India slams US move to keep IT firms out of PERM

COUNTER. To Vance's 'indentured servants' jibe, MEA points to immigrants' contribution

Amiti Sen
New Delhi

DEEPLY OFFENSIVE. The government strongly objected to US Vice-President JD Vance's description of H-1B visa holders, adding that talent mobility added value to both economies REUTERS

The Ministry of External Affairs has criticised the US decision to freeze the permanent labour certification (PERM) process for select tech firms such as TCS, Infosys, HCL and Wipro, warning that curbs on mobility of Indian professionals undermines the interest of both countries.

The government also strongly objected to US Vice-President JD Vance's description of H-1B visa holders as "foreign indentured servants", calling the terminology "deeply offensive" and dismissive of Indian professionals' contribution to the American economy.

TALENT MOBILITY

"The steps announced by the US do not advance the shared ambitions of both countries," the MEA said in a statement on Friday, adding that talent mobility added value to both economies. "While it creates opportunities for Indians, it equally helps US companies with cutting-edge talent, innovation, research, productivity, competitiveness and job creation, besides creating shareholder wealth in the US," the statement noted.

On Thursday, US Labour Secretary Keith Sonderling and Vance announced immediate suspension of eight major technology corporations from the PERM programme, targeting Indian IT companies TCS, Infosys, Wipro, HCL Technologies and Cognizant, alongside Capgemini, Microsoft and Adobe.

LEGAL GATEWAY

PERM is the primary legal gateway used by foreign tech talent to transition from temporary employment to permanent residency. Under the latest order, the US will reject new PERM applications and halt pending ones, curbing the process of permanent residency.

The MEA also slammed Vance's labelling of H-1B visa holders as "foreign indentured servants" who, he said, are underpaid compared to their American counterparts and are easily exploited because they face deportation if terminated.

Such descriptions are unwarranted, it said.

"The history of the US itself has been shaped by generations of immigrants whose labour, enterprise and innovation have contributed to its growth and prosperity. Resorting to terminology that carries painful historical and colonial legacy connotations is deeply offensive," the MEA statement underlined.

PERM is distinct from the H-1B visa programme. "The suspension of PERM applications does not, by itself, affect the validity of existing H-1B visas or the status of H-1B visa holders and their dependents, though there could be some impact on the permanent-residency/Green Card process of eligible employees of the affected companies," the MEA stated.

10-year G-Sec yield hits high 7.3% on fear of more liquidity draining by RBI

Ashokamithran T
Mumbai

Government bond yields climbed to a three-year high on Friday, reflecting mounting market concerns over persistent inflation, tighter liquidity conditions and the possibility of additional liquidity-draining measures by the Reserve Bank of India.

The benchmark 10-year government security (G-Sec) yield touched 7.31 per cent, its highest level since November 2023, before settling near 7.30 per cent at close. The bond had opened at 7.26 per cent, briefly eased to 7.25 per cent and then climbed sharply through the session.

SHARP RISE

The sharp rise in yields follows a hawkish shift in market expectations after the RBI's monetary policy announcement earlier this week. While markets had largely priced in a 25 basis point rate hike, investors were caught off guard by the central bank's warning on inflation risks and its indication that interest rates may need to remain elevated longer.

A key trigger behind the sell-off has been expectation that the RBI will continue aggressively draining surplus liquidity from the banking system through open market operation (OMO) sales.

The central bank has already announced an OMO sale of ₹25,000 crore for October 13, and treasury officials expect further sales that could cumulatively amount to around ₹1 lakh crore in the coming weeks.

"The market was comfortable with a surplus liquidity of ₹3-4 lakh crore. The expectation now is that the RBI wants to withdraw more liquidity than earlier anticipated," said Rajeev Pawar, Head of Treasury at Ujjivan Small Finance Bank.

He added that given the heavy supply of government bonds and changing liquidity conditions, a gradual move towards 7.5 per cent on the benchmark yield before the next policy meeting remains a possibility.

RETAIL INFLATION DATA

Markets are also bracing for higher retail inflation data due next week. V Rama Chandra Reddy, Head of Treasury at Karur Vysya Bank, said, "Expectations of elevated inflation combined with additional OMO sales have contributed to the persistent hardening in yields."

"While the consensus was that the repo rate would to peak between 5.75 per cent and 6 per cent, the market is now pricing in a terminal rate as high as 6.25 per cent by FY27, implying a cumulative tightening of as much as 100 basis points from current levels," said Reddy.

PERM freeze may push tech work to India

Sanjana B
Bengaluru

The US Department of Labour's temporary suspension of new applications under the Permanent Labour Certification (PERM) programme for several technology companies could raise hiring costs and prompt Indian IT firms to rethink their US staffing strategies, while accelerating the shift of higher-value technology work to India, industry experts said.

The US Labour Department on Thursday suspended certain IT companies, including Indian firms operating in the US, from filing new applications under the PERM programme, which allows employers to sponsor foreign workers for permanent residency. Companies affected include Microsoft, Adobe, TCS, Infosys, Wipro, HCLTech, Cognizant and Capgemini.

WORKFORCE STRATEGY

TCS said, "We have noted the announcement by the US Government on PERM, and TCS will comply with any directive from the Department of Labour. Our US workforce strategy is anchored in hiring local talent, supported by a robust campus recruitment model. We have built a significant local workforce across 31 offices and delivery centres in the country."

◉ JOBS SHIFT?

The move, announced this week, blocks sponsorships for many US-based IT roles, prompting firms to rethink staffing strategies

LOCAL WORKFORCE

The company said it plans to hire an additional 15,000 employees in the US over the next five years to strengthen its local workforce. With PERM applications in single digit over the past two years, it does not expect the suspension to affect its workforce strategy or client engagements.

Former HCL Technologies CEO Vineet Nayar, in a post on X, said that President Donald Trump's push to restrict the movement of Indian IT professionals to the US could mean shifting more American technology work to India.

"The original Indian IT model was to send engineers to America, before companies realised much of the work could be done from India. We may be at the beginning of another shift. As the US makes it harder to move Indian talent there, technology is enabling smaller teams in India to handle more sophisticated work. This could accelerate the movement of American work to India, but not another wave of coding and maintenance jobs," he said.

The opportunity is in architecture, product engineering, cybersecurity, AI implementation, industry solutions, and eventually ownership of products and IP.

OTHER AVENUES

Saravanan Balasundaram, Founder and CEO of Han Digital Group, a talent advisory company, noted that companies may explore L-1A transfers for eligible managers and executives, L-1B transfers for employees with specialised knowledge, and O-1 visas for individuals meeting the extraordinary-ability criteria.

For permanent residency, PERM-free pathways include EB-1C for qualifying multinational managers and executives, and EB-2 National Interest Waivers for qualifying professionals.

Uncertainty over permanent residency could prompt some experienced Indian tech professionals to reconsider their long-term future in the US, with some exploring opportunities in Canada, the UK or Gulf countries, while others may return to India as its technology and GCC ecosystem matures.

Moreover, the suspension could erode these firms' appeal to high-skilled, niche talent. Kamal Karanth, Co-founder of Xpheno, a specialist staffing firm, added that replacing H-1B workers with US-based talent could raise hiring costs by 20-100 per cent, depending on the skillset and experience level.

"As for Indian firms, engaging US-based talent will topple the commercial equation and take away the commercial competitiveness in client contracts," he said.

Though credentials in the home country matter, the delivery ecosystem built and maintained at the client's location has been a significant strength for IT service players and provides confidence to clients.

Funding crunch dims lights at Durga puja pandals

Administrative delays, cuts in corporate spending quieten Kolkata's festive beat

Mithun Dasgupta
Kolkata

Pandals are coming up all across Kolkata, but behind the scaffolding. Puja committees are facing a stark new reality: Funds that usually fuel Bengal's biggest festival have dried up. A transition in State governance has triggered an unintended financial crisis for Kolkata's Durga pujas, leaving small organisers worried and corporate sponsors backing away.

TEPID START. Huge banners put up by sponsors at Hatibagan in North Kolkata ahead of Durga puja celebrations

AD DISPLAY TIME

A late decision by the government on the operating procedures for putting up advertisement hoardings this festival season is being blamed for the funds crisis. According to 'Forum for Durgotsab', a leading organisation of community Durga pujas in Kolkata, overall corporate spending has seen a drastic cut of 30-40 per cent this year compared to last year, significantly impacting the budget of puja organisers.

"Late decisions from the administration is one of the major factors that led to the major drop in corporate sponsorship. Puja committees need sufficient time to erect advertisement hoardings and banners, companies also want these to be displayed for a longer time in the festival season. Puja organisers and companies had been waiting for the guidelines, which came much later," Partha Ghosh, Chairman, Forum for Durgotsab, told *businessline*.

The Kolkata Municipal Corporation has limited the period when hoardings can be displayed to just seven days before *Mahalaya* and seven days after *Bijaya Dashami*. During the erstwhile Trinamool Congress government, there were no such guidelines.

"Community pujas are witnessing stress in corporate sponsorship as well. For big and medium community pujas, around 70 per cent of the budgets comes from corporate sponsorship. Due to shrinking sponsorship, we are postponing payments to decorators," said Saswata Basu, Vice-President, Forum for Durgotsab and Secretary of Hatibagan Sarbojanin Durgotsav Committee.

Notably, West Bengal Chief Minister Suvendu Adhikari last month urged big budget community Durga pujas to voluntarily forgo financial aid from the government, while announcing a grant of ₹1 lakh for Durga puja committees that applied for the aid.

Until last year, the previous Trinamool Congress government provided ₹1.10 lakh to each police-approved puja committee in the State. The grant, introduced in 2018, was raised to ₹50,000 per committee during the Covid-19 pandemic times to support puja organisers facing financial difficulties during the lockdown. It was subsequently increased in phases to ₹1.10 lakh in 2025.

This year, several eligible puja committees have not been able to apply for aid as the application system was changed.

"For providing financial support to community puja organisers, the new government has adopted an entirely new application system, which is more centralised. Earlier, local police stations helped puja organisers with the application process. This year many small puja committees could not apply because they did not get this support," said Kajal Sarkar, Committee President, Bosepukur Sitala Mandir, a crowd-puller and big-ticket Durga puja in South Kolkata.

Lakshmi Venu pushes for settlement along lines of TVS family partition

Sindhu Hariharan
Raghuvir Srinivasan
Chennai

To settle the dispute over wealth sharing within the Venu Srinivasan family, Lakshmi Venu, daughter of Venu Srinivasan and Mallika Srinivasan, is understood to be pushing for a settlement along the lines of the broader TVS family partition in 2020.

Sources close to Lakshmi said that the harmonious partition and settlement between four major wings of the TVS family can be a model to settle the wealth of the Venu Srinivasan Group comprising TVS Motor, Sundaram Clayton, TVS Holdings and TVS Credit.

In 2020, the larger TVS family comprising multiple branches valued all assets, divided them on a mutually agreeable basis and also compensated family members. However, this demand has led to an impasse.

FORMAL SETTLEMENT

According to insiders, Venu Srinivasan and Sudarshan have shown resistance to a formal settlement. "Multiple requests by Lakshmi Venu to her father and brother, Sudarshan, over the last several months have been met with silence," said a person close to the family.

The father-son duo is understood to be of the view that a family settlement was already executed *via* a 2024 memorandum of understanding (MoU) signed by all four members.

However, this particular MoU, reviewed by *businessline,* does not speak of any financial settlement and just lays down details of brand rights and non-compete arrangements. As per the document, Venu and Sudarshan control automobiles, financial services, real estate and drone business of TVS Holdings, and Venu and Lakshmi control Sundaram-Clayton.

Mallika and Lakshmi manage TAFE, which is not part of the TVS Group. The dispute started when Lakshmi came to know of a TVS Holdings statutory filing in April 2025 declaring significant beneficial ownership in favour of Sudarshan Venu.

Lakshmi Venu

Sudarshan Venu

"Lakshmi was shocked as family wealth cannot be allocated unilaterally without discussion," the source said.

She is not taking legal action yet and continues to try and address this internally, the person added.

businessline has also learnt that Mallika Srinivasan, as the mother of Lakshmi and Sudarshan, is attempting to get the family together for a dialogue and believes that it could be settled within.

"She wants this issue to end with a fair and equitable settlement and is in favour of getting a neutral mediator for the purpose," a close family source said, adding that there should be no gender disparity in sharing of the family wealth.

The source emphasised that the issue is not just about economic settlement between family members but about ownership and management of the group companies. "Someone who has managed the company, even if he did well, cannot claim ownership over it," the source said.

Mallika is said to have taken a strong view that a person creating value in the company does not automatically extinguish legal ownership rights of the other.

As of Friday, TVS Holdings had a market cap of ₹23,180 crore, TVS Motor is valued at ₹1,83,621 crore and Sundaram Clayton at around ₹2,702 crore.

None of the Venu Srinivasan family members responded to requests for official comments.

Tight security in Delhi ahead of CJP protest today

Ankita Upadhyay
New Delhi

Delhi has been fortified ahead of the proposed protest at the Jantar Mantar demanding Chief Election Commissioner Gyanesh Kumar's resignation. The police have denied permission for the demonstration; gates at 57 metro stations are set to close, and 45 train services at two major railway stations have been cancelled.

Meanwhile, the apex court told the Centre to allow services in a "regulated" manner.

Aditya Birla Renewables seeks $1.5 b in rupee loans

Mumbai: Aditya Birla Renewables is seeking $1.5 billion in rupee-denominated loans to fund the acquisition of Shell Plc's Indian renewable energy arm and avoid a costlier bridge debt, three bankers aware of the discussions said. The company had, in July, agreed to acquire Solenergi Power for $1.8 billion. The firm had also earlier secured a $1.6 billion bridge loan commitment from MUFG Bank to fund the acquisition, two bankers said. It's now looking to raise longer-term rupee loan to avoid the bridge facility. REUTERS

Poonawalla Fincorp's Q2 net soars 5x to ₹375 cr

Mumbai: Poonawalla Fincorp Ltd's net profit shot up about five times in the second quarter to ₹375 crore, against ₹74 crore in the year-ago period on the back of healthy growth in net interest income (NII) as well loan growth. NII rose 75.6 per cent y-o-y to ₹1,589 crore. Assets under management also rose 55.1 per cent to ₹74,008 crore. OUR BUREAU

Scindia clears air, says won't allow monopoly in satcom

SIGNAL AWAITED. The Minister says none of the three licensees has been chosen yet

S Ronendra Singh
New Delhi

PLACING OPTIONS. The government's job is to provide a bouquet of services to customers, and it is for the latter to choose its option from a free market, said Jyotiraditya Scindia, Minister of Telecommunications, in New Delhi on Friday

The government has said it will not allow a monopoly in the satellite communication (Satcom) sector, despite allegations from Starlink-owned Elon Musk in the last couple of days.

"Satcom has become extremely tropical in the last 24 hours, so let me set the record straight... India does not allow a monopoly in any sector and therefore, even as satcom is concerned, there is not a single licensee that has been chosen," Jyotiraditya Scindia, Minister of Telecommunications, told reporters here on Friday. "Licences have been given to everyone who wants to provide these services, and today, there are three licences that are out there."

IN THE MIX

Speaking on the sidelines of the India Mobile Congress (IMC) 2026 here, Scindia said there was a lot of conversation about a particular party (Starlink).

"There is Reliance Jio, OneWeb [by Airtel] and Starlink. And, there is another party [Amazon's Kuiper] that is also interested in procuring a licence, and now that party also has to follow the process," he said.

Once the revenue (spectrum) charges system is finalised, and each of these parties, individually, based on their achievement of milestones with regard to security concerns, and prerequisites, have fulfilled the requirements, they can obviously start operations then, said the Minister. But that has to be a compliance done by each one of them, individually, he added.

SECURITY CLEARANCE

The Ministry of Home Affairs, he said is looking into the security part, so as and when the companies get clearances, they can start their services. "I think the Ministry of Home Affairs has to state that you have successfully shown compliance with security requirements."

Be it an Internet Service Provider (ISPs), a telco, or a broadband infrastructure, it's the responsibility of the Government of India to lay out a very predictable regulatory architecture, the Minister added.

"For us, in the Department of Telecommunications (DoT), we are technology agnostic, and I have said that multiple times... our job is to be able to provide the bouquet of services to every single customer. It is for the customer to choose in a free market, which service he or she prefers and within that service bouquet, which company service he or she prefers," said Scindia.

India provides that capability for individuals and companies to make the decision in terms of capex; already $50 billion has been invested in 5G in two and a half years, which is currently covering 99.9 per cent districts and 86.86 per cent of the population, he added. It has resulted in 550 million subscribers in 5G.

Trillionaire businessman Musk had alleged that "certain oligarchs" had blocked his company's satcom services in India.

Cost of education, MSME, housing loans eased the most since Feb 2025

Sourashis Banerjee
Chennai

The Reserve Bank of India's October Monetary Policy Committee (MPC) decision to raise the repo rate by 25 basis points marks the end of the easing phase, prompting a closer look at how the period between February 2025 and July 2026 impacted various sectors.

DATA FOCUS.

A *businessline* analysis of RBI data till the end of August shows that transmission of the rate cut in the previous cycle was the strongest in education loans, followed by MSME, housing and other personal loans.

DEMAND HIT

Between February 2025 and July 2026, the interest rate on fresh rupee loans to the education sector fell by 162 basis points, while outstanding education loans saw a reduction of 122 basis points.

The benefit transmission to MSMEs was 112 basis points, followed by housing at 107 basis points in the same period.

Demand for education loans appears to have taken a hit in recent years, with growth slowing from 19.6 per cent in August 2023 to 13.2 per cent in August 2026.

This could have led to a greater reduction in interest rates for this segment. With growing preference for more affordable destinations abroad, banks had to compete more, leading to more than a 100 per cent transmission of the rate cut benefits to fresh education loans.

"Credit demand in the education sector is primarily influenced by enrolment trends, overseas education demand, and rising education costs. While lower interest rates improve affordability, structural demand factors are likely to have played a larger role," said Vivek Iyer, Partner at Grant Thornton Bharat.

Growth in housing loans also witnessed a sharp deceleration in the three years to August 2026, which could have prompted more aggressive rate cuts.

"In sectors such as housing and MSMEs, where borrowing decisions tend to be more interest-rate sensitive and underlying demand remained robust, monetary transmission was naturally more effective," said Iyer.

SECTORAL IMPACT

"With corporate credit demand remaining subdued, banks competed aggressively in retail and MSME segments, leading to faster transmission. In contrast, transmission to large corporates was slower as these loans were already finely priced, leaving little scope for further reduction in a rate easing cycle," said Sachin Sachdeva, Vice-President, ICRA.

"As the RBI enters a tightening phase, credit growth in rate-sensitive segments such as housing, MSMEs, and trade could moderate somewhat as borrowing costs rise and affect affordability. However, the slowdown is likely to be gradual and not abrupt," said Sachdeva.

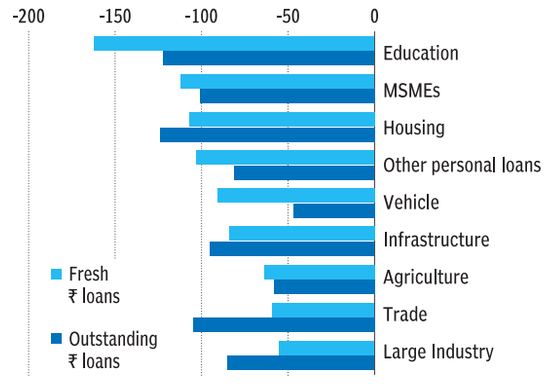

"Infrastructure and large corporate lending may remain relatively resilient in the near term, as elevated bond yields continue to make bank funding attractive," he added.

"The education sector is also expected to remain relatively resilient, as demand for higher education tends to be driven more by long-term aspirations and demographic factors rather than short-term movements in interest rates, although loan growth may moderate marginally," said Iyer.

Sectoral impact of policy rate transmission

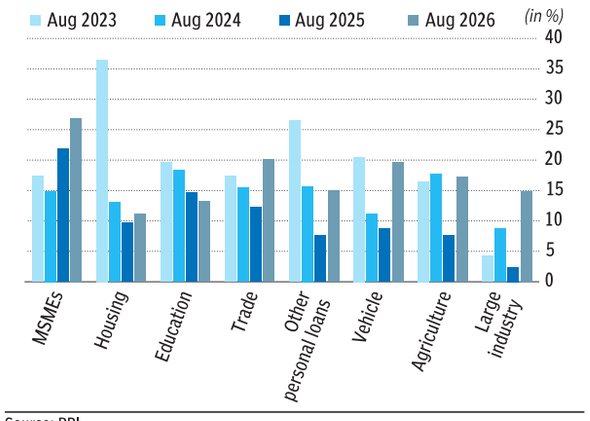

Fresh education loans record highest rate cut

Transmission across select sectors (Feb 2025-July 2026) (in basis points)

EVs now make up 64.9% of all three-wheeler sales

In the lead

Electric three-wheeler sales (in units)

Company	Sep-25	Sep-26	Growth (in %)
Bajaj Auto	6,978	15,109	116.52
Mahindra Group	8,364	14,716	75.94
TVS Motor Company	2,501	4,630	85.13
YC Electric Vehicle	3,208	2,355	-26.59
Saera Electric Auto	1,625	1,804	11.02

Source: FADA

T E Raja Simhan
Chennai

India's electric three-wheeler (e3W) retail sales surged 40 per cent y-o-y to 86,024 units in September. Last year same month, the category had seen sales of 61,434 units. The share of the overall three-wheeler market, too, increased to 64.9 per cent from 56.7 per cent a year ago, in the overall e3W market, per the Federation of Automobile Dealers Associations.

The 8.2 percentage point increase in market share highlights the growing acceptance of e3Ws in the last-mile passenger and goods transportation segment, driven by lower operating costs, improving vehicle performance and an expanding charging ecosystem, said experts.

E3W DEMAND

e3W now accounts for nearly two-thirds of the market and the next phase of growth will increasingly depend on replacement demand and the transition of existing CNG vehicle operators to electric mobility, noted analysts.

The key question now is how much further they could expand into the remaining segment, said Poonam Upadhyay, Director, Crisil Ratings.

Rajat Gupta, Business Head – Commercial Mobility Business, TVS Motor Company, attributed the growth to changing customer preferences. For commercial users, lower running and maintenance costs, improved range, charging convenience and the availability of capable, connected vehicles are making e3W an attractive proposition for daily operations, he said.

Suman Mishra, Managing Director and CEO of Mahindra Last Mile Mobility Ltd, said the passenger auto segment has now crossed 45 per cent electrification nationally. This growth is being driven by rapidly evolving ecosystem around EVs.

Europe's diesel crunch may help Reliance's O2C business

Amit Vijay Mohile
Mumbai

Reliance Industries could generate nearly ₹5,700 crore in additional EBITDA from its oils to chemicals business in the September quarter as Europe's diesel shortage lifts refining margins.

Jamnagar's export-duty advantage and higher crude-processing volumes are expected to help the segment contribute nearly three-fourths of the conglomerate's incremental operating earnings. This could mark a significant shift in Reliance's earnings mix.

THE EDGE

"Reliance is well placed to benefit from tight global supplies of diesel and aviation fuel," said Kranti Bathini, Director of Equities at WealthMills. "Jamnagar's scale and flexibility will allow it to adjust crude sourcing and direct products to markets where returns are the strongest..."

Nuvama Institutional Equities estimates its O2C EBITDA at ₹20,700 crore, up 38 per cent y-o-y. The projected ₹5,700-crore increase will account for around 73 per cent of Reliance's estimated growth in consolidated core EBITDA, it added.

BLESSING IN DISGUISE

- The company's oil-to-chemicals EBITDA could come in at ₹20,700 crore, up 38 per cent y-o-y: Nuvama
- This projected increase is expected to account for nearly 73 per cent of the estimated growth in Reliance's consolidated core EBITDA

The opportunity became evident in July when Reliance loaded an estimated 4-5 million barrels of diesel from Jamnagar for Europe, marking its highest shipment in 10 months. European diesel margins and international oil prices surged in late July amid supply disruptions. Reliance responded by increasing the share of middle distillates such as diesel and jet fuel in its output mix.

EXEMPTION FACTOR

Jamnagar's ability to process a wide range of crude grades and alter product yields enables Reliance to respond quickly to market opportunities, though profitability ultimately depends on feedstock costs, freight rates and operating expenses. Reliance's 35.2 mtpa SEZ refinery is exempt from export duties, unlike its 33 mtpa domestic tariff area refinery.

Diesel export duties ranged between ₹8.50 and ₹25.50 a litre in the September quarter. At the peak rate, the levy translates to roughly ₹4,055 per barrel, creating a significant difference in net export realisations. While the exemption enhances export profitability, the expected earnings improvement is driven primarily by stronger refining margins and higher throughput.

REFINING EARNINGS

Nuvama expects Reliance's crude throughput to rise about 10 per cent sequentially to nearly 20 million tonnes following maintenance shutdowns in the June quarter. Favourable ethane-cracking economics could support earnings, although weaker petrochemical spreads and the diversion of propane and butane to domestic LPG production may offset some of the gains.

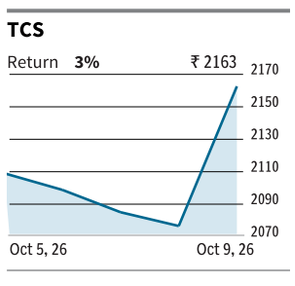

"The extent to which these gains translate into earnings will depend on throughput levels, feedstock and freight costs, and the performance of the broader O2C portfolio," said Bathini.

No impact of ban on US workforce strategy: TCS

Our Bureau
Mumbai

IT-services major Tata Consultancy Services (TCS) expects no impact to its workforce strategy or client engagement owing to the US government's recent green-card ban on Indian IT companies.

"Our PERM (Permanent Labour Certification) applications were in single digits in the last two years and hence, we do not expect the suspension of the programme to impact our workforce strategy and customer engagements," the company said in a stock exchange filing on Friday, confirming compliance with the directive from the US Department of Labour.

LOCAL WORKFORCE

The company's workforce strategy in the US is anchored in hiring local talent, supported by a robust campus recruitment model, according to its management.

"We have built a significant local workforce across our 31 offices and delivery centres in the US," the company said. "As we had announced earlier, we intend to hire an additional 15,000 people in the country over the next five years, to further augment our local workforce," it added.

Earlier, industry representative body Nasscom had said Indian IT companies have already significantly reduced their dependence on US immigration programmes and built larger local workforces.

PepsiCo India sharpens focus on low-, zero-sugar beverages portfolio

Meenakshi Verma Ambwani
New Delhi

PepsiCo India is doubling down on its no-sugar and low-sugar beverages portfolio, which now accounts for nearly 73 per cent of the consolidated sales volumes.

The snacks and beverage major considers India an anchor market, where it's focusing on the transformation of its portfolio, in line with evolving consumer needs.

CHANGING MIX

"Over the last 18 months, we have stepped up our focus on transformation of our beverage portfolio. The mix of the business is changing," said Nitin Bhandari, V-P and General Manager – Beverages, PepsiCo India and South Asia.

"Over a year ago, nearly 50 per cent of the volume used to be contributed by low-sugar and no-sugar products.

Nitin Bhandari, VP and General Manager – Beverages, PepsiCo India and South Asia

This has now increased to 73-74 per cent of our beverage portfolio volume. We believe that over the next one and a half years, low-sugar and zero-sugar products will account for nearly 90 per cent of the portfolio volumes," he added.

KEY DRIVERS

As consumers are seeking more choices, the zero sugar category, at an industry level, is growing to the tune of 40 per cent, said Bhandari.

The company offers zero-sugar options for various brands, including 7UP, Pepsi, Gatorade, Mountain Dew, and Nimbooz Jeera Soda.

On the key drivers for the transformation, he said, "We believe we need to deliver a future-backed portfolio, and we are focused on how the consumer preferences are changing. This is being done to drive business growth as we are putting the transformation at the centre. We believe this will help us drive market growth."

Bottled soft drinks segment saw a 44.1 per cent penetration in the March-May period this year, according to data sourced from Worldpanel by Kantar. It's the highest in-home penetration the category has ever achieved.

There is a huge opportunity to grow the household penetration for beverages in both urban and rural regions, said Bhandari. "For us, nearly half the growth is coming from rural."

Agility, consistency key to business success: Shashwat Goenka

bl.interview

Amit Vijay Mohile
Mumbai

As AI, quick commerce and the energy transition disrupt established business models, Shashwat Goenka, the Vice-Chairman of the RP-Sanjiv Goenka Group, is helping steer businesses as varied as CESC and Purvah Green Power in energy.

His portfolio also spans PCBL Chemical, Firstsource Solutions, FMCG brand Too Yumm!, Spencer's Retail and Nature's Basket, Saregama, and the Super Giants sports franchises. For Goenka, navigating businesses exposed to different forces requires leaders to become comfortable with uncertainty. "The pivot has to come quicker," he said. *Edited excerpts:*

Businesses are being challenged by forces outside their industries. What are the most important things leaders need to navigate this state of flux?

We are living in uncertain times, where every day brings a new inflection point, a new crisis, and a new opportunity. You have to be okay with uncertainty and ambiguity and respond quickly. You can sum that up in one word: agility. Whether it is agility in process, leadership or the business model, the pivot has to come quicker. Businesses have to change continuously. Experiment, challenge the status quo and don't be scared of failure. Learn to fail fast.

FMCG is seeing changing tastes and disruption from quick commerce. How are you navigating that?

Consumer tastes and preferences are changing and business models are changing, too. Ten or 15 years ago, there was general trade and some modern trade. Then came e-commerce, and now quick commerce. When we started Too Yumm!, we launched makhana and other products. Three years later, we weren't selling those. Now we've returned to makhana. You are constantly trying new formats, flavours, pack sizes and price points, and learning from them.

> Businesses have to change continuously. Experiment, challenge status quo and don't be scared of failure
>
> SHASHWAT GOENKA
> Vice-Chairman, RPSG Group

How do you balance premiumisation with demand for health and convenience?

Premiumisation is a huge trend. Awareness around health and better-for-you offerings is also greater. A lot of the kitchen is moving into the store. People are busier, households are shrinking, and everyone wants convenience.

At Nature's Basket, we pre-soak pulses or prepare fruits and vegetables that are difficult to cut. This saves time while still letting consumers cook at home.

How is your energy business shaping up?

Energy isn't new to us. We've always been in energy through distribution and have now entered renewable generation. We currently have about 1.8 GW operational and should reach 2.3-2.4 GW by year-end. Purvah Green Power covers wind, solar and battery storage.

What is changing at Firstsource as AI reshapes business services?

We are moving to become a business-growth partner and we want more clients and a higher share of the wallet from existing clients.

We are also moving away from the typical full-time employee concept towards the value we can deliver to clients and partners, including how AI can help deliver it.

Looking at overall capex, where do you think you'll be by 2030?

We definitely have upwards of ₹65,000-70,000 crore of capex coming up in the next five years across sectors, most heavily in energy and renewables, and chemicals.

Forex reserves fall by $12.952 b to $734.61 b

Mumbai: The country's forex reserves dropped by $12.952 billion to $734.606 billion during the week ended October 2, according to the RBI data released on Friday. The overall reserves had dropped by $18.343 billion to $747.557 billion in the previous reporting week ended September 25. The reserves had touched an all-time high of $785.706 billion for the week ended September 4 on the back of a heavy flow of currency as part of a special concessional swap for deposits from the diaspora through which banks raised a record sum of $133 billion. For the week ended October 2, foreign currency assets fell by $10.664 billion to $604.747 billion. PTI

Govt may unveil policy on stockpiling of minerals soon

New Delhi: The government is likely to announce a policy on stockpiling of critical minerals within a month, a move which is expected to ensure the supply of these resources to strategic sectors like defence, aerospace and energy. "We are on the verge of finalising the policy on stockpiling of critical minerals which will be announced in about a month's time," Mines Secretary Keshav Chandra told reporters here. The government is also working on four dedicated critical minerals processing parks across Gujarat, Maharashtra, Andhra Pradesh and Odisha to fast-track value addition for key battery materials, the official said. PTI

Global refining shock lifts India's diesel exports to 12-month high in Sept

JOLT TO MARKET. W. Asia conflict and drone attacks on Russia hit 8 mb/d of global refining capacity, say traders

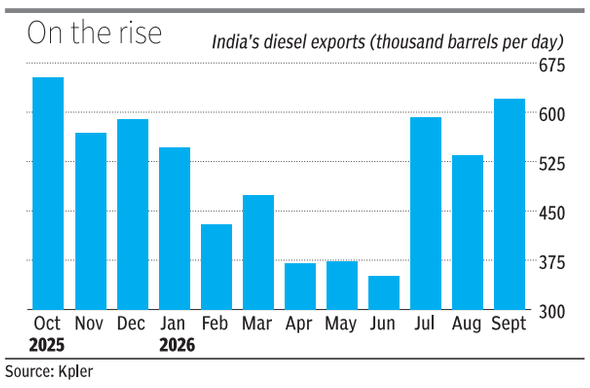

Rishi Ranjan Kala
New Delhi

Indian refiners, mostly private sector, exported roughly 2.50 million tonnes (mt) of diesel, the highest in a year, in September as refinery attacks and geopolitical tensions impacted roughly 10 per cent of the global refining capacity with transportation bottlenecks further exacerbating the situation.

Analysts, traders and refiners indicated that West Asia refinery outages and drone attacks on Russian refineries impacted roughly 8 million barrels per day (mb/d) of global refining capacity. What has further tightened the market for diesel is curtailed Chinese refining and shipping constraints.

"Acute diesel shortage, particularly in Europe, offered a window of opportunity to domestic refiners. Mostly private refiners such as Reliance Industries (RIL) got a good market opportunity.

"Shortage is expected to continue and will keep crack prices on the higher side," said one of the sources.

Source: Kpler

STRONG SUPPLY

Kpler said that Indian refiners have been able to maintain strong domestic supplies while capitalising on shortages in international markets.

"Diesel exports have been particularly strong, with shipments reaching around 620,000 barrels per day (b/d) in September, the highest in a year. Indian products are reaching Europe, Africa, Asia and even distant markets such as the US West Coast, while some diesel cargoes have also moved to Russia in recent months," it added.

This reflects India's growing role as a reliable supplier to global product markets, particularly when traditional exporting regions are struggling with refinery outages and logistical disruptions, noted Sumit Ritolia, Kpler's Lead Research Analyst for Refining & Modeling, said.

"One important distinction worth preserving is that India's export-oriented refiners have benefited significantly from high diesel cracks, but that does not mean all Indian refiners or fuel marketers are enjoying similarly strong net margins, especially where domestic selling prices remain constrained," he told *businessline*.

RIL IS MAIN GAINER

Trade sources said that RIL is a main gainer here considering it is a major swing supplier of ultra low sulphur diesel. RIL's dual-refinery set up addressing domestic and international markets offers the refiner logistical and operational edge to manage output yields, adjust crude processing and act as a fast swing supplier. It has been a major supplier of winter grade diesel to Europe.

The combination of relatively competitive crude procurement, high refinery utilisation, processing flexibility and strong international product prices has translated into exceptionally healthy refining economics, particularly for export-oriented refiners, Ritolia said. Diesel cracks have been especially attractive, with Singapore diesel cracks against Dubai exceeding $60 per barrel during September. However, the benefits are not uniform across the sector, as refiners with greater export flexibility are better positioned to capture international margins than those primarily serving the domestic market, he added.

The Federal Bank of Dallas (Dallas Fed) in a Thursday commentary said that global refinery capacity declined by as much as 10 per cent due to closure of the Strait of Hormuz, attacks from Houthi rebels in Yemen on Red Sea shipping, damaged Middle East refineries, Ukrainian drone attacks on Russian refineries, and export restrictions in China and Russia.

Additionally, a decade of minimal refinery investment has intensified fuel market pressures. Between 2019 and 2025, global liquid fuel consumption grew 4 mb/d, while refining capacity increased 2.3 mb/d, it added.

Taken together, refining capacity curtailment and depleted inventories are driving a blowout in fuel prices. Global economy is wrestling with a refining shock in addition to an oil price shock, particularly for diesel.

With liquidity in surplus, RBI increases minimum daily maintenance of CRR

Our Bureau
Mumbai

CRR is the slice of deposits that banks have to park with the Reserve Bank of India

With liquidity continuing to be in surplus despite RBI conducting variable rate reverse repo (VRRR) auction and open market operation sale of government securities to suck it out, the central bank has decided to increase the minimum daily maintenance of the cash reserve ratio (CRR) from 90 per cent of the requirement to 99 per cent effective from the fortnight beginning October 16.

What this means is that the current flexibility to maintain less CRR on some days and more on others, ensuring that the average CRR maintained in a fortnight is 3 per cent of deposits, is now curtailed.

CRR is the slice of deposits that banks have to park with RBI. It is currently at 3 per cent of their deposits. Banks don't earn any interest on CRR.

The banking system liquidity is reeling under liquidity surplus emanating from banks' mobilising FCNR (B) deposits aggregating $133 billion between June 8 and August 31 under the RBI's special foreign currency swap window.

As measured by the net position under the Liquidity Adjustment Facility, system liquidity stood at an average daily surplus of ₹5.9 lakh crore since the last MPC meeting in August.

Upasna Bharadwaj, Chief Economist, Kotak Mahindra Bank, said the increase in daily minimum CRR requirement is more a restriction on operational flexibility, with a possibility of curbing speculative positions against rupee using CRR funds.

She expects OMO sales and FX intervention continuing to withdraw durable liquidity, thereby ensuring overnight rates get anchored closer to repo rate.

Strong dollar, higher import costs may weigh on rupee: RBI report

Our Bureau
Mumbai

The rupee may face headwinds from a robust US dollar, elevated import cost, volatile capital inflows and rise in trade policy uncertainties, cautioned the RBI's latest Monetary Policy Report (MPR).

The report said any escalation in geopolitical tensions or unexpectedly aggressive monetary tightening by major central banks may put pressure on the rupee. Conversely, the rupee could find support from the resilience of India's services exports, the stability in bilateral trade frameworks and sustained foreign capital inflows.

In a scenario where the rupee depreciates by 5 per cent over the baseline, inflation could be higher by around 40 basis points (bps), while GDP growth may benefit by around 25 bps through the exports channel in the short term, under normal macroeconomic conditions, according to the

report. One basis point equals one-hundredth of a percentage point.

In contrast, an appreciation of the rupee by 5 per cent relative to the baseline would moderate both inflation and GDP growth by around 40 bps and 25 bps, respectively.

Amit Pabari, Managing Director, CR Forex Advisors, observed that the rupee has weakened nearly 7.5 per cent in calendar year 2026 and around 3.8 per cent since the beginning of the current financial year, moving from around 90 to nearly 96.75 against the US dollar. However, the pace of depreciation seen so far may not continue at the same rate over the coming months.

He said the RBI's recent 25 bps repo rate hike failed to trigger an appreciation in the rupee because the move was already priced in by the market.

With India perceived to be behind the rate curve, markets were looking for a stronger surprise.

"A 50-bps hike, for instance, could have delivered a more meaningful positive shock for the rupee.

"Instead, the RBI delivered what was expected, triggering a sell-the-news reaction as market participants sold the rupee and bought dollars," he said.

RATE HIKE LIKELY

Going forward, the RBI could hike rates by another 50 bps over the next year, depending on inflation and growth developments, per Pabari's assessment. While this may not trigger immediate appreciation, higher rates could provide silent support by improving the relative attractiveness of Rupee assets and reinforcing the RBI's commitment to containing inflation, he said. This, combined with active currency management, could help moderate the pace of depreciation.

"Overall, the RBI's potential rate-hiking cycle, substantial forex reserves and improving oil-supply conditions could provide support to the rupee. If these conditions persist, USD/INR may face resistance around 97–97.20, with support at 96.20–96.30. The rupee may remain under pressure, but the risk of another sharp depreciation appears more limited," Pabari said.

'PM-KUSUM 2.0 aims for more sustainable blend of food & energy security'

bl.interview

Rishi Ranjan Kala
New Delhi

> The tender for offshore wind energy should hopefully come in the next two months. The capacity is likely to be less than 1 GW.
>
> **SANTOSH KUMAR SARANGI,** Secretary, MNRE

Emphasising that PM-KUSUM (Pradhan Mantri Kisan Urja Suraksha evam Utthaan Mahabhiyan) helped the farm sector in reducing irrigation costs and generating additional income, Santosh Kumar Sarangi, Secretary of the Ministry of New & Renewable Energy, said PM-KUSUM 2.0 will integrate learnings from the first scheme, moving towards a more sustainable blend of food and energy security. Excerpts:

What is the thought behind PM-KUSUM 2.0?

PM-KUSUM 2.0 aims at a more sustainable blend of food security and energy security. For instance, in Component A, we had kept a provision for a ground-mounted solar. But for that, you don't have availability of agricultural land, as it was meant for farmers to use. Barren agricultural land was not available much in other parts of the country except in Rajasthan.

So, Component A could take off only in Rajasthan. In other parts, it didn't take off. We realised farmers won't abandon agriculture to set up solar farms.

So, the future will be agri-photovoltaics, without compromising farm production. So, that will have to be a focus in Kusum 2.0.

Then Component B (solar pumps) is very good, but we realised that farmers use it only 120-150 days a year. The rest of the time, the panels are still generating electricity.

We recommend a universal solar pump controller (USPC), which can use surplus electricity for other purposes, such as a thresher or harvester. Integrating USPC into Component B should also be a focus area.

We also found that individual pump solarisation (IPS) in Component C has limited demand. This is largely because states have been providing power at subsidised or free rates. There is no saving compared to Component B. But feeder-level solarisation makes sense, and it should continue with BESS for effective local distribution management. It will be voluntary and not mandatory.

What is the status of the wind energy taskforce?

The task force is working with State governments to address registration requirements for RE players.

How to simplify the registration process by making it online and not charging a high fee. Similarly, notifying the compensation prices for RoW.

On these issues, the task force is working with the respective states. Its job is to work with States and sort out lingering issues.

How is the Ministry moving ahead on offshore wind energy?

The tender for offshore wind energy should hopefully come in the next two months. The capacity is likely to be less than 1 GW, given the high establishment cost. Offshore wind energy potential is very good, with a capacity utilisation factor of nearly 50 per cent. However, this hasn't been tried in the country, so developers don't have the expertise. So, we have to get developers from outside. This will be happening for the first time, so the cost is going to be high.

What assistance can we expect from the government for offshore wind energy?

The assistance will be in the form of voluntary gap funding. The government will build the transmission and distribution infrastructure.

Then it will tie up with the Tamil Nadu government to purchase the power at a predetermined rate.

Then it will create port infrastructure to allow large-size equipment to come in. For that, Tuticorin port (VO Chidambaranar Port) has been identified as the nodal port, and they are now investing to make it capable of handling such large-size equipment.

India's solar PV module manufacturing capacity has exceeded demand. What are your thoughts?

In a country, if total electricity generation is X, then it is up to the CEA, the central nodal officer, to advise the government on the electricity roadmap and decide the energy mix.

Given that our total peak requirement is only about 270 GW today, you can't plan indefinite expansion. It has to be within the resource adequacy framework.

Within the resource adequacy framework, adding 50-60 GW a year is sufficient. Accordingly, our manufacturing investors must make a conscious call on their investment decisions. We expect them to do their due diligence and make a decision.

FM discusses ties with Singapore President

TRADE PUSH. Finance Minister Nirmala Sitharaman with Singapore President Tharman Shanmugaratnamin Singapore PTI

Press Trust of India
New Delhi

Finance Minister Nirmala Sitharaman on Friday met Singapore President Tharman Shanmugaratnam and Prime Minister Lawrence Wong and discussed further strengthening bilateral co-operation.

"Union Minister for Finance & Corporate Affairs Smt @nsitharaman called on H.E. Mr. @Tharman_S, President of Singapore, at The Istana, in Singapore, today. The meeting provided an opportunity to exchange views on taking forward the Comprehensive Strategic Partnership and further strengthening bilateral co-operation," the Finance Ministry said in a post on X.

Singapore Prime Minister, in a separate post on X, said, "We had a good discussion on global economic developments and on navigating the ongoing energy crisis.

Sitharaman is in Singapore for a three-day official visit from October 9 to 11.

'Logistics sector to double to $600 b by 2032'

Our Bureau
Chennai

India's logistics sector is expected to double in size to $600 billion by 2031-32 from around $300 billion currently, driven by infrastructure development, policy reforms and improved connectivity, said Subhash Chandra Karol, Director, Logistics Division, Department for Promotion of Industry and Internal Trade (DPIIT).

Logistics contributed more than 13 per cent to India's GDP and played a critical role in supporting manufacturing growth. The two sectors were complementary, making efficient logistics infrastructure essential to strengthening the country's manufacturing ecosystem, he said while addressing at PRISM 2026 – Powering Recognition: India's Skill Movement, hosted by the Lo-

Subhash Chandra Karol, Director, Logistics Division, DPIIT

gistics Sector Skill Council (LSC) in association with National Skill Development Council on Friday.

A study conducted by DPIIT in 2025 estimated India's logistics costs at around 8 per cent of GDP, challenging the earlier perception that they accounted for 13-14 per cent. The reduction reflects the impact of government reforms and efforts to improve logistics efficiency, although the official noted that comparable estimates had not been available earlier. India has also improved its position in the Logistics Performance Index, moving from 46th in 2018 to 30th. The government aims to bring the country into the top 25 within the next five years, said Karol.

Infrastructure connectivity remains central to improving logistics efficiency, with better links needed between manufacturing hubs, consumption centres and last-mile destinations.

The government launched PM Gati Shakti in 2021 as a digital platform to coordinate infrastructure planning across ministries. The platform helps identify gaps in connectivity, locate underserved areas and anticipate implementation hurdles before projects reach the execution stage. This enables authorities to plan clearances in advance and reduce delays during implementation, the official said.

Depletion of coal stock slows, but rebuilding yet to commence: Govt

Rishi Ranjan Kala
New Delhi

The Coal Ministry said that dispatch to thermal power plants (TPPs) has increased with supply in October averaging about 9 per cent higher than last month helping to bring down the depletion in reserves at plant end.

However, rebuilding of stocks at 176 domestic coal-based (DCB) power plants with a capacity of around 207 GW will take time. On October 8th, DCB plants had a stock of 18.25 million tonnes (mt) with 79 plants having critical stocks.

The coal reserves at power plants are utilised when daily supply does not meet the requirement. For instance, the Coal Ministry on October 5 said that 1.75 mt, 1.87 mt and 1.81 mt were dispatched by Coal India (CIL) on October 1-3, respectively, averaging at 1.81 mt. However, the daily requirement of the DCB plants is around 2.95 mt per day. Coal stock position needs to be viewed alongside the improvement since the September trough in supplies, Coal Ministry said in a statement. "Daily supplies to the power sector have risen by around 36 per cent from the September low, with October averaging about 9 per cent higher than September. The rate of stock depletion has also moderated significantly," it added.

Coal stock position

	DCB stocks (mt)	ICB stocks (mt)	DCBs with Critical stocks*	ICBs with Critical stocks*
Sept 29	18.93	2.53	73	8
Sept 30	18.76	2.48	75	8
Oct 1	18.6	2.46	76	8
Oct 2	18.63	2.43	79	8
Oct 3	18.5	2.39	79	8
Oct 4	18.34	2.39	83	8
Oct 5	18.22	2.37	81	8
Oct 6	18.07	2.37	83	7
Oct 7	18.26	2.4	81	7
Oct 8	18.25	2.37	79	6

DCB: Domestic Coal Based Power Plants ICB: Imported Coal Based Power Plants
mt: million tonnes *Number of power plants with critical stocks
Source: Coal Ministry, Power Ministry

Rail loading has strengthened correspondingly, averaging at over 465 rakes per day in October, with the 470-rake target achieved on three consecutive days. Supplies through other modes, including road, have also improved, it emphasised.

"Stock depletion has slowed sharply, with the daily drawdown falling by more than half from 0.243 mt per day in September to 0.116 mt daily in October. The position is therefore stabilising, although stock rebuilding is yet to commence," the Ministry said.

CRITICAL STOCKS

The rise in plants with critical stocks is being closely monitored, with requirement-based redistribution of coal to vulnerable stations to ensure adequate supplies and uninterrupted power generation, it said.

"With the monsoon receding and peak demand expected to moderate by mid-October (as per historical trends) sustained loading of 465–475 rakes per day should support further stabilisation and enable stock rebuilding ahead of the festive, winter and subsequent summer demand periods, thereby reducing the number of plants in the critical category," the Ministry assured.

TPPs are burning more coal as electricity demand is high due to higher temperatures, particularly during non-solar hours. For instance, while coal receipts rose by 3.3 per cent Y-o-Y in April-August FY27, consumption rose by 9.2 per cent during the same period.

During July to September, India's energy consumption rose by 11.5 per cent Y-o-Y to roughly 502 billion units (BU). The consumption last month was at 162 BU, higher by 11 per cent on an annual basis.

CHENNAI

QUICKLY.

Maybach S-Class facelift comes to India

Priced at ₹3.35 crore (ex-showroom), the Maybach S-Class is being offered in the S 580e spec, for the first time ever bringing plug-in-hybrid tech to a Maybach offering.

Other than all the bells and whistles you would expect on a Maybach, the S 580e PHEV gets a 3.0-litre six-cylinder petrol engine with a combined output of 577 bhp and comes with all-wheel drive as standard. EV-mode range is pegged at 98 km, while its top speed on electric propulsion is 140 kph.

Aprilia launches SXR GT maxi-scooter range

The SXR GT replaces the SXR, and you can have it in a 125cc or 175cc spec. Built on the SR platform, both scooters now get 14-inch wheels (instead of 12, on the SXR) and revised styling. The SXR GT 125 (₹1.1 lakh) gets a 124.5cc engine which produces 10.4 bhp, while the SXR GT 175 (₹1.3 lakh, ex-showroom) gets a 174.7cc motor with 13.1 bhp. The 175 also gets a 5-inch TFT screen.

Honda Elevate facelift launched at ₹11.8 lakh

The Elevate has received its first substantial facelift, and it features revisions to its exterior as well as to its cabin. The facelifted Elevate gets new light signatures, a restyled grille, a new 360-degree camera, ventilated seats in both rows of seating and other updates to its interior trim. The 1.5-litre naturally aspirated petrol motor continues unchanged. Prices start at ₹11.80 lakh and go up to ₹18.40 lakh (ex-showroom).

PRASHANT SHETTY

Big Deal

FROM THE WORLD. Kia's globally popular Sorento makes its India debut as a seven-seater. We drive it to find out if it can capture India's imagination

Ruman Devmane

Your NRI cousins know exactly what the Kia Sorento is. And no, they probably didn't buy it because it was fun or extraordinary in any way. They bought one for being a no-brainer. There's almost nothing sensational about a Kia Sorento and that's a very good thing.

Cars that don't try to grab headlines with some fancy bit of tech or ostentatious performance claims are generally keepers. Think Corolla Altis, Camry, Accord and CR-V — that's the kind of car the Sorento is. Internationally proven, dependable to an appliance-like degree, sensible, large and most adaptable to every role you can assign it. Just don't try bragging about it at, say, an alumni meet. In India, we expect the Sorento to primarily challenge the Mahindra 7XO and the Toyota Innova HyCross, but it also has competition from the age-old but eternally reliable Crysta. If you get imaginative, you might even be distracted by the compellingly well-equipped (and cheaper) Kia Seltos or, for that matter, the Skoda Kodiaq! The Sorento is larger than all of these cars, by the way.

HYBRID THEORY

Photographs don't tell you how large the Sorento is. At 4815 mm in length, it's longer than the HyCross (4755 mm), 7XO (4695 mm) and the Kodiaq (4699 mm) and is slightly wider than all of these, too. The familiar Kia nose is decidedly 'SUV', while from the rear it appears more like a crossover with its curved C-pillar. The sides are flat and featureless, and could have done with a bit more muscle to go with either end. The roof rails do add an outdoorsy flavour to the proceedings. Whether you consider it an SUV or a crossover, the Sorento is a really likeable design.

You can have a Sorento with either a 1.6 litre petrol-hybrid motor or a 2.2 litre diesel; for this story, we'll focus on the former. It boasts healthy specs, with 177.5 bhp and 27 kg-m of torque (the electric motor adds 64.1 bhp/27 kg-m) and a 6-speed torque converter automatic being the only gearbox on offer.

Our test car also came equipped with all-wheel drive, which you can only have on the top-spec HTX/HTX (A) variants.

Depending on who you are, you may find the Sorento hybrid's performance ample or conservative, but it isn't exciting. What it unmistakeably is, is crisp. It feels refined, responsive and quite relaxing in most scenarios, which goes with the Sorento's 'grown-up' personality. The automatic gearbox complements the hybrid's performance, and what you get as a result is an extremely well-behaved driving experience that works comfortably in the city and out on the highway. The diesel, just to set context before we elaborate on it in another story, is more powerful and feels noticeably punchier although it lacks the hybrid's quietness.

The Sorento hybrid powertrain feels like an ideal highway companion even though its performance isn't inspiring.

Not everyone wants their family crossover/SUV to do sports-car things, right? If you agree, you'll find a lot to like about the Sorento in hybrid form. You can drive it aggressively once in a while — it certainly has enough to make expressway-speed overtakes seem easy — but that's not the inherent frame of mind the Sorento puts you in.

SPACE MISSION

The cabin contributes hugely as it offers an effortlessly plush interior with an inherent sense of space and light, and nothing appears substandard or overdone. The ergonomics for the driver are spot-on, the twin curved display doesn't feel excessively large and is neatly integrated and, courtesy the light-toned interior upholstery, the Sorento appears inviting and, in fact, larger than it already is!

COMFORT CLASS. Premium cabin features a classy, intuitive layout. Second-row space is fantastic and seats get ventilation, too; underthigh support is underwhelming PRASHANT SHETTY

The steering wheel feels premium to hold and the controls mounted on it feel tactile and intuitive to operate. There's a touch panel below the central AC vents on the dashboard that, rather cleverly, you can switch to operate and fine-tune either the climate control or the infotainment functions.

It's a small (almost missable) but thoughtfully done element by Kia. The dash flows into a neatly executed centre console which features controls for the seat ventilation (rear passengers get their own door-mounted switches), a wireless charging pad, two cupholders, the drive selector (a thing of beauty, even if obviously inspired) and, lastly, the drive mode selector. There's a spacious armrest, which features an equally generous stowage bin underneath. The door pad is almost entirely leatherette-padded and features chunky grab handles although, oddly, your knee (as the driver) constantly grazes against a hard plastic surface, which may get uncomfortable over a long driving day. I liked the massage function which, though not very intense, does a tailbone pulse long-distance drivers will really appreciate. In other news, outward visibility is really good!

The middle row, offered with captain seats in the top-spec variants, is somewhat unconvincing despite what its appearance suggests. Yes, it's quite well-loaded but the floor is a bit too high-set — even on the diesel! If you're 5'7" or shorter, you may not find this to be a concern area, but taller folks will be starved for decent underthigh support. Space is, of course, ample — more than you'll really ever need — but the high floor eats into what could have been a terrific, perhaps best-in-class backseat experience.

The third row can accommodate small-sized adults; you get vents, high-quality blower controls, charging ports, cupholders and storage cavities on either side, but it still is a space best left to kids, at least for longer periods. Even better, you can fold the seats flat to create an enormous amount of boot space and what you have, as a result, is a mini-Carnival. The spare wheel, while mounted on the underside, still is a space-saver!

A highlight of the Sorento is its ride quality. It's plush and composed — not sporty, and the 19 inch wheels (18, on the HTE) suit this character well. AWD, too, works better than advertised, at least on dry surfaces, and there's almost a ladder-frame toughness to the Sorento you wouldn't be able to tell by just looking at it.

With prices ranging from ₹27.99 to ₹38.49 lakh (ex-showroom; six variants in all), the Sorento isn't aggressively priced.

It does, however, offer serious value for money especially in its lower variants, which are also equipped well enough for you to consider them over the top-end spec. End of the regime for any of its rivals, then? Certainly not. But the Sorento has enough merit to simply co-exist and do really well for Kia.

@TheMotorGram

Encore!

A COMEBACK. The Himalayan 440 brings along smoother nostalgia for those who missed it and those who didn't

RUMAN DEVMANE

ATTITUDE CHECK. LS 440 single-cylinder engine's long-stroke character is quite appealing. Scram-sourced instrumentation lacks the charm of the older console RUMAN DEVMANE

Kartik Ware

Royal Enfield's adventure-touring Himalayan range is growing, mirroring the mountains it takes its name from. In 2016, the Himalayan 411 appeared first, making way for the Himalayan 450 in 2023, and soon we'll have the flagship Himalayan 750 in our midst. However, why bring back a 10-year-old motorcycle with a handful of improvements? The short answer is a more accessible price point for the newest/oldest Himalayan 440. For the long answer, please read on. Only the eagle-eyed will spot the differences between the older 411 and the new 440. Visual changes include a new LED headlight, new paint schemes, a new instrument console and nothing else. This is not really a terrible thing because I've always thought the old Himalayan was quite a handsome motorcycle. I also like the fact that the 440 now brings back the embossed Himalayan logo on the side panels rather than the stickers seen on the last of the 411s.

The biggest changes are the ones not seen but certainly felt. The E20-compliant LS 440 air- and oil-cooled single-cylinder engine gets an 81-mm bore (3 mm wider than before), while its stroke remains unchanged at 86 mm. Power and torque figures see marginal increases to 25.4 bhp at 6250 rpm and 3.46 kg-m at 4000 rpm respectively, while kerb weight remains the same at 199 kg.

CALLING CARD

However, the biggest improvement is refinement; this engine runs far smoother than its older version. Coupled with the lighter clutch lever and the addition of a sixth gear, the mechanical changes immediately make the Himalayan 440 a better bike to ride in the city as well as on the highway.

The 440's long-stroke character is the star of the show, and in this respect it will remain unique in the Himalayan range for the foreseeable future. It's a slow-revving unit with pleasing amounts of torque from idle to its mid-range. There's no tachometer and it's not required either; just grab a handful of throttle and the Himalayan 440 simply gushes forward. However, this isn't a rev-mad tyre-shredder; progress is best made with generous throttle inputs that remain around the halfway mark; cruising at 100 kph is now a smooth affair.

The Himalayan 440 won't set the fastest time between mountain passes, but it'll easily be the most undemanding one. With off-throttle pops from the exhaust all the way, no less. Where the Himalayan 440 betrays its inherent age is in its dynamics. Despite the larger-diameter pistons in its brake callipers, braking is so-so at best. As are the tyres that inspire little confidence on the road, though they can take a beating on the rough stuff. The suspension setup offers the same 200 mm of travel up front and 180 mm at the rear, combined with a seat height of 800 mm and ground clearance worth 220 mm.

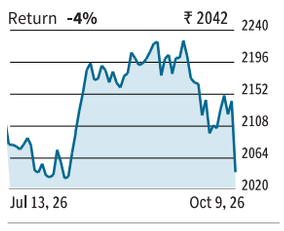

All of which means that the Himalayan 440 is a friendly motorcycle to get acquainted with, even if the suspension feels a bit unsophisticated in today's context. The touch points could've been better; the old grips, levers and switches look rather out of date. Also, the old meter console added a tonne of character to the bike, though there's nothing wrong with the new one lifted from the Scram 440. The lack of tubeless tyres is a miss (for now) and that headlamp can barely compete with smartphone torches. Then again, the Himalayan 440 is priced at ₹2.29 lakh (ex-showroom), and it undercuts the base 450 by ₹79,000 and the top-spec 450 by ₹1.1 lakh.

The Himalayan 440 also seems like a good idea when you consider that Royal Enfield has already paused bookings for it after filling up its production run for the next six months. It brings back one more option for buyers, one that is relaxed and friendly, if a bit too familiar for some. It's not the fastest or the most high-tech motorcycle around — but no other adventure motorcycle has that long-stroke knack for turning trips into journeys, with improved nostalgia as standard equipment.

QUICKLY.

Anand Rathi Wealth's Q2 profit rises 22% to ₹122 cr

New Delhi: Anand Rathi Wealth on Friday reported a 22 per cent increase in consolidated net profit to ₹122 crore for the September quarter of FY27, driven by revenue growth. The wealth management firm posted a net profit of ₹99.8 crore in the July-September quarter of the previous fiscal. Its revenue from operations rose 16 per cent to ₹356.6 crore (₹307 crore), it said. For the first half of FY27, the company's consolidated net profit increased 23 per cent to ₹238 crore, and revenue grew 17 per cent to ₹693 crore. Anand Rathi Wealth's assets under management rose 18 per cent y-o-y to ₹1,08,377 crore as of September 30. The board has declared an interim dividend of ₹4 a share. PTI

Axis MF enters SIF space, Nandik Mallik to head

Mumbai: Axis Asset Management Company on Friday announced its entry into the specialised investment fund (SIF) category, launching a dedicated business unit called 'Accelerate SIF' aimed at delivering risk-adjusted returns for investors. The fund house has appointed Nandik Mallik to head the new venture. Mallik brings over two decades of experience in managing risk-adjusted funds and previously served as CIO at Avendus Capital Public Markets Alternate Strategies LLP. He also has prior experience launching the long short fund at ICICI Prudential AMC. OUR BUREAU

TCS' Q2 numbers, global cues pull Dalal Street out of eight-week rut

ARRESTING THE SLIDE. For the week, Nifty ended 0.4% higher, while BSE Sensex advanced 0.8%

Anupama Ghosh
Mumbai

Equities staged their sharpest single-session recovery in weeks on Friday, snapping an eight-week losing streak as Tata Consultancy Services' better-than-expected quarterly numbers triggered a broad-based buying spree and calmer geopolitical waters brought crude oil off the boil.

The Nifty 50 closed 1.30 per cent higher at 22,520.45, while the BSE Sensex advanced 1.23 per cent to 72,472.33.

Bank Nifty outperformed, rising 1.36 per cent to 55,256.65.

On the week, the Nifty ended 0.44 per cent higher and the Sensex added 0.8 per cent, the first positive weekly close after eight consecutive weeks of decline.

'RELIEF RALLY'

"Treat the current rebound as a relief rally until the index demonstrates sustained strength above key resistance levels," said Ajit Mishra, SVP, Research at Religare Broking, capturing the mood of a market caught between relief and residual anxiety.

TCS shares surged around 5 per cent after the company reported 15 per cent profit growth for the September quarter alongside strong AI-related revenue and healthy deal wins, sending the Nifty IT index up more than 3 per cent.

Investors also brushed aside near-term jitters over the US suspension of major technology companies from the PERM employment-based green-card programme after clarifications confirmed that existing H-1B employment was unaffected.

IN THE LEAD. TCS shares surged around 5 per cent after the company reported 15 per cent profit growth for the September quarter, sending the Nifty IT index up more than 3 per cent

Geopolitics did the rest. President Trump's confirmation that the US would hold back from military action against Iran ahead of the November midterm elections pulled Brent crude from levels above $104 a barrel, easing inflation concerns.

IT, FMCG, banking, auto and consumer durables all closed in the green; only Nifty Oil & Gas bucked the trend, ending marginally lower. Apollo Hospitals, ITC and Eicher Motors led the Nifty gainers, while BSE, Reliance and JSW Steel lagged.

The Nifty Midcap 100 rose 1.56 per cent and the Nifty Smallcap 100 gained 0.54 per cent. For the week, FMCG and PSU bank outperformed with gains of 2.45 per cent and 2.38 per cent, respectively, while Realty and Metal were the biggest laggards, falling over 3.5 per cent.

For investors, a bounce after a sharp fall is normal and doesn't change the bigger picture, said Sarvam Goel, Founder, Pocketful. "IT's rally looks more like relief than conviction while visa risks remain unresolved. Stay selective, avoid chasing the rebound, and wait for crude and global cues to settle before adding fresh money."

Mark-to-market losses in equity may test AMCs' profit

Suresh P Iyengar
Mumbai

Asset management companies' profitability will come under pressure in the September on the back of mark-to-market losses in equity markets. However, steady flow into equity schemes through systematic investment plan (SIPs) and lump sum investment can be saving grace.

The average asset under management (AUM) of the country's largest fund house, SBI Mutual Fund reported a 9 per cent increase in the September quarter to ₹13.09 lakh crore against ₹11.99 lakh crore in the same period last year.

ICICI Mutual Fund and HDFC MF asset jumped to ₹11.56 lakh crore (₹10.14 lakh crore) and ₹9.69 lakh crore (₹8.81 lakh crore). On a sequential basis, SBI MF, ICICI MF and HDFC MF – reported a 4 per cent rise in average AUM.

FEE INCOME

AMCs earn fees based on average AUM and the sharpest fall came in September and early October. Average equity AUM for the quarter was therefore still higher than in Q1, which may support y-o-y growth in fee income.

Shobhit Sharma, Research Analyst, Elara Capital, said it is going to be a sequentially weak quarter for AMCs, primarily due to lower mark-to-market gains in assets under management.

Aditya Birla Sun Life AMC may be the exception, as the Employees' Provident Fund Organisation mandate of ₹6 lakh crore will be reflected in AUM for the full quarter, he added. SIP flows continue to support overall net equity flows, as it contributed 85 per cent of net equity flows in July-August, he said.

Asset base jumps
(Avg AUM in ₹ lakh cr)

	Sept Qtr FY'27	Sept Qtr FY'26
Nippon India MF	7.87	6.56
Birla MF	4.42	4.25
UTI MF	4.02	3.78
Canara Robeco MF	1.24	1.19
Shriram MF (in cr)	1,170	1,031

"Further, we believe distributors are increasing share of small schemes to sustain overall yield," he said.

Aditya agarwala, Chief Investment Officer and Co-Founder, InvestValue, said while core earnings may hold up in September quarter, reported profits appears weaker and the bigger hit could come in December quarter if the correction persists. "The pressure may show in other income. treasury and seed investments are marked-to-market, so gains could be lower or negative this quarter. Several AMCs could report a sequential fall in net profit even as core profit grows," he said

STOCK PERFORMANCE

The stock markets have already priced in weak September quarter with HDFC AMC down about 14 per cent over three months while Nippon India MF and ABSLife AMC are down about 11 per cent each.

Vinit Bolinjkar, Head of Research, Ventura, said the Nifty declined about 5 per cent during the quarter, with most of the fall coming in September. Since AMC revenues are linked to average AUM rather than quarter-end market levels, the earnings impact should be lower than the headline market decline suggests, he added.

Moreover, equity-oriented schemes, which carry higher fee yields, sustained weakness affecting the blended revenue yields, he said.

Jio Platforms may set IPO price band at ₹1,065-1,119

Bloomberg

Jio Platforms Ltd is set to price its shares at ₹1,065-1,119 apiece in its planned initial public offering (IPO), according to people familiar with the matter.

The company is targeting a market value of as much as ₹10.30 lakh crore, the people said, asking not to be identified because the information isn't yet public. At the upper end of the price band, Jio's IPO would raise about ₹30,200 crore, according to Bloomberg calculations. That would keep it on track to become India's largest-ever IPO.

The telecom and digital services arm of Reliance Industries plans to open public subscription on October 21, the people said. The shares expected to begin trading on October 28, they said.

Deliberations are ongoing and details including the price range, valuation and timing could still change, the people said.

A Reliance Industries representative did not offer any immediate comments. The valuation falls short of some earlier expectations, though the offering is still poised to surpass Hyundai Motor India Ltd's ₹27,800 crore share sale in October 2024, the country's biggest.

Airtel Money makes LSE debut

Press Trust of India
New Delhi

African digital financial services platform, Airtel Money, made its London Stock Exchange (LSE) debut on Friday, marking the exchange's largest initial public offering in several years.

Sunil Mittal, Founder of Airtel and Founder and Chairman of Bharti Enterprises, said the listing builds on Bharti's significant record of long-term interests in the UK.

"I am delighted to welcome the successful listing of Airtel Money on the London Stock Exchange. This listing is a vote of confidence in the UK as an attractive global destination for investment, with a stable business and policy environment attractive for long-term investors," he said.

IN QUEEN'S LAND. African dancers during the debut of Airtel Money on the London Stock Exchange on Friday BLOOMBERG

The over-subscription of the Airtel Money offering shows the appetite of the UK market for high-quality investable assets, he added.

It has begun conditional trading on the LSE. The offer price is £1.96 a share, in early conditional trading, the shares touched about £2, then eased to about £1.94.

BROKER'S CALL.

AUM Capital

JG CHEMICALS (BUY)
Target: ₹774
CMP:₹629.70
JG Chemicals Ltd (JGCL) is India's largest manufacturer of zinc oxide, operating with an installed production capacity of over 60,000 tpa (tons per annum) for zinc chemicals and 10,000 tpa for zinc sulphate. Plants are located in Jangalpur and Belur in West Bengal and Naidupeta in Andhra Pradesh. It is into manufacturing of Zinc Oxide (ZnO), Zinc Sulphate (Heptahydrate and Monohydrate), and recycled zinc products and is counted amongst the top 5 Zinc Oxide producers globally.
JGCL is India's largest zinc oxide manufacturer and amongst the top-10 global producer, supplying critical chemical grades to industries like tyres, rubber, pharmaceuticals, and ceramics with about 30 per cent market share in India's zinc oxide market. JGCL has long-standing supply relationships with 9 out of the top 10 global tyre manufacturers and all of the top 11 Indian tyre makers (including Apollo, MRF, and CEAT).
The ₹100-crore Greenfield Plant in Dahej, Gujarat, facility adds 40,000 tpa of capacity for zinc chemicals, scaling the company's total aggregate capacity from roughly 70,000 MTPA closer to 110,000 tpa. Post completion of the two phases, ₹1,000 crore is expected to be added to the topline.
Strong balance sheet position, coupled with its ongoing expansion at Dahej is expected to further consolidate its position domestically and internationally.
We would recommend a Buy with a target price of ₹774 in the next 9-12 months.

Elara Capital

ADANI POWER (ACCUMULATE)
Target: ₹220
CMP: ₹189
Thermal power – backbone of reliable baseload supply: Thermal generation remains the backbone of India's power system, providing reliable, dispatchable baseload capacity that helps offset renewables intermittency and maintain grid stability. While renewable energy penetration is rising, its weather dependence and variable output require complementary investments in battery energy storage systems (BESS) and pumped storage.
Adani Power is India's largest private thermal power generator, with operating capacity of 18.3 GW across 13 assets, predominantly comprising high-efficiency supercritical and ultra-supercritical thermal plants.
The company is pursuing one of the sector's largest capacity expansion programmes, with 24 GW of locked-in capacity that would increase its targeted portfolio to 42 GW. Around 60 per cent of the pipeline is Brownfield, supporting faster execution and lower project cost.
We initiate on Adani with an Accumulate rating and a TP of ₹220 based on 12x FY29E EV/EBITDA. The company offers strong earnings visibility, supported by its 24 GW locked-in capacity expansion, rising PPA coverage, and upside from merchant power.
However, the stock has already rallied 27 per cent y-o-y in the past year, outperforming the BSE Utilities Index. We believe a significant portion of the company's medium-term growth opportunity is already reflected in the current valuation.

Price vs value: Don't pay extra to invest overseas

RINGSIDE VIEW.

KS BADRI NARAYANAN

The recent warnings from the National Stock Exchange (NSE) and BSE on international exchange-traded funds (ETFs) deserve investors' attention. Several overseas ETFs are trading at substantial premiums to their net asset values (NAVs), exposing buyers to losses that have little to do with the performance of the underlying investments.

Consider the Motilal Oswal Nasdaq Q 50 ETF. On Friday, its units closed at ₹246 on the BSE, against a reported NAV of ₹120.05. This means investors buying at the market price were paying more than twice the underlying value of the ETF's assets.

Such a premium is difficult to justify, regardless of the prospects of the overseas market.

WHY PREMIUMS ARISE

An ETF's NAV represents the per-unit value of its underlying assets, while its market price is determined by demand and supply on the stock exchange. Under normal circumstances, the two remain reasonably close because market makers can create or redeem ETF units to exploit price differences.

AT VARIANCE. A Nasdaq-linked ETF trading at a substantial premium does not mean its underlying technology stocks have appreciated by a similar extent REUTERS

However, this mechanism has been disrupted in several international ETFs. Overseas investment limits available to Indian mutual funds have been exhausted, restricting the creation of fresh units. With supply constrained, increased investor demand can push exchange prices substantially above NAV.

As Samco Securities points out, demand exceeding the available supply of ETF units is one of the main reasons behind such premiums. But scarcity of ETF units should not be mistaken for an increase in the value of the underlying investments. A Nasdaq-linked ETF trading at a substantial premium does not mean its underlying technology stocks have appreciated by a similar extent.

The distinction matters because investors face two separate risks. One arises from movements in the overseas securities. The other stems from the possibility that the premium itself will disappear.

The exchanges have specifically warned that an increase in overseas investment limits could restore the creation of fresh ETF units, potentially narrowing these premiums. NSE has also highlighted the implications of SEBI's revised price-band mechanism, scheduled to take effect from April 1, 2027.

WHY NO ARBITRAGE

At first glance, a substantial difference between an ETF's NAV and its market price appears to offer an attractive arbitrage opportunity. Why not purchase units at NAV from the fund house and sell them at the higher exchange price?

The difficulty is that ordinary retail investors generally cannot create ETF units directly with the asset management company in small quantities at NAV.

The creation and redemption mechanism operates largely through authorised participants and market makers, subject to prescribed unit sizes and other conditions.

In international ETFs where fresh unit creation is restricted, even these participants may be unable to undertake the usual arbitrage activities that would otherwise narrow the premium.

SEBI does provide a limited safeguard for investors when ETFs become illiquid. Under specified conditions, investors other than market makers can approach the asset management company for direct redemption.

These conditions include the ETF trading at a discount of more than 1 per cent to its day-end NAV for seven consecutive trading days, the absence of exchange quotes for three consecutive trading days, or insufficient bid quantities over a prescribed period.

However, this facility is intended to address liquidity problems. It does not offer investors a way to buy ETF units at NAV and immediately sell them on the exchange at a premium. Nor does it protect those who have already paid an inflated market price.

PRICE MATTERS

Premiums and discounts are not confined to international ETFs. Gold ETFs, as well as ETFs tracking the Sensex, Nifty and other indices, can also trade away from their NAVs. However, such deviations are generally easier to correct where the underlying securities are accessible and the creation-redemption mechanism functions normally.

Investors should therefore examine more than the index an ETF tracks or its recent market-price performance. The premium or discount to NAV, trading liquidity, bid-ask spread and ability to create fresh units are equally relevant.

ETFs can be useful instruments for long-term investing, but their low-cost structure and exchange-traded convenience do not make them attractive at any price.

Fusion CX fixes price band as ₹275-289 for ₹702 crore IPO

Suresh P Iyengar
Mumbai

Fusion CX, a customer Experience service and AI data infrastructure services provider, plans to launch ₹702 crore initial public offering (IPO) on the mainboard.

The company has fixed the price band at ₹275-289 per share and the public issue will open on October 14.

The IPO comprises a fresh issue of shares aggregating up to ₹500 crore and an offer for sale of shares aggregating to ₹202 crore by the promoter companies, PNS Business and Rasish Consultants.

USAGE OF FUNDS

Fusion CX plans to use ₹275 crore from fresh issue for repaying outstanding borrowings, ₹61 crore for investment in step-down subsidiaries, Omind Technologies Inc and Omind Technologies for upgrading IT tools (Arya and MindVoice), and remaining for pursuing inorganic growth through unidentified acquisitions and general corporate purposes.

Incorporated in 2004 by co-founders Pankaj Dhanuka and Kishore Saraogi, Fusion CX blends deep domain expertise with a portfolio of proprietary AI tools.

Fusion CX reported revenue from operations of ₹1,818 crore and net profit of ₹169 crore for FY26. As on June-end, Fusion CX had 13,735 employees with operations in 13 countries.

Bonfiglioli eyes ₹2,500-cr IPO as India arm powers 31% of group EBITDA

Amit Vijay Mohile
Mumbai

Bonfiglioli India, the wholly owned Indian subsidiary of Italy's Bonfiglioli Group and a manufacturer of gearboxes and drive systems for wind turbines, construction equipment and industrial machinery, is eyeing a ₹2,500-crore-plus initial public offering through a stake sale by its parent. The Indian business contributes roughly 31 per cent of the global group's EBITDA and 17.6 per cent of its revenue.

The proposed offer for sale (OFS), estimated by top industry sources, could value the company at over $1 billion. Bonfiglioli has invested close to ₹680 crore over its 25 year Indian journey, building manufacturing facilities, engineering capabilities and customer relationships, Managing Director Kennady V Kaippally told *businessline*. "We have reached a maturity where we can stand on our own," Kaippally said.

Kennady V Kaippally, MD, Bonfiglioli India

Unlike passenger-car gearbox manufacturers, Bonfiglioli supplies specialised drives for excavators, cranes, road-building machinery and industrial equipment.

INDIA PROFIT ENGINE

Indian revenue increased 10.5 per cent to ₹1,864.08 crore in 2024, while profit jumped 29.4 per cent to ₹191.12 crore.

During the nine months ended September 2025, revenue reached ₹1,460.17 crore, with EBITDA margins climbing to 17.36 per cent. The company remained debt-free, with net cash of ₹162.83 crore.

The OFS brings no fresh capital into the company. However, Kaippally said investors should evaluate its competitive position, financial strength, capital efficiency and underlying growth prospects rather than the issue structure alone.

GST without chains

GST Council pushes ease of doing business reform

After having successfully overhauled slabs and rates last year, the GST Council has rightly turned its focus on process reforms. At its 57th meeting, the Council announced changes in adjudication, registrations, return filing, availing tax credit and refunds. These reforms will not only help existing taxpayers but can also expand the taxpayer base, which is around 1.70 crore.

The most significant decision taken by the Council was to divest GST officials of the power to arrest under Section 69 of the GST Act, 2017. This will likely entail an amendment to the law. In practice, this provision was used to threaten arrest in cases of tax demands exceeding ₹5 crore. While few arrests have actually been made, the power opens up scope for misuse. The GST system allows for attachment of bank accounts and cancellation of registration, anyway, in the event of a tax demand not being met over an extended period, without its being challenged either. There is a process in place to invoke these provisions. For transgressions under Sections 73 and 74, which deal with small errors, penalties are set to be reduced from ₹25,000 to ₹10,000. The Council has sought to shield small taxpayers by raising the threshold for prosecution from ₹1 crore to ₹5 crore. With these proposed changes, the pursuit of 'revenue circle targets' will, hopefully, not lead to harassment.

The Council has also done well to recognise the hardships caused on account of blocked input tax credits and delayed refunds. Allowing input tax credits on a slew of items including health and life insurance taken for employees, telecom towers, free medicine samples, and expired stock that the law requires to be destroyed will help ease working capital stress. Similarly, allowing refunds on taxes paid on inverted duty structures will ease cashflow constraints — these could apply to plant and machinery, capital goods and other services. The Council also decided on other measures which will reduce uncertainty — time for acknowledging refunds is to be cut to 10 days, 90 per cent of refunds can be claimed in 13 days and GST rates will be reviewed only once a year. Small businesses using e-commerce platforms to sell across States have also been provided some relief, letting them use the warehouse of the e-commerce operator as their place of business to claim input tax credit in that State. This saves them the expenses involved in setting up a place of business in each State.

The faceless assessment scheme too holds out promise of a more seamless experience for taxpayers in dealing with scrutiny of returns, audits, adjudication, appeals and grievance redressal. Since the scheme will eliminate any interface between the taxpayer and tax officials, it can be faster and simpler, improving compliance. The Authority should use the experience of the first set of two lakh GST taxpayers — registered with Central GST and with businesses in multiple States — to improve the scheme further.

Make in India, measured against wrong decade

AGAINST ODDS. The last 10-12 years have been marked by progress despite the pandemic, tariff wars and armed conflict. A comparison would require a long-term view

REUTERS

A recent article in a leading publication evaluated 12 years of Make in India with 12 metrics and a verdict of "low and patchy impact". The metrics are real.

The verdict rests on a choice the piece never defends. It sets India's record since 2014 against the 12 years before, as if both periods offered the same world. They did not. Time a runner without asking whether she ran downhill or into a gale, and you learn little about the runner.

TWO DIFFERENT WORLDS

Between 2002 and 2013, world merchandise exports tripled, from $6.2 trillion to $18.8 trillion. Markets were open, rules were stable, and a rising tide lifted every exporter. Between 2014 and 2025, world exports grew by less than two-fifths, to $26.3 trillion. That decade brought a pandemic, tariff wars, sanctions and armed conflict. India's non-petroleum exports grew more than 400 per cent in the first period and 53 per cent in the second, by the article's own count. Most of that gap is the world, not India.

The flat export share has a cause too, and it does not lie in New Delhi. China's trade surplus more than tripled between 2014 and 2025, to $1.19 trillion. Its manufacturing value added, at $4.8 trillion, is about 27 per cent of the world's total and nine times India's. Short of demand at home, Chinese firms export at falling prices. Subramanian and Chatterjee estimate some $365 billion of "excess" Chinese exports in low-skill sectors in 2022 alone. Indonesia and Mexico have felt the squeeze. Germany, Europe's finest manufacturer, saw industrial output in 2025 run about 14 per cent below its 2018 level. Holding a 1.7 per cent share of world exports through such a decade is not a sign of failure.

THE COMPARISON NOT MADE

A fair assessment would ask how India did against economies that faced the same shocks. On that test, India comes out ahead. Its share of world manufacturing value added rose from 2.4 to 3 per cent between 2014 and 2025, a bigger gain than Brazil, Mexico, Indonesia or South Africa made. In dollar terms, India's manufacturing value added grew 73 per cent, against 51 per cent for China and 36 per cent for the world. That was achieved even as the rupee weakened from about 61 to the dollar to over 85. Some will point to Vietnam, whose export share more than doubled. Over three-quarters of Vietnam's exports come from foreign-invested firms, largely assembling imported parts. That path has served Vietnam well. India has chosen to build deeper capability at home. That takes longer to show up in trade data, and lasts longer once it does.

THE ARTICLE'S OWN NUMBERS

In the new national accounts series, manufacturing grew faster than the economy in every one of the three years for which data exist. Manufacturing's share of FDI inflows rose from 48 to 55 per cent. At constant prices, manufacturing's share of GVA rose from 14.7 per cent in 2022-23 to 16.1 per cent in 2025-26, a gain of 1.4 percentage points in three years. That is hardly marginal. At current prices the share barely moved, because factory-gate prices rose slowly, held down by cheap Chinese goods. Cheaper goods are not a weaker sector.

On jobs, the article finds that total manufacturing employment barely rose. The Annual Survey of Industries shows registered factories employed 2.10 crore people in 2024-25, over 14 lakh more than a year earlier. If total employment is flat while factory jobs rise, work is moving from informal sheds into formal factories, with better pay and protection. That shift is what industrial policy is meant to bring about.

THE WORLD CHANGED ITS MIND

The article refers to the Prime Minister's remark at the 2014 launch that industrialists come for a good environment, not for incentive schemes. The environment did change. GST, the Insolvency and Bankruptcy Code, the 2019 cut in corporate tax, the decriminalisation of 183 provisions under the Jan Vishwas Act, and the four labour codes in force since November 2025 all served that end. Logistics costs, long put at 13-14 per cent of GDP, are now estimated at about 8 per cent.

Industrialisation is the work of decades. The countries that achieved it did not judge themselves by anniversaries. They asked whether they were building capability faster than the world around them

What changed after 2020 was the world. The US set aside $52.7 billion for chips alone, and others followed. When the richest economies began paying firms to produce at home, a country offering nothing would have offered no reason to come. The PLI schemes were India's answer. They have drawn ₹2.4 lakh crore of investment, about 83 per cent of it in five sectors. The article treats that concentration as a flaw. It is the design. Solar modules, electronics, pharmaceuticals, automobiles and specialty steel are where scale decides survival and where China's lead is largest. Solar module capacity has grown from 2.3 GW in 2014 to about 192 GW. Electronics exports reached $47.96 billion in 2025-26. Penicillin G, once imported from China, is again made in India.

WORK IN PROGRESS

None of this means the job is done. Domestic value added in electronics is still low, at 18-23 per cent. That is why the components scheme has approved 106 projects worth nearly ₹70,000 crore.

Five semiconductor units are in production, and a second phase worth ₹1.275 lakh crore was approved in July. Solar cell capacity lags module capacity. Since June, government-backed solar projects must use domestic cells, and listed cell capacity has already passed 30 GW.

The hardest task is labour-intensive manufacturing. The textiles PLI has drawn less than half of the investment once expected. China still supplies about 64 per cent of developing-country exports of apparel, textiles, leather and footwear. Seven PM MITRA textile parks are being built, with investment commitments above ₹27,000 crore.

A scheme for footwear and leather was announced in the 2025 Budget.

The labour codes will make it easier for firms to grow large. Private investment has been cautious, and the reasons are not hard to find.

A firm weighing a new plant must price in a flood of cheap imports and, this year, the largest oil supply disruption on record.

THE RIGHT TEST

Every one of the 13 economies that grew at 7 per cent or more for 25 years after 1950 did so while engaging with world markets. India is following that path. Trade agreements with the UAE, Australia, EFTA, the UK, Oman, New Zealand and the EU open markets and secure inputs. At home, the next steps are clearer land and permit rules, and lower tariffs on intermediates, components and capital goods.

Industrialisation is the work of decades. The countries that achieved it did not judge themselves by anniversaries. They asked whether they were building capability faster than the world around them. In a decade unkind to latecomers, India has done that. The task now is to do it faster.

AI's mathematical abilities are disconcerting

AI, according to one of the best mathematicians, will destroy human understanding and creativity

Atanu Biswas

On September 8, news suddenly emerged that about 10,000 AI agents from OpenAI had — in just 88 hours — solved one of the six remaining "million-dollar" math problems, known as the *Millennium Prize Problem,* announced by the Clay Mathematics Institute. The Navier-Stokes equations, a cornerstone of modern fluid dynamics, govern the flow of fluids — from the whirlpool to the turbulent winds El Niño. It's now proved that the equations that govern the motion of fluids are fundamentally flawed.

"This is a Deep Blue-Kasparov moment," wrote New York University mathematician Tristan Buckmaster, who claimed to have made significant progress in the solution of the long-standing problem.

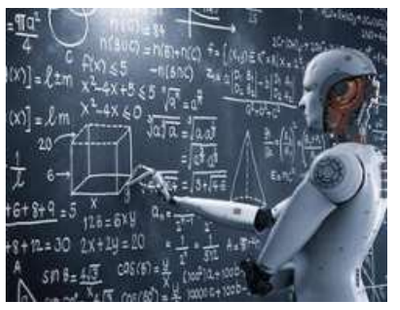

But if AI were to solve all unsolved mathematical problems in this manner, would human mathematicians face an existential crisis? Interestingly, 37-year-old Chinese mathematician Deng Yu — a recipient of this year's Fields Medal — remarked, "If AI can solve all maths problems, I'll go home and write my yuri novel." "Yuri" is a Japanese genre of romantic novels.

Deng may well have said this in jest. Yet, there's a catch here too: AI is already writing stories, novels, and essays — and in many instances, better than that of human creations. In the age of AI, when almost everything is becoming automated, isn't it increasingly difficult — and perhaps futile — to try to halt its application? Instead, could humans and AI engage in "collaborative creation"?

MOST POWERFUL TOOL

Is ideal human-AI collaboration possible in scientific developments? It's evident that AI could rapidly discover cures for intractable diseases or make breakthroughs in physics and chemistry — achievements that might otherwise have taken humans decades or even centuries. "A major goal of our work is to empower scientists to advance research and technology that benefits all of humanity," OpenAI researchers wrote.

Sam Altman described AI as one of the most powerful tools for improving quality of life in the long term, particularly through scientific discovery. Altman believes AI could help solve one of humanity's toughest challenges — curing cancer. Well, such discoveries are crucial for the advancement of human civilisation — nobody can deny that. If machines, rather than humans, provide these solutions, is there any real harm beyond hurting human ego and vanity?

AI UNPLUGGED. Existential crisis for mathematicians? ISTOCK

Perhaps there's some additional subtle harm. Terence Tao, considered to be one of the best mathematicians in modern times, has his own apprehensions about the capabilities of AI. According to him, such a swift pace of AI wouldn't only accelerate mathematics but would actually destroy everything that's beautiful about mathematics — human understanding and creativity. He, thus, views this not as a pure triumph but as a potential net negative for mathematical understanding. Tao compared using an autonomous AI to solve a hard math problem to landing a helicopter at the peak of a mountain. You reach the top, but you miss all the insights, mapping, and physical conditioning gained by actually climbing it. This may be similar to what the Fields Medal-winning mathematician Bill Thurston said in 2010, well before the age of AI: "The product of mathematics is clarity and understanding. Not theorems, by themselves."

Yet, is AI solving these problems, even if in that way, worse than halting the prospect of AI discovering a cure for cancer tomorrow? There's no one-word answer to this question, perhaps. As Tristan Buckmaster suggests, "The community needs to have serious and unhurried discussion about where to go from here." It's extremely difficult to achieve a universally accepted, rational solution, though. Today, bewildered human civilisation — along with its scientific pursuits — faces profound uncertainty.

Economy under pressure

This refers to 'Debt mutual funds turn volatile on RBI repo rate hike' (October 9). The volatility in Indian equity and debt markets following the repo rate hike has left investors uncertain about their next move. With depositors unlikely to benefit immediately from higher rates and the RBI signalling calibrated tightening, existing debt portfolios, particularly those with longer maturities, could face further valuation pressures. With equity markets also under pressure, investors face a potential double whammy. As higher policy rates gradually transmit into lending rates, borrowers may face higher EMIs or extended loan tenures, depending on their loan terms. These developments could dampen private consumption and investment, posing risks to India's projected 7.1 per cent GDP growth for FY27.

Srinivasan Velamur
Chennai

Reductive rhetoric

Apropos, 'Govt reacts to Musk's oligarchs post, rebuts discrimination allegations' (October 9). US businessman Elon Musk's post in X asking if Mukesh Ambani is India's "real boss" reduces a sovereign democracy to a corporate oligarchy. Spurred by regulatory delays over Starlink, Musk misinterprets strict governance as industrial favouritism. India's policy decisions prioritise national security, data sovereignty, and fair competition over corporate interests — domestic or foreign. While industrial leaders hold substantial economic influence, state policy remains governed by constitutional institutions, not private dictates. Foreign tech leaders must respect that sovereign regulations reflect national priorities, not tycoon influence.

N Sadhasiva Reddy
Bengaluru

BRICS' climate action

This refers to 'BRICS needs to address CBAM consequences' (October 9). Climate measures should not become additional trade barriers for developing economies. The EU's Carbon Border Adjustment Mechanism could impose substantial compliance costs on exporters, particularly smaller enterprises. BRICS nations should develop common carbon accounting standards, emissions verification procedures and reporting systems to reduce duplication. They should also promote technology transfer and affordable climate finance to help businesses adopt cleaner production methods.

Canara HSBC Life Q2 profit up 5% to ₹43 crore

New Delhi: Canara HSBC Life Insurance Company reported a 5 per cent increase in net profit to ₹43 crore in the September quarter of the current fiscal. The insurer had recorded a net profit of ₹41 crore in the year-ago quarter. The total income of the insurance firm promoted by Canara Bank improved to ₹2,511 crore in the quarter under review from ₹2,349 crore a year ago, the insurer said. PTI

We have grown faster than industry in data centre biz: Airtel Business CEO

FUTURE PLANS. The company is betting big on sovereign cloud, cybersecurity and AI-led growth

S Ronendra Singh
New Delhi

Bharti Airtel on Friday said that as enterprises scale applications, the demand for its cloud services are gaining traction and over the last one year of its sovereign cloud infrastructure, it has gotten 33 customers and more are expected in the coming days.

"We launched our sovereign Airtel Cloud last year, and it has had a very good take up. We have more than 33 customers right now and we are right now deploying them, and that continues to rise up because the trajectory of growth is very good in that space. We also expanded our cybersecurity portfolio that has grown very good," Sharat Sinha, Chief Executive Officer, Airtel Business, told *businessline* on the sidelines of India Mobile Congress (IMC) 2026 here.

He said the company's data centre business and connectivity business, both have also grown faster than the market. In the domestic business, there are multiple verticals such as BFSI, government, Manufacturing and also global capability centres (GCCs), and all of them have also grown.

"With AI being more widely used, I expect that trend to continue. There will be more need for data, but more importantly secured connectivity or cloud access. So, we are heavily investing in those areas too — data centres, connectivity, we are investing in Metro — big investment in fibre being done. Many investment have gone in subsea cable capacity also," Sinha pointed out.

Sinha said by consolidating connectivity, cloud and data centre services on a sovereign Indian stack, Airtel Business is helping enterprises to modernise faster, recover with confidence and retain sovereign control over critical data in India, with potential cost savings while also supporting secure digital growth.

On asked about the rising costs of memory chips and if it was affecting the AI data centre business, and if Airtel was passing on to the customers, he said, " Cost of electronics have been going up and AI (data centre) has driven a lot of supply constraint, but we're a part of global industry. I think globally it's adding to cost of all operations, but having said that the way we provide services, it is our cost and globally all are impacted."

> There will be more need for data, but more importantly, secured connectivity or cloud access.
>
> **SHARAT SINHA**
> CEO, Airtel Business

Talking about Airtel's AI-powered, network-level safety solutions that protect customers from spam calls and SMS, malicious links, banking OTP fraud and call-forwarding scams, he said the company has stopped maximum number of such activities since the launch last year (September 2025), he said.

SAFETY NETWORK

Called Airtel IQ Gateway, it has flagged over 98.4 billion spam calls , 1.62 million malicious links blocked and 11 million call-forwarding alerts generated to date. The AI-powered Spam detection analyses more than 250 parameters in real time to identify and flag suspected spam calls and SMS, Sinha explained.

"Airtel IQ Gateway extends the same network-grade trust layers to enterprises, unifying SMS, WhatsApp, RCS, business voice and number verification (silent authentication) on a single, DPDP-compliant control plane for safe, scalable customer engagement. The platform solves fragmented, multi-vendor communication stacks by offering unified management, real-time analytics, transparent delivery reporting," he said.

Asked about how companies like Airtel can participate in developing global framework to curb digital frauds, as the Prime Minister also suggested on the first day of IMC, Sinha said, "We operate in 15 countries, and we have about 370 million plus subscribers in India. Overall between all countries, we have 650 million plus subscribers that makes us second largest telecom company in the world, so we have to do things at global state."

He said data sovereignty is important, but control planes sovereignty, operational sovereignty is also critical and this is where Airtel differentiate because it has built totally built on its own infrastructure.

Thermax eyes 22% revenue growth to ₹13,000 cr in FY27

Amit Vijay Mohile
Mumbai

Ashish Bhandari, Managing Director and CEO, Thermax

Pune-based engineering major Thermax, could post about 22 per cent revenue growth in FY27, reaching nearly ₹13,000 crore from ₹10,694 crore last year, according to industry sources familiar with the company's plans. The anticipated acceleration, driven by infrastructure investments, data-centre demand and exports, is backed by a ₹14,045-crore order book.

The expectation follows FY26 revenue growth of 3.64 per cent and a 15 per cent increase in consolidated profit to ₹720 crore. June-quarter revenue rose 7 per cent to ₹2,303 crore, although profitability was affected by a ₹91-crore cost revision on a legacy infrastructure project.

Speaking to *businessline* on Thursday after unveiling Thermax-i, a new range of intelligent boilers and heaters that can reduce industrial fuel consumption by up to 10 per cent, Ashish Bhandari, Managing Director and CEO, outlined opportunities in domestic power, data centres and exports.

Bhandari said Thermax was becoming more selective about long-duration, fixed-price construction contracts, where rising costs create execution risks. Bio-CNG operations are also improving after nearly three years.

Bhandari believes better government support for pricing and operational efficiency could help the business turn the corner.

Thermax's order book grew 23 per cent year on year. Bhandari said geopolitical disruptions had caused delays, although the company expects stronger revenue conversion as bottlenecks ease.

In India, opportunities are emerging in hybrid cooling towers, water treatment, chemicals and wastewater recycling, particularly for semiconductor plants and water-intensive industries.

Life insurers' first-year premium up 20.6% in H1

Our Bureau
Hyderabad

Life insurers' first-year premium rose 20.6 per cent year-on-year at ₹2.46 lakh crore during April–September FY26, against ₹2.04 lakh crore in the corresponding period last year, driven by growth in both individual and group single-premium policies.

According to the numbers released by the Insurance Regulatory and Development Authority of India (IRDAI) on Friday, the industry collected ₹48,781 crore in the month of September, up 21.3 per cent from ₹40,207 crore a year earlier, indicating sustained growth in new business.

The Life Insurance Corporation of India (LIC) continued to dominate the market, with its first-year premium increasing 19.3 per cent to ₹1.44 lakh crore during the six-month period. Private life insurers collectively accounted for the remaining business, with several major players reporting growth.

Among private insurers, SBI Life's first-year premium rose to ₹20,255 crore from ₹18,342 crore, while HDFC Life recorded a 18.3 per cent increase to ₹19,571 crore. ICICI Life's premium grew 25 per cent to ₹11,821 crore, while Bajaj Life reported a 39.8 per cent increase to ₹8,848 crore.

By product category, group single premiums rose 24.3 per cent to ₹1.45 lakh crore, while individual non-single premiums increased 12.7 per cent to ₹57,942 crore. Individual single premiums grew 16.6 per cent to ₹29,140 crore.

Group non-single premiums, however, declined 49.6 per cent to ₹905 crore, highlighting uneven growth across product segments.

CareEdge Global eyes 100 nations for sovereign ratings

Avinash Nair
Ahmedabad

CareEdge Global plans to add more than 55 sovereigns to its coverage, taking the number of countries it rates to around 100, as the two-year-old agency in GIFT City looks to expand beyond emerging markets and into developed economies, MD and Group CEO Mehul Pandya said.

The expansion would significantly widen the footprint of the international ratings arm of CareEdge Ratings, which began its global-scale sovereign ratings business in October 2024 with coverage of 39 countries. The agency now rates "45 sovereigns covering roughly 85 per cent of the world's economy", V Chandrasekaran, Chairman of CareEdge Ratings, said at an event marking CareEdge Global's second anniversary at GIFT City on Wednesday evening.

> **CareEdge Global is now the "fourth**-largest in the world by sovereign coverage"

"We began with ratings on 39 countries, where conviction, differentiated methodology and little else was certain," Chandrasekaran said. CareEdge Global is now the "fourth-largest in the world by sovereign coverage", behind three US-based rating agencies, he added.

The planned expansion comes as CareEdge seeks to establish itself as an alternative voice in a global credit-rating market dominated by established agencies with decades-long track records. Pandya said the agency was confident of a "calibrated expansion" into more jurisdictions. "In the next 55-plus sovereigns that we are going to rate, and the next generation of analysts that we are going to train, the global order today with more centres of economic gravity, requires more than a duopoly assessing its creditworthiness," he said.

ROAD AHEAD

For a ratings agency that is only two years old, the bigger challenge is not simply adding countries to its coverage but persuading investors, institutions and issuers to rely on its assessments. Pandya acknowledged that the agency had faced resistance from stakeholders accustomed to established rating providers.

"Stakeholders who have relied on a familiar set of voices that was for decades do not open their minds to a new entrant, however sound their approach," Pandya said.

STAND OUT

He said the agency had anticipated a period of adjustment as institutions and investors became familiar with its methodology. CareEdge has sought to differentiate itself through its methodology rather than simply replicate the assessments of existing global agencies. "Our conclusions were not an echo of an existing rating. They were sound judgement reflective of authenticity," Pandya said. "Genuinely different methodology should occasionally reach a different answer, otherwise it is not a fresh perspective, merely a new letterhead," he said.

CareEdge said its assessments have subsequently gained validation in a number of markets. According to Chandrasekaran, ratings or outlook actions by established global agencies have moved towards CareEdge's assessment in "22 of the 45 sovereigns" covered by the agency.

He cited Morocco, Nigeria and Portugal among countries where CareEdge had identified strengthening or risks ahead of the broader consensus.

Quest Global shifts domicile to India ahead of IPO

Aishwarya Kumar
Venkatesha Babu
Bengaluru

Co-founder and CEO Ajit Prabhu

Quest Global has shifted its domicile to India ahead of a planned IPO and is looking to accelerate growth through acquisitions, which could contribute 5–10 per cent to growth going forward, Co-founder and CEO Ajit Prabhu told *businessline* in an exclusive interview.

The company recently completed an inbound merger of its overseas holding structure into its Indian subsidiary through a share swap, without an additional cash payout. In April, it acquired BITSILICA, an India-based semiconductor design services company, to strengthen its semiconductor offerings and expand its presence in serving global semiconductor customers.

The US accounts for about 50 per cent of Quest Global's revenue, Europe around 30 per cent. The remainder comes from Asia and other markets, Prabhu said. The company has about 200 employees in China, based primarily in Shanghai and Beijing to support American companies with operations and supply chains.

India currently contributes approximately single-digit share of revenue, Prabhu said. However, the company sees an opportunity to work with global capability centres in the country, particularly by helping them address inefficiencies in their cost structures.

'Investment tourism' could be GIFT City's next big growth driver, says ViewTrade Holding chief

bl.interview

Avinash Nair
Ahmedabad

GIFT City is seeing growing interest from Indian investors looking to access global markets, but India INX believes the bigger opportunity could be to make the financial hub a two-way gateway for capital. Vijay Krishnamurthy, MD and CEO of India INX, which operates Global Access (a platform that enables investors in India to access global securities through GIFT City)said regulatory clarity is beginning to give the business momentum. The other side of that equation is attracting global investors to India. Tony (Anthony) Petrilli, Chairman and CEO of US-headquartered ViewTrade Holding Corporation, calls this emerging opportunity "investment tourism". The executives not only see a large untapped market ahead, but also expect greater clarity on KYC, equity listings and dual listings over the next 3-6 months. *Edited excerpts:*

> The idea now is to develop a true international centre where two-way flows happen equally
>
> **VIJAY KRISHNAMURTHY**
> MD & CEO of India INX

Is the opportunity for GIFT City now as much about bringing global investors into India as it is about taking Indian investors overseas?

Tony : Our global clients are very interested in India too. This is going to be a two-way flow — money coming back to India too. Quite frankly, the next 20 years are India's and people recognise that. GIFT City represents a potential opportunity to bring those investors to the Indian market. A lot is going on around the world, and investors want to participate where wealth and great ideas are being created. India is one hell of a great story when it comes to that. I really like the word "investment tourism".

Vijay : The objective from the beginning has been to see how GIFT IFSC can become a true international jurisdiction where both inbound and outbound investment happen. Today the globe has become seamless.

You are sitting in the comfort of your home and, with technology and the payment systems that have been built, you can access markets around the world. The idea now is to develop a true international centre where two-way flows happen equally.

But doesn't greater access to global markets mean more Indian money moving overseas?

Vijay: There is a misconception that money is going from the Indian securities market to the global securities market. Indians, like any other investment community, want to diversify. Take overseas education. Someone may start accumulating assets in a foreign currency to build that corpus. In doing so, they are also hedging against currency fluctuations. Over the last two years, Indian equities have not performed as strongly as some global markets. So there is an opportunity to diversify perhaps 1-3 per cent of a portfolio overseas, depending on one's risk appetite. I would say diversification is good.

This is not about keeping your money away from India; it is about not keeping all your eggs in one basket.

What is different about the GIFT City model for an Indian investor?

Tony: Opening the accounts of Indian residents outside India is not the right thing to do. We spent five years working with regulators and exchanges to understand what it means to offer cross-border business from India. The model we brought here did not exist before. The important difference is that an Indian resident can open an account here in India under Indian and IFSCA rules.

> It sounds like a simple mission, but we do all the hard work... to deliver what, to the end customer, seems like the push of a button.
>
> **TONY (ANTHONY) PETRILLI**
> Chairman and CEO of ViewTrade Holding Corporation

If you are an Indian resident opening an account in the US, do you have access to the US legal system? Probably not. Bringing that entire process to India changes the equation.

There are hundreds and thousands of accounts opening every month and it is growing rapidly. It is just the beginning. The core mission is to make it seamless, frictionless and as easy as possible for anybody to have access to the world markets. It sounds like a simple mission, but we do all the hard work with the exchanges, regulators, banks and the entire ecosystem required to deliver what, to the end customer, seems like the push of a button.

Vijay: Earlier, these opportunities were available to Indians, but there was limited awareness and there was also a trust issue — your money was going somewhere and your securities were lying somewhere. Today, through the GIFT ecosystem, it comes through a trustworthy ecosystem. You have a regulated entity with a legacy behind it. We are also building our own capacity to support investors as the scale increases.

What still needs to be fixed before this becomes a much larger market?

Vijay: KYC is one of the key things that needs to be solved. There has been progress with video KYC for certain jurisdictions and categories of investors, but a lot of processes still need to be eased. There is also a lot happening around equity listings and dual listings.

Optimistically, in the next 3-6 months, we should see greater clarity on these policy issues. Once that happens, the doors will open a lot more. We are already talking to startups, unlisted companies and merchant bankers. Compared with the domestic framework, there are areas where the requirements are lighter.

Juspay FY26 revenue rises 30% to ₹664 cr

Our Bureau
Bengaluru

Payments technology company Juspay reported a net loss of ₹90 crore even as its revenue rose 30 per cent year-on-year to ₹664 crore in FY26, compared with ₹514 crore in the previous financial year, as it expanded its international operations and invested in artificial intelligence capabilities. The company's revenue has more than tripled from ₹213 crore in FY23, translating into a compound annual growth rate of around 46 per cent.

Juspay reported an adjusted EBITDA of ₹33 crore in FY26, excluding non-cash employee stock ownership plan costs, even as its net loss stood at ₹90 crore. The company attributed the investments in its next phase of growth to international expansion, AI capabilities and strengthening its core payments infrastructure.

Its payments platform processed 400 million transactions daily during the year, with annualised total payment volume exceeding $1 trillion. International markets across Asia-Pacific, Europe, the US, Latin America and the Middle East gained traction during the year as Juspay sought to strengthen its position as a global payments technology provider. The company also expanded its AI portfolio, including Xyne, an open-source enterprise AI platform designed to let organisations build applications and agents while retaining control over their data and model choices.

SPECIAL WINDOW FOR RE-LODGEMENT OF TRANSFER REQUESTS OF PHYSICAL SHARES

Pursuant to the Securities and Exchange Board of India ("SEBI") Circular No. HO/38/13/11(2)2026-MIRSD-POD/ I/3750/2026 dated January 30, 2026, we bring to your notice that another special window has been opened for a period of 1 year from February 05, 2026, till February 04, 2027 ("special window period") to facilitate transfer and dematerialization of physical shares which were sold/purchased prior to April 01, 2019. The special window shall be available for (i) re-lodgement of transfer requests which were submitted prior to April 01, 2019, and were rejected/returned/ not attended to due to deficiency in the documents/process/or otherwise and (ii) fresh lodgement of transfer requests which were not submitted prior to April 01, 2019, provided that the original share certificate is available.

The shares transferred during this special window period shall be mandatorily credited to the transferee only in demat mode and shall be under lock-in for a period of one year from the date of registration of transfer. Such shares shall not be transferred/lien-marked/pledged during the said lock-in period. Due process as prescribed under the said Circular shall be followed for such requests. Further, (i) cases involving disputes between transferor and transferee (to be settled through court/NCLT process), (ii) shares which have been transferred to Investor Education and Protection Fund (IEPF) and (iii) re-lodgement / fresh lodgement of transfer requests executed prior to April 01, 2019, where original share certificate is not available, will not be considered during this special window period.

Eligible investors are requested to avail this opportunity by submitting the transfer requests along with all the requisite documents as mentioned in SEBI Circular No. HO/38/13/11(2)2026-MIRSD-POD/ I/3750/2026 dated January 30, 2026 to MUFG Intime India Pvt Ltd (formerly "Link Intime India Private Limited"), the Registrar and Share Transfer Agent (RTA) of the Company within the above stipulated time, whose details are as follows: Postal Address: Surya, 35, Mayflower Avenue, Behind Senthil Nagar, Sowripalayam Road, Coimbatore – 641 028, Tamil Nadu, India Contact: +91 422 231 4792, 253 9835, 253 9836 Email: investor.helpdesk@in.mpms.mufg.com

UPDATE KYC AND CONVERT PHYSICAL SHARES INTO DEMAT MODE:

The shareholders who are holding shares in physical form are requested to update their KYC details / Bank details / choice of nomination / contact information by submitting the Investor Service Request Forms i.e. Form ISR-1, ISR-2, ISR-3, Form SH-13, as applicable and are also requested to convert their physical shares into dematerialized form.

Gold hits 1-week high as inflation woes ease

Gold rose to a one-week high on Friday, as falling oil prices eased concerns around inflation. Spot gold rose 1.3 per cent to $4,186.04 by 1339 GMT. US gold futures for December delivery also added 1.3 per cent to $4,211.20. REUTERS

Crude oil falls on easing supply concerns

Crude oil fell as West Asian supply concerns eased after the US said it would not attack Iran before next month. Brent crude futures dropped $1.10 to $103.18 a barrel by 1328 GMT. US WTI crude futures fell 49 cents to $91. REUTERS

Monetary tightening likely to keep metal prices on leash

RATE WORRIES. Ferrous and non-ferrous metals have come under pressure on fears of a hawkish stance from the US Federal Reserve

Subramani Ra Mancombu
Chennai

Industrial metals, ferrous and non-ferrous, have come under pressure over the past few weeks on fears of a more hawkish stance from the US Fed.

Further monetary tightening will be a key downside risk for them for the remainder of the year, analysts said.

"Industrial metals have come under broad pressure in recent weeks, falling 3.3 per cent month-on-month as of October 7 on a more hawkish Fed... Individual supply and demand fundamentals, however, continue to dictate relative performance, with some metals proving more resilient than others despite mounting macroeconomic headwinds," said research agency BMI, a unit of Fitch Solutions.

"Prices of industrial metals like copper, steel and aluminium remain highly responsive to incremental signals from geopolitical activity, manufacturing demand and policy-driven shifts," said US-based multinational financial services firm JP Morgan.

IRAN WAR MAY EXTEND

BMI said with the US-Iran conflict expected to extend into 2027, inflationary pressures are likely to stay elevated for a longer period, reinforcing expectations of a higher-for-longer interest rate environment.

"This is likely to weigh on industrial metals demand expectations and limit upside across the complex," it said.

CHINA-US TUG OF WAR

Australia's Office of Chief Economist (AOCE) said hostilities in West Asia and between Russia and Ukraine pose ongoing risks to commodity markets.

JP Morgan said a tug of war between the US and China will drive up copper prices, while the Hormuz Strait will decide the prices of aluminium and the steel market will be regional-specific.

BMI said despite mounting macroeconomic headwinds, performance across the industrial metals complex has been highly divergent.

"Critical metals exposed to strong long-term structural demand trends stemming from the AI investment boom and the energy transition continue to rank among the strongest year-to-date performers," it said.

TIN, A STANDOUT

Tin has been the standout, rising 33.5 per cent year-to-date to $54,125/tonne as of October 7 on continued investment in AI infrastructure. It has strengthened expectations for a significant expansion in global data centre capacity.

GLOBAL RISKS. BMI said the US-Iran conflict could extend into 2027, keeping inflationary pressures elevated and interest rates higher for longer

As a key input in electronic solder used across servers and other data centre equipment, tin is well placed to benefit from this build-out.

AOCE said demand for copper is being driven by increasing electrification, expansion of electricity grids and AI-related data centre developments.

Aluminium faces headwinds, while lithium is set to post gains, it said. Gregory Shearer, head of base and precious metals strategy at JP Morgan, said the medium-term environment for copper remains supportive, even at current elevated prices of over $14,000 a tonne.

"Continued tight mine supply, ongoing weak production and structurally supported demand trends around electrification tied to data centre capex have not changed, even with the threat of Fed hikes later this year," he said.

Shearer said the aluminium market faces a serious and potentially lasting deficit this year that either escalation or de-escalation of the conflict could drive prices higher.

He said the price of steel remains highly region-dependent, with trade protection measures and supply disruptions serving as key determinants going forward.

RARE EARTHS

BMI said rare earths and lithium have also posted strong gains, rising 27 per cent to $1,10,268 a tonne and 15 per cent to $19,588, respectively, in the year-to-date.

PRICE FORECAST

AOCE expects copper to average $13,460 a tonne this year, zinc $3,393 in 2026-27 and aluminium to rule above $2,900.

JP Morgan expects copper to average at $13,885 a tonne and aluminium at $3,587.

BMI forecast an annual average of $3,280/tonne in 2026 for aluminium, nickel to stay under pressure below $16,000 a tonne, copper to stay elevated and ferrous metals to lag the broader industrial metals complex.

'94% of consumers willing to try cultivated meat'

V Sajeev Kumar
Kochi

A new study by the Good Food Institute India (GFI India) has found that 94 per cent of consumers surveyed are willing to try cultivated meat, indicating strong interest in this alternative method of meat production.

Titled *Cultivated Meat in India: Consumer Awareness, Perceptions, Drivers & Barriers*, the study examines consumer attitudes through eight focus group discussions and 414 online interviews.

SUSTAINABLE PROTEIN

The survey covered urban, affluent non-vegetarian and flexitarian consumers aged 18-44 in Delhi, Mumbai, Bengaluru and Hyderabad.

Initial reactions to cultivated meat were largely positive, with most participants understanding it as real meat produced from animal cells without slaughter.

More than 93 per cent of respondents found the concept relevant and distinctive, while 90 per cent considered it believable.

"As India's meat consumption continues to grow, innovative food technologies like cultivated meat can sustainably and reliably satisfy demand without asking consumers to give up the foods they enjoy," said Sneha Singh, MD of GFI India.

Converting consumer interest into adoption would depend on taste, affordability and accessibility, as well as effective communication about the technology's science and safety, she said.

The study found that consumers viewed cultivated meat as a potential solution to concerns over hygiene, freshness and the ethical implications of conventional meat production.

More than 51 per cent considered it a good source of protein, while 46 per cent perceived it as healthier than conventional meat. Easy availability and affordability were important factors for 44 per cent of respondents.

PRICE HOLDS THE KEY

Price remains a key consideration.

Respondents expected cultivated meat to cost roughly as much as conventional meat for regular consumption and were willing to pay a premium of no more than 15-20 per cent.

The terminology also influenced consumer perceptions. 'Cultivated meat' was the most acceptable term, with 85 per cent of participants rating it appropriate. 'Lab-grown meat' received a 64 per cent acceptance rating, while 'artificial meat' scored 53 per cent, reflecting associations with unnaturalness and excessive processing. The study suggests that consumer interest could create opportunities for cultivated meat to contribute to India's future protein supply.

Wider adoption, however, will depend on competitive pricing, accessibility and consumer confidence, alongside its potential contribution to climate, nutrition and public health goals.

CPCRI develops coconut sap concentrator to cut reliance on cooling, processing needs

AJ Vinayak
Mangaluru

The Kasaragod-based ICAR-Central Plantation Crops Research Institute (CPCRI), with financial support from the Kochi-based Coconut Development Board (CDB), has developed a pilot-scale coconut sap concentrator for hygienic collection and thermal pre-concentration of sap at the tree top.

KB Hebbar, CPCRI Director, told *businessline* that the compact, portable system has a double-jacketed, insulated outer vessel and a food-grade inner container. Fresh sap flows directly from the tapped inflorescence through a food-grade pipe into the heating chamber, minimising exposure to external contaminants.

The device uses a steel-embedded immersion heater to heat the sap at 85-90°C, facilitating water evaporation and pre-concentration.

Its specially designed lid incorporates a waterproof, heat-resistant electrical socket, temperature and level sensors, and sap inlet and exhaust provisions.

A dedicated spadix holder facilitates the transfer of freshly collected sap into the concentrator, he said.

The technology has been jointly patented by ICAR-CPCRI and the CDB as 'A Portable Electric Palm Top Concentrator'. Coconut inflorescence sap is a nutritious natural beverage containing sugars, minerals and other nutrients.

However, its high sugar content makes freshly collected sap highly susceptible to fermentation at ambient temperatures, posing challenges for collection, transportation, storage and processing, Hebbar said.

The new concentrator enables thermal pre-concentration at the tree top immediately after collection.

It runs on electricity and could be integrated with solar power systems, reducing dependence on refrigeration and lowering subsequent processing requirements.

COST ADVANTAGE

An economic comparison showed that tree-top pre-concentration could significantly reduce the cost of producing coconut sugar.

Processing 30 litres of coconut sap into about 4.5 kg of sugar cost ₹294.44 in energy and fuel using the concentrator, compared with ₹632.02 under the conventional chilling-based process.

The estimated production cost of coconut sugar fell from ₹140.45 a kg under conventional chilling to ₹65.43 a kg with tree-top pre-concentration, a reduction of about 53.4 per cent, he said.

Angshu Mallick elected as SEA President for 2026-27

Our Bureau
Mangaluru

Angshu Mallick, SEA President

The Solvent Extractors' Association of India (SEA) has elected Angshu Mallick, Executive Deputy Chairman of AWL Agri business, as its new President for 2026-27.

He holds a Bachelor's degree in Dairy Technology from the National Dairy Research Institute and a Post Graduate Diploma in Rural Management from the Institute of Rural Management Anand.

A media statement said he comes to the presidency with nearly three decades of experience in AWL Agri business. Associated with the company since its inception in 1999, he played an instrumental role in launching and scaling 'Fortune'.

Through 'Fortune SuPoshan', AWL's nutrition initiative, Mallick has been closely associated with efforts to address malnutrition, anaemia and other nutritional challenges across India.. Prior to joining AWL, he headed Dhara operations at the National Dairy Development Board (NDDB) and held various responsibilities across sales, marketing, distribution and exports at the Gujarat Cooperative Milk Marketing Federation (Amul).

Sanjeev Asthana, immediate past President of SEA, said: "His strong business and marketing background, coupled with his deep understanding of the edible oil sector, gives him a unique perspective."

'Low' over Bay raises hopes of N-E monsoon onset

Vinson Kurian
Thiruvananthapuram

The first clear signal of a weather shift over the South Peninsula has emerged, with the India Meteorological Department (IMD) identifying an upper-air cyclonic circulation over the Gulf of Thailand as a potential precursor to the North-East monsoon.

The development comes as the South-West monsoon season draws to a close after a spell marked by severe regional rainfall deficits.

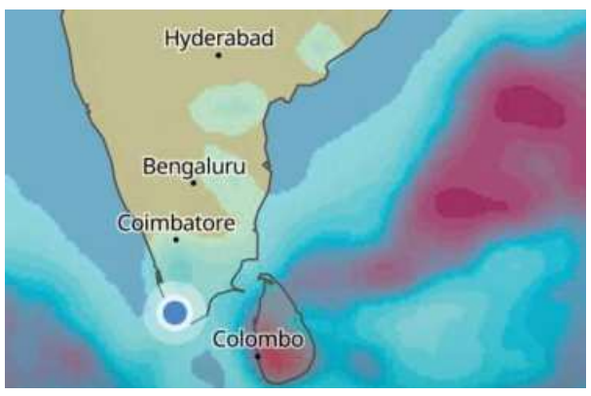

It raises hopes of a second rainy season for the South Peninsula, even as the retreating monsoon leaves its own unsettled legacy.

LOW-PRESSURE AREA

The Bay of Bengal appears poised to drive the next phase.

The IMD expects the circulation over the Gulf of Thailand to move westward under the influence of easterlies and emerge over the Andaman Sea by Sunday.

It may intensify into a low-pressure area over the adjoining south-east Bay of Bengal by Tuesday, potentially setting the stage for a fresh rain-bearing system.

SETTING THE STAGE. The building low over the Bay may drive up a rainfall and initially lash the Sri Lanka and south Tamil Nadu coast, per European weather agency

businessline had earlier flagged the developing circulation and the arrival of easterlies over the Gulf of Thailand and the Andaman Sea.

The system could provide an initial trigger for the North-East monsoon, which brings the principal rainy season to Tamil Nadu and parts of the South Peninsula.

Its onset will depend on the evolution of the Bay system and the establishment of seasonal easterlies, but the ingredients for a transition are beginning to fall into place.

On Friday evening, a trough of low pressure extended from the Comorin area to north interior Karnataka across Tamil Nadu and south interior Karnataka.

The system could draw moisture inland and sustain cloud formation, triggering rain, thunderstorms, lightning and gusty winds across parts of the region.

The broader circulation pattern is adding to the instability.

The Gulf of Thailand system is accompanied by cyclonic circulations over north Bangladesh and east Assam. Another trough extended from west Assam to Telangana across north Bangladesh, the hills of West Bengal and Sikkim, Jharkhand, Odisha and Chhattisgarh.

Together, these features could keep the weather unsettled over the South Peninsula into next week.

KERALA, TN RAINS

The IMD has forecast isolated heavy rainfall over Kerala, Mahe, Tamil Nadu, Puducherry and Karaikal on Saturday.

Isolated to scattered rainfall is likely over coastal Andhra Pradesh, Yanam, coastal Karnataka, Rayalaseema, Tamil Nadu, Puducherry and Karaikal for six more days.

Lakshadweep is likely to receive isolated to scattered rainfall for five days from Sunday. Kerala and Mahe are in for a more persistent spell.

India holds soy cargoes over doubts on origin

Reuters

Indian customs authorities have withheld clearance of soybean cargoes declared as originating in Niger this month as importers failed to provide documents proving the oilseeds were sourced there to qualify for duty-free entry, sources said.

About 1,500 tonnes of soybeans, or 60 containers, were stranded at Jawaharlal Nehru Port (JNPT) near Mumbai, sources from the customs department said.

India allows duty-free imports from countries categorised as least-developed, such as Niger.

MORE SCRUTINY

Customs authorities have stepped up scrutiny of soybean imports claiming Niger origin following an internal alert issued to customs officials last week, the sources said, as concerns rise that Nigerian soybeans are being mis-declared to benefit from duty-free treatment.

The sources declined to be named as they were not authorised to speak to the media.

An alert issued by the Office of the Commissioner of Customs, Nhava Sheva, in Maharashtra, and seen by *Reuters*, advised field officers to use a risk-based approach to verification and thoroughly check transit documents for goods declared as originating in Niger.

Reuters on Monday reported that Indian customs authorities are investigating a surge in such soybean imports.

India's soybean imports declared as originating in Niger rose to 404,429 tonnes in the first eight months of 2026 from zero, Trade Ministry data showed.

Last month, customs authorities issued notices to dozens of importers who had brought in soybeans declared as originating in Niger, seeking documents to verify that the oilseeds were produced there.

Nabventures announces first close of Fund II at ₹450 crore

Our Bureau
Mangaluru

Nabventures, the venture capital arm of the National Bank for Agriculture and Rural Development (Nabard), has announced the successful first close of Nabventures Fund II, securing commitments of ₹450 crore. Building on the strong track record of its earlier funds, which have collectively backed 23 innovative enterprises, the Fund is targeting a total corpus of ₹1,500 crore, including a green-shoe option.

A media statement said Nabventures Fund II will invest across high-potential early- to growth-stage companies in sectors such as agri tech, food and agribusiness, rural fintech, climate-smart solutions, supply chain and logistics, and other innovations driving rural transformation.

In addition to providing growth capital, the Fund will leverage Nabard's extensive nationwide presence and sectoral expertise to help portfolio companies scale their impact and contribute meaningfully to India's agricultural and rural development journey.

KEY MILESTONE

Quoting Shaji Krishnan V, Chairman of Nabard, the statement said the successful first close of Nabventures Fund II at ₹450 crore marks an important milestone in Nabard's continued commitment to fostering innovation across India's agriculture and rural economy. As the sector evolves, there is a growing need for scalable, technology-driven solutions that enhance productivity, strengthen value chains, improve farmers' incomes, and build resilient rural enterprises, he said.

"Our focus is on supporting enterprises that deliver both strong commercial outcomes and meaningful social impact through sustainability, climate resilience, financial inclusion, and livelihood creation," he said.

Steel Exchange India's Sept output hits a record high of 25,095 tonnes

Our Bureau
Mumbai

Steel Exchange India has achieved its highest-ever monthly and quarterly production of 25,095 tonnes in September and 69,617 tonnes in the September quarter.

The recently commissioned reheating furnace has strengthened its production capabilities and supported higher Rolling Mill utilisation. The company's previous highest monthly production of 24,823 tonnes was recorded in August.

Production in September comprises 17,678 tonnes from the Continuous Casting Machine and 7,417 tonnes from the newly operationalised Reheating Furnace.

The increased production capability is expected to be sustained going forward, with the operationalisation of the reheating furnace providing an ongoing enhancement to the company's rebar production capacity.

Overseas demand lifts orthodox tea prices in Kochi auctions

V Sajeev Kumar
Kochi

A strong overseas demand lifted orthodox tea market in Kochi auctions, leading to a ₹10 per kg rise in average price realisation.

Traders said that 97 per cent of the offered quantity of 2,60,784 kg in sale 41 was sold with active procurement by buyers from Russia, CIS countries, Africa and West Asia.

Traders attributed the surge in buying to settling of pending payments of earlier sales, facilitating overseas buyers to place fresh orders in the auctions.

The trend is likely to continue for the time being, depending on the crop availability.

However, rain in the high ranges is a positive sign for quality crop arrivals in the auction platform, traders said.

Auctioneers Forbes, Ewart & Figgis said that brokens was firm and sometimes dearer following quality. CTC leaf market also witnessed good demand with brokens and Fanning firm to dearer.

ORTHODOX TEAS

Anil Goerge Joseph of Tea Trade Association of Cochin said good demand continued for orthodox leaves with select clean, black, well-made whole leaf, mid-leaf and bolder brokens were firm to dearer.

There was active participation from West Asian buyers.

However, he said that the CTC market was lower with popular and good-liquoring sorts were lower by ₹1-2 a kg, with some withdrawals.

According to auctioneers, the quantity offered in CTC dust was 6,45,163 kg with liquoring teas was lower by ₹1-2.

All blenders together absorbed 66 per cent of the total CTC quantity sold.

Orthodox dust was firm to dearer with a 100 per cent sales out of the offered quantity of 6,611 kg.

CDS highlights 5-year defence purchase list for industry to tap

NEW PERSPECTIVE. Companies are now industry partners, not just vendors, says General NS Raja Subramani

Dalip Singh
New Delhi

CDS General N S Raja Subramani chairs a meeting during the inauguration of the residential accommodation for senior sailors and defence civilians of the Navy in Karwar, on Friday ANI

Chief of Defence Staff General NS Raja Subramani on Friday virtually offered a five-year shopping list to domestic industry while acknowledging policy gaps in futuristic technology procurement, which he assured are being addressed.

General Subramani also put forth three asks from the industry on volume, scale, and speed and assured that the relationship between defence forces and the companies is now that of an "industry partner" and not as a vendor.

Speaking at the "Annual Session and Society of Indian Defence Manufacturers (SIDM) Champions Award 2026", the CDS said, "We will give a clear demand signal of over 5-7 years and also technology capability signals which have already been done through prospective development programmes. In order to become better partners, come up with an innovative product that we are compelled to buy or create demand, instead of finger pointing over lack of business."

NEED MORE RANGE

The General was speaking at a session on jointness, multi-domain integration and national deterrence, which was moderated by Baba Kalyani, industry veteran and founder president of SIDM.

The CDS stated that long range missiles are the need of the hour and that they are working with the industry to get home grown products. "We would like to have a missile that fires till 500 km to 600 km first and range can be increased further later," he added. but with a caveat — build it at a cost of less than ₹5 crore so that it's affordable, he said.

"Pinaka has a range of 70-80 kms, but today we want to have an extended version of 300-400 kms. Similarly increase the range of artillery gun ammunition because we cannot change the barrels," he saidto the gathering of representatives of industry, MSMEs and start-ups.

Referring to the air defence capabilities needs, he called on the industry to fulfil requirements of counter-drone systems, be it lasers or directed energy weapons.

SOLUTIONS NEEDED

On the adequate policy backing, he assured the industry that the government has taken cognisance of the absence of an explicit Software-as-a-Service (SaaS) defence procurement model and would come up with some solution.

In another session, Chief of Naval Staff Chief Admiral Krishna Swaminathan urged the industry to invest more in R&D to come up with products that forces can own up. He vowed to give insight into capability requirements, clear visibility of problems faced, faster feedback and handholding to industry besides investing in the programmes.

TN reshuffle: Rajesh Lakhoni to head TNEB

Our Bureau
Chennai

The Tamil Nadu government on Friday effected a bureaucratic reshuffle, with Rajesh Lakhoni replacing Arun Roy as CMD of the Tamil Nadu Electricity Board and Tamil Nadu Power Distribution Corporation Ltd.

SECOND CHANGE

This will be the second replacement in the electricity department in three months, with Roy taking over in July.

Roy will move in as the Expenditure Secretary. The change comes as the State faces power shortages in many regions.

Expenditure Secretary N Venkatesh has been posted as Agriculture Production Commissioner.

A government order says A Karthik has been posted as Home Secretary, replacing K Manivasan.

In April, the Election Commission of India appointed Manivasan as Home Secretary.

Ruling TVK bags both seats in TN bypolls; BJP wins in West Bengal

T E Raja Simhan
Chennai

The ruling Tamilaga Vettri Kazhagam (TVK) has strengthened its position in the Tamil Nadu Assembly by winning the by-elections in Madurantakam and Dharapuram, taking its tally to 109 in the 234-member House, still eight short of a simple majority.

TVK had initially won 108 seats in the April 23 Assembly elections. However, its strength fell to 107 after party leader and Chief Minister C Joseph Vijay, who won from both Perambur and Tiruchirapalli East, retained Perambur and resigned from Tiruchirapalli East.

RESIGNATIONS

The by-elections were necessitated by the resignations of Maragatham Kumaravel and P Sathyabama on May 25. Both had been elected on AIADMK tickets from Madurantakam and Dharapuram, respectively, but resigned within three weeks of their election and joined the ruling TVK.

They contested in the by-polls under the TVK banner.

In Madurantakam, TVK candidate Maragatham Kumaravel (74,048 votes) defeated the DMK's I Paranthamen (54,008 votes), while AIADMK candidate S Kanitha Sampath finished third (47,450 votes), according to Election Commission of India data.

HARD CAMPAIGN

A similar outcome was recorded in Dharapuram, where TVK's P Sathyabama (secured 66,841 votes) defeated the DMK's S Suganya (57,370 votes), leaving AIADMK candidate K Banumathi (45,280 votes) in the third place.

Vijay stepped up the campaign in its final phase, holding a series of roadshows in the two constituencies to mobilise support for the party's women candidates and ensure their victory.

Reacting to the party's victory, Vijay in a social media post said, "This is an election won without spending a single paisa on votes, without confining anyone to a list and humiliating them, without any formula like the Thirumangalam or Erode East formula — relying solely on the formula of love, affection, and relationships, and the formula of safeguarding democracy."

DMK leader MK Stalin taking a dig at the TVK, said the win is a temporary victory for betrayal and the downfall of false image politics has begun. The by-polls were a blatant murder of democracy, he alleged.

BJP BAGS WEST BENGAL

The BJP bagged both Nandigram and Rejinagar seats by comfortable margins. In Nandigram, Hasirani Rath was the victor while Shankharavh Sarkar won in Rejinagar.

SC: TN Speaker's decision cannot be challenged

Aaratrika Bhaumik
New Delhi

The Supreme Court on Friday declined to intervene in the Tamil Nadu Assembly Speaker's decision to close disqualification proceedings against a group of All India Anna Dravida Munnetra Kazhagam (AIADMK) legislators who had supported C Joseph Vijay's Tamilaga Vettri Kazhagam (TVK)-led government during the trust vote in May. The court observed that the Speaker's decision could not be challenged by an "interloper".

TENTH MANDATE

A Bench of Chief Justice of India (CJI) Surya Kant and Justices Joymalya Bagchi and V Mohana dismissed a plea filed by advocate PV Selvakumar, while observing that the sanctity of the constitutional mandate under the Tenth Schedule, which contains the anti-defection law, must be preserved.

Selvakumar approached the Supreme Court after the Madras High Court rejected his petition challenging the Speaker's June 9 decision to drop the disqualification proceedings against the AIADMK legislators. The Speaker had acted on a May 27 letter from the party's general secretary seeking withdrawal of the proceedings. The High Court had held that Selvakumar, had no *locus standi* to interfere.

'Micro, trading MSMEs need targeted support'

Our Bureau
Chennai

(from left) PN Vasudevan, MD, Equitas Small Finance Bank; GSK Velu, Chairman, FICCI Tamil Nadu State Council and R Vijay Anandh, MD and CEO, City Union Bank, at the Vettri Tamil Nadu MSME Summit 2026, in Chennai BIJOY GHOSH

Micro enterprises, which account for about 99 per cent of Tamil Nadu's registered MSME units, need greater access to capital and targeted government support, according to PN Vasudevan, Managing Director, Equitas Small Finance Bank.

MSME SCHEMES

Vasudevan was speaking at the *Vettri* Tamil Nadu MSME Summit 2026 organised by the Federation of Indian Chambers of Commerce and Industry (FICCI) and the Tamil Nadu Small and Tiny Industries Association.

"Lots of subsidies and other kinds of schemes are available for manufacturing MSMEs. But we do not have so many schemes for service, and practically nothing for trading. I think the government has to start thinking in terms of how they support micro MSMEs and especially trading enterprises," he said.

SUBSIDISED INTEREST

He added that the government can support micro and trading MSMEs by exploring options for subsidising interest on loans.

GSK Velu, Chairman of FICCI Tamil Nadu State Council said MSMEs were crucial to Tamil Nadu's ambition of becoming a $1.5-trillion economy by 2036 and called for simpler regulations and improved ease of doing business.

Vijay Anandh R, MD and CEO of City Union Bank, highlighted the role of digital lending in speeding up credit decisions.

Chairman's Statement for the 68th Annual General Meeting of NMDC LTD.

Turnover Rs.31,554 Cr.

PAT Rs.7,421 Cr.

Production 53.16 MnT

Sales 50.24 MnT

Dear Shareholders,

It gives me immense pleasure to present the Annual Report of NMDC Limited for the financial year 2025-26, a year marked by strong performance, significant milestones and continued progress towards our long-term vision.

The year 2026 has marked an important chapter in our national journey. Despite global economic and geopolitical uncertainties, India's progress remains steady and decisive. Our real GDP growth of 7.7% in FY26 reflects the strength of our economy and investment momentum. India is also asserting leadership in technology, innovation and global partnerships.

For NMDC, this has been a year replete with 'Eureka' moments where we discovered and rediscovered our true calling and embarked on a journey of profound transformation to harness our real potential. In FY26, we became the first mining company in India to produce more than 50 million tonnes of iron ore in a single year, achieving record production of 53.16 million tonnes and sales of 50.24 million tonnes, scripting history on stone. The numbers reflect an increase of 20.62% in production and 13.15% in sales year on year, which have been achieved organically, by optimizing and exceeding the capacities and capabilities of the existing production and sales equipments and infrastructure. NMDC has proved its resilience with such a quantum jump in production in a single year which is unprecedented and unparalleled in the industry. Through this commendable performance, NMDC has genuinely contributed to the strengthening of the foundation for India's infrastructure and industrial growth.

This operational excellence was naturally reflected in the financial performance of the Company which registered new echelons in turnover and other financial parameters. Revenue from operations increased by 33.31% to ₹31,554 crore, Profit After Tax rose by 10.88% to ₹7,421 crore and Net Worth increased by 14.39% to ₹33,836 crore. NMDC invested ₹3,384 crore in capital expenditure during the year while continuing to create value for shareholders through payment of interim dividend @ ₹2.50 per share and proposed final dividend @ ₹1.00 per share for FY 2025-26, subject to shareholders' approval.

India's rapid industrialization calls for secure, reliable and responsibly managed mineral resources. Our Vision 2030 of achieving 100 MTPA of iron ore production capacity is therefore not merely a business ambition, but an important contribution towards India's long-term mineral security and economic growth.

Strengthening the Growth Platform

The next phase of NMDC's journey is focused on converting capacity and ambition into safe, efficient and dependable operations. Our 60 MT production target for FY 2026-27 represents an important step towards the 100 MTPA pathway.

Significant progress was achieved in strengthening our integrated mining and logistics infrastructure. The Kirandul–Jagdalpur railline doubling project achieved 98% overall progress, with 140 km completed and operational. Further, the Company has successfully commissioned its Slurry Pipeline Project on 26th September 2026, with the production of the first batch of fired pellets at its Pellet Plant in Nagarnar, Chhattisgarh. This milestone marks the successful integrated commissioning of the entire SPL system, comprising of Iron Ore Processing Plant (IOPP) at Bacheli, the 135 km Slurry Pipeline traversing three districts and 2.0 Million Tonne Pellet Plant at Nagarnar. These projects will enhance evacuation capacity and improve the overall efficiency of the Bailadila value chain.

NMDC also continued to diversify its domestic mineral portfolio. Tokisud North in Jharkhand commenced mining operations in January 2026, marking our entry into domestic coal mining. The ground-breaking of Bailadila Iron Ore Deposit-4, through NMDC-CMDC Limited, was undertaken in February 2026, with commencement of commercial operations. Significant progress in the development of Bailadila Iron Ore Deposit-13, which is also a part of NMDC-CMDC Limited, were undertaken during FY 2025-26, leading to its commercial operation in the months that followed.

It also makes me proud to inform that NMDC, in true recognition of the tireless and dedicated efforts of its human capital, made concerted efforts to provide quality life to its employees in the projects by commissioning new housing and anciliary facilities during the year and also undertaking the commencement of a few other such projects in its townships at Bailadila and Donimalai complexes.

Our earnestness and seriousness to emerge as a world class, global mineral behemoth took a significant leap with the opening of our offices in Dubai, UAE and Sydney, Australia. These offices are expected to support in NMDC's mineral diversification journey abroad.

Technology, Sustainability and People

State of Art Technology and innovation are an integral part of NMDC's operations with an objective to improving operational visibility, decision-making, productivity and safety. Initiatives taken up include Digital Project Management Unit, Automated Sampling, Digitally Enabled Drilling and Blasting, Real-Time Material Visibility and Integrated Sustainability Data Systems.

Our commitment to responsible growth remains equally strong. NMDC is pursuing greater energy and resource efficiency, increased renewable energy utilisation, improved water and land stewardship and lower-carbon logistics. Our Net Zero Strategy and Roadmap provides a structured direction for reducing the environmental footprint of our operations.

Our people remain at the heart of this transformation. Safety continues to be a non-negotiable priority, complemented by focused investments in human capital through skill development, leadership enhancement and digital capabilities.

Through our CSR initiatives, NMDC also continues to contribute to healthcare, education, skill development and community infrastructure, particularly in the regions surrounding our operations.

Corporate Governance

Corporate governance remains a cornerstone of NMDC's organisational ethos, underpinning every aspect of our operations and decision-making. We are committed to creating sustainable long-term value for all our stakeholders including shareholders, customers, suppliers, creditors, the Government of India, State Governments, regulatory authorities, and the communities we serve. Guided by the highest standards of integrity and accountability, we strive to ensure full compliance with applicable laws and regulations, both in letter and spirit. Through transparent governance practices, prudent risk management and responsible decision-making, we continue to strengthen stakeholder confidence and safeguard value creation.

Looking Ahead

The year ahead will be the year of execution, consolidation and transformation. Stabilising our higher production base, reaching the 60 MT production milestone, completing critical infrastructure projects and advancing the next phases of capacity expansion will remain key priorities.

The journey towards 100 MTPA will require operational excellence, disciplined capital allocation, strong project execution, technology adoption and unwavering commitment to safety and sustainability. At the same time, NMDC will continue to explore opportunities for diversification into critical and strategic minerals, both domestically and internationally, in alignment with India's evolving mineral security needs.

I am confident that NMDC has the resources, capabilities and institutional strength to meet the opportunities and challenges ahead. We are building an enterprise that is larger in scale, stronger in capability, smarter through technology and more responsible in its operations.

I express my sincere gratitude to the Government of India, Ministry of Steel, Ministry of Mines, Ministry of Environment, Forest and Climate Change, other Government Departments and the State Governments for their continued guidance and support.

I also thank our employees and their unions, customers, suppliers, partners, host communities, regulators and shareholders for their continued trust and confidence.

Together, we will continue to build NMDC as a globally competitive mining enterprise and remain at the heart of India's journey towards a stronger, more self-reliant and mineral-secure future.

Jai Hind

Alexis Benjamin Riols, GMR Airports ED resigns

New Delhi: GMR Airports Ltd has said that Alexis Benjamin Riols has resigned as the Deputy CEO and Executive Director after the company's co-promoter Group ADP withdrew his nomination. In a regulatory filing, GAL said the nomination was withdrawn owing to Group ADP's organisational changes. "Group ADP has nominated a replacement for Riols, which shall be taken up for approvals in due course and intimated separately," the company said in the filing late Thursday. PTI

BBL at Chennai: Tickets to go on sale from today

Chennai: Ticket sales for the Big Bash League (BBL) opener between Melbourne Renegades and Perth Scorchers to be played here at the MA Chidambaram Stadium will begin on Saturday. The opening match will be held in the city on December 12. Tickets will be available only online at: District by Zomato mobile app and the official website: district.in. PTI

Delhi under security blanket ahead of protest demanding CEC's resignation

CAPITAL ON EDGE. Metro gates shut, 45 trains cancelled, mobile internet services to be suspended partly

Ankita Upadhyay
New Delhi

Delhi has been fortified ahead of Saturday's proposed protest at the Jantar Mantar demanding the resignation of Chief Election Commissioner Gyanesh Kumar.

Police have denied permission for the demonstration; entry and exit gates at 57 Metro stations are set to close, and 45 train services to and from two major railway stations have been cancelled.

The protest has been called by the Cockroach Janata Party (CJP) and the All India Students' Association (AISA), amid demands for accountability over alleged irregularities in the revision of electoral rolls. Delhi Police said permission had not been granted for the October 10 demonstration, citing the short notice, alleged violations of conditions during an earlier protest, and concerns over law and order and traffic management. Police warned that legal action would be taken against those violating prohibitory orders.

POLICE DEPLOYMENT

The Centre has made around 23,000 personnel from the Central Armed Police Forces available to Delhi Police for deployment between October 8 and 12.

The deployment includes five all-women paramilitary companies, with personnel being brought in from several States. Delhi Police have also stepped up security in central Delhi.

TRANSPORT CURBS

As part of the security arrangements, the Delhi Metro Rail Corporation (DMRC) has announced that entry and exit gates at 57 Metro stations will remain closed from 9 pm on Friday until further notice. Interchange facilities will remain available at the affected stations, except at New Delhi Metro station, the DMRC said.

ON HIGH ALERT. Security personnel keep vigil as part of heightened security arrangements by the Delhi Police PTI

Railway services have also been curtailed. A total of 45 trains, out of 165 scheduled arrivals, to and from New Delhi and Hazrat Nizamuddin railway stations have been cancelled between 4 am and 2 pm on Saturday.

Services at other terminals, including Old Delhi and Anand Vihar railway stations, are expected to remain unaffected.

The Central Industrial Security Force (CISF) has also sought passenger manifests for select flights scheduled to arrive in Delhi on October 10, according to sources.

Several schools and colleges in Delhi have shifted classes online, and postponed examinations scheduled for October 10.

The New Delhi Traders Association (NDTA) has advised shop owners and establishments in Connaught Place, including offices and restaurants, to remain vigilant and shut down on October 10 as a precautionary measure. The Delhi government has ordered liquor vends to remain closed on October 9 and 10.

Meanwhile, activists and participants have raised concerns over alleged detentions and restrictions on their movement ahead of the demonstration.

Bharatiya Kisan Union president Rakesh Tikait said in a video message that those wishing to participate in the October 10 demonstration could travel to Delhi.

INTERNET CURBS

Mobile internet services will be suspended within a 4-km radius of the Janpath-Kartavya Path crossing from 10 pm on October 9 to 10 pm on October 10, under an order authorised by the Union Home Secretary.

Indian origin Navi Pillay wins Nobel Peace Prize

Press Trust of India
Oslo

Navanethem "Navi" Pillay
REUTERS

South African jurist of Indian origin Navanethem "Navi" Pillay, a former UN human rights Chief whose work helped shape international law on genocide and sexual violence, won the 2026 Nobel Peace Prize for her efforts to promote peace and uphold international law.

She is also serving as a judge in a case before the International Court of Justice in which The Gambia has accused Myanmar of violating the Genocide Convention.

DEFYING APARTHEID

Born in Durban on September 23, 1941, to Indian parents of Tamil descent, Pillay grew up under apartheid and went on to build a career challenging racial discrimination, defending anti-apartheid activists, and advancing human rights and equality.

In September 2025, the Independent International Commission of Inquiry on the Occupied Palestinian Territory, including East Jerusalem, and Israel, chaired by Pillay, concluded that Israeli authorities and security forces had committed and were continuing to commit genocide against Palestinians in Gaza.

The commission found that four of the five acts listed under the Genocide Convention had been committed and concluded that they were accompanied by the specific intent required to establish genocide.

The commission called on Israel to immediately end the genocide and investigate and punish those responsible.

Pillay's father was a bus driver who worked multiple jobs to support the family.

Pillay studied at the University of Natal and later earned postgraduate law degrees from Harvard University. In 1967, she became the first woman of colour to establish a law practice in South Africa's Natal Province, according to the Institute for African Women in Law. In 1973, she helped secure the right of political prisoners to access legal counsel, according to *South African History Online*.

As a member of the Women's National Coalition, she contributed to the campaign that helped secure a constitutional equality clause prohibiting discrimination.

LANDMARK TRIAL

One of the most consequential chapters of her judicial career was her work at the International Criminal Tribunal for Rwanda, where she was one of the judges in the landmark case against Jean-Paul Akayesu, a former mayor convicted of genocide, crimes against humanity and direct and public incitement to commit genocide during the 1994 Rwandan genocide.

The Norwegian Nobel Committee credited Pillay with playing a significant role in this legal development.

Announcing the Nobel award, the Norwegian Nobel Committee praised Pillay's commitment to universal legal principles and said she had held states and national leaders accountable while bringing hope to victims of violence and conflict.

It described her as one of the most respected international jurists of her time and stressed that the rule of law was essential to maintaining peace and resolving conflicts without violence.

SC backs right to protest, urges govt against blanket transit ban in Delhi

Krishnadas Rajagopal
New Delhi

With the authorities clamping down metro rail and railway services on Friday, a day ahead of the CJP protests, the Supreme Court urged the government to allow metro and railway services in a "regulated" manner.

A three-judge Bench headed by Chief Justice of India Surya Kant said that the restrictions must be proportionate to the anticipated threat to law and order.

ALTERNATIVE VENUE

The court suggested that the government find an open, spacious site where protesters could "peacefully and lawfully" demonstrate in the capital. The October 10 protest demanding the resignation of the Chief Election Commissioner Gyanesh Kumar is expected to take place at the Jantar Mantar, the designated site for voicing dissent in the national capital.

The hearing began with an impromptu oral mentioning by senior lawyers before the Bench. They urged the court to intervene, saying the capital had been "heavily barricaded", making free movement virtually impossible.

TRAVEL RESTRICTIONS

A writ petition filed by CPI (M) General Secretary MA Baby said express trains to Delhi from as far away as Keralam had been cancelled from 2 pm on October 9.

The lawyers said the coordinated, pre-emptive and indefinite restrictions imposed by the capital's police force had caused grave hardships to commuters who had no connection whatsoever with the protest. You can't shut down an entire city because you cannot handle a bunch of protestors," senior advocate Gopal Sankaranarayan submitted.

Senior advocates Nitya Ramakrishnan, Sanjay Hegde, Prashant Bhushan and Subhash Chandran pointed out that 57 metro stations across Delhi had been shut down.

Justice Bagchi stressed that freedom of association was indeed a fundamental right, but it had to be verified whether permission for the protest had been obtained. The judge said that if not, the protest may prove to be illegal. Kapil Sibal said the State could not impose forcible, coercive and restrictive measures before any illegal act had been committed. "Detention centres have been identified. YouTubers have been warned of action. There are heavy checks at the borders of Delhi," he submitted.

The lawyers said the Delhi Police's prohibition orders cited no statutory authority, no order from an Executive Magistrate and no material other than an apprehended "likelihood of unruly mob movement".

Solicitor General Tushar Mehta, said permission was refused for the October 10 protest, as the same organisers had violated assurances given for earlier protests.

Justice V Mohana, who was part of the Bench, observed that the petitioners should also consider "who would be responsible" if anything untoward happened on October 10.

COMMUTERS' RIGHTS

The Chief Justice made it clear that the court was primarily concerned about the "hundreds of thousands of commuters" who would be stranded by the closure of metro stations and public transport.

The court directed that traffic advisories to be extensively published in newspapers and online to avoid hardships to the public on October 10.

Airlines seek release of funds arising from VAT relief on ATF

Rohit Vaid
New Delhi

Airlines have sought the release of funds arising from the relief on value added tax (VAT) on Aviation Turbine Fuel (ATF). Oil marketing companies are withholding these funds to recover losses incurred from selling ATF at reduced prices in June this year, they alleged.

KEPT OUT OF LOOP

The withholding of funds has added to their financial pressure, said airline sources, adding that they plan to approach the Centre to secure their release as jet fuel prices rise again. The carriers said OMCs had not informed them at the time of the June sales that the losses would subsequently be recovered by withholding VAT refunds.

According to the sources, had such a recovery plan been communicated in advance, airlines would have increased fares then to account for the non-availability of VAT refunds. However, recovering those costs now would mean passing on the burden arising from June's fuel sales to passengers travelling today. That would be unfair to passengers, they said, especially when they are facing higher fuel surcharges already.

Nevertheless, the carriers said their dire financial situation could leave them with little choice but to increase fares and truncate flight operations.

THE BACKSTORY

OMCs held domestic ATF prices steady through May and June to limit the impact of higher fuel costs on airlines. On June 1, it was officially revealed that domestic jet fuel sales were resulting in under-recoveries of about ₹30 per litre for OMCs. At that time, a temporary VAT reduction relief measure was provided at two major aviation hubs.

BRACING FOR IMPACT. The carriers said their dire financial situation could leave them with little choice but to increase fares

Consequently, Delhi lowered the levy from 25 per cent to 7 per cent, while Maharashtra reduced it from 18 per cent to 7 per cent, both for six months. Besides, on June 3, the Union Cabinet cleared budgetary support of up to ₹10,000 crore for an ATF Price Stabilisation Fund. The arrangement envisaged interest-free advances to OMCs to enable stable fuel pricing for airlines joining the scheme.

businessline reported in July that the scheme had lapsed as no domestic carrier had entered into the required MoU with OMCs.

With fuel costs rising again, Civil Aviation Minister K Ram Mohan Naidu told reporters on October 6 that the government was examining a revival of the scheme.

Naidu said changes to the framework could be considered after consultations with airlines and OMCs. The Ministry was discussing fuel surcharges and airfares with both sides to arrive at a middle ground, he said.

THE AFTEREFFECT

On the other hand, rising fuel prices prompted airlines to levy higher fuel charges on passengers ahead of the festival season. IndiGo's revised fuel charges came into effect for new bookings on October 6. These range from ₹375 to ₹1,300 on domestic routes and from ₹1,000 to ₹10,000 on international services. According to the airline, ATF prices rose by more than 14 per cent over the previous month, pushing fuel costs to among the highest levels recorded in the past decade.

Air India and Air India Express also revised their fuel surcharges for new bookings from October 9. Their domestic one-way charges range from ₹400 to ₹1,200, based on the distance flown.

Similarly, Akasa Air introduced domestic fuel charges ranging from ₹375 to ₹1,150 from October 9.

Meanwhile, the Federation of Indian Airlines flagged the industry's financial difficulties in a September 25 letter seeking government intervention. Accordingly, it proposed a cost-plus mechanism for domestic ATF pricing, a fixed-rate excise levy and an extension of tax and airport-charge relief.

UP Cabinet approves proposal to name Jewar airport after PM Narendra Modi

Our Bureau
New Delhi

The Uttar Pradesh Cabinet has approved a proposal to name the Noida International Airport at Jewar the "Narendra Modi International Airport Noida Jewar".

According to Uttar Pradesh Chief Minister Yogi Adityanath, the State is emerging as a major aviation and industrial hub under the Prime Minister's guidance.

Adityanath addressed the media at Lok Bhavan, alongside both Deputy Chief Ministers and representatives of National Democratic Alliance (NDA) allies.

The Council of Ministers also passed a resolution congratulating Prime Minister Narendra Modi on completing 25 years as head of government.

The Chief Minister said that before 2017, the State was associated with insecurity and poor living conditions, but is now recognised for good governance, investment and development.

In June, the airport began domestic commercial operations, becoming the third airport in the National Capital Region.

Furthermore, IndiGo operated the inaugural services, with the first flight arriving from Lucknow and the first departure heading to Bengaluru.

Prime Minister Narendra Modi inaugurated the airport in March.

Its first phase comprises one runway and one passenger terminal, with the capacity to handle 12 million passengers annually.

Upon full development, the airport's annual passenger handling capacity is expected to increase to 70 million. The airport's passenger terminal covers around 138,000 sq metres, while its 3,900-metre runway can accommodate wide-body aircraft.

ECONOMIC HUB

Meanwhile, the airport is envisioned as an aerotropolis, with manufacturing, information technology, hospitality, cargo, agriculture and aviation services developing around it to support employment and economic activity across western Uttar Pradesh.

Its integrated cargo terminal, developed through Air India SATS Airport Services Pvt Ltd, has an initial annual handling capacity of 200,000 tonnes. Expansion plans envisage increasing this capacity to 2.5 million tonnes.

A significant part of the cargo capacity is expected to serve western Uttar Pradesh's agricultural economy, providing farmers and agri-businesses with access to domestic and international markets.

Cancer drug margin cap sparks affordability concerns, industry seeks uniform pricing rules

Ankita Upadhyay
New Delhi

Civil society groups have questioned whether the government's 30 per cent cap on trade margins for non-scheduled cancer medicines will make costly treatments more affordable. They called for stronger measures to rein in prices of patented drugs.

While industry bodies have welcomed the move, they have also sought transparent, uniform pricing rules to prevent excessive mark-ups and ensure a level playing field for domestic manufacturers.

NO MATTER WHAT

Jyotsna Singh and KM Gopakumar of the Working Group on Access to Medicines and Treatments said the cap may do little to improve access to several expensive cancer medicines, particularly patented drugs.

WELCOME MOVE. The govt's decision to cap trade margins at 30% of the MRP is expected to help patients save ₹2,500 annually

"For instance, the price of Ribociclib shows that even after its margin was capped at 30 per cent in 2019, its monthly cost rose from ₹58,000 in 2022 to ₹78,000 in 2025... A margin cap cannot bring prices like these within reach of ordinary patients," Singh and Gopakumar said They also sought ceilings on maximum retail prices.

SIMILAR STEP BEFORE

The government had adopted a similar approach in 2019, said JS Shinde and Rajiv Singhal of the All India Organisation of Chemists and Druggists.

According to data cited by the organisation, the MRPs of 526 brands had been cut by half. The chemists' body argued that manufacturers determine and print MRPs, and that excessive mark-ups should, therefore, be addressed at the source.

Malini Aisola of the All India Drug Action Network said the Centre must examine the price at which a medicine first enters the market, rather than focusing only on mark-ups added later. Cancer drugs are often supplied through hospitals rather than purchased directly from retail chemists, she said.

Separately, the Association of Indian Medical Device Industry called for a uniform framework for trade margin rationalisation, warning that the design of price controls could disadvantage domestic manufacturers relative to importers.

India, Bangladesh joint working group on trade resumes talks after 3-year hiatus

Amiti Sen
New Delhi

Port curbs, non-tariff barriers and duty-free access dominate discussions as trade imbalances persist

India and Bangladesh discussed long-standing trade concerns, including port restrictions, non-tariff barriers, and trade through land routes, as the two neighbours resumed their joint working group on trade discussions in New Delhi after a three-year gap amid political uncertainty.

Bangladesh is also worried about the continuation of duty-free access to the Indian market under the SAFTA (South Asia Free Trade Agreement) as it graduates out of its LDC status, sources said. "This meeting was not aimed at taking decisions, as it was at the joint secretary level. But it was important as it restarted discussions to take pending matters forward for decision-making at the next stages," a source tracking the matter told *businessline*.

MARKET ACCESS

The official delegation from Bangladesh that participated in the meeting in New Delhi on October 8-9 was headed by Aysha Akter, Additional Secretary of the FTA wing of the Commerce Ministry.

Bangladesh wants India to ease port-related restrictions, most imposed last year, that have affected exports of key items such as readymade garments, processed food, plastic products, wooden furniture and cotton waste. "Addressing restrictions imposed on shipments of jute and jute products from Bangladesh was also on the agenda," the source said.

Dhaka has also been pushing for the removal of non-tariff barriers, including certain testing and certification requirements, which limit exports.

India wants Bangladesh to lift curbs on shipments of yarn through land routes and remove high tariffs on Indian imports. Bangladesh exported goods worth $1.75 billion to India in 2025-26, while India exported $10.96 billion to Bangladesh. India is Bangladesh's second-largest source of imports after China.

Political ties between India and Bangladesh have been strained since the ouster of former Prime Minister Sheikh Hasina in August 2024 and her subsequent stay in India.

The political climate remains delicate under Prime Minister Tarique Rahman, whose Bangladesh Nationalist Party won the February 2026 general elections, opening the way for a possible reset in ties. The two sides have continued diplomatic engagement, but a full normalisation of ties remains a work in progress, the source said.
