Gold and silver prices dip on global weakness

Mumbai: Gold prices plunged by ₹2,885 or two per cent to ₹152,765 per 10 g against ₹155,650 on Thursday in line with the weakness in global markets and appreciation of the dollar against the rupee. Similarly, silver prices declined by ₹16,700 to ₹2,42,433 a kg against ₹2,59,133 at close on Thursday as investors booked profits, according to the Indian Bullion and Jewellers Association data. **p10**

PV, 2W and 3W dispatches in Jan touch record highs

New Delhi: Wholesales of passenger vehicles (PVs), two-wheelers and three-wheelers hit the highest-ever in January, with double-digit growth, compared to January 2025, the Society of Indian Automobile Manufacturers said. According to SIAM data, PV dispatches rose 12.6 per cent to 4,49,616 units in January compared with 3,99,386 units in January 2025. Two-wheeler dispatches grew 26.2 per cent to 19,25,603 units (15,26,218 units). **p2**

Bank credit, deposit rebound signal economic momentum

STEAMING UP. RBI data show strong build-up in corporate loan pipeline, hardening bond rates

K Ram Kumar
Mumbai

A robust pick-up in credit and deposits in the last fortnight of January indicates that the Indian economy is gathering steam, shrugging off headwinds arising from higher US tariffs, global trade fragmentation and geopolitical tensions.

Credit and deposits of all scheduled banks jumped ₹3,40,934 crore and ₹3,80,346 crore, respectively, in the fortnight ended January 31, reversing the decline on both fronts in the preceding fortnight, per the latest RBI data.

Credit as well as deposits of all scheduled banks had declined ₹3,55,765 crore and ₹1,88,383 crore, respectively, in the preceding fortnight ended January 15.

CREDIT UPTICK

The healthy credit offtake comes amid a strong build-up in the corporate loan sanctions pipeline by public sector banks and hardening rates in the corporate bond market. Banks that have disclosed their pipeline include the State Bank of India (₹7.86 lakh crore), Punjab National Bank (₹1.02 lakh crore), and Bank of Baroda (₹75,000 crore).

GOING STRONG. Year-on-year credit growth at 14.4% as of January-end is higher than deposit growth of 12.42%: RBI

Ashwini Kumar Tewari, Managing Director, SBI, in a recent analyst call, observed that the bank is seeing a pick up in corporate loans, especially in the power, including renewables, metals and infrastructure sectors.

Further, the RBI's move to allow commercial banks to extend finance to Real Estate Investment Trusts (REITs), which is a large market and is growing fast, as well as finance acquisitions by Indian companies, will help the SBI increase its corporate loan book, with better margins, he said.

DEPOSIT INFLOWS

In view of the downturn in equity markets late last month, banks may have seen deposit inflows, especially bulk deposits, say experts.

Ashok Chandra, MD and CEO, Punjab National Bank, in an analyst concall, noted that his bank had 18 crore plus customers, and they had a lot of faith in the banking system. "We are mindful of the deposits, the scenarios, the dynamic situation... So, we thought, let us continue the (current) deposit rates. That is the reason, in the third quarter... we have kept them intact," he said.

Madan Sabnavis, Chief Economist, Bank of Baroda, attributed the deposit growth to high-cost bulk deposit and Certificate of Deposit, which are being picked up to bridge the gap between credit and deposit growth.

Year-on-year, credit growth at 14.4 per cent as of January-end is higher than deposit expansion of 12.42 per cent, per RBI data.

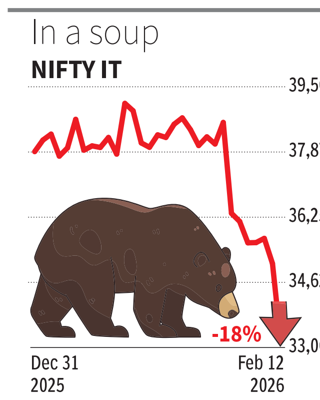
Referring to the credit pick-up in the reporting fortnight, Sabnavis said, "It must be a case of the large corporates drawing down sanctions.... retail loans and all that cannot swing the credit growth number so much.

"If you consider these kinds of large numbers, it's definitely a case of saying there is buoyancy in the economy, which is getting reflected from the higher demand for credit."

Continuing sell-off in IT stocks sends the market into the red

Anupama Ghosh
Mumbai

In a soup



Friday's fury

	Close	% fall
Sensex	82,626.8	-1.3
Nifty	25,471.1	-1.4
Nifty Midcap	59,438.0	-1.7
Nifty SmallCap	17,032.9	-1.8
Nifty Next50	68,826.8	-1.6

Major losers

	Close (₹)	
Hindalco	909	-5.7
Hindustan Unilever	2,305.2	-4.3
Eternal	285.2	-4.3
Adani Enter	2,136.6	-3.4
ONGC	267.4	-3.2

The market witnessed sharp selling pressure on Friday, and benchmark indices slid 1.3 per cent as mounting concerns over artificial intelligence-led disruption in the IT sector triggered widespread profit-booking across sectors.

The IT sector bore the brunt of the sell-off, with heavyweights seeing significant declines. TCS fell 2 per cent and Wipro 2.2 per cent. The Nifty IT Index has lost over 8 per cent this week.

"Today's weakness in Sensex and Nifty is largely driven by selling pressure in the IT sector, which weighed on broader market sentiment," said Swapnil Aggarwal, Director, VSRK Capital.

He pointed out that concerns around global demand slowdown, cautious commentary from tech companies and uncertainty related to AI-led disruptions and job losses triggered profit-booking after recent gains.

"The view that software or IT services are structurally obsolete appears overstretched, particularly in the enterprise segment, which runs mission-critical multi-locational and highly secure applications," said N ArunaGiri, CEO, TrustLine Holdings. "In the current IT meltdown, instead of taking a universal buy-on-dips approach, take a prudent, selective and stock-specific approach based on underlying business models," he added.

FPI STEP UP SELLING

Sensex lost over 1,000 points and Nifty ended 336.1 points lower as foreign portfolio investors stepped up selling. According to provisional data, they offloaded shares worth ₹7,400 crore.

Hindalco was the top Nifty loser, plummeting 6.08 per cent, followed by Hindustan Unilever, which dropped 4.34 per cent. Among gainers, Bajaj Finance rose 3.09 per cent and Eicher Motors gained 1.56 per cent.

The broader market correction was widespread, with metals and FMCG stocks facing heavy selling.

The Nifty Midcap 100 fell 1.71 per cent, while the Nifty Smallcap 100 tumbled 1.79 per cent. All sectoral indices closed in the red, with Nifty Bank down 0.91 per cent.

"This appears to be more of a sentiment-driven correction rather than the start of a deeper structural downturn," said VSRK Capital's Aggarwal, advising investors to "adopt a staggered investment strategy" through SIPs to navigate volatility.

Siddhartha Khemka, Head of Research, Motilal Oswal Financial Services, expected markets to "remain range-bound in the near term amid mixed global cues," with investor attention shifting to next week's India AI Impact Summit in New Delhi.

Experts' advice for IT sector p7

Spectrum cannot be sold under IBC as telcos do not own the national asset, rules Supreme Court

Krishnadas Rajagopal
New Delhi

The Supreme Court on Friday laid down that telecom service providers (TSPs) do not own spectrum, a precious and finite public resource meant to be used for the common good of all, and cannot include it among their pool of 'assets' for insolvency or liquidation.

A Bench of Justices PS Narasimha and Atul Chandurkar held that the Insolvency and Bankruptcy Code (IBC) excludes any asset over which a corporate debtor has no ownership rights.

"Mere recognition of spectrum licensing rights as an intangible asset by TSPs in the financial statements is not conclusive of their ownership, as it only represents control over future economic benefits," Justice Narasimha clarified the law.

PEOPLE'S PROPERTY

The court said spectrum was a scarce natural resource owned by the people of India, with legal title vesting exclusively in the Union of India, which holds it in trust for the public.

"Licensees acquire no proprietary interest in spectrum," Justice Narasimha, who authored the judgment, underscored.

The mere grant of spectrum under a licence does not mean a complete transfer of a finite natural resource from the Union government to a TSP. "It confers only a limited, conditional and revocable privilege to use spectrum, subject to statutory requirements, licence conditions and overriding public interest," Justice Narasimha clarified.

The court observed that the Union, as the owner and trustee of spectrum, on the one hand, and the Telecom Regulatory Authority of India as the regulator, on the other, occupy the entire province of telecommunications.

"The statutory regime under the IBC cannot be permitted to make inroads into the telecom sector and rewrite and restructure the rights and liabilities arising out of administration, usage and transfers of spectrum, which operate under an exclusive legal regime concerning telecommunications. The disharmony caused by applying the IBC to the telecom sector, which operates under a different legal regime, was never intended by Parliament," the court noted.

The Supreme Court verdict was on a series of separate appeals filed by the State Bank of India and others against a 2021 National Company Law Appellate Tribunal judgment requiring TSPs undergoing insolvency to clear statutory dues to the DoT before transferring or selling spectrum under the IBC. It made it clear that the spectrum cannot be brought under the IBC framework. The TSPs did not own spectrum in the first place to sell it.

Besides, the top court made it clear that the dues owed by TSPs to the DoT were not 'operational debts' under the IBC.

NEW ADDRESS FOR PMO

GOVERNANCE HUB. Prime Minister Narendra Modi signs a document at Seva Teerth, the newly inaugurated Prime Minister's Office complex, in New Delhi. MoS Jitendra Singh and other senior officials are also seen. Seva Teerth is a set of three buildings housing the PMO, the National Security Council Secretariat and the Cabinet Secretariat, which were previously in different locations within the Central Vista area. US, EU sanctions drag India's Jan Russia crude imports to 3-year low

Rishi Ranjan Kala
New Delhi

India's imports of crude oil from Russia stood at 1.1 million barrels per day (mb/d) in January, the lowest in more than three years as US sanctions forced domestic refiners to scale back purchases from Moscow.

The International Energy Agency (IEA), in its latest *Oil Market Report*, pointed out that Russian supplies declined last month by a sizeable 3,50,000 b/d, as key buyers faced increased pressure from Washington and broader EU sanctions.

The IEA report pointed out that Russian supply declined last month by a sizeable 350,000 b/d BLOOMBERG

IMPORT DECLINE

"Shipments to India have been hit particularly hard as fresh EU restrictions on imports of petroleum products derived from Russian crude prompted key export refineries to look for alternative supplies. Tanker tracking data show Indian imports of Russian crude declined to 1.1 m b/d in January — the lowest level since November 2022 — down from 1.7 mb/d on average in 2025," the IEA report added.

In contrast, Russian crude deliveries to China surged to an all-time high last month, it added.

Analysts and trade sources said that pressure from Washington on India to stop Russian imports, coupled with the European Union's 18th sanctions package, which prohibits the supply of refined petroleum products derived from crude oil from Moscow, resulted in lower imports by Indian refiners.

NO SUPPLY ISSUES

However, there is no dearth of supply currently, said one of the analysts, adding that India's refiners can manage with West Asian medium sour crude, besides leveraging the US and West Africa for light sweet grades.

"With supply continuing to outpace demand, observed oil inventories rose by a further 37 million barrels (mb) in December, taking global stock builds in 2025 to an extraordinary 477 mb, or 1.3 mb/d on average, a level not seen since 2020," the IEA said.

Govt clears 2.5 mt wheat exports to stabilise prices on hopes of record rabi crop, permits 0.5 mt more sugar shipments

Prabhudatta Mishra
New Delhi

The Centre on Friday approved the export of 2.5 million tonnes (mt) of wheat. It also permitted shipments of an additional 0.5 mt of wheat products and 0.5 mt of sugar to "stabilise domestic markets and ensure remunerative returns to producers".

The additional quantity will be over and above 0.5 mt of wheat products and 1.5 mt of sugar already allowed for export.

"This calibrated decision has been taken after a comprehensive assessment of the current availability and price scenario, reaffirming the government's commitment to protecting farmer interests," the Food Ministry said in a statement on Friday.

According to official data, the all-India average mandi (agri-market yard) price of wheat this month (February 1-12) dropped to ₹2,527/quintal from₹2,587 in January, which traders attribute to bumper arrivals.

PRICE DIP. The all-India average mandi price of wheat this month dropped to ₹2,527/quintal from ₹2,587/quintal in January, which traders attribute to bumper crop arrivals REUTERS

In Gujarat and Madhya Pradesh, where the new wheat crop has started arriving, the rates have fallen by ₹85/quintal and ₹92/quintal, respectively, in the past month. The government has fixed the Minimum Support Price for the new wheat crop at ₹2,585/quintal.

HIGHER RATES

It highlighted that wheat stocks with private entities in the 2025–26 season are about 7.5 mt, some 3.2 mt higher than that in the corresponding period last year.

The Ministry felt this year-on-year increase was comfortable for domestic availability. Besides, the total wheat availability with the Food Corporation of India (FCI) is projected at 18.2 mt as on April 1, 2026, when the next harvesting season starts. Officials said allowing exports will not impact domestic food security requirements.

"At the current market price, there is no parity with the international price, and it is difficult to say how the domestic prices will move," said Pramod Kumar, a former President of the Roller Flour Millers Federation of India.

Rajesh Paharia Jain, Chief Manager of Kribhco Agri, said that recently a company in Bangladesh purchased wheat of Russian/Ukrainian origin at $275/tonne (C&F) at port delivery, whereas Indian wheat would have cost $315/tonne at the current market rate. But there is a potential for exporting to Nepal, but the demand is not big, he said.

The wheat acreage in the rabi 2025-26 season increased to about 334.17 lakh hectares from 328.04 lakh hectares last year as farmers planted more, thanks to the assured MSP and procurement mechanisms. The government expects to achieve its target of a record 119 mt this year.

"In view of higher stock availability, softening prices, expected higher production and the need to prevent distress sales during peak arrivals, the decision on exports will help stabilise domestic prices, improve market liquidity, ensure efficient stock rotation, and further strengthen farmers' income, while ensuring national food security," a senior official said.

"The additional export quantity of 0.5 mt will be made available to willing sugar mills subject to the condition that at least 70 per cent of their allocated quantity is exported by June 30, 2026," it said.

QUICKLY.

Lupin Q3 profit jumps 37% on US performance

Mumbai: Drugmaker Lupin Ltd reported a 37 per cent growth in net profit at ₹1,180 crore for the third quarter ended December 31, 2025, as compared to ₹858 crore in the same period last year. This was, however, 20.5 per cent down sequentially, at ₹1,484 crore. Sales for the quarter under review stood at ₹7,100 crore, up 26.4 per cent from ₹5,618 crore in the same period last year. Nilesh Gupta, MD, Lupin, said Q3 saw the company's highest-ever quarterly sales in the US. OUR BUREAU

RK Swamy reports 15% rise in Q3 revenue

Chennai: Advertising and marketing services firm R K Swamy Ltd on Friday reported a 15 per cent growth in consolidated revenue for the quarter ended December 2025 at ₹88.7 crore. Net profit declined to ₹2.8 crore in the quarter compared to ₹3.6 crore in the same quarter last year. The company has presented an incremental impact of ₹3 crore relating to the new labour code regulations under exceptional items. OUR BUREAU

Crisil's Q4 profit up 7.5% to ₹241 crore

New Delhi: Crisil Ltd on Friday reported a 7.5 per cent growth in net profit at ₹241.5 crore for the fourth quarter ended December 31, 2025. The Board also recommended a dividend of ₹28 per equity share of face value of ₹1 each, taking the total dividend to ₹61 per share, Crisil said. Its consolidated income from operations for Q4 2025 was up 18.5 per cent to ₹1,081.6 crore, compared with ₹912.9 crore in Q4 2024. PTI

PV, 2W and 3W dispatches in January in top gear: SIAM

NEW RECORD. Domestic wholesales grew 12.6% y-o-y to 4,49,616 units during the month

S Ronendra Singh
New Delhi

Passenger vehicles (PVs), two-wheelers and three-wheelers posted their highest-ever domestic wholesales (dispatches to dealers) of January in 2026, with double-digit growth, compared to January 2025, the Society of Indian Automobile Manufacturers (SIAM) said on Friday.

The domestic PV dispatches grew by 12.6 per cent year-on-year (y-o-y) to 4,49,616 units in January 2026, compared with 3,99,386 units in January 2025, the auto industry body mentioned in its monthly sales data.

Similarly, total two-wheeler dispatches to dealers grew by 26.2 per cent y-o-y in January to 19,25,603 units, compared with 15,26,218 units in January 2025. Total three-wheeler wholesales also witnessed a strong growth of 30.2 per cent y-o-y to 75,725 units, compared with 58,167 units in the corresponding month last year.

GROWTH ACCELERATES. Total dispatches of vehicles across categories grew by 23.5% y-o-y to 24,50,944 units, compared with 19,83,771 units in the year-ago period PTI

"The new year has begun on a positive note, extending the strong momentum seen in the previous quarter, supported by sustained demand following the GST rate reduction. The initiatives announced in the Union Budget 2026 to strengthen India's manufacturing base, along with existing policy tailwinds, are expected to deliver long-term benefits for the sector and support growth in the medium term," said Rajesh Menon, Director General, SIAM.

The total dispatches of vehicles across categories grew by 23.5 per cent y-o-y to 24,50,944 units, compared with 19,83,771 units in the year-ago period.

EXPORTS SHINE

All three segments logged double-digit growth on a y-o-y basis in terms of exports as well.

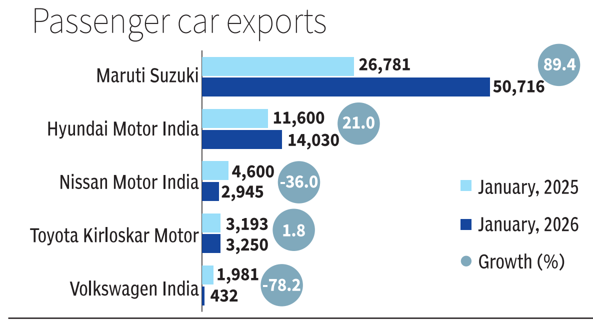
For instance, the total PV exports grew by 33.4 per cent y-o-y to 76,822 units during the month, against 57,585 units in the same month last year. The total two-wheeler exports grew by 20 per cent y-o-y to 4,56,435 units in January this year, compared with 3,80,528 units in January 2025, the SIAM data indicated.

Similarly, the total three-wheeler exports grew by 54.6 per cent y-o-y to 36,879 units last month, compared with 23,859 units in the same month a year ago. Total exports of vehicles across categories grew by 23.5 per cent y-o-y to 5,71,066 units in January, compared with 4,62,500 units in the corresponding month last year.

Maruti drives PV exports up 33% in January

T E Raja Simhan
Chennai

Passenger car exports



Tata Motors - Only cumulative data is available for Apr-Dec Source: SIAM

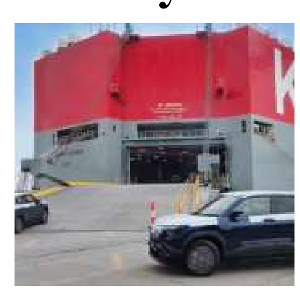
Passenger vehicle (PV) exports in January rose by 33 per cent thanks to a substantial increase in exports by market leader Maruti Suzuki. The total PV exports in January 2026 increased to 76,822 against 57,585 in January 2025, according to SIAM data on Friday.

Maruti reported 89 per cent year-on-year (y-o-y) increase in export volumes in January to 50,716 (26,781). Hyundai's exports rose by 21 per cent, but the South Korean auto major's market share in exports declined to 18 per cent (20 per cent).

Both Nissan and Volkswagen saw a decline in exports by 36 per cent and 78 per cent, respectively. Toyota's exports volume rose by 2 per cent, SIAM data shows.

Rahul Bharti, Senior Executive Officer, Maruti Suzuki, told *businessline* the company exported over 50,000 vehicles in January, accounting for 66 per cent of India's total PV exports, though it included a shipment missed from December 2025 exports. "In the first 10 months of FY26, Maruti Suzuki exported close to 3.6 lakh passenger vehicles, contributing to 48 per cent of India's total PV exports. While the rest of the industry's export grew by 7 per cent year-on-year in this period, Maruti Suzuki grew by 32 per cent," he said.

One of the major factors fuelling this growth was the commencement of exports



e VITARA being exported from the Pipavav port

of the company's first BEV, e VITARA in August 2025. So far, nearly 16,000 units have been exported to 36 countries, predominantly in Europe.

Tarun Garg, MD and CEO, HMIL, said in an analyst call, "By 2030, we have to take the export contribution to 30 per cent. The FTAs present new opportunities, but need to be studied in detail."

Number of transactions under DBTs declines sharply in FY26

Yashaswani Chauhan
New Delhi

Direct Benefit Transfers (DBT), which expanded sharply during the pandemic years, have been showing a clear slowdown since FY24.

While the value of DBTs till February 12, 2026, amounted to ₹5.44 lakh crore in FY26, the number of transactions stood at just 528 crore. The transactions have nearly halved from 931 crore in FY25.

A steady rise was seen between FY20 and FY23, when DBT outlays nearly doubled from ₹3.81 lakh crore to ₹7.16 lakh crore. Spending flattened in FY24 and FY25 and may be slightly lower in FY26, compared to the previous year. This points to a mix of fiscal tightening and slower implementation of schemes.

DATA FOCUS.

Economists attribute the decline primarily to tighter Budget allocations and delays in fund utilisation. "The decline is largely driven by a decline in Budget allocation," said Prof Anil Sood, Institute for Advanced Studies in Complex Choices (IASCC). He noted that the sharp fall seen in the current fiscal year could partly be corrected as the year progresses, but flagged large sums lying unspent in Single Nodal Agency (SNA) accounts. "For instance, the Ministries of Social Justice and Empowerment and Tribal Affairs together have about ₹4,000 crore parked in these accounts," Sood said, suggesting that lower on-ground spending also reflects slower release and utilisation of funds.

SPACE FOR OTHERS

Lower DBT outlays also coincide with reduced budgeted spending on fertilizer and food subsidies. While publicly available data does not fully explain scheme-wise cuts, Sood pointed out that the need for food support had not declined, given stagnant real incomes for a large share of the workforce.

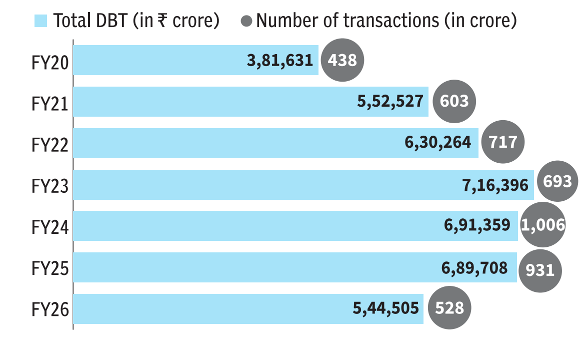
A comparison of FY25 and FY26 shows that the slowdown is broad-based. Scholarship transfers fell by nearly 65 per cent, and NSAP (financial assistance to the elderly and PWDs) payments dropped over 62 per cent till the first half of February. PAHAL (LPG) transfers are also likely to be lower this year as the number of Ujwala beneficiaries declines. The other category, which includes smaller welfare and State-specific schemes, recorded the sharpest contraction in FY26, by almost 50 per cent. In-kind transfers now account for over 61 per cent of DBT in FY26, compared with 37 per cent in FY20. The share of cash transfers has fallen to 38 per cent.

"In-kind schemes are better choices than cash transfers," Sood said, arguing that they are more likely to meet scheme objectives such as ensuring access to food grains and fertilizers, though effectiveness ultimately depends on implementation.

Overall, data suggest DBT is not being rolled back, but is losing momentum amid fiscal pressure, implementation bottlenecks and a gradual rebalancing of welfare delivery.

Direct Benefit Transfers lose pace

Year-wise DBT



FY26 DBT shrinks across schemes; fertilizer alone posts marginal growth (0.3%)

Puravankara's Q3 net surges 162% to ₹58.5 cr

Our Bureau
Bengaluru

Puravankara Ltd reported a profit after tax of ₹58.48 crore in the third quarter of FY26, up 162.2 per cent year-on-year (y-o-y). Total revenue for the quarter rose 231 per cent y-o-y to ₹1,104 crore. Customer collections increased 22 per cent y-o-y to ₹1,140 crore.

The realty major said the profit was supported by project completions and execution during Q3. The result also reduced losses recorded in the first half of FY26.

For the first nine months (9M) of FY26, project revenue stood at ₹2,305 crore, up 51 per cent y-o-y. Customer collections rose 8 per cent y-o-y to ₹3,045 crore during the period. Operating cash inflows during 9MFY26 stood at ₹3,504 crore, up 9 per cent y-o-y.

Sales value during the third quarter rose 17 per cent y-o-y. For the nine-month period, sales volumes stood at 4.24 million square feet with sales value of ₹3,859 crore, up 9 per cent y-o-y.

The company handed over 1,116 homes covering 1.23 million square feet during the quarter. During the nine months, it handed over 2,446 homes aggregating 2.58 million square feet.

ONGC Q3 net jumps 23% despite lower crude realisation

Our Bureau
New Delhi

ONGC posted a 23 per cent year-on-year (y-o-y) growth in its consolidated net profit at ₹11,946 crore in Q3FY26, aided by improved performance of the refining & marketing segment and lower finance costs, despite declining realisation from the oil and gas business and falling production from mature fields weighing on sales.

However, the net profit of India's largest exploration & production (E&P) company fell by 5 per cent on a sequential basis, it said in a filing on BSE late Thursday night.

The company's consolidated total income during Q3FY26 was almost flat y-o-y at around ₹1.71 lakh crore, compared to ₹1.61 lakh crore in Q2FY26 and ₹1.70 lakh crore in Q3 FY25.

Its total consolidated expenses stood at ₹1.55 lakh crore in the December quarter of FY26, compared to ₹1.44 lakh crore in Q2FY26 and ₹1.56 lakh crore in Q3FY25.

OTHER BUSINESSES

However, ONGC's finance costs were lower at ₹3,207 crore in Q3FY26 against ₹3,411 crore in Q2FY26 and ₹3,750 crore in Q3FY25.

In the CPSU's E&P segment, the operating profit from both onshore and offshore business was on the lower side, on an annual as well as sequential basis.

The petrochemicals business continued to report an operating loss, but it narrowed on an annual basis. However, the loss widened on a quarter-on-quarter basis. Its operating profit from foreign business was higher annually, but declined sequentially.

On the brighter side, ONGC reported a higher operating profit of ₹7,299 crore from the refining & marketing segment compared to ₹6,256 crore in Q2 FY26 and ₹5,253 crore in Q3 FY25.

PRODUCTION

Realisation from crude oil prices from nominated fields fell by over 15 per cent y-o-y to \$61.63 per barrel in Q3FY26. The realisation in gas prices from nominated fields was marginally higher y-o-y. However, the realisation from New Well Gas was lower on an annual basis.

During 9MFY26, revenue from New Well Gas stood at ₹5,028 crore, delivering an additional ₹944 crore revenue compared to the APM gas price, ONGC said in a statement. New Well Gas now contributes more than 18 per cent of total gas sales revenue from the ONGC portfolio, it added.

ONGC's crude oil production from standalone fields, as well as fields operated by JVs, declined on an annual basis.

While gas production from standalone fields was almost flat y-o-y, it declined in JV-operated fields.

ONGC registered an upward growth of 0.35 per cent y-o-y in crude oil production during 9MFY26, while natural gas production remains constant during the same period, the E&P major said.

Biocon banks on new launches, insulin capacity expansion to drive growth

Aishwarya Kumar
Bengaluru

Biocon Ltd is betting on a wave of biosimilar launches, expanded insulin capacity, and deeper US market penetration to propel growth over the next 12–18 months, according to MD & CEO of Biocon Biologics Shreehas Tambe.

The company expects five key products to begin contributing meaningfully to revenues. Bevacizumab, launched late last year, is set to scale up contributions in the coming fiscal year. Biosimilar ustekinumab (Yesintek) has crossed 10 per cent in market share.

Denosumab, cleared for launch following a global settlement with Amgen, is scheduled for rollout in the next fiscal year, Tambe told *businessline*. Aflibercept is also progressing steadily; the company has begun commercialisation in Turkey, where it has captured over 20 per cent market share, and expects a significant US market entry in the second half of calendar year 2026.

Additionally, approvals for generic liraglutide products, Saxenda and Victoza, are expected shortly.

Biocon expects its insulin drug product capacity to double in FY27, with drug substance capacity projected to double around FY28. The expansion is underway at its Malaysia facility.

'NO FRESH CAPEX'

Tambe said most capital expenditure undertaken in the past three years is now behind the company. Growth will be supported by existing capacity, and no fresh capex is planned in biosimilars or generics. The only ongoing investment is the insulin capacity expansion.

EID Parry consolidated Q3 net profit up 19%, standalone revenue declines

Our Bureau
Chennai

EID Parry reported a consolidated net profit of ₹232 crore for the quarter ended December 2025 (Q3FY26), up 19 per cent from ₹195 crore in the same quarter last year. The consolidated revenue from operations for the quarter was ₹10,316 crore compared to ₹8,720 crore in the year-ago period. Lower sales volume and cost pressures marked the quarter.

On a standalone basis, revenue from operations for Q3FY26 was ₹773 crore as compared to ₹848 crore in the year-ago period.

The revenues of the sugar segment were at ₹389 crore for Q3FY26 compared to ₹391 crore in the corresponding quarter of the previous year. However, the company managed to reduce losses in the segment on account of better realisation and cost optimisation measures.

Muthu Murugappan, Whole-time Director and CEO, EID Parry BIJOY GHOSH

The distillery segment reported a loss of ₹15 crore for Q3FY26 compared to a loss of ₹1 crore in the year-ago period, primarily driven by higher input costs.

In the Consumer Products Group (CPG) segment, revenue declined from ₹236 crore in Q3FY25 to ₹143 crore in Q3FY26. The decrease was primarily driven by lower sweetener revenues due to restricted release quotas, along with reduced volumes in the non-sweetener portfolio, the company said.

The consolidated revenue from operations for the nine months ended December 31, 2025, was ₹30,664 crore, compared to ₹24,797 crore in the year-ago period.

AIR AROUND MSP

Muthiah Murugappan, Whole-time Director and CEO, EID Parry, said in a call with analysts that there is no clarity on any upward revision of the MSP for sugar, and this continues to put a strain on the business. "The challenge here is that the ethanol output prices have also not gone up, and this has been for almost 3 years now," he added.

As for the consumer products group, Murugappan said they will stay focused on selling more of the profitable SKUs. "Our focus on backward integration will remain, and we will continue to run our plants at max capacity," he said.

Senco to continue to hedge 55-65% of inventory value

CONDITIONS APPLIED. The company will go back to 80-90% gold inventory hedging if the prices come down, said MD Suvankar Sen REUTERS

Mithun Dasgupta
Kolkata

Senco Gold, which has been keeping a gold inventory hedging ratio at 55-60 per cent in the last six months amid high gold prices, would go back to 80-90 per cent hedging to protect inventory losses once gold prices are on a downward trend and become stable.

Until that price stability is achieved, the company would continue to hedge 55-65 per cent of its gold inventory value.

"In the last six months, in the high gold prices volatility, there has been pressure on liquidity. There have been pressures on maintaining the margin. And, in this kind of a dynamic, volatile scenario, based on our hedging policy and guidance, we said that let us keep it at 55-60 per cent. That would ensure that we continue to focus on our business, we continue to manage our inventory well," Senco Gold & Diamonds Managing Director and CEO Suvankar Sen told analysts during an earnings conference call for Q3FY26 on Friday.

"If gold prices are on a downward trend, there is an amount of stability that our balance sheet and liquidity is allowing us, we will go back to 80-90 per cent (of gold inventory hedging). But till that stability is achieved, it will range between 55 and 65 per cent," Sen said.

DE-GROWTH

Senco Gold on Thursday reported nearly eight-fold jump in its consolidated net profit to ₹264 crore for the third quarter this fiscal, backed by around 50 per cent year-on-year (y-o-y) increase in its revenue.

Revenue from operations during Q3FY26 rose to ₹3,070.98 crore from ₹2,045.98 crore in Q3FY25. On a quarter-on-quarter (q-o-q) basis, revenue growth was 30 per cent. However, very high gold prices impacted volume, which saw a de-growth of around 3 per cent q-o-q.

During Q3FY26, average gold prices rose 63 per cent y-o-y and 23 per cent q-o-q, peaking at a historic high of ₹1,40,000 per 10 gm.

DEALING MECHANISM

"It is not that the high gold prices are discouraging consumers. Rather their faith and trust in the commodity (gold or silver) is increasing. It is only up to us as jewellers as to fit into the budget of the consumers, create products, whether it be in 22 carat, 18 carat, 14 carat, or even 9 carat," Sen said.

‘Electronics exporters can grab a greater share of the US, EU markets’

NITI AAYOG REPORT. Urges shift from assembly-led gains to component-led manufacturing

Amiti Sen
New Delhi

India’s electronics sector is poised for a major export push into the US and the European Union, leveraging trade agreements to tap a larger share of their combined $1.6 trillion market, according to a quarterly trade watch report released on Friday by NITI Aayog.

The report said the proposed India-EU Free Trade Agreement and relatively lower reciprocal tariffs imposed by the US on Indian suppliers, compared to China, Vietnam, Mexico and Thailand, create a timely opportunity for Indian manufacturers to deepen market penetration.

Together, the US and the EU account for roughly one-third of global electronics demand, underscoring their strategic importance for India’s export ambitions.

TARIFF EDGE

The US currently sources electronics primarily from China, Mexico, Vietnam, Malaysia and Thailand. However, reciprocal tariff rates on these countries remain higher than those applied to India — around 20 per cent on China and Vietnam, 25 per cent on Mexico and nearly 19 per cent on Thailand, compared with 18 per cent for India.

“This relative tariff advantage, both in the US and the EU, improves India’s cost competitiveness and presents a timely opportunity to scale exports and capture a larger share of global trade,” the report noted.

PRIME BUYERS. The US and the EU together account for nearly one-third of the global electronics demand

Despite the opportunity, India’s share in the $4.6 trillion global electronics market remains modest at about 1 per cent, based on 2024 exports of $42 billion. High-tech segments, such as integrated circuits and semiconductors, continue to be dominated by China, Hong Kong and Taiwan. The report said recent policy initiatives, including the Electronics Component Manufacturing Scheme, the semiconductor mission, customs duty rationalisation and support for e-commerce exports, signal a push to move up the value chain. However, India must transition from assembly-led gains to component-led manufacturing.

On the supply side, incentives should focus on domestic value addition, sustained R&D and ecosystem deepening through anchor investments that transfer technology and generate stable demand for local suppliers.

$500 B AMBITION

The report stressed that coordinated fiscal, trade and logistics reforms are needed to close structural cost gaps and improve competitiveness.

Such measures, it said, could anchor India’s shift from a manufacturing base to a globally competitive electronics ecosystem and support its $500 billion manufacturing ambition by FY2030.

Reliance secures US licence to import Venezuelan oil

Press Trust of India
New Delhi

Billionaire Mukesh Ambani’s Reliance Industries Limited has received a US general licence to purchase Venezuelan crude oil directly, enabling India’s largest private refiner to resume imports of discounted heavy feedstock that aligns with its Jamnagar refinery configuration and optimises refining margins.

Reliance, which operates the world’s largest single-site refining complex at Gujarat’s Jamnagar, was among the international companies which, in late January, got a general licence from the US for buying Venezuelan oil directly without violating sanctions, sources aware of the matter said.

EASING SANCTIONS

Since capturing Venezuelan President Nicolas Maduro last month, the US has eased sanctions on the South American nation’s energy industry to resume the flow of oil from the country that holds the world’s largest reserves. Reliance did not respond to requests for comments.

So far, the US has permitted the sale of Venezuelan oil through traders, but now a general licence will give authorisation to purchase oil directly from an entity that has already extracted it from below ground or is in possession of it. Reliance was a regular buyer of Venezuelan crude before the US slapped sanctions on Maduro’s regime in 2019-20.

Venezuela’s crude grades, especially from the Orinoco Belt, are predominantly heavy and extra-heavy.

Reliance’s Jamnagar refineries are among the world’s most complex and geared toward efficiently processing heavy, sour crudes, which trade at a deep discount to international benchmarks due to production challenges and logistical constraints.

REFINING MARGINS

Buying Venezuelan oil will allow Reliance to optimise its refining margins because these barrels can be upgraded into higher-value products like diesel, kerosene and LPG that fetch strong demand in India and export markets.

PMO shifts to ‘Seva Teerth’, signs welfare schemes on Day 1

Shishir Sinha
New Delhi

Prime Minister Narendra Modi on Friday began working from his new office at ‘Seva Teerth’.

From the new PMO, he signed four major files, including one for providing relief to accident victims.

After decades, the Prime Minister’s Office (PMO) shifted from the historic South Block to the new office ‘Seva Teerth’.

Per a statement from the PMO, in order to provide life saving protection for every citizen, Modi approved the ‘PM RAHAT Scheme’.

“Under this initiative, accident victims will get cashless treatment of up to ₹1.5 lakh, ensuring that no life is lost due to lack of immediate medical help,” it said.

According to Road Transport and Highway Minister Nitin Gadkari, immediate medical care could reduce 50,000 road accident deaths.

A report prepared by AIIMS found that nearly 30 per cent deaths were due to delay in getting medical care during the golden hour — the first hour after a person suffers a traumatic injury, when emergency treatment is most likely to be successful.

Per the WHO India Recommendations, 50 per cent of the victims die in the first 15 minutes due to serious cardiovascular or nervous system injuries.

The victims can be saved by providing basic life support during this ‘golden hour’.

OTHER DECISIONS

Also, the PM signed a file to double the number of ‘Lakhpati Didis’.

The government has crossed the landmark of 3 crore ‘Lakhpati Didis’, more than a year ahead of the original March 2027 timeline.

“The PM has now set a new, ambitious target of 6 crore Lakhpati Didis by March 2029, doubling both scale and aspiration,” the statement said.

In another decision aimed at strengthening India’s entire agriculture value chain, the PM announced the doubling of the loan target of the Agriculture Infrastructure Fund to ₹2 lakh crore.

At the same time, to power India’s innovation ecosystem — especially in deep tech, early-stage ideas, advanced manufacturing and breakthrough technologies — the PM approved the Startup India FoF (Fund of Fund) 2.0 with a corpus of ₹10,000 crore.

Twenty world leaders to attend India-AI Impact Summit 2026

Our Bureau
New Delhi

India is set to host leaders and heads of state from 20 countries for the India-AI Impact Summit 2026, beginning Monday (February 16), according to the Ministry of External Affairs (MEA).

High-profile attendees include French President Emmanuel Macron and Brazilian President Luiz Inácio Lula da Silva, both of whom will be on official state visits.

“The summit will bring together global leaders, policymakers, innovators, and experts from across the world to deliberate on the way forward for AI,” an MEA statement issued on Friday stated.

The summit will host Presidents from Estonia, Serbia, Slovakia, Spain, Sri Lanka, and Switzerland, the MEA statement noted. Prime Ministers from Bhutan, Croatia, Finland, Greece, Kazakhstan, Mauritius, and Netherlands are also scheduled to attend. The Crown Prince of Abu Dhabi (UAE), the Hereditary Prince of Liechtenstein, and Vice Presidents from Bolivia, Guyana, and Seychelles will represent their respective nations.

Gem, jewellery exports dip 6% at $2,238.54 million in Jan: GJEPC

Press Trust of India
Mumbai

India’s gem and jewellery exports witnessed a 5.79 per cent on-year decline in January to $2,238.54 million, amid global trade headwinds and tariff-related pressures in key markets, the Gem and Jewellery Export Promotion Council (GJEPC) said on Friday.

Overall exports stood at $2,376.02 million in January 2025, for the same period of the previous year, GJEPC said in a statement.

However, overall exports remained steady during the April 2025-January 2026 period with a marginal decline of 0.64 per cent at $23,185.87 million, compared to $23,334.73 million for the same period of the previous year.

NEWER MARKETS

The overall performance was significantly influenced by a sharp contraction in shipments to the US, India’s largest gem and jewellery export destination, where exports declined by over 45 per cent due to elevated tariffs and pricing disadvantages.

Meanwhile, India has successfully diversified its export markets, and during April 2025-January 2026, exports to the United Arab Emirates grew 23.71 per cent and Hong Kong 33.5 per cent, while Australia and France posted robust growth of over 36 per cent each.

Other markets such as Belgium, Thailand and Israel also recorded double-digit growth.

Ferrari Luce EV interior revealed

Ferrari has shared fresh details of its first-ever electric car, confirming it will be called the Luce, which means 'Light' in Italian. It has also revealed the EV's interior, which blends modern tech with retro influences. The cabin features a steering-column-mounted digital instrument cluster designed to move with the wheel, using layered OLED displays that mimic classic analogue dials. The steering wheel draws inspiration from older Ferraris, with physical buttons replacing touch controls. An aluminium trim runs across the dashboard, housing circular air vents and a floating centre screen that can be angled toward the occupants . Ferrari has integrated a mechanical clock with multiple display modes and a glass shift-by-wire selector. The Luce's glass key introduces colour-changing E-Ink technology, adding another distinctive touch to Ferrari's first electric model.

Tata Punch EV facelift unveiled

Tata Motors is set to launch the Punch EV facelift on February 20 and has done a preview of the updated model's front design ahead of its debut. The facelift introduces a revised nose with split headlamp clusters, replacing the earlier connected lighting element. The new design draws inspiration from the Harrier.ev , though it adopts a cleaner and more upright look. The side profile remains unchanged, retaining the black cladding, wheel-arch trims and ORVM-mounted indicators. At the rear, a connected LED tail-lamp setup is expected. Inside, the Punch EV facelift is likely to continue with a modern cabin featuring a large touchscreen, wireless charger, digital instrument cluster, capacitive HVAC controls and a dual-tone theme. Mechanical specifications are expected to be unchanged, with 25-kWh and 35-kWh battery options producing 80 bhp with 11.6 kg-m and 121 bhp with 19.4 kg-m, offering claimed ranges of 315 km and 421 km respectively.

Bajaj gifts Chetak C25 to RCB women's team

Bajaj Auto has announced that it will gift its newly launched Chetak C25 electric scooter to the Royal Challengers Bangalore Women's team following its Women's T20 League title win. Each member of the championship-winning squad will receive the electric scooter as a gesture recognising the team's performance across the season. Bajaj noted that the initiative aligns with the recent introduction of the Chetak C25, which is positioned as a younger and lighter addition to the Chetak lineup. The scooter also served as the official ride for the RCB women's team during the tournament.

NO FRILLS. The Lexus RX 350h is for those who value refined Japanese hospitality over European badge swagger

Zen Precision

Yash Sunil

After spending a few days with the Lexus RX 350h, I genuinely couldn't understand why we do not see more of it on our roads. What stops those who can afford it from choosing something this complete? After all, the RX is one of those rare luxury cars that gets everything right without screaming about it.

It also helps that it does not look like anything else out there. While most rivals chase soft curves and familiar silhouettes, Lexus has gone down a sharper and more angular path; the result is a crossover that carries real presence without trying too hard. Those sculpted lines and bold proportions make it instantly recognisable, even from a distance. And then there are the 21-inch wheels. On paper, they do not inspire confidence for the Indian roads; however, behind the wheel, the RX surprises you. Bad surfaces, broken tarmac and poorly patched roads are all taken in its stride, delivering a ride that is far more accommodating than you would ever expect.

What is most admirable about the Japanese approach is their refusal to bow to peer pressure. They do not force a car to be sporty, tech-heavy, off-road capable and engaging, all at once. That clarity of purpose is exactly what makes the RX special; its focus is unapologetically on luxury. Having spent time in other SUVs in this price bracket, I can say this with confidence — no other cabin feels quite as special as that of the Lexus. It's not just about the quality of materials, though those are excellent anyway, it's the way everything comes together. The layered dashboard layout, the calm design and the attention to detail, all feel deliberate. It is also anchored by a massive 14-inch touchscreen, a massive step up from older systems, offering a crisp and intuitive interface that feels modern.

CLASSY CRUISER. This is Toyota DNA at work, which gives you reasonable maintenance costs for a deeply considered luxury SUV that prioritises long-term ownership satisfaction YASH SUNIL

The same clarity of thought carries through to the convenience features. It feels carefully and almost politely equipped, with comfort evenly distributed throughout the cabin. Every seat feels like the best one in the car. While this generation is strictly a five-seater with two rows of seating, the rear bench is where the car truly shines. It offers power-reclining seats and a level of plushness that rivals the long-wheelbase Europeans, making it a genuine alternative for those who prefer to be driven. If someone claimed the driver's seat before I got there, I would not be too upset.

One feature that deserves special mention is the Mark Levinson 21-speaker sound system, which genuinely redefines what in-car audio can be. This is not the kind of setup you listen to casually while scrolling through tracks; it demands your attention. The clarity, depth and balance are exceptional, whether you are sitting in the front or the back. It is the kind of system that makes traffic more tolerable and long drives disappear. It fits perfectly with the RX's calm and indulgent character. Few luxury SUVs at this price point manage to get audio this right.

DRIVER-FOCUSED

Under the bonnet sits a 2.5-litre four-cylinder petrol engine paired with the proven Lexus hybrid system. While the numbers will not set your pulse racing, the way the power is delivered is deeply satisfying. Throttle responses are smooth, linear and reassuring, with the electric assistance filling in the gaps seamlessly. It is a setup that always feels relaxed but never lethargic, making everyday driving feel effortless.

The only element that slightly disrupts this otherwise cohesive experience is the CVT. It does its job unobtrusively most of the time, but when you start pushing harder, it reminds you that outright driver engagement isn't the RX's primary mission. That is really the one factor that keeps it from being a true driver-focused SUV. In other areas, such as steering weight, accuracy and consistency, it actually does rather well. Viewed from another angle, though, this plays perfectly to the car's strengths, especially for owners who spend more time being chauffeured than driving themselves.

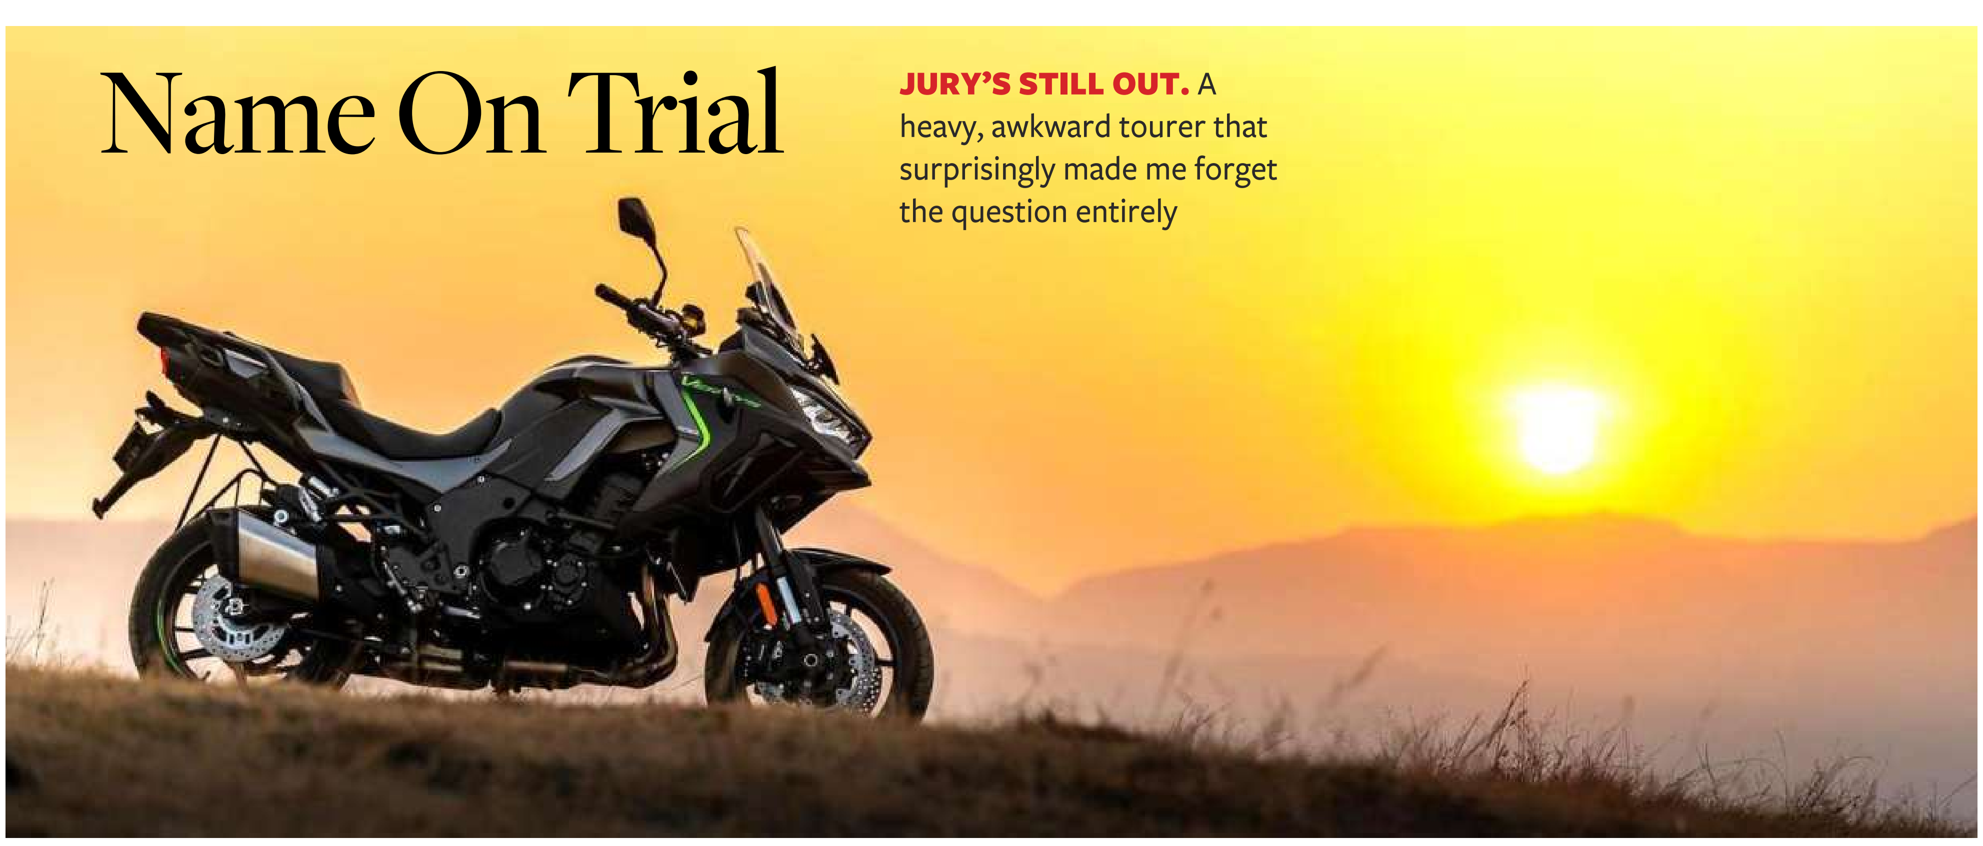
Spending time with the RX also makes you question the curious position of Lexus in India. Unlike rivals such as the BMW X5 and the Mercedes-Benz GLE, Lexus continues to exist in a corner of the luxury market, rarely shouting for attention. And yet, after living with the RX 350h, it is hard to understand why it remains such an under-the-radar choice, as with other Lexus cars as well.

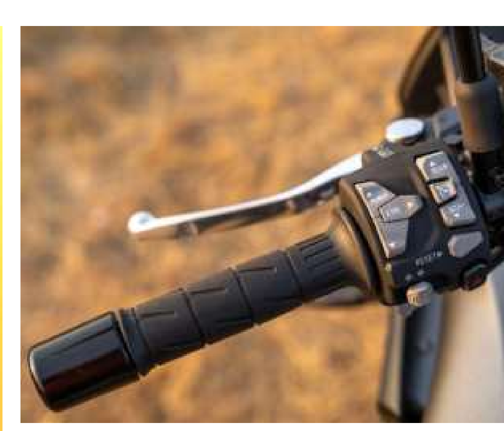
Part of the answer may lie in how Lexus goes about its business. There is no badge bravado here and no attempt to overwhelm you with performance stats or gimmicky tech. Instead, what you get is a deeply considered luxury SUV that prioritises long-term ownership satisfaction. Maintenance costs are relatively reasonable for the segment and reliability is almost a given; after all, this is Toyota DNA at work. Further, the strong-hybrid powertrain delivers fuel efficiency that its petrol-only rivals cannot match.

It may not appeal to buyers chasing outright performance or bragging rights, but for those who value comfort, reliability and long-term peace of mind, the RX 350h makes a compelling case. Add to that with its strong fuel efficiency, relatively sensible ownership costs and a design that stands apart from the usual luxury SUV crowd, it's hard to ignore just how complete this package is, even at a price tag of ₹89.99 lakh (ex-showroom). In a market obsessed with obvious choices, the Lexus RX 350h remains a brilliant alternative that deserves far more attention than it currently gets.

Name On Trial

JURY'S STILL OUT. A heavy, awkward tourer that surprisingly made me forget the question entirely





THE COMPLETE VIBE. The Versys 1100 charms with its electronics package: ABS, three-level traction control and two ride modes KAIZAD ADIL DARUKHANAWALA

Manaal Mahatme

The name 'Versys' is a portmanteau of 'versatile' and 'system', and looking at Kawasaki's flagship crossover at first, that name felt optimistic. I mean, how versatile can a 257-kg motorcycle on long-travel suspension and 17-inch wheels really be? So instead of overthinking it, I did the obvious thing — I spent the next few days living with it.

Before even getting on the saddle, though, I had to make peace with how the Versys 1100 looks. This isn't a motorcycle that will end up on aspirational posters on walls. From the front, it has an undeniable presence, menacing, even, and traffic instinctively makes way for it. But the wide subframe and those 17-inch alloys make the proportions look awkward, almost unresolved. I initially blamed the in-line-four layout of the 1099 cc engine for that broad waist. Then I climbed onto the 820-mm seat, and just like that, none of it mattered.

The riding position can be likened to a lounge chair. Upright, relaxed and commanding, it's like sitting on a couch placed perfectly to admire the scenery. That view also includes the instrument cluster; watching the analogue tachometer's deep orange needle rush to the red line while the digits flashed impatiently was oddly satisfying. I let each gear run longer than necessary, savouring the deep intake growl as the silky inline-four built into a full-blown metal concert. Predictably, there was a downside.The bike is hilariously short-geared in the first four ratios. By 4000 rpm, a gentle buzz suggests an upshift. By 6000 rpm, vibrations make their presence known through the tank, handlebar and footpegs, leaving you little choice but to listen. In traffic though, this short gearing and the engine's tractable nature work in its favour, letting you surf through gaps without constantly stirring the gearbox. Rush hour, however, is where the illusion cracks. Engine temperatures climb past 110, the clutch grows heavier and eventually refuses to cooperate. Not that anyone is buying a Versys 1100 for their daily commutes.

Out on the highway, everything changes. That same linear, predictable power delivery becomes its biggest strength.

PROVES ITS POINT

The Versys doesn't provoke or challenge you but gently pulls you into a rhythm, a zen state where fatigue fades and kilometres are effortlessly racked up. And don't mistake that calm for laziness; after all, there's 133 bhp and 11.4 kg-m at your disposal. Twist the throttle hard enough, and it'll loft the front wheel and storm past 200 kph without breaking a sweat, helped by the fact that there's no wheelie control here to play spoilsport.

The electronics package is refreshingly sparse: ABS, three-level traction control and two ride modes — 'Low' and 'Full'. Switching between them requires a complete stop, which feels charmingly old-school, as does adjusting the windscreen via two manual knobs. You find a setting you like, leave it in 'Full' and get on with riding.

The braking experience mirrors the bike's personality. It's progressive and reassuring, but if you grab a handful in a moment of enthusiasm, it briefly flirts with sportbike territory, even locking the front for a split second. It sounds dramatic, but never felt alarming. If anything, that fleeting moment of bite helped scrub speed faster, and I found myself appreciating the honesty of it.

Suspension, too, is tuned for comfort first. On stock settings, it genuinely feels like a magic carpet, as long as you stick to tarmac. Potholes barely register and broken roads are dismissed with indifference. Push harder into corners, though, and you need restraint. After a point, the rear starts to feel unsettled, gently reminding you that this isn't a supersport in ADV clothing.

Fully fuelled, the 21-litre tank does make the Versys feel top-heavy at standstill; there's no hiding that. But once rolling, it shrinks around you remarkably well, never feeling as heavy as its numbers suggest. Even mundane things, such as getting it onto the centre stand, are surprisingly easy — Kawasaki's design makes it feel like a job a teenager could manage.

And comfort? That's where the Versys won me over. No matter how long the ride, how bad the traffic or how late the return, I always felt like I could turn around and do it all again. Even pillions were consistently impressed, so much so that I briefly entertained the wild idea of spending 100 km on the back myself.

Which brings me back to that name. At ₹13.89 lakh (ex-showroom), the Versys 1100 undercuts most European middleweight ADVs, even if they offer broader versatility. Sure, a few omissions like cornering lights feel harder to justify at this price. But if what you want is a motorcycle that turns highways into comfort zones and days into longer days, the Versys doesn't need to brag loudly about being versatile; it just keeps going. And somewhere along the way, you'll stop questioning the name altogether, just like I did.

QUICKLY.

AU SFB MD & CEO gets three-year extension

New Delhi: AU Small Finance Bank, the first SFB in over a decade to receive in-principle approval from the RBI to transition into a universal bank, on Friday announced the central bank's nod for the reappointment of Sanjay Agarwal as its Managing Director & Chief Executive Officer. The reappointment for a further period of three years is effective April 19, 2026, said the bank. This follows earlier approvals from the Board on October 17, 2025, and shareholders on December 26, 2025, subject to the RBI's confirmation, it said. Agarwal first became the MD of AU Financiers on February 14, 2008, and subsequently MD & CEO of AU Small Finance Bank on April 19, 2017, when the institution transitioned into a bank. PTI

Uday Kotak appointed Chairman of GIFT City

Ahmedabad: The Gujarat government has appointed Uday Kotak, Founder and Director of Kotak Mahindra Bank, as the new Chairman of Gujarat International Finance Tec-City Company Ltd (GIFT City), replacing Hasmukh Adhia. Kotak will take charge with immediate effect, according to a resolution issued on Friday by the Urban Development and Urban Housing Department of the Government of Gujarat. "The government of Gujarat hereby appoints Uday Suresh Kotak as the Chairman of Gujarat International Finance Tec City Co Ltd," said the resolution. OUR BUREAU

IRDAI tells insurers not to invest in overseas AIFs

TOE THE LINE. Auditor of the insurer should also certify compliance with regulations

Our Bureau
Hyderabad

Insurance companies should not invest in overseas alternative investment funds (AIFs), according to the Insurance Regulatory and Development Authority of India (IRDAI).

STATUTORY AUDITORS

The statutory auditors of AIFs should confirm that the capital of the insurer is not invested outside India.

The insurer should obtain a compliance certificate from the AIF, confirming that all overseas investments are disclosed to the insurer. The concurrent auditor of the insurer should also certify compliance with the provisions of excusal rights in respect of the insurer's investment in AIFs with exposure outside India, said IRDAI.

HOME NORM. Indian insurers have strict excusal rights regarding AIFs, prohibiting investments outside India

INSURANCE ACT

According to the norms of Section 27E of the Insurance Act, 1938, and also related rules of SEBI, insurance companies in India have strict excusal rights regarding AIFs, prohibiting investments outside India.

Insurers can be excused or excluded from AIF investments that violate laws, regulations or internal policies, particularly if the AIF invests in foreign securities, engages in forbidden leverage or acts as a fund of funds.

Disruption forces Coinbase to halt trading for one hour

Our Bureau
Mumbai

Global cyrptocurrency exchange Coinbase suffered a service disruption late on Thursday, resulting in users being unable to buy, sell or transfer cryptocurrencies on the platform for around one hour.

"We are aware that customers may be unable to buy, sell, transfer on http://Coinbase.com at this time. Our team is investigating this issue and will provide an update. Your funds are safe," Coinbase's support team posted on X.

CEO SELLS SHARES

The issue was resolved around one hour later.

Separately, Coinbase CEO Brian Armstrong reportedly sold the company's shares amounting to approximately $550 million over the nine-month period, reflecting a sustained programme of stake reduction.

The issue was resolved around one hour later

COMMON PATTERN

The selling activity follows a pattern seen in prior quarters, during which Armstrong periodically trimmed his holdings in Coinbase Global Inc, the US-based cryptocurrency exchange he co-founded and currently leads.

INSIDER TRADING

Such transactions are not uncommon among technology and crypto executives, and are frequently conducted under pre-arranged trading plans pursuant to SEC Rule, designed to mitigate insider trading concerns.

Against the backdrop of broader global financial volatility, including pressure on technology equities and fluctuations in precious metals, market conditions remain liquidity-sensitive. In the near term, this environment could support range-bound price action or continued downside pressure until macro liquidity dynamics stabilise, according to experts.

RBI hikes banks' M&A financing limit to 20% of tier-1 capital

Our Bureau
Mumbai

The Reserve Bank of India (RBI) said banks can conduct acquisition financing of up to 20 per cent of their tier-1 capital, as against the proposed 10 per cent cap, in its draft guidelines. In November, *businessline* had reported that bankers had sought tweaks to the draft acquisition finance guidelines, including higher exposure limits, permission to fund unlisted companies' merger and acquisition (M&A) plans and approval to finance corporates acquiring majority stakes in tranches rather than in a single go.

"The aggregate capital market exposure (CME) of a bank, on both solo and consolidated basis, shall not exceed 40 per cent of its eligible capital base. A bank's direct capital market exposure, consisting of investment exposures, shall not exceed 20 per cent of eligible capital base, on both solo and consolidated basis. A bank's aggregate exposure to acquisition finance shall not exceed 20 per cent of its eligible capital base, within the aggregate CME ceiling of 40 per cent, both on a solo and consolidated basis," said the RBI.

ACQUISITION VALUE

Lenders can fund up to 75 per cent of the acquisition value, enabling acquisitions of both listed and unlisted entities, subject to different guidelines.

The acquisition shall result in the acquirer obtaining control of the target company through a single transaction, or a series of interconnected transactions but completed within 12 months from the date of execution of the acquisition agreement.

Further, the RBI also allowed banks to lend against government securities, sovereign gold bonds, loan against shares, NCDs, mutual funds, units of ETFs and InvITS. The regulator has set 75 per cent loan to value (LTV) ratio against mutual funds, 60 per cent for loan against shares and NCDs and 85 per cent for debt mutual funds.

"The RBI has opened gates for leveraged buyouts, allowing banks to finance acquisition of control, including acquisition of substantial stake in already controlled entities by non financial acquiring companies. The directions permit acquisition of both domestic and overseas entities for up to 75 per cent of the acquisition value. With this, banks would be able to fund acquisitions directly without hiding it in the name of general corporate purposes," said Payal Agarwal, Partner, Vinod Kothari and Company.

'City Union Bank will continue to focus on MSME lending, technology'

Sindhu Hariharan
Chennai

As City Union Bank prepares for a transition with longtime MD and CEO N Kamakodi completing his 15-year tenure in April, the bank has decided to tap internal talent to take over the mantle.

With the banking regulator approving the appointment of Vijay Anandh as the new MD and CEO of City Union Bank with effect from May, the executive told *businessline* that his focus would be to build on the bank's core strength in MSME, gold loans and secured retail, and he would look to further leverage technology across operations.

"It is an honour to get the opportunity to lead a bank as reputed as this. We have consistently achieved double-digit growth across the last few quarters, and will look to sustain the growth to end up over and above the industry level growth. Our focus on MSME, gold loan and secured loans, such as housing and LAP, will continue," he told *businessline*.

Vijay Anandh will take over as the new MD and CEO of the bank from May BIJOY GHOSH

CYBER SECURITY

"We are already investing in technology and we also want to use AI for governance, transaction monitoring and for the ease of our customers," he said.

Separately, strengthening cyber security is also a key priority. "Physical branch expansion will also continue as CUB serves MSMEs and customer contact and relationship is key in this segment," he said.

NET PROFIT GROWTH

The mid-sized private sector lender reported a net profit growth of 16 per cent year-on-year (y-o-y) at ₹332 crore in the third quarter ended December 2025 (Q3FY26). Profit grew on growth in advances and improvement in yield on advances.

Speaking about credit demand, Anandh said post the GST rate cut, they had seen an uptick in demand across segments, and recent trade deals were also likely to help MSMEs upgrade capacity.

To a question on the uptick in gold loans in recent quarters, he said the share of gold loans had remained fairly stable in overall advances. "With our special mention accounts under control and the macro environment on track, we are optimistic of beating industry growth," he said.

Anandh holds over 28 years of experience in banking. Prior to his appointment in City Union Bank, he served as the business and collections head for retail asset products at RBL Bank. He was first appointed as Executive President of CUB in 2023 and was designated ED in 2024.

CUB has historically been a conservative lender, focusing on MSMEs, traders and retail customers. The management transition has taken the shape of an internal succession plan, with the board opting to elevate an existing executive, rather than an external candidate.

Speaking earlier this week at an analyst call, current MD and CEO N Kamakodi said: "As you all know, this is my 59th quarter today. So, we have one more quarter to go. And based on the regulations currently in force, let's say I have to complete my tenure on April 30."

Tesco shifts from headcount to skill count as AI reshapes roles

Aishwarya Kumar
Bengaluru

As artificial intelligence reshapes enterprise operations, Tesco Business Solutions is recalibrating its workforce strategy around skills rather than scale, said CEO Sumit Mitra. He added that the future of work will be defined by human-machine collaboration.

"It's no longer about headcount. It is about skill count, hiring the right talent, at the right cost, in the right place, at the right time, to deliver the right outcome," said Mitra, pushing back against what he described as the "random violence" seen in parts of the tech sector.

Tesco's India headcount will remain in the 5,500-6,000 range even as it plans to add new roles this year, as AI increasingly automates processes such as reconciliation and supplier payments.

Sumit Mitra, CEO of Tesco Business Solutions

JOB LOSSES

Mitra stressed that automation had not led to job losses. Instead, the nature of jobs is evolving. "Humans will become assurers. Their job will be to make sure AI is doing what it needs to do," he said, adding that this is likely the last generation in which work is done by humans alone.

"Going forward, it will be human and machine. You need somebody to ensure the machine is not hallucinating, that the data and insights are clean. Yes, AI is generating insights, but humans will validate them."

INDIA OPERATIONS

Tesco has been present in India since 2003 when many global firms were only beginning to explore the country. Today, its India operations span four areas, including Tesco Business Solutions and Tesco Technology, which together serve as the backbone of the retailer's global operations, from architectural design for its 5,000 stores, to supporting the opening of around 60 new stores annually.

"When a lot of companies were not looking at India, we decided to build our own capability," said Mitra.

Rather than outsourcing to third parties, Tesco chose to establish a captive model and invested in a 15-acre campus in Bengaluru.

RBI plans to revise lead bank scheme to boost effectiveness

Press Trust of India
Mumbai

The RBI on Friday proposed revised guidelines for the lead bank scheme (LBS) to streamline operational aspects and further enhance the effectiveness of the programme, which was introduced in 1969, for coordinating development activities at the district level.

LBS aims at coordinating the activities of banks, government and other developmental agencies through fora established under the scheme to enhance the flow of credit to priority sectors for inclusive growth and deepening financial inclusion.

The guidelines aim to fine-tune the objectives of the scheme — the structure, membership and agenda of various fora; clear delineation of roles and responsibilities of key functionaries; and provisions to further strengthen the State Level Bankers' Committee (SLBC) and lead district manager offices, among others.

"The Reserve Bank shall designate a commercial bank as lead bank in each district, to coordinate the efforts of the credit institutions, government and other stakeholders to improve credit flow to the priority sectors and promote financial inclusion in the district," said the draft circular on LBS.

SLBC convenor banks will coordinate the activities of all banks in the State, and regularly discuss with State government officials the operational problems in lending, while extending necessary support for banking development and to achieve the objective of greater financial inclusion.

Fighting fit

Rafale buy a watershed in defence upgrade efforts

The decision to buy 114 Rafale aircraft at a cost of ₹3.25 lakh crore, 96 of which will be manufactured in India, is an event of exceptional significance. Along with the Tejas aircraft from Hindustan Aeronautics Ltd, the Rafales (36 of which are already in operation in India, with some being deployed by the Navy) will replace the ageing MiG 29 fleet of over 100 aircraft. France's 4.5-generation Rafales could well become the backbone of India's Air Force. India has scored a geopolitical point here, resisting US efforts to sell its F-35.

Efforts to indigenise the production of the Advanced Medium Combat Aircraft (fifth generation) with the involvement of private players also seem to suggest that Russia's SU-57 may not take the centrestage, after all. This pivot affirms India's multi-alignment in a fractious world. Besides multi-alignment, strategic autonomy is also being put into practise in defence procurement. According to the March 2025 report of the Parliamentary Standing Committee on Defence, 89 per cent of the contracts for defence equipment, finalised between March 2019 and December 2024, were signed with Indian vendors. India's defence ecosystem is coming of age, despite issues of delayed deliveries; defence exports are in the region of ₹25,000 crore (with a two-third contribution from the private sector).

Indeed, the multi-pronged push to boost defence capabilities — acquiring aircraft, developing cyber warfare skills through the National Quantum Mission, building capacity in critical minerals, electronics and semi-conductors — acquired a sense of urgency after Operation Sindoor. This is reflected in the hike in defence outlay in the Budget. A 22 per cent rise in capital outlay to ₹2.19 lakh crore or 28 per cent of the total outlay of ₹7.84 lakh crore, marks a break from the past. This could entail higher spending on R&D, cyber warfare, unmanned systems and boosting exports. Both Operation Sindoor and the recent US action in Venezuela brought home the primacy of drone, satellite and precision warfare, marked by real-time intelligence. Even as India easily overcame Pakistan's challenge in Operation Sindoor, what became obvious was the extent to which Pakistan benefited from Chinese technology and weaponry — a point flagged by the Ministry of Defence as it made a case for raising the defence budget to 2.5 per cent of GDP in late 2025.

The defence Budget allocation of ₹7.84 lakh crore is about 2 per cent of GDP and close to 14 per cent of the total Budget size. This reverses a decline on both counts since FY20. Since salaries and pensions account for half the defence budget, and will stay that way, large budgetary increases with an accent on modernisation are a must. In the present context, Operation Sindoor necessitated a replacement of ammunition and spares as well. Be that as it may, an integrated approach to defence, electronics and semi-conductors, as spelt out in recent policies and Budgets, is the way forward.

Pooling risk to finance urban India

RASING FUNDS. Allowing multiple cities to issue bonds collectively works best. But to achieve scale, sustained institutional support and standardised frameworks are required

AATMAN SHAH
ADITYA SINHA

ALLEN EGENUSE J

India is urbanising faster than its cities can finance themselves. Urban areas already generate the majority of the country's GDP and will house hundreds of millions more residents in the coming decades. Yet Indian cities remain fiscally constrained, dependent on State and Central transfers, and chronically short of capital for infrastructure. Water systems, sewage networks, flood control, mass transit and climate resilience all demand long-term investment. The real question is not whether cities need more money, but whether they can raise it themselves.

Municipal bonds offer one answer. They allow urban local bodies (ULBs) to borrow from capital markets to finance infrastructure instead of relying solely on grants or bank loans. In principle, they also promote financial discipline: a city that borrows from the market must maintain credible accounts and predictable revenues. Municipal bonds, therefore, are not merely a financing tool, but a governance tool.

India is not starting from scratch. Over the past decade, policymakers have nudged cities towards market financing. The SEBI regulations of 2015 provided a strong framework for listing. The AMRUT mission incentivised credit ratings and bond issuance by providing a grant of ₹13 crore for every ₹100 crore of bonds issued. Green municipal bonds have begun to emerge, linking urban finance with climate goals. Recent budgetary incentives for large-scale municipal issuance signal continued policy interest.

Yet, the municipal bond market in India remains shallow, having raised only ₹3,784 crore across 19 cities. Volumes remain small relative to India's urban financing needs. The constraint is not policy design, but weak municipal balance sheets and investor concerns. From an investor's point of view, municipal bonds pose several challenges.

MANY CHALLENGES

First is credit risk uncertainty. Indian cities have very low 'own-source revenues' (less than 0.6 per cent of GDP), and covering only 30-40 per cent of their expenditure. Property tax collections which are the backbone of local finance globally remain underexploited. The Economic Survey 2026 estimates nationwide collections at just 0.15 per cent of GDP, compared to 0.3 per cent in LMICs and up to 1.5 per cent in OECD countries. User charges rarely achieve cost recovery. For investors, this raises a basic question: what ensures repayment if political priorities shift?

Second is financial transparency. Delayed audits, non-standard accounting, and limited disclosure make financial assessment difficult. Markets can absorb risk, but they struggle with price uncertainty.

Third is illiquidity. India's municipal bond market is thinly traded. Most investors buy and hold to maturity, leaving little secondary trading. Exit is difficult and price discovery weak, deterring large institutional investors.

Fourth is scale. Typical issuances of ₹100-200 crore are too small to justify the due-diligence costs of large institutional investors.

This is where pooled municipal financing can be transformative. Pooling allows multiple cities to issue bonds collectively rather than individually. Several ULBs combine borrowing needs into a single, larger issuance. Repayment depends on a basket of cities rather than one, diversifying risk and creating institutional-scale instruments.

India has already experimented with this model. The Pooled Finance Development Fund (PFDF), approved in 2006, was designed to enable State-level pooled entities to raise bonds on behalf of ULBs with credit enhancement support. It funded rating enhancements, project development and State Pooled Finance Entities (SPFEs) as specialised pass-through vehicles to build credibility and scale.

> **Indian cities have very low 'own-source revenues' (less than 0.6 per cent of GDP), and covering only 30-40 per cent of their expenditure**

SUCCESSFUL INITIATIVES

Tamil Nadu demonstrated its potential. Its Water and Sanitation Pooled Fund (WSPF) issued pooled bonds for 13 small and medium ULBs that could not access markets alone. A multi-layered credit enhancement structure including debt service reserve funds, escrow accounts, state revenue intercepts and a USAID partial credit guarantee secured strong credit ratings and investor confidence. Proceeds financed water and sanitation infrastructure and refinanced earlier high-cost debt.

Karnataka followed through the Karnataka Water and Sanitation Pooled Fund Trust, again using credit enhancements to help smaller municipalities access capital markets.

These cases show that pooled finance is not theoretical in India. It has worked, but not scaled. PFDF uptake was limited due to market conditions and institutional constraints. Many pooled entities struggled to sustain repeat issuances, and technical expertise proved hard to retain.

Globally, pooled and aggregated models have deepened municipal markets. The UK's Municipal Bonds Agency and US state-level bond banks help smaller local governments borrow at scale, while cities from Gothenburg to Cape Town show that transparency and credible project reporting, not just incentives drive investor confidence.

The lesson is clear: incentives can catalyse issuance, but they cannot manufacture creditworthiness or market depth. Pooled finance works when backed by sustained institutional support, standardised frameworks and predictable fiscal reforms.

Successive Finance Commissions have tried to repair the institutional gaps holding municipal bonds back. The Thirteenth and Fourteenth FCs highlighted the absence of reliable municipal accounts; the Fifteenth FC went further by making audited accounts, property tax reforms, and the constitution of State Finance Commissions' (SFCs) entry conditions for local body grants.

The Sixteenth FC has mandated publicly available provisional and audited municipal accounts as a precondition for any grant, ties a share of urban grants to measurable growth in own-source revenues, and conditions State-level performance grants on States' own transfers to local bodies. It could have gone further by explicitly encouraging pooled municipal financing. That remains a missed opportunity.

Will the changes to IT rules contain deepfakes?

While labelling may identify deepfakes, whether it captures users' attention or social media platforms act on it is moot

V Sridhar

The comprehensive amendment to the Information Technology (Intermediary Guidelines and Digital Media Ethics Code) Rules, 2021, announced on February 10 by the Ministry of Electronics and Information Technology, is welcome in the era of AI generated content. The rules, which come into effect on February 20, clearly defines "synthetically generated audio, visual or audio-visual information" using computer resources and specifies mechanisms to contain the generation and dissemination of false and malevolent information, often referred to as deepfakes.

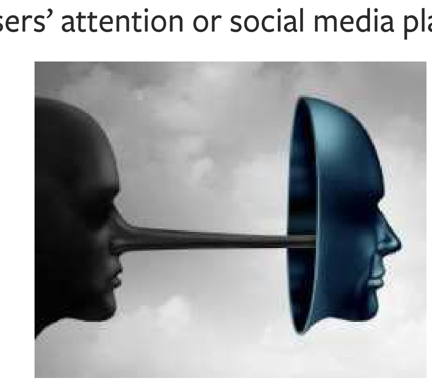
The rules also prescribe the due diligence to be observed by the intermediaries in containing the production and dissemination of deepfakes. In addition, the rules specify that the intermediaries should inform the users to prominently label such synthetically generated information for easy identification. Hence the current rules while empowering the intermediaries to monitor user content also endow them with associated responsibilities and liabilities for hosting or propagating deepfakes. However, the power bestowed on the intermediaries to flag and take down synthetically generated information *suo motu* is likely to hit some guardrails.

In this age of GenAI, creation of synthetically generated information has become much easier with the availability of hundreds of tools. The Nvidia backed AI voice start-up — Elevenlabs — that provides voice and video cloning aps, hit $13 billion valuation in the recent round of funding. These apps are being used by creators to combine their work with AI driven synthetically created media to generate performances for the next generation.

ENTRY BARRIERS REDUCED

These AI tools have also dramatically reduced the entry barriers for new and upcoming artists, writers, and performers to create a niche market for themselves amidst the biggies. These and other similar creative uses of synthetically generated information are broadly permitted under the new rules. While the labelling mandate is meant to curb information created in bad faith, the malevolent actors will not label their content and hence a comprehensive audit mechanism is required to book such offenders.

What bothers governments all over is the virality of deepfakes that are violent, abusive, malevolent and obscene.



AWARENESS DRIVE. Vital for alerting netizens on deepfakes ISTOCKPHOTO

Further, researchers have found that deepfakes often are more viral due to their innovative creation and visually compelling nature. A study indicates that deepfake based cyber attacks or frauds happen once every five minutes. Social media platforms are the primary sources for encountering and disseminating the deepfakes. Hence the additional responsibility placed on significant social media platforms for checking the authenticity of labels on synthetically generated content is a welcome measure indeed. However, whether they will act on the deepfakes that are viral at the cost of losing eyeballs is a moot question!

While prominent labelling should help identify deepfakes, will it be effective given the short attention span of today's users, especially the youth? It is estimated that the attention span on social media of Gen Z is eight seconds, compared to 12 seconds of the millennials. This is one of the primary reasons for the popularity of short video formats and reels. In an experiment conducted with students at IIIT, we found that even the tech-savvy students were not able to fully identify deepfakes that were created using AI tools, as they so closely mimic originals.

However, we found that educational intervention such as providing tips on detecting deepfakes resulted in marked improvement in detection rates. Hence, apart from the well-founded IT rules, the government should also create an awareness campaign for alerting netizens on deepfakes. Regulations introduce constraints in the use of technology and hence have a negative effect on innovation. Hence, aside regulations, awareness building campaigns for educating users, especially the semi-literate and older population, on deepfakes are also the need of the hour.

This writer is Professor, IIIT-Bangalore. With inputs from Trupti Khodwe, Rishabh Dixit, Samyak Jain (students) and Prof Roland Haas, IIIT-B

Deposit insurance

This refers to the editorial 'Creditable move' (February 13). At a time when risks are inevitable in banking, DICGC's move to charge insurance premiums differentially on banks based on risk assessment is prudent, as it provides benefits to those banks that are resilient. This will urge banks to implement robust risk assessment and mitigation measures to strengthen compliance culture and governance.

However, non-disclosure of information with regard to premiums paid to DICGC by depositors is not fair as it goes against the interests of the latter. The depositor has every right to choose a bank whose business risk is moderate. Though the RBI will act proactively to safeguard the interest of depositors, it is paramount to publish the information about the rating of DICGC.

Survival index

Apropos, 'Jan retail inflation at 2.75% under new CPI base year' (February 13). This new index hides the real struggle of the common man. The index today gives weightage to housing, transport, and services. What matters for survival are groceries like rice, wheat, pulses, oil, milk and vegetables, essential for two square meals a day. Medicines for BP, diabetes, cold, and cough are also part of basic needs. Without these, life becomes hard. Therefore, an exclusive index should be created for these items alone. It should reflect the cost of survival, not luxury.

O Prasada Rao
Hyderabad

Gaps in school education

Apropos, 'Digital divide not the real problem in schools' (February 13). Although the digital divide undeniably persists between public and private school students and between urban and rural learners, reform efforts must transcend the narrow obsession with devices and connectivity. Before bridging this gap, education systems must institutionalise rigorous curriculum delivery in language, science and mathematics, while systematically cultivating analytical reasoning and adaptive skills to confront everyday challenges scientifically. Equally essential is the deliberate integration of moral education, ethical standards and civic responsibility so that knowledge evolves into wisdom, character and social consciousness. .

Promoting tourism

This refers to 'Give tourism a boost' (February 13). India with its vast and ancient culture, heritage sites and historical places should have become the epicentre of world tourism. However due to poor upkeep of our historical/heritage sites, the domestic tourism industry is in a bad shape. The Tourism Ministry should identify such sites and work speedily towards refurbishing them. Non-availability of guides who can speak foreign languages is also a constraint in attracting foreign tourists.

Commerce Secy meets WTO chief in Geneva

New Delhi: Commerce Secretary Rajesh Agrawal on Friday held meetings with WTO chief Ngozi Okonjo-Iweala in Geneva and discussed issues pertaining to the forthcoming ministerial conference in Cameroon. The 14th ministerial conference (MC14) is scheduled at Yaounde, Cameroon, from March 26-29 this year. "Discussed key priorities for making MC14 a positive, balanced and inclusive Ministerial. Highlighted India's continued commitment towards constructive engagement with WTO Members for strengthening rules based MTS (multi-lateral trading system)," said a social media post by the Permanent Mission of India at the WTO, Geneva. PTI

Forex reserves drop $6.7 b to $717.06 b

Mumbai: India's forex reserves dropped by $6.711 billion to $717.064 billion during the week ended February 6, the RBI said on Friday. During the week ended February 6, foreign currency assets, a major component of the reserves, increased by $7.661 billion to $570.053 billion, the data released by the central bank showed. The value of the gold reserves dropped by $14.208 billion to $123.476 billion during the week, the Reserve Bank said. PTI

Indian IT firms must re-strategise AI adoption plans, say experts

INFLECTION POINT. SaaS, cybersecurity and data operations seen as next growth engines

Vallari Sanzgiri
Mumbai

The IT services sector must rework its AI strategy, build new growth vectors and rethink technology investments, according to a report released on Thursday by NITI Aayog.

Experts told *businessline* that the sector had been slow to adopt AI and now needs decisive action.

The government described the IT industry as a key lever for achieving the Viksit Bharat vision by 2047. To realise its 2047 ambition, the report proposes a dual approach — protect existing engines such as data, AI and cloud, while pivoting to new growth vectors. It outlines five frontier pathways — Agentic AI Play, Software Play, Infrastructure Play, Innovation Play and India-for-India Play.

Companies have been urged to adopt hybrid "human + agent" service models, target mid-market enterprises and modernise legacy systems. Capturing a larger share in high-growth segments such as data operations, cybersecurity and vertical-specific SaaS could strengthen India's position as a global SaaS hub.

TARGET & GAP

"Over the medium to long term, sustained outperformance will require a shift from labour-heavy delivery to outcome-, IP- and platform-led models, along with new services around enterprise AI adoption, governance and compliance," said Titus Michael, Practice Director at Everest Group.

VIKSIT BHARAT. To realise the 2047 ambition, the NITI Aayog report proposes a dual approach — protect existing engines such as data, AI and cloud, while pivoting to new growth vectors

The report identifies five major investment pools to drive new growth — $8 trillion in AI-led automation of core operational work; $3 trillion in enterprise automation across finance, procurement and HR; $1.1 trillion in data centres, hybrid infrastructure and orchestration; $1.1 trillion in software, and $1.1 trillion in R&D operations.

To meet the Viksit Bharat goals, the sector must reach $750-850 billion in annual revenue by 2035, maintain a 7-8 per cent GDP share and expand its global market share beyond 25 per cent.

MARKET JITTERS

IT stocks have come under pressure amid concerns that new AI tools could disrupt the traditional services model. Analysts say the sell-off reflects doubts over the sector's pace of AI transition.

Michael noted that stronger US jobs data and fading hopes of early Federal Reserve rate cuts have weighed on global tech valuations.

Kranthi Bathini, Director–Equity Strategy at WealthMills Securities, said Indian firms had been complacent in advancing AI capabilities despite having capital buffers.

Ola Electric narrows Q3 loss to ₹487 crore, but revenue falls 55%

Our Bureau
Bengaluru

EV maker Ola Electric reported a consolidated net loss of ₹487 crore in Q3 FY26, narrowing 14 per cent year-on-year from ₹564 crore in the same period last year.

Revenue from operations fell 55 per cent to ₹470 crore from ₹1,045 crore, while electric two-wheeler deliveries stood at 32,680 units.

'STRUCTURAL RESET'

Ola Electric termed the December quarter a "structural reset", as it realigned its retail footprint, cost structure and operating model amid slower EV penetration.

Quarterly operating expenses declined to ₹484 crore in Q3 FY26 from a peak of ₹840 crore in Q4 FY25. The company has outlined a roadmap to reduce operating expenses further to ₹250-300 crore over the next few quarters. It said EBITDA break-even had been reset to around 15,000 units per month, adding that its current manufacturing footprint could support 3-4x volume growth with minimal incremental fixed costs.

GIGAFACTORY RAMP UP

During the quarter, Ola Electric doubled cell production quarter-on-quarter to 72,418 cells and began commercial deployment of 4,680 Bharat Cells in customer vehicles.

The company said its gigafactory is currently operating at about 2.5 GWh capacity and plans to scale it up to 6 GWh by March 2026.

Ola Electric doubled cell production quarter-on-quarter to 72,418 cells and began commercial deployment of 4,680 Bharat Cells in customer vehicles

While topline and volumes remained under pressure, Ola Electric said cost rationalisation, vertical integration and margin expansion would position it for operating leverage once demand recovers.

ATHER POSTS GROWTH

Meanwhile, rival Ather Energy reported 50 per cent year-on-year growth in units sold in Q3 FY26. Total income rose 53 per cent to ₹9,957 million.

Ather expanded to 600 experience centres and increased its pan-India market share to 18.8 per cent. Its shares closed at ₹30.90 on the BSE, down 0.26 per cent.

'Google testing ads in AI mode for shopping across categories'

Sindhu Hariharan
Chennai

After OpenAI began rolling out advertising inside ChatGPT, Google also plans to accelerate ads in its AI mode from 2026.

In her annual letter published on Wednesday, Vidhya Srinivasan, Google Ads and Commerce VP/GM, noted that while Google's AI Mode already provides organic shopping recommendations based on what's most relevant to a query, the big tech major is now testing a new ad format to additionally showcase listings that offer the specific products, clearly marked as sponsored.

This will start with a roll out in the US market.

OFFERS, INCENTIVES

"This new format helps shoppers easily find convenient buying options, and offers retailers the opportunity to show up in these key moments of consideration. We are testing similar formats in categories beyond retail, like travel, to help people find relevant products and services," Srinivasan said in a note on Google's Ads and Commerce outlook for 2026.

"We aren't just bringing ads to AI experiences in Search; we are reinventing what an ad is," she added.

Google also recently introduced a new monetisation experience in AI Mode — Direct Offers — to allow businesses to share a tailored offer with a shopper who is ready to buy to help close the sale, without changing what they offer everyone else.

Vidhya Srinivasan, VP/GM, Google Ads and Commerce

"We will expand these to include special offers that go beyond price to value, like loyalty benefits and product bundles," the note said.

Google, earlier in January, unveiled its Universal Commerce Protocol, an open standard to enable AI agents to perform the entire shopping process on a user's behalf right from discovery to checkout and order management.

CREATIVE PARTNER

"In the weeks following the launch, we've received tremendous interest from hundreds of top tech companies, payments partners and retailers interested in integrating it. It's already improving shopping experiences on Google," Srinivasan said.

In 2026, Gemini-powered tools will help businesses improve their ads, Google said.

Tools like Nano Banana, and Veo 3, in Google Ads Asset Studio, can help advertisers produce studio-quality work in minutes, effectively making AI a real-time creative partner for businesses, Google said.

In case of its plans for creators, Google plans to use AI to understand content and audiences, and instantly matching brands with the creator communities that will love their products.

"This turns creators' organic influence into real business impact," Google said.

DGCA fines Air India ₹1 crore for flying without valid airworthiness permit

Our Bureau
Mumbai

The Directorate General of Civil Aviation has fined Air India ₹1 crore for operating an Airbus A320 on eight routes in November without a valid airworthiness review certificate (ARC).

ARC is renewed annually and validates an aircraft's certificate of airworthiness. The lapse came to light after Air India voluntarily informed the regulator.

Following an investigation, the DGCA imposed the penalty.

MERGER TRANSITION

In a statement on Friday, Air India said it had received the DGCA order related to the 2025 incident and that all identified gaps had since been addressed.

"Air India remains unwavering in its commitment to maintaining the highest standards of operational integrity and safety," the airline said. The regulator had earlier clarified that the aircraft (registration VT-TQN) was previously part of Vistara's fleet. As part of Vistara's merger into Air India in 2024, it was decided that the first ARC renewal for all 70 Vistara aircraft post-merger would be handled by the DGCA.

While ARCs for 69 aircraft were issued after the merger, the concerned aircraft was grounded for an engine change when its ARC expired. It was subsequently released for service following the engine replacement, the DGCA said.

Ramco Systems unveils AI-powered Chia to automate customer service

Our Bureau
Chennai

Ramco Systems, the software firm from Chennai's Ramco Group, has launched Chia, a conversational AI chatbot that can automatically handle customer support requests for businesses.

According to Abinav Raja, MD, Ramco Systems, Chia enables enterprises to design multi-step workflows so that customer support issues can be resolved from start to finish without human intervention.

This is expected to reduce manual effort, speed up responses, and operating costs, enabling businesses to deliver superior customer experiences at scale, the company said.

Raja added that a key advantage that Chia had over its competitors is that workflows can be built using natural language with minimal code or engineering required.

The company plans to sell Chia to enterprise customers with large customer support teams across sectors such as BFSI, telecom, E-commerce, retail, healthcare and travel.

SEBI proposes T-1 reference price, dynamic circuit filter for ETFs

OPERATIONAL EFFICIENCY. To curb mispricing, regulator seeks to remove pricing lag, manual adjustments

Akshata Gorde
Mumbai

The Securities and Exchange Board of India (SEBI) on Friday proposed changes to the methodology for determining base prices and price bands for exchange-traded funds (ETFs), with the aim of aligning ETF trading more closely with movements in their underlying assets.

The regulator proposed shifting the reference price for ETFs from the existing T-2 day NAV-based system to T-1 day metrics in order to eliminate the current one-day lag.

As reported earlier by *businessline*, the regulator has been examining the possibility of moving to a more current reference price framework to improve price discovery and reduce operational friction.

TRADING OPTIONS

SEBI has sought views on four possible options for determining the base price for the trading day (T day): the closing traded price of T-1 day (weighted average of the last 30 minutes), the closing NAV of T-1 day (if available before market opens), the average iNAV of the last 30 minutes on T-1 day, or the latest available indicative NAV (iNAV) of T-1 day.

"The closing NAV of ETFs typically differs between T-1 and T-2 day," SEBI said, adding that the current practice of using T-2 NAV for applying price bands creates a built-in lag. Further, corporate action adjustments are currently carried out manually on the T-2 NAV, which "increases the risk of errors and omissions."

UNIFORM PRICE BAND

At present, ETFs are subject to a uniform fixed price band of 20 per cent (up or down) on the base price. SEBI proposed replacing this with a calibrated mechanism for most categories.

For equity and debt index-linked ETFs, an initial price band of 10 per cent (on either side) has been proposed, which may be flexed up to 20 per cent during the trading session, subject to cooling-off periods and trade-quality parameters.

The regulator observed that "in case of more than 99.8 per cent of the ETFs in equity/debt segment, the max movement was less than or equal to 10 per cent," indicating that a narrower initial band may be adequate in most cases.

GOLD/SILVER ETFS

For gold and silver ETFs, an initial band of 6 per cent has been proposed, with staged intra-day flexing up to 20 per cent. Overnight and TREPs (tri party repo dealing system) ETFs would continue with the existing 5 per cent band.

SEBI has also asked whether the price bands for commodity ETFs should be aligned with the aggregate daily price limits applicable to their underlying derivative contracts.

The regulator has invited public comments on the proposals till March 6.

Regulator mulls relaxations in reporting norms for brokers

Press Trust of India
New Delhi

To boost the ease of doing business, markets regulator SEBI on Friday proposed additional relaxations to reporting norms for stock brokers, including exempting certain demat accounts held by brokers who are also primary dealers from tagging requirements.

Further, brokers that are banks or primary dealers will be required to report only those bank accounts used for stock broking activities, SEBI proposed.

"All demat accounts maintained by stock brokers should be appropriately tagged. Further, this shall not be applicable for the demat accounts used exclusively for activities other than stock broking activities by stock brokers, which are also primary dealers.

"Stock broker which is also bank or primary dealer shall be required to report to the stock exchanges only those bank accounts that are used for their stock broking activities," SEBI said in its draft circular.

KEY EXEMPTIONS

Under the current rules, brokers are required to maintain properly named and tagged bank and demat accounts and report the opening and closure of such accounts to the stock exchanges.

Certain exemptions were earlier provided to brokers that are banks.

In its draft circular inviting public comments on proposed relaxations, SEBI suggested that the earlier requirement regarding reporting of certain demat accounts by brokers had been deleted.

Instead, depositories will share details of demat accounts opened or closed by stock brokers directly with the concerned stock exchanges, as per a mechanism jointly decided by them.

MS eyes $500 m for India fund, shifts some assets

Morgan Stanley's asset management arm is sounding out investors about shifting a portfolio of India assets from an existing fund into a new vehicle, according to people familiar with the matter. The firm plans to move eight healthcare-focused investments into a so-called continuation vehicle, the people said, asking not to be identified. It is seeking to raise $500 million for the new India fund strategy and has approached investors on the plan, the people added. The assets include Omega Hospitals and RG Scientific Enterprises Pvt, one of the people said. Morgan Stanley Investment Management invested in Omega in 2024 with a minority ownership and bought a controlling stake in RG Scientific that same year. A media representative for Morgan Stanley declined to comment. BLOOMBERG

Silverline Tech to raise ₹80 cr in growth capital

Mumbai: Silverline Technologies plans to raise about ₹80 crore. The board will meet on February 18 to consider a strategic equity investment proposal of up to ₹80 crore, implying a potential post-money valuation of about ₹400 crore, the company said. It has received a non-binding letter of intent from UAE-based Trueledger Technologies FZE, expressing interest in acquiring up to a 20 per cent equity participation in the company. The proposed capital infusion is aimed at strengthening the company's balance sheet, accelerating growth initiatives and supporting its technology-led expansion strategy. OUR BUREAU

Anticipatory regulation key as markets expand rapidly: Pandey

Our Bureau
Mumbai

The Securities and Exchange Board of India is recalibrating its regulatory approach towards more anticipatory and risk-based supervision to keep pace with the rapid expansion and growing complexity of India's capital markets, Chairman Tuhin Kanta Pandey said on Friday.

Tuhin Kanta Pandey, Chairman, SEBI

"Regulation can no longer be only reactive. It must become anticipatory. It must move with markets, not behind them," Pandey said at the ET NOW Global Business Summit.

He said the regulator is moving away from a framework centred largely on entities to one focused on activities and risks.

"We are moving from silo oversight to a more coordinated regulatory architecture. We are also moving from static rules to dynamic supervision," he said, adding that the regulator's role extends beyond rule-making to being "a market developer, a guardian of integrity, and a protector of investors".

The remarks come amid a structural shift in India's capital markets. Pandey noted that the number of unique investors has risen to about 140 million, while market capitalisation has grown more than four-fold over the past decade to over ₹470 lakh crore.

Looking ahead, he said that the "four Ts — trust, technology, transparency and teamwork — will guide our approach."

IPOs of 5 companies including Duroflex, Premier Industrial receive green signal

Our Bureau
Mumbai

Capital market regulator SEBI cleared five initial public offerings on Friday.

Companies that have received SEBI nod include Premier Industrial Corporation, Virupaksha Organics, Hexagon Nutrition, Om Power Transmission and Duroflex.

Premier Industrial Corporation, one of the fastest growing manufacturers in both powders and wires categories of the welding consumables industry, plans to offer 2.79 crore equity shares. The offer includes a fresh issue of up to 2.25 crore equity shares and an offer for sale of up to 54 lakh shares.

The company plans to use net proceeds for financing the capital expenditure requirements towards setting up a new wire manufacturing facility at Raigad, Maharashtra, and for financing the capital expenditure required for the expansion of the existing manufacturing facility at Palghar, Maharashtra.

The proceeds will also be used for funding the working capital requirements and for general corporate purposes.

The IPO of Duroflex, a mattress company, consists of a fresh issue of equity shares of ₹184 crore and an offer for sale of up to 2.25 crore equity shares by promoters and existing investors.

Premier Industrial, Virupaksha Organics, Hexagon Nutrition, Om Power Transmission and Duroflex got nod for IPOs

VIRUPAKSHA ORGANICS

Virupaksha Organics plans to raise ₹740 crore through the IPO for capital expenditure, ₹195 crore for prepayment of certain borrowings and general corporate purposes. The Hyderabad-based active pharmaceutical ingredient manufacturer will issue fresh shares in the IPO.

Hexagon Nutrition will raise ₹600 crore through its IPO, consisting of a fresh issue of about ₹100 crore and an OFS of over 3 crore equity shares. The Mumbai-based company has reserved 35 per cent for retail investors.

The Om Power Transmission IPO comprises 1 crore equity shares, comprising a fresh issue of 90 lakh shares and an OFS of 10 lakh shares.

BROKER'S CALL.

Axis Securities

HINDUSTAN UNILEVER (HOLD)
Target: ₹2,450
CMP: ₹2,305.20

Hindustan Unilever (HUL) posted a 2.8 per cent year-on-year increase in revenue in Q3FY26, with underlying volumes expanding 4 per cent, reflecting broad-based traction across categories. The management indicated that demand trends have gradually improved, supported by moderating inflation, particularly in food, over recent months. The steady improvement in consumer confidence signals an early recovery in overall consumption sentiment.

EBITDA margins contracted to 23 per cent, impacted by decline in gross margins. However, the management expects sequential improvement, supported by a favourable price-cost equation, better product mix and ongoing net productivity initiatives. The management reiterated margin guidance of 22-23 per cent, while continuing to invest in the business to drive sustained growth, with a clear focus on volume-led growth and premiumisation.

HUL remains focused on driving competitive, volume-led growth through stronger brand positioning, expansion in high-growth segments and scaling of future-ready channels such as quick commerce. The management expects a gradual recovery in the coming quarters, aided by recent GST rate reductions, which could act as a catalyst for demand recovery in the long term, along with other favourable macro policies. However, we remain cautious in the short term and prefer to adopt a wait-and-watch approach and therefore maintain our Hold rating on the stock.

InCred Equities

MAHINDRA & MAHINDRA (ADD)
Target: ₹4,289
CMP: ₹3,533.80

Mahindra & Mahindra, or M&M's Q3FY26 standalone EBITDA rose 19 per cent year on year to ₹5,290 crore, which was in line with our estimate, but 4 per cent below Bloomberg (BB) consensus estimate. Normalised PAT rose 31 per cent per cent to ₹4,000 crore due to higher other income and flattish depreciation. The ₹590-crore charges in respect of global farm equipment business hit reported PAT.

The management indicated that GST cut is benefiting sports utility vehicle (SUV) premiumisation and entry-level car customers. While El Nino fears are a cause for concern, the precise timing of its landing will be key to gauge the impact on FY27F tractor demand.

We have raised sales volume estimates by 5-7 per cent for FY26F-27F to factor in new vehicle launch momentum and capacity build-up. We build in 8 per cent tractor industry volume growth for FY27F. With current mark-to-market of investment in subsidiaries, we raise the value of subsidiaries to ₹709/share (from ₹654 earlier). The standalone entity is valued at 22x one-year forward P/E, marginally below the +1SD level to reflect concerns over rainfall, leading to a SOTP-based higher target price of ₹4,289 (₹4,157 earlier) and maintain Add rating on the stock.

Hindalco tanks 6% as Q3 profit slides, brokerages weigh Novelis impact

Madhu Balaji
Bengaluru

Shares of Hindalco Industries came under pressure on Friday, falling 5.7 per cent to ₹909 on the NSE on Friday, after the company reported a sharp decline in net profit for the December quarter, largely due to an exceptional loss linked to a fire incident at its overseas subsidiary.

The Aditya Birla Group company posted a consolidated net profit of ₹2,049 crore for the quarter, down 45 per cent from ₹3,735 crore a year earlier. The fall was attributed mainly to a one-time provision related to the fire accident at its US-based subsidiary Novelis.

Revenue, however, rose 14 per cent to ₹66,521 crore (₹58,390 crore). The company reported an exceptional loss of ₹2,610 crore.

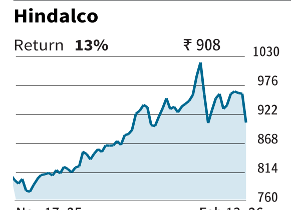
LEVERAGE RISKS

Brokerages offered mixed views on the performance of Hindalco. Citi downgraded the stock to 'Neutral' from 'Buy', though it raised the target price to ₹1,000 from ₹920. The brokerage said the structural bullish thesis could be tempered by leverage concerns, noting uncertainty over insurance recovery related to the Oswego fire and warning that cash flow impact appears higher than earlier expected. It also projected that the net debt-to-EBITDA ratio could climb to about 4.5 times by FY27.

Jefferies maintained a 'Hold' rating and lifted its target price to ₹890 from ₹855, describing the quarter as weak and flagging concerns around Novelis. It said that softer-than-expected performance in the domestic aluminium business and multiple fire incidents cloud operational visibility while rising debt levels remain a concern. However, it raised FY27–28 earnings estimates by 6 per cent on the back of stronger aluminium prices.

In contrast, HSBC retained a 'Buy' call but trimmed its target price to ₹1,210 from ₹1,240, arguing that underlying earnings remained strong and the Oswego impact should be viewed as a one-off event. JM Financial maintained a 'Buy' stance with a target price of ₹1,120, citing supportive metal prices and resource security following recent mine acquisitions. Motilal Oswal Financial Services cautioned that the fire incident and cost escalation at the Bay Minette project weaken near-term visibility. The brokerage expects insurance recoveries to offset part of the impact over the next 18–24 months and reiterated a 'Buy' call at a target price of ₹1,110.

Hindalco



Nippon Gold BeES breaks into global top 10 with $912 million inflows

Our Bureau
Mumbai

Nippon India ETF Gold BeES ranked sixth globally in gold ETF fund flows for January 2026, recording net inflows of $911.7 million and a gold demand of 5.7 tonnes, according to data released by the World Gold Council. It was the only Indian gold ETF to feature in the global top 10 for the month.

The ranking was disclosed on Friday by Nippon Life India Asset Management Ltd (NAM India), the manager of Nippon India Mutual Fund.

The fund's performance placed it alongside established gold ETFs from the US, China and Europe in a month when global gold ETFs saw combined net inflows of approximately $14.75 billion across the top 15 funds.

World Gold Council data attributed the surge in global gold ETF flows in January to economic uncertainty, expectations of interest rate shifts and demand for portfolio diversification.

INVESTOR ADOPTION

India, while operating a relatively smaller ETF market compared to the US and China, emerged as a notable contributor to global gold ETF flows during the period.

NAM India said the result reflects growing investor adoption of regulated, exchange-traded gold products in the country. Nippon India ETF Gold BeES is the largest gold ETF in India by assets and has been listed on the NSE since 2007.

HDFC Flexi Cap Fund crosses ₹1 lakh cr AUM

Our Bureau
Mumbai

HDFC Flexi Cap Fund has crossed the ₹1-lakh-crore mark in assets under management as it completed 31 years and has gone through different market cycles.

Launched in January 1995, the fund allocates investment dynamically across market capitalisations and sectors while aiming at long-term wealth creation.

Navneet Munot, MD and CEO, HDFC Asset Management Company, said the fund had remained anchored to a robust research-led investment process, with a clear aim of long-term wealth creation through periods of expansion, correction and structural change.

New world order demands export competitiveness: CEA

CRUCIAL ROLE. India must emerge as a manufacturing-driven central player: Nageswaran

Our Bureau
Chennai

In a global economic order that is characterised by fragmentation and protectionism, it is critical for India to evolve as a central player driven by export strength and manufacturing-led growth, according to V Anantha Nageswaran, Chief Economic Advisor (CEA), Government of India.

Nageswaran was speaking at the TiECON, an annual entrepreneurship conference hosted by The Indus Entrepreneurs (TiE — Chennai Chapter), here on Friday. He said the nature of the global system had changed, with trade no longer being reciprocal and supply chains being used as instruments of state power.

"In that case, we need to have buffers. Emerging markets like India will still be required to import, and to pay for imports, we have to export and attract capital. It has to be a combination of the two. Both the public and the private sectors have a huge responsibility to tackle this huge challenge," he said.

PRODUCTION INCENTIVE. CEA V Anantha Nageswaran at the inaugural session of TiEcon Chennai 2026 BIJOY GHOSH

CAPITAL FLOW

Attributing the recent currency depreciation to scare capital flows driven by trade uncertainty, he added that if exports and capital flows become problematic, the currency will be vulnerable.

In order to improve export competitiveness, Nageswaran suggested that import protections given to the industry should not be in perpetuity but in return for reciprocal obligations on productivity and export performance including investment in quality products, R&D and innovation.

Moreover, he said he believes that the key to being strategically resilient lies in manufacturing strength. Services alone cannot sustain long-term strength and manufacturing is essential for export competitiveness and resilience.

COMPLIANCE BURDENS

In terms of policy, he called for an 'entrepreneurial bureaucracy' which promotes faster deregulation to cut compliance burdens, enable experimentation, and lower business costs to boost competitiveness and manufacturing growth.

In terms of the India-US trade deal framework, he said it is significant as it removes uncertainties in the minds of investors and should improve capital flow.

The event also saw the presence of Manoj Kumar, CEO Naandi Foundation and Co-Founder, ARAKU Coffee; Amar Agarwal, Chairman & MD, Dr Agarwal's Eye Hospital and Eye Research Centre; and Shashi Kumar, Founder and CEO, Caregiver Saathi, among others.

NASA-Vast Space in deal for private mission to ISS

Our Bureau
Mumbai

Vast Space, a privately-held American aerospace company, has signed an order with NASA for the sixth private astronaut mission to the International Space Station (ISS), targeted to launch no earlier than summer 2027 from Florida.

It is Vast's first private astronaut mission to the space station in partnership with NASA.

Max Haot, CEO, Vast, said leveraging the remaining life of the ISS with science and research-led commercial crewed missions is a critical part of the transition to commercial space stations and fully unlocking the orbital economy.

Vast is also equally focused on the Indian markets with Haot attending the Global Space Exploration Conference last year focusing on opportunities in human spaceflight and space station development.

Vast's Haven-1 is expected to become the world's first commercial space station when it launches in 2027, followed by additional Haven modules to enable permanent human presence by 2030.

'Banks can fund only listed REITs with 3-year history'

Our Bureau
Mumbai

The Reserve Bank of India's (RBI) plans to allow banks to lend to SEBI-registered real estate investment trusts (REITs) provided the trusts are listed and have a minimum three-year operational history with positive cash flows, according to Reserve Bank of India (Commercial Banks – Credit Facilities) (Draft) Second Amendment Directions, 2026.

Alongside, the central bank also issued updated draft guidelines for bank's exposure to infrastructure investment trusts (InvITs). These are similar to the one issued for bank lending to REITs.

CREDIT EXPOSURE

The central bank said the aggregate credit exposure of all banks to the borrowing REIT and its underlying SPVs/holdcos (special purpose vehicles/holding companies) taken together, cannot exceed 49 per cent of the value of the REIT's assets as on March 31 of the previous financial year or such lower limit as may be decided by the bank's board.

Lending to a REIT by a bank can only be by way of loans not involving bullet or ballooning principal repayments.

A bank should strictly monitor the end use of funds lent to REITs to ensure that this route is not being used to finance activities which are not permitted, such as land acquisition, even where such acquisition forms part of a project.

Overseas branches can lend to REITs constituted overseas if an effective insolvency/bankruptcy mechanism, either statutory or regulatory, is available in the relevant jurisdiction.

As REITs are trusts, the bank will need to be mindful of the legal provisions in respect of these entities especially those regarding enforcement of security.

BANK FINANCING

Where bank financing is for the purpose of refinancing of existing term loans of SPVs, it shall be ensured that it is undertaken only in respect of completed projects that have received a completion certificate (CC), occupancy certificate (OC) or their equivalent.

McLeod Russel narrows Q3 net loss to ₹36.41 cr, revenue rises 20%

Our Bureau
Kolkata

Bulk tea producer McLeod Russel on Friday reported narrowing of its consolidated net loss to ₹36.41 crore for the third quarter this fiscal from ₹87.33 crore for the corresponding period last fiscal, as its revenue from operations grew 20 per cent year-on-year.

Revenue from operations rose to ₹445.45 crore for Q3FY26 from ₹370.56 crore for Q3FY25, according to a stock exchange filing.

UNDER STRESS

The company said its financial position continued to be under stress and it is passing through prolonged financial distress over a considerable period of time.

The realisation against tea has also been affected significantly, having an impact on the volume of operations and the company's performance on an overall basis.

Notably, the stressed assets resolution process for the company under the Reserve Bank of India's guidelines was initiated long back in earlier years.

Mauritius seeks enhanced air connectivity with India

Aneesh Phadnis
Mumbai

Mauritius is looking to strengthen air connectivity with India as it redoubles its efforts to attract more tourists.

The island country's Tourism Minister Christian Harold Richard Duval and officials from Mauritius Tourism Promotion Authority (MTPA) met airline executives and travel agents at the OTM Travel Show in Mumbai as a part of promotion efforts.

"India remains a top priority in our tourism growth strategy. By strengthening our air corridors and fostering closer collaborations with Indian trade partners, we are ensuring that Mauritius remains a preferred choice for leisure, business and celebrations alike," Duval said. Currently, Air India, Air Mauritius and IndiGo operate flights between two countries.

SIGNIFICANT GROWTH

Last year, over 75,000 Indians visited Mauritius representing 35 per cent year-on-year growth. "Moving beyond the metro cities, our aim is to capture the booming tier-2 and tier-3 markets. We are also working on bolstering flight connectivity, between India and Mauritius, expanding our meetings, incentives, conference and exhibitions segment, and highlighting our unique spiritual and cultural links. One particular target market where we will focus more effort is the Gen-Z and first-time young Indian traveller," said Dinesh Burrenchobay, Chairman, MTPA.

QUICKLY.

Palm oil posts 2nd weekly loss on selling pressure

Jakarta: Malaysian palm oil futures posted its second weekly loss on Friday, even as it closed higher on the day, on the back of selling pressure from slow demand. The benchmark palm oil contract for April delivery on the Bursa Malaysia Derivatives Exchange rose 13 ringgit to 4,050 ringgit ($1,037.13) a tonne at the close. It lost 2.5 per cent for the week. REUTERS

Aluminium drops on report US may ease tariffs

London: Aluminium prices sank to a one-week low on Friday after a report that the US may trim some tariffs. Other industrial metals also lost ground on profit-taking and risk-off sentiment. Benchmark three-month aluminium on the LME gave up 1.9 per cent to $3,040.50 a tonne by 1020 GMT, its weakest since February 6. REUTERS

Crude oil prices stable on US inflation data

London: Crude oil prices steadied on Friday after US inflation data, recovering from an earlier dip on news that the OPEC+ is leaning towards a resumption in production increases. Brent crude futures gained 9 cents, or 0.13 per cent, to$67.61 a barrel by 1424 GMT. US West Texas Intermediate crude was unchanged from the previous close at $62.84 at the same time. REUTERS

Gold, silver dip on global cues

LOSING SHINE. Silver drops below ₹2.5 lakh a kg; gold rules near ₹1.5 lakh/10 g

Suresh P Iyengar
Mumbai

Gold prices plunged by ₹2,885 or 2 per cent to ₹1,52,765 per 10 g against ₹1,55,650 on Thursday in line with the weakness in global markets and appreciation of the dollar against the rupee.

Similarly, silver prices declined by ₹16,700 to ₹2,42,433 a kg against ₹2,59,133 at close on Thursday as investors booked profits, according to the Indian Bullion and Jewellers Association data.

Gold for April delivery on the MCX turned volatile and traded between ₹153,153 and ₹154,837. Silver for March delivery on the MCX traded between ₹2,39,602 and ₹2,48,786.

Both metals have declined by 16-43 per cent from their peaks after rallying to record highs as macroeconomic cues turned stable though geopolitical tensions continue.

DEEP FALL. Both metals have declined by 16-43 per cent from their peaks after rallying to record highs REUTERS

Gold fell below $5,000 an ounce level after US economic data suggested that the Federal Reserve is unlikely to cut interest rates soon

GOLD BELOW $5,000/OZ

Globally, gold fell below the $5,000 an ounce level after US economic data suggested that the Federal Reserve is unlikely to cut interest rates soon. Spot gold prices dropped as much as 4 per cent to $4,880 per ounce before recovering slightly to above $4,900.

Silver also witnessed a near 10 per cent decline as investors trimmed their positions amid a wild swing in prices. Traders are now awaiting the US inflation data for clues on future gold trends and central banks.

Hareesh V, Head of Commodity Research, Geojit Investments, said gold prices had turned choppy following their sharp swings in early 2026, but the broader structure still appears constructive. The recent volatility was driven by shifts in Fed expectations, dollar strength and speculative flows.

Most institutional forecasts support a positive long-term narrative for this year, underpinned by strong central-bank buying, geopolitical uncertainty and a softer dollar outlook, he said.

ATTRACT BUYING

In the near term, every dip in gold prices will attract buyers, supported by resilient safe-haven demand and slowing real yields, he added.

Sandip Raichura, CEO of Retail Broking and Distribution & Director, PL Capital, said though US President Trump's deal with India and a potential deal with Brazil had reduced the tariff uncertainty, higher inflation and continuing geopolitical uncertainties, apart from the emerging split between the Global North-West (Europe, North America and parts of Oceania) and the rest of the world will continue to propel reserve banks buying gold.

"Gold is well on its way to what we believe should be $6,000 an ounce level by 2026-end. We believe all dips are an opportunity to buy gold," he said.

Palm oil imports up this season

Our Bureau
Mangaluru

Edible oil imports declined by 2 per cent in the first quarter of the oil year 2025-26 (November-October), mainly due to the reduction in imports of soybean oil and sunflower oil.

India imported 38.78 lakh tonnes (lt) of edible oil during November-January of the oil year 2025-26 against 39.21 lt in the corresponding period of the previous oil year.

BV Mehta, Executive Director of the Solvent Extractors' Association of India (SEA), said edible oil imports marginally declined to 13.11 lt in January 2026 from 13.62 lt in December 2025.

Soybean oil imports declined to 12.02 lt during the first three months of the oil year 2025-26 from 13.87 lt in Q1 of 2024-25.

Sunflower oil imports declined to 7.62 lt in the first quarter of 2024-25 from 9.12 lt in the corresponding quarter of the previous year.

REFINED OILS DOWN

However, India's palm oil (including RBD palmolein and crude palm oil) imports increased to 19.08 lt during the first quarter of the current oil year from 16.21 lt in the corresponding quarter of the last year.

Stating that imports of crude palm oil (CPO) were on the rise, he said India imported 18.87 lt of CPO during Q1 of 2025-26 (11.14 lt in Q1 of 2024-25).

Imports of RBD palmolein decreased to 9,784 tonnes (4.84 lt) during the period. Imports of refined soybean oil declined to 47,369 tonnes (1.14 lt) and refined sunflower oil to 3,022 tonnes (18,473 tonnes) during the period.

The ratio of refined oil to the total edible oil imports sharply decreased to 2 per cent from 16 per cent during the first quarter of 2025-26.

The share of palm oil imports in the total edible oil imports increased to 49 per cent from 41 per cent due to the higher import of CPO.

He said Nepal exported around 54,000 tonnes of refined oils during November 2025.

This included 47,639 tonnes of refined soybean oil, 3,022 tonnes of refined sunflower oil and 2,484 tonnes of RBD palmolein. In December 2025, Nepal exported around 48,000 tonnes of refined oils.

MAJOR EXPORTERS

During November-January 2025-26, Malaysia exported 8.31 lt of CPO to India. Indonesia exported 7.24 lt of CPO and 7,300 tonnes of RBD palmolein to India during the period.

India imported 7.63 lt of crude soybean degummed oil from Argentina, 1.5 lt from Brazil and 1.42 lt from China during the first quarter of the oil year 2025-26. Russia exported 4.33 lt of crude sunflower oil to India during Q1 of 2025-26. This was followed by Argentina at 1.1 lt and Ukraine at 1.52 lt.

Total vegetable oil imports (including both edible and non-edible oils) reached 39.60 lt during the first three months of the oil year 2025-26 against 40.46 lt in the same period of the last oil year.

Chilly weather continues to hit tea gardens in Munnar, Nilgiris

V Sajeev Kumar
Kochi

Chill weather conditions in Munnar and the Nilgiris since December have begun to worry tea producers, who fear prolonged cold could dent output in the coming weeks.

Anil George, Vice-President (Tea Operations), Harrisons Malayalam Ltd-SBUA, told *businessline* that a sudden drop in temperature from 6–7°C to 2–3°C during the early hours on February 11 resulted in frost at a few estates across the Munnar and Devikulam regions.

Frost is normally confined to December–January, and its occurrence in February is considered unusual. The low temperatures led to ice crystal formation on tea leaves, causing scorching of tender, manufacturable foliage after sunrise.

Lockhart Estate of HML, located in Devikulam at an elevation of approximately 5,500 ft MSL, recorded minimum temperatures of 2–3°C and was mildly affected. Relative humidity during the period was around 55 per cent. While the prevailing cold and dry spell may impact production during the month, such conditions are expected to enhance tea flavour and quality as well, he said.

PRODUCERS WORRIED. In the Munnar region alone, around 100 hectares of crop have been afffected

ACUTE LEAF SHORTAGE

The Nilgiris district is also facing a severe frost spell, with sharp early-morning temperatures drop, damaging tender tea shoots and slowing new flush growth. Green leaf arrivals have fallen drastically across many areas, bringing down overall production, Dhananjayan Krishnamurthy, President of the Nilgiris Bought Tea Leaf Manufacturers Association, said.

Several bought leaf factories are currently operating only one day per week due to acute leaf shortage. Tea dispatches from factories have also dropped significantly. Small growers and factory workers are particularly affected as the bushes will take time to recover—until rains set in and night temperatures rise, he said.

Since a majority of the tea gardens are owned by small growers, the dropping temperatures are affecting their earnings. Frost conditions are being experienced in Ooty, Kotagiri and other areas too, he added.

CROP LOSS

In the Munnar region alone, around 100 hectares of crop have been affected. It is early to evaluate the production loss and the quantum of actual loss could be ascertained only after a couple of months.

Kerala's tea production is estimated to be around 64 million kg and of this, 25 per cent comes from the Munnar region.

Coffee economy in focus at Bengaluru IICF

Our Bureau
Bengaluru

The specialty coffee industry took centre stage in Bengaluru as the India International Coffee Festival (IICF) 2026 kicked off on Thursday, drawing participants from across the coffee value chain.

Organised by the Specialty Coffee Association of India, with support from the Coffee Board and Nestlé India, the three-day event brings together growers, roasters, exporters, café brands and equipment makers as the sector shifts towards quality-driven growth.

With over 120 exhibitors and an expected footfall of more than 30,000, the festival reflects the rising momentum in India's evolving coffee ecosystem, where premiumisation, traceability and value addition are becoming key industry themes.

The event is structured around a farm-to-cup framework, offering insights into production, processing, roasting and brewing through curated tastings, workshops and cupping sessions.

IICF is also hosting the National Coffee Championships, where winners from regional rounds will get to represent India at international competitions.

Nano urea maintains crop yields, reduces urea usage by 25-50%: Centre

Our Bureau
Mangaluru

A study has found that farmers could reduce urea usage by 25-50 per cent without reducing crop yield by applying two sprays of nano urea as top-dressing along with the recommended basal dose of nitrogen. Apart from maintaining the yield, this method improved it by 3-8 per cent in some crops when compared with the yield that obtained with the full recommended dose of nitrogen.

In a written reply to a question on the impact of nano urea on crop production in the Rajya Sabha on Friday, Ramnath Thakur, Union Minister of State for Agriculture and Farmers' Welfare, said that based on the bio-efficacy trials at multiple locations by Indian Council of Agricultural Research (ICAR) institutions and State agriculture universities (SAUs) and bio-safety test results, the government had provisionally notified nano urea as nano nitrogen fertilizer under the Fertilizer Control Order (FCO), 1985.

"These experimental trials of nano urea were conducted on different crops, such as paddy, wheat, mustard, maize, tomato, cabbage, cucumber, capsicum and onion in different agro-climatic zones. The study indicated that two sprays of nano urea as top-dressing, along with the recommended basal dose of nitrogen, gave comparable yield to that obtained with the full recommended dose of nitrogen with yield advantage of 3-8 per cent and urea saving of 25-50 per cent in various crops," he said.

Similarly, on the basis of positive result of crop trials conducted in SAUs/ICAR institutes, the government has notified nano DAP and nano zinc under the FCO.

All nano fertilizer manufacturers have been informed to conduct bio-efficacy trials under the supervision of SAUs/ICAR in different agro-climatic zones.

CRM SCHEME

ICAR has initiated a network project, entitled 'Evaluation of nano urea on crop productivity and nitrogen use efficiency in diverse agro-ecological zones of India', in November 2025 in 14 centres and 10 major agro ecological zones for 12 major crops on important parameters, such as the impact of long-term application of nano urea on crop yield, produce quality and soil nutrient balance, he said.

To a separate question on the implementation of the crop residue management (CRM) scheme, Thakur said that the overall objective of reducing the burning of paddy straw through initiatives under CRM scheme were getting realised as it is evident from the reports published by the Consortium for Research on Agroecosystem Monitoring and Modelling from Space (CREAMS) Laboratory, Division of Agricultural Physics, ICAR-Indian Agricultural Research Institute (IARI), New Delhi.

There is a visible reduction in the paddy residue burning events, and the same have reduced by 92.4 per cent in Punjab, 94.9 per cent in Haryana and 17 per cent in Uttar Pradesh in 2025 when compared with 2017, Thakur said.

Under the CRM scheme, the government has released ₹4,173.84 crore from 2018-19 to 2025-26 (as on February 10) to various States. These include ₹2,026.45 crore to Punjab and ₹1,156.71 crore to Haryana.

IMD confirms watch for low pressure area over Bay

Vinson Kurian
Thiruvananthapuram

The India Meteorological Department (IMD) said on Friday that an upper-air cyclonic circulation persisting over the east Equatorial Indian Ocean and adjoining the south-east Bay of Bengal may descend to lower levels of the atmosphere, setting up a non-seasonal low-pressure area over the same region by Sunday.

The IMD indicated that the system may move west-northwest towards the south-west Bay in the direction of the Sri Lanka/Tamil Nadu coasts, but not quite reaching there during the week starting Thursday next. Isolated rain, thunderstorms and lightning are forecast to roll out over the Andaman and Nicobar Islands on Monday and Tuesday.

WET SPELL FOR SOUTH

Light to moderate rainfall is likely at isolated to scattered places over the South Peninsula during some days next week.

Overall, rainfall is likely to be near normal to above normal over the region during this period, the IMD said in its short-term outlook.

Models, as of now, rule out the possibility of a storm developing out of the system. One of them went on to suggest that it might die out at sea off the coast of Tamil Nadu.

IMD's numerical predictions indicate the low-pressure area leading from the front of an easterly wave is likely to push straight West towards the south of Sri Lanka. It may progressively move west-southwest and away from the island nation.

To the north of the country, an incoming western disturbance lay along a latitude linking Quetta and Multan in Pakistan with Bathinda in Punjab (India) on Friday.

A follow-up western disturbance is set to arrive by the middle of next week, as per the European Centre for Medium-Term Weather Forecasts.

This would likely be followed by a hiatus, with a nascent anti-cyclonic circulation rearing its head even as the 2025-26 winter season begins to draw to a close. The anti-cyclone is seen as blocking the normal track used by western disturbances to stream in across Afghanistan and Pakistan towards North-West India.

RAIN ALERT FOR NORTH

IMD has predicted isolated rain/snow over Jammu-Kashmir-Ladakh on Monday and Tuesday, Himachal Pradesh and Uttarakhand for three days from Monday, and Arunachal Pradesh on Saturday and Sunday. Isolated rain and thunderstorms are likely over Punjab, Haryana, Chandigarh, west Uttar Pradesh and north Rajasthan.

Dasault to set up Rafale assembly line, manufacturing hub and MRO in India

FIRE POWER. With purchase of 114 fighters, India will have the second largest fleet of Rafales after France

Dalip Singh
New Delhi

The proposed Rafale fighter aircraft purchase deal for 114 jets is expected to give a significant boost to the domestic aerospace industry, with Dasault Aerospace to set up a final assembly line as well as separate manufacturing hubs for sub-assemblies and components.

The multi role righter aircraft (MRFA) Rafale programme is being implemented through a government-to-government agreement with no intermediaries and full transparency, Defence Secretary Rajesh Kumar Singh asserted a day after the Defence Acquisition Council (DAC) gave nod to the proposed deal, setting in motion the process of formal contract negotiations ahead of French President Emmanuel Macron's visit to India from February 17.

"For the first time, Rafale aircraft will be manufactured outside France with significant level of localisation. We are seeking a minimum of 40 to 50 per cent localisation. They have offered close to 40 per cent. Our intent is to take it to close to 50-plus and we are confident we can negotiate that," Singh said.

LOCAL INDUSTRY

"The G2G framework provides for significant levels of localisation, and full authority to integrate Indian weapons and systems which are key highlights of this programme," he said.

Sources aware of the development said that transfer of technology for production and maintenance of airframe, engine and avionics is also proposed. Dassault will also establish a MRO facility in India for the entire fleet of Rafales operated by the IAF and the Navy. Besides, the hub may be open for armed forces of other countries as well.

Dassault will also assist in raising a simulator facility as per the convenience of the IAF at a location decided by them.

While some numbers of Rafale will fly in from France, a majority of them will be produced in India.

STRONG FLEET

The Defence Secretary stated that the first of the Rafales will start coming out from the production facility in the country in the next three-and-half years.

And the 26 marine version of Rafale, which the Indian Navy contracted last year will roll out from 2028, beefing up the fighter aircraft strength, he stated.

If this deal goes through, India will become the second largest operator of Rafale after France, with 176 of them which includes 36 already in the IAF and the 26 of marine version of the aircraft contracted by the Navy last year.

ADD ON. Dassault will also help set up a simulator facility as required by the IAF MURALI KUMAR K

France operates over 225 aircraft.

The deal will not only give business exposure to the overall defence and civilian aerospace industry but create infrastructure, provide skilled jobs and further integrate indigenous companies in global supply chain.

Dassault Aviation may opt for TASL as one of its partners since it chose TASL in June last for four production transfer agreements to manufacture the Rafale fighter aircraft fuselage.

KLA Corp of US to invest $400 m over 10 years to expand Chennai unit

Our Bureau
Chennai

US-based KLA Corporation, a semiconductor process control company, has signed a memorandum of understanding (MoU) with the Government of Tamil Nadu to establish a research and development (R&D) and innovation campus in Chennai.

KLA will invest up to $400 million (₹3,600 crore) over the next decade and generate over 10,000 jobs.

MOU SIGNED

The company earlier this year opened a ₹300 crore R&D facility in Chennai. The campus, an expansion of the company's existing facility, has been envisioned on a 12-acre site with a potential capacity of up to 15 lakh sq ft over time.

The MoU was signed on Friday in the presence of MK Stalin, Chief Minister of Tamil Nadu, Udhayanidhi Stalin, Deputy Chief Minister, TRB Rajaa, Minister for Industries, and Dominic David, President, KLA India, among other industry and officials.

INNOVATION CAMPUS

"KLA's decision to establish their new R&D and innovation campus in Tamil Nadu reinforces the State's role in the global semiconductor value chain," said TRB Rajaa, Minister for Industries, Investment Promotion & Commerce.

"India has been a critical part of KLA's global growth story for over two decades. This MoU continues our long-term vision to scale India as a global centre for AI and software-led semiconductor innovation. We expect the planned Chennai campus to extend our existing R&D capabilities, strengthen collaboration across global teams, and provide broader support to customers," said Dominic David, President, KLA India.

Stalin's ₹5,000 bonanza for 1.3 cr women ahead of TN polls jolts opposition

TE Raja Simhan
Chennai

Tamil Nadu Chief Minister MK Stalin offered a big bonanza for women, with ₹5,000 credited to the accounts of over 1.3 crore beneficiaries, just days before the Assembly election dates are announced.

Analysts say this is a "smart move by the DMK that could rattle the opposition parties".

"As advance for February, March, April months: ₹3,000 under Magalir Urimai Thittam plus as summer special allocation of ₹2,000 - total of ₹5,000 has been credited this morning to 1.31 crore Kalaignar women rights scheme beneficiaries as well," Chief Minister Stalin said in a social media post.

"We will raise the ₹1,000 rights allocation to ₹2,000 and provide it! This is the promise given by this Muthuvel Karunanidhi Stalin to my sisters," he said. Stalin also alleged that amid "attempts to withhold payment of ₹1,000 per month for next three months" citing forthcoming polls, the government acted and paid it in advance. Sounding optimistic on winning the election, Stalin also promised that the monthly assistance of ₹1,000 would be doubled once the party returns to power.

AIADMK general secretary Edappadi K Palaniswami recently announced that a monthly allowance of ₹2,000 each would be provided to women-headed families covered under ration cards under the Kula Vilakku Scheme as soon as the AIADMK government is formed.

The amount will be transferred to the head of the family's bank account. This will create economic balance in society, the party said.

TN Chief Minister MK Stalin

EXPERT VIEW

"It is certainly a smart move ahead of the elections with an eye on consolidating women's votes," said JVC Sreeram, psephologist & political strategist, on Stalin's announcement.

"This is also a subtle message for the Congress that with or without them DMK can face elections," he said.

The 2026 election would be a fight between urban and rural voters. The battle is going to be between the two Dravidian parties, the DMK and AIADMK, with the latter holding on to its rural vote bank.

TVK would now be on a weak wicket, Sreeram felt.

AIADMK CHARGE

AIADMK general secretary Palaniswami said on social media that the "Stalin government, which has been dragging its feet without giving ₹1,000 for 28 months, is now giving a 'summer special amount' in addition to the monthly amount. The total dole the DMK government has given since September 2023 was ₹34,000 but the minimum amount that each family has lost is ₹3,50,000".

Standard Engineering Technology unveils new corporate identity

Our Bureau
Hyderabad

Standard Engineering Technology, formerly Standard Glass Lining Technology, has launched its new corporate identity as part of its brand evolution following its earlier change of name.

"Glass lining continues to remain at the core of the company's DNA and is one of its fastest-growing and most profitable verticals," Kandula Nageswara Rao, Managing Director, Standard Engineering Technology said on Friday.

The refreshed brand identity would reflect the company's journey into a high-precision, integrated engineering platform capable of delivering complex, multi-disciplinary projects with single-point accountability from concept to commissioning.

BNP claims victory in Bangladesh elections

Dhaka: The Bangladesh Nationalist Party (BNP) on Friday claimed victory in the crucial general elections to elect a new government to replace the interim administration, which took charge after the fall of the Awami League regime in August 2024. The BNP had earlier announced that if it wins the election, its Chairperson and former premier Khaleda Zia's son, Tarique Rahman, would be the next Prime Minister. According to media reports, the EC is expected to declare BNP the winner in the general elections with tallies in predawn hours on Friday suggesting it got majority seats in Parliament. Prime Minister Narendra Modi congratulated Rahman on his "decisive victory" and said he looked forward to working with him to advance common development goals. PTI

Telecom regulator urges customers to use DND app to report spam calls

STRICTER MONITORING. Flagging such cases would help in discontinuation of the numbers: TRAI Chairman

Our Bureau
New Delhi

Just blocking the numbers won't help, consumers should report spam calls through the Do Not Disturb (DND) app, Anil Kumar Lahoti, Chairman, Telecom Regulatory Authority of India (TRAI), said here on Friday, adding that TRAI will also roll out a revamped My-Call app in March to enable consumers to file complaints about the quality of calls.

"We have repeatedly emphasised on reporting of the spam. We want more and more reporting of spam, and we want that the consumers should register on the DND app. Quite often we find a consumer, who is very bitterly complaining about spam, actually has not registered on the DND. So, basically that consumer has not exercised any choice of not receiving unsolicited commercial communication (UCC)... So, it is important that people register on the DND app," he told reporters.

REGULATORY MOVE. The telecom regulator has revamped the Do Not Disturb and MySpeed apps to curb spam

MULTILINGUAL OPTION

The sector regulator has revamped the DND and MySpeed apps to curb spam and check real-time network performance of the mobile services, and these will be available in multilingual options.

He said monthly data indicated that complaints against unregistered telemarketers consistently accounted for the overwhelming majority of reported cases throughout the year, significantly outnumbering complaints against registered telemarketers, adding that this trend reinforced TRAI's focus on targeting unauthorised and non-compliant entities operating outside the regulatory framework.

Lahoti also said that multilingual options will be available on the app as it is important for its adoption, particularly in far-flung and rural areas, in regional languages for registering complaints in fewer steps, improved preference management and more reliable support for dual SIM ports. "In future, we will also incorporate an appeal feature so that a consumer who is not satisfied with the service provider's response can file an appeal through the app itself," he said. He, however, did not give any timeline for adding the appeal feature in the DND app.

UCC COMPLAINTS

TRAI informed that in 2025, a total of 31.09 lakh UCC complaints were registered across all channels and of these, 17.06 lakh complaints were submitted through the DND app, which underscores increased consumer participation in reporting unsolicited communications.

"TRAI's enforcement efforts in 2025 are anchored in the principle that consumers should experience perceptible improvement in control of unsolicited commercial communications. Enhanced consumer participation through the DND ecosystem has enabled faster identification of violations and more decisive action against persistent offenders," he said, adding that with the revamped app, customers could now know the name of the sender of a SMS header or a particular 1600 series number from the app itself.

Talking about the revamped MySpeed app, Lahoti said it is designed to test speeds obtainable with 5G technology. Besides mobile connectivity, the consumer can also test speeds obtained on fixed-line broadband or Wi-Fi.

Alkem Medtech to pick up majority stake in Swiss firm for ₹1,074 cr

Our Bureau
Mumbai

Alkem Medtech said it intends to pick up a majority stake in Occlutech Holding AG, a Swiss medical devices company focused on minimally invasive cardiac implants.

A wholly-owned medical devices subsidiary of Alkem Laboratories, Alkem Medtech said it had executed a binding offer to buy up to 55 per cent stake in Occlutech for €99.4 million (about ₹1,074 crore), subject to statutory approvals. The acquisition marks the company's entry into advanced cardiovascular devices.

MEDICAL DEVICES

Occlutech develops, manufactures and commercialises medical devices for congenital heart disease, stroke prevention and heart failure, and is the second-largest company in Europe in the minimally invasive cardiac implants segment and the third-largest globally, a note on the transaction said.

It operates manufacturing and research and development facilities in Germany and Turkey, a global distribution hub in Sweden, and clinical operations in the US, it added.

In 2025, Occlutech recorded revenue of € 49.4 million (unaudited), representing a 15.7 per cent CAGR in three years. Occlutech derives about 85 per cent of its revenue from Europe and the US, it added. The acquisition is expected to be completed by June 2026 after regulatory approvals are obtained, the note said.

BN Singh, Alkem Lab's Executive Chairman, said, "The acquisition of Occlutech opens up significant opportunities for Alkem MedTech, and reinforces Alkem's long-term vision of becoming a

The acquisition marks the company's entry into advanced cardiovascular devices

global player in the medical devices industry, replicating its success story in pharma."

Kaustav Banerjee, Alkem Medtech's Chief Executive Officer, added, "Occlutech has established capabilities in structural heart devices, a highly-experienced management team, world class R&D and manufacturing facilities, and strong quality and regulatory framework, which provides a strong foundation for Alkem MedTech to begin its journey in the cardiology segment and support sustainable growth. It gives us entry into high-barrier, high-value markets such as the US, Japan, Germany and other western European markets."

Tor Peters, Chief Executive Officer, Occlutech, said, "Over the last 23 years, we have built a company driven by patient centricity and innovation."

STATUTORY AUTHORITY

The Boston Consulting Group acted as an advisor in this transaction, the note said, adding that it was subject to certain conditions, including authorisation by the statutory authority as part of the control of foreign investments in some of the geographies, as well as the absence of qualified material adverse events. Sandeep Singh, Alkem Lab Managing Director, said, "Medtech is a natural extension for Alkem. In the coming years, along with Enzene Biosciences, our biotech arm, we expect Alkem MedTech to become a meaningful growth pillar for the company."

India among fastest growing markets for Airbnb, new users grow by 60%

Aneesh Phadnis
Mumbai

India has emerged as one of the fastest growing markets for Airbnb, helping the vacation rental company post 10 per cent growth in revenue in 2025.

In its fourth quarter and full-year results announced on Thursday, the company said Brazil, Japan and India had become the fastest growing countries on an origin basis with nights booked up 50 per cent on a year-on-year basis.

"First-time bookers grew at double-digit rates across all three countries, with India up more than 60 per cent," Airbnb said.

Airbnb's full-year global revenue rose 10 per cent to $12.2 billion in 2025 on a y-o-y basis. Net income, however, declined by 3.8 per cent to $ 2.5 billion.

CORE MARKETS

While the US, Canada, the UK, Australia and France remain core markets for the company, it has been expanding in Asia and Latin America to tap the growing travel demand.

"In 2025, we made meaningful progress outside of our core markets by making Airbnb more locally relevant," said the firm.

NEW FEATURES

The company has been rolling out new features to widen its customer base, including smarter search tools and flexible payment options.

A research study commissioned by Oxford Economics for Airbnb had revealed that domestic travellers accounted for 91 per cent of its customers in India in 2024, up from 79 per cent five years ago.

IndiGo receives approval to launch one-stop flight services to Istanbul

Rohit Vaid
New Delhi

Airline major IndiGo has secured regulatory approval to operate one-stop flights to Istanbul using narrow-body A320 aircraft, even as it prepares to phase out leased wide-body operations on the route, industry insiders told *businessline*.

These flights, sources said, will operate with a technical halt at Ras Al Khaimah in the UAE. Besides, these services will be run using Airbus A320 aircraft from Mumbai and Delhi as a temporary arrangement. The transition to this operating pattern is effective February 28, 2026.

INTERIM PLAN

Accordingly, the interim plan will remain in place until the airline inducts its second Airbus A321XLR aircraft, expected by the end of March.

The first Istanbul flight using the XLR is slated to operate on the Mumbai-Istanbul sector.

Notably, the development comes as IndiGo prepares to return the Boeing 777 aircraft currently operated under a wet-lease agreement with Turkish Airlines. The wide-body jets had been inducted as an interim measure to operate high-demand long-haul services and bridge capacity gaps arising from aircraft groundings and delivery delays. However, the regulatory approvals for the leased Boeing 777 aircraft were time-bound, with extensions granted only on the condition that the arrangement would be phased out within a specified period.

According to sources, with timelines now requiring the return of the leased aircraft, IndiGo has been preparing to transition key international routes to its own fleet.
