SEBI may defer CAS for derivatives by a year

Mumbai: The Securities and Exchange Board of India is likely to stop using the Closing Auction Session (CAS) to calculate derivatives settlement prices for at least a year, two sources with direct knowledge of the matter said. Instead, the volume-weighted average price of the final 30 minutes of trading will be used to determine derivatives settlement prices. **p6**

'UNAVOIDABLE' REASONS

GST Council meet put off by a day to October 8

New Delhi: The GST Council will now meet on October 8, a day later than scheduled. According to an office memorandum, the meeting was rescheduled from October 7 due to "unavoidable circumstances". The meeting is being held after a gap of 13 months and is expected to consider several process reforms. **Our Bureau**

Air India, Express may share key teams in cost-cutting push

TEAM INTEGRATION. Common HR, finance, IT and engineering functions under review

Rohit Vaid
New Delhi

Tata Sons-led Air India Group is examining a proposal to integrate some key departments of Air India with those of Air India Express to reduce duplication and costs, sources told *businessline*.

The proposal envisages common teams for identified functions to streamline operations, improve resource utilisation and unlock economies of scale. Unlike the earlier mergers, involving Vistara in 2024 and Indian Airlines in 2007 when Air India was under government ownership, the proposal under discussion is limited to integrating select functional departments.

Air India did not respond to queries on the discussions.

STREAMLINING OPS. Air India would continue with its full-service positioning, while Air India Express would retain its low-cost model

COMMON FUNCTIONS

According to sources, the discussions cover human resources (HR), finance, information technology (IT) and engineering. No final decision has been taken, and if approved, the integration could take about six months to implement.

Marketing has already been integrated as part of the Group's commercial functions. The Group also has shared leadership across network planning, sales and distribution, and revenue management.

Air India Express currently has separate heads for HR and finance. The proposal could extend the integration to other identified functions by bringing the teams under common leadership.

The proposed arrangement would retain the two airlines' distinct identities, cost structures and product offerings. Air India would continue with its full-service positioning, while Air India Express would retain its low-cost model.

PUSH FOR SAVINGS

The discussions come amid substantial losses and a broader push for cost savings and consolidation across the Group.

For FY26, Air India and Air India Express, along with their joint ventures and subsidiaries, reported combined losses of ₹22,238 crore on a revenue of about ₹71,870 crore. The financial pressure is evident at both carriers. Air India reported a standalone net loss of ₹15,368 crore in FY26, while Air India Express recorded a net loss of ₹6,767 crore.

At Air India Express, revenue rose 19 per cent to ₹19,088 crore during the year, while operating expenses stood at ₹20,663 crore.

"The plan seems to integrate core corporate functions of both these airlines under one leadership team, thereby resulting in better management as well as savings on overheads and potentially unlocking economies of scale," an industry insider said.

FOCUS ON SYNERGIES

Recently, Air India's CEO and MD Tewolde Gebremariam, in his first townhall address to employees, called for closer integration across the group. He emphasised that the airlines already belong to one Air India Group and that the group would streamline operations and pursue synergies wherever possible, while retaining a focus on customers.

Bank deposit growth gets FCNR(B) boost in Q2, yet trails credit expansion

Ashokamithran T
Mumbai

Deposits of commercial banks rose 15.3 per cent to ₹173.5 lakh crore in the September quarter of FY27 from ₹150.5 lakh crore a year earlier, according to an analysis of business updates released by 21 banks.

On a sequential basis, deposits grew 5.2 per cent during the quarter.

The increase was aided by strong foreign currency non-resident (FCNR-B) deposit flows.

However, deposit growth was not broad-based, with the share of low-cost current and savings account (CASA) deposits at several lenders remaining flat or declining y-o-y.

This points to continued reliance on term deposits and bulk funding.

FCNR(B) INFLOWS

Most banks reported quarter-on-quarter deposit growth of 4-6 per cent.

Kotak Mahindra Bank was a notable outlier, with deposits rising 13.7 per cent sequentially.

Banks that attracted significant FCNR(B) inflows generally reported stronger deposit growth, with HDFC Bank and South Indian Bank among those recording above-average growth.

Business trends Q-o-Q (%)

Lender	Advances	Deposits
HDFC	4.9	4.9
BoB	5.8	6.2
Axis	8.8	5.8
Canara Bank	6.2	5.3
PNB	5.5	3.0
Union Bank of India	5.4	2.8
21 banks total	**6.2**	**5.2**

Source: BSE

ADVANCES UP

HDFC Bank's deposits grew 19 per cent y-o-y, outpacing its loan growth of more than 15 per cent and providing some relief on the funding front.

Despite stronger deposit mobilisation, banks continued to expand their loan books faster than deposits. Aggregate advances of the 21 banks grew 21.4 per cent y-o-y to ₹149.6 lakh crore in Q2 FY27.

On a sequential basis, advances rose more than 6.25 per cent, outpacing deposit growth by around one percentage point.

CREDIT-DEPOSIT RATIO

The surge in FCNR(B) inflows, estimated at about $137 billion, was still insufficient to materially ease the pressure on banks' funding metrics.

The aggregate credit-deposit (CD) ratio rose to 86.3 per cent in the September quarter from 82 per cent a year earlier, reflecting the persistent gap between credit and deposit growth.

Of the 21 banks analysed, only HDFC Bank and Bank of India reported a decline in their CD ratios, although modestly.

HDFC Bank recorded the sharper improvement, with its CD ratio easing to 95.7 per cent from 98.8 per cent a year earlier.

EARNINGS OUTLOOK

The stronger business momentum is also expected to reflect in the September-quarter earnings.

Analysts expect banks to report healthy profit growth, supported by robust loan expansion and stable asset quality.

Lenders that attracted sizeable FCNR(B) deposits could face some pressure on net interest margins (NIMs) because of the temporary increase in funding costs.

However, earnings are expected to remain supported by balance sheet growth and contained credit costs.

Rural porting war heats up as telcos chase users via generous retailer incentives

Vallari Sanzgiri
Mumbai

Telecom operators are ramping up incentives for rural retailers to attract subscribers through Mobile Number Portability (MNP), signalling a shift in the competitive dynamics.

While keeping MNP payouts broadly unchanged, telcos are offering additional incentives equivalent to a month's recharge or free demo plans for meeting specified port-in targets, according to an IIFL Capital rural survey on telecom trends.

In parts of Rajasthan, retailers received ₹299-349 per MNP after the first five port-ins, effectively equivalent to a free monthly recharge. In rural Maharashtra, retailers are eligible for a free demo pack from a telco after completing more than three MNPs.

This marks a sharp shift from the research firm's 2018 rural survey, when operators offered ₹200-210 per port-in only after retailers crossed 50 port-ins.

RACE INTENSIFIES

The new incentives come amid intensifying competition among Bharti Airtel, Reliance Jio and Vodafone Idea (Vi) to expand their subscriber bases, industry sources told *businessline*.

Vi's recent move to offer free international roaming on select plans is another sign of the changing competitive landscape, they said.

While the slowdown in incentives had earlier been attributed to the market becoming increasingly duopolistic, industry sources said the renewed push reflected operators' efforts to protect and grow their subscriber bases.

"Increase in incentives makes sense since the market has become more competitive now that Vodafone Idea is in a better position and can be more aggressive. The stakes are a little higher. Almost every operator has an incentive to attract and retain more subscribers," said Mahesh Uppal, Director, CommFirst (India).

Following the AGR (adjusted gross revenue, a metric used by the Department of Telecom to calculate licence fees and spectrum usage charges owed by telecom operators) relief granted to Vi earlier this year, the operator has sought to reinvent itself in the telecom and digital spaces.

PORT-INS PICK UP

Generally, too, MNP activity has increased. The number of SIM port-ins across India rose from 14.46 million in May to 15.83 million in August, according to Telecom Regulatory Authority of India data. However, August remained below the 15.98 million port-ins recorded in January.

ROYAL WELCOME

FOR A LAST BOW. 'Abhimanyu', the lead elephant that will carry the 'Golden Howdah' during the grand finale of the Mysuru Dasara festival, regally sports a traditional 'Mysuru Peta' (head-dress) and garlands. The elephants were given a traditional welcome at the Mysuru Palace on Monday. Associated with Dasara festivities for 25 years, Abhimanyu has carried the Golden Howdah from 2020 to 2025. The jumbo was relieved of Dasara duties this year on turning 60, but brought back for a last bow on public demand PTI

Did SIR impact the TN Assembly elections?

Ramasamy Jayaprakash
Chennai

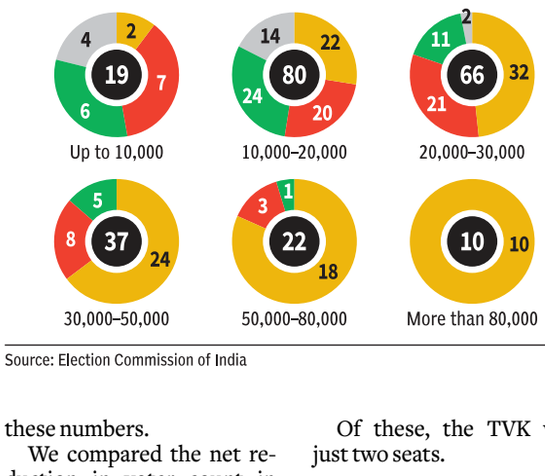

Alleged irregularities in the Special Intensive Revision (SIR) have stirred protests not just at the national but at the State level, too.

The deletion of several lakh voter names from the list was one of the reasons for the DMK's loss in Tamil Nadu, party chief and former Chief Minister MK Stalin said recently. The social media is abuzz about how the ruling TVK's victory may have been aided by these deletions.

SIR impact?

TVK sweeps constituencies with more voter deletions

Number of constituencies won in each deletions slab

Source: Election Commission of India

MAPPING VICTORIES

A *businessline* analysis of the granular data on SIR deletions and the outcome of the 2026 TN Assembly elections shows that the Tamilaga Vettri Kazhagam (TVK) struggled to win in constituencies where SIR deletions were lower, and recorded more wins where the deletions were higher.

Political analysts and experts, however, warn that not much should be read into these numbers.

We compared the net reduction in voter count in each constituency as per the April 2026 electoral rolls with the pre-SIR numbers.

Of the total 234 constituencies in the State, 19 had lower deletions, of up to 10,000 voters, when the April 2026 electoral rolls were compared with the pre-SIR numbers.

Of these, the TVK won just two seats.

REASONING LOGICAL?

But the wins tilt in the TVK's favour as deletions increase. In the 22 constituencies where the deletions were between 50,000 and 80,000 voters, the party won 18. It also won all the 10 constituencies with more than 80,000 deletions.

Political analyst Badri Seshadri said, "I don't believe it is possible to selectively delete voters of one political party. There is no scientific basis on which it can even be brought up. Field agents of both these two parties were there already. They never raised any complaints, unlike in West Bengal where there were repeated complaints. But here... no complaints from the ground. That's all I can say."

Emphasising that the DMK's voters were selectively targeted, P Wilson, DMK Member of Parliament, said, "They wanted to eliminate the DMK from the frame. This is a complete conspiracy of the Election Commission of India."

Vivek Gananathan, TVK's national spokesperson, said, "I find the correlation to be just a coincidental reading or an incidental truth, not the actual reality. There is nothing more to be looked into. The DMK, and even the AIADMK, have lost their traditional voters to us as people have lost hope in their leadership."

India-US trade talks have hit a plateau: FM

Amiti Sen
New Delhi

Suggesting that the India-US interim trade deal may be facing a deadlock, Finance Minister Nirmala Sitharaman on Monday said both sides have "reached a plateau" beyond which giving or taking might be difficult.

The Minister also criticised the US' unilateral tariff impositions and threats, and noted that while the accepted way to address trade imbalances was through negotiations, tariffs were now being "weaponised".

"It's been a hard and very rigorously negotiated agreement. The negotiations are still ongoing, although I'd like to believe that the both sides have reached a plateau beyond which giving or taking might be very, very difficult," Sitharaman said at the Munich Security Conference on Monday.

MANY IMBALANCES

The Finance Minister, however, left open the possibility of further movement, saying that if there were "room to operate from", both sides would do so.

> Negotiation used to be the only platform to highlight discrepancies... Now, the imbalance is sought to be addressed through other means, where... tariff has become weaponised
>
> **NIRMALA SITHARAMAN**
> Finance Minister

Coming down heavily on Washington's unilateral tariff actions, Sitharaman said the US was understandably seeking to cut its trade deficit with India, but questioned whether imbalances could be corrected outside negotiations.

"Negotiation used to be the only platform through which countries could highlight the discrepancies... Now, the imbalance is sought to be addressed through other means, where... tariff has become weaponised," she said. Citing India's own deficit with China, which has grown "exponentially" since 2014, Sitharaman said a country could not treat imbalance as the sole criterion and must "talk it out" with "some give and take".

Her remarks come as Commerce Minister Piyush Goyal wraps up a week-long US visit. He met USTR Jamieson Greer on the sidelines of the G20 Trade Ministers' Meeting in Milwaukee to push for an early conclusion of the deal.

Greer later said the talks were in the "short strokes" but that nothing was imminent, as the two sides had identified a "universe of items" that remained sticking points. He did not name them, and said Prime Minister Narendra Modi and President Donald Trump may speak again "very soon".

RUSSIAN ENERGY

The talks are taking place under immense US tariff pressure. A fresh threat comes from the Lindsey O Graham Sanctioning Russia and Iran Act which authorises tariffs of up to 100 per cent on top buyers of Russian energy.

India has raised concerns with Washington about the law's implications for bilateral ties and energy markets.

The US imposed 50 per cent tariffs on India in August 2025, including a 25 per cent penalty over Russian oil, but withdrew it from February 7. The US Supreme Court later struck down Trump's sweeping global tariffs.

Since July, Indian goods have been facing an additional 10 per cent duty under Section 301 over forced labour, while a separate probe into structural excess capacity remains pending.

myTVS' parent firm raises ₹425 cr in Series D funding

Chennai: TVS Automobile Solutions, the owner of 'myTVS' automotive aftermarket brand and part of the $3 billion TVS Mobility Group, has raised ₹425 crore in a Series D round led by CE-Invests, the investment arm of the UAE-based Crescent Enterprises. The investment from CE-Invests will support myTVS' continued growth in India while enabling it to take its technology-led model into international markets. The partnership will initially focus on opportunities across the Middle East and North Africa region, where the companies see potential to adapt and scale myTVS' technology and capabilities for mobility and fleet businesses, said a statement. Prior to the current round, myTVS had raised nearly ₹690 crore. OUR BUREAU

Shyam Metalics to invest ₹50,000 cr in steel plant

Mumbai: Shyam Metalics and Energy, a leading metals and minerals producer, plans to set up an integrated steel complex of 9 million tonne per annum at Chandrapur in Maharashtra with an investment of ₹50,000 crore. The company has signed an MoU with the Maharashtra government in this regard. All the required mineral blocks are well-connected by rail, road and power infrastructure. In the first phase, the company will set up 3.75 mtpa finished steel capacity. The complex will generate about 10,000 direct jobs and 20,000 indirect employment opportunities. OUR BUREAU

'Several indicators show India is in a stable, strong position'

WHAT NEXT? Energy security, advanced manufacturing jobs critical: N Chandrasekaran

Our Bureau
New Delhi

India's economy is robust in a world that is uncertain and difficult, and multiple indicators show that it is in a stable and strong position, N Chandrasekaran, Chairman, Tata Sons, said on Monday.

Speaking at the Indian Foundation for Quality Management (IFQM) symposium here, he said energy security, advanced manufacturing jobs and investment in human capital are critical to sustain long-term growth.

> Our economy is doing very well, and over the last few years it has exceeded expectations by posting the highest growth in a world that's uncertain and difficult
>
> **N CHANDRASEKARAN**
> Chairman, Tata Sons

'NO MEAN TASK'

Chandrasekaran, who was recently handed his third five-year term as Tata Sons Chairman amid an intense boardroom battle, said the Indian economy was doing very well and, over several years, has consistently exceeded expectations.

"India has made tremendous progress in developing sustainable world-class infrastructure and institutions. Our economy is doing very well, and over the last few years it has exceeded expectations. Achieving this amid global economic uncertainty is no mean task. It was possible because of infrastructure growth, manufacturing, especially precision manufacturing and investment in human process [education and skill development]," he said.

He also noted that the Viksit Bharat 2047 vision has percolated across multiple aspects of the country.

Chandrasekaran said India's growth was being driven by strong domestic demand, services exports and an enabling policy environment, and said it was fair to say the indicators are strong.

"Even today what we are witnessing is a double-digit demand in high frequency indicators like auto sales, credit growth; ,we are also seeing power demand and cement demand, etc., in double digits," he said.

DRIVING INNOVATION

Chandrasekaran said that sustaining growth over a long period will require several things to happen, and drew attention to energy security, advanced and precision manufacturing jobs and investment in human capital as "critical" for sustaining long-term growth.

Citing Toyota, he said the Japanese auto giant never looked at quality as just an outcome, but focused on innovation and productivity. "Quality is definitely important to produce the outcome that we want... But it became a key driver for innovation."

EVs not the only solution to cut pollution: Venu Srinivasan

Our Bureau
New Delhi

THE PATH FORWARD. EVs should grow organically, with consumers' choice playing an important role, said Venu Srinivasan, Chairman Emeritus, TVS Motor Company

Electric vehicles (EVs) are not the only solution to reduce pollution, and the auto industry should remain technology-agnostic in its efforts to cut emissions while giving consumers a greater choice, said Venu Srinivasan, Chairman Emeritus, TVS Motor.

"I always believe we have to be agnostic [in technology] and look at the net effect on the country in terms of pollution, quality and environment. So, EV is not the only solution," he said on the sidelines of the IFQM Symposium 2026 on Monday.

Srinivasan said EVs should be allowed to grow organically, with consumer choice playing an important role. In India, EV adoption has been gaining ground, particularly in the three-wheeler and two-wheeler segments.

ETHANOL BLENDING

On ethanol blending in petrol, the auto veteran said the policy could help India reduce its dependence on fuel imports, while the impact on vehicle performance has so far been limited. "The degradation in performance is very marginal. I think that should not deter us. After all, the whole of Brazil runs on ethanol," he noted.

Further, Srinivasan said consumers should not necessarily need a choice of fuel blends up to E10, but there could be a case for offering a choice at higher blending levels because of concerns over the impact of higher ethanol content on vehicle materials. "There might be a mild fuel drop, but I think that is being played up too much. The country should look at the imports. And it is ecologically more friendly... I always believe that their choice should be there," he said.

He also stressed the need for Indian companies to raise quality and productivity standards as they seek to expand their global presence.

Delhi govt to issue tenders to develop EV charging stations at 180 sites soon

Rishi Ranjan Kala
New Delhi

The Delhi government has completed the assessment of more than 380 sites that will be converted into charging stations for electric vehicles (EVs), with tenders for developing 160-180 sites to be floated soon.

The EV policy of the government of national capital territory of Delhi (GNCTD) came into effect on July 1, 2026.

"A true EV revolution cannot rely solely on short-term financial payouts; it requires robust, reliable, and segment-specific charging infrastructure that eliminates range anxiety for everyday citizens," Delhi's Power Minister Ashish Sood told *businessline*.

A total of 456 sites were identified and aggregated for developing EV charging stations through the State's Revenue Department, he said, and another 49 sites through the Delhi Transport Corporation (DTC). Out of these sites, the Ministry of Heavy Industries (MHI) has approved 382.

"After the launch of the Delhi EV Policy 2026, all the 382 sites have been reassessed for developing EV charging infrastructure for segment wise: 2W, 3W and 4W separately to meet the mandates," he added.

PRIMARY FOCUS

Under the policy, only electric three-wheelers and electric N1 trucks will be registered in Delhi from January 1, 2027 and only electric two-wheelers will be registered from April 1, 2028

The State's primary focus over the last quarter has been to lay a sustainable, future-ready infrastructure foundation that directly aligns with the bold deadlines set under the Delhi EV Policy 2026, the Minister said.

The Delhi government has also on-boarded KPMG for monitoring the projects. "The site reassessment work was completed recently and we are about to float the tender for around 160-180 sites," Sood noted.

The Minister explained that a granular site-level customisation was executed to ensure Delhi's charging network directly supports upcoming statutory mandates, including transitioning to 100 per cent electric registrations for three-wheelers and N1 light commercial trucks.

"Measuring the success of an EV ecosystem merely by disbursement counts overlooks the core structural transformations happening on the ground," he added.

By prioritising power availability, grid feasibility, and segment-specific charging nodes, the government is ensuring that when citizens transition to electric two-wheelers, three-wheelers, and commercial vehicles, they are backed by world-class infrastructure across the capital, the Minister stressed.

THE TOUGH PART

Delhi, through its EV policy, is encouraging resident welfare associations (RWAs) and housing societies to facilitate community or private charging infrastructure. It also introduced a discom-led single-window system that allows consumers to select empanelled vendors, obtain new EV electricity connections or meters, and schedule installations.

According to a recent report by the Institute for Energy Economics and Financial Analysis (IEEFA), Delhi has acknowledged that the difficult part of charging deployment is often not the charger itself, but securing land, distribution capacity and upfront grid work.

To this effect, the Delhi Transco public-charging tender model sought to leverage public land and upstream electrical infrastructure support.

AkzoNobel to sell S-E Asia paints biz to Nippon Paint for $1.35 billion

Our Bureau
Mumbai

As part of its portfolio rebalancing towards leadership positions, AkzoNobel has entered into binding agreements to sell its decorative paints business in South-East Asia to Nippon Paint for $1.35 billion.

While the sale of the Indonesia business will be executed by late 2026, the rest of the deal (in Vietnam, Malaysia, Thailand, Singapore, Papua New Guinea, and Australia) is expected to completed only by mid-2027, said AkzoNobel. The transactions represents a 21x EV/FY25 EBITDA multiple.

AkzoNobel had earlier sold its deco businesses in India and Pakistan to Parth Jindal-led JSW Paints for ₹12,900 crore.

The acquisition helped JSW Paints poll vault to become the fourth-largest paint company in India's fast-growing paints and coatings market. With the current divestment, AkzoNobel will now continue to focus on the successful closing of its merger with Axalta, the statement said.

STRATEGY SHIFT

The successful completion of the Asia portfolio review is part of an ongoing strategy to focus on areas where the company can achieve differentiating scale and strengthen its position, said Gregoire Poux-Guillaume, CEO, AkzoNobel. "We trust that Nippon Paint, in combination with their own businesses in those countries, will build on that momentum."

Quarterly price hike a norm now: Merc chief

S Ronendra Singh
New Delhi

Mercedes-Benz India on Monday said that quarterly price increases are becoming the new norm because of the rupee depreciating against the Euro and other economic factors.

"I think the price increase on a quarterly basis is becoming the new normal till the time we adjust to the current exchange rates... so even to reach the current levels, it may take another year or a year and a half to recover because we can't pass on everything in one shot; it has to be gradual in that sense," said Santosh Iyer, MD and CEO, Mercedes-Benz India.

Every quarter, the company has been increasing the prices by 1-2 per cent, he said. So far in 2026, Mercedes-Benz India has increased prices thrice, the latest being this month.

NEW PLUG-IN HYBRID. Santosh Iyer (right), MD and CEO, with Brendon Sissing, V-P, Sales and Marketing, at the launch of the Mercedes Maybach S580e, priced ₹3.35 crore

That said, Iyer said the demand for luxury cars continues exist in India, even though it was growing by single digit owing to the high base last year. "We always start the year with a prognosis of a single-digit growth. Even on a year-to-date basis, we are at 8 per cent in terms of growth and numbers. So, even till the end of the year, we see a similar growth. In the last two weeks, we can see some sentimental change, but that's more capital market-driven... We are still confident of continuing the growth during the festival season."

Mercedes has a strong pending order bank, he said, especially in EVs, including CLA and EQS SUV. "The EQS SUV's situation should improve by the end of the last quarter. Plus, we have a new launch coming up — the GLC battery EV — which will be introduced on November 4. So, there is a lot of anticipation and strong demand already there."

STRONG SALES

The company said it has achieved its best quarterly sales ever. Led by iconic products and exceptional customer experience, it sold 5,422 units in Q3, an increase of 6 per cent y-o-y compared with 5,119 units in Q3 2025.

Even during the January-September period, Mercedes registered an 8 per cent growth, selling 15,190 units, powered by new launches, continued success of long-wheelbase products like E-Class, GLE, GLS, V-Class and qualitative expansion of Mercedes-Benz's luxury retail network into existing and new markets, it added.

Hurt by cost pressures, Honda to rework parternship with Tata Tech

Reuters
Mumbai/Tokyo

BIG NUMBERS

- Honda aims to cut more than $9 billion in costs over 4 years
- Honda's market share in India has fallen to 1.3 per cent from 7.3 per cent

Honda Motor aims to cut costs by as much as a fifth and halve development times under its new partnership in India with Tata Technologies, according to two people familiar with the matter, as pressure from rivals forces the Japanese automaker to rethink its go-it-alone approach.

Reeling from EV-related losses that it expects to cross $12 billion, Honda is pivoting to hybrids. Last month, *Reuters* reported that it is seeking to cut over $9 billion in costs over the next four years and has told suppliers to reduce prices.

In May, Tata Technologies said it was selected to develop vehicles for a Japanese automaker. It declined to name the partner, but sources said it was Honda. Under the agreement, Tata Technologies will develop cars for the Indian market, while Honda expects to see up to 20 per cent in cost reductions and halve its development times from around five years, two people said.

Honda decided to bring in Tata Technologies after its Japanese and Indian managers failed to agree on the suppliers for upcoming vehicles, said sources.

In a statement, Honda said it has not been able to offer a sufficient product lineup in India that allows customers "value for money". To that end, it was "redefining" its offerings in India and planned to introduce vehicles that strike a balance between quality and price, it said. It denied there were disagreements between the Japanese and Indian teams.

BALANCING ACT

Like other Japanese automakers, Honda faces the difficult balancing act of defending its legacy business in places like the US while developing new technologies to compete with Chinese firms elsewhere.

But Honda's market share has slumped to 1.3 per cent from the peak of 7.3 per cent more than a decade ago. Its portfolio has shrunk to four models. "Honda is already late and behind competitors," one of the people said.

Hyundai workers seek wage hike on par with management

T E Raja Simhan
Chennai

An interim wage hike handed to the management employees at Hyundai recently has prompted the auto major's workers' union to seek similar treatment.

The United Union of Hyundai Employees (UUHE) has urged Hyundai Motor India to extend the 2 per cent wage increase given to more than 4,000 management employees recently to the 2,000-plus workers as well. It is learnt that the union has taken up the issue with the company management.

"Considering the contribution and continuous efforts of the employees towards the growth of the company, we have requested the management to provide the 2 per cent wage increase to all the employees," said UUHE President P Ramanathan.

"We are not against the wage increase for the management. We are only asking that it should be given to all the employees as the management claims the productivity has been good this fiscal," he said.

COMPANY VIEW

An HMIL spokesperson said the revision was specific to management employees and their compensation framework; they are governed by their respective contracts of employment and the performance appraisal mechanism. Workmen's wages continue to be governed by the Long-Term Settlement agreed with the Union.

"We want to assure everyone that the company highly values the contribution of its workmen and remains committed to their welfare and well-being. Our objective is always to maintain a fair and balanced approach, in accordance with applicable agreements, business performance, and established compensation policies," the spokesperson said.

Range Rover Sport Electric puts JLR's in-house EV strategy to test

Amit Vijay Mohile
Mumbai

Jaguar Land Rover has opened India bookings for the Range Rover Sport Electric, taking battery power into one of its most important luxury SUV franchises.

This, as the Tata Motors-owned carmaker attempts to build the scalable EV business that its pioneering I-PACE never became.

"Excited to share that the Range Rover Sport Electric is now available to order," Balaje Rajan, JLR's Group Chief Strategy Officer, said. The vehicle, he said, brings together "world-class hardware and software", with digital technologies enhancing performance, efficiency, charging and the ownership experience.

The Sport Electric is designed to address three gaps left by the I-PACE: manufacturing scale, an electrical architecture that could keep pace with newer rivals, and a route to electrifying the Range Rover SUVs that increasingly dominate JLR's business. It is assembled at Solihull in UK, moves from the I-PACE's 400V system to an 800V architecture, and puts JLR's latest electric technology into a core Range Rover rather than a standalone Jaguar.

IN THE DNA. The Sport Electric is designed to address three gaps left by the I-PACE — manufacturing scale, an electrical architecture and a way to electrify the Range Rover SUVs

WHAT'S DIFFERENT?

The I-PACE put JLR among the early luxury EV entrants when it arrived in 2018, but it remained largely an island. Production was contracted to Magna Steyr in Austria, and the car never became the manufacturing template for electrifying JLR's larger SUV portfolio.

The Range Rover programme takes a different route. Vehicles are assembled at Solihull, while electric drive units and battery packs are assembled within JLR's UK manufacturing network.

More important is MLA-Flex, JLR's architecture capable of accommodating internal-combustion, plug-in hybrid and battery-electric powertrains. That gives JLR a hedge the I-PACE could not: production can follow customer demand rather than leaving factory utilisation dependent on how quickly luxury buyers switch completely to EVs.

The second gap is the electrical architecture. Where I-PACE used a 400V system, the Sport Electric combines an 800V architecture with a 118.5-kWh battery and DC charging at up to 350 kW.

JLR claims up to 609 km of WLTP range and a 10-80 per cent charge in about 22 minutes. But faster charging solves only part of JLR's problem. An electric Range Rover still has to behave like a Range Rover.

Two electric motors produce 550 PS and 850 Nm, while software-controlled torque delivery allows the drivetrain to respond rapidly as grip changes, taking over some of the work traditionally performed by mechanical four-wheel-drive systems. The Sport Electric also retains 900 mm of wading capability, matching its combustion-powered siblings.

WHERE IT MATTERS

The third gap may ultimately matter the most.

Range Rover, Range Rover Sport and Defender accounted for 77.6 per cent of JLR's global wholesales in Q2 FY27, when shipments rebounded about 25 per cent year-on-year to 82,400 vehicles. The electric transition also comes as JLR needs stronger cash generation. In Q1 FY27, pre-tax profit stood at £109 million (roughly ₹1,400 crore), while free-cash outflow reached £998 million.

The I-PACE proved JLR could build an electric luxury car. It didn't give the company the manufacturing system, electrical architecture or connection to its strongest franchises needed to make EVs central to its business.

Eight years later, the Range Rover Sport Electric is JLR's attempt to close all three gaps at once.

BPCL plans $3 b bond sale to fund Brazil project

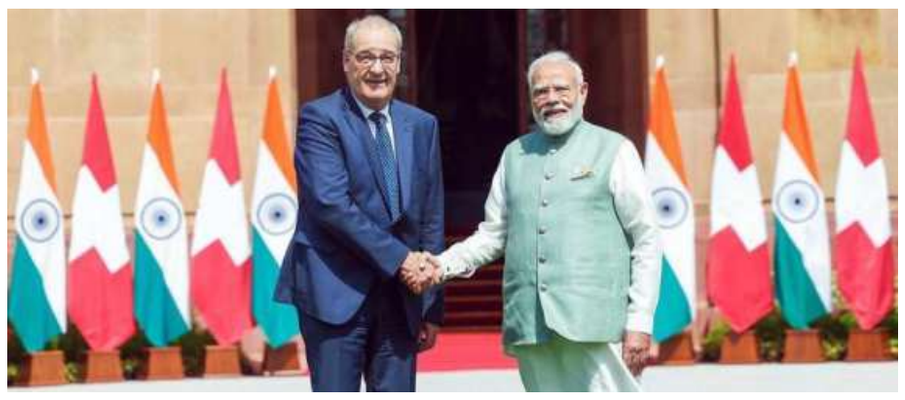

Bharat Petroleum Corp Ltd (BPCL) is preparing an international bond sale to raise as much as $3 billion, largely to fund a major oil project in Brazil and refinance debt maturing next year, according to people familiar with the matter. The largest share of the proceeds will help fund BPCL's $2.8 billion contribution to the SEAP-I offshore development in Brazil, the people said, asking not to be named because the discussions are private. The refiner plans to raise the money in several tranches and held investor roadshows in London, Dubai and Singapore last month to gauge demand, they said. A BPCL spokesperson did not immediately respond to a request for comment. India seeks to diversify energy supplies The Brazil investment underscores India's accelerating push for overseas energy supplies as wars in the Middle East and between Russia and Ukraine disrupt traditional sources. India, Switzerland to expand market access, address concerns

FOSTERING TIES. Swiss President, Modi discuss trade, defence, nuclear co-operation; five agreements signed

Amiti Sen
New Delhi

TRADE PUSH. Prime Minister Narendra Modi with Swiss President Guy Parmelin in New Delhi ANI

India and Switzerland on Monday agreed to expand market access for Indian exports and address trade and investment-related constraints faced by businesses as the two countries seek faster implementation of the Trade and Economic Partnership Agreement (TEPA) between India and the four-member European Free Trade Association (EFTA) bloc.

The decision followed talks between Prime Minister Narendra Modi and Swiss President Guy Parmelin, who is on a three-day state visit to India coinciding with the first anniversary of TEPA coming into force.

SPECIAL GROUP

The two sides also agreed to set up a special group to address trade and investment-related issues, with the full support of both governments and the other EFTA members, a senior Indian official said. "Both sides are happy that there is progress in the implementation of TEPA," MEA Secretary (West) Sibi George said at a media briefing. The special group, which has full support of the two governments (India and Switzerland), and all other member countries, would discuss trade and investment issues and address constraints faced by businesses, he said.

The Indian PM, in his statement during the joint press statement with his counterpart, said the two countries had taken several decisions to increase market access for Indian exports to Switzerland and facilitate investment. "This will help increase exports of Indian agricultural products, pharmaceuticals, textiles, and engineering goods to Switzerland. At the same time, we will attract new Swiss investments into key sectors in India, such as biotechnology, life sciences, banking, insurance, food processing, and sustainability," Modi said.

New opportunities for cooperation in military exchanges and defence production were identified and the two leaders also agreed to further deepen cooperation in nuclear energy, Modi added.

The push for greater market access comes amid a decline in India's exports to EFTA.

Goods exports to the bloc fell 10.77 per cent to $1.75 billion in FY26, with the decline deepening after TEPA took effect on October 1, 2025.

Exports fell 22.72 per cent to $461.64 million in April-June, the first quarter of FY27. Switzerland, by far India's largest market within EFTA, saw a sharper decline.

Parmelin expressed hope that TEPA would significantly boost bilateral trade in the coming years and said interest among Swiss companies had been strong since its implementation.

FIVE PACTS

The two countries signed five agreements, including pacts on migration and mobility, young professionals, and co-operation in transportation technologies, mobility systems and infrastructure development. The leaders also agreed to deepen defence co-operation, including military exchanges and defence production, as well as nuclear energy co-operation.

The migration pact seeks to facilitate mobility while addressing irregular migration and human trafficking. It provides multiple-entry visas of up to five years, stays of up to six months per visit and renewable one-year student permits.

The young professionals pact will allow 300 people annually from each country, expandable to 500, to take up temporary employment.

Pulses, potash, visas on the table as India, Canada begin 5th round of CEPA talks

Amiti Sen
New Delhi

Both governments are trying to conclude the deal before Prime Minister Narendra Modi's expected visit to Canada in December

Predictable market access for agricultural products and farm inputs, including pulses and fertilizers, technical standards, and adequate visas for workers are among the key issues India and Canada are seeking to resolve as they began the fifth round of negotiations on a Comprehensive Economic Partnership Agreement (CEPA) in Ottawa on Monday, sources said.

Both governments are trying to conclude the deal, which also focusses on co-operation in energy, advanced manufacturing and AI, and supply of critical minerals, before Prime Minister Narendra Modi's expected visit to Canada in December.

"Agriculture is expected to be the most difficult area. Canada, the world's largest pulse exporter, wants predictable, long-term access to the Indian market. India has changed its pulse duties several times in recent years. Canadian farm groups have asked for enforceable commitments rather than tariff cuts that could be reversed at short notice," a source tracking the matter told *businessline*.

Canadian Trade Minister Maninder Sidhu recently said Canadian farmers want certainty and predictability

India, which is protective of its farm sector, may be looking at options such as tariff-rate quotas, the source said. Adequate market access for fertilizers (potash), one of Canada's main exports to India, and India's demand for adequate visas for professionals and workers, are also on the table.

The round follows the fourth round in New Delhi in September, after which Sidhu met Commerce Minister Piyush Goyal in Mumbai. Both ministers reaffirmed their commitment to conclude the agreement quickly. The two countries aim to more than double two-way trade to $70 billion (Canadian dollars) by 2030, according to Canada's figures.

The push to advance the talks comes amid heightened geopolitical uncertainty and changes in the US tariff regime under President Donald Trump, adding urgency to efforts by both countries to strengthen trade ties and diversify markets and supply chains.

DELHI'S DEMAND

India wants Canada to ease some of its restrictive or burdensome technical regulations, standards, and product safety requirements, including packaging and labelling requirements.

Canada has identified certain technical standards and regulations imposed by India on farm products as non-tariff barriers and wants those addressed. "Clashing standards and stringent regulatory frameworks continue to restrict bilateral trade flow and both sides want these addressed," the source said.

RBI announces ₹2.5 lakh crore VRRR auction

K Ram Kumar
Mumbai

In an indication that the financial system is being primed for a rate hike, the Reserve Bank of India has decided to conduct an overnight variable rate reverse repo (VRRR) auction for a larger quantum (₹2.5 lakh crore) on October 6, a day ahead of the Monetary Policy Committee's call on interest rates, to suck out surplus liquidity from the banking system.

The last time RBI conducted a VRRR auction bigger than ₹2.5 lakh crore was ₹3 lakh crore on September 17. After September 17, the central bank has been conducting VRRR auction in the ₹1-2 lakh crore range, on an average, to drain out the FCNR(B) deposits related excess liquidity. Sucking out the surfeit of liquidity will ensure that transmission of a repo rate hike, which is expected to kickstart from October 7, into money markets, loans and deposits is smooth, said a senior executive with a private sector bank.

The banking system is awash with liquidity, with the excess at ₹5,15,659 crore as on October 4, per RBI data. The central bank has been draining out liquidity surplus, which is a result of banks' swapping the $133 billion with RBI under its limited period special US dollar-rupee forex swap facility, by conducting VRRR auctions and open market operation sale of government securities.

Harshal Joshi, Senior Vice-President – Fixed Income, Bandhan AMC, said: "We expect a 25 basis points increase in the repo rate to 5.50 per cent (from 5.25 per cent), after August CPI rose to 4.82 per cent. Global neutral real rate has moved higher: US growth is strong, the Fed has become more hawkish, and the dollar is firmer. India competes for the same capital, so the RBI may need considerable tightening in the months ahead if global commodity and real-rate pressures do not ease. Our base case expectation is at least 3 to 4 hikes (total of 75-100 bps) in upcoming policies."

Joshi said the RBI said it has tools such as bond sales and foreign exchange swaps to bring overnight rates closer to the repo rate. So, further liquidity actions are likely to matter as much as the repo rate for transmission.

GST Council may consider single registered address for small businesses to sell through e-commerce

Shishir Sinha
New Delhi

A small business may be permitted to sell products nationwide on an e-commerce operator (ECO) with a single registered address. The GST Council on October 8 is expected to take up a proposal to permit small businesses to use warehouse location of an e-commerce operator to use for registration.

As on date, rule says a business needs to have physical presence in the State or UT where they sell good or provide service. Now, this will change for small businesses and that will save lot of cost. Here, small businesses will mean those having total output GST liability does not exceed ₹2.50 lakh per month.

According to officials, the scheme will be optional and available to suppliers who need to make supply of goods exclusively through e-commerce operators collecting tax at source and who do not have or very limited presence in various State/UT.

"The small need to have physical presence in at least one State or UT, which shall be declared as principal place of business (PPoB). The suppliers opting for this scheme will have to undergo physical verification and biometric-based Aadhaar authentication in the home State where he has a physical presence," an official told *businessline*.

Registration obtained under the scheme will be restricted to ECO-based supplies only. Non-ECO supplies will require a separate registration with a physical office as PPoB in each such State or Union Territory The registration application will be filed by the eligible supplier on the common portal in a State/UT where he does not have physical presence. The small business will require prior concurrence/permission of the concerned ECO(s) allowing the supplier to declare their various warehouses as additional place of business (APoB).

WHAT IT ALLOWS

The simplified registration will be limited to sales made through e-commerce operators. If the business also wants to make supplies outside e-commerce platforms, it will have to obtain regular GST registration, including maintaining a physical place of business in each State/UT where such registration is required. "Under this scheme, single registration against a PAN can be obtained in a State/UT," the official said.

A seller could apply for the simplified registration through the GST common portal in a State/UT where it does not have a physical presence. Its warehouses in other States could be declared as additional places of business, but only with the prior consent of the e-commerce operator concerned.

The proposal also places responsibilities on e-commerce operators to ensure that tax authorities can access information about sellers using the simplified registration route. E-commerce operators will have to appoint an authorised representative in every State/UT to provide information about registered suppliers when required by tax officials. They will have to inform the GST authorities if a supplier is deactivated from their platform and assist tax authorities in proceedings and recovery of tax dues.

There will also be limits on the scheme. "A supplier who wishes to pass on Input Tax Credit (ITC) above ₹2.5 lakh in a month to a registered person will be required to withdraw from the scheme and then obtain regular registration," the official explained.

The rules will also provide for what happens if an e-commerce operator withdraws its consent to a seller using its warehouse as the principal place of business. The seller will get 30 days to designate another e-commerce operator's warehouse for that State/UT or exit the scheme.

SIMPLIFIED GST

The proposal adds on a new chapter on a simplified GST registration mechanism that came into effect on November 1, 2025. That mechanism allows certain low-risk applicants, as well as businesses that self-assess their monthly output tax liability on supplies to registered persons at not more than ₹2.5 lakh (inclusive of CGST, SGST/UTGST and IGST), to obtain registration automatically within three working days.

CIL raises average supply to 1.78 mt/day so far in Oct

Rishi Ranjan Kala
New Delhi

State-run Coal India (CIL) has increased the daily supply of coal to power plants to an average of 1.78 million tonnes (mt) per day so far in October, compared to an average of 1.63 mt daily for September.

September provided a stronger signal with CIL's total coal supplies during the month rose to 61.20 mt, against 54.40 mt in September 2025, registering a growth of 12.5 per cent, the Coal Ministry said.

The mining behemoth liquidated 63 mt of pithead coal stocks during the first half of FY27, demonstrating that increased supply was supported not only by current production but also by better inventory utilisation.

During September, CIL's power-sector despatch aggregated around 48.99 mt, equivalent to an average of around 1.63 mt per day. The first seven days averaged about 1.51 mt per day, while the last seven days averaged about 1.59—an improvement of roughly 5 per cent in daily throughput towards the end of the month.

During the week of September 28 to October 3, CIL despatched an average of 1.78 mt coal per day. The daily power-sector despatch remained robust, reaching 1.74 mt, 1.79 mt and 1.71 mt on September 28-30, and sustaining the momentum at 1.75 mt, 1.87 mt and 1.81 mt on October 1-3, respectively.

During H1 FY27, CIL's power-sector coal despatch stood at 302.8 mt, compared with 285.4 mt during H1 FY26.

Nearly 79 per cent of CIL's total H1 FY27 offtake was directed towards the power sector.

During the first six months of FY27, CIL's total coal offtake reached 384.2 mt, compared with 357 mt during the corresponding period of FY26.

Govt cuts FY27 borrowing plan: SBICAPS

Our Bureau
Mumbai

The Centre has pared its gross market borrowing programme for FY27 to ₹15.99 lakh crore from the budget estimate of ₹17.2 lakh crore, aided by lower issuances in the first half and liability management exercises such as switch and conversion auctions.

However, the reduction in borrowing is unlikely to translate into lower bond yields immediately as inflation concerns and higher State borrowings continue to weigh on market sentiment.

According to SBICAPS, the government plans to borrow ₹7.8 lakh crore in the second half of FY27 through 23 weekly auctions, accounting for nearly 49 per cent of the annual borrowing programme, one of the highest H2 shares in recent years. Net borrowing is expected to remain broadly in line with budget estimates despite the cut in gross issuances.

"The reduction in gross borrowing is positive from a supply perspective, but the unchanged net borrowing profile means fiscal pressures have not eased materially," the report noted.

On the fiscal front, direct tax collections remain robust, with net collections rising 13 per cent year-on-year to ₹12.1 lakh crore as of September 17. However, weak GST collections and higher transfers to the States have moderated overall revenue growth, making fiscal deficit targets dependent on sustained tax buoyancy in the coming months.

STATE BORROWINGS

State governments are expected to step up borrowing in the December quarter, with planned borrowings of ₹3.61 lakh crore, up 43 per cent from a year earlier. Maharashtra, Tamil Nadu and West Bengal are among the largest scheduled borrowers. The report expects bond market conditions to remain challenging until inflation moderates more decisively.

DPDP compliance boom gives Big 4 consulting firms a new growth boost

Sindhu Hariharan
Chennai

India's tightening data protection regime is opening up a sizeable new business opportunity for consulting firms, as companies move from understanding the Digital Personal Data Protection (DPDP) framework to actually building the systems, processes and technology needed to comply.

DEDICATED TEAM

Most organisations are turning to external expertise rather than handling the transition in-house, and the Big 4 consulting firms and other specialist firms who have an experience in dealing with GDPR are seeing a surge in engagements that is expected to extend well beyond the May 2027 compliance deadline.

The consulting firms *businessline* spoke to said they have set up dedicated DPDP practices/vertical with team sizes of around 300-400 and also leveraging relevant skills from other departments as they undertake client engagements spanning data discovery, mapping, consent process,etc.

The consultants also anticipate they will be guiding clients beyond May 2027 to operate the consent management technologies and processes and update them as per organisational changes.

"Most of the consulting firms, including PwC, have made sure that all the skills are brought together into one platform so as to get all the multi-disciplinary skills together to support clients. For us, this is part of our data privacy and risks competency, which is part of our risk consulting practice," Anirban Sengupta, Partner, Risk Consulting, PwC India, said. "We also lean on other departments on a need basis," he added.

BIZ OPPORTUNITIES. Most organisations are turning to external expertise rather than handling the transition in-house

"Large companies in India and those processing large volumes of personal data have already started their journey, resulting in a lot of consulting, implementation and managed services engagements," Sengupta added.

Consultants note that for most organisations, this is a top-down initiative, with the Boards seeking status updates in current level of readiness.

"Presentations are arranged with the Board to help them understand the current level of preparedness," said Sengupta.

While there is a group of companies still waiting and watching for the formation of the DPB and few other clarifications, most organisations are taking the May 2027 deadline as sacrosanct, he added.

Given the complexity involved, it is not easy to take an off-the-shelf consent management platform and implement in the ecosystem, Mayuran Palanisamy, Partner, Deloitte India, said. That is where we come in and provide system integrator skills, he added.

"Secondly, for some organisations, who have decided to develop the consent management platform on their own, we are also helping with functional knowledge" he added.

"Considering that we just have another eight to nine months, there is a bit of a hurry in the market right now to start the work; definitely we are seeing a significant upside [in business], especially in the tech implementation space," he said. In the last few months, there's a lot of large RFPs that have come, he added.

TECH OPPORTUNITIES

Mini Gupta, Partner, Cybersecurity Consulting, EY India, said there is a large opportunity for tech providers in providing consent technologies to companies in their compliance journey with a revenue opportunity size for the tool alone being upwards of ₹250 crore per annum.

"As Big 4's, we are also partnering with consent tech providers or developing proprietary consent solutions to provide capabilities as part of their services," she said.

EY India has already done about a hundred projects, even before the Rules came out, covering the current state [of processes], data discovery, mapping, and design documentation, and there's much more in progress on the implementation, Gupta said.

BRISK HIRING

The consulting firms note that brisk hiring is happening, both at the lateral and freshers.

The data architecture and privacy related skills have always been premium, and now more so, the partners note. The firms are also repurposing talent from other relevant departments.

As for the early mover sectors, BFSI is leading the implementation cycle with many large banks and financial services players currently in the stage of implementing the consent management processes and systems. Healthcare and e-commerce too are catching up, said Deloitte's Palanisamy.

Underwhelming show

Asian Games' medals tally affirms need to improve

India leaves Aichi-Nagoya with a campaign that is difficult to classify as either a triumph or a disappointment. The 85-medal haul — 21 gold, 27 silver and 37 bronze — helped secure the fourth place, but there has been a sizeable drop from the record 106 at Hangzhou in 2022.

While it still counts as the country's second-best medal count at the quadrennial showpiece, the regression, particularly in gold, makes a case for some introspection. The campaign began under an avoidable cloud as the organisers struggled with accommodation, transport and accreditation. A handful of athletes had to wait long hours for rooms, there were inadequate food options, and some had to make lengthy journeys to training venues. Indian shooters, for example, faced commutes of up to two hours to the range. The participation of about 17,000 athletes and officials strained the system further. The organisers eventually apologised and things looked up, but the opening logistical nightmare was a blemish on the Games being hosted in a country which is renowned for efficiency.

On the sports front, India took its own sweet time to find its rhythm. Athletics (24 medals) remained the biggest contributor, while archery, hockey, cricket and boxing delivered the most consequential gold medals. Both hockey teams qualified for the 2028 Los Angeles Olympics, while the cricket teams retained their crowns. The women's hockey team's victory was especially significant, as it brought to an end a gold drought that stretched back to the 1982 Games in New Delhi. Meanwhile, Pranavi Urs became the first Indian woman to win an individual Asian Games golf gold, underlining a widening sporting base.

The most striking individual story came from shooting. Neeru Dhanda became the first Indian woman to win an individual Asian trap title, and added another gold in the mixed team event after winning a silver in the women's team event. And she did all of that despite being hospitalised for three days in Bhopal with suspected H1N1 in the lead-up to the Games. Her performance rescued a campaign that was threatening to become defined by near misses, which is perhaps why she was flown back to Japan as India's flag-bearer at the closing ceremony.

India finished with 15 shooting medals, but only three gold, compared to the seven it won in the previous edition. There were a few glaring disappointments. Tennis failed to win a medal for the first time since 1986, while badminton (one bronze), table tennis (one bronze) and several other disciplines contributed less than expected. A late surge propped up the campaign, and India eventually matched its previous ranking, finishing behind China, Japan and South Korea. For a country with 2036 Olympics-hosting ambitions, Aichi-Nagoya served as a minor caution.

There were historic breakthroughs, Olympics qualifications, national records and new champions, but also evidence that India's recent gains are not enough. The next cycle must turn these lessons into sustained improvement.

Foreign capital: need for diversity, not dominance

KEY TAKEAWAYS. FCNR(B)'s success should prove that there are ways to get foreign capital without making concessions that create excess volatility

GETTY IMAGES/ISTOCKPHOTO

ASHIMA GOYAL

The Indian debate is quick to blame domestic policy even for external shocks. Thus, it was argued that there was something fundamentally flawed with the Indian economy because it was running an overall balance of payment deficit for two years. Never mind that the current account deficit (CAD) was only about 1 per cent of GDP and outflows were largely due to external shocks continuing since the end of 2024. This created rupee weakness that led to further outflows in a self-fulfilling cycle.

Since the 1990s reform, a set of analysts had been arguing for full capital account convertibility to cut bureaucratic tangles that ostensibly kept capital away. But periodic global financial crises would throw cold water on these recommendations. Strangely, global shock-induced outflows have now become an opportunity to ask for more concessions to foreign capital. The argument is that foreign capital is essential to finance the CAD and raise investment. All kinds of concessions have to be rolled out to attract foreigners, who are seen as the only hope.

POLICY TOOLS

Is it domestic or foreign policy that is creating shocks? One reason why people even listen to the argument is that the Indian policies being criticised have protected the economy from the worst consequences of external shock-led volatility. In August, I was speaking at a Bank of Indonesia conference in a session on integrated policy frameworks and adaptive policy tools. Since their economy has suffered the ills of being 'too open too fast' to foreign capital flows, they understand how necessary it is to use multiple policy tools to moderate global volatility.

Since the 2000s, financial crises have originated in advanced economies (AEs). Fluctuating global risks have aggravated surges and suddenly halted capital flows to emerging markets (EMs). They have had to cope with these shocks without help from an outdated international financial architecture.

The East Asian crisis especially hit a few EMs, who had followed IMF advice to more fully liberalise capital flows. Short-term foreign debt became very costly to service under steep currency depreciations. However, they had gained from globalisation and were committed to it, so they undertook major market supportive financial and legal reform. They reduced short-term foreign debt, slowed down capital account convertibility and did well in the 2000s.

AEs, however, did not adopt any of the then prevailing reform suggestions such as hedge fund transparency, prudential regulation or investors' bail-in. Had they done so, the string of crises that originated in AEs may have been mitigated.

RATE VOLATILITY

After the 2008 global crisis, Indonesia added exchange rate, capital flow and macro prudential policy to its flexible inflation targeting. But in the 2010s, they liberalised foreign investment in local currency (LCY) bonds, which were pushed as being free of currency risk. But large interest rate volatility followed during the 2013 taper-on crises, when the US Fed pronouncements on early reversal of quantitative easing led capital to flee EMs. Even the IMF has begun an analysis of integrated policy frameworks that deploy multiple policies suited to the context to reduce rate volatility and risk and therefore interest rate spreads for EMs, where raising interest rates to defend the currency may only raise risk premiums. FX reserve buffers for strategic intervention, signalling, and macro-prudential measures are included in the framework.

India's post-pandemic policy used all of the above, plus structural reforms. As a result, performance regularly exceeded expectations. One-year forward exchange rate premium fell from 5.19 per cent over 2014-19 to 1.95 per cent in 2023, as the RBI's daily intervention kept the rupee in a narrow but depreciating band. The band was too narrow and had to be widened, but unfortunately this was done in the end of 2024 just as global shocks intensified. It is in uncertain times that markets require more guidance.

Reforms to reduce transaction costs for foreign fixed income investors are required, but fully open doors are best avoided

What is an ideal share of foreign capital? The bond market in absolute size and as a percentage of GDP is much larger in India compared to Indonesia, but the share of foreign investors is much larger in the latter. Even so, bond markets are underdeveloped in India. Issuances of debt are just 13 per cent of equity while global averages are 25-30 per cent.

In Indonesia the share of foreign investors in the bond market was 32.6 per cent during the 2013 taper on. The 10-year yield shot up to 15.14 per cent in July. By 2026 Q1 the foreign share had fallen to 12.6 per cent and the 10-year yield rose much less, from 1.8 per cent in February, to 7.8 per cent in June.

In India the foreign investor share was only 1.3 per cent and 10-year yields rose to 8.3 per cent in July 2013. In 2026 Q1, the share had risen only marginally to 2.5 per cent (higher at 6.8 per cent for the fully accessible route). The 10-year G-Sec rate averaged 6.86 per cent. The central bank was forced to raise repo rates more in Indonesia —175 and 100bps. In India, changes in the two periods were only 50 and 0 bps. Depreciation of the Indonesian Rupiah exceeded that of the rupee, even though they raised interest rates relatively more. Diverse ownership lowers the level of interest rates, but capping the share of foreign investors as a percentage of the domestic market lowers interest rate volatility. The ideal share seems to be above India's, but below the Indonesian level to reduce interest rate level as well as volatility and support the domestic cycle.

THE FINAL WORD

Diverse ownership is helpful, but the tail must not wag the dog. Reforms to reduce transaction costs for foreign fixed income investors are required, but fully open doors are best avoided. Higher volatilities in 2013 compared to 2026Q1 demonstrate that above a threshold of development and with critical buffers, an integrated policy framework can counter global shocks.

Multiple instruments are required to reduce exchange rate volatility. Markets remain nervous due to continued geo-economic stress and perceived vulnerability to oil shocks. But the success of the FCNR(B) should give the important lesson that there are ways to get foreign capital without making concessions that could create excess volatility. Ammunition is available to break self-fulfilling fears of depreciation so that real exchange and interest rates can be near equilibrium, growth supporting levels despite external shocks.

How does analogue paneer differ from the regular?

bl.explainer

Mangaiyarkarasi J

The Food Safety and Standards Authority of India (FSSAI) has proposed to ban the sale of analogue paneer made from constituents not derived from milk, saying the move is aimed at safeguarding consumer interests. The draft notification, published on September 24, also requires products already licensed or registered under the 'analogue in dairy context' category to drop the word paneer from their nomenclature, labelling and marketing.

What is analogue paneer? How is it made?

According to the standards set by the FSSAI, a product can be called paneer when it is made from milk or milk solids using permitted acids. In the case of analogue paneer, milk fat or milk protein may be partly or wholly replaced with non-milk constituents such as vegetable fat or oil or vegetable protein. Depending on the formulation, manufacturers may also use ingredients such as starches, milk solids, emulsifiers and stabilisers. There is no exact composition, so the nutritional aspect of the product also varies from product to product. FSSAI calls these products 'analogue in the dairy context'. Analogues are, therefore, not illegal by themselves; the problem arises when they get sold and used as conventional paneer without clear disclosure.

What has the FSSAI proposed, and why now?

The draft notification proposes ban on the manufacture and sale of paneer not made from milk. The proposal comes amid raising concerns of analogue paneer reportedly being sold as conventional paneer. The FSSAI's central advisory committee has noted that the absence of specific quality parameters for dairy analogues, particularly in the case of paneer, makes enforcement difficult. It also raised concerns that consumers may not be able to distinguish an analogue from genuine paneer made from milk, especially when it's used in restaurants. Punjab, Karnataka, Maharashtra, Gujarat, Chhattisgarh, Madhya Pradesh, Himachal, Telangana and Uttarakhand have imposed restrictions and ban on the manufacture and sale of analogue paneer.

Is analogue paneer unsafe? How is it nutritionally different from genuine paneer?

Being an analogue doesn't by itself mean it is unsafe to consume. The concern stems from not knowing what went into the making of the analogue product, or what has been used to substitute for the milk constituents and the rest of the composition. Unlike conventional paneer, there is no single ingredient list for making an analogue. Mislabelling deceives consumers. An analogue made with vegetable fat and starch, for instance, cannot be assumed to provide the same amount or quality of protein and nutrition as conventional paneer.

ANALOGUE PANEER. Leaves a bad taste in the mouth

Paneer made from milk products has a defined nutritional profile set by the National Institute of Nutrition (NIN-ICMR). Their Indian Food Composition Tables puts the average protein content of paneer at about 18.9 grams per 100 gram, with about 24.8 gram of fat and 2.4 gram of carbohydrate. For analogue paneer, though, there is no equivalent standard nutritional value or protein data because the formulation varies between products and depends heavily on the ingredients used.

So, why make an analogue in the first place?

Because replacing relatively expensive milk fat and milk protein with cheaper non-milk ingredients can substantially reduce production costs. Industry estimates suggest that analogue paneer can cost about 30-50 per cent less than conventional paneer, with reported prices of around ₹200-250 a kg, compared with roughly ₹400-600 per kg for milk-based paneer.

Can you tell if the paneer you are buying or eating is analogue?

For packaged products, checking the ingredient list and nutrition information are the starting points. But, for food eaten outside, menu declarations about analogue use are nearly rare-to-non-existent. Price, texture and appearance may offer clues, but they cannot by themselves establish authenticity. The same applies to commonly circulated home tests such as the iodine test or dry-pan test. An iodine reaction, for example, can indicate the presence of starch adulterants, but it does not by itself prove that a product is an analogue. Laboratory testing remains a more reliable way of establishing composition.

MPC's modest tightening

This is with reference to the editorial 'Bite the Bullet' (Oct 5). The editorial has rightly said that it seems prudent to consider a 25-basis point repo rate hike by MPC, given the inflationary pressures and continuing geopolitical constraints pushing up oil prices among other factors. The RBI may also like to prevent inflation expectations becoming entrenched so that raising moderately now can reduce the need for a sharper tightening at a later stage. With regard to the impact of a 0.25 per cent hike, the impact would not be severe on any sector. For the industry, the cost of borrowing may increase a bit and some investment decisions may be postponed temporarily. But companies with high debt and thin margins would feel the pressure. However, if inflation remains high, businesses will face the pressures of higher wages, raw material costs, logistic costs and finance costs. So, it would be better for the industry if the MPC opts for modest tightening.

Kosaraju Chandramouli
Hyderabad

Voters taken for a ride

This refers to 'Impossibility of a Paretian EC' (Oct 5). There is no objection to SIR, but to the methodology adopted, which is worse than the disease. Equating large-scale deletions with rolls purification on the grounds that thousands of people in India die every day is strange. Does the EC not conduct a special summary revision every year to update its rolls to account for such occurrences? What sanctity does its intensive exercise have if a wide gap exists between the country's estimated adult population and the number of voters it ultimately maps, especially women? The total gains versus total loss criterion is subjective, and depends on which side of the fence you sit on. Apply it to the millions of legitimate voters whose names are dropped because they couldn't comply with the document-intensive process, and see what it feels like to lose the basic right to vote.

Communication is key

Apropos 'A Test for Forward Guidance in Monetary Policy' (Oct 5). The RBI's forward guidance plays an important role in shaping market expectations, influencing investment decisions and maintaining financial stability. However, guidance loses its value if communication is vague. Monetary policy operates amid uncertain oil prices, global interest rate movements and unpredictable capital flows. MPC should clearly distinguish its present assessment from projections that may change with incoming data. Regular explanations of inflation risks, liquidity conditions and growth prospects will help businesses and investors plan more confidently. The RBI must retain flexibility without creating unnecessary uncertainty. Credible communication, supported by consistent reasoning and transparent data, is essential for an effective monetary policy.

Power to arrest under GST

GST Council must ensure it is exercised judiciously

Mohan R Lavi

As the GST Council meets on October 7 for its 57th meeting, one of the more contentious items before it is whether GST officers should retain the power to arrest at all. Nine years of experience suggest that if the power is retained, it must be exercised judiciously and only in exceptional circumstances.

Section 69 of the CGST Act empowers the Commissioner to authorise the arrest of a person where he has reasons to believe that the person has committed specified offences under Section 132, where the amount involved exceeds ₹2 crore. Offences above ₹5 crore are cognisable and non-bailable. The Law Committee could not agree on the proposal. One view is that the safeguards being built into return filing will reduce mismatches and ITC frauds, and that prosecution remains available to deal with fraud. The opposing view is that diluting enforcement may hurt compliance, and the power should be retained with safeguards against misuse. The final call now rests with the Council.

VITAL. Safeguards against misuse of power to arrest

JUDICIAL CAUTION

The courts have consistently treated arrest as the exception. In *Make My Trip*, the Delhi High Court held under the erstwhile service tax law that the power of arrest must be used with great circumspection and not casually, and that the statutory process of determining the tax cannot be bypassed. The Supreme Court affirmed this in January 2019. The Punjab & Haryana High Court in *Akhil Krishan Maggu* held that arrest must be reserved for exceptional cases — originators of fake invoices, persons who ignore repeated summons, those likely to flee the country, habitual offenders, or where concrete evidence of active involvement exists. It specifically cautioned against arresting chartered accountants and advocates merely on the basis of statements of others, and noted that arresting the top brass of a running concern can close it down.

CBIC's Instruction No. 02/2022-23 of August 17, 2022, directs that arrest should not be made in a routine and mechanical manner, that *mens rea* must be palpable, and that it should not be resorted to where the demand arises from a difference of opinion on interpretation of law. Every arrest must be reported to the Board within 24 hours. In *Make My Trip*, a senior executive was arrested without even a show-cause notice having been issued, and the court found that the tax 'voluntarily' paid after the search was anything but voluntary. In *Akhil Krishan Maggu*, the court found officers recording one statement after another, apparently to intimidate a young advocate into a self-incriminating confession. Arrest, in such hands, becomes a tool of recovery rather than of investigation. Those hit hardest are not organised fake-invoice rackets but the small business owner, their employees and professionals.

It is worth remembering that the Income-tax Act, which collects more revenue than GST, does not give assessing officers the power to arrest; offences are dealt with through prosecution before a court. GST officers today have e-invoicing, e-way bills, the invoice management system and AI-enabled analytics at their disposal. Fraud can be detected through data without placing a taxpayer behind bars before his liability is even determined.

If the Council decides to retain the power, the safeguards in the CBIC (Central Board of Indirect Taxes and Customs) instruction must move from the circular into Section 69 itself. Reasons to believe should be recorded in writing and furnished to the person arrested. Arrest should require the prior approval of a committee of senior officers rather than a single Commissioner. It should be barred where the dispute is interpretational, where the taxpayer has cooperated, or where the tax has been paid. And officers who arrest without justification must be personally accountable. Personal liberty under Article 21 cannot be left to the temperament of an officer. A power meant to be used rarely must be designed so that it can only be used rarely. It is hoped that the GST Council will take a reasonable decision on the power of the department to arrest in their 57th meeting.

Conditions ripe for rate hike

POLICY MOVE. RBI needs to be categorical in its stance and actions in times of external vulnerabilities and uncertainties

ABHIMAN DAS
SMITA ROY TRIVEDI

Has the time for a rate hike finally arrived? In retrospect, as we had argued earlier, given the global and domestic inflationary trends, a pre-emptive rate hike would have helped (*businessline*, August 3 and May 4, 2026). The contours of what lay ahead were becoming increasingly visible through the last two quarters.

Three factors have made a rate hike desirable: First, domestic inflationary headwinds, fuelled by the global conditions, suggest that a hawkish stance could help. Both CPI and WPI have headed northwards in the last four months. Second, given global inflationary trends, it was only a matter of time before the Fed raised the rates, making "follow the Fed" imperative to prevent capital outflows. Third, given the sustained depreciating trend in rupee, brought about by FII outflows, a higher rate differential could help.

CONFUSING SIGNALS

However, the RBI has so far chosen to keep interest rate unchanged, yet sending somewhat confusing signals through minutes, rate and stance decisions in its Monetary Policy Committee meetings. As for the domestic situation, CPI inflation came in at 4.82 per cent in August, up from 4.45 per cent in July, to an eight-month high. As is the case with India's inflation story, CPI food and beverage inflation climbed faster reaching 5.66 per cent in August, up from 5.24 per cent reported in July. Onion inflation (over 48 per cent) stood out in this context.

In recent years, the average inflation that made the RBI raise rates is above 6 per cent, veering close to 6.25 per cent. In each of these tightening episodes, Fed was in hawkish mode

In August 2026, core inflation also crossed 4 per cent, indicating greater pass through and generalised price pressure. Reflecting global price conditions, WPI inflation rose to 9.92 per cent in August 2026, up from 9.78 per cent in July — staying near double digits for the past four consecutive months. Crude prices are at over $100/barrel and likely to continue, and rupee-dollar exchange rate again sniffing 96 thresholds, despite buoyant FCNR inflows. The Chart shows the usual "three's trouble" dynamics in crude, rupee and inflation.

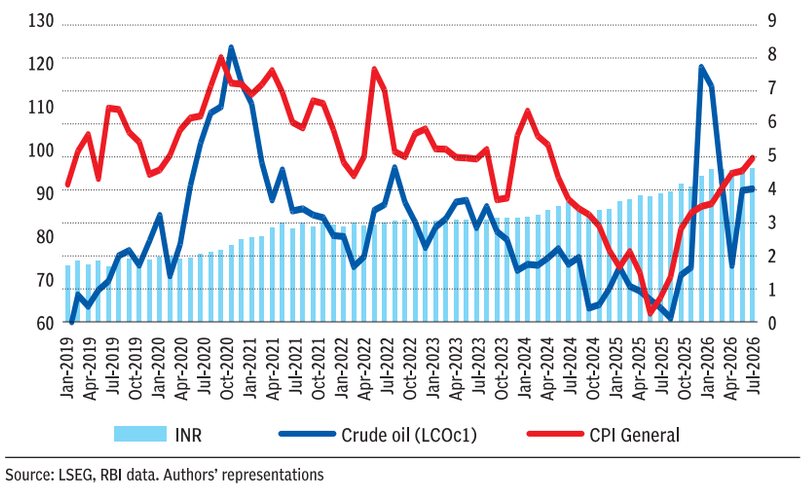

Second, US interest rate has been raised by 25 bps, so that sustained pressure on capital outflows is likely to continue. Will MPC consider the above developments as 'risks are evenly balanced'? In this context, it is instructive to look at how the RBI has responded to inflationary conditions in the past.

How many times in the last 20 years has the central bank raised rates and at what inflation range? As the Table shows, the average inflation that made the RBI raise rates is above 6 per cent, veering close to 6.25 per cent. In each of these tightening episodes inflation had remained persistently elevated and Fed was in hawkish mode. The episodes of repo rate increase in 2018, considered as exceptions, coincide with RBI's adoption of a new monetary policy framework of Flexible Inflation Targeting.

Besides those episodes, the FIT target of 4 per cent largely seems out of sync with reality for inflation control. Therefore, going by past experience, the MPC is unlikely to change the repo rate in the October 2026 policy on the basis of inflation alone— unless the Fed rate hike and the rupee pressures in its aftermath become dominant. Post the Fed hike, the rupee has continued to be under pressure, reaching a low of 96.30 as of October 5, 2026.

HAWKISH STANCE MAY HELP

With domestic credit growth already at a multi-year high and liquidity conditions showing signs of exuberance given the expected FCNR flows, a rate hike, or at least a hawkish stance may help.

The general trend of geopolitical tensions is further intensifying and is likely to remain firm in the near term. So are the inflationary trends. In this situation, with so many outside vulnerabilities and uncertainties, exchange rate is but one of the considerations. Holding on to exchange rate stability through schemes like FCNR(B), which lead to large-scale build-up of future liabilities, is questionable when geopolitical conditions are unpredictable.

Das is ICICI Bank Chair Professor, IIM Ahmedabad; Trivedi is Associate Professor, National Institute of Bank Management. The views are personal

Two leaders on tenterhooks

Sridhar Krishnaswami

In less than a month, the political fate of two leaders would have been determined even if they are not directly on the ballot. On October 27, the Prime Minister of Israel, Benjamin Netanyahu, faces parliamentary elections that will largely determine if his Likud coalition will stay in power; even if it did there is the larger question of whether Netanyahu can extend his 19-year stint as Prime Minister. And on November 3, the mid-terms in the US will determine if the Republican Party can hold on to its razor thin majority in Congress. President Donald Trump is not on the ballot, but he is hoping that his personal pull will push the Grand Old Party across the finish line.

But realities tell a different story. With an approval rating of around 29 per cent, many Republicans are distancing themselves from the leader of 'Make America Great Again' and are getting ready for the worst. Many have given up on the House of Representatives; the Senate is in play as well, and it is being maintained.

SECURITY CLOAK

Netanyahu has always wrapped himself around the security cloak — that he is the only person who can provide the Jewish state the kind of peace of mind in a hostile and troubled neighbourhood. But as Israelis are nearing critical elections, questions are being asked if the October 7, 2023, massacre of some 1,200 people by terrorist thugs could have been averted. The contention being that Netanyahu had all the warnings including from Egypt and the United Arab Emirates, perhaps from even Palestinians of what the Hamas was planning. The Prime Minister denies he failed to pass on relevant information to intelligence agencies.

HOME TURF. Facing election pressure

Iran has always been a thorn on then side of Israel, on its own as well as through Tehran backed proxies in the Hamas, Hezbollah and the Houthis. Now, on the eve of polls there is a nagging suspicion that Netanyahu may restart the war with Iran just to use it as an excuse to postpone elections. The harrowing cockpit fight in Flydubai airlines once again brought Iran into the picture: Netanyahu immediately saying that the Omani co-pilot had undergone radicalisation and whoever had sent him "will pay a very heavy price".

President Trump was not too far behind, maintaining that early information suggested a link with Tehran and that Washington will hit the Islamic Republic "very hard" if proved. A majority of American voters are of the view that Washington does not have an exit strategy. In a recent poll, only 26 per cent approved of the President's handling of Iran.

Even at this late stage, Republicans are imploring President Trump to bring an end to the war so that there is at least some drop in prices of gas at the pumps.

It appears Washington is set for yet another massive strike on Iran, but after the mid-terms — a third aircraft carrier has moved to the staging area and a total of about 30,000 sailors and marines are available for any planned new offensive.

Nervous Republicans and jittery lawmakers seeking re-election are no longer confident that the cash pile is going to get them through. Party strategists are said to be throwing money in defending safe seats in the House and Senate in states that are seen as solid Red.

TWENTY YEARS AGO TODAY.

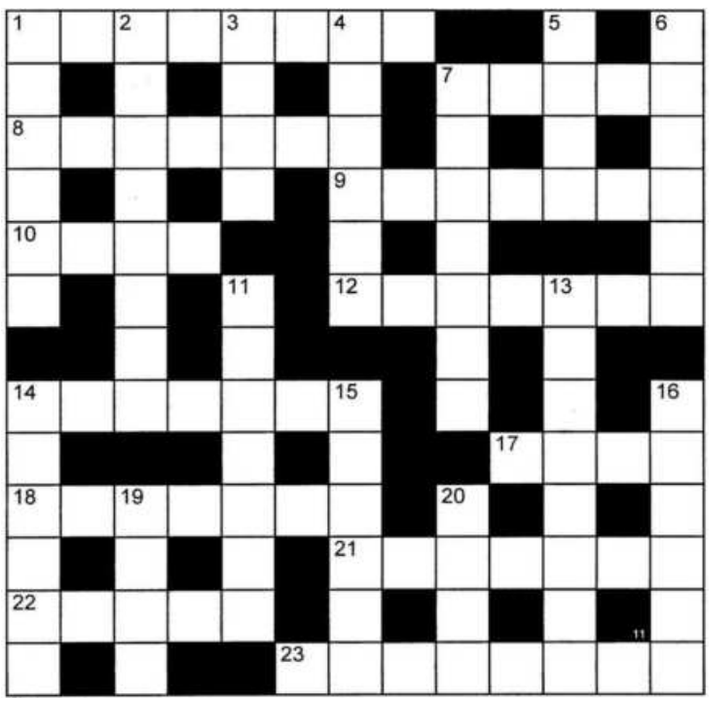

October 6, 2006

India offers Qatar stake in Petronet
India and Qatar are likely to sign deals under which more liquefied natural gas (LNG) could flow in from that country, which would pick up stake in Petronet LNG Ltd. The possibility of such deals coming through sent the PLL stock surging by 20 per cent today; the scrip closed at ₹57.90 on the BSE, hitting the upper limit.

Tata Steel reviewing takeover options
Tata Steel said the company was reviewing various takeover options including that of British steelmaker, Corus Group Plc. "However, there can be no certainty that an approach will be made and, if made, that it will result in an offer," the company said in a notice to the BSE.

Drug cos oppose cost-based pricing
The pharmaceutical industry is opposed to proposals that call for cost-based pricing of drugs, sharing of production cost data and equipping the future regulator — the National Pharma Pricing Authority — with *suo motu* powers to bring drugs outside the National List of Essential Medicines under its control. This is likely to further delay the finalisation of the new drug policy.

'Jio Platforms to launch mega IPO on October 21'

Mumbai: Mukesh Ambani's Jio Platforms plans to launch its initial public offering (IPO) on October 21, seeking to raise about $3.8 billion (around ₹37,000 crore) in what is set to be biggest listing, two sources familiar with the matter said. The shares are expected to list on October 28. The biggest listing to date is Hyundai Motor India's $2.9 billion listing in 2024, while the NSE made its market debut last month after a $2.3 billion IPO. The sources were not authorised to speak to media and declined to comment. Reliance did not respond to a *Reuters* request for comment. Proceeds from the offering will largely be used to repay debt owed by its telecoms division. Jio Platforms, which counts Meta and Google among its major foreign investors, also runs AI, cloud and enterprise network businesses. REUTERS

Sabari Constructions files NSE Emerge IPO papers

Mumbai: Sabari Constructions Technologies, an integrated engineering, procurement and construction (EPC) and infra turnkey contracting company, has filed its draft red herring prospectus with the NSE Emerge platform for initial public offering (IPO). The IPO comprises entirely a fresh issue of up to 63 lakh shares. The company will use ₹160 crore from the IPO proceeds for working capital and for general corporate purposes. GYR Capital Advisors has been appointed as the book-running lead manager, while Purva Sharegistry (India) will be the registrar. OUR BUREAU

SEBI may defer closing auction price system for derivative stocks by a year

REVERT TO OLD FORMULA. Volume-weighted average price trading will be used to determine the F&O value

Reuters
Mumbai

The Securities and Exchange Board of India is likely to stop using closing auctions to calculate derivatives settlement prices for at least a year, two sources with direct knowledge of the matter said, in a partial reversal of the new mechanisms it has introduced for setting the closing prices of key stocks and derivative contracts.

SEBI in August introduced a new mechanism called the closing auction session,or CAS, for stocks that have futures and options contracts linked to them.

Under this system, a short auction at the end of the trading day helps determine the closing price of a stock. The new process, similar to that used in global markets including the US and Hong Kong, has led to sharp swings in derivatives prices on expiry days, prompting the regulator to review it.

Sources said that instead, the volume-weighted average price (VWAP) of the last 30 minutes of trading will be used to determine the derivative pricing. In a post on social media platform X over the weekend, SEBI said it had received 20,000 suggestions to tweak the rules in response to a consultation paper issued last month.

CAUSE FOR WORRY. SEBI, in August, introduced CAS for F&O stocks. The process led to sharp swings in derivatives prices on expiry days, prompting the regulator to review it

CAS FOR CASH

For underlying stocks in the less liquid cash market, a closing auction will still be used to determine the end-of-day price, said the sources, who declined to be identified.

SEBI is expected to implement the changes by the end of this month. A SEBI spokesperson did not respond to a request.

The new approach would align India more closely with US and European markets, where derivatives settlement is often determined using dedicated pricing mechanisms, including VWAP over set trading periods, rather than closing auction.

ROADMAP AHEAD

The regulator had also proposed in its review plans in September to stop publishing the indicative value of an index and publish only the indicative prices of individual stocks during the 10-minute CAS window.

The majority of feedback comments it received said sophisticated trading desks could reconstruct those values independently and that removing them would reduce transparency without addressing manipulation concerns, the sources said.

"The regulator agrees but will push for greater awareness among investors that the underlying index price is only determined at the end of the 10-minute window," said the second source.

The feedback also favoured keeping the existing timetable broadly intact, with regular trading continuing until 3.30 pm and derivatives trading until 3.45 pm, as this would aid price discovery and better align derivatives trading with the cash market closing process.

Nifty, Sensex end higher in volatile trading session

Anupama Ghosh
Mumbai

Equities ended higher on Monday, snapping their losing streak after softer-than-expected US jobs data eased expectations of another Federal Reserve rate hike, while a moderation in crude oil prices provided further support. The Nifty gained 0.6 per cent after opening about 110 points higher, but gave up much of the early rise as profit-taking emerged before recovering from the day's lows.

The Sensex closed at 72,382.47, up 472.77 points, while the Nifty50 ended at 22,555.75, higher by 133.80 points. Bank Nifty gained 263.35 points to close at 54,714.10. The Nifty touched an intra-day high of 22,621.80 before falling to 22,397.10, while the Sensex moved between 72,631.93 and 71,840.18.

"Positive global cues and a fall in international crude oil prices helped the markets reverse last week's losing streak," said Ankur Punj, Managing Director, Equirus Wealth. He added that equities remained cautious through the session, with IT stocks seeing some profit-taking ahead of TCS' second-quarter results.

SECTOR GAINS

The broader market also participated, with the Nifty Midcap 100 rising 0.67 per cent and the Smallcap 100 gaining 0.47 per cent. FMCG was the best-performing sector, rising about 1.8 per cent, followed by consumer durables, PSU banks, media and realty.

Select banks gained up to 5 per cent after quarterly business updates. FMCG stocks were also supported by data showing sector value growth at a six-quarter high of 8.6 per cent in Q2FY27, led by rural demand.

SEBI pushes investor awareness messages on broker platforms under Project Jagrook

Our Bureau
Mumbai

The Securities and Exchange Board of India (SEBI) has directed stock brokers to prominently display investor awareness messages on their websites and trading applications as part of its investor protection drive under Project Jagrook, a nationwide financial literacy initiative.

The move comes ahead of World Investor Week 2026, being observed from October 5 to 11, and forms part of SEBI's broader efforts to strengthen investor education, promote informed investing and curb financial fraud.

Under Project Jagrook, SEBI has been working with securities market institutions, including stock exchanges, depositories, mutual fund bodies and market intermediaries to improve financial literacy.

According to a SEBI circular, the new requirements will be implemented in phases. Between October 5 and October 31, stock brokers must display SEBI-specified investor awareness messages on their websites, alongside existing risk disclosures.

From November 1, these messages will become mandatory on the landing pages of broker websites.

AWARENESS DRIVE

For trading applications, brokers may voluntarily display the awareness messages during October. However, from November 1, the requirement will become mandatory.

The initiative builds on SEBI's earlier framework mandating risk disclosures by brokers and seeks to place investor education messages directly before retail investors who increasingly access financial markets through digital channels.

The awareness campaign aligns with SEBI's recently launched "Samajh Se Investing Simple" programme under Project Jagrook, which aims to simplify investing through education and awareness, encouraging investors to understand investment products, assess risks, verify the authenticity of investment platforms and make informed financial decisions.

SEBI has instructed stock exchanges and depositories to communicate the latest directions to market participants and make the necessary changes to ensure seamless implementation.

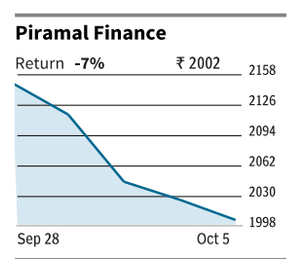

Piramal Fin board okays ₹1,750-crore pref allotment

Our Bureau
Mumbai

Piramal Finance Ltd's (PFL) committee of directors on Monday approved the allotment of 82.94 lakh warrants of the company to promoter group entity Nithyam Realty Pvt Ltd on a preferential basis, aggregating about ₹1,750 crore.

The consideration received on the allotment date was about ₹437.50 crore, according to the company's exchange filing.

This allotment comes even as PFL's board on September 28 approved issuance of non-convertible debentures (NCDs) of three years and 45 days tenor on private placement basis aggregating ₹2,000 crore.

The NCD issue comprises a base issue size of ₹500 crore, along with a green shoe option to retain oversubscription of up to ₹1,500 crore. The coupon rate on the NCDs, whose allotment date is October 8, is 8.62 per cent.

Vishal Nirmiti IPO subscribed 1.71x on final day

Press Trust of India
New Delhi

The initial public offering of Vishal Nirmiti was subscribed 1.71 times on the final day of bidding on Monday. The IPO received bids for 1.44 crore shares against 84.71 lakh shares on offer, as per NSE data.

The non-institutional investors category was subscribed 1.81 times, while the retail portion was booked 1.67 times. The QIB quota was subscribed 1.27 times.

Vishal Nirmiti had fixed a price band of ₹208-220 per equity share for its public offer. The shares will be listed on the BSE and the NSE.

Orient Cables makes strong listing, while three others see muted day 1

Our Bureau
Bengaluru

Shares of Orient Cables (India), AceVector, Runwal Enterprises and German Green Steel and Power made contrasting debuts on the stock exchanges on Monday, with Orient Cables delivering the strongest listing performance while Snapdeal-backed AceVector opened at a discount. Runwal Enterprises made a largely flat debut, while German Green Steel and Power listed at a modest premium.

However, all these stocks witnessed selling pressure and closed lower from the listing price.

ELECTRIC MOMENT. Sriram Krishnan (left), Chief Business Development Officer, NSE, with Vipul Nagpal, CMD, Orient Cables (India), at the listing ceremony

ORIENT IN LOWER BAND

Orient Cables (India) shares debuted at a 65.44 per cent premium on the NSE at ₹450, against its IPO price of ₹272. On the BSE, the stock began trading at a 64.7 per cent premium at ₹448.10.

It then fell 10 per cent to ₹405 on the NSE and ₹403.30 on the BSE, and settled in the lower circuit, but posted gains of over 48 per cent against the IPO price.

Orient Cables IPO was subscribed 92.27 times and comprised a fresh issue of up to ₹320 crore and an OFS of ₹232 crore.

Ravi Singh, Chief Research Officer, Master Capital Services, said Orient Cables' strong listing reflected its positioning in networking cables and passive networking equipment.

Investors should track whether the company can sustain revenue growth, improve profitability and execute expansion plans while maintaining healthy working capital and cash flows, he said.

German Green listed at a 3.2 per cent premium on the BSE at ₹143.50 over the IPO price of ₹139. On the NSE, the stock debuted at ₹142. However, it then fell to close at ₹128.33 and ₹128.20 on the NSE and the BSE, nearly an 8 per cent loss against the IPO price.

In fact, the IPO witnessed a strong response by receiving bids for 29 times. Its public offer comprised a fresh issue of ₹290 crore and an OFS of ₹13.9 crore.

RUNWAL: FLAT DEBUT

Runwal Enterprises, on the other hand, made a flat debut at ₹305 on the NSE and ₹306 on the BSE, against its IPO price of ₹305. It then dipped to close at ₹301.45 on the NSE and ₹298.95 on the BSE, a marginal decline of around 2 per cent. The issue was subscribed 2.5 times. Its IPO was entirely a fresh issue of ₹500 crore.

ACEVECTOR DIPS 19%

The AceVector shares were the worst performer as they listed at a discount of 11.5 per cent on the NSE at ₹28.32 and at ₹28.30 on the BSE against the IPO price of ₹32. It slid further to close at ₹26.08 and ₹26.10 on the NSE and the BSE, down over 19 per cent. The IPO was subscribed 4.93 times.

Jane Street denies manipulation charges

Bloomberg

Jane Street Group LLC denied charges of manipulation as it mounted its defence against the Securities and Exchange Board of India (SEBI), telling a local court that stocks in a banking index fell or rose irrespective of its trading activity.

The Wall Street firm sought redacted counterparty information included in the SEBI's trade logs that formed part of the regulator's July interim order.

Jane Street's appeal is a test case of SEBI's authority following its July 3, 2025, order against the firm and seizure of alleged ill-gotten gains of ₹4,840 crore. While the company denied the allegations, it deposited the money but has yet to resume trading in India.

The next hearing in the Securities Appellate Tribunal (SAT) is scheduled for October 6. SEBI has accused Jane Street of influencing the prices of stocks on the NSE Nifty Bank Index, a popular gauge with options contracts tied to it. Denying the charges of abuse, Darius Khambata, a lawyer representing the firm, told the tribunal that the index stocks rose when Jane Street sold shares.

SEBI had renewed its investigation against Jane Street even after the NSE and the regulator's surveillance department cleared the firm of market abuse.

The Wall Street trader has sought additional data from SEBI on its inter-department communication and whistleblower complaints that prompted the regulator to set up an investigation committee. Withholding documents from the trading firm would "vitiate" the process and goes against "natural justice," Khambata argued, adding that Jane Street wanted to understand why the regulator disregarded its own internal review that had cleared the trading firm.

BROKER'S CALL.

JM Financial

FSN E-COMMERCE (BUY)
Target: ₹405
CMP: ₹340.9
FSN E-Commerce Ventures' (Nykaa) pre-quarter business update for Q2-FY27 suggests continued growth momentum in top line, with consolidated GMV expected to grow around 30 per cent while NSV growth is expected to be higher in the early 30s. Consolidated net revenue growth is likely to be in the late 20s.
The beauty business continued to deliver healthy NSV growth of late-20s y-o-y, ahead of JMFe of mid 20s despite a difficult base of festive spends starting early last year.
The strong quarter was supported by robust customer acquisition as well as repeat orders, sustained traction in House of Nykaa brands and LFL store sales growth of early 20s. Fashion too continued its solid performance as NSV growth is expected to be in the late-40s y-o-y, significantly ahead of JMFe of mid 30s on the back of new customer additions, assortment expansion and continued traction in Nike partnership. With both businesses continuing to scale well, we expect operating leverage to remain favourable, supporting another quarter of healthy earnings delivery.
While the business had delivered similar growth trends in Q1 as well, it is worth noting that the base for Q2 was tough because of shift in festive spends to Q3 this yea whereas last year spends had started in Q2 itself. This in turn also augurs well for Q3-FY27.
We maintain our estimates but roll-forward to Sep'27E for a revised TP of ₹405 (earlier ₹395); maintain Buy.

Keynote Capitals

VESUVIUS INDIA (BUY)
Target: ₹560
CMP: ₹389.6
Vesuvius India Ltd, part of the Vesuvius plc Group, is one of the leading players in the refractory industry. The Company provides flow control solutions, advanced refractories and comprehensive refractory management services to the steel, foundry, aluminium, cement and other high temperature industries, with a considerable contribution from the steel sector. The India refractory market revenue is expected to grow at a CAGR of about 9.9 per cent from 2026 to 2033.
As an early mover in localising flow control manufacturing in India, the company has built a strong product portfolio and technical service network, supporting its leadership position in the domestic market, where it holds about 50-55 per cent market share.
We expect VIL's revenue to grow at about 12 per cent CAGR over CY25-CY28E, supported by sustained growth in the steel industry and the resulting increase in demand for refractory and flow control products. The company's service led model and provision of total refractory solutions are expected to support recurring revenue through maintenance and related services.
In addition, the ramp up of new capacities is expected to support the normalisation and improvement of margins. Keeping in view these factors, we initiate coverage on Vesuvius India with a Buy rating, valuing the company at 30x CY28E P/E multiple.

TODAY'S PICK.

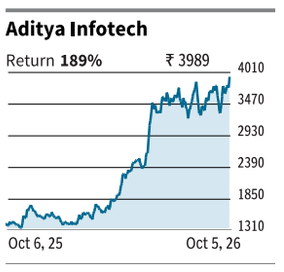

Aditya Infotech (₹3,989.05): BUY

Gurumurthy K
bl. research bureau

The short-term outlook is bullish for Aditya Infotech. The 5 per cent rise on Monday has taken the share price just above the key resistance level of ₹3,900. It also gives an early sign that the sideways consolidation since June could have ended. The level of ₹3,900 will now act as a good resistance-turned-support.

Below that ₹3,820-₹3,800 is the next key support. The Aditya Infotech share price can rise to ₹4,200-₹4,220 in the coming weeks.

Traders can buy Aditya Infotech shares now at ₹3,989. Accumulate on dips at ₹3,940.

Keep the stop-loss at ₹3,840 initially. Trail the stop-loss up to ₹4,020 as soon as the stock goes up to ₹4,070. Revise the stop-loss higher to ₹4,080 and ₹4,140 when the price touches ₹4,120 and ₹4,180 respectively. Exit the long positions at ₹4,210.

Note: The recommendations are based on technical analysis. There is a risk of loss in trading

Beyond Appliances raises ₹110 crore for expansion

Bengaluru: Smart kitchen technology company Beyond Appliances has raised ₹110 crore in a Series B funding round led by Fireside Ventures, with participation from Dharana Capital and other investors as it looks to step up research and development, expand manufacturing capacity and enter new kitchen categories. The additional capacity will support its plan to build a ₹500 crore annual recurring revenue business over the next three years. OUR BUREAU

Orange Retail, Shriram Finance in co-lending pact

Chennai: Orange Retail Finance India Private Ltd, an RBI-registered non-banking financial company (NBFC), has signed a co-lending agreement with Shriram Finance Ltd to offer gold loans to customers across Tamil Nadu. The programme has a total cap of ₹100 crore. Customers will have the option of choosing between a bullet repayment structure for tenures of up to 12 months or an EMI-based repayment structure for tenures of up to 36 months. OUR BUREAU

Kotak Bank eyes doubling SME portfolio to ₹2.5 lakh cr in 3 years

HUGE POTENTIAL. The private sector bank sees a ₹28 lakh crore untapped credit opportunity

Mahesh Ravidas Nayak
Mumbai

As competition for small and medium enterprise (SME) customers intensifies, Shekhar Bhandari, Head-SME at Kotak Mahindra Bank, believes the next phase of growth will be driven not merely by lending but by creating a comprehensive ecosystem around entrepreneurs.

The private sector lender, which recently brought together its agri, business banking and corporate SME businesses under a unified SME vertical, is looking to accelerate growth in a segment it sees as one of the bank's key strategic pillars.

BUSINESS FOCUS

"SME is one of the four focus segments for the bank, and its contribution is likely to increase from about 24 per cent of total advances to nearly 30 per cent in the years to come," said Bhandari.

"A business of this size doubling in three to three-and-a-half years is the focus we are working towards," he added. The integration has created a unified SME portfolio of around ₹1.25 lakh crore, accounting for nearly a quarter of the bank's advances.

According to Bhandari, the move was driven by the need to simplify customer engagement and provide a consistent experience across products and geographies.

"Customer centricity was the biggest reason behind the merger. We wanted one onboarding process, one underwriting framework, one servicing model and one way of engaging with customers across the SME spectrum," he said.

The opportunity remains sizeable. Citing industry estimates, Bhandari said the overall SME credit market is nearly ₹66 lakh crore, of which around ₹38 lakh crore has been addressed by banks and non-banking finance companies, leaving an unmet demand of about ₹28 lakh crore. To tap this opportunity, Kotak is investing heavily in technology, digital journeys and customer engagement rather than competing solely on pricing.

> SME is one of the four focus segments for the bank and its contribution is likely to increase to nearly 30 per cent
>
> **SHEKHAR BHANDARI**
> Head-SME, Kotak Mahindra Bank

"Funding alone is no longer enough. The real differentiator is whether you can provide funds on time, improve working capital efficiency and help customers run better businesses. If technology and process improvements can save an entrepreneur more than 100 basis points, that creates far greater value than negotiating a few basis points on interest rates," Bhandari said.

KEY ELEMENT

A key element of Kotak's strategy is its knowledge-led engagement model. Over the past year, the bank has partnered with various IITs to conduct exclusive two-day AI workshops for SME promoters.

"What started as an experiment has evolved into something far more meaningful. We have already conducted five workshops across IIT campuses, and the response has been extremely encouraging. Our objective is to prepare SME promoters for the future and help them adopt technology ahead of the curve," Bhandari said.

Regarding the broader economic environment, Bhandari dismissed concerns that recent tariff-related uncertainties or geopolitical developments in West Asia would significantly derail SME growth.

"Margins are largely protected, and demand remains healthy across sectors. While some businesses have seen longer working capital cycles, we do not see any major stress from tariffs or geopolitical developments at this stage," he said.

Among sectors witnessing strong momentum, he highlighted infrastructure-linked businesses, renewables, data centres, defence, hospitality, logistics, textiles, gems and jewellery, pharmaceuticals and paper products. Chemicals, select real estate segments, petroleum-linked businesses and parts of the plastics value chain, however, remain areas where the bank prefers a cautious stance.

Bhandari remains optimistic that SMEs will continue to be among the strongest growth engine for both the banking sector and the Indian economy

"India's growth story will ultimately be written by entrepreneurs. If SMEs can scale, innovate and become globally competitive, the opportunity for the sector and for lenders supporting them is virtually limitless," he said.

Gold loan cos eye parity on minimum tier-I capital need with other NBFCs

K Ram Kumar
Mumbai

Loans against jewellery for NBFCs, especially GLCs, are growing at a robust pace

Gold loan companies (GLCs) are eyeing for parity with other non-banking financial companies (NBFCs) on the minimum tier-I capital requirement so that their capital costs come down, and they can give more credit to underserved customers.

As per regulations, while NBFCs, including GLCs, are required to maintain a regulatory minimum capital to risk-weighted assets ratio (CRAR) of 15 per cent, the minimum tier-I capital requirement within this for GLCs and other NBFCs is at 12 per cent and 10 per cent, respectively.

CAPITAL REQUIREMENT

GLC top officials argue that, given that their loans are secured by a highly liquid collateral (gold), they are subject to loan-to-value requirements, and recovery through liquidation of the collateral is relatively hassle-free, the minimum tier-I capital requirement could be brought down to 10 per cent.

Tier-I capital, or own funds, comprises shareholders' funds, retained profits, compulsorily convertible preference shares and perpetual debt instruments up to a limited extent less regulatory deductions.

Tier-II capital comprises subordinated debt, hybrid debt instruments, preference shares not convertible into equity, and revaluation reserves, among others.

"There is a need for examining whether the current risk weighting and capital requirements for gold loans appropriately reflect the actual collateral and recovery characteristics of the asset. For NBFCs, the tier-1 capital requirement applicable to gold-loan assets has historically been higher than for some other categories of NBFCs. The industry view is that this differential deserves to be reviewed," said the CEO of a GLC.

LOAN PORTFOLIO

Finance industry expert V Vishwanathan observed that since tier-I is higher within the overall CRAR for GLCs, these companies have to raise their own funds periodically, as retained earnings might not be sufficient to support an expanding gold loan portfolio.

"If a level playing field is established, like other NBFCs, GLCs can also strategise to expand their tier-II sources of funding without relying on increasing tier-I alone all the time," he said.

"So, if the minimum tier-I capital requirement reduces to 10 per cent (from the current 12 per cent) and the headroom for tier-II capital proportionately increases within the overall CRAR of 15 per cent, GLCs will be encouraged to expand their risk-weighted assets (loans)," Vishwanathan said.

Loans against jewellery for NBFCs, especially GLCs, are growing at a robust pace. This is underscored by the fact that in July 2026, the offtake of these loans jumped to 68.5 per cent y-o-y against 43.9 per cent y-o-y growth in July 2025.

FSSAI directs States to ramp up food safety checks

Meenakshi Verma Ambwani
New Delhi

With the onset of the Navratri and Diwali festivals, the Food Safety and Standards Authority of India (FSSAI) has directed the States to ramp up surveillance and enforcement drives to prevent circulation of adulterated, counterfeit and unsafe food products, especially milk products and sweets.

> **FSSAI has also asked States** to "strategically deploy" Food Safety on Wheels, wherever available

The food regulator has asked the States to focus on different categories.

"In light of this, the FSSAI underscores the need for heightened surveillance and enforcement actions to prevent the circulation of adulterated, counterfeited and unsafe food products namely. milk and milk products, sweets, snacks & savouries including *namkeen*, *papad*/fryums, edible oil, beverages and ghee, etc," it noted in its order.

FOOD INSPECTION

"Further, these commodities may vary and can be decided dependent upon the eating patterns and prevalence in the respective regions (e.g., use of *kuttu atta*/ *singhada atta* in northern and western parts)," it added.

It has asked State Food Safety Commissioners to direct enforcement officials in their jurisdiction to conduct inspections and sampling in their respective area during the festival period. "These drives may be focused particularly on identified hot spots and sensitive locations under your jurisdiction," the FSSAI added.

It also asked the States to "strategically deploy" Food Safety on Wheels, wherever available, in prominent markets based on specific intelligence inputs to facilitate on-the-spot testing, strengthen vigilance, create awareness and to boost consumer trust by assuring them of safe and quality food products during the festival season.

UPI MDR should not attract any GST: former RBI Governor C Rangarajan

Our Bureau
Chennai

The new merchant discount rate (MDR) to be imposed on UPI merchant transactions above ₹2,000 should not attract any GST, former Reserve Bank of India Governor C Rangarajan said here on Monday.

Rangarajan was speaking at the launch of '*Cashless Nation: How UPI Changed Everything*' a book by B Sambamurthy and Santanu Paul chronicling the introduction and evolution of UPI, by here on Monday.

"The moment you levy this charge, it will automatically attract GST, because it is a price paid, and therefore the GST will have to be paid.

(from left) Santanu Paul, Author; V Kamakoti, Director, IIT Madras; Soumya Swaminathan, Chair, MS Swaminathan Research Foundation; C. Rangarajan, former RBI Governor; Sundaraman Ramamurthy, MD & CEO, BSE, and B Sambamurthy, Author, at the launch of the book BIJOY GHOSH

I would urge that the GST Council must clearly come up and say, GST should not be levied," he said. Rangarajan suggested that given that there is a cost involved in operating the UPI infrastructure, the question of whether merchants should be charged for transactions is a legitimate one.

DIGITAL PAYMENT

The event also saw the presence of Sundararaman Ramamurthy, MD and CEO of BSE India, who emphasised that UPI has been able to democratise access to the capital markets by making digital payments more accessible. He pointed to the need to further expand digital payments ecosystem into remote areas and underserved communities.

UPI SUCCESS

V Kamakoti, Director of IIT Madras, said that beyond scale and democratisation UPI's success can be attributed to the security.

Soumya Swaminathan, former Chief Scientist, WHO, suggested that efforts should be made to address security concerns in the ecosystem.

PhysicsWallah sells loan portfolio worth ₹95.79 cr to NBFC Auxilo Finserve

Our Bureau
Bengaluru

Edtech PhysicsWallah (PW) is changing its approach to student lending as its wholly owned subsidiary FinZ Finance has agreed to sell, transfer and assign a loan portfolio worth ₹95.79 crore to RBI-registered NBFC Auxilo Finserve, as per the stock exchange disclosure.

It accounts for a substantial part of FinZ Finance's total loan book, making the transaction significant for PW's lending strategy.

The move comes after PW earlier said that FinZ would allow it to provide loans to students from its own books.

However, PW later said it would work with third-party NBFCs to facilitate loans for its students instead of taking the entire lending exposure on its own balance sheet.

STRATEGY CHANGE

The change in strategy came as investors raised questions around the capital requirements and risks associated with building an in-house lending business when lending was not the company's core business.

PW reported a 24.4 per cent y-o-y rise in revenue from operations to ₹1,054 crore in Q1 FY27, while its net loss narrowed 30.7 per cent to ₹88 crore. The company's online business grew 33.3 per cent to ₹549 crore, while offline revenue rose 14.5 per cent to ₹490 crore during the quarter.

AM Intelligence orders 20,000 more Nvidia GPUs for India and Malaysia

Our Bureau
Hyderabad

AM Intelligence (AMI), an AI infrastructure platform set up by Greenko's promoters, has placed two more orders for a combined 20,000 Nvidia Rubin graphics processing units (GPUs) to be deployed in India and Malaysia. The new capacity of about 70 MW is scheduled for delivery in the second quarter of 2027.

The GPUs will be deployed as Nvidia Vera Rubin NVL72 rack-scale systems, the company said in a statement on Monday. With the new orders, the company's aggregate orders total 29,000 GPUs for a capacity of 100 MW. The company had placed its first order for 9,000 GPUs in August for its first AI factory here.

The expanded capacity would give cloud providers,

enterprises, and AI developers access to large-scale computing capacity closer to where they build and deploy AI.

COMPANY'S PLAN

The company said it planned to bring another 300 MW of capacity to market in the next 15 months, with an estimated investment of over $20 billion. This is in addition to the $6 billion already committed for the first 100 MW.

Both new facilities will be built to the same architectural standard as the Hyderabad AI factory, Anil Chalamalasetty, Chairman, AM Intelligence, said.

"Each site is engineered for high rack power density and liquid-cooled throughout, allowing the infrastructure to accommodate successive generations of AI silicon within the same physical footprint," he said.

The three orders form the first committed tranche of a pipeline of about 400 MW of compute-as-a-service capacity in locations including India, the US, Europe and Malaysia. The rest is under development for delivery in phases in 2027 and early 2028.

AMI plans to offer 1 GW of compute-as-a-service capacity for global AI workloads, within a larger programme of 5 GW of powered AI data centres across India, the US and Europe.

Anthropic's Claude live in India with in-country inference via Amazon Bedrock

Our Bureau
Bengaluru

Anthropic has announced that its Claude models, including Claude Opus 5, Sonnet 5, and Haiku 4.5, are now available with in-country inference in India through Amazon Bedrock. Requests sent to Claude via the India endpoint are now processed entirely within India, providing regulated Indian institutions with the data residency assurances needed to deploy Claude at scale for their most sensitive workloads.

India is one of the largest markets for Claude and home to one of the most technically sophisticated developer communities. A recurring request from Indian organisations has been the ability to run inference locally, a requirement that is often imperative for financial institutions, government bodies and large enterprises operating under strict regulatory and data-handling standards. That capability is now available.

> **India is among Claude's largest** markets, with a highly technical developer community

LOCAL PARTNERSHIP

"In August, we committed to bringing Claude inference to India, and we are delivering on that promise. Our customers, especially in regulated sectors and government, want to use Claude on their most critical work, with requests processed in the country. From today, they can," said Irina Ghose, Managing Director, India, Anthropic. "This is a long-term commitment. We will keep growing our team in India and investing in local partnerships, he added."

Sandeep Dutta, President, AWS India and South Asia, said, "Responsible AI adoption at scale has become a strategic imperative for some of India's most regulated industries. For them, data residency is the parameter that decides whether AI stays confined to pilots or reaches full production. With in-country inference for Claude now available through Amazon Bedrock, requests are processed on servers based in India, enabling banks, insurers and public institutions to trust and deploy AI at a production scale."

Claude deployments come with the audit trails and access controls that risk and compliance teams require before deploying AI in production environments.

Special Window for Transfer and Dematerialisation of Physical Securities

Reference: SEBI Circular No. HO/38/13/11(2)2026-MIRSD-POD/I/3750/2026 dated 30th January 2026

Pursuant to the SEBI circular cited above, we wish to inform you that a Special Window has been opened to facilitate the transfer and dematerialisation of physical securities.

1. Validity Period: The special window is open for a period of one year, commencing from 5th February 2026 to 4th February 2027.
2. Eligibility Criteria: This facility is available for physical securities sold or purchased prior to 1st April 2019, provided the original security certificate is available. Applications may be submitted under the following categories:
   - Re-lodgement: Transfer requests submitted prior to this date that were rejected, returned, or unprocessed due to document deficiencies or procedural issues.
   - Fresh Lodgement: New transfer requests provided the Transfer Deed was executed prior to 1st April 2019.
3. Key Conditions: Investors should note the following regulatory mandates regarding this process:
   - Demat Mode Only: Securities transferred under this window shall be mandatorily credited to the transferee only in dematerialised (Demat) mode.
   - Lock-in Period: The securities shall remain under a mandatory lock-in for a period of one year from the date of registration of transfer.
   - Restrictions: During the lock-in period, such securities cannot be transferred, lien-marked, or pledged.
4. Exclusions: The following cases will not be considered for processing under this special window:
   - Cases involving existing disputes between the transferor and transferee (to be settled via Court or NCLT process).
   - Securities that have already been transferred to the Investor Education and Protection Fund (IEPF).
5. Submission Details: Eligible investors are requested to submit their transfer requests, along with all requisite documents, to the Company's Registrar and Share Transfer Agent (RTA) at the address below:

   MUFG Intime India Private Limited (Formerly Link Intime India Private Limited) Surya, 35, Mayflower Avenue, Behind Senthil Nagar, Sowripalayam Road, Coimbatore – 641 028, Tamil Nadu, India. Tel: +91 422 4958995 / 2539835-36

Important Note: All shareholders are requested to ensure their E-mail ID(s) are updated with the Company, the RTA, or their respective Depository Participants.

QUICKLY.

Crude oil falls as exports from West Asia rise

New Delhi/Singapore: Crude oil prices fell on Monday as rising West Asian crude oil exports and a release of stocks by the Group of Seven nations boosted supplies, offsetting concerns about further damage to Gulf oil infra as the US-Israeli war on Iran drags on. Brent crude futures fell 72 cents, or 0.71 per cent, to $101.59 a barrel at 0634 GMT, while US West Texas Intermediate crude was at $90.05 a barrel, down $1.05, or 1.2 per cent. REUTERS

Gold up as softer Fed outlook lifts sentiment

Gold prices ticked up on Monday as investors lowered their expectations that the US Federal Reserve will hike rates this month, although a stronger dollar and rising Treasury yields limited the gains. Spot gold rose 0.2 per cent to $4,152.19 per ounce by 9.26 am EDT. US gold futures for December delivery added 0.4% to $4,180.30. REUTERS

Palm oil futures snap six-session losing streak

Kuala Lumpur: Malaysian palm oil futures rebounded on Monday, snapping a six-session losing streak on firmer Chicago soy oil, while traders also awaited fresh Malaysian Palm Oil Board data. The benchmark palm oil contract for December delivery on the Bursa Malaysia Derivatives Exchange gained 43 ringgit, or 0.95 per cent, to 4,578 ringgit ($1,120.69) a tonne at the close. REUTERS

Fertilizer sales fall 28% under FFS pilot, help govt save ₹1,470 crore

VOLUME SLUMPS. In 222 districts, sales dropped to 13.35 lt in kharif 2026 from 18.3 lt a year ago

Prabhudatta Mishra
New Delhi

Under the Framework for Fertilizer Sales (FFS), launched in 222 districts across 29 States and Union Territories during Kharif 2026, fertilizer sales declined by 28 per cent, helping the government save ₹1,470 crore.

Under the scheme, farmers are eligible to buy subsidised crop nutrients based on their land holdings and the crops selected.

Also, the decline came despite more farmers purchasing fertilizers in kharif 2026 than in the year-ago period in the districts where the pilot was implemented.

WEAK RAIN IMPACT
According to a presentation made by Additional Secretary Pramod Kumar Meherda at the recently held annual Rabi Conference, Telangana, Andhra Pradesh, Maharashtra, Uttar Pradesh, Bihar and Karnataka, among the major agricultural States, reported a decline of up to 75 per cent in sales.

GROWING DEMAND. Nearly 47 lakh farmers purchased fertilizers — up from 44.55 lakh last year

Experts said that the drop in sales was also due to lower rainfall in some of these States. Meherda said that regulating sales through an app or online system had eliminated queues outside retail outlets as farmers receive a token indicating when they can collect the fertilizers.

POLICY RESISTANCE
Punjab and Madhya Pradesh were two important States missing from the list, as Punjab did not implement the pilot, while Madhya Pradesh discontinued it following protests by farmers.

Agriculture Minister Shivraj Singh Chouhan defended the pilot when asked about Madhya Pradesh's decision to discontinue it. He said it was up to the States to decide as participation was not compulsory. However, he stressed that it was essential to reduce and check the excessive use of chemical fertilizers to protect soil health and prevent their diversion to non-farm uses, thereby reducing the subsidy burden.

As many as 46.97 lakh farmers in these pilot districts purchased fertilizers in Kharif 2026, compared with 44.55 lakh a year ago.

Similarly, sales stood at 13.35 lakh tonnes (lt) against 18.30 lt a year ago. Also, nearly 77 per cent of farmers had a digital Farmer ID (FID), while 15 per cent were tenant farmers, sources said.

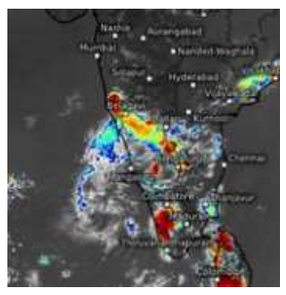

Fertilizer Secretary Rajat Kumar Mishra last week appealed to the States to check the diversion of highly subsidised fertilizers for non-farming use and ensure that farmers practise balanced nutrient use based on soil conditions. He also said the States should promote organic and natural farming as much as possible.

While stressing that the opening stock of fertilizers in the country, as of October 1, would be the highest in three years, he urged the States to focus on curbing excess use of crop nutrients as the subsidy in the current fiscal could exceed ₹3 lakh crore amid high global prices.

At the annual Rabi conference, Mishra said due to the global price rise, the per-bag subsidy burden on urea (45 kg) had surged from ₹1,350 before the war (February 28, 2026) to ₹2,775 now — a 106 per cent increase.

Monsoon withdrawal pauses briefly ahead of reversal of winds over South

Vinson Kurian
Thiruvananthapuram

Menacing thunderstorms lit up skies over the South Peninsula and adjoining Sri Lanka

The withdrawal of the South-West monsoon briefly stalled on Monday over Central and East India, with the retreating edge stretching in an arc through Supaul, Ranchi, Raipur, Brahmapuri, Parbhani, Baramati and Harnai, and the western end nestling in Maharashtra.

Farther south, the atmosphere is preparing for the next seasonal act. Winds over the South Peninsula are showing a growing inclination to turn from south-westerly to easterly, the defining signal of the transition to the North-East monsoon. Easterlies have established themselves over the Arabian Sea, and the adjoining South Peninsula is expected to follow suit shortly.

The missing piece is the Bay of Bengal, where the wind regime must turn decisively before the North-East monsoon can properly take hold.

REVERSAL OF WINDS
The normal window for this transition opens around October 15. Forecast models suggest that the seasonal reversal could unfold broadly on schedule this year, with an easterly wave moving in from the South China Sea providing the initial trigger. It could set up a cyclonic circulation over the Andaman Sea before moving into the central Bay of Bengal, past the Andaman and Nicobar Islands, around October 14, and draw north-easterlies towards south coastal Andhra Pradesh and the Tamil Nadu coasts, strengthening the seasonally reversing flows.

HELPFUL FEATURES
The atmospheric stage was already being set on Monday evening. An upper-air cyclonic circulation lay over north interior Karnataka, with a trough extending from the Comorin area towards it across Tamil Nadu and south interior Karnataka. Another trough extended from West Bengal to Madhya Maharashtra, passing across Jharkhand, interior Odisha, Chhattisgarh, Vidarbha and Marathwada.

Together, these features are helping reorganise the piloting wind and rainfall pattern over the South Peninsula. The preceding South-West monsoon has left behind a significant rain deficit after being suppressed by the dominant El Nino over the equatorial Pacific. In this context, the South Peninsula is eagerly looking to a replenishing spell from the North-East monsoon.

The India Meteorological Department (IMD) expects isolated heavy rain to continue over Tamil Nadu, Puducherry, Karaikal, Kerala and Mahe on Tuesday. Kerala and Mahe could see heavy spells on Friday and Saturday, while south interior Karnataka is likely to receive isolated heavy rain on Tuesday. Rainfall is expected to remain fairly widespread over Kerala, Mahe and Lakshadweep during the next six days. Isolated to scattered rain is likely over coastal Andhra Pradesh, Yanam, Rayalaseema, Tamil Nadu, Puducherry and Karaikal during the next six days.

IVPA asks members to reduce retail prices of edible oils

Our Bureau
Mangaluru

The Indian Vegetable Oil Producers' Association (IVPA) has written to its members asking them to reduce retail prices of cooking oils in view of the festival season demand.

It has also asked its members to duly share the retail prices of edible oils with the government every week.

TRADE BALANCE
This follows the government's recent decision to reduce customs duties on major imported edible oils, effective September 24.

A media statement said that the duty rationalisation is expected to narrow the duty arbitrage on imports through Nepal and moderate the surge in imports, thereby creating a level playing field for domestic importers and refiners.

The duty reduction, therefore, assumes significance not only from the perspective of moderating consumer prices but also in ensuring greater transparency, fair competition and stability in the domestic edible oil trade, it said.

Sudhakar Desai, President of IVPA, said: "We thank the government for this timely intervention, particularly as the country approaches the festive season, when edible oil consumption typically increases. Global edible oil prices have remained under pressure due to a combination of geopolitical uncertainty, weather-related issues and supply-side constraints arising from the growing diversion of vegetable oils towards biofuel production. This has added to domestic inflationary pressures and strained household budgets. The reduction in import duties will provide much-needed relief to consumers."

IVPA seeks weekly price disclosures as duty cuts aim to ease consumer costs

"We have also written to our members, urging them to pass on the benefit of the duty reduction to consumers through a corresponding reduction in retail prices and to submit their retail price lists to the government every week. This will help ensure transparency, facilitate price monitoring and ensure that the benefit of the government's decision reaches consumers on time," Desai added.

PRICE VOLATILITY
Global edible oil prices have witnessed considerable volatility over the past six to 12 months.

In India, consumer price inflation has been continuously rising, reaching 4.8 per cent in August 2026, with the prices of some edible oils rising sharply, he said.

The association noted that the duty reduction assumed added significance ahead of the festive period.

A moderation in import costs could help ease the price pressures and support consumption, the IVPA added.

Solvent extractors body to ink pact with Columbian oil palm growers' federation

Our Bureau
Mangaluru

The Solvent Extractors' Association of India (SEA) is expected to sign a memorandum of understanding (MoU) with Colombia's National Federation of Oil Palm Growers (Fedepalma) to explore new avenues for palm oil sourcing, trade and cooperation.

The initiative follows a high-level interaction between SEA and a Colombian delegation on the sidelines of SEA's recently concluded 55th annual general meeting and 29th Globoil event in Mumbai.

TIMELY INITIATIVE
A statement said the timing of the initiative is significant, as India recently reduced import duties on crude edible oils, and the festive season is driving renewed focus on their availability and affordability in the domestic market.

Quoting BV Mehta, Executive Director of SEA, the statement said the proposed collaboration assumed greater significance at a time when India's edible oil sector is witnessing a rapidly changing global supply landscape.

"With Indonesia and Malaysia moving increasingly towards higher biodiesel blending, more palm oil is likely to move from food to fuel. In such a scenario, India has to look ahead and explore alternative and complementary sources of supply. Colombia, with its growing palm oil production and exportable surplus, presents an interesting opportunity," he said.

In fact, in the recent past, India has imported about 2 lakh tonnes from Colombia, he said.

Angshu Mallick, SEA President, said Colombia currently produces around 2 million tonnes of palm oil annually and is the largest palm oil producer in Latin America. "Their invitation to visit Colombia and explore opportunities of mutual benefit is a positive development. SEA is planning the delegation visit early next year and looks forward to taking this engagement forward," he said.

Dry fruit prices rise on geopolitical impact, driving consumers towards cashews this festival season

V Sajeev Kumar
Kochi

Consumers should prepare to pay more for dry fruits this festive season, with the market facing rising prices and supply constraints amid overseas trade disruptions due to the West Asia crisis and broader geopolitical tensions.

Traders expect sales to decline this season as disruptions across global supply chains have pushed up the prices of dry fruits.

Retail prices of several varieties have risen 15–30 per cent year-on-year, driven by transit disruptions in West Asia, higher container freight rates and crop damage in major producing countries.

COSTLY NUTS. Prices of several varieties have risen 15–30% amid the West Asia war, higher freight rates and crop damage

Raju Bhatia, Ambassador, India, International Nuts and Dry Fruits Council, told *businessline* that the price surge could affect sales, with traders anticipating a 10-15 per cent decline due to higher international prices and lower crop yields.

SUPPLY DISRUPTIONS
Pistachios are among the worst affected, with prices rising 30-40 per cent, mainly due to supply disruptions from Iran and a sharp increase in container freight rates.

The impact has been compounded by a nearly 50 per cent decline in US crop yields. Almond prices have increased 10–20 per cent, amid lower production in the US. Other products, including pumpkin seeds, pecans and dates, have also increased by 5-10 per cent, owing to currency depreciation and higher logistics costs.

CASHEW RESILIENCE
Cashews, however, remain an exception, with prices largely unchanged from last year. J Rajmohan Pillai, owner of the Nut King brand, said retail prices of whole cashews were currently hovering around ₹900–₹1,000 per kg, while broken cashews are priced around ₹800–₹900 per kg.

According to Pillai, importers are also diversifying their sourcing origins, looking towards Chilean walnuts and Australian almonds.

At the same time, seeds, such as pumpkin and sunflower, along with makhana, are being promoted as relatively stable-priced alternatives.

Corteva spins off seeds biz, focuses on crop protection

Our Bureau
Hyderabad

US-based agri-sciences firm Corteva Inc has spun off its seed and genetics business to become a pure-play crop protection company.

It has lined up 12 new active ingredients, including five biologicals, for launch over the next decade. Its crop protection pipeline is valued at $11 billion.

Revenue from the crop protection business rose by over $1 billion between 2020 and 2025. The segment's operating EBITDA margin expanded by about 250 basis points during the period.

Corteva has built a biologicals and natural products platform and shifted product mix towards differentiated tech, which now account for about 65 per cent of sales.

Blenders, exporters lift tea prices in Coonoor auctions

V Sajeev Kumar
Kochi

Useful support from blenders and exporters lifted tea prices at the Coonoor auctions, with the market remaining firm amid good demand across the sale.

However, traders said the shortage of rainfall is causing concern as they fear it could affect future volumes at the auctions.

The water table in reservoirs and in the high ranges in and around Coonoor are declining, which might affect not only tea but also other crops. Traders are hoping for the North-East monsoon to revive the crop.

CTC DEMAND
Global Tea Auctioneers said 12,78,366 kg was offered in leaf sales, with 95 per cent sold, while 3,06,770 kg was offered in dust sales, with 95 per cent sold. In CTC leaf, the high-priced teas were lower by ₹4–₹5, while some quality lots occasionally sold ₹3–₹4 dearer.

FIRM BIDS. Global Tea Auctioneers said 12,78,366 kg was offered in leaf sales, with 95 per cent sold BLOOMBERG

The better medium sorts saw fair demand and sold ₹3–₹4 dearer, largely in line with quality. The medium and plainer sorts also sold ₹2–₹3 dearer.

Generally, good demand was seen across the CTC leaf sale. The primary whole-leaf grades were barely steady to occasionally ₹2–₹3 dearer. The broken grades sold fully firm to ₹2–₹3 dearer.

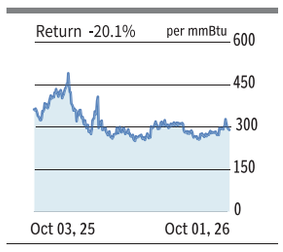

The primary orthodox dust grades saw good demand and sold ₹4–₹5 dearer, with some lots fetching more.

The secondary and finer dusts saw fair demand and sold fully firm to ₹2–₹3 dearer, with some lots fetching more.

Natural gas: Buy at ₹293 with stop-loss at ₹278

Akhil Nallamuthu
bl. research bureau

Natural gas futures (₹293/mmBtu) have been witnessing considerable volatility over the last two weeks. It lost 6.2 per cent last week, whereas in the preceding week it was up 9.6 per cent. Nevertheless, an important support level holds well at the moment, leaving chances for the bulls to recover.

COMMODITY CALL.

The October contract hit a two-month high of ₹326.9 on September 24 before falling to the current level of ₹293. There is support ahead at ₹285, followed by ₹280. Hence, the price region of ₹280-285 is a support band.

The contract is likely to see a rally on the back of the nearby base. A rise from here could lift the price to ₹310. A breakout of this level could take natural gas futures to ₹325. However, if the support at ₹280 is breached, the near-term outlook could turn bearish, triggering an initial quick fall to ₹275.

If this support is invalidated, natural gas futures could fall to ₹270.

Overall, as it stands, the likelihood of natural gas (October) futures rallying is high. Hence, traders can consider buying.

TRADE STRATEGY
Buy natural gas (October) futures at ₹293 and place initial stop-loss at ₹278. When the contract hits ₹310, revise the stop-loss to ₹295. Book profits at ₹325.

Experts call for more cocoa acreage, quality planting material for self-reliance

AJ Vinayak
Mangaluru

Experts have stressed the need to expand the area under cocoa cultivation using quality planting materials to meet the expected increase in demand.

Speaking at a brainstorming session on 'Self-reliant Cocoa Sector: A Roadmap for 2047', organised by the ICAR-CPCRI (Central Plantation Crops Research Institute) in Vittal, Dakshina Kannada district, on Monday, KB Hebbar, Director of CPCRI, said domestic demand for cocoa is around 1.1 lakh tonnes (lt), while the country's production stands around 30,000 tonnes. In addition, demand for cocoa is also increasing in international markets.

Stating that India had enough cultivable land, he said the country should take this opportunity to explore cultivation using quality planting materials. However, the focus should be on traceability, quality and certification as the area under cocoa cultivation is expanded.

KB Hebbar, Director of CPCRI, speaking at the session in Vittal, Dakshina Kannada

Highlighting cocoa consumption patterns across countries, P Chowdappa, former Director of CPCRI, said India's per capita consumption stands around 1 kg, compared with 11.56 kg in Switzerland, 9.2 kg in the US, 5.4 kg in Germany and 3 kg in the UK.

Referring to Andhra Pradesh's role in cocoa cultivation, he said that around 40 per cent of India's cocoa production is concentrated in the State. The Andhra Pradesh government is also focusing on expanding the area under cocoa cultivation, and had initiated a plan to develop a 'cocoa city' in Eluru district.

Stressing the need to increase cocoa production in the country to 2 lt by 2040, he said the priority should be to improve the availability of quality planting materials.

NK Krishna Kumar, former Deputy D-G (Horticulture Science), ICAR, said cocoa grown in the East and West Godavari regions of Andhra Pradesh is comparable to that grown in Sudan. In fact, there is a good market for cocoa from Sudan in the European market.

Considering the unstable supply chain in Africa, it is time for India to invest in cocoa cultivation to meet the demand. There are also signs of cocoa cultivation being taken up in the North-East, he said.

QUICKLY.

Bharat Forge inks deal with Pratt & Whitney

New Delhi: Bharat Forge Ltd (BFL) has entered into a long-term contract with Pratt & Whitney Canada, a global leader in aerospace engine, for the supply of mission-critical aerospace engine components. The components will be manufactured at BFL's aerospace facility in India, specifically developed to produce high-performance, high-value, aero-engine products, the company said on Tuesday. Hyderabad: Cygni Energy and Indus Towers have signed a memorandum of understanding for collaboration on sourcing energy storage solutions for telecom infrastructure. Under the MoU, the proposed collaboration includes plans to establish battery energy storage system manufacturing capacity of up to 1.5 GWh. OUR BUREAU

SC asserts changes to Form 6 were 'not by us', puts EC under the spotlight

JUDICIAL REMARK. Court made the observation while hearing petitions demanding suspension of CEC Kumar

Krishnadas Rajagopal
New Delhi

The Supreme Court on Monday distanced itself from the controversial alterations made to Form 6 for registering new voters during the Special Intensive Revision (SIR) of electoral rolls across several States, shifting scrutiny onto the Election Commission of India (EC).

"We are making it clear, any modifications to Form 6 have not been made by us," Chief Justice of India Surya Kant, heading a three-judge Bench, said.

Modifications to Form 6 should be done through the proper law-making process, and not carried out unilaterally by administrative actions.

The alterations in Form 6 included a supplementary declaration form requiring additional linkage requirements for voter registration.

New applicants have to declare whether they, their parents or their grandparents were registered in previous SIR electoral rolls. Further, responding to these mapping and linkage questions were made a strict prerequisite for submitting the Form 6 applications.

CEC PRESSURE

The oral observation came during the hearing of two petitions demanding the suspension of Chief Election Commissioner Gyanesh Kumar over allegations of bias, administrative unilateralism and procedural overreach during the SIR process.

Justice Joymalya Bagchi pointed to how the Chief Election Commissioner (CEC) and Election Commissioners continue to enjoy immunity from legal proceedings even after demitting office, a protection not available to even judges.

SET NORMS. The Supreme Court said modifications to Form 6 should be done through the proper law-making process, and not unilaterally by administrative actions PTI

Section 16 of the Chief Election Commissioner and other Election Commissioners (Appointment, Conditions of Service, and Term of Office) Act of 2023 provides that "no court shall entertain or continue any civil or criminal proceedings against any person who is or was a Chief Election Commissioner or an Election Commissioner".

"A protection when in office is always understood. But the 'was' in the provision is perhaps only protection with regard to the President. It does not apply even to judges... Look at the Judges Inquiry Act," Justice Bagchi observed.

Senior advocate Vikas Singh, for petitioner Rakesh Singh, said the statute had "exalted the CEC to such a high position, perhaps higher than a Supreme Court judge". Singh argued that Section 18 of the 2023 Act and the Constitution gave the CEC no individual title.

He was the Chairman of the multi-member Commission and not the Commission itself, the senior counsel argued.

He urged the court to suspend the CEC or divest him of any authority till the Supreme Court took a final call on the petition.

"But then, who will conduct elections? You have to file petitions keeping in mind the working of the Constitution," Justice Bagchi responded.

THREAT TO FRANCHISE

Senior advocate Menaka Guruswamy, for petitioner Shailendra Mani Tripathi, pointed out that 30 per cent of the electorate in Delhi and 25 per cent of the electorate in West Bengal had been deleted in the SIR process. She submitted that lakhs of appeals were pending before the appellate tribunals in West Bengal.

The court tagged both petitions and indicated that it may list the case for next week to hear the EC.

BJP lists 8 RS candidates for UP, drops incumbents

Our Bureau
New Delhi

The names were shortlisted apparently balancing social, regional and caste combinations

Union Ministers Hardeep Singh Puri and BL Verma did not figure in the BJP's list of eight Rajya Sabha candidates from Uttar Pradesh announced on Monday.

Puri holds the dual charge of Minister of Petroleum and Natural Gas and Urban and Housing Affairs. Verma is is the Minister of State in the Ministry of Consumer Affairs, Food and Public Distribution.

There has been a cloud over Puri after Leader of the Opposition from Congress Rahul Gandhi accused him in Parliament and outside of having links with Jeffrey Epstein.

The BJP decided to drop all the 7 members of the Rajya Sabha — Puri, Verma, Arun Singh, Seema Dwivedi, Neeraj Shekhar, Brij Lal and Geeta Shakya — ahead of the Assembly elections in Uttar Pradesh while the seat of Dinesh Sharma fell vacant after he was made Lieutenant Governor of the Andaman and Nicobar Islands.

Elections to 12 Rajya Sabha seats across Uttar Pradesh, Uttarakhand and West Bengal will be held on October 16.

TIGHT ROPE ACT

As per the list released, the BJP has decided to field State Minister Dharampal Singh, Radhakant Ojha, Prakash Pal, former MLC Vidyasagar Sonkar, Gopi Krishna Pandey, Ram Pratap Singh Chauhan, former Lok Sabha MP Priyanka Singh Rawat and Jharkhand Governor Santosh Gangwar's daughter Shruti Gangwar.

The names of these eight candidates were shortlisted keeping in mind balancing of social, regional and caste combinations.

The list has three candidates from the upper castes while two of them are women, three are from the Other Backward Castes and two from the Scheduled Castes, as per BJP sources.

Among the prominent OBC faces, Prakash Pal currently leads the party's Uttar Pradesh OBC Morcha and previously helmed the Kanpur-Bundelkhand organisational zone. Strengthening its dalit representation, the party has fielded Jaunpur native Vidyasagar Sonkar, a seasoned former MP and MLC who previously served as Deputy Leader in the UP Legislative Council and as a State general secretary.

Of the women candidates, Rawat, who serves as State BJP vice-president and national executive member, notably defeated Congress stalwart PL Punia by nearly two lakh votes in the 2014 Lok Sabha elections. Gangwar, an IIT graduate who chairs the Urban Co-operative Bank in Bareilly, termed her candidature a pivotal step toward women-led governance and emphasised the growing role of women in shaping national policy.

Keeping the upper castes in mind, the party has opted for a Thakur representative in State general secretary Ram Pratap Singh Chauhan, who oversees western UP and formerly represented Agra's Etmadpur seat as MLA. Alongside Chauhan are Brahmins Radhakant Ojha, a senior Allahabad High Court advocate and two-time Bar Association President, and Gopi Krishna Pandey, a veteran leader known regionally for extensive organisational work at the grassroots level.

Great Nicobar Project: SC refuses to stay Calcutta HC proceedings

Krishnadas Rajagopal
New Delhi

Saying that "preservation of culture is a constitutionally protected fundamental right", the Supreme Court on Monday did not agree with a Union government plea to stay Calcutta High Court proceedings in a petition filed by former Union Environment Secretary Meena Gupta challenging the Great Nicobar Island Project as a threat to the area's fragile ecosystem and Forest Rights Act, 2006.

A three-judge Bench headed by Chief Justice of India Surya Kant, instead urged the Calcutta High Court to hear the case and decide the issues without delay.

Appearing for the Centre, Attorney General R Venkataramani and Additional Solicitor General Aishwarya Bhati said the ₹72,000-crore project involving construction of a container terminal was of "immense" national importance and strategic value.

Venkataramani said there was "no loss of habitation" for the indigenous tribal population like the endangered Shompen tribe of the Great Nicobar Island.

Justice Joymalya Bagchi, on the Bench along with Justice V Mohana, said there should be some degree of filtration between what constitutes the security of the State and what involved commercial interests.

PRESERVING CULTURE

"Preservation of culture is a constitutionally protected fundamental right. When you are talking about tribe cultures in Nicobar ecology. Tribe culture requires constitutional protection," Bagchi observed orally.

Bhati submitted that the National Green Tribunal (NGT) had already twice disposed of the apprehensions raised regarding the project. It had cleared the environmental clearance given to the project, subject to conditions and the formation of a High Powered Committee to re-examine specific ecological impacts.

The law officer said even a review against the environmental clearance was rejected by the NGT subsequently in April 2023.

However, the Calcutta High Court had entertained writ petitions filed by Gupta highlighting severe environmental threats the project may allegedly cause.

In May, the High Court dismissed the Union government's preliminary objections regarding the *locus standi* of Gupta, banking on the submission that she was not a local.

DATE SCHEDULED

The High Court had scheduled the case for November 25 and 26 for hearing constitutional issues centring on fundamental rights and preservation of the tribals' way of life.

Senior advocate S Muralidhar, appearing for Gupta, said the argument in maintainability of the writ petitions before the High Court has become academic as the tribal councils have already been impleaded.

Venkataramani said the tribes were integrated, and were not in the protected category.

The Shompen and the Nicobarese tribes are said to be affected by the project.

The Bench said the Union government could place the NGT decisions, with whatever persuasive value they may command, before the High Court.

Set up 24-hour monitoring cells in vulnerable areas, SC tells Delhi Police

Aaratrika Bhaumik
New Delhi

Underlining the need to take preventive measures against sexual offences against women, the Supreme Court on Monday asked the Delhi Police to set up 24-hour monitoring cells in vulnerable areas. The court also asked the police to strengthen patrolling, particularly around educational institutions and public spaces.

A Bench of Justices JB Pardiwala and K Vinod Chandran observed that the mere installation of CCTV cameras in public spaces would serve little purpose.

"When we are talking about surveillance through CCTV cameras, how far will they help curb crimes if there is no continuous monitoring at different war rooms? The cameras will help you in catching hold of the culprit. But how will you prevent such crimes? There has to be a cell, a 24-hour cell, which keeps monitoring what is happening," the Bench remarked.

The top court was hearing a *suo motu* case concerning a spate of sexual assault incidents involving minors and women in the Delhi-National Capital Region. It had earlier indicated that it intended to fix accountability on authorities entrusted with preventing crime and protecting the vulnerable.

'VULNERABLE POCKETS'

"Focus on educational institutions, colleges, where there are goons (who) keep harassing young girl students. We are also told that there are hundreds of illegal eateries across NCT of Delhi where all anti-social elements get together... Start identifying all those vulnerable pockets," the Bench said.

Solicitor General Tushar Mehta, appearing for the Delhi Police, acknowledged that there appeared to be deficiencies in police patrolling. "*Prima facie*, it appears that there is some deficiency in patrolling duty," he said.

The Bench also pointed to reports that, even prior to the gang-rape of a 17-year-old at Astha Kunj Park near Lady Shri Ram College, residents had repeatedly flagged safety concerns to the police, but their concerns remained unaddressed.

Referring to the upcoming festival holidays, Justice Pardiwala asked the Delhi Police to heighten vigilance to ensure that such incidents did not recur. "You need to create a fright, a fear in the mind of a man who is prone to commit such offences... Unless and until you create that fear, that fright in the minds of those anti-social elements, you will not be able to prevent the commission of such crimes," he said.

Accordingly, the Bench said it would pass an order recording the measures to be undertaken and posted the matter for further hearing on November 16.

India needs more globally benchmarked institutions as BITSoM marks 5 years: Birla

Suresh P Iyengar
Mumbai

India will need more globally benchmarked educational institutions as it grows, Aditya Birla Group Chairman Kumar Mangalam Birla said, underlining the importance of preparing students for a rapidly changing world.

Addressing the fifth anniversary of the BITS School of Management (BITSoM), Birla said the project was launched with the ambition of creating a global business school from India. Birla said this required taking decisions on faculty, curriculum and pedagogy that were sometimes more expensive but necessary to meet international standards.

The school has graduated 579 students from 21 States and 123 cities, with its students and alumni now spread across more than 300 companies.

UPDATING CURRICULUM

Birla said the curriculum was designed not only around traditional business disciplines such as finance, marketing, strategy and operations, but also around critical thinking, learning agility, self-awareness, communication and decision-making amid uncertainty, he said, would remain relevant even as technology changes.

The rapid emergence of artificial intelligence has reinforced that approach. Birla said BITSoM was regularly updating its curriculum to help students understand how AI could transform businesses and workflows.

The school has introduced courses focused on deploying technology against real business problems and has also launched an AI incubator connecting start-ups with students. More than 2,300 start-ups applied to participate, with 35 expected to be selected to work alongside BITSoM students on enterprise challenges.

Kumar Mangalam Birla, Chairman, Aditya Birla Group

V Ramgopal Rao, Vice-Chancellor, BITS Pilani, said the institute disburses nearly ₹130 crore in scholarships annually, benefiting one in every four undergraduate students. Additionally, top 500 BITSAT rankers from households earning under ₹20 lakh receive a 100 per cent tuition waiver.

AI+ CAMPUS

Looking forward, he said the upcoming AI+ campus in Amaravati will be launched next year, alongside expanded schools for management, law and design in Mumbai.

Highlighting how rapid technological shifts have transformed entry-level tasks such as initial research, drafting, and spreadsheet analysis, Saravanan Kesavan, Dean, BITSoM, said management education matters more now than ever.

Gujarat plans rooftop solar for 15,000 govt buildings, to add 65 MW capacity

Our Bureau
Ahmedabad

Gujarat is planning a major expansion of rooftop solar on over 15,000 government buildings this financial year to add 65 MW of capacity to its public infrastructure.

The expansion follows the installation of rooftop solar systems on 1,377 government buildings during FY26, adding 17.1 MW of capacity.

With this, over 6,014 government buildings have been covered under the programme by March 2026, with total installed capacity of 95 MW, an official release said on Monday.

Gujarat Climate Change Minister Arjun Modhwadia stated in the release that the State had earmarked ₹314 crore for the programme in FY 27.

Over ₹278 crore has been allocated for general government buildings, ₹3 crore for buildings under the Social Justice and Empowerment Department and ₹33 crore for buildings managed by the Tribal Development Department, according to Dharmendra Patel, Director, Gujarat Energy Development Agency.

TRACKING GENERATION

Alongside the capacity expansion, Gujarat has introduced an industrial internet of things (IIoT)-based Renewable Energy Monitoring System to track renewable energy installations on government buildings. The system uses smart meters, sensors and IoT gateways connected through GPRS, 4G and Ethernet networks. It captures performance data every 15 minutes, generating up to 96 readings a day, and can send automated remote alerts when required.

"The system's robust infrastructure integrates smart meters, sensors and IoT gateways connected via GPRS, 4G and ethernet," Modhwadia added.

The monitoring interface currently tracks significant renewable generation capacity, including 142.5 MW of solar and 68.3 MW of wind generation, the Minister said.

According to the Union Ministry of New and Renewable Energy, Gujarat has installed renewable energy capacity of 47,178 MW, putting it ahead of Rajasthan and at the top nationally.

Rajnath to launch fleet support ship in Vizag today

Our Bureau
New Delhi

Defence Minister Rajnath Singh will launch fleet support ship-1 (FSS-1), lay the keel of fleet support ship-5 (FSS-5) and also inaugurate the upgraded slipway-4 and 300-tonne Goliath crane at Hindustan Shipyard Ltd, Vishakapatanam, on Tuesday.

FSS-1, the first of five fleet support ships being built for the Navy, will enter the waters of the Bay of Bengal just 18 months after initial steel cutting. These 43,500-tonne vessels will replenish warships at sea. The keel laying of FSS-5 will mark the programme's steady march towards series production.

The upgraded slipway-4, supported by the 300-t Goliath crane, will enable the shipyard to launch vessels of up to 45,000 DWT.

BigEndian Semiconductors gets ₹130-crore TDB-DST funding support

Our Bureau
Bengaluru

Bengaluru-based BigEndian Semiconductors has bagged ₹130 crore under the Research Development and Innovation (RDI) Fund from the Technology Development Board (TDB), Department of Science & Technology (DST), Government of India.

The financial support will be provided through optional convertible debt (OCD) to support Project VeerAI to develop a camera-focused AI vision system-on-chip (SoC) on a sovereign technology platform, addressing the growing requirement for secure, intelligent and application-specific semiconductor solutions. Project VeerAI has a project cost of ₹260 crore.

The project is positioned around the development of a secure AI chip for surveillance applications, particularly CCTV systems, to reduce dependence on externally developed semiconductor and technology supply chains.

Rajesh Kumar Pathak, Secretary, TDB, said, "The support to BigEndian Semiconductors reflects TDB's focus on enabling firms to develop strategic semiconductor capabilities and translate domestic design expertise into deployable products."

Saudi airline flyadeal eyes expansion in India

Mumbai: Saudi low-cost airline flyadeal is eyeing new routes and revamping its product as it aims to strengthen its presence in India. On Saturday, the airline launched its five-weekly service between Riyadh and Mumbai, adding to its Hyderabad flights. The airline is also looking to introduce services to Delhi, Kozhikode and Lucknow. OUR BUREAU

Schneider Electric nears $20 b deal to buy PTC

France's Schneider Electric is nearing a deal to buy US software group PTC for about $20 billion, the *Financial Times* reported on Sunday. A deal may be announced as soon as Monday, the report said, adding that there was no certainty it would result in a deal. Boston-based PTC has a market value of $15.63 billion, according to LSEG data. REUTERS

Airlines urge govt to unlock delayed ECLGS payments

AWAITING CREDIT. FIA says lenders are holding back funds amid liquidity pressures

Our Bureau
New Delhi

The airline industry has sought urgent government intervention to expedite the release of sanctioned credit under the Emergency Credit Line Guarantee Scheme (ECLGS) 5.0, citing delays by lending institutions amid mounting financial and operational pressures.

Accordingly, the Federation of Indian Airlines (FIA), which represents Air India, IndiGo and SpiceJet, has urged the Ministry of Civil Aviation (MoCA) to provide guidance and reassurance to participating banks to facilitate disbursements to eligible member airlines seeking support.

In a letter dated October 1, 2026, to Civil Aviation Minister K Ram Mohan Naidu, reviewed by *businessline*, the industry body said member airlines that had sought credit under the scheme had received a portion of the sanctioned assistance.

"The release of the balance amounts has, in several cases, been delayed due to continued hesitation on the part of lending institutions," the FIA said.

SEEKING RELIEF. According to the FIA, the disbursements would help airlines meet critical operational and working capital requirements and sustain operations VV KRISHNAN

However, the federation clarified that not all its members require credit under ECLGS 5.0.

Its request concerns eligible airlines seeking assistance, particularly financially vulnerable carriers that have applied for immediate liquidity support to sustain and strengthen operations.

VULNERABLE CARRIERS

Besides, the FIA said the continuing conflict in West Asia since April 2026, airspace restrictions, flight diversions, rupee depreciation, escalating operating costs and a sharp rise in aviation turbine fuel (ATF) prices had severely strained airline liquidity and working capital.

The federation said the urgency of the situation warrants immediate action to ensure that airlines seeking assistance can access funds without avoidable delays.

According to the industry body, the disbursements would help airlines meet critical operational and working-capital requirements, sustain operations and continue providing essential air connectivity.

Furthermore, the FIA highlighted the sector's contribution to national connectivity, trade, tourism, employment and economic growth. It cited an estimate that every person employed in aviation supports an additional 6.10 jobs in ancillary and allied businesses.

So far, SpiceJet and Akasa Air have received the first tranche under ECLGS.

Last month, Civil Aviation Minister Ram Mohan Naidu had said that the ministry continues to engage with SpiceJet and examine how it can facilitate matters.

However, he pointed to limits on government intervention in private airlines.

SPICEJET'S FUNDS

Besides, Naidu said SpiceJet had received ₹150 crore under ECLGS, while the remaining funding had to be worked out between the airline and its bank.

Asked about the disbursement of a further ₹350 crore, the minister said the government had made the scheme available, but obtaining the funds was a matter for the company and the lender.

Furthermore, the minister said the government had extended ECLGS in recognition of the difficulties airlines could face, particularly during the West Asia crisis.

"Our main priority is to ensure that passengers do not face inconvenience, that safety is not compromised at any cost and that smooth operations are sustained," he said.

German and American scientists win medicine Nobel for work on optogenetics

Reuters
Stockholm

American Karl Deisseroth and Germans Peter Hegemann and Georg Nagel won the 2026 Nobel Prize in Physiology or Medicine on Monday for their discoveries on light and optogenetics that have helped understand how the brain works.

The Nobel Assembly of Sweden's Karolinska Institute medical university said Deisseroth, 54, Hegemann, 71, and Nagel, 73, were selected for their "discoveries concerning light-gated ion channels and optogenetics."

Optogenetics "makes it possible to switch on, or off, the activity of individual nerve cells in a living brain", said Thomas Perlmann, Secretary-General of the Nobel Assembly at Karolinska Institute.

"This method is now being used in laboratories around the world to reveal the brain's mysteries," Perlmann said.

In clinical trials, researchers are restoring vision to people blinded by a condition called retinitis pigmentosa by inserting a light-sensitive protein in the retina.

Researchers also hope optogenetics could improve cochlea implants, allowing more precise stimulation of the auditory nerve than current electrical devices.

Deisseroth, Hegemann and Nagel will share a prize sum amounting to 12 million Swedish crowns ($1.2 million).

Karl Deisseroth, Peter Hegemann and Georg Nagel were picked for the 2026 Nobel Prize in medicine at the Nobel Forum at Karolinska Institute in Stockholm on Monday REUTERS

RESEARCH

Optogenetics "makes it possible to switch on, or off, the activity of individual nerve cells in a living brain"

RECIPIENTS DELIGHTED

In the early 1990s, Hegemann investigated how the alga Chlamydomonas reacts to light in half a millisecond. He hypothesised that a single protein captured light and acted as an ion channel. Nagel tested this by injecting Chlamydomonas genes into frog eggs, discovering channelrhodopsin-2 — an ion channel that opens when exposed to light.

In 2003, they published that this protein could be introduced into human and hamster cells to generate electrical impulses using light. In 2005, Deisseroth at Stanford demonstrated the technique in rat nerve cells and the method was named optogenetics a year later.

Perlmann said he had talked to all three laureates on Monday morning, and that they were surprised and delighted.

"All three said the same thing, that they thought it was absolutely wonderful to receive the prize with the other two and they call them my friends. That it's such an honour to receive them together. So that's something they conveyed," Perlmann said.

Health activists call for regulation of private hospital charges, margins

Our Bureau
New Delhi

Private hospitals are charging patients significantly more than the cost of providing treatment, with large corporate hospital chains earning substantial surpluses from each bed and imposing high margins on medicines and medical consumables, Jan Swasthya Abhiyan (JSA) and the Working Group on Access to Medicines and Treatment demand said on Monday, calling for urgent government intervention to regulate private healthcare.

JSA Co-convener Abhay Shukla said the average daily bill per patient at five leading corporate hospital chains ranged between ₹60,500 and ₹73,000 in 2024-25, with charges at some hospitals rising to nearly ₹78,000 a day in 2025-26.

According to calculations presented by Shukla, hospitals were earning a surplus of around ₹9,500–11,500 per bed per day after accounting for expenses, taxes, interest, maintenance and other costs. This, he said, translated into annual surpluses of around ₹22 lakh to ₹32 lakh per bed, with the figure for Max Healthcare estimated at nearly ₹56 lakh per bed.

"Today hospital rates, especially in larger corporate hospitals, are heavily inflated. Huge profit margins are being made. These need to be regulated," Shukla said.

REGULATION MARGINS

He compared the charges with those at Christian Medical College (CMC), Vellore, saying a patient receiving comparable complex and super-specialty care was billed around ₹29,000 per day. The comparison, he said, showed that similar care could potentially be provided at substantially lower rates.

JSA and the Working Group on Access to Medicines and Treatment, in a joint statement issued on Monday, demanded that the government introduce ceilings on hospital charges and regulate margins on medicines and medical products.

The groups said patients face excessive and arbitrary charges for treatment, medicines and consumables, with limited protection or recourse.

MEDICINE CHARGES

Shukla also highlighted the margins being charged on medicines and consumables. Citing data from Maharashtra, he said one medicine purchased by hospitals for around ₹180 was supplied to patients for ₹950, while paracetamol infusion bought for ₹33 was billed at ₹408.

He said an analysis of 46 medicines found patients were paying three to five times the hospital's purchase price.

The margins on consumables were also high, he said. A needle purchased for 63 paise was sold for ₹4, while an IV set bought for around ₹11.50 was billed at ₹160.

"Medicines and medical consumables are a particularly serious concern. These are being sold at 200, 300, 400 up to 1,000 per cent excessive margins. This needs to be urgently addressed," Shukla said.

PRICING PRACTICES

The renewed demand for regulation comes amid scrutiny by the Supreme Court of pricing practices in hospital pharmacies. The court has questioned steep mark-ups on medicines sold through hospitals, including a case in which a cancer medicine supplied at around ₹2,700 reportedly carried an MRP of around ₹27,000. It has also questioned practices requiring patients to purchase medicines from hospital-linked pharmacies and asked the government to examine regulation of trade margins.

JSA said the Clinical Establishments Act, 2010, provides a legal framework for regulating clinical establishments and envisages government-determined ranges of charges, but the framework has not been effectively implemented. It also pointed out that laws in several States do not provide for regulation of hospital charges.

Mumbai bars Russian airline cargo, local agent seeks Ministry intervention

Aneesh Phadnis
Mumbai

The Adani Group-run Mumbai airport has stopped accepting cargo booked on Russian flag carrier Aeroflot.

The airline operates daily flights between Moscow and Delhi. Bonded cargo is carried in trucks from Mumbai and other cities and is then flown to Russia via Delhi.

The airport's curbs on Russian airlines come days after the Adani group's $1 billion share sale in its airport business to investors, including US funds.

Aeroflot's cargo sales agent Delmos Aviation Pvt Ltd has sought the Civil Aviation Ministry's intervention as shippers are facing delays and extra costs due to the restrictions.

Airlines authorise shippers to bring in cargo inside the cargo terminal after checking the airway bill and flight booking details. This process, known as carting, is carried out through Mumbai airport's online system.

CARTING CLEARANCES

For carriage of bonded cargo too, goods need to be first brought to the airport, where they are checked by Customs officials. Thereafter, the goods are trucked to the destination for its onward journey.

The process has come to a standstill at Mumbai for goods booked on Aeroflot and Volga-Dnepr Airlines for the past two weeks and trucks carrying goods had to return to origin.

Volga-Dnepr Airlines also had to reroute its September 19 flight to Delhi after the Navi Mumbai airport denied it permission.

In a letter to the Ministry on September 30, Delmos Aviation said no proper explanation had been provided for the refusal of permissions to the Russian operators.

DELMOS' LETTER

"We also request clarification regarding Russia-related cargo being carried from Mumbai by other international carriers, including Emirates, Turkish Airlines, Ethiopian Airlines and others. If such carriers are permitted to accept and move cargo connected with Russia, we request clarification on the criteria being applied and whether the same criteria are being applied uniformly to all carriers and stakeholders," said Delmos Aviation's Managing Director Naveen Rao.

"We are not seeking any exemption from applicable Indian law, Customs requirements, airport security procedures or other legally applicable regulations. Our request is simply for a clear, written and uniformly applicable policy, together with a workable procedure for cargo that has already entered the customs-controlled environment," he added.

Adani Airports and the Civil Aviation Ministry did not respond to emailed queries on the issue.

IndiGo revises fuel charges amid hike in ATF costs

Our Bureau
New Delhi

Airline major IndiGo has revised fuel charges across its domestic and international routes following a sustained increase in aviation turbine fuel (ATF) prices.

The revised charges will apply to all new bookings made from 0001 hours on October 6. Accordingly, domestic fuel charges under the revised structure will range from ₹375 to ₹1,300, while international levies will range from ₹1,000 to ₹10,000.

The airline said that the latest month-on-month increase in ATF prices exceeded 14 per cent, taking fuel costs to their highest levels in the last decade.

IndiGo said fully offsetting the increase in fuel costs would have required a significant hike in fuel charges.

Russia on alert after worker's death at plague research institute

Press Trust of India
Moscow

Russian authorities have quarantined a hospital and are monitoring contacts of an employee at a plague research institute in Siberia who contracted pneumonia of an "unknown" cause. Local state TV said the woman died last week.

Russian authorities said they found no evidence that her illness was caused by any of the pathogens she worked with.

But the case has raised alarm in Russia after unconfirmed media reports suggested she might have died of pneumonic plague — a less common but severe form of plague that can spread from person to person.

The woman worked at the Irkutsk Anti-Plague Research Institute of Siberia and the Far East in Irkutsk, southeastern Siberia. A state TV station in Irkutsk reported Monday that she died last week in a hospital in Shelekhov, a town just outside Irkutsk.

The hospital has been placed under quarantine, Mayor Maxim Modin said Friday, no longer admitting or discharging patients, and its laboratory halted carrying out routine tests.

The hospital's outpatient clinic kept operating as usual, he said.

Anna Popova, head of Russia's public health watchdog Rospotrebnadzor, flew to Irkutsk and met with Governor Igor Kobzev and other officials on Friday.

DANGEROUS INFECTION

Kobzev said everyone who came into contact with the woman is under medical supervision. He didn't identify the infection and called it a suspected case of "a particularly dangerous infection".

Rospotrebnadzor said on Sunday that the woman was diagnosed with "pneumonia of unknown etiology," and said "extensive" testing found "no microorganisms associated with the patient's professional activities".

Two people who were in contact with the woman tested positive for a virus that causes a common cold and two others for COVID-19, the agency said, adding that others who were tested were all negative.

Shifting flights from Mumbai to Navi Mumbai in 20 days not possible, say airlines

Aneesh Phadnis
Mumbai

Shifting flights from Mumbai to Navi Mumbai airport will not be possible in 20 days, a senior airline official said, citing complexities involved in the process.

"The airlines will have to sign separate ground handling, aircraft maintenance and catering contracts for operations at Navi Mumbai. For foreign airlines, it could also require site inspections by their global teams. It is not a mere transfer of flights, and it is opening a new destination," he said.

Airlines are also citing cost and connectivity issues as they oppose Mumbai International Airport Limited's move to temporarily reduce one-third of their international flights from October 26. The airport operator has suggested that impacted airlines may relocate their flights to Navi Mumbai.

At present, the Navi Mumbai airport has only one international flight to Abu Dhabi, operated by Air India Express. IndiGo is likely to add foreign routes in the winter schedule. "We have already sold seats on Mumbai flights and if these services are cancelled now, it will create big issue for passengers. Splitting operations between two airports will require us to hire more manpower so there are extra costs too," another executive said.

In a statement, the Navi Mumbai airport said it is expanding transport options, including electric bus services to Pune, Dadar and Borivali, starting Wednesday. It is also launching complementary inter-airport shuttle services between Mumbai and Navi Mumbai.

CARGO OPERATIONS

Cargo operators and agents are also facing issues with freighter operations at the airport. Custom brokers have complained about a shortage of manpower and equipment needed to handle the volume. The Navi Mumbai airport did not respond to a query on cargo issues.

Indian pharma company's Ukraine facility damaged by Russian drone, one worker killed

Ankita Upadhyay
New Delhi

For more than a decade, an Indian pharmaceutical company continued making medicines in Ukraine even as the country was engulfed in war. Its workers kept coming to the plant, although their working hours had been curtailed because of the security situation.

Now, one of those workers is dead and the future of the plant is uncertain after Russian drones struck the Kusum Group's pharmaceutical facility in Sumy. For Sanjeev Gupta, Co-founder of the Kusum Group of Companies, however, the immediate concern goes beyond the financial loss. "We just request Russia not to target the Indian community. We just want to work," Gupta told *businessline*.

Kusum Group's pharmaceutical operations in Ukraine have been hit in Russian attacks before. In April 2025, a Russian drone destroyed the company's pharmaceutical warehouse in Kyiv, causing losses of more than $25 million, according to reports.

WORKING HOURS

The company employs more than 200 people at the Sumy plant, all of them local Ukrainians. There are no Indian employees working at the facility, Gupta said.

One person was killed in the attack, he said.

The company began operations in 1994 as a distributor exporting medicines from India to Ukraine. It later moved into manufacturing,with the Sumy facility opening in 2009.

Gupta put the company's own estimate of the damage at $40-50 million.

The estimate includes the buildings, machinery, equipment, raw materials and other supplies needed to keep the plant operating.
