expect demand conditions to remain favourable and therefore support output.

That said, "the overall level of confidence slipped to a three-month low and was below the historical trend," said S&P Global.

Granular data showed consumer services remained the brightest spot as the growth of new business intakes and output outpaced those seen in other three categories. Consumer services topped the inflation rankings, recording the strongest increases in both input costs and output charges out of all four monitored sub-sectors.

'E85 fuel will be priced much lower than petrol'

Our Bureau
New Delhi

Hardeep Singh Puri, Union Minister for Petroleum and Natural Gas

The Centre is working on a pricing framework for E85 ethanol-blended fuel to make it significantly cheaper than regular petrol as part of efforts to accelerate flex-fuel vehicle adoption and reduce dependence on imported crude oil.

According to Hardeep Singh Puri, Union Minister for Petroleum and Natural Gas, the Centre is actively examining policy measures to support the launch of higher ethanol blends.

"E85 fuel will be used for vehicles compliant with E85. It will be substantially cheaper than normal fuel," said Puri at the launch event of Hero MotoCorp's flex-fuel variants of Splendor and HF Deluxe motorcycles in New Delhi.

The Minister did not provide details on the proposed pricing structure, but indicated that a policy announcement could be made shortly. "We are actively examining supportive policy frameworks to accelerate affordable adoption," he said. "I've already said it will be substantially cheaper. You'll find out in a few days."

ETHANOL PUSH

The development comes as India seeks to move beyond its conventional ethanol-blending programme, which has emerged as a key pillar of the government's strategy to lower crude oil imports, reduce emissions and support rural incomes. Besides, Puri said that India has increased ethanol blending in petrol from around 1.5 per cent in 2014 to 20 per cent currently, achieving its original 2030 target six years ahead of schedule.

The Minister said the ethanol-blending programme has helped save ₹1.84 lakh crore in foreign exchange, substitute 302 lakh metric tonnes of crude oil and reduce carbon dioxide emissions by 909 lakh metric tonnes. In addition, farmers have earned around ₹1.58 lakh crore through ethanol production, he added.

Puri said the launch of Hero MotoCorp's flex-fuel motorcycles marks India's entry into mass-market flex-fuel mobility. The Minister noted that even a limited shift towards E85-compatible vehicles could generate substantial ethanol demand.

Puri added that India's future mobility strategy will not rely on a single technology pathway, but will combine electric vehicles, biofuels, hydrogen and renewable energy solutions based on sectoral requirements.

"A calibrated approach comprising fuel price support and targeted fiscal incentives can create strong consumer economics and accelerate adoption," he said.

India has an active fleet of more than 300 million two-wheelers, giving an opportunity for wider adoption of ethanol-based fuels. Consequently, if only one per cent of annual petrol vehicle sales transitions to E85 in the 2026-27 ethanol supply year, more than 40 million litres of incremental ethanol demand could be created, while foreign exchange savings may reach approximately ₹195 crore.

India's exports of refined products hit multi-year low in May

Rishi Ranjan Kala
New Delhi

The imposition of windfall tax, coupled with re-prioritisation of refinery operations to increase LPG output and refinery maintenance, pulled down India's refined petroleum product exports in May to their lowest levels since October 2022.

May 2026 also marked the third consecutive month of decline in the export of petroleum, oil and lubricants (POL) products, following the government's re-imposition of Special Additional Excise Duty (SAED) on diesel and aviation turbine fuel (ATF) to discourage outbound shipments in March.

The prices of jet fuel and diesel have been surging in the global market due to the conflict.

INVENTORY LEVELS

The windfall tax also came after India's crude oil inventory levels declined, slipping below 100 million barrels in March.

Kpler said India's refined product exports fell to around 930,000 barrels per day (b/d) in May 2026, which is the lowest export level recorded since October 2022 (926,000 b/d).

"This sharp retrenchment was driven by a combination of lower refinery throughput, maintenance activity, and a structural pivot toward the domestic market," the real-time data and analytics provider added. Sumit Ritolia, Kpler's Lead Research Analyst for Refining & Modelling, told *businessline*: "State-owned refiners have increasingly prioritised domestic market requirements amid continued uncertainty in global energy markets. Concerns around supply security and the mandate to maintain adequate local availability encouraged PSU refiners to direct a larger share of production towards the domestic grid rather than international export channels."

DOMESTIC TAXES

Besides, he explained that export economics have become less supportive for incremental overseas shipments, as domestic taxes on refined product exports continue to reduce the attractiveness of international sales relative to local supply.

OUTPUT DISRUPTION. Planned maintenance at Reliance's Jamnagar complex significantly reduced exports in May

Ritolia also pointed out that the planned maintenance at Reliance Industries Ltd's (RIL) Jamnagar complex significantly reduced export availability in May.

"As India's largest refiner and refined product exporter, Reliance plays a disproportionate role in determining national export volumes. The maintenance turnaround lowered crude intake and refinery throughput," he added.

Beyond maintenance-related run cuts, Ritolia pointed out that refiners actively adjusted product yields to prioritise domestically required fuels, particularly liquefied petroleum gas (LPG), and this has led to lower production (80,000 b/d in total) of gasoline and gasoil. Shifting refinery configurations to maximise local LPG output directly reduced the availability of export barrels, with gasoline and gasoil exports bearing the largest impact.

CA firms to onboard interns under PMIS, advertise under ICAI's revised code of ethics

Shishir Sinha
New Delhi

Chartered accountant (CA) firms are likely to start accepting interns under the Pradhan Mantri Internship Scheme (PMIS) soon.

Meanwhile, the Institute of Chartered Accountants of India (ICAI) has implemented a revised code of ethics, allowing the issuance of advertisements, among other changes.

"Under the scheme, an intern can get at least ₹9,000 per month, of which ₹8,100 is provided by the government and the remaining ₹900 or even more can be provided by CA firms from a non-corporate social responsibility (CSR) fund. There is agreement on this issue with the government," ICAI President Prasanna Kumar D told *businessline*.

RESOLVES ISSUE

Since the PMIS guidelines prescribe payment of the company's contribution through the CSR fund, and CA firms do not have that fund, a technical issue arose, which has now been resolved. As part of Budget 2024-25, PMIS aims to provide internship opportunities to 1 crore youth across the top 500 companies over five years. Under the scheme, the company is expected to provide the person with hands-on experience in a skill directly related to its core activities.

Prasanna Kumar D, ICAI President

At least half of the internship period would be spent in the actual work/ real-life business environment.

On another budget announcement, the introduction of PM Mitra, Kumar said: "We have given our inputs to the government. We expect the scheme to be launched soon as early as next month," he said.

PRACTICAL TRAINING

Earlier, the institute had said that it was working on a 9-month curriculum, with theoretical and practical training provided over the same period.

With a nationwide network of five regional councils and 186 branches, including a strong footprint in Tier-II and Tier-III cities, the institute offers an established last-mile professional infrastructure where MSMEs are densely located.

This enables the delivery of structured compliance and advisory support without geographical or cost barriers that often restrict smaller enterprises from accessing quality professional services.

The primary objective of the Corporate Mitras course is to create a pool of industry-ready professionals with strong practical knowledge. It will also enable MSMEs to access affordable and effective compliance and advisory support.

Meanwhile, the ICAI has made the revised (13th edition) code of ethics public, with April 1 as the implementation date.

According to Kumar, one of the significant changes is permitting CA firms to advertise.

"This will be an important step in line with the PM's vision for creating big desi firms," he said.

REVISED CODE

The revised code says that "the members may advertise, through a write-up, setting out their particulars, or of their firms, and the services provided by them subject to the guidelines by ICAI, and must be presented in a manner that upholds the profession's good reputation, dignity and its ability to serve public interest", adding that the institute will neither approve a proposed write-up, nor own any responsibility whatsoever for such contents or claims by the writer member(s)/firm(s).

Other changes in the code enable strengthening the independence provision relating to non-assurance services for audit clients.

Despite geopolitical woes, tyre exports rose 9% to touch ₹27,312 crore in FY26

Our Bureau
Kochi

Tyre exports reached an all-time high of ₹27,312 crore in FY26, registering a 9 per cent increase from ₹25,057 crore in the previous fiscal, according to data released by the Commerce Ministry.

This marks the second consecutive year of 9 per cent growth in tyre exports, highlighting the resilience and global competitiveness of the Indian tyre industry despite geopolitical uncertainties and a slowing global economy.

The strong export performance was achieved amid significant disruptions in global supply chains, elevated logistics costs and trade-related uncertainties across key markets, said Arun Mammen, Chairman of the Automotive Tyre Manufacturers Association (ATMA).

The US remained the largest export destination for Indian tyres, accounting for 15 per cent of total export value at ₹4,082 crore.

However, its share declined from 17 per cent in the previous year after the US administration increased tariffs on Indian tyre imports from 25 per cent to 50 per cent, putting Indian exporters at a competitive disadvantage compared to several competing economies that continued to enjoy lower tariff barriers.

LOWER TARIFFS

In relief to exporters, the US reduced tariffs on most Indian goods from 50 to 18 per cent in February, improving the outlook for tyre exports to the American market.

Through market diversification, cost optimisation and policy support, the Indian tyre industry was able to maintain export momentum.

The other leading export destinations for Indian tyres are Germany (7 per cent), Italy (5 per cent), Brazil (5 per cent), and France (4 per cent).

While ongoing geopolitical developments, including the West Asia crisis continue to pose challenges through supply chain disruptions, higher energy costs and inflationary pressures, the industry remains optimistic about the long-term export outlook.

TRADE DEALS

Ongoing trade agreements and greater integration of India into global value chains are expected to create fresh opportunities for exports.

As global supply chains continue to evolve, India is increasingly being recognised as a reliable sourcing destination for high-quality tyres.

Supported by technological advancements, sustainability initiatives and favourable trade engagements, the Indian tyre industry is well positioned to strengthen its role in the global markets in the years ahead, said Mammen.

Energy shock fuelled by West Asia crisis to hit economy: Experts

Amiti Sen
New Delhi

The ongoing West Asia crisis and energy shortages are set to severely affect production, distribution and consumption in the country, and the government needs to take steps to protect vulnerable sections of society while prioritising the use of fuel for essential activities, said experts.

"There were problems in the economy even before February 28 [when US attacked Iran], but because of the West Asia crisis we are facing a supply shock, which is a new thing for our economy. Because we are short of energy, it is affecting everything, from production to distribution to consumption. And it is the unorganised sector that is taking the worst hit," pointed out economist Arun Kumar at a panel discussion on the impact of the West Asia crisis organised by the Indian Women's Press Corps on Wednesday.

STAGFLATION

As far as poor people are concerned, the economy is in stagflation, with high inflation and growth stagnation. "If the situation continues, the economy will be in recession with official data not capturing it," he said. Pointing out that gas was being sold in the black market at four to five times the actual price, Kumar said it was severely affecting the budget of the poor who had very little savings. "The black market prices don't get accounted for in our inflation data. The inflation for our poor could be as high as 40 per cent while the official figures could be 3.5 per cent," he said.

> **We are in trouble. But we are not the only ones. The US, too, is facing problems. West Asia is very important to us for our energy and fertilizer security, said an expert**

On the production side, the large sector was still managing as it had enough capital, but things are dire for small producers.

"The small sector has very little capital. So, when prices go up, especially that of energy, it shuts down. And people lose their jobs. That is why lots of workers are now going back to the rural sector, just like in the pandemic. There they can at least burn wood," said Kumar.

On how to find a way out of this energy crisis, Kumar said the government must differentiate between essential and non-essential things.

"You curb the inessential, but you allow full energy use to the essential. That will minimise the loss of output," he said.

For example, the government could check the use of private transport and promote public transport, said Kumar. "We are in trouble. But we are not the only ones. The US, too, is facing problems. West Asia is very important to us for our energy and fertilizer security. And the closure of the Strait of Hormuz and other routes have affected supplies," said former Ambassador Anil Trigunayat.

LESSON FOR INDIA

The lesson for India is to diversify away from West Asia, which it is already doing but that will take time, he said.

"The alternative routes that are being explored cannot happen in the short term. There will be pains [for India], and these have to be addressed through policy measures and the government is already taking action," he said.

THURSDAY - JUNE 4, 2026

Prepare the ground

IMD forecast points to a deficient agri season this year

The India Meteorological Department's (IMD) June forecast for South-West monsoon carries more bad news than the April one. IMD now believes that monsoon rainfall for the country will likely be at 90 per cent of the Long Period Average (LPA), compared to the April forecast of 92 per cent. IMD's June forecast for the monsoon is usually more accurate than the early April one. It suggests a deficient monsoon year, instead of merely a sub-normal one, and calls for greater preparation.

The forecast also casts a damper on the spatial distribution of rain. Only North-East India, not very critical for the agri-economy, is now expected to receive normal rain. Central and South Peninsular India and the North-West are likely to experience below normal rains. The monsoon core zone, which is rainfed and critical for agricultural output, is expected to receive less than 94 per cent of LPA. The forecast also raises the possibility of the looming El Nino coinciding exactly with the monsoon months. In April, the IMD had talked of weak La Nina conditions persisting until June, pushing back the advent of El Nino. It also held out the hope that a positive Indian Ocean Dipole (a weather phenomenon that counteracts the impact of El Nino) could emerge towards the end of the Southwest monsoon season. A positive IOD has in some years negated the El Nino effect. However, the latest forecast says that neutral IOD conditions are expected to continue, suggesting that this hope is receding. The World Meteorological Organisation has just predicted that there is an 80 per cent probability of a moderate to strong El Nino emerging between June and August. June has already seen a patchy start to the Southwest monsoon, accompanied by a countrywide heat wave. Should these conditions last through July, the critical sowing month, kharif output could be seriously hit.

In its latest estimates this week, the Agriculture Ministry has marginally lowered its kharif output target to 151 million tonnes for rice (from 154 million tonnes last year), 52.5 million tonnes for maize (55.1 MT last year) and 40 million tonnes for oilseeds (43.1 MT last year). Estimates for other kharif crops such as sugarcane, jowar, bajra, tur, urad and moong have either been hiked or left unchanged from the previous year. No estimates have been provided for horticulture crops. It is unclear if this is because the Ministry expects no impact from a deficient monsoon, or plans to course-correct as sowing progresses.

Pulses and vegetables have been key contributors to spells of runaway inflation in the past. Therefore, a sensible approach is to start with realistic estimates — and avoid knee-jerk actions such as export bans or import duty cuts which hurt farm incomes and impact India's reputation as a reliable supplier of agri-products. Lower paddy and maize output also call for recalibration of the ambitious ethanol blending programme. Overall, the Centre and States should be prepared with policy options to deal with eventualities.

OTHER VOICES.

The Guardian

Civilians need lasting peace, not short-term patches

Let's see how long that lasts," Donald Trump wrote on Truth Social on Monday night, addressing his attempts to de-escalate in Lebanon following Israel's intensified military campaign. Within hours, Israeli drone strikes had killed eight people in the south, including a father and his two children, and damaged a hospital. Hezbollah continued launching rockets and drones. Anxious to escape the illegal war that he launched on Iran, and with Tehran threatening to suspend peace talks over the Israeli offensive, the US president reined in Benjamin Netanyahu – for now – in what was described as an expletive-laden phone call. Mr Trump's post, despite its unusual admission of doubt, still oversold the agreement. LONDON, JUNE 2

THE WALL STREET JOURNAL. EUROPE

Republicans Can Kill Trump's Retribution Fund for Good

President Trump is retreating from the proposal to set up a $1.776 billion "anti-weaponization" fund as a settlement of his lawsuit against his Internal Revenue Service. "We're not moving forward with the fund. Period," acting Attorney General Todd Blanche told Congress Tuesday. Not moving forward? That isn't dead for good, and it isn't enough. Republicans in Congress can kill the idea forever, however, by barring money for its use. That would be good policy and politics. The "settlement" between Mr. Trump and his own Administration, diverting $1.8 billion of tax money to political allies, possibly including Jan. 6 rioters, would be an ugly precedent. The courts have blocked the payouts for now, and the Justice Department said Monday it will "abide by" that. NEW YORK, JUNE 2

Welding AI with manufacturing systems

THE ARCHITECTURE. Tweaking the PLI framework to create ecosystems, converging AI and physical systems for talent formation are vital

GETTY IMAGES/ISTOCKPHOTO

VIPIN SONDHI
G SUNDARARAMAN

Walk through the despatch bay of a mid-sized auto-component plant in Manesar, Haryana and ask the plant head what keeps him awake. A year ago, the answer would have been capacity; more orders than the line could absorb. Today the answer is different.

A long-standing European buyer will be introducing a new requirement: full carbon traceability data, shipment by shipment, as a condition of continued supply under the EU's Carbon Border Adjustment Mechanism (CBAM). The plant can produce, but it cannot yet prove. In global manufacturing, the inability to prove is rapidly becoming indistinguishable from the inability to perform.

This is not an isolated episode. Trade, technology and carbon policy have ceased to be neutral terrain. They shape market access, define the terms of participation in global value chains and determine which nations retain industrial agency. The question for Bharat is whether we build the depth this moment demands, or whether we scale capacity while the architecture lags behind.

THE SHIFT TO PHYSICAL AI

Artificial intelligence has, until recently, been largely a phenomenon of the screen; content, retail, software. That is changing.

The next phase of AI is physical: applied to factories, logistics, energy grids and supply chains where interaction between software and machines must be seamless and reliable. This is not a distant prospect. It is already under way in the most competitive manufacturing economies and beginning unevenly in Bharat.

The applications are concrete. Predictive maintenance systems flag equipment stress before a breakdown occurs. Digital twins allow factories to be stress-tested virtually before capital is committed to build physically. Machine vision replaces subjective quality inference with real-time assurance. Energy management algorithms reduce industrial consumption that bear directly on carbon compliance. None of these require frontier AI research. They require disciplined deployment of techniques that are already proven.

The concern is not awareness. It is adoption depth. Several large automotive and engineering firms in Bharat are beginning this journey. But the gap between these early movers and the wider MSME base is significant. A mid-sized component supplier operating across three shifts may grasp the value of predictive maintenance in principle.

The challenge is integration: legacy equipment, mixed data architectures and the absence of in-house capability to deploy and sustain these systems. The B2B clusters — foundries, machining shops — are where the adoption gap is widest and the competitive risk, most acute.

THE ECOSYSTEM IMPERATIVE

Manufacturing competitiveness is rarely the achievement of individual firms. It is the product of ecosystems. In Shenzhen, a hardware prototype moves from concept to revision in days, not because of one exceptional factory but because suppliers, tooling specialists, designers and process engineers operate within a dense, interdependent cluster where learning circulates rapidly.

Bharat has analogues; the auto-component clusters of Pune and Chennai, the textile ecosystem of Tiruppur, the electronics base emerging in Tamil Nadu and Telangana. The question is whether these clusters are developing the institutional depth that converts proximity into compounding advantage, i.e. shared testing infrastructure, training pipelines, standards bodies in which industry actively participates and research institutions engaged with problems the shopfloor actually wrestles with. Without these, a cluster is geography, not ecosystem.

> AI investment layered onto poorly designed operating systems will not rescue this situation. It will amplify the underlying weaknesses

The standards dimension deserves particular attention. Mechanisms like CBAM and the EU's Digital Product Passport are not administrative inconveniences, they are the new architecture of market access. Those who shape such standards retain influence over the terms of global trade. Bharat's ambition to be a trusted partner in diversified supply chains requires a deliberate shift from compliance to co-authorship at standards bodies, in trade negotiations and in value chain design.

WEAK POINTS

The risk Bharat faces is not that it misses this manufacturing moment. The geopolitical realignment of supply chains, the China-plus-one strategies of global corporations, the friend-shoring logic of western procurement creates structural demand for India as a manufacturing destination. That tailwind is real.

The risk is that we respond by scaling capacity without upgrading the underlying architecture, producing growth that is brittle rather than durable.

Most manufacturing systems expand initially through stretch; additional shifts, higher equipment utilisation, extended managerial spans. Stretch releases latent capacity efficiently. But beyond a threshold accountability blurs, variability accumulates and delivery credibility built patiently erodes faster than it was earned. Global buyers managing their own compliance obligations have limited tolerance for inconsistency.

AI investment layered onto poorly designed operating systems will not rescue this situation. It will amplify the underlying weaknesses.

A WAY FORWARD

Bharat enters this transition with genuine structural advantages; a large engineering base, demonstrated capacity for digital deployment at scale, deepening integration into global supply chains across automotive, pharmaceuticals, electronics and defence.

Converting these advantages into durable industrial sovereignty requires three specific shifts. First, the PLI framework must evolve beyond output incentives because volume-linked subsidies have served their purpose. The next phase must reward ecosystem formation: supplier depth, shared infrastructure and technical workforce pipelines.

Second, the valley between research capability and industrial application must be bridged through co-funded mechanisms with shared accountability. National laboratories like CMTI and SAMEER carry deep technical capability that is not being converted into production-grade tools consistently. The missing link is not science but industrial partners willing to take prototypes from TRL 4 to TRL 7.

Third, Bharat must treat the convergence of AI and physical systems as a talent formation priority. Engineers who can navigate both algorithms and material systems — thermodynamics, robotics, reliability engineering — will determine which countries shape the next industrial era. Bharat produces exactly this profile. The question is whether institutional conditions exist to deploy that capability at home.

The factory that can trace its carbon footprint, anticipate its failures and integrate cleanly into evolving global value chains is the operational baseline that serious manufacturing buyers are already beginning to demand. And so, while scale will build presence, architecture will build sovereignty.

Monetary policy should not target exchange rate

Interest rate hikes will not address real concerns underlying the rupee fall. Instead, they will harm the domestic economy

Krishan Sharma
Nida Rahman

The rupee touching 96.96 to the dollar on May 20 was not simply a story of crude oil, dollar strength, or foreign portfolio outflows. Those were the triggers. The deeper issue is that India is operating inside the classic open-economy trilemma: the attempt to preserve currency stability, monetary-policy autonomy, and access to global capital at the same time.

India does not sit at any pure corner of this triangle. It has partial capital controls, a managed float, and an inflation-targeting central bank. But partial insulation is not full insulation. The pressure is visible in the data: the current account deficit widened to 1.3 per cent of GDP in the December quarter of FY26, driven by a higher merchandise trade deficit, even as services exports and remittances continued to provide a partial cushion.

The RBI's response has been deliberately layered. Rather than using the policy rate as a blunt exchange-rate defence tool, it has relied on foreign-exchange intervention, liquidity management, and balance-sheet instruments. The $5 billion dollar-rupee swap auction, which attracted bids of $9.8 billion, showed the RBI's preference for managing currency and liquidity pressures without turning monetary policy into a permanent rupee-defence mechanism.

This distinction matters more than most commentary acknowledges. If monetary policy becomes a standing support mechanism for the currency, the RBI loses the flexibility to respond to the domestic growth and inflation cycle. A central bank that conflates exchange-rate management with monetary policy ends up doing neither well.

The standard response to a slide in rupee typically involves calls to raise rates, intervene more, and attract portfolio flows. Each of these addresses symptoms rather than causes. Portfolio inflows are reversible by nature. Higher rates can attract short-term capital while slowing investment. Forex reserves can smooth volatility but cannot substitute for genuine external competitiveness.

Three structural gaps deserve attention.

First, India's energy import bill remains one of the largest sources of current account vulnerability. Despite significant progress in renewable capacity, fuel-pricing reform, faster electrification of transport, and a credible demand-side strategy are needed.

Second, India's services exports, particularly in technology and business process work, are a genuine strength and a stabiliser. But goods exports have repeatedly underperformed their potential, partly because logistics costs remain elevated and partly because India has been slow to embed itself in the regional supply chains that anchor more durable trade flows.

RUPEE. Worrying consequences

Third, the composition of capital inflows matters as much as the volume. Foreign direct investment and long-term debt and stable external borrowing are far more reliable anchors than equity and short-duration portfolio flows, which move with global risk sentiment rather than India's fundamentals. The broader architecture of capital account management needs to tilt incentives more deliberately in this direction.

There is also a fiscal dimension that is often left out of currency commentary. When external balances are under pressure, the fiscal stance matters. Demand-stimulating expenditure can worsen import demand and add pressure to the current account at exactly the wrong time. Fiscal consolidation, in this context, is not merely an austerity argument. It is also an external-stability argument.

A government running expansionary policy while the current account is widening and the currency is under stress is adding to the trilemma rather than managing it.

THE HONEST RECKONING

India is not in an external crisis. Its reserves are substantial, services surplus is real, and growth story remains intact. But the rupee's weakness is a signal that the comfortable conditions of recent years, such as low global interest rates, moderate oil prices, and abundant portfolio flows, may not persist indefinitely.

The rupee is not asking for panic defence. A more honest macroeconomic strategy is needed: less dependence on volatile capital, stronger export competitiveness, lower energy-import vulnerability, and a fiscal stance that recognises external constraints.

The trilemma is not just a theory. It is the budget constraint of macroeconomic sovereignty in an open economy.

Pithy Pocket

This refers to the cartoon 'Pocket' (June 3). The theme accurately predicted the impact of the long-term volatility of crude prices inflicted due to the underlying uncertainty over conclusion of the war in the near future, with both fighting parties rigid and adamant with their endless demands and fear of losing sovereignty and domination over each other.

Sitaram Popuri
Bengaluru

Biodegradable packaging

Apropos 'Mother Dairy rolls-out eco-friendly milk pouch' (June 3). This is a great initiative to be cherished by the consumer sector in general and must be emulated by food processing industries on a pan-India basis. Additionally, the bio-degradable packaging material must be introduced to suit each sector. The E-Com and Q-Com sector must adopt these packaging materials as it is one of the major generators of packaging waste, most of which is non-bio-degradable. Institutes like IISc and CFTRI must further develop these products and encourage MSMEs to produce sector specific bio-digestive packaging material which offers several advantages including employment generation and environmental conservation.

Securing bank lending

Expected Credit Loss model, a well-reasoned one

Mohan R Lavi

RISK-PROOFING. Banks will now have to provide for expected losses

The former Chair of the Federal Reserve, Ben Bernanke once said: "The central bank needs to be able to make policy without short-term political concerns". To a large extent, the Reserve Bank of India has been making such policies — with one such move being making banks embrace Indian Accounting Standards (Ind AS). In April 2026, it mandated banks to follow the Expected Credit Loss (ECL) model from April 1, 2027. For three decades Indian banks have provisioned on an incurred-loss basis — money was set aside only once an account had actually slipped. Banks will now have to provide for losses they expect.

THREE STAGES

At the heart of ECL is a three-stage classification that tracks credit risk from the day a loan is made. A standard exposure that has not deteriorated sits in Stage 1, where the bank carries a provision equal to 12 months of expected loss. The moment there's a 'significant increase in credit risk' (SICR) since origination, the exposure migrates to Stage 2 and the provision jumps to cover the loss expected over the remaining life of the loan. Once the asset is credit-impaired, it falls into Stage 3, again carrying a lifetime provision. The directions force a bank to recognise stress well before an account turns non-performing, capturing borrower problems while there is time to price and manage it.

For most instruments the loss is built from three estimates — the probability of default (PD), the loss given default (or loss in the event of default) or LGD and the total exposure at default (EAD) — multiplied together and discounted to present value. Stage 1 uses a 12-month PD; Stages 2 and 3 use a lifetime PD that must genuinely reflect higher lifetime risk rather than be mechanically scaled from the 12-month figure.

The RBI has set a PD floor of 0.03 per cent, and where a bank cannot reliably model recovery, it has set regulatory backstop LGDs of at least 65 per cent on secured and 70 per cent on unsecured exposures, easing to 30 per cent for the safest collateral such as cash, gold and government paper. Crucially, the estimate must be forward-looking and probability-weighted across multiple macroeconomic scenarios. A loss is recognised even where the bank expects to be repaid in full, but if repayment will arrive later than contractually due. This is because ECL reflects the timing of money, not only its eventual receipt.

The norms do not leave provisioning entirely to internal models. Recognising that models can be optimistic, the RBI overlays prudential floors as a regulatory minimum: the final threshold is the higher of the modelled ECL and the prescribed floor. NPA recognition must be system driven and borrower-level — if one facility defaults, every exposure to that borrower is tagged. Banks must adopt effective interest rate method for amortised cost, and on April 1, 2027, the transition date, route the difference through retained earnings rather than P&L account.

The capital impact of moving from the old regime to ECL may be phased into Common Equity Tier 1 over four years on a declining 80-to-20 per cent basis. Overseeing this is a governance architecture: board-level accountability, a committee chaired with the CFO and CRO, and a risk management framework requiring independent validation before any model goes live.

Disclosure obligations are correspondingly granular — credit quality by stage, reconciliations of the loss allowance, the SICR methodology and the macroeconomic assumptions all enter the notes to accounts, with further detail filed privately with the RBI. The framework brings Indian banks materially closer to Ind AS 109 and in doing so it changes what a provisioning number means. A provision will no longer be a backward glance at accounts already gone bad; it will be a forward estimate about the portfolio's health. Going forward, like the IRDAI, the RBI should mandate banks to transition completely to Ind AS including fair valuing treasury portfolio.

The writer is a chartered accountant

The missing link in monetary transmission

ASYMMETRY. If monetary easing does not reduce the risk-free benchmark rate, can transmission really be regarded as complete? Notably, the largest borrower is the Union Government

GETTY IMAGES

S ADIKESAVAN

Given the circumstances under which the June meeting of the Monetary Policy Committee (MPC) is taking place, there is little expectation that the Committee would seek to compound the problems of domestic economic agents by raising the cost of money.

Consequently, a status quo on the repo rate is the broad market consensus. This time around, however, the Statement on Developmental and Regulatory Policies — issued alongside the MPC decision — may prove more consequential.

Transmission of policy rates will continue to remain a key issue. The RBI's assessment of how effectively reductions in the repo rate have been transmitted to deposit and lending rates will be watched. Yet there is another dimension of transmission that receives less attention.

The largest borrower in the country is not a corporate house, nor the household sector. It is the Government of India. State governments, taken together, constitute another large borrowing segment.

Against incremental credit absorption (growth) of about ₹30 lakh crore in FY 2025-26, the combined net market borrowings of the Centre and the States in the same period were around ₹26 lakh crore.

In other words, governments borrow almost as much as the entire non-government sector. More importantly, the Government of India is by far the single largest borrower in the market, dwarfing every corporate borrower. In FY 2025-26, the Centre borrowed approximately ₹11.5 lakh crore and the largest corporate loan would probably not have exceeded ₹25,000 crore.

Given this reality, should monetary transmission not also be assessed by its impact on sovereign borrowing costs?

Over the recent period, the repo rate has been reduced by 125 basis points. The benefit of this reduction has flowed, in varying degrees, to different segments of borrowers. Yet the benchmark yield in the government securities market is currently around 7 per cent, compared with about 6.30 per cent a year ago. Thus, even as the central bank's policy rate has moved down, governments have found themselves paying more.

Public discussion on monetary policy generally centres on the borrowing costs of housing loans, vehicle loans, personal loans, and MSME credit. Transmission is deemed successful if banks pass on repo rate cuts to these sectors. As for large corporates, their professional treasury managers negotiate aggressively and borrow at the most competitive rates available.

> A divergence of 100 basis points between the repo rate and the G-sec yield can translate into an additional interest burden of nearly ₹28,000 crore on government borrowings

The more fundamental question is this: if monetary easing does not reduce the risk-free benchmark rate in the economy, can transmission really be regarded as complete? And if not, should this issue not invite greater policy attention? The RBI is not merely the monetary authority; it is also the debt manager for both the Union and State governments.

INTEREST BURDEN

The fiscal impact is material. More than one-fourth of the Union Government's expenditure is devoted to servicing debt. In the Union Budget for FY 2026-27, interest payments alone are estimated at about ₹14 lakh crore out of a total budget size of ₹53 lakh crore. State governments collectively would have a comparable interest burden.

A divergence of 100 basis points between the movement in the repo rate and the G-sec yield can translate into an additional interest burden of nearly ₹28,000 crore on government borrowings. For many States, even a difference of ₹1,000 crore in borrowing costs can materially affect fiscal planning.

On the ground, almost every category of borrower has vocal advocates who raise concerns about the cost of credit. Governments, however, appear to have no such constituency. One cannot expect politicians or ministers to focus on the finer points of sovereign yield movements. But public finance managers would certainly know that while the overall cost of debt and capital has declined, governments have not enjoyed a similar benefit. (For government, read the people.)

There is, of course, merit in the argument that inflation expectations, fiscal deficits and global bond market movements influence sovereign yields. Markets may have entirely valid reasons for keeping long-term government bond yields elevated despite policy easing. Yet the asymmetry in transmission remains striking. When banks fail to transmit repo rate reductions, it is viewed as a policy failure. When sovereign yields fail to respond — or move in the opposite direction — it is accepted as a market outcome.

As India's public debt and borrowing requirements continue to grow, perhaps the concept and coverage of monetary transmission deserves a relook. A textual approach would be to assess that inflation is the sole parameter for assessing monetary policy effectiveness, not even transmission. But, should the success of regulatory moves not also be judged by the behaviour of the sovereign yield curve, given its impact on public debt?

Aquifer management, key to addressing water stress

Priyanka Vadrevu

From drying borewells in peninsular India to falling water tables across the Indo-Gangetic plains, groundwater, the country's invisible lifeline, is under severe stress. Yet, paradoxically, it remains one of the least governed resources. In this context, aquifer-based participatory water management offers not just a technical solution, but a transformative shift in how India understands and governs water. Increasingly, this shift also aligns with global sustainability priorities, particularly the Sustainable Development Goals (SDGs), which emphasise integrated, inclusive, and ecologically grounded water management.

At its core, aquifer-based participatory water management rests on a simple but powerful idea: groundwater must be managed where it actually exists 'in aquifers' and by the people who depend on it. Unlike rivers or lakes, aquifers do not follow administrative boundaries. They are geological formations, often shared across villages and districts. Managing them through fragmented policies or individual extraction decisions has led to overuse, inequity, and ecological decline. Recent global sustainability assessments reinforce that such fragmentation is one of the primary reasons water governance continues to fall short of SDG targets on efficiency, sustainability, and ecosystem protection.

COMMON POOL RESOURCE

The participatory dimension is equally crucial. Groundwater in India is effectively a common pool resource, accessed through millions of private wells. Regulatory approaches alone have proven inadequate in such a decentralised landscape. Instead, involving communities in understanding aquifer behaviour, monitoring water levels, and making collective decisions on usage introduces both accountability and sustainability.

For decades after Independence, water policy focused largely on supply-side interventions — dams, canals, and later, the proliferation of borewells. Groundwater extraction grew rapidly, aided by subsidised electricity and advances in drilling technology. However, the ecological limits of this model became evident by the 1990s, as over-extraction began to outpace natural recharge. Such unsustainable extraction patterns are contributing not only to local water stress but also to broader environmental risks, including land degradation, ecosystem collapse, and even alterations in regional hydrological cycles.

GROUNDWATER. Rapid growth in use

In the early 2000s, a paradigm shift began to take shape. Initiatives such as the Andhra Pradesh Farmer Managed Groundwater Systems demonstrated that when farmers are equipped with basic hydrogeological knowledge and data, they can make informed decisions, adjusting cropping patterns, reducing water-intensive practices, and collectively managing extraction. These experiments challenged the assumption that groundwater governance must be top-down.

Over the past decade, large-scale programmes have sought to map aquifers scientifically and integrate community participation into groundwater management. The emphasis has moved from merely augmenting supply to balancing demand with available resources — through water budgeting, crop planning, and local governance mechanisms.

The spread of such practices across States like Maharashtra, Gujarat, Rajasthan, and Karnataka underscores both their adaptability and effectiveness. In several villages, communities have voluntarily adopted water-sharing norms, shifted to less water-intensive crops, and invested in recharge structures. These are not isolated success stories, but indicators of a broader shift in thinking.

However, the path ahead is not without challenges. A significant portion of India's aquifers remains inadequately mapped. Hydrogeological knowledge is still limited at the community level. Institutional fragmentation continues to hinder coordinated action, with multiple agencies operating in silos. Economic incentives, such as free or subsidised electricity, often encourage excessive extraction. Without addressing these structural issues, participatory approaches may struggle to scale.

Yet, the future remains promising. Advances in technology, from remote sensing to real-time monitoring, are making aquifer data more accessible. Policy frameworks need to integrate groundwater management with broader efforts in watershed development, agriculture, and climate adaptation.

Vanaspati imports from Sri Lanka through Nafed

In a bid to regulate inflow of cheap Sri Lankan-origin vanaspati into the country through the Free Trade Agreement (FTA) route, the Government has appointed the National Agricultural Cooperative Marketing Federation of India (Nafed) as the canalising agency for undertaking these imports. Currently, the FTA implemented since March 2000 allows vanaspati imports of up to 2.5 lakh tonnes (lt) annually from Sri Lanka at zero duty.

LIC may not enter health insurance

The LIC of India is having second thoughts about its proposed health insurance venture. According to Mr TS Vijayan, Chairman, LIC, the corporation will not enter the segment unless it has the right business model.

Tata Power may join Tata Steel for coal mining

Tata Power is planning to forge a tie-up with Tata Steel Ltd for coal mining. The company, which has applied for acquiring coal blocks at sites in Jharkhand and Orissa, plans to invest around ₹18,000 crore to augment generation capacity by over 4,000 MW through coal-based projects. It plans to set up at least four coal power projects in the next five years.

QUICKLY.

US stocks record rally takes a breather

US stocks main indexes retreated on Wednesday after a run of record highs, while a fresh West Asia flare-up pushed oil prices higher and cast doubts over a quick end to the war. Stocks and sectors that led gains in recent days logged the steepest declines. Software stocks shed 3.1 per cent following a sharp rebound, while Datadog, Palo Alto and IBM fell between 6.7 per cent and 7.7 per cent. Four of the 11 S&P 500 sectors were in the red, with the tech index leading the declines. At 10:03 am ET, the Dow Jones fell 0.54 per cent, the S&P 500 lost 0.36 per cent and the Nasdaq slipped 0.50 per cent. REUTERS

SEBI issues administrative warning to ICICI Pru AMC

Mumbai: SEBI has issued an administrative warning to ICICI Prudential Asset Management Company on the back of a complaint registered by an investor. In an exchange filing, the fund house disclosed that an investor in ICICI Prudential Strategic Alpha Fund, an alternative investment fund (AIF) managed by it, complained that the AMC had failed to verify the eligibility of investors to invest in the AIF on time. Pursuant to review of a complaint from an investor, SEBI observed a procedural delay in verifying the investor's eligibility to invest in one of the schemes under the AIF. The amount was refunded later upon carrying out the necessary checks, along with an additional amount as compensation, it added. OUR BUREAU

Sensex, Nifty trim losses swiftly as banks offset IT stocks rout

KEY TRIGGER. Expectation that govt will soon announce some relief in LTCG tax boosted sentiment

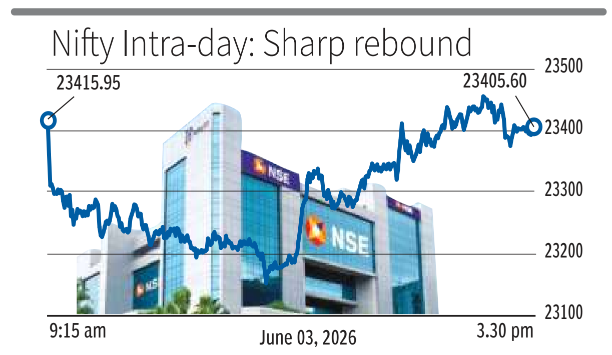
Madhu Balaji
Bengaluru

Equity benchmarks reversed sharp early losses but still ended lower on Wednesday as buying in banking and financial stocks helped the markets recover from intra-day lows, even as persistent weakness in IT shares continued to weigh on sentiment. Besides, expectations that the government may soon announce relief in LTCG tax to boost foreign capital inflows and stop outflows also boosted sentiment.

Concerns around geopolitical tensions, elevated crude oil prices, foreign fund outflows and fears of AI-led disruption in the technology sector kept investors cautious, while near-term market direction is expected to hinge on the RBI policy outcome, crude oil movement and global developments.

The BSE Sensex ended 303.67 points lower at 74,346.17 (recovering from the day's low of 73,492.60). NSE Nifty 50 settled 77.95 points lower at 23,405.60, hitting a low of 23,151.50.

Vinod Nair, Head of Research at Geojit Investments, said investors remained cautious ahead of the RBI policy decision and GDP data. He said developments in India-US negotiations and geopolitical uncertainties are likely to dictate near-term market direction.



The benchmarks remained weak through the first half of the session; however, strong buying interest emerged at lower levels during the second half, helping them recover sharply.

The rebound was led by banking and financial stocks, where domestic institutional investors stepped in aggressively.

The volatility index was up 6 per cent. The broader market also mirrored the benchmark recovery. Mid-cap and small-cap indices also rebounded strongly from intra-day lows. The Nifty Midcap 100 slipped 0.42 per cent and the Nifty Smallcap 100 dipped 0.11 per cent. THe Nifty Smallcap 250 outperformed and closed flat.

IT SLUMPS 5.5%

On the sectoral front, Nifty PSU Bank emerged as the top-performing index, followed by Nifty Private Bank. Meanwhile, Nifty IT remained under heavy pressure throughout the session, declining 5.5 per cent and ending as the worst-performing sectoral index. Nifty Realty also closed among the top laggards. The sharp decline in IT stocks came after a strong rally over the previous three sessions, triggering significant profit-booking across the sector.

The market breadth remained weak. A total of 298 stocks out of the Nifty 500 universe ended in the red.

SEBI flags ₹15.15 lakh cr revenue distortion by Rajesh Exports

Our Bureau
Mumbai

The Securities and Exchange Board of India has restrained Rajesh Mehta, promoter and Executive Chairman of Rajesh Exports Ltd, from buying, selling or dealing in the company's securities after a probe found prima facie evidence of largescale financial misrepresentation, disclosure failures and diversion of company funds.

The regulator estimated that Rajesh Exports had "*prima facie* misrepresented approximately ₹15,15,385 crore" of revenue attributable to subsidiaries between FY21 and FY25, representing nearly 99.8 per cent of such revenues attributed to overseas subsidiaries and step-down subsidiaries.

"The aforesaid conduct appears to have prima facie enabled REL to portray an inflated and misleading picture of its operational scale, consolidated financial position and financial health before investors and the securities market", the 109-page order said.

INCONSISTENCIES

SEBI also found significant inconsistencies between the revenues reported at the consolidated level and the audited financial statements of key operating subsidiary Valcambi SA.

It found misrepresentation of stand-alone revenues amounting to ₹12,557 crore during FY21-FY24.

INTERIM ORDER

- Restrains Rajesh Mehta, promoter and Executive Chairman of Rajesh Exports, from buying & selling company's shares
- Orders appointment of a fresh forensic auditor to examine the company's books

SEBI further alleged that REL falsely recorded derivative transactions executed by Mehta in his personal capacity as company sales of ₹11,487 crore and purchases of ₹11,488 crore, classified exchange fluctuations of ₹867 crore and ₹716 crore as revenue and purchases respectively, and booked ₹204 crore of interest income from mutual funds and fixed deposits as revenue from operations. SEBI has directed REL and Mehta to cooperate with the ongoing investigation.

FORENSIC AUDIT

SEBI has ordered the appointment of a fresh forensic auditor to examine the company's books. It also directed the company to make true and fair disclosures to investors and forwarded a copy of the order to the National Financial Reporting Authority for appropriate action.

The action stems from an investigation launched after a shareholder complaint in March 2024 alleging possible financial misrepresentation relating to long-outstanding trade receivables. SEBI's probe covered between April 2020 and March 2025.

It alleged that REL failed to provide critical records to investigators and forensic auditors, including access to its ERP system, books of accounts and transaction-level data.

REL also did not furnish financial statements of key overseas subsidiaries and step-down subsidiaries that account for the bulk of its consolidated business.

The regulator observed that investors may have been presented with an inflated picture of the group's operational scale and financial position. The interim order will remain in force pending further investigation.

West Asia war slows MF growth in GIFT City

Weak dollar returns from Indian equities and geopolitical uncertainty have tempered investor enthusiasm

Suresh P Iyengar
Avinash Nair
Mumbai/Ahmedabad

GIFT City's promise as a two-way investment gateway is facing an early reality check. While a few inbound and outbound funds have made cross-border investing easier than ever, weak dollar returns from Indian equities and geopolitical uncertainty have tempered investor enthusiasm, slowing the flow of capital through the financial hub.

For global investors looking to put money into India, the process is a breeze through GIFT City. New retail funds such as the Tata Dynamic Equity Fund have dropped entry limits to just $500. Other MF schemes in GIFT City include the DSP Global Equity Fund (outbound), Edelweiss Greater China Equity Fund (outbound) and Sundaram India Mid Cap Fund (inbound). PPFAS Asset Management has launched two outbound passive funds — The Parag Parikh IFSC S&P 500 FoF and IFSC Nasdaq 100 FoF.

Tata India Dynamic Fund has an asset under management of $2.97 million as of Feb-end.

However, low return has made Indian markets unattractive for global investors. In dollar terms, the Nifty and Sensex have delivered a negative return of 5 per cent and 6 per cent in last one year, while returns from individual stocks of these indices have plunged 16 per cent.

For Indian residents, GIFT City has become a vital route for investing abroad particularly after the most popular avenue through MF schemes was shut.

LRS ROUTE

GIFT City outbound funds bypass this bottleneck entirely, allowing locals to use Liberalised Remittance Scheme quota of $250,000 to buy into global markets.

Hema Thakkar, Head-Business Development, Parag Parikh Financial Advisory Services, said the Indian markets have been flat for the last one-and-a-half years while Nasdaq and S&P have registered strong growth supported by companies with better long-term prospects.

Akshat Garg, AVP Research & Product, Choice Wealth, said despite clear demand, everyday adoption is still in its early stages. On the outbound side, the current minimum ticket size of about $5,000 positions this as a product built for the serious, informed investor, a deliberate and structured entry point for a cross-border product of this nature, he said. Moreover, the upfront Tax Collected at Source (TCS) on foreign remittances temporarily locks up investor liquidity and a basic lack of public awareness keeps the market small, he said.

Saurabh Jain, Head of Fundamental Research, SMC Global Securities, said the mutual fund schemes launched through GIFT City may face initial challenges in attracting large global investor inflows, as overseas investors already have multiple established avenues to invest in India.

However, favourable tax benefits and regulatory support could improve adoption over time, he said.

Dubai-based Apparel Group mulls taking India business public

Bloomberg

Dubai-based fashion and lifestyle retailer Apparel Group is considering an initial public offering for its Indian unit in Mumbai, according to people familiar with the matter.

The company, which operates brands such as Victoria's Secret, Aldo and Crocs in India, has held preliminary discussions with bankers to gauge market sentiment for Apparel Group India Pvt's potential share sale, the people said, asking not to be identified because the information is private.

While the valuation and the IPO size are yet to be decided, banker appointments are expected soon, the people said. The offering could take place later this year or in early 2027, they added. Deliberations are ongoing and details, including the timing of the offering, could still change, the people said.

LISTING PLANS. The IPO could take place later this year or in early 2027, according to sources

A representative for the Apparel Group did not immediately respond to a request for comment.

INDIA OPERATION

Apparel Group India operates over 300 stores in more than 50 cities in the country and manages more than 20 brands, according to its website.

Its portfolio includes Charles & Keith, Dolce & Gabbana Beauty, Levi's Kids, Tim Hortons, Inglot, Call It Spring, Nike Littles and Jordan Kids.

Right Horizons launches AIF targeting ₹200 cr

Our Bureau
Chennai

Right Horizons Portfolio Management Pvt Ltd, a Bengaluru-based investment manager, has launched the RH Rising India Opportunities AIF, a closed-ended Category III Alternative Investment Fund targeting ₹100 crore. The AIF also has green-shoe option aiming for another ₹100 crore.

The fund is open to resident Indians, NRIs, HNIs, corporates and institutional investors with a minimum commitment of ₹1 crore.

The AIF will focus on small- and mid-cap (SMID) initially through a multi-cap strategy while large-cap allocations will also be part of the portfolio, giving the fund the flexibility to de-risk during volatile periods.

Right Horizons Portfolio Management Pvt Ltd currently manages over ₹3,000 crore in group assets under management.

Kotak Alts $1 b real estate fund attracts ADIA, NPS Korea

Our Bureau
Mumbai

Kotak Alternate Asset Managers, the alternative assets arm of the Kotak Group, has achieved the final close of its 14th real estate fund at approximately $1 billion.

The fund is backed by a major anchor commitment from a wholly owned subsidiary of the Abu Dhabi Investment Authority (ADIA) and marks the maiden investment from Indian alternatives by the National Pension Service of the Republic of Korea (NPS Korea).

ADIA's anchor commitment of over $675 million represents its sixth consecutive commitment to Kotak Alts' real estate platform.

KOREA'S MAIDEN ENTRY

Spanning more than a decade, this enduring relationship underscores the global investor's continued confidence in Kotak's underwriting discipline and consistent returns across market cycles.

Managing more than $1 trillion globally, NPS Korea's first-ever commitment to Indian alternative assets highlights the growing maturity of India's institutional market and the global standing of Kotak's investment franchise, Kotak Alts said.

The real estate fund will target residential developments, commercial projects and other specialised real estate sectors in major Indian cities.

"NPS Korea's maiden Indian alternatives commitment to our platform for an India dedicated strategy in these volatile times is an equally powerful validation," said Srini Sriniwasan, MD, Kotak Alts.

Vikas Chimakurthy, CEO of Kotak Alts (Real Estate Fund), added that the fund builds on the institutional memory and deep learnings gathered across 13 prior fund vintages. Since its inception in 2005, Kotak Alts has raised, managed and advised over $22 billion across various asset classes.

BROKER'S CALL.

Elara Securities

NBCC (BUY)
Target: ₹165
CMP: ₹102.20

NBCC continues to strengthen its position in redevelopment and PMC-led projects, with a growing pipeline of self-sustainable redevelopment mandates across Maharashtra, Nagpur, Jammu and Kashmir, and Delhi. Funding approvals, loan sanctions and regulatory clearances across key projects such as MAHAPREIT, Nagpur redevelopment and Supertech have improved execution visibility, while large redevelopment clusters are progressively moving into the tendering and contractor award phase.

NBCC reported a stable Q4FY26, with consolidated revenue of ₹4,560 crore as growth in the PMC business was offset by subdued performance in real estate and EPC. The management guided for FY27 consolidated revenue of about ₹18,000 crore and PAT of about ₹1,100 crore.

The company has a robust ₹1.3-lakh crore order-book, and appears well positioned for a sustained acceleration in execution, revenue growth and order-book monetisation over FY27-29. The management's outlook is positive but we build in conservative revenue and earnings CAGR in FY26-29 at 16 per cent and 19 per cent to factor in delays in project approval. Hence, we lower earnings estimates by 14 per cent for FY27E and by 12 per cent for FY28E due to slower ramp-up across redevelopment projects than previously anticipated. We reiterate Buy with SOTP-TP of ₹165 (unchanged) on 40x FY28E P/E for the PMC business and inventory of owned landbank on NAV.

IDBI Capital

BRIGADE HOTEL VENTURES (BUY)
Target: ₹86
CMP: ₹61.46

We initiate coverage on Brigade Hotel Ventures (BHVL) with a Buy rating and TP of ₹86, valuing it at 14x EV/EBITDA on FY28E. BHVL has a portfolio of nine operating hotels with 1,604 keys at the end of FY26. We like BHVL considering: its strong foothold in key Southern markets; active asset management, which will drive operational efficiencies; strong parentage of Brigade Group; aggressive expansion plan in high growth markets; and lucrative valuation at current level. We forecast net sales/EBITDA CAGR of 22.8 per cent/28.3 per cent over FY26-28E and we believe the long-term growth is more promising, given that a majority of the new assets (commanding higher ADR and operating margin) would be operational by end of FY30E. BHVL is a subsidiary of Brigade Enterprises (BEL), which is one of the leading real estate developers in India. This allows the company to benefit from BEL's brand reputation and leverage its network, relationships, businesses and credibility that helps it to be a trusted provider of hospitality services. With nine existing hotels, it is the second-largest owner of chain-affiliated hotels in South India and the company's hotels are operated by global marquee hospitality companies such as Marriott, Accor and InterContinental Hotels Group.

Further, the company plans to double the inventory to 18 hotels about 3,300 keys over FY26-30E. We believe this bodes well for net sales growth as well as margin improvement over mid-long term horizon.

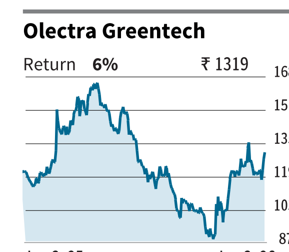
TODAY'S PICK.

Olectra Greentech (₹1,319.70): BUY

Akhil Nallamuthu
bl. research bureau



The stock of Olectra Greentech has been rallying since mid-March after it found support at ₹878. After witnessing a price correction recently, the stock now shows that the bulls are regaining traction. Notably, last week, the scrip rebounded from the 50-day moving average at ₹1,187 and has now moved above a key resistance at ₹1,260, opening the door for a further rally. That said, there might be a minor decline, possibly to ₹1,260, before the stock sees the next upswing. We expect the price to rise to ₹1,530 in the near term.

Therefore, traders can consider buying Olectra Greentech now at ₹1,319 and accumulate if the price dips to ₹1,260. Place stop-loss at ₹1,160. When the price touches ₹1,400 and ₹1,475, alter the stop-loss to ₹1,320 and ₹1,420 respectively. Exit at ₹1,530.

Note: The recommendations are based on technical analysis. There is a risk of loss in trading

Bajaj tops May e3W market as EV sales surge 96% y-o-y

POWER MODE. The firm sold 11,639 electric 3-wheelers during the month: Vahan data

Amit Vijay Mohile
Mumbai

Bajaj Auto emerged as India's largest electric three-wheeler player in May 2026 as EV retail sales surged 96 per cent year-on-year (y-o-y) even though the broader three-wheeler industry remained flat sequentially, according to Vahan data.

Electric vehicles accounted for 46.6 per cent of total three-wheeler retail sales during the month, while ICE volumes continued to decline.

India's three-wheeler market is increasingly being reshaped by electrification rather than fresh demand growth, with Bajaj Auto overtaking Mahindra Last Mile Mobility to emerge as the country's largest electric three-wheeler player in May 2026. Vahan data showed Bajaj sold 11,639 electric three-wheelers during the month, marginally ahead of Mahindra Last Mile Mobility's 10,709 units.

E3W FRONTRUNNER. In contrast, internal combustion engine (ICE) three-wheeler sales declined 4.5 per cent y-o-y and 11.8 per cent m-o-m to 39,650 units REUTERS

The broader three-wheeler industry, however, showed signs of stalling, with total retail sales standing at 74,221 units in May 2026, almost unchanged from 74,211 units in April.

Within that flat market, electric three-wheeler sales surged 96.3 per cent y-o-y and 18.1 per cent sequentially to 34,571 units, while ICE sales fell 4.5 per cent y-o-y and 11.8 per cent month-on-month (m-o-m) to 39,650 units, according to Vahan data.

In contrast, ICE three-wheeler sales declined 4.5 per cent y-o-y and 11.8 per cent m-o-m to 39,650 units, signalling that EVs are now beginning to cannibalise conventional fuel-powered volumes in absolute terms rather than merely contributing incremental growth.

EV ADOPTION

Industry executives said improving operating economics and rising fuel costs are accelerating EV adoption across commercial mobility applications, particularly in three-wheelers, where vehicles operate at high daily utilisation.

"The rising demand for EVs across two-wheelers, three-wheelers, and four-wheelers is a clear indicator that clean mobility is becoming mainstream in India," said Uday Narang, Founder and Chairman of Omega Seiki Mobility (OSM).

Omega Seiki Mobility retailed 1,264 electric three-wheelers in May 2026, up 16.4 per cent from 1,086 units in April and 58.8 per cent higher than 796 units sold in May 2025, according to Vahan data.

TVS Motor also sharply expanded its electric presence, with sales more than doubling year-on-year to 3,590 units. Electric vehicles now account for over 60 per cent of the company's three-wheeler retail volumes.

Piaggio, one of the more ICE-heavy players in the segment, continued to face pressure with ICE retail sales falling to 6,495 units in May from 7,260 units in April, while EV volumes remained relatively small at 1,251 units.

The latest numbers indicate India's three-wheeler market is approaching a key inflection point where EVs could soon rival ICE vehicles in overall monthly retail sales.

Tata Motors to use Chery-made platform for Avinya premium EVs

Amit Vijay Mohile
Mumbai

Tata Motors will use the Freelander platform produced by Chery Jaguar Land Rover (CJLR) for its upcoming Avinya premium electric vehicles (EVs), marking a strategic shift in its EV roadmap as competition intensifies in India's fast-growing electric passenger vehicle market.

Reuters reported that Tata Motors had turned to a Chery-linked platform after earlier plans tied to Jaguar Land Rover's electrified modular architecture (EMA) were shelved.

Confirming the development, Tata Motors said the first Avinya vehicle, scheduled for launch in India in 2027, will leverage the Freelander platform produced by CJLR and will be manufactured at the company's recently-opened Tata Motors Passenger Vehicles-JLR facility at Panapakkam in Tamil Nadu.

The move comes as Tata Motors seeks to accelerate its premium EV programme amid rising competition from Mahindra & Mahindra, JSW MG Motor and other auto-makers.

The move comes as Tata Motors faces rising competition from other auto-makers REUTERS

The revised plan also confirms Tata Motors had reworked its Avinya strategy after JLR's EMA-linked India plans were dropped. Company officials, however, clarified that Chery "will act as a supplier of platforms for Avinya" and added that "there is no licensing or technology transfer being done".

CHINA LINK SCRUTINY

The clarification comes at a time when Indian auto-makers are facing increasing scrutiny over reliance on China-linked EV ecosystems for platforms, electronics and battery technologies, even as New Delhi pushes localisation and supply-chain self-reliance.

"Avinya is being developed as a global premium brand for a next-generation EV portfolio to be built on multiple, scalable platforms and architectures while being anchored in Tata Motors' design, engineering and integration capabilities," the company said.

The auto-maker added that its collaboration with JLR and its partners would form "an important pillar" of its premium EV strategy, while allowing it to leverage the broader Tata Motors Passenger Vehicles Group ecosystem. While Tata Motors confirmed use of the Freelander platform and production at the Tamil Nadu facility, the company did not comment on whether or not initial vehicles will arrive as kits for assembly in India, or specify localisation targets for the programme.

"Avinya's design and development will harness the global strength of the Tata Motors PV Group ecosystem, with production in India reinforcing our commitment to building competitive domestic capabilities alongside globally benchmarked vehicles," the company said.

Suzlon to infuse ₹2,500 cr by FY31 to scale up

Avinash Nair
Mumbai

Suzlon Group on Wednesday unveiled its five-year 'Suzlon 2.0' roadmap, outlining plans to invest ₹2,500 crore by FY31 to expand annual renewable energy equipment sales four-fold to 10 GW, establish a 4 GW battery energy storage system (BESS) manufacturing facility in India, and build a 3 GW export business.

The company expects its order book to nearly triple from the current 5.5 GW to 15 GW by FY31, while scaling up its operations and maintenance portfolio from about 15 GW of assets under management (AUM) to 70 GW. Suzlon is also targeting a 40 per cent share of the domestic wind market from the current 33 per cent over the next five years.

Girish Tanti, Executive Vice Chairman, Suzlon Group

"Today, we are primarily a wind energy player. As we grow, we will be able to supply wind, solar and storage and we will also add a layer of energy management systems, which will be the intelligent layer both from a hardware and software point of view," Girish Tanti, Executive Vice Chairman, Suzlon Group, said during an interaction held in Mumbai.

Annual sales are expected to rise from about 2.5 GW currently to 10 GW by FY31, with wind continuing to account for around 70 per cent of the portfolio. Additionally, the company is targeting 3 GW of export orders and plans to strengthen its presence in markets abroad, where it is already present.

RE UMBRELLA

At the heart of Suzlon 2.0 is the company's transition from a pure-play wind turbine manufacturer to a broader renewable energy platform spanning project development, equipment manufacturing, energy management systems, storage integration and asset management. "Today, we are laying the foundation for moving from a pure-wind play to a renewables play and from a pure equipment supplier to a whole value-chain play across the renewable value chain," Tanti said.

The company plans to expand firm and dispatchable renewable energy (FDRE) projects, which combine wind, solar and storage to provide reliable clean power. Suzlon believes its existing wind project pipeline gives it a natural advantage in building such projects. "Good news is that most of the wind sites have the potential to be converted into FDRE. Solar sites cannot get converted, but almost all wind sites can be converted to FDRE," Tanti said.

Battery storage, however, will see direct investments from the company. "As far as BESS is concerned, we will start with an assembly system. It will be about ₹200 crore of investment initially," Tanti said, adding that the facility could eventually scale up to 4 GW.

Synology eyes doubling India business in 5 years

Rohan Das
Taipei

Synology, a Taiwanese provider of network-attached storage (NAS) devices and on-premise data management services, is looking to double its India business in the next 3-5 years driven by an increased focus on enterprise storage solutions.

Synology's NAS boxes allow enterprises, small businesses, and individual consumers to store data locally offering an alternative to cloud-based storage services.

Speaking to *businessline* on the sidelines of Computex 2026 Taipei, Andrew Huang, Regional Sales Manager, Synology, said the company had posted a 40 per cent compound annual revenue growth in India for the last five years.

Andrew Huang, Regional Sales Manager, Synology

"In India, we have a very strong presence among small businesses, consumers and power users. We now want to expand more to the enterprise segment. Over the past three years, we have actively been trying to build our way up to the enterprise market," he said.

Enterprise customers currently contribute 20-30 per cent of Synology's India revenue. Small and medium businesses still contribute a larger chunk of 50 per cent while the remainder comes from consumers and power users.

ENTERPRISE BIZ

Huang said Synology expects enterprise contribution to rise to around 50 per cent within three years. "In the short term, our priority is to expand our system integrator (SI) ecosystem for enterprise business with at least one strong SI partner in every State."

Government institutions, BFSI, manufacturing, healthcare and media & entertainment are among the company's largest enterprise verticals.

"SMB customers often have budget constraints and a standard NAS server will fulfil about 80 per cent of their needs. But for enterprises, the solutions have to be tailored. A media and entertainment company will require speed, but for a financial services company it could be security," Huang said.

He added that new government-mandated data regulations and an increased intent for data sovereignty and ownership, especially with the advent of AI, had increased the opportunity for on-device storage services.

Globally, Synology offers cybersecurity solutions where it builds hardware, software and storage solutions for CCTV cameras.

In India, Synology currently only offers surveillance data storage services given the regulations around CCTV products. He added that the company is exploring creating local manufacturing in India for CCTVs within the next three years.

The writer is in Taipei at the invitation of Synology

'Next phase of banking resilience is more about managing uncertainty'

Our Bureau
Mumbai

The next phase of banking resilience will be less about addressing known balance sheet stress and more about managing complexity and uncertainty, according to Swaminathan J, Deputy Governor, RBI.

"Recent years have shown that shocks can arise from very different sources: pandemics, geopolitical tensions, supply chain disruptions, commodity price volatility, cyber incidents or sudden shifts in market sentiment. The task, therefore, is not only to prepare banks for known risks, but also to make them adaptable to risks whose timing, form and transmission may be difficult to predict," Swaminathan said in his speech at the School of International and Public Affairs, Columbia University.

The Deputy Governor noted that retail credit, digital lending and microfinance have expanded access, but they also require careful underwriting, fair recovery practices and close monitoring of borrower leverage.

Technology can make banking faster, but it does not make it wiser.

AI, cyber risk, third-party dependencies, climate-related risks and financial interconnectedness will therefore require ongoing attention from banks and supervisors. "Banking resilience is not a fixed achievement. It is a continuing institutional project. It is built through discipline across the balance sheet and beyond, transparent recognition of stress, balance sheet strengthening, calibrated and adaptive regulation, and responsible conduct within banks," Swaminathan said.

Swaminathan J, Deputy Governor, RBI

He observed that strong banks require capital and technology, but they also require judgment, governance, accountability and institutions that learn.

"Resilience is not only about withstanding the last shock, but about building the capacity to respond well to the next one," he said.

He underscored that there are five dimensions of resilience by design: transparent recognition of stress, balance sheet strengthening, stronger supervision, calibrated and adaptive regulation, and resilience within banks themselves.

RISK APPETITE

Swaminathan highlighted that risk has a habit of building quietly in good times and introducing itself loudly when conditions change.

Buffers, governance and risk discipline must be strengthened when growth is strong, asset quality appears comfortable, and risk appetite naturally rises, he added.

Margins of auto parts sector to moderate by 10.5-11% amid W. Asia crisis: Crisil

Our Bureau
Chennai

Operating margins of the auto component sector are expected to moderate by 100-150 basis points this fiscal, from around 12 per cent last year, with the West Asia conflict driving up input prices and freight costs across domestic and overseas markets. Revenue growth, however, is expected to remain resilient, according to a Crisil Ratings report.

Demand from original equipment manufacturers (OEMs), the largest contributor to the sector's revenues, is expected to remain steady, providing underlying support for this revenue momentum. Further, balance sheets, though not debt-free, remain at moderate levels, adequate to fund capital expenditure (capex) and working capital needs.

An analysis of Crisil-rated auto component makers, which accounted for almost half the sector's revenue of ₹9 lakh crore last fiscal, indicates as much.

Last fiscal, OEMs generated over two-thirds of the sector's revenue, while exports and the after-market contributed 16 per cent and 12 per cent respectively.

COST STRESS

Raw materials constitute three-fourths of the sector's total cost. Notably, prices of steel and aluminium, which together account for 50-60 per cent of input costs, have risen sharply.

Anuj Sethi, Senior Director, Crisil Ratings, "Raw materials, employee expenses and power together account for 90 per cent of overall cost structure. Input and energy prices have risen, with minimum wage revisions across several States, adding further pressure. OEMs, accounting for over two-thirds of revenues, offer a cost pass-through, though with a lag of one to two quarters and not always in full, thus moderating operating margins by 100-150 bps to 10.5-11 per cent this fiscal. With revenue growth expected at 9-11 per cent, the impact on overall profitability is expected to remain contained."

Poonam Upadhyay, Director, Crisil Ratings, said, "Capex of auto component players rated by us is expected at ₹27,000 crore this fiscal, up 10 per cent on-year."

Precious metals slip on bets of higher rates

Gold prices dipped on Wednesday, weighed down by expectations that war-driven inflation will keep interest rates elevated. Spot gold fell 0.7 per cent to $4,452.09 per ounce by 1240 GMT. US gold futures slipped 0.9 per cent to $4,480.50. Silver fell 1.5 per cent to $73.98, platinum lost 1.4 per cent to $1,908.95, and palladium was down 2.3 per cent at $1,337.75. REUTERS

Copper retreats on fresh attacks in West Asia

London: Copper prices retreated after fresh hostilities in West Asia dampened hopes for an imminent resolution between Washington and Tehran and lifted the dollar, though the prospect of US tariffs helped limit losses. Benchmark three-month copper on the LME slipped 0.8 per cent to $13,930 a tonne. US Comex copper futures dropped 1.1 per cent to $6.60 per lb. REUTERS

Crude oil extends gains as hostilities flare up

London: Crude oil prices rose more than 2 per cent as hostilities in the Middle East erupted anew and talks between Tehran and Washington showed little progress. Brent futures were up $2.02 at $98.02 a barrel at 1209 GMT. US West Texas Intermediate crude climbed $2.06 to $95.82. US crude oil inventories fell for a seventh straight week last week, per American Petroleum Institute data. REUTERS

Central banks turned net buyers of gold in April

SHOWING THE WAY. Poland and China lead the purchase trend, but Russia continues to offload the yellow metal

Subramani Ra Mancombu
Chennai

After having been net sellers of gold in March, central banks turned net buyers of the precious metal in April, led by Poland and China, data from the World Gold Council (WGC) showed.

"Central banks resumed net gold purchases in April, having bought 17 tonnes. This was a rebound from the sizeable net sales reported in March," said Marissa Salim, Senior Research Lead, Asia Pacific (APAC), WGC.

However, the pace of accumulation of the yellow metal slowed in April.

According to Salim, Poland was the top buyer in the month, purchasing 14 tonnes.

China intensified buying to a 16-month high at 8 tonnes of net purchase.

It extended Beijing's current buying run to 18 consecutive months. The Czech Republic showed similar consistency in purchases, buying 3 tonnes in April — its 38th consecutive monthly purchase.

However, Russia continued its sales streak this month. It sold 6 tonnes. With this, it has sold 22 tonnes since January.

BUYING SPREE

The WGC data showed that the National Bank of Poland had purchased 45 tonnes since the beginning of the year.

Its gold reserves are currently at 595 tonnes, making up about 30 per cent of its total reserves.

In March, Polish President Karol Nawrocki and central bank governor Adam Glapinski had said that they would use the gold reserves to finance military expenditure. However, Finance Minister Andrzej Domanski ruled out such a move.

Central banks handling of gold

	(in tonnes)
Gross purchases	25
Gross sales	8
Net purchases	17
12-month average buys	21

Source: WGC

In China, official gold reserves now stand at 9 per cent of the total reserves or around 2,322 tonnes.

China has been consistently purchasing gold and has been one of the factors pushing up the prices of the yellow metal.

UZBEKISTAN SELLS

The Czech National Bank's modest but consistent purchases had led its gold reserves to rise to 79 tonnes or 6 per cent of its total reserves.

The WGC said Eastern European and Asian central banks continued to dominate with consistent purchases.

Over the past 36 months, both regions have purchased 12 tonnes and 11 tonnes per month, respectively, on average. Global central banks' activity shows average net purchases of 29 tonnes over the same period.

On the other hand, the Central Bank of Uzbekistan sold one tonne in April. However, it is a net purchaser year-to-date (24 tonnes) and second only to Poland.

Uzbekistan's reserves make up 88 per cent of its total reserves or around 414 tonnes.

The Central Bank of Russia, on the other hand, has been selling gold since the beginning of the year.

The Central Bank of the Republic of Turkiye, which was the top seller in March, reported its gold reserves flat in April. Weekly data showed that short-term gold/dollar swaps matured in April, leaving only longer-term (1-3 month) gold/dollar swaps outstanding.

IRAN WAR ENDS RALLY

The Turkish central bank sold gold in March to defend its currency, which dropped sharply against the dollar, and also for liquidity purposes. Overall, it has sold close to 80 tonnes so far this year.

Besides Russia and Turkiye, other countries that have sold gold are Azerbaijan and Kazakhstan.

Gold owes its glittering rally from 2024 to January 2026 to purchases by the central banks. Besides them, the precious metal soared due to hopes of a rate cut by the US Fed, geopolitical crisis, and trade disputes between the US and others, particularly China.

These developments saw gold emerge as a strategic investment asset.

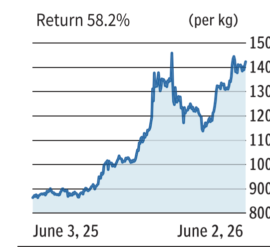
However, the outbreak of the Iran war has seen a total change in the outlook for gold.

The yellow metal, which soared to a high of $5,608 an ounce on January 29, has lost over 20 per cent since then. On Wednesday, it was quoted at $4,430 at 1915 hours IST.

The Iran war has stoked fears of inflation and a fall in global economic growth, particularly due to crude oil prices soaring to $100 a barrel. Investors have also switched over to the crude oil complex from gold following the surge in the fossil fuel prices.

COMMODITY CALL.

Retain longs in copper futures



Akhil Nallamuthu
bl. research bureau

Copper futures (₹1,385/kg), which have been trading flat recently, has now started showing signs of a resumption in uptrend.

June futures oscillated in the narrow range of ₹1,342-₹1,374 between May 18 and June 1. But on Tuesday (June 2), it broke out of the resistance at ₹1,374 and closed at ₹1,379.30.

The 21-day moving average, around ₹1,365, acted as a good base and aided in the breakout.

Also, the broader trend has been bullish.

So, the prevailing price action shows a good positive bias and we expect further upside in the forthcoming sessions.

The nearest resistance levels are at ₹1,430 and ₹1,450, which are likely to be tested soon.

However, if copper futures decline from the current level of ₹1,385 and slip below the support at ₹1,342, the downswing could extend to the support band of ₹1,320-₹1,300.

A breach of ₹1,300 could turn the outlook weak.

Nevertheless, as it stands, the outlook stays bullish.

TRADE STRATEGY

Retain the long position that we suggested at ₹1,362.

But revise the stop-loss from ₹1,320 to ₹1,330. Book profits at ₹1,430.

FTA with Oman to give a boost to livestock product exports

Our Bureau
Bengaluru

The India-Oman Free Trade Agreement is expected to give a boost to the export of farm products, including poultry and marine products, stakeholders said.

"The India-Oman Free Trade Agreement is a significant boost for India's agriculture, poultry, livestock and marine export sectors. By providing duty-free access for key products such as shrimp, fish, eggs and other food items, the agreement will make Indian exports more competitive in a strategically important Gulf market," said Divya Kumar Gulati, Chairman, Compound Livestock Feed Manufacturers Association of India (CLFMA).

UNTAPPED POTENTIAL. Oman imported marine products worth $35.3 million in 2025, while India's exports accounted for only about $10 million

SEAFOOD EXPORTS

"For the marine sector, the opportunity is particularly promising. India's seafood products are globally recognised for their quality, traceability and compliance with international food safety standards, making them highly sought after in global markets. Oman imported marine products worth $35.3 million in 2025, while India's exports accounted for only about $10 million, indicating substantial untapped potential," Gulati said.

"The grant of duty-free access to marine products provides Indian seafood exporters with a stronger platform to expand their presence in Oman and use it as a gateway to the wider Gulf region. This is expected to benefit exporters and coastal economies across Andhra Pradesh, Kerala, Tamil Nadu and Gujarat," he said.

EGG EXPORTS TO GAIN

Oman is one of the major markets for Indian poultry products, particularly eggs.

"Any removal of import duty on eggs will benefit Indian exports and make them competitive against other origins such as Iran and Turkiye," said Valsan Parameswaran, Secretary, All India Poultry Exporters Association. "There is a five per cent import duty on eggs, which is currently borne by importers in Oman," he said, adding that Indian exporters were also expecting Oman to issue more import permits for eggs.

Gulati said the agreement also reinforces India's position as a trusted food supplier to Oman.

AGRI IMPORTS

"India already accounts for 17.8 per cent of Oman's agricultural imports, over 94 per cent of its bovine meat imports and more than 98 per cent of its fresh egg imports. With agricultural exports to Oman reaching nearly $553 million in 2025, duty-free access will create new opportunities for farmers, poultry producers, food processors and agri-exporters, while driving higher export earnings, rural employment and value addition across the agricultural value chain," Gulati said.

"Overall, the FTA provides a timely opportunity to strengthen India's footprint in Gulf food markets, improve returns for producers and further establish the country as a reliable global supplier of high-quality agricultural and marine products," he added.

3 fortified rice brands unveiled at Uttar Pradesh workshop

Our Bureau
Mangaluru

Three fortified rice brands — Nutri Crown Fortified Rice by Shree Ram Foods, Nutri Pro Rice by VistaarX and Grainova Poshan Rice by Jain Industries — were unveiled at a workshop 'Unlocking market potential: Advancing fortified rice in Uttar Pradesh' in Lucknow on Tuesday.

Speaking at the launch of the brands, Satish Chandra Sharma, Uttar Pradesh Minister of State for Food, Civil Supplies and Consumer Affairs, said fortification is a practical and effective solution to address micronutrient deficiencies, particularly among vulnerable populations.

INCREASING ACCESS

Monojit Indra, Senior Practice Lead, TechnoServe and Program Lead, Millers for Nutrition Asia, said the launch of the brands represents an important evolution in India's fortification journey.

Monojit Indra (left), Senior Practice Lead, TechnoServe; Satish Chandra Sharma, Minister of State for Food, Civil Supplies and Consumer Affairs; and Abhishek Shukla, Country Project Manager, Millers for Nutrition, in Lucknow on Tuesday

While fortified rice has already demonstrated its value through public distribution, expanding availability through commercial markets can significantly increase consumer access to better nutrition.

Uttar Pradesh has emerged as a key State in advancing rice fortification, and it is encouraging to see local millers taking leadership in bringing fortified rice directly to the consumers, he said.

Abhishek Shukla, Country Program Manager, Millers for Nutrition India, said the introduction of these fortified rice brands demonstrates how millers can play a transformative role in improving nutrition while building sustainable businesses.

USHBC to host blueberry event in Mumbai on June 10

Our Bureau
Mangaluru

The US Highbush Blueberry Council (USHBC) will host 'Blueberries Go Big India 2026' in Mumbai on June 10.

The event will bring together leading chefs, food technologists, nutrition experts, importers, retailers, food service professionals and industry leaders to explore the growing opportunities for US blueberries in India. Chef Sanjeev Kapoor will launch the recipe book, *USA blueberries across the globe*, on the occasion.

A media statement said the book presents creative and practical ways to use US blueberries across global and Indian-inspired recipes, with applications suitable for home kitchens, chefs, bakeries, cafés, food service operators and food manufacturers.

FRUIT'S VERSATILITY

Quoting Raj Kapoor, India representative of USHBC and Managing Director, Assocom India Pvt Ltd, the statement said US blueberries were increasingly being explored in India not only as a premium fruit, but also as a versatile ingredient for food processing, culinary innovation, healthy snacking, bakery, dairy, beverages, mithai, desserts and food service applications.

SAMPLE PROGRAMME

Haiying Zhang, Director, Global Business Development, USHBC, and Nicole C Podesta, Senior Agricultural Attaché, US Consulate General, Mumbai/USDA, Foreign Agricultural Service, will address the event.

The programme will feature focused discussions on market opportunities, culinary concepts, nutrition, food processing applications, ingredient formats and new product development, the statement said.

The event will also witness the launch of the USA Blueberries Quality Sample Programme.

Kharif prospects & target 2026-27

The Union government has released crop production targets for 2026-27 across the kharif, rabi and zaid seasons. The kharif foodgrain target has been set marginally higher than the estimated 2025-26 output, although the rice production target has been reduced by 1.5 million tonnes (mt). In contrast, the rabi foodgrain target indicates a decline of nearly 3 mt, largely on account of lower maize production. After *businessline* reported on June 3 that the annual production target had been lowered from the previous year's actual output amid concerns over a deficient monsoon, the government has now released season-wise and State-wise crop production targets.

Coffee exports up 20% during April-May

Vishwanath Kulkarni
Bengaluru

Coffee exports rose by a fifth in the first two months of FY27, crossing $503 million during April-May, driven by robust demand from key European markets such as Italy and Germany.

According to the latest Coffee Board data, export volumes increased 36 per cent to 92,903 tonnes during April-May from 67,910 tonnes in the corresponding period last year.

In value terms, exports grew 20 per cent to $503.77 million from $418 million a year ago. In rupee terms, export earnings surged 33 per cent to ₹4,752 crore from ₹3,567.85 crore.

However, amid volatile global prices, exporters realised slightly lower returns. Per-tonne realisation declined 1.7 per cent to ₹5.16 lakh from ₹5.25 lakh a year ago.

India, the world's seventh-largest coffee producer and fifth-largest exporter, shipped 4.05 lakh tonnes worth over $2.12 billion in FY26. Export earnings stood at more than ₹18,809 crore, with average realisation of ₹4.64 lakh per tonne.

"Compared to last year, exports have been much better, especially in robusta and instant coffee. Last year, Indian coffee was priced at a steep premium for most of the year, prompting buyers to source from Uganda, Brazil and Vietnam. This year, however, coffee from other origins is also expensive. The weakening rupee has further aided exporters," said Praveen Kolimarla of Agrani Coffee and Commodities, a broker sourcing international orders for exporters.

Kolimarla said export growth could moderate in the coming months as the new Brazilian crop enters the market.

DEMAND OUTLOOK

Recently, the USDA's Mumbai office projected India's coffee exports for the 2026-27 marketing year, beginning October, to rise 3 per cent to 6.22 million bags of 60 kg each (about 3.73 lakh tonnes), supported by higher exportable surplus and strong demand for soluble coffee.

"The export growth is supported by firm demand from key markets, supply constraints in major producing countries and a shift towards higher-value varieties," the USDA Post said.

Iran war forces change in Persian Gulf's view on food systems

Subramani Ra Mancombu
Chennai

The Iran war, which has impacted West Asia, is fundamentally reshaping how governments, investors and citizens think about food systems in the Persian Gulf. It has reinforced a key learning for the organisations in the region that supply chains are not just efficient — they're resilient, say executives of food companies in the region.

The war led to the UAE, which imports 85-90 per cent of its food, facing a real-time stress test. Dubai, in particular, has responded in a way that surprised the global community. Food companies have turned to technology to help them tide over the current crisis.

"While challenging dynamics, we are grateful to say that our business has been incredibly resilient. We remain both ahead of the year-to-date plan and profitable, but with some margin compression and increased working capital demands," said Sky Kurtz, Founder and CEO of Pure Harvest.

MODEL'S ADVANTAGE

Pure Harvest serves as a formidable example of the importance of domestic and "friend-shored controlled-environment" agriculture production capabilities to de-risk the region's food system, he said.

"Like most food businesses in the region, we experienced some level of disruption, primarily in sourcing consistency, lead times and price volatility for imported produce," said Pravin Rai, CEO, QuickKart. "However, one of the advantages of our model is that we're not entirely dependent on long international supply chains. Because we've been actively building relationships with UAE-based farms and regional suppliers, we were able to offset some of that risk by shifting volumes locally where possible."

DEFYING THE ODDS. Dubai's response surprised the global community as food companies turned to technology to tide over the current crisis

The current situation is dynamic, he said, adding that freight costs, availability and supplier reliability continue to fluctuate.

Kurtz said the immediate impact was on the people, who understood the "critical" importance of work and how to respond.

"We sit within 'critical infrastructure' for food security/food system resilience, and everyone stepped up. Like many others (police, medical workers, etc.) we didn't miss a beat," said the CEO of Pure Harvest, a UAE-headquartered agtech company that operates high-tech, climate-controlled hydroponic greenhouses.

The geopolitical crisis impacted demand, and there was a shift from hotel, restaurants and catering to "food at home." Trade through online channels surged as people began eating at home or ordering groceries, he said.

Shivakumar takes oath as Karnataka CM, Parameshwara is Deputy CM

DEFT MOVE. 12 members sworn in as Cabinet ministers, balancing seniors, communities and castes

Aishwarya Kumar
Bengaluru

DK Shivakumar was sworn in as the 25th Chief Minister of Karnataka on Wednesday, with G Parameshwara taking oath as the Deputy Chief Minister.

Senior Congress leaders KH Muniyappa, KJ George and MB Patil were among the ministers inducted into the Cabinet. Shivakumar took the oath in the name of Veera Gangadhara Ajja, the deity he worships, and held a copy of the Constitution while taking the oath of office and secrecy.

CELEBRATION TIME. Chief Minister DK Shivakumar with Congress leader Rahul Gandhi

BALANCING ACT

In the first round of Cabinet formation, Shivakumar appears to have struck a balance across caste groups, regions, seniority and experience. Deputy Chief Minister Parameshwara, a prominent Dalit leader, took oath in the name of BR Ambedkar. Among the Ministers sworn in, Muniyappa and Priyank Kharge represent the Scheduled Castes, Patil and Eshwar Khandre are from the Lingayat community, Ramalinga Reddy represents the OBC community, Satish Jarkiholi the Scheduled Tribes, Krishna Byre Gowda the Vokkaliga community, while Yathindra Siddaramaiah and Byrathi Suresh are seen as representing the influential Kuruba community.

BK Hariprasad has been appointed as the Karnataka Pradesh Congress Committee (KPCC) chief. However, the absence of women ministers in the first list has drawn attention. "The Chief Minister has managed to strike a balance in terms of region, caste, seniority, new faces and experience in the Cabinet.

However, there is no representation for women, which is something to watch for in the next round of Cabinet expansion," said Sandeep Shastri, Director (Academics), Nitte Education Trust. Senior leaders present at the swearing-in ceremony included Mallikarjun Kharge, President of the Indian National Congress; Rahul Gandhi, Leader of the Opposition in the Lok Sabha; KC Venugopal, General Secretary of the All India Congress Committee (AICC); and Randeep Singh Surjewala, AICC General Secretary. Religious leaders were also present at the ceremony.

PM MODI GREETS

Taking to X, Prime Minister Narendra Modi congratulated Shivakumar on taking oath as the Chief Minister and said the Centre would work closely with the Karnataka government for the welfare of the people.

The new Chief Minister, popularly known as the "Kanakapura Bande," (Rock of Kanakapura) faces the challenge of steering the State towards the 2028 Assembly elections while addressing governance issues that had been overshadowed by prolonged political and power tussles within the state.

First seafood cargo under India-Oman CEPA flagged off from Chennai

Our Bureau
Chennai

In a significant boost to India's seafood exports, the first consignment of chilled fish destined for Oman under the India–Oman Comprehensive Economic Partnership Agreement (CEPA) was officially flagged off from the Chennai airport on June 1.

The consignment was exported by Aqua World Exports Pvt Ltd.

OMAN ROUTE

The agreement provides an immediate competitive edge to Indian exporters who will face zero import duties from 5 per cent, previously on major marine products such as shrimp, fish, and cuttlefish.

It also institutes a dedicated sanitary and phytosanitary (SPS) framework to fast-track Customs clearance for perishables, positioning Oman as a maritime gateway for re-exporting high-value seafood into the broader Gulf Cooperation Council (GCC) and East African markets, said a government release.

ADVANTAGE TN

Tamil Nadu stands out as a prime beneficiary of this landmark agreement with its coastline, modern fishing harbours and advanced processing infrastructure, the State has established a strong trade footprint with Oman, a PIB release said.

During 2024–25, Tamil Nadu exported 2,279 tonnes of seafood to Oman valued at ₹25 crore ($3.01 million), while provisional data for 2025–26 indicates an ongoing shift toward higher-value products with 647 tonnes exported at ₹17.35 crore ($1.93 million).

The agreement is expected to encourage seafood exporters in Tamil Nadu to expand production, invest in value-added processing, strengthen cold-chain logistics, and explore new product segments.

Updated MoSPI norms to peg DDP released

Press Trust of India
New Delhi

The Statistics Ministry on Wednesday said that it has released a uniform guideline for the compilation of district domestic product (DDP) estimates with base year 2022-23.

The National Statistics Office , Ministry of Statistics & Programme Implementation (MoSPI), has released the finalised "Guideline for Compilation of District Domestic Product (DDP) Estimates." It is available on the official website of MoSPI, it said.

Brands redesign smartphone features to offset increase in memory chip prices

SPECS DOWNGRADE. Cost trade-off reflected in adjusted quality of components, which often go unnoticed by customers

Vallari Sanzgiri
Mumbai

As memory chip costs surged 8-12 per cent in the first three months of 2026, brands opted to maintain smartphone prices by manipulating adjacent features in the latest models.

From pocket-friendly brands to the high-end labels, smartphone companies are struggling to meet memory chip cost inflation in the face of supply constraints. Entry and base segments have been hit hardest, with the steepest increases in the sub-₹20,000 segment where memory chip costs are proportionally highest.

To off-set these costs, brands like Xiaomi Redmi, Oppo and Realme have settled on the quality of camera resolution, display technology and weight for newer models while improving the quality of older models and increasing their prices. Individual brands also compromise other features such as audio quality, in-box add-ons and additional specifications such as water resistance.

Compromising on features

Specifications	Oppo		Realme		Xiaomi Redmi

TECH SLIDE

"This is a trade-off that happened even when 5G phones came about. Displays were downgraded to give masses 5G chips in their phone. Consumers have no choice, many do not even notice," said Faisal Kawoosa, Chief Analyst and Founder of Techarc.

On the flip side, he pointed out that brands also have to resort to price regressions during inflationary times.

Currently, 25-30 per cent of annual smartphone sales are expected to be affected if prices continue rising at the current pace, as per a joint study by Techarc and Trakin Tech. Moreover, 54 per cent of the demand that exists today is expected to not convert into a purchase this festive season.

The trend extends to high-end phones like iPhones as well. The bill of materials cost for iPhone 17e was estimated to have increased by 15.6 per cent compared to the Apple iPhone 16e, primarily driven by a sharp rise in memory chip pricing, as per Counterpoint Research in late April.

Yet to make matters worse, analysts estimate the price rise to continue in coming months.

SURGING PRICES

All the tweaks and pivots by companies can be attributed to the global NAND flash and DRAM memory chip costs that surged from November 2025, forcing OEMs to re-price across all tiers.

While brands with a longer view have managed to sail through the earlier months in 2026, the cost dilemma will worsen in the second quarter of calendar 2026, as per IDC.

"Q1 always has a cyclical dip in market demand since everyone waits for schemes and discount since we are an 'upgrader' market. However, brands and channel partners are now trying to explain to people that there is no need to defer purchases. Prices will not go back to the previous value," said Upasana Joshi, Senior Research Manager, IDC. In the face of such developments, companies are now convincing individuals that "now is the best time to buy a phone".

The cost and quality control by brands has done little to change minds. The Trakin-Techarc report highlighted how only 22 per cent of consumers in their survey said they would settle for less in terms of specs but 48 per cent said they would rather postpone the purchase until prices settle.

India shifting towards long-cycle of defence drone procurement

Rohit Vaid
New Delhi

The armed forces are preparing to move from emergency drone acquisitions towards larger and more structured procurement programmes, industry executives told *businessline*.

The move comes amid the scale-up of the indigenous manufacturing ecosystem.

Accordingly, industry executives indicated that upcoming procurement programmes for tactical drones, loitering munitions and other unmanned systems could collectively exceed $2 billion over the next 18 to 24 months, making them among the largest indigenous unmanned systems acquisitions undertaken so far.

On a strategic level, drones have become an indispensable part of modern warfare, as demonstrated in the Russia-Ukraine and US-Iran conflicts, due to their ability to strike targets deep inside enemy territories without being detected.

This tectonic shift in warfare has allowed nations with limited resources to use drones against larger, more advanced adversaries.

STRUCTURAL SHIFT

Speaking to *businessline*, Drone Federation India (DFI) President Smit Shah said the procurement cycle is the beginning of a structural shift in how drones are being procured by the Indian military.

"Over the last five to six years, the ecosystem has largely been driven by emergency acquisitions and relatively small orders aimed at meeting immediate operational requirements," he said.

According to Shah, the next phase appears to be moving towards larger, more sustained procurement programmes that provide long-term visibility to industry.

"This is important because defence manufacturing does not scale on one-off orders. Companies invest in production lines, supplier networks, engineering teams and component development when they can see a predictable pipeline of demand," he said. "Larger and recurring procurements can accelerate the maturation of India's defence drone industry in a way that emergency purchases alone cannot."

LARGE PROCUREMENT

Besides, he pointed out that the significance of largescale drone procurement extends beyond drone manufacturers themselves.

"As volumes increase, demand will flow across the broader supply chain, including payloads, communication systems, navigation technologies, propulsion systems, batteries and other critical subsystems," Shah said. "This could become one of the most consequential growth phases for India's unmanned systems ecosystem."

Meanwhile, the procurement push is also expected to have a broader industrial impact. At present, India's drone ecosystem has expanded rapidly over the last few years, with hundreds of companies now involved in manufacturing drones, subsystems and components.

Zoho, Uber among investors as ONDC secures ₹220 cr funding

Jyoti Banthia
Bengaluru

The Open Network for Digital Commerce (ONDC) has secured ₹220 crore in fresh funding from a consortium of investors, including Zoho, Uber, Paytm and BSE Technologies. This development, industry observers say, could strengthen the government's ambitious attempt to build an open alternative to dominant platforms.

The capital infusion comes at a time when ONDC is looking to regain momentum after a challenging few years marked by sluggish adoption and the exit of network participants from food and grocery delivery.

While the network was envisioned as a decentralised digital commerce infrastructure that would reduce the dominance of large platforms, it has struggled to achieve scale comparable to established players.

Experts say the latest fundraise is significant not merely because of the capital involved but also because of the strategic nature of the investors backing the network.

> **The participation** of Uber and Paytm could help drive greater engagement for the network

"The moment you have a technology player actually putting in money, it means a lot. It means the backbone of technology is going to grow deeper and wider," said Harish Bijoor, a business and brand strategy expert. "The current fundraise is definitely going to give ONDC a more meaningful character as a challenger."

The participation of ecosystem players such as Uber and Paytm could also help drive greater engagement with the network, analysts said. ONDC has been attempting to increase participation from both buyers and sellers while simultaneously improving the overall user experience. Despite its promise, ONDC continues to face significant hurdles.

Lloyd Mathias, independent director, angel investor and business strategist, said the network has yet to establish itself as a serious alternative to established e-commerce platforms.

LIMITED TRACTION

"They've been around for four years, but they haven't gained enough traction to really emerge as an option to the established players," Mathias said.

According to him, ONDC's biggest challenge has been creating the network effects required to sustain growth. "The biggest issue was that not enough customers got onto the platform because not enough sellers were on the platform, and the customer experience was not seamless," he said.

Experts caution, however, that funding alone will not be enough. ONDC will need to improve customer experience, increase awareness about how the network works and identify categories where it can differentiate itself from entrenched competitors.

Hind Unilever sharpens premium bet, AI focus in chase for faster growth

Our Bureau
Mumbai

Hindustan Unilever Ltd (HUL) is sharpening its focus on premium products, artificial intelligence-led operations and targeted investments in high-growth categories as it seeks to accelerate volume-led growth amid an improving consumption environment, Chief Executive Officer and Managing Director Priya Nair said in her first annual letter to shareholders.

Expressing confidence in India's long-term consumption story, Nair said the FMCG major had entered the new financial year with "sharper strategic clarity, stronger fundamentals and a clear conviction in the direction we are taking", even as the broader operating environment remains dynamic.

CLEAR CONVICTION. The firm said it was entering the new financial year with "sharper strategic clarity and stronger fundamentals"

HUL Chairman Nitin Paranjpe pointed out that while "the near-term environment will continue to present challenges", India had consistently demonstrated resilience, emerging stronger through periods of uncertainty.

"HUL, with deep roots in the country, will navigate this environment with agility and discipline — anchored in our unwavering commitment to serve our consumers," he said.

HUL reported a turnover of ₹63,763 crore in FY26, up 5 per cent, with underlying volume growth of 4 per cent.

Growth momentum strengthened through the year, with underlying sales growth improving from 3 per cent in the first half to 7 per cent in the March quarter.

FOUR PRIORITIES

Nair outlined four strategic priorities that will underpin the company's future growth. These include deeper consumer segmentation, building more desirable premium brands, strengthening its route-to-market capabilities and concentrating resources on a smaller number of high-growth opportunities.

According to her, HUL's objective is to deliver "competitive, volume-led revenue growth" by tailoring products, pricing and channel strategies to specific consumer cohorts.

A major plank of the strategy is premiumisation. During the year, HUL strengthened its beauty and wellness portfolio through investments in digital-first brands such as Minimalist and OZiva. Nair said these brands are helping the company tap evolving consumer aspirations and build future growth engines in science-backed beauty, health and wellbeing categories.

To support this shift, HUL had announced investing up to ₹2,000 crore to expand manufacturing capacity in fast-growing premium categories.

Technology and AI are expected to play a central role in the company's next phase of growth.

Nair said artificial intelligence is already helping HUL understand consumers better, personalise engagement and improve marketing effectiveness.

SAS' re-launch flight to India returns to Copenhagen as Delhi delays final approval

Aneesh Phadnis
Mumbai

Scandinavian Airlines' (SAS) return to India after 17 years hit a hurdle on Tuesday.

SAS's Airbus A330 aircraft operating the inaugural flight on the Copenhagen-Mumbai route had to turn back after over four hours as the carrier did not receive "final approval" from the Indian government.

LONG RETURN

The aircraft took off from Copenhagen around 8.20 pm on Tuesday, four hours behind schedule. It was *en route* India and flying over Azerbaijan when it had to turn back to base. The aircraft landed at Copenhagen after around eight hours.

In a statement, the airline said the flight returned to Copenhagen "after the final approval expected from authorities was not issued as anticipated".

"SAS completed all necessary operational and regulatory preparations for the launch following several months of planning and coordination. Based on ongoing discussions with the relevant authorities, SAS had every expectation that the pending formal approval would be finalised while the flight was *en route*. As the approval was not finalised as anticipated, the flight could not continue as planned," the airline said.

HELPING PASSENGERS

"Our immediate focus is on supporting affected passengers and securing the remaining approval is obtained in order to commence service as soon as possible. We remain ready to commence operations and expect the service to begin within the next couple of days once the formal approval has been issued," the airline added.

The Copenhagen-Mumbai service marks SAS' return to India after 17 years and "is an important addition to our network, strengthening connectivity between Scandinavia and one of the world's fastest-growing aviation markets". "We look forward to welcoming customers onboard very soon and continuing this route as planned," it added.

*: Closing price is the average of trade price(s) for the last half an hour;52-Week High/Low figures pertain to BSE.

Shares of face value other than ₹10 is indicated in brackets immediately following the name of the company.

Qty (No of shares traded) is denoted in thousands.

The PE(price-earnings multiple) of each stock is based on the latest declared earnings.

The PE computation takes into account the per share earnings of each company for the latest 12 months.

BSE Stocks
