FRAUD CHARGE

NMC's BR Shetty files $15 b suit against BoB

Mumbai: NMC Healthcare Founder BR Shetty has filed a $15 billion civil suit in the Bombay High Court against the Bank of Baroda and 25 other defendants, accusing the state-run lender of facilitating one of the largest corporate frauds linked to the collapse of the NMC and UAE Exchange groups. **p2**

AI IMPACT

Zoho to skip pay increases this year

Chennai: SaaS major Zoho has said that it will not roll out "the usual level" of wage increases for its employees this year. In a post on X, Founder Sridhar Vembu said that the business outlook for the software industry remained uncertain. "AI has raised costs dramatically with a four-fold increase in server prices, which we need for data centres. AI usage is also increasing rapidly, leading to much higher expenses, which we are trying to control," he said. **p9**

FM's remarks on LTCG tax and STT lift markets

CURRENCY CUSHION. The RBI will continue to curb rupee volatility, says Sitharaman

Shishir Sinha
New Delhi

SENTIMENT BOOST. Nirmala Sitharaman, Finance Minister, during the Bloomberg New Economy Forum in New Delhi BLOOMBERG

Finance Minister Nirmala Sitharaman's expressed "keenness" to hear the debate on the Long Term Capital Gains (LTCG) Tax and the Securities Transaction Tax (STT) lifted investor sentiment on Tuesday.

The Finance Minister also said that the Reserve Bank of India will continue taking measures to curb rupee volatility. This statement, combined with measures announced by the central bank on Saturday, helped the rupee strengthen for the third straight session on Tuesday, appreciating around 50 paise to close at 95.28 against the US dollar.

Although the Finance Minister stopped short of signalling any change in the tax regime ahead of the Union Budget, her remarks on LTCG and STT boosted market sentiment, with both the Sensex and Nifty closing up around 1.6 per cent.

BUDGET PREPARATION

Speaking at the Bloomberg New Economy Forum 2026, Sitharaman said: "We are very close to the Budget, and the preparation for the Budget has started. It may not be the best time for me to say what I will or what I will not consider," she said in response to a question on the rationalisation of LTCG tax and STT. "This debate on tax in the market, debate on the Securities Transaction Tax, and the question of treating all asset classes, similarly, has been a very well-discussed topic," she said.

Sitharaman said the government sought to bring different asset classes on a more equal footing two years ago, a move some investors saw as an increase in taxes.

The objective, she said, was to ensure that investors did not choose one asset class over another merely because of differences in tax treatment. "It's healthy to have this debate, and I will be keenly hearing them," she said, adding that the issue also figured in her discussions with investors.

RBI'S RUPEE MEASURES

On the rupee, the Finance Minister attributed the currency's significant depreciation over the past 18 months largely to external challenges, while emphasising that India's macroeconomic fundamentals and foreign exchange reserves remained sound.

"I am sure there are efforts which the RBI would take further to make sure that rupee doesn't become too volatile," she said.

She clarified that the central bank's objective was to contain excessive fluctuations rather than defend a particular exchange rate.

"So, these efforts from the RBI ... will continue not to, as I said, fix the rupee. We would appreciate it if the rupee finds its own (level)," the Minister said.

Sitharaman said the RBI's measures had supported the rupee, which appreciated around 1 per cent on Monday. The currency extended its gains in early trade on Tuesday before provisionally closing at 95.28 against the dollar.

In a separate session at the forum, veteran banker Uday Kotak also weighed in on the currency's valuation, saying: "My personal view is, we should let the rupee find its own level, and over time, the true strength of the economy will play out."

MDR on high-value UPI transactions postponed until after Deepavali

Ashokamithran T
Mumbai

The National Payments Corporation of India (NPCI) has deferred the rollout of the merchant discount rate (MDR) on high-value UPI transactions until after Deepavali, according to a statement on Tuesday. The levy was scheduled to come into effect on October 15.

"The UPI and Services Steering Committee today decided that, keeping in mind the festival season, the MDR on select person-to-merchant UPI transactions shall be implemented immediately after Deepavali, on a date to be notified separately," an NPCI statement said.

The NPCI announced the introduction of a 0.4 per cent MDR on UPI transactions above ₹2,000, along with a sector-wise rate framework, on September 15. The postponement comes against the backdrop of a plea filed by Supreme Court advocate Anjan Datta, seeking a stay on the MDR rollout, saying the process lacked transparency and raised constitutional concerns. While the Supreme Court declined to stay the implementation, it directed the NPCI, the RBI and the government to explain the legal basis for the MDR.

Hyundai Motor Group to invest $15.5 b in India in 6 yrs

BUSINESS DRIVE. Prime Minister Narendra Modi with Hyundai Motor Group Executive Chair Euisun Chung in New Delhi

S Ronendra Singh
New Delhi

The Hyundai Motor Group on Tuesday unveiled a massive $15.5 billion (₹1.47 lakh crore) investment plan for India spanning 2026 to 2032, cementing the country as a vital hub for its global expansion, emerging markets strategy and next-generation mobility innovation.

The initiative was discussed during a meeting between Prime Minister Narendra Modi and Hyundai Motor Group Executive Chair Euisun Chung, the company said. "India remains one of Hyundai Motor Group's most important and strategic markets globally. The past 30 years have been defined by our commitment to India. This investment reaffirms our commitment to India for the next 30 years and beyond," Chung said.

This outlay incorporates the ₹45,000 crore investment announced by Hyundai Motor Company (HMC) last October, sources told *businessline*. The allocation extends to group entity Kia India, specifically targeting R&D. It builds on the commitment made last year by HMC President and CEO Jose Munoz to introduce 26 products, including hybrids and EVs. "Through this investment, we will create more employment and work with partners and stakeholders to support India's continued industrial development," Chung said.

The group will establish a dedicated entity in India to execute investments across R&D infrastructure, future technologies and the broader automotive industry ecosystem. It will also serve as a platform to identify local partners, support strategic partnerships and foster local supply collaborations.

The group will build an automotive ecosystem including expansion of manufacturing capacity across Hyundai Motor India and Kia India. It plans to invest $700 million on its R&D centre.

SEBI extends relief on IPO size tweaks till March

Akshata Gorde
Mumbai

The Securities and Exchange Board of India (SEBI) has extended until March 31, 2027, its relaxation allowing companies to increase or reduce the size of the fresh issue component of their initial public offerings (IPOs) by up to 50 per cent without filing fresh draft offer documents.

The extension follows representations from the Association of Investment Bankers of India (AIBI), flagging practical difficulties faced by issuers and merchant bankers in revising issue sizes during the IPO process. The relaxation will apply to IPOs opening on or before March 31, 2027, AIBI said in a press release on Tuesday.

Sources said the regulator had communicated its decision to AIBI on Monday.

The industry body said the relaxation facilitated a higher number of IPO launches, contributing to nearly ₹1 lakh crore in capital formation in the July-September quarter.

Companies raised ₹90,482 crore through 69 mainboard IPOs during the quarter, while 92 SME IPOs raised ₹4,167 crore, taking the combined amount to ₹94,649 crore.

"IPO sizes may need revision with evolving business needs and market conditions. SEBI's relaxation reduces procedural hurdles and makes the IPO process more efficient," said AIBI Chairman Mahavir Lunawat, who is also the Founder of the Pantomath Financial Services Group.

MORE FLEXIBILITY

He said the measure would provide greater flexibility to issuers and merchant

bankers while safeguarding transparency, due diligence and investor protection.

Under the regular framework, a change of more than 20 per cent in an IPO's issue size requires the issuer to file fresh draft offer documents. The relaxation allows companies to revise the fresh issue component by up to 50 per cent, subject to specified conditions, without restarting the regulatory filing process.

The relief applies to the fresh issue component, through which companies raise new capital, and not the offer-for-sale (OFS) portion, through which existing shareholders sell shares.

Companies must ensure that the primary objective of the IPO remains unchanged and justify the revision. Lead managers must comply with SEBI regulations, conduct due diligence and update the relevant sections of the draft red herring prospectus (DRHP). An addendum reflecting the changes must also be made public.

SEBI had previously extended the relaxation until September 30, 2026, as geopolitical tensions and market uncertainty weighed on investor sentiment.

Separately, the regulator extended the validity of IPO observation letters due to expire between April 1 and September 30, 2026, by six months, giving issuers more time to launch their offerings.

The latter extension ended on September 30, with no further extension announced so far.

Celluloid history, colonial heritage come alive in pandals

Durga Puja is an occasion for Kolkata to push the boundaries of community art

Mithun Dasgupta
Kolkata

From celebrating the birth centenary of legendary actor Uttam Kumar to showcasing colonial-era buildings and broadcasting a powerful anti-war message, Kolkata's big-ticket pandals are pushing the boundaries of community art this Durga Puja season. The themes span from cultural heritage to contemporary global realities.

At bustling Ballygunge in south Kolkata, Samaj Sebi Sangha has created a nostalgic cinematic world of Uttam Kumar, depicting the actor's life, career, achievements and famous films.

GOLDEN ERA REVIVED

"We have used 222 posters of iconic and superhit films of Uttam Kumar and recreated them in a new format. We have showcased legendary songs from his films. When a person enters our pandal, he or she will go back to the golden era of Bengali cinema," Arijit Maitra, General Secretary, Samaj Sebi Sangha, said.

OLD & NEW. Themes of Durga Puja pandals span from cultural heritage to contemporary realities JAYANTA SHAW

RAJ ERA STRUCTURES

The Hatibagan Sarbojanin Durgotsav Committee is trying to create awareness about the need to restore north Kolkata's colonial-era buildings. "Most buildings in north Kolkata were constructed during the British era. But some have become dilapidated and others replaced by high-rises. This year, our theme is based on protecting these nostalgic old buildings and reviving our cultural heritage," said Saswata Basu, Secretary of the Hatibagan Committee.

'Stop wars and make peace' is the central theme of south Kolkata's Bosepukur Sitala Mandir. "Wars are going on. We have depicted that it is god who can make or break a person or a nation," said Kajal Sarkar, Committee President, Bosepukur Sitala Mandir.

The Kashi Bose Lane Durga Puja is showcasing timeless Warli tribal art to celebrate the simple beauty of life at its roots. More than 90 people worked for close to two months to develop the pandal.

BRANDS GALORE

Meanwhile, brands are also making their presence felt. Eveready Industries has brought Bengal's traditional craftsmanship to life with heritage remote-controlled toys at 95 Pally and Mudiali. At Tridhara Sammilani, Pentonic, a writing instrument brand owned by Linc Ltd, created a 5.5-feet representation of Goddess Durga with around 13,000 pens and 13,000 refills made of recycled plastic.

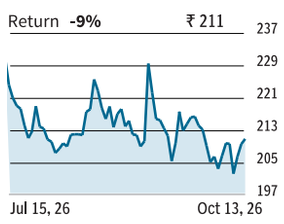

Yet again, Bengal's biggest festival has shown that it is not just a religious event but a living canvas of art, culture and human experiences.

Revenue rose 61 per cent to ₹739 crore. TARIL reported an order inflow of ₹1,169 crore in Q2, marking a 97 per cent rise y-o-y. OUR BUREAU

BR Shetty files $15 billion suit against Bank of Baroda

SERIOUS CHARGES. Alleges fraud, says bank ignored anti money laundering/KYC flags

Our Bureau
Mumbai

NMC Healthcare founder BR Shetty has filed a multi-billion-dollar civil suit in the Bombay High Court against Bank of Baroda and 25 other defendants, accusing the state-run lender of facilitating one of the largest corporate frauds linked to the collapse of the NMC and UAE Exchange groups.

THE ALLEGATION
In the suit, valued at $15 billion (approximately ₹1.44 lakh crore), Shetty, acting through his constituted attorney Shishir Shetty, has alleged that Bank of Baroda served as an "instrument of fraud" through which former senior executives, including brothers Prasanth Manghat and Promoth Manghat, along with other associates, siphoned funds from group entities, concealed debt and exposed him to liabilities through allegedly forged guarantees.

The 84-year-old businessman, once among the most influential Indian-origin entrepreneurs in the Gulf, claims the bank ignored repeated anti-money laundering alerts, permitted suspicious round-tripping transactions, opened and operated accounts linked to sham suppliers, and failed to prevent large-scale diversion of funds between NMC, UAE Exchange, Neopharma and related entities.

According to the plaint reviewed by *businessline*, Bank of Baroda's internal teams and regulators had flagged concerns over KYC lapses and unusual transactions years before NMC's collapse in 2020. The suit alleges that despite these warnings, the lender continued extending credit, rolled over facilities without adequate security, and concealed its true exposure from auditors.

Shetty has further contended that several loan guarantees relied upon by the bank bear forged signatures and that certain accounts were operated without his authorisation. He has cited forensic reviews, a graphologist's reports and ongoing investigations by enforcement agencies to support allegations that signatures and instructions were fabricated.

'WEAKENS EFFORTS'
The lawsuit comes months after Bank of Baroda reached a settlement of about $600 million with NMC's joint administrators in Abu Dhabi proceedings related to fraud and alleged AML failures. While the settlement was reached without any admission of liability, Shetty argues that it weakens the bank's efforts to recover dues from him based on personal guarantees arising from the same set of facts.

Apart from direct and consequential damages, Shetty is also seeking an additional $5 billion from Bank of Baroda for the alleged loss of reputation and goodwill.

Bank of Baroda did not respond to *businessline*'s email on the matter.

A BIRD'S EYE VIEW

- The issue relates to a largescale diversion of funds between the NMC and UAE Exchange groups
- NMC Healthcare, founded by Shetty, collapsed in 2020 after a short-seller report on its debts and accounting fraud
- Shetty was once among the most influential Indian-origin entrepreneurs in the Gulf
- The suit comes after the bank and NMC administrators arrived at a $600 million settlement in July 2026

Govt has no straight answer to queries from Advanced Chemistry Cell PLI bidders

M Ramesh
Chennai

Tuesday (October 13) was the last day for submission of bids for 10 GWh of battery cells for availing oneself of subsidies under the PLI for Advanced Chemistry Cells scheme. But the government has given evasive responses to potential bidders' queries seeking clarification.

The Ministry of Heavy Industries, which administers the scheme, has responded to all but four of the 265 queries raised by prospective bidders with one of two standard replies: "Provisions of the bid documents shall prevail" or "The relevant provisions of the bid documents are self-explanatory".

The technical bids for the scheme are scheduled to be opened on October 14.

THE REALITY
The responses, issued ahead of the Tuesday deadline, leave several substantive questions about eligibility, technology definitions and capacity measurement without specific clarification. The pattern is significant given the gap between capacity awarded under the scheme and manufacturing capacity actually installed.

STILL UNCLEAR. The queries include questions on the eligibility of vanadium redox flow batteries, how their capacity and domestic value addition would be calculated, and which applications qualify as grid-scale stationary storage GETTY IMAGES

Of the 50 GWh envisaged under the ACC PLI programme, 40 GWh has been awarded, while installed capacity remains below 2 GWh.

The queries include questions on the eligibility of vanadium redox flow batteries, how their capacity and domestic value addition would be calculated, and which applications qualify as grid-scale stationary storage. These are material issues for firms assessing whether their proposed technologies and business models meet the scheme's requirements.

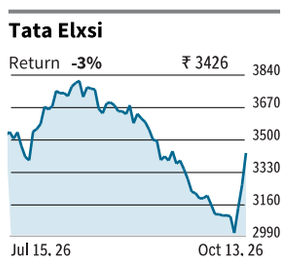

THE QUERIES
For instance, one of the bidders pointed out that unlike lithium iron phosphate cells, the energy capacity of a flow battery depends on the stack, electrolyte and tanks together. It sought clarification on how the government would define the qualifying ACC unit and calculate committed capacity, value addition and subsidy. The response said the relevant provisions of the bid documents were self-explanatory.

Another sought the "exact definition and eligibility of grid-scale stationary storage applications". The response was: "Provisions of the bid documents shall prevail."

The four responses outside the two standard formulations comprise two stating that the queries did not pertain to bid documents, one referring the bidder to the definition of "Advanced Chemistry Cell/ACC" in the Programme Agreement, and one to an appendix.

The unanswered questions come as the Ministry prepares to select manufacturers for the final 10 GWh tranche. The lack of specific responses to prospective bidders raises concerns: whether companies have sufficient clarity on the scheme's requirements to make investment and bidding decisions with confidence.

Tata Elxsi's Q2 profit rises 10%, revenue up 15%

Press Trust of India
New Delhi

Tata Elxsi has reported a net profit to ₹170.30 crore during Q2 FY27, up 10 per cent from ₹154.82 crore in the year-ago period.

Revenue from operations rose 14.98 per cent to ₹1,055.66 crore. "We have delivered strong operational excellence and resilient growth across customers and verticals in a volatile environment," CEO and MD Manoj Raghavan said.

Transportation vertical grew 2 per cent q-o-q in constant currency terms while the media and communications and healthcare verticals grew 3.4 per cent and 3.5 per cent, respectively.

Sameera Group enters industrial warehousing

T E Raja Simhan
Chennai

Real estate developer Sameera Group plans to invest ₹1,500-1,800 crore over the next few years to develop five to six industrial parks in Tamil Nadu. The move marks the company's entry into industrial warehousing as a developer and landlord.

Hitherto, the company has been providing land to its clients for industrial warehousing, its MD M Jayakumar told *businessline*.

Its first project, at Singadivakkam village in the Sriperumbudur-Kancheepuram industrial belt, will involve an investment of ₹150-170 crore to develop about 4.5 lakh sq ft of warehouse space on 16 acres. It's learnt that the tendering process is under way.

IN TALKS
Construction is also expected to begin after the tender process is completed. The group is in discussions with a potential tenant, but no lease has been finalised yet, he said.

The group has already acquired some land parcels and identified additional locations for its expansion.

The company expects demand to be supported by Chennai's established industrial ecosystem, labour availability and infrastructure. It cited leasing activity of about three million sq ft in the Chennai market in the first half of 2026 as an indicator of demand.

The proposed warehousing expansion will be funded through a combination of the group's internal cash flows and bank borrowings, he said.

FMCG companies face uneven FY27 earnings as input costs rise

Amit Vijay Mohile
Mumbai

FMCG and paint companies are heading into the Q2 earnings season with expectations of double-digit sales growth. But rising raw-material costs and intensifying competition threaten to squeeze margins, leaving profits trailing revenue at several companies.

Brokerage forecasts for FY27 point to divergent fortunes. Britannia and HUL are expected to report slower profit growth than sales, Emami's earnings could stay unchanged, while Marico, Nestle India and Titan are projected to deliver stronger profit increases.

SALES RECOVERY
PL Capital expects Britannia's FY27 revenue to rise 10.7 per cent to ₹21,208 crore, but adjusted profit to increase only 6.4 per cent to ₹2,703 crore. HUL's standalone revenue is forecast to grow 9.5 per cent to ₹67,880 crore, while profit increases 6.1 per cent to ₹10,790 crore.

PAIN POINT. Brokerages expect sustained inflation and weaker demand to pressure companies' earnings

Emami faces a sharper divergence, with revenue projected to rise 14.3 per cent but profit remaining almost unchanged. HDFC Securities expects around 12 per cent revenue growth across its FMCG coverage, while Systematix forecasts approximately 13 per cent for its 10 tracked companies.

MARGIN SQUEEZE
Britannia's quarterly revenue could increase 11.7 per cent, supported by an anticipated volume growth. Yet, its EBITDA is forecast to rise only 4.8 per cent as sugar, palm oil and fuel costs rise.

Emami's quarterly revenue is expected to increase 18.2 per cent, helped by acquired brands and a favourable base. But EBITDA margin could contract 200 basis points. Jyothy Labs faces a steeper squeeze, with profit forecast to fall 52.2 per cent alongside an 811 bps contraction in EBITDA margin.

THE CONTRAST
ACMIIL expects Godrej Consumer's quarterly revenue to increase 16.7 per cent and adjusted profit to rise 50.7 per cent. HDFC Securities expects a more modest profit increase of about 10 per cent. Marico stands out as a beneficiary of easing commodity costs. Nomura estimates copra prices are about one-third below year-earlier levels, while Emkay expects cheaper inputs and an improved product mix to support EBITDA growth.

HDFC Securities remains underweight on FMCG, warning that sustained inflation and weaker demand could pressure earnings. The coming results will test whether consumer companies can recover rising costs through pricing without sacrificing volumes or market share.

Volvo eyes bigger share of India's luxury EV market

NEW LAUNCH. The EX90 electric SUV it launched is priced ₹1.26 crore, undercutting peers Kia and Mercedes

Our Bureau
Mumbai

Swedish automaker Volvo Cars' Indian subsidiary has launched its EX90 electric SUV at ₹1.26 crore, undercutting the Kia EV9 GT-Line by ₹4 lakh and the Mercedes-Benz EQS SUV 580 by ₹23 lakh. The launch comes as the company seeks to regain ground in India's increasingly competitive luxury EV market.

Volvo's share of luxury EV registrations fell to 7 per cent in FY26 from 12 per cent a year earlier, even as the segment expanded 61 per cent, according to Vahan data. The EX90 gives Volvo a new flagship, but deliveries beginning only in January 2027 will delay its sales contribution. Customer drives start in November, though.

Seven luxury carmakers — BMW, Mercedes-Benz, JLR, Tesla, Volvo, Porsche and Lamborghini — registered a combined 4,534 vehicles in September, per Vahan. Of which, Volvo clocked just 126. Its broader India business has also faced pressure. Overall registrations fell 2 per cent to 1,647 in FY26.

COST PRESSURES
Rising shipping and transportation costs present another challenge. Industry sources said unpredictable shipping conditions have increased logistics expenses, raising the possibility of further price revisions. Volvo had already increased prices by up to ₹1 lakh in May.

Jyoti Malhotra, MD, identified customer experience, dealership expansion and charging infrastructure as priorities to build sustainable sales.

Hyundai bets on Talegaon as export hub, capacity expansion fuels growth ambition

Amit Vijay Mohile
Mumbai

Hyundai Motor India's (HMIL) Talegaon expansion is central to its ₹45,000 crore investment roadmap, which includes 26 product launches by FY30 and a target of exporting about 30 per cent of vehicles produced in India.

The automaker is ramping up production faster than initially planned, advancing third-shift operations to nearly two years ahead of schedule.

ADDITIONAL CAPACITY
The Talegaon unit, which began producing passenger vehicles in October 2025, has an installed annual capacity of 1.70 lakh vehicles.

Combined with Chennai's 8.24 lakh capacity, Hyundai's total manufacturing footprint in India now stands just shy of the 1 million mark. The company plans to raise capacity to 1.14 million units annually by 2030.

The additional capacity comes at a crucial time for HMIL, which has faced rising competition and production constraints in recent years. The company showed signs of recovery in September, with domestic sales rising 10.9 per cent year-on-year to 57,166 units and exports increasing 10.4 per cent to 20,750 units.

THE OPPORTUNITY
SUVs account for only 13-14 per cent of Hyundai's exports versus roughly 70 per cent of domestic sales, leaving significant room for growth overseas

ROOM FOR NEW SUVS
Shifting the production of its SUV Venue to Talegaon has freed up the company's manufacturing capacity in Chennai for two upcoming models: the Bayon petrol-powered mid-size SUV, scheduled for launch next week, and a compact electric SUV due this fiscal.

HMIL Managing Director and CEO Tarun Garg recently told investors that both vehicles will be manufactured in Chennai, supporting higher capacity utilisation and improved profitability.

The company is banking on these launches, higher Venue volumes and fleet sales to regain market share, with a long-term target of 15 per cent by 2030.

EXPORT PUSH
Hyundai plans to export Venue's new model to around 35 markets. By July, the company had already received orders from more than 30 global markets.

Accordingly, the plan is to increase Venue exports from about 6,500 units currently to 15,000-20,000 units annually. SUVs account for only 13-14 per cent of Hyundai's exports, leaving significant room for growth overseas.

The Talegaon facility has already dispatched more than 62,000 Venue SUVs in its first six months of operations.

Motilal Oswal expects Hyundai's volumes to grow about 9 per cent annually between FY26 and FY28, driven by new launches and a strong export order book. ICICI Securities believes new products and higher capacity will help Hyundai regain market share.

By 2028, Hyundai wants to expand Talegaon's capacity to 2.5 lakh and then to 3.2 lakh by 2030.

Unkind cut

No case for making insured patients 'co-pay' hospital bills

After decades of prioritising industry growth over consumer welfare, the Insurance Regulatory and Development Authority of India (IRDAI) has only recently turned its attention to policyholder issues. The recent consultation paper on reforming selling practices for insurance products sends a firm message that the regulator is now striving to make insurance a more palatable product. However, the insurance industry doesn't seem to have woken up to smell the coffee.

The general insurance industry is piloting a proposal to impose a mandatory 10 per cent co-payment clause on all retail health insurance policies from January 1, 2027. The regulator must push back against this idea. A 10 per cent compulsory co-payment clause on all health policies is untenable on three counts. One, the primary case for health insurance in India is that the average low-income household is only one medical emergency away from penury. The latest 80th round of the NSS Health Survey conducted in 2025 showed that for ailments requiring hospitalisation, nearly 58 per cent of rural patients and 65 per cent of urban ones used private hospitals. Despite 44 per cent of them being covered by government schemes or insurance, they ended up incurring an average of ₹50,508 as out-of-pocket expenses on hospitalisation. This is quite an unaffordable sum for a country where per capita income hovers at about ₹2 lakh per annum. Therefore, the policy objective should be to reduce out-of-pocket expenses and enhance insurance payouts and not the other way around.

Two, even for the fully insured policyholders, health insurers seldom pay claims in full. Data from the latest IRDAI annual report show that in FY25, health insurers settled only 71 per cent of the claims filed, by value. This suggests that health policyholders are already informally 'co-paying' part of the bill. Building in a mandatory 10 per cent co-payment on top of this would place an unfair burden on them. Three, retail health insurance buyers in India are already burdened with steep premium rates and patchy claim payouts that cross-subsidise cheaper group plans. Enforcing a co-payment clause on retail buyers alone would worsen this anomaly.

While proposing this clause, insurers have argued that hospitals tend to over-charge patients by jacking up bills and ordering unnecessary diagnostic tests. But this is not a battle that individual patients can fight when under emotional and physical strain. Meanwhile, a Parliamentary Standing Committee has issued a detailed report on reforming hospitals, with proposals for room rate caps. The health insurance industry must contribute to fine-tuning these proposals, so that insurers and hospitals can agree on reasonable charges for procedures and room rates. As for co-payment, insurers already have optional co-payment clauses in place for policy buyers seeking lower premiums, or those presenting higher risks. This practice can continue on a case-to-case basis without a universal co-payment clause.

India isn't a zero in AI

SHAPING UP. Domestic firms are making progress in sovereign, voice, semiconductor and specialised AI models

GETTY IMAGES/ISTOCKPHOTO

AJAI CHOWDHRY

There has been talk that India is zero in AI. Chairman of Rockefeller International and global investor Ruchir Sharma's observation that foreign investors view India as a "loser in the AI race" triggered a lively debate, with critics arguing that this underplays India's strengths in AI talent, data, adoption and digital infrastructure. The comments captured an anxiety already playing out in the markets: foreign capital was chasing AI winners elsewhere, while Indian IT stocks faced concerns over AI-led disruption.

But India is not zero in AI. Former Infosys CFO Mohandas Pai has described it as the world's third-largest AI power, a view supported by India's third-place ranking in Stanford University's 2025 Global AI Vibrancy Index. Yes, we have some gaps in compute, frontier models and AI infrastructure, but there are important areas where considerable work is happening.

One is sovereign AI. In February this year, the IndiaAI Mission selected 12 organisations and consortia to develop indigenous foundation models, including large and small language models. A PIB report mentions government support worth about ₹2,194 crore for these 12 projects. Sarvam AI, Soket AI, Gnani AI, Gan AI, Avataar AI, IIT Bombay Consortium (BharatGen), GenLoop, Zenteiq, Intellihealth, Shodh AI, Fractal Analytics and Tech Mahindra Maker's Lab have been selected to develop models using Indian datasets.

The benefit of having our own sovereign LLMs is that no one can deny us access to these technologies tomorrow. There is also a cost advantage, as relying on global LLMs could become increasingly expensive. Geopolitical or national-security considerations could also restrict access, as seen when US export controls temporarily limited foreign access to Anthropic's advanced Claude models in June.

EXPANDING IN INDIA

Look at how global LLMs are expanding in India. ChatGPT has attracted a huge user base, and both OpenAI and Anthropic are pushing their products through advertising and promotion. The strategy is to get users hooked with free or low-cost offerings and as they see value, sell them premium subscriptions, like a land-grab strategy.

This dependence on foreign models could come back to haunt us. Look also at data centres. Why are global technology companies investing over $60 billion in setting up data centres in India? We need to see what India gets in return. These facilities use our land, power and water, while the data generated here becomes valuable to the companies operating them. Also, data centres are highly automated and will not create jobs on a scale commensurate with the resources and investment involved. The whole game in the US is about AI infrastructure. But Indian companies like Yotta, Adani, Ctrl S, Sify and Nextra are shaping up.

There is another area in India that is developing beautifully: voice AI. CoRover, one of the early players in conversational AI, developed IRCTC's AI-powered virtual assistant AskDISHA, in 2018. It enabled passengers to book railway tickets conversationally using voice or chat. Today, companies such as Gnani.ai, CoRover, Sarvam AI, Smallest.ai and Skit.ai are building speech and conversational-AI solutions for Indian and global markets.

The opportunity is significant. Rajan Anandan, managing director at Peak XV Partners, estimates that the addressable market for voice AI in India's BFSI sector alone is at least ₹50,000 crore. "Voice AI will be the first $1 billion revenue Enterprise AI category (outside coding) in India," he recently posted on X (formerly Twitter). India's AI opportunity lies in affordable, localised AI, with voice AI and India-specific applications driving mass adoption. The next wave is moving beyond generic AI 'wrappers' towards AI-native applications that solve local problems. These include startups like Kello, an AI-powered recruitment platform based in Bengaluru, that lets hiring teams search resumes and candidate pools using plain, everyday language, TAL, a conversational WhatsApp agent, for automating recruitment and candidate screening, and August AI, which applies AI to healthcare by combining medical intelligence with physical infrastructure to make care more affordable and accessible.

The benefit of having our own sovereign large language models is that no one can deny us access to these technologies tomorrow.

SEMICONDUCTOR AI LAYER

Significant work is also underway at India's semiconductor AI layer. The Ministry of Electronics and Information Technology (MeitY), through CDAC, is funding the development of an indigenous Indian GPU, with SD Sudarsan, Executive Director of C-DAC Bengaluru, leading the effort, targeting GPU specialisation by 2029 and a fully indigenous HPC system by 2030. C-DAC's AI inference chip has already entered trial production in partnership with HCL. Alongside this, approximately 20 startups are working on AI accelerators, including Agrani, Morphing Machines, SandLogic, and Netra Semi, many founded by experienced semiconductor veterans returning from global chip companies.

At the Indian AI Research Organization (IAIRO), we have developed SAMVIT, a platform that enables companies to build specialised small AI models faster. For specific enterprise applications, small AI models can be fast and efficient. Small AI could give India an opportunity to carve out a distinct position in the global AI ecosystem. We can be world leaders here.

This becomes particularly important as enterprises worry about sensitive data leaving their systems. Small models can be trained on relatively compact systems, including machines based on AMD's Strix Halo platform and NVIDIA's DGX Spark, reducing dependence on external cloud infrastructure and expensive, data-centre-grade GPUs. Inference can be run on low-cost AI notebooks.

LLMs will continue to serve applications that need them, but enterprises can address many specific use cases with smaller models at significantly lower costs. India does not necessarily have to replicate somebody else's AI model. It can build an AI ecosystem around its own strengths —sovereign models, voice, applications and Indian languages and smaller, affordable AI. So, is India zero in AI? Certainly not.

Chowdhry is Co-founder of HCL, Chairman MGB (Mission Governing Board), National Quantum Mission, Chairman, IAIRO (Indian AI Research Organisation, and author of the bestselling book 'Just Aspire'

What really protects the small investor?

SEBI board's recent guardrails, which fine-tune the ecosystem rather than arm investors, are likely to be effective

Rachana Baid

On September 24, 2026, SEBI issued a press release listing the decisions taken at its 215th board meeting. The list is long: new Portfolio Managers Regulations, new Settlement Regulations, a Common Advertisement Code, FPI entry into commodity derivatives, a stronger framework for vault managers, depository receipts on REIT and InvIT units, easier voting thresholds for REITs and InvITs, relaxed debt listing norms, a wider accredited investor framework, and a settlement scheme for old illiquid stock options cases.

A cursory glance may suggest none of this is meant for the small investor. Portfolio Management Services (PMS) start at ₹50 lakh and accredited investors need ₹5 crore of market exposure. A retail investor with a monthly SIP might ask: how does any of this protect me? I will never sign a PMS agreement, file a settlement application, inspect a vault, or trade a commodity derivative. Almost every decision sits several layers above where I invest.

The reality is just the opposite. SEBI's preamble states that its core objective is "to protect the interests of investors in securities and to promote the development of, and to regulate, the securities market". Getting markets to work well for investors has been the running thread of SEBI's regulation making, and this board meeting added a few more guardrails.

A PUZZLE WORTH PAUSING OVER

Holger Spamann of Harvard Law School offers a useful frame in 'Indirect Investor Protection: The Investment Ecosystem and Its Legal Underpinnings' (2021). His claim is that we look for the direct effect of a rule on the small investor, while the real effect is usually indirect. Market players have no mandate to look after them. Their protection runs through the rules that keep the ecosystem competitive, solvent, accountable and afraid of getting caught. Good regulation, on this view, is less about arming investors than about tuning the machine they ride on.

Seen this way, the press release looks like a systematic servicing of each channel of indirect protection.

Keeping assets real: The vault manager amendments extend custody discipline to the bullion behind gold and silver ETFs. Stronger vaults backed by higher capital protect ETF unit-holders, who never have to inspect a bar themselves.

Keeping managers accountable: The PMS regulations will not apply to the small investor, but they make managers more accountable and harden a principle across the whole fund ecosystem: client money is never the manager's insurance.

Keeping the professionals competent and the pitch honest: The certification amendments keep a competence floor under everyone dealing with the investing public. The Common Advertisement Code disciplines how the industry speaks to investors: celebrity endorsements only with safeguards, and promotion clearly separated from routine investor service.

CORE OBJECTIVE. To protect investors' interest GETTY IMAGES

Keeping enforcement credible: The Settlement Regulations, 2026 replace discretion with a published formula, disgorge wrongful gains separately, and fast-track small matters so that enforcement capacity concentrates where it deters most. Small investors never appear in a settlement proceeding, but anyone who might cheat them now faces a predictable, calculable price for doing so.

Deepening the informed crowd: FPIs in commodity derivatives, depository receipts on REIT and InvIT units, a portable accredited investor regime, simpler debt listing: each adds informed, competing capital to a venue, and every additional sophisticated participant sharpens the prices at which the uninformed investor transacts.

Keeping governance voice effective: The REIT and InvIT amendments make approvals turn on votes cast rather than units outstanding, and give genuine dissenters a full exit. The retail unit-holder who never votes still benefits when the institutions that do vote can actually carry or block a resolution.

What the press release assumes: SEBI's release does not invoke economic theory, and it does not need to. But it is worth noticing what it implicitly accepts. Not one of the decisions asks the retail investor to read more, vote more, or verify more. The people who will keep their holdings fairly priced, safely stored and honestly managed are professional traders, accredited investors, portfolio managers with liability, vault managers with capital at stake, and an enforcement machinery.

That is what good regulation does: tune the ecosystem so that people who read none of it still hold their investments at something close to fair value, in the form they were promised. That is investor protection, and it is the kind that works when the pre-conditions, competitive markets, accountable intermediaries and credible enforcement, are met in practice.

THE WALL STREET JOURNAL. EUROPE

If the Saudis fight the Houthis, the US can help

Missile and drone attacks by Yemen's Houthis over the weekend have Saudi Arabia reeling. The skies over Riyadh emptied after a Saturday strike on the international airport killed 13 and injured more than 300, and a Sunday attack killed one more. Now comes the test for US policy. Asked Saturday about joining Saudi strikes against the Houthis, President Trump said, "We may. We're going to look at it." Yet the last thing he seems to want before midterm elections is a military escalation. That hesitation may be what Iran and its Houthi militia proxies, whom it arms and finances, are counting on. (NEW YORK, OCTOBER 12)

讀賣新聞 THE YOMIURI SHIMBUN

Unauthorised use of AI-generated imitations must stop

Cases in which third parties use generative artificial intelligence to imitate the voice of a celebrity without permission have become a growing concern. A court ruling that has, for the first time, recognised that a person's voice is protected by publicity rights will likely serve as a deterrent against such actions. In a lawsuit concerning the creation of voice clones, the Tokyo District Court has ruled that a voice is subject to legal protection. In the lawsuit, popular voice actor Kenjiro Tsuda claimed that videos using AI-generated copies of his voice were posted on the video sharing platform TikTok without his permission. Tsuda had called on TikTok's operator to remove the videos. The videos were deleted after the lawsuit was filed, so the court dismissed Tsuda's claim. However, what makes this ruling significant was the court's acknowledgment that "a voice is a symbol of one's personality." (TOKYO, OCTOBER 13)

Propping up the rupee

A rupee under pressure is like a bucket with a slow leak: patching it quickly may feel reassuring, but families only relax when they know where the hole is ('Signs of nerves', October 13). The RBI's weekend steps may calm the market for a few days, yet calm that arrives without explanation can look like worry in disguise. The deeper cure lies at home. Every dollar we do not spend on imported fuel is a dollar the rupee need not defend. Faster adoption of electric buses, rooftop solar and home-grown biofuels, along with stronger exports of services and crafts, would give the currency sturdier legs. Households can help too, by choosing public transport and local goods when practical. Central banks can steady a currency for a season, but only a nation's habits can steady it for a generation.

Keynes revisited

This refers to the article 'Nobel prize for macroeconomic stabilisation' (October 13). Robert Hall and Michael Woodford have been awarded the Nobel prize for economics for their work on how governments can manage economies in the midst of crisis. It is in a sense a revisit of Keynesian theory that when markets are extremely volatile, without government intervention they cannot stabilise. It is even more so today with the interconnected global economy. This has been showcased a number of times including during the Lehman crisis, Covid and now during the West Asia crisis.

Pradip Menon
Kochi

Law of demand

The Nobel Prize winners in Economics, have not said anything new. For instance, Hall has said that if people expect increase in future income, they will be optimistic and spend more. This is in fact one of the conditions of the economic law of demand. Actually, if prices of commodities fall, demand for them should contract, provided consumers' income doesn't increase. Put differently, if consumers expect increase in income, they will demand more of commodities even if their prices rise. This (like Giffen's paradox) is an exception to the law of demand.

Similarly, Rutherford has also based his theory on future expectations of business owners. He has said that if a business believes that if interest rates, its costs and competitors' prices would go up, then it would set a higher price for its commodities. This is not a revolutionary idea. Macroeconomic decisions of economies are largely based on microeconomic theories and practices.

Ready for business?

Examining what global reforms mean for India

Rohini Rangachari Karnik
Priyanka Goswami

As India enters the World Bank's Business Ready assessment, reforms in France, the European Union and the Philippines offer three lessons: decide fundamental questions early, reduce regulatory fragmentation and give investors long-term certainty.

For many years, the World Bank's Ease of Doing Business ranking influenced how governments positioned themselves in the eyes of investors. It measured matters such as starting a business, paying taxes, trading across borders and enforcing contracts before placing economies in an annual league table. The ranking was discontinued in 2021 following concerns over data irregularities and ethical lapses.

A KEY QUESTION

Its successor, Business Ready, or B-Ready, takes a broader approach. It examines regulatory frameworks, public services and operational efficiency across the life cycle of a business. As India joins the assessment in 2026, the important question is not how many reforms it has announced, but whether it has become consistently easier to establish, operate, expand and exit a business in India.

Recent reforms in France, the European Union and the Philippines provide three complementary insights. In May, France adopted its law on simplifying economic life. Among its principal provisions is one that allows critical questions concerning major projects to be considered earlier. For instance, whether a project serves an "imperative reason of overriding public interest" can be examined at the project declaration stage, rather than emerging much later during environmental approvals.

India's renewable energy experience offers a useful parallel. Solar and wind projects in Rajasthan and Gujarat were impacted between 2021 and 2024, after concerns over transmission lines crossing the habitat of the critically endangered Great Indian Bustard.

An earlier, coordinated determination — balancing renewable-energy needs with conservation requirements and identifying permitted corridors and mitigation measures — could have provided greater certainty to developers and conservation authorities alike. France's reform

BUSINESS READY. Takes a broader approach BLOOMBERG

also reflects a broader regulatory principle: before introducing a new rule, governments should assess its necessity, determine whether it duplicates an existing obligation, quantify its likely compliance cost and provide businesses with adequate time to adapt.

India's 2023 laptop import controls, or the quality control orders issued from time to time for different industries, illustrate the point. A new licensing/quality requirement affects several international companies, especially when businesses are given limited time to comply. Following industry representations, the government has often deferred their applicability. This underscores the point that even a legitimate objective to promote domestic manufacturing is more effective when preceded with prior stakeholder consultation and accompanied by a realistic transition period.

The EU has a common market, but businesses continue to encounter divergent national requirements, duplicated procedures and uneven enforcement. Its single market strategy and 'One Europe, One Market' roadmap seek to simplify rules and remove harmful internal barriers.

INDIA'S CHALLENGE

B-Ready allows India to move the discussion from reforms announced to results experienced. France demonstrates the value of early decisions and regulatory impact assessment; the EU, the importance of coordination; and the Philippines, the power of long-term certainty.

India's challenge is to bring all three together. The jurisdictions that attract and retain global capital will not necessarily have the fewest rules, but ones that are clear, coordinated and reliably administered.

Can GOBARdhan fuel efficiency?

THE TEST. The success or failure of transition to circular bio-energy will be decided at the farm gate, not in a boardroom

CAPITAL IDEAS.

RICHA MISHRA

Is GOBARdhan the answer to India's energy paradox? The country remains trapped in a stark dual-deficit contradiction: it incinerates millions of tonnes of domestic agricultural residue while exporting billions in capital to import foreign liquefied natural gas (LNG).

Every winter, North India chokes on toxic stubble smoke while urban grids rely on expensive, imported foreign fuel. The Union Cabinet's latest mandate solves both crises at once. Through the newly launched ₹23,731-crore GOBARdhan scheme, India is establishing a massive 10-year circular bioenergy framework.

The goal? Turn environmental hazards into compressed biogas (CBG), boosting rural income and driving true national energy sovereignty. Administered under the Ministry of Petroleum and Natural Gas, this 10-year master plan (FY27 to FY36) targets a 10-fold growth in CBG production. It aims to inject over ₹75,000 crore into the national GDP and slash foreign gas import bills by more than ₹40,000 crore. Yet, the policy's ultimate hurdle is not financial architecture or chemical engineering; it is the anthropological and logistical challenge.

VOLATILE ENERGY PRICES

India imports 50 per cent of its natural gas requirements, exposing the economy to volatile international prices and geopolitical risks. "As an example, in FY25, LNG import bill accounted for $15.2 billion (approximately ₹1.28 lakh crore, assuming average exchange rate of ₹84/dollar); though the FY26 data is not yet published, it is surely a sharp jump over previous year, owing to the prolonged West Asia crisis and plummeting rupee against the dollar," according to the Indian Biogas Association (IBA).

"Even with a conservative estimate of 1,500 fully functional CBG plants in the coming years, the trade deficit on

GROUND REALITY. To make GOBARdhan viable, the state must engineer a deep behavioural shift GETTY IMAGES/ISTOCKPHOTO

account of natural gas import could be reduced by one-third from the current level or $5 billion (approximately ₹40-lakh crore)," said the IBA.

Global LNG operates with centralised efficiency. Supertankers dock at high-tech terminals, immediately gasifying cargo and pumping a steady molecular stream into trunk networks. By contrast, a CBG plant relies on a chaotic, hyper-localised supply chain. To match the energy density of a single gas shipment, an anaerobic digester requires thousands of tonnes of low-density agricultural residue or wet cattle dung, say subject experts.

FINANCIAL RISKS

The policy brilliantly manages financial risk for developers. It enforces a mandatory compressed biogas obligation (CBO) on city gas distribution networks, scaling from 3 per cent to 5 per cent. It sets an administered, stable benchmark price of ₹2,110 per MMBtu (₹105/kg) to shield investors from global price volatility.

However, policy cannot legislate away

The policy's ultimate hurdle is not financial architecture or chemical engineering; it is the anthropological and logistical challenge

physical geography. If the village-level supply gridlocks, a multi-crore facility goes cold.

India is trying to substitute liquid, global commodity markets with a highly fragmented and seasonal rural transportation network.

TIME-SENSITIVE LIABILITY

For generations, the Indian farmer has viewed crop residue as an expensive, time-sensitive liability. In the narrow two-week window between the paddy harvest and wheat sowing, stubble is a ticking clock. Setting it ablaze costs a single matchstick and zero labour hours. To make GOBARdhan viable, the state must engineer a deep behavioural shift. Farmers must see this liability as a commercial feedstock. This requires more than an announced procurement price. It demands automated balers, localised storage depots and guaranteed prompt payouts.

If the factory gate price does not comfortably exceed the cost of the labour and diesel required to harvest it, the matchstick will always win. An uncritical look at the GOBARdhan unified registration portal reveals rising numbers, but a deeper dive exposes a sharp geographical skew. Out of the commissioned plants, a vast majority are clustered in industrialised, or highly cooperative dairy States such as Gujarat and Uttar Pradesh.

These regions succeed because they already possess organised agricultural aggregators, or dairy cooperative networks. If the scheme remains confined to these progressive pockets, it will fail its macro-environmental goals.

For GOBARdhan to succeed, it must expand footprint across the eastern and southern agricultural belts. The government must seed units in areas characterised by smaller landholdings and lower mechanisation. This guaranteed structural de-risking has fundamentally altered corporate calculations, drawing India's largest conglomerates into the bio-energy fold.

Reliance Industries Ltd (RIL) has announced a massive ₹1-lakh crore capital expenditure in Andhra Pradesh to establish dedicated CBG plants. Adani TotalEnergies is systematically approaching the sector with long-term sourcing models. Rather than relying solely on erratic seasonal residue, Adani has pioneered farming contracts for Napier grass to secure a consistent feedstock baseline for its massive processing facilities.

THE CONSTRAINTS

Even the capital muscle of Reliance and Adani cannot easily bend the physical laws of rural logistics. When shifting from mega refineries to decentralised biogas, industrial players face distinct operational constraints: the sourcing radius paradox, seasonal storage glut and counterparty friction.

Because agricultural waste has a low energy density relative to its bulk weight, transporting it over long distances destroys profitability. Agricultural waste is hyper-seasonal, and aggregating an entire year's feedstock within a brief 20-day harvest window creates massive inventory risks. Industrial giants are optimised to negotiate multi-million-dollar supply contracts with single, corporate entities. In the CBG domain, they must suddenly manage thousands of fragmented relationships with micro-scale farmers and independent tractor operators.

The success or failure of transition to circular bio-energy will be decided at the farm gate and not in a boardroom. It rests upon the efficiency of the humble village trolley, the reliability of the local aggregator and the willingness of the smallholder farmer to participate.

Indian chemicals: From market darlings to a slow recovery

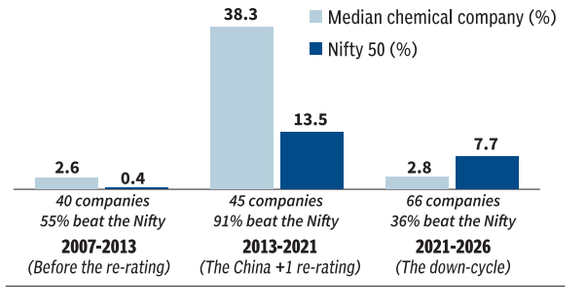

India's specialty chemicals sector is emerging from a downturn marked by excess capacity, weak demand and margin pressure, according to Equirus Capital. Capex doubled between FY21 and FY26, even as returns on capital fell sharply, weighing on investor sentiment. Listed companies' revenue rebounded in FY26, with CRAMS/CSM/CDMO leading revenue CAGR over FY20–26. Margins are now recovering and inventories normalising. Momentum strengthened further in Q1FY27, with broader revenue growth and sequential margin improvement. Despite the recent challenges, the market is projected to grow from $36 billion in 2025 to $61 billion by 2030.

Now, TV channels at Rs 5 a month a reality

Eleven broadcasting firms, including big ones such as Star India, SET Discovery, ESPN and ZEE Turner, have announced Rs 5 per channel, per month, for their Conditional Access System (CAS) customers in compliance with the Telecom Regulatory Authority of India (TRAI) tariff order of August 31.

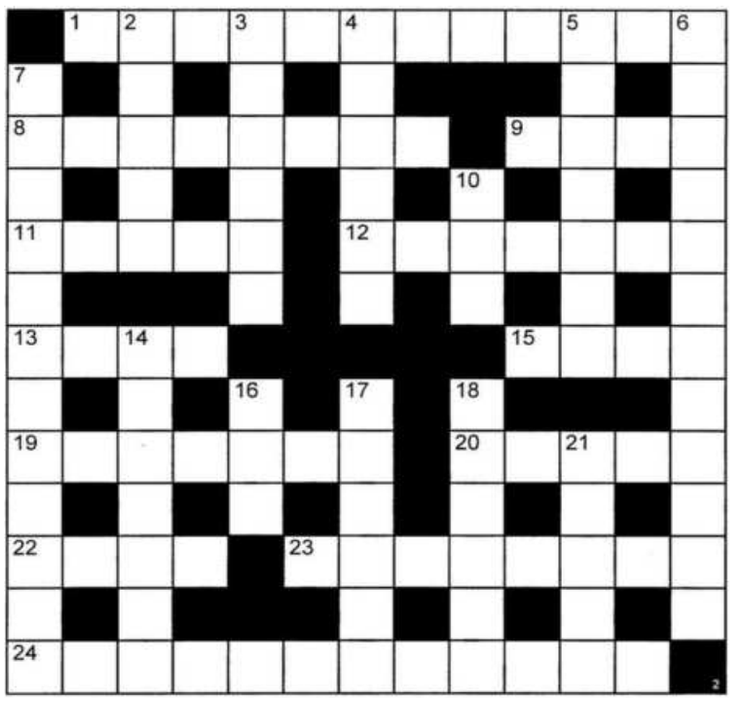

Dengue, chikungunya spur mosquito repellent sales

On the back of an increasing number of cases of dengue and chikungunya, the sales of mosquito repellents have seen a huge surge in the past few months. Dabur's Rs 30-crore brand, Odomos, and leader in the cream and gel segment has reported a 63 per cent hike in sales in its second quarter results this year, compared to the corresponding period in the previous year.

Sensex drives past 12,700

The BSE Sensex revved past the 12,700 mark for the first time on Friday, on the back of good corporate earnings, decline in crude oil prices and strong growth in the manufacturing sector. Sensex touched an intraday high of 12,756.23 points before settling down at 12,736.42, up 198.44 points or 1.58 per cent. The previous high was 12,612.38 points on May 10 this year.

Sun Pharma board okays ₹10,000-crore NCD issue

New Delhi: The board of Sun Pharmaceutical Industries has approved a proposal to raise funds of up to ₹10,000 crore through the issuance of non-convertible debentures (NCDs). The decision was taken at a meeting of the company's board of directors held on October 12, Sun Pharma said in a regulatory filing. The board approved the issuance of NCDs on a private placement basis in one or more tranches and/or series for an aggregate amount not exceeding ₹10,000 crore. Separately, it announced that Gautam Doshi had resigned as a Non-Executive, Independent Director with immediate effect, citing personal reasons. PTI

Quant MF sells 1% stake in Jubilant Pharmova

New Delhi: Quant Mutual Fund (Quant MF) has sold nearly 1 per cent stake in Jubilant Pharmova for over ₹100 crore through an open market transaction, according to NSE data. Quant MF offloaded 11 lakh shares, representing a 0.69 per cent stake in the Noida-based drugmaker, as per block deal data on the NSE. The transaction was executed on Monday at an average price of ₹915, taking the deal value to ₹100.65 crore. The stake sale reduced Quant MF's holding in Jubilant Pharmova to 1.16 per cent from 1.85 per cent. Jubilant Pharmova's shares fell 2.32 per cent to ₹928.80 on the NSE on Tuesday, after the transaction was executed a day earlier. PTI

Nifty posts sharpest single-day gain since June on IT surge, LTCG hopes

BULLS BACK WITH A BANG. HCL Technologies' strong Q2 performance lifts stock 8%, Nifty Index over 5%

Anupama Ghosh
Mumbai

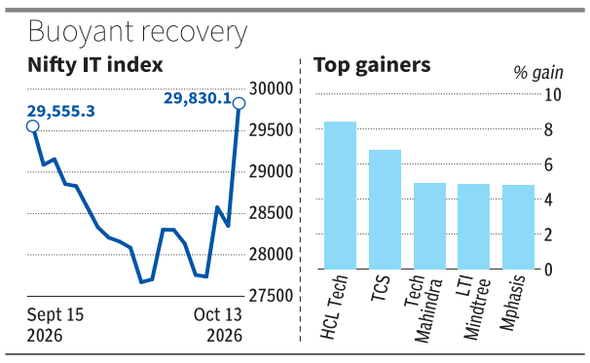

A blowout quarter from HCL Technologies jolted the Indian equity markets out of a two-session slump on Tuesday, triggering a broad-based recovery that saw the Nifty clock its steepest single-session percentage advance since June 12.

Sentiment received an additional tailwind in the afternoon after Finance Minister Nirmala Sitharaman indicated the government was open to hearing stakeholder views on long-term capital gains tax during budget consultations, remarks that lifted capital market stocks even as no formal commitment was made.

The Nifty 50 closed at 22,721.95, up 358.6 points or 1.6 per cent and the Sensex ended 1,109.1 points (1.54 per cent) higher at 73,033.78, while the Bank Nifty gained 563.05 points or 1 per cent to 55,481.05.

The Nifty IT index surged over 5.2 per cent, the session's top sectoral performer, with HCL Technologies jumping 8 per cent and TCS rising 6.6 per cent after both companies reported stronger-than-expected quarterly earnings anchored by healthy AI-driven deal wins.

"Markets staged a strong recovery on Tuesday, gaining over one and a half per cent and extending the rebound amid the prevailing consolidation phase," said Ajit Mishra, SVP, Research, Religare Broking.

"IT led the gains, supported by strong quarterly results from HCL Technologies and continued strength in TCS," he said.

SECTORAL GAINS

All sectoral indices closed in the green except Nifty pharma. The Nifty Midcap 100 rose 1.06 per cent and the Nifty Smallcap 100 eked out a 0.11 per cent gain, with market breadth positive for a third consecutive session.

On the flows front, foreign institutional investors had sold ₹1,205 crore on Tuesday, while domestic institutions countered with ₹2,439 crore in purchases.

Gaurav Bhandari, CEO of Monarch Networth Capital, who has a Nifty target of 26,000-26,500 over four to five months, pointed to global macro as a potential trigger.

"The yield at 5.35 per cent is not a new normal; it is the peak of an extreme that is already breaking the US economy from the inside," he said, expecting a fall in US yields to redirect global liquidity toward Indian equities as the dollar weakens.

Looking ahead, Siddhartha Khemka, Head of Research at Motilal Oswal Financial Services, said the Q2 earnings season would drive stock-specific action.

South Korea's Kospi crashes 5.5% in chip sell-off

Reuters
Seoul

South Korea's benchmark Kospi tumbled on Tuesday, triggering a temporary trading curb as concerns over rising Chinese memory-chip competition and a broader retreat from AI-linked stocks rattled the tech-heavy market.

The benchmark stock index closed down 5.46 per cent after falling as much as 7.4 per cent earlier in the day, extending its losing streak to a fifth straight day in its longest run of declines since September 2024.

TRADE HALT

Earlier, the Korea Exchange halted programme sell orders for five minutes at 9.47 am local time after the Kospi 200 futures index fell 5.08 per cent or 51.2 points, to 955.02.

The sell-off came after US memory-chip maker Micron Technology fell overnight on reports of rapid technological advances by Chinese rival ChangXin Memory Technologies.

"This is a collision of two concerns: growing Chinese competition threatening memory pricing power and investors unwinding crowded AI trades," said Song Zhe, an analyst at BNP Paribas Asset Management. "The sell-off reflects a sharp reset in expectations rather than a sudden deterioration in underlying AI demand."

Investor sentiment was further dampened after President LeeJae Myung said higher interest rates were likely unavoidable.

Chipmaker Samsung Electronics fell 7.39 per cent, while peer SK Hynix lost 10.09 per cent. Among other index heavyweights, battery maker LG EnergySolution climbed 3.02 per cent, while Hyundai Motor fell 1.56 per cent and sister automaker Kia Corp rose 0.19 per cent.

Two-thirds of UHNI husbands don't consult spouses on investments, finds Equirus study

Ashokamithran T
Mumbai

Two-thirds of husbands in Indian ultra high net worth individuals (UHNI) family offices did not consult their spouses to make investment decisions, according to a report by Equirus Wealth Management and Family Office.

The report, based on a qualitative study, found that just about 30 per cent of men in the nearly 50 female to 70 members of the UHNI families interviewed consulted their spouses for financial decisions. This is prominent in big-ticket investments and private-market opportunities. "Participation is universal; direct involvement in capital allocation is far less common. The challenge is not simply to bring women into the conversation, but to give them the authority, experience and decision-making framework to influence how capital is deployed," Equirus said.

Manisha Gudka, Founder, Sapientia Family Office Solutions, said, "Structured family offices work to specific investment mandates, documented in an investment policy statement. Among the business families I have advised, in some, women are invited welcome to express their views on investment decisions. In others, women were not consulted, either because they lacked experience or exposure or because they themselves did not want to get into the detail."

ROLE OF WOMEN

Most women said they were professionals first — medicine, technology, finance, media or enterprise — long before taking on a more active role in managing wealth.

About 40 per cent of the women, came into managing the family wealth because of a major family event like death of the head of the family, separation, capital loss or inheritance, which means that women taking over the family office management was not a natural choice in these ultra rich families, who were Equirus' clients.

The reduced participation of women in family business becomes prominent when looked at the gap between involvement and authority over decision making.

Fintech funding 'rises 14% to $2.2 b in nine months of 2026 but deal count falls 41%'

Our Bureau
Bengaluru

Indian fintech funding rose 14 per cent year-on-year to $2.2 billion in the first nine months of 2026, even as deal volumes fell 41 per cent to 153 rounds, according to a report by Tracxn.

The funding was concentrated in a smaller number of large late-stage rounds. Digital Lending and Payments top the category rankings, while Bengaluru accounts for over three-fifths of all capital raised.

On the exit side, IPOs saw a 50 per cent uptick while overall acquisitions slowed.

Five deals of $100 million or more accounted for 48 per cent of total funding, while late-stage investments nearly doubled to $1.5 billion. Bengaluru accounted for over three-fifths of capital raised.

LARGE DEALS

During this period, Cred raised $540 million Series H in June 2026 backed by Meta, KreditBee raised a $220 million Series E in April 2026 backed by Motilal Oswal, White Oak and Hornbill Capital and Weaver raised a $103 million Series B in March 2026 backed by Premji Invest and Lightspeed Venture Partners.

The remaining two mega-rounds were raised by Slice ($100 million Series D in September 2026) and Navi ($100 million Series C in August 2026, backed by Prosus). The sector added three unicorns, up from two a year earlier, including Square Yards, KreditBee and Neo Group.

FINTECH IPOs

IPOs rose 50 per cent to three, while acquisitions fell 45 per cent to 11.

Augmont led with a $757 million IPO market cap in August 2026, followed by Turtlemint ($471 million in June 2026) and Kissht ($305 million in May 2026).

SC strikes down MMTC appeal against NSEL one-time settlement

Suresh P Iyengar
Mumbai

Nearly 13 years after default, investors in the National Spot Exchange Ltd (NSEL) can heave a sigh of relief as the Supreme Court cleared all road blocks for the execution of the one-time settlement of ₹1,950 crore proposed by 63 moons technologies (erstwhile Financial Technologies).

The Supreme Court on Tuesday dismissed an appeal filed by public sector undertaking MMTC Ltd challenging the approval of a ₹1,950 crore settlement scheme.

A Bench of Justices PS Narasimha and Alok Aradhe dismissed the appeal against a March 30 judgment of the NCLAT, which had refused to interfere with the approval granted to the scheme by the NCLT, Mumbai.

In November, 2025 NCLT Mumbai approved the ₹1,950 crore scheme supported by over 92 per cent of creditors.

The settlement covers 5,682 specified creditors (traders), ensuring a minimum recovery of roughly 42 per cent of verified claims.

ED CLEARANCE

Earlier, the Special Court under Prevention of Money Laundering Act directed the Enforcement Directorate to monetise properties worth ₹3,464 crore attached in the NSEL case.

ED gave its no-objection to this arrangement in order to secure early restitution to investors. As per the order, any amount realised in excess of ₹1,950 crore will remain in the custody of the Special Court, subject to the final outcome of the proceedings, said ED in a statement.

The FIR in the case was filed in 2013 against NSEL, its directors and key officials, 25 defaulting members and others, for criminal conspiracy, cheating, criminal breach of trust and forgery. It was alleged that trading was allowed in commodities without actual underlying stocks. The resulting payment default affected about 13,000 investors, with outstanding dues of about ₹5,600 crore.

In November 2025, NSEL submitted a scheme that envisaged payment of ₹1,950 crore to 5,682 traders in proportion to their outstanding as on July 31, 2024, against closure of legal cases against the group along with assignment of all rights of traders in favour of 63 moons.

In August 2013, NSEL with the support of 63 moons paid about ₹179 crore for providing immediate relief to 7,053 smaller traders with outstanding of less than ₹10 lakh.

BROKER'S CALL.

Choice Institutional

APTUS VALUE HOUSING (BUY)
Target: ₹330
CMP: ₹223.3

We initiate coverage on Aptus Value Housing Finance with a 'Buy' recommendation. We value the company at 2.5x FY28E ABV (based on peer-group benchmarking), resulting in target price of ₹330. Aptus Value Housing leads both affordable and prime housing financiers on profitability, with estimated return on asset (RoA) of 7.8 per cent and return on equity (RoE) of 20.4/20.7 per cent for FY27E/FY28E. It delivered over 20 per cent RoE in FY26 despite a ₹10 lakh ticket size and a branch-heavy model. Its 9.1 per cent spread, the widest among peers, reflects strong underwriting and cost discipline. Net NPA of 1.3 per cent is among the highest in the peer set, but we expect it to stabilise on improving collections and about 40 per cent LTV.

Key risks: Slower-than-expected branch ramp-up, higher delinquencies in the SBL and Karnataka books, yield pressure from rising competition and lower assignment income could weigh on earnings and valuation.

Aptus Value Housing Finance is an RBI regulated affordable housing lender serving selfemployed, low-and-middle-income customers in semi-urban/rural South India. Its major product offering includes home loans, LAP and small business loans. As of Q1 FY27, it operates 372 branches with AUM of about ₹13,700 crore, with a core presence in Tamil Nadu, AP, Telangana, and Karnataka, now expanding into Maharashtra and Odisha.

ICICI Securities

GUJARAT FLUOROCHEMICALS (BUY)
Target: ₹5,380
CMP: ₹4,551.5

We upgrade Gujarat Fluorochemicals (GFL) to a Buy (from Add) with a revised target price of ₹5,380 (up from ₹5,050), valuing the stock at 35x FY29E EPS.

We like GFL's strategic positioning, as the company enjoys a distinct first-mover advantage with the largest battery chemicals portfolio in India.

GFL is capable of addressing 70 per cent of the total value (cost) requirement for LFP batteries, establishing the company as a critical player in the evolving non-Chinese global supply chain.

GFL benefits immensely from its in-house access to critical HF, alongside its proven expertise in processing fluorine chemistry and managing high-temperature calcination. Having already established pilot-scale capacities, the company has spent the past four years navigating a steep learning curve.

To factor in execution variables, we have compressed our target PE multiple to 35x (down from 40x) while integrating GFCL EV's financial estimates into our consolidated projections.

Our EPS estimates for FY27 and FY28 have been cut by 4-8 per cent on account of losses in GFCL EV in FY27E, and lower revenue for bulk chemicals. Our reversed valuation analysis indicates that GFL trades at 22x FY29E core EBITDA (excluding GFCL EV).

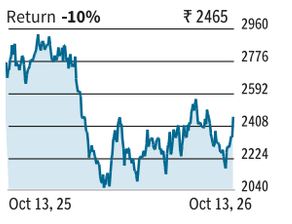

This implies that the CMP discounts the core chemical business efficiently but captures virtually nil optionality or value for the high-growth GFCL EV subsidiary, offering investors a highly favourable risk-reward entry point.

TODAY'S PICK.

Mphasis (₹2,465): BUY

Gurumurthy K
bl. research bureau

The short-term outlook for Mphasis is bullish. The stock surged over 5 per cent on Tuesday and closed strongly. This rise has taken the share price well above the key ₹2,390-₹2,400 resistance zone.

The 200-Day Moving Average (DMA) is also poised in this region. The strong close above the 200-DMA also strengthens the bullish case. Any dips in the coming days will be limited.

The Mphasis share price could go up to ₹2,600-2,630 in the coming weeks.

Traders can buy Mphasis shares now at ₹2,465. Accumulate on dips at ₹2,420.

Keep the stop-loss at ₹2,345 initially. Trail the stop-loss up to ₹2,495 as soon as the stock hits ₹2,525. Revise the stop-loss higher to ₹2,530 and ₹2,570 when the price touches ₹2,565 and ₹2,595, respectively. Exit the long positions at ₹2,620

Note: The recommendations are based on technical analysis. There is a risk of loss in trading

CKK Retail board approves 5:1 bonus issue

Our Bureau
Mumbai

CKK Retail Mart has approved a proposal to increase its authorised share capital from ₹20 crore to ₹117 crore and issue bonus shares in the ratio 5:1. The proposals, approved by its board on Tuesday, are subject to shareholders approval.

The proposed increase in authorised share capital will raise the company's authorised share capital from 2 crore shares to 11.7 crore.

The board has also approved a consequential amendment to the capital clause of the company's Memorandum of Association.

Following the proposed bonus issue, the company's paid-up share capital is expected to increase from ₹19.37 crore to ₹116.21 crore.

Shellz India plans ₹60 crore IPO on BSE SME

Our Bureau
Mumbai

Shellz India, a confectionery manufacturer under the brand names 'Hugs' and 'Tosca', plans to raise ₹60 crore through an initial public offering (IPO) on the BSE SME platform.

The company will issue 33.5 lakh shares in the price band of ₹170-179 a share. The issue opens for subscription on October 15.

The net proceeds from the IPO will be used for repayment of certain outstanding borrowings, funding incremental working capital requirements, general corporate purposes and issue related expenses.

Socradamus Capital will be the book-running lead manager, while Bigshare Services has been appointed the registrar for the issue. Mansi Share and Stock Broking will be the Marker Maker to the issue.

Shellz manufactures confectionery products in India through a portfolio of over 300 SKUs across baked treats, choco delights, jellies and panned and sugar confectionery. Kapil Garg, Chairman & Managing Director, Shellz India, said the upcoming IPO will help fuel the next phase of growth by strengthening the company's financial resources and supporting the expansion of its operations. As the Sonipat facility scales up, it will broaden its product portfolio and deepen its distribution reach, he said.

Priyesh Jain, Director, Socradamus Capital, said: "Shellz India has built its confectionery business around a diverse product portfolio, in-house manufacturing capabilities and an established distribution network."

A CH-CHE

Piramal Pharma focuses on cutting China exposure

Indian contract drug manufacturer Piramal Pharma Ltd has cut its exposure to Chinese raw materials in a bid to reduce concentration risk, as countries globally look to diversify critical drug supply chains. "One of the things that we worked really hard on is limiting our exposure to China," Nandini Piramal, Chairperson at Piramal Pharma told Haslinda Amin on the sidelines of Bloomberg's New Economy Forum in New Delhi on Tuesday. Piramal also said the global turmoil has driven up the cost of drug raw materials. The drugmaker's stock has risen 12.8 per cent this year, a middling performance compared to peers in the Nifty Pharma Index. BLOOMBERG

'India offers itself as a trusted partner to the world amid global uncertainty'

COLLECTIVE GROWTH. We do not grow at anyone's cost. We grow with the world, says PM Modi

Shishir Sinha
New Delhi

Amid unprecedented global challenges, Prime Minister Narendra Modi on Tuesday offered India as a trusted partner to the world. He also made it clear that the country is not seeking credit for its efforts.

Addressing the Bloomberg New Economy Forum, Modi reminded that the 21st century had brought unprecedented global challenges. Supply chains, energy, minerals, payment systems and technology were increasingly becoming instruments of pressure and dominance. The routes created by globalisation over the past decades had, in many cases, become chokepoints. Amid all this, AI is transforming the way every sector functions. At the same time, many countries are facing rapidly growing challenges related to ageing populations, he said.

CREATING OPPORTUNITIES. PM Narendra Modi addressing the Bloomberg New Economy Forum in New Delhi on Tuesday ANI

ECONOMIC GROWTH

Modi reminded that whenever the world needs a steady pillar, India extends its hand in support, recognising its responsibility. "We do not grow at anyone's cost. We grow with the world and for the world, and India does not seek credit for what it does," he said. Yet, "India never asked for royalties in return," he said.

Modi highlighted the economic growth at 7.8 per cent during the first quarter. The current account deficit is 0.61 per cent, while the country's forex reserves stand at more than $700 billion, and its banking system is strongest in many decades. "It is because of this strength that India's sovereign ratings are being upgraded. Today, India's confidence is at an unprecedented high," he said.

Mentioning reform measures, he said that GST had transformed a complex web of taxes into a national market. Then, the Insolvency Law was enacted. Twentynine labour laws have now been consolidated into four simple labour codes. Hundreds of minor business-related offences have been decriminalised. And "we have not stopped there. India's reform express continues to move ahead at high speed. For us, reforms are not a compulsion. Reforms are our conviction," he emphasised.

Invoking a mantra from the Vedas, *Sangachchhadhwam Samvadadhwam Sam Vo Manamsi Janatam*, he called for repeating the same mantra today.

"Let us walk together. Let us speak together. Let us strive to understand one another. Because when we walk together, our strength grows," he said.

Further, "dialogue deepens understanding and by understanding one another, we can solve challenges," "This is the essence of 'Power to Empower'. It means not limiting our power solely to our own progress, but using it to create new opportunities for others as well," he concluded.

Nilekani moots computer test infra to avoid paper leaks

Our Bureau
New Delhi

Infosys Co-founder Nandan Nilekani said on Tuesday that the country needs to do away with traditional question papers to prevent leaks in competitive examinations, and proposed generating exam papers at the last minute from a large question bank, including for the National Eligibility-cum-Entrance Test (NEET).

He also called for expanding the country's computer-based testing infrastructure to make examinations more secure and accessible. Speaking at the Bloomberg New Economy Forum in New Delhi, Nilekani questioned the need to prepare a single question paper in advance, arguing that its existence creates an incentive for people to steal and sell it.

Infosys Co-founder Nandan Nilekani

CBT EXAMINATION

He proposed creating a massive bank of questions from which the paper for a particular examination could be generated shortly before the test, reducing the opportunity for leaks.

"So, the way to solve this is to really have a massive bank of questions, and only at the last minute generate the question paper for that day, and therefore the question of 'a' question paper goes away, and there's no economic incentive for that," Nilekani said.

Asked about using artificial intelligence (AI) to generate question papers on the day of an examination, he said the technology could be used for this purpose. He said he has three months to develop recommendations.

Nilekani also stressed the need to move towards computer-based testing (CBT) for examinations, saying that this would require a much wider network of testing centres.

"We have 150,000 locations where a young boy or girl can take a test. That needs to be expanded," he said.

He said his task force would examine these systemic issues. "And the Prime Minister is very keen to implement our decisions," he added.

TASKFORCE ROLE

Nilekani heads the Centre's High-Powered Task Force on Reforms in Public Examinations, announced by Prime Minister Narendra Modi on July 26, 2026, amid renewed scrutiny of the country's examination system following paper-leak allegations and concerns over the conduct of competitive entrance tests.

Its mandate covers strengthening examination security and institutional processes, deploying appropriate technology, expanding testing infrastructure, and safeguarding student well-being. So, the task force has also invited suggestions from students, parents, teachers, academic institutions, subject experts, industry bodies and examination-conducting agencies as part of its consultation process.

The proposed shift toward last-minute question paper generation and broader computer-based testing would require robust question banks, secure digital systems, and adequate testing infrastructure.

Nilekani's proposals come amid continued demands for greater accountability and safeguards in high-stakes examinations, where paper leaks and other irregularities can affect students' futures and undermine public confidence in the selection process.

Chandra defends Tata's long-term semicon bets

Our Bureau
New Delhi

Tata Sons Chairman N Chandrasekaran on Tuesday defended the group's investments in semiconductors and other strategic sectors, arguing that their long-term importance to India should take precedence over the pressure to deliver financial returns within two to three years.

His remarks at the 2026 Bloomberg New Economy Forum in New Delhi come amid a boardroom tussle over capital allocation and the returns expected from the group's large, long-gestation projects.

Tata Group has committed substantial capital to expand its presence in semiconductors, electronics and batteries, sectors that Chandrasekaran believes will be central to future industrial growth. "So, whether we will get it right and meet the numbers in two years or three years, it's not the point. The point is that chips are going to be fundamentally required for domestic consumption," he said. Arguing that India had the foundations to develop a semiconductor manufacturing ecosystem, he said: "We are in a beautiful spot in India, because we have the talent, we have the domestic market, we can play a part in every global supply chain."

N Chandrasekaran, Chairman, Tata Sons

SEMICON PUSH

Tata Electronics is setting up a semiconductor fabrication plant at Dholera in Gujarat in partnership with Taiwan's Powerchip Semiconductor Manufacturing Corporation, with an investment of around ₹91,000 crore. The group is also developing a semiconductor assembly and testing facility in Assam at an investment of around ₹27,000 crore.

He also underlined the importance of partnerships in developing domestic capabilities and accessing the technologies needed to compete globally. "We need partnerships, because we have all the technologies... But you also have to be careful, because you need to keep an eye on energy," he said.

He acknowledged that the financial assessment of long-term investments could not always be reduced to predictable projections, given the uncertainty surrounding technology, demand and the pace at which production could be scaled up. "Sometimes things go wrong," Chandrasekaran said, but argued that setbacks did not necessarily invalidate the underlying investment rationale. He added that "advanced manufacturing here will stay," even as conventional manufacturing faced pressures.

DOUBLE-DIGIT GROWTH

He also acknowledged operational setbacks, including an air crash, a cyberattack and supply-chain disruptions, but said the group had continued to deliver double-digit growth while maintaining margins.

He added companies needed to build resilience into their operations rather than prioritise efficiency alone, given the risks posed by geopolitical tensions and supply-chain disruptions.

He also flagged the risks posed by continuing conflicts around the world, saying the proliferation of wars and the absence of resolutions were a source of concern.

Capital allocation, geopolitics key business challenges: Aditya Birla Group Chairman

Our Bureau
New Delhi

Capital allocation and geopolitical developments are the two major challenges for businesses operating across multiple countries, but investments must happen despite global uncertainties, Aditya Birla Group Chairman Kumar Mangalam Birla has said.

Businesses cannot afford to put growth on hold despite mounting demands on capital and disruptions across the world, as sustained expansion was essential to remain competitive, Birla said at the Bloomberg New Economy Forum on Tuesday.

"You can't stop growing... For me, capital allocation has been a challenge because you have a whole lot of new demands on your capital, which we know about, but at the same time. You (have to) keep growing. You either grow or you go down," he said.

INVESTMENT AREAS

Birla said the group had continued investing in both existing and new businesses despite the uncertain global environment, underlining the need to balance competing investment priorities while sustaining growth.

Geopolitical developments pose another significant challenge, particularly for companies with operations spanning multiple countries, he said. Events unfolding in one part of the world can have repercussions across businesses and markets elsewhere, making it difficult to anticipate their full impact.

Kumar Mangalam Birla, Chairman, Aditya Birla Group

"We are a global organisation, and when I read about a significant global event in the newspapers, I can be sure that it will impact us somewhere in the business, somewhere in the world, which I may not even sort of understand the full impact of when I'm reading it in the papers."

RESILIENT BUSINESSES

Birla stressed the importance of building resilient businesses while ensuring employees remain engaged and equipped to navigate an increasingly interconnected global environment. He added that companies needed to encourage collaboration and learning among employees.

He also highlighted cost competitiveness and scale as key pillars of the group's manufacturing strategy, saying businesses needed to build structural advantages to withstand global competition and uncertainty.

IMF raises India's FY27 growth forecast to 7% on strong domestic demand

Shishir Sinha
New Delhi

The International Monetary Fund (IMF) has raised India's growth forecast by 60 basis points to 7 per cent for the current fiscal year, 2026-27.

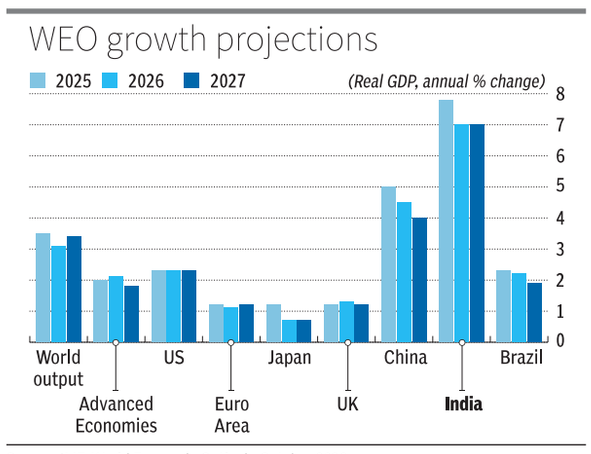

"India's growth remained robust, underpinned by domestic demand and services, despite higher oil prices," the multilateral agency said in its latest World Economic Outlook (WEO), released during the annual Fund meeting in Bangkok.

"India remains among the fastest-growing major economies, with growth in 2026 (fiscal year 2026-27) projected at 7 per cent. This reflects stronger-than-expected momentum, supported by resilient domestic demand and robust services activity," it said.

Earlier this month, the Reserve Bank of India raised its real GDP growth projection for FY27 to 7.1 per cent from 6.7 per cent. At the same time, the World Bank on Tuesday raised India's growth forecast for the current fiscal year by 50 basis points to 7.1 per cent.

However, it cautioned that growth in the second half of the current fiscal year is likely to slow.

Last month, the Asian Development Bank, the OECD, and other global agencies like S&P and Fitch raised India's FY27 GDP growth projection to around 7 per cent, boosted by robust June quarter economic activity and resilient domestic demand despite the West Asia conflict. The Paris-based Organisation for Economic Co-operation and Development (OECD) raised its GDP growth forecast by 80 basis points to 7.1 per cent for FY27.

Source: IMF, World Economic Outlook, October 2026

FTA BENEFITS

IMF emphasised that free trade agreements benefit economies such as India.

"Efforts to negotiate or deepen new regional and bilateral trade agreements — such as the EU's recent trade agreements with India and Mercosur (the Southern Common Market) or the UK's agreement with India — could lower tariffs and non-tariff barriers on traded goods and services among participating economies, facilitate adjustments to recent trade policy changes, and strengthen supply-chain resilience," it said.

On Monday, a Bloomberg Economics report said that India's free trade agreements already in force, including those agreed with the European Union and New Zealand, could add about $140 billion to the country's gross domestic product by 2035, lifting economic output by 1.7 per cent and export volumes by 6.2 per cent.

One key assumption is that the agreements with EU and New Zealand are implemented from 2027.

GLOBAL GROWTH

Meanwhile, highlighting the resilience of the global economy, the IMF said global activity is projected to grow 3.1 per cent in 2026 and 3.4 per cent in 2027.

Global headline inflation is forecast to rise to 4.7 per cent this year, driven primarily by higher commodity prices, and to fall back to 4.1 per cent next year.

However, it cautioned that global economic resilience is under strain. Decisive policy action is needed. "Countries must move from coping to rebuilding, restoring fiscal space and supply-side resilience to enhance their ability to grow sustainably," it said.

INDIA'S OUTLOOK

The IMF said global output is projected to expand at an average annual pace of 3.2 per cent in 2028-31, a persistently lacklustre performance compared with the pre-pandemic (2000-19) historical average of 3.7 per cent.

Compared with January 2026, the medium-term outlook has become increasingly uneven, with downgrades concentrated among economies directly affected by the West Asia conflict and among energy-importing emerging market and developing economies elsewhere, excluding India.

PNGRB proposes 5% hydrogen blending in piped gas for households

Rishi Ranjan Kala
New Delhi

The Petroleum and Natural Gas Regulatory Board (PNGRB) has floated draft guidelines for mixing 5 per cent hydrogen in natural gas for domestic piped natural gas (D-PNG) consumers served through the city gas distribution (CGD) network.

The guidelines prescribe minimum requirements for commercial supply of HNG (hydrogen-natural gas mix).

They address single-point injection into small, hydraulically defined commercial deployment areas confined to domestic consumers.

5% CONCENTRATION

The regulator emphasised that 5 per cent is the maximum commercial concentration, and not the routine control target. The normal operating set-point shall be lower sufficient to prevent higher percentage of hydrogen injection during peak or minimum demand, start-up, shutdown and disturbances

In March 2024, the regulator had said that it is working on avenues for transporting green hydrogen through natural gas transmission lines by blending hydrogen with natural gas. It was considering gas transmission lines as a first choice for transporting green hydrogen.

Hydrogen is a flexible energy carrier and can be used for many energy applications like integration of renewables and transportation.

"Maximum commercial blend limit means 5 per cent hydrogen by volume as demonstrated in accordance with the measurement and verification arrangements in the approved area," PNGRB said in the draft guidelines.

GREEN DRIVE. The draft norms exclude compressed natural gas and HCNG, automotive use, transmission pipelines, pure-hydrogen supply, refuelling, de-blending and non-domestic PNG

VIEWS SOUGHT

The regulator has sought comments from stakeholders by November 11.

The draft guidelines, however exclude compressed natural gas (CNG) and HCNG, automotive use, transmission pipelines, pure-hydrogen supply, refuelling, de-blending and non-domestic PNG.

The guidelines propose that CGD entities should have a 'Hydrogen-Ready Infrastructure', which means that portion of a CGD network, together with associated equipment, meters, regulators and validated appliance classes, established as suitable for HNG service up to the approved commercial concentration, not exceeding 5 per cent hydrogen by volume.

They also propose a hydrogen receipt and interface point, which is a defined physical point at which hydrogen is received from the upstream supply system into the blending facility.

"These guidelines apply from the hydrogen receipt and interface point, through the blending facility, to the downstream commercial deployment area and domestic installations," PNGRB said.

The scope includes hydrogen-side receipt, regulation, measurement, isolation and injection equipment downstream of that interface point and upstream of the mixing point, it added.

However, hydrogen production, transportation, compression and storage upstream of the interface point, including upstream mobile-cascade systems, remain outside the scope of these guidelines and shall independently comply with applicable laws and competent-authority approvals.

GREEN HYDROGEN

State-run Engineers India (EIL) and IIT-Kanpur have studied the impact of green hydrogen on CGD pipelines and the findings of the report have been submitted to the Ministry of Petroleum & Natural Gas.

EIL's study suggested that 3-5 per cent hydrogen can be blended in natural gas.

India's annual demand for hydrogen is around 6 million tonnes, which accounts for about 6 per cent of the global demand.

APPOINTMENT

CITY UNION BANK
No.24B, Gandhi Nagar, "Narayana",
Administrative Office, Kumbakonam - 612 001.

WE ARE LOOKING FOR
HEAD OF TREASURY

City Union Bank, a leading private sector Bank in the country with 121 years of history and having 1000+ branches all over India and rendering trusted service, invites applications from experienced senior executives of the Banks for the position of **HEAD OF TREASURY** with a proven track record to share our zeal and passion for excellence.

The candidate shall provide strategic leadership for the Bank's Treasury Operations, ensuring operational excellence, regulatory compliance, risk management, and seamless execution of treasury transactions. The role requires close collaboration with Treasury Front Office, Back Office, Risk Management, Finance, Compliance, Technology, and Regulatory stakeholders.

Maximum Age	:	**50 Years**
Minimum Qualifications	:	**Postgraduate / MBA (Finance), CAIIB, ACA, CFA, FRM, Certified Treasury Professional or equivalent professional qualifications preferred.**
Minimum Experience	:	**With minimum 20 years of experience in Banking out of which minimum 10 years of experience in Treasury. In addition, minimum 5 years in a senior management role handling Treasury is preferred.**

The desired areas of knowledge and experience may include handling proprietary desks in Forex/Money/Bond/Derivative market operations, banking operations, among others. In nutshell, should possess in-depth knowledge on all areas of the banking.

For details, please visit our Bank's website:
https://www.cityunionbank.com/careers

APPLICATIONS THROUGH ONLINE MODE ALONE WILL BE CONSIDERED.

Citi, Credendo close $328 m IndiGo aircraft financing

Mumbai: Citi and Credendo, Belgium's export credit agency (ECA), on Tuesday announced the closing of a $328 million financing for eight Airbus aircraft (six A321s and two A320s) for IndiGo. The transaction marks the first-ever Credendo-insured aviation financing globally and the first ECA-backed aircraft financing through a GIFT IFSC leasing structure, setting a milestone in aviation finance, Citi said. ReNew secures $100 m financing facility

New Delhi: ReNew announced on Tuesday that it has secured a $100 million (around ₹955 crore) financing facility from FMO, the Dutch entrepreneurial development bank. Extended to ReNew Solar Power under the Voluntary Retention Route (VRR), the 10-year financing will support RE projects currently under construction across the ReNew Group. It marks FMO's largest single-ticket investment in India's energy sector. OUR BUREAU

Government confident of meeting tax target despite excise duty shortfall

WIDER NET. GST reforms, a wider taxpayer base and B2C e-invoicing to strengthen compliance and collections

Shishir Sinha
New Delhi

UPBEAT PROJECTION

- Budget projects net tax collection ₹28.7 lakh crore
- Direct taxes up 13% to ₹12.1 lakh crore
- Collections measured between April 1 and September 17
- Central Goods and Services Tax collections crossed ₹2.42 lakh crore in April-September period

Despite lower collections under central excise duty, the Finance Ministry is hopeful of meeting the budgetary targets for overall net direct tax collections, a senior government official said on Tuesday. He said recent measures by the GST Council on refunds for input services and capital goods and the unblocking of input tax credit (ITC) for various items would benefit the majority of sectors.

The Budget projected net tax collections (both direct and indirect) of ₹28.7 lakh crore. Data from the Income Tax Department showed that net direct tax collections rose 13 per cent year-on-year to ₹12.1 lakh crore between April 1 and September 17. Similarly, CGST collections crossed ₹2.42 lakh crore during the April-September period.

"Budget tax targets are likely to be met this fiscal year," the official said, adding that a possible shortfall in excise duty collections could be offset by stronger receipts from other major tax heads. "There may be a shortfall in excise duty collections. Higher collections from direct taxes, GST and customs are expected to compensate for the losses," he said.

Meanwhile, the official said that recommendations on refunds for input services and capital goods would benefit the majority of sectors and, in turn, have some impact on tax collections.

At its meeting on October 8, the GST Council recommended that ITC availed on input services on or after November 1, 2026, be included in the computation of refunds under the inverted duty structure. The same provision will apply to capital goods. The official said the number of assessees under GST was expected to rise with the easing of registration procedures. "We have had discussions on improving the base and also the quality of disclosure. We can leverage technology to increase the base without the exercise being intrusive," he said, adding that some analysis had also been shared with the States.

Currently, there are 1.7 crore registered taxpayers, of whom 97 lakh are under State formations, with the remainder under Central formations.

NUDGE CAMPAIGN
Officials said State tax officers should ensure that cash tax collections increase, and the output tax liability of businesses should not be equal to their input tax credit claims. "We need to strengthen our tech system and adopt a non-intrusive approach. We have to improve data analytics, find gaps, and increase outreach to taxpayers to make them understand the benefits of compliance," an official said, while drawing a parallel to the Income Tax Department's 'Nudge' campaign.

DIGITAL INVOICING
Officials also said the B2C e-invoicing will ensure data reaches the last mile in the supply chain — from suppliers to final buyers. Currently, businesses with an average annual turnover of ₹5 crore have to mandatorily generate e-invoices for B2B sales.

The GST Council, chaired by Union Finance Minister Nirmala Sitharaman and comprising State counterparts, had in September 2024 recommended rolling out a pilot for B2C e-invoicing. Now, the effort is to roll out B2C e-invoicing, which will be rolled out voluntarily from April 1, 2027.

Rupee's recovery may be short-lived

Akhil Nallamuthu
bl. research bureau

The rupee appreciated 1.2 per cent against the dollar over the past week to close at 95.28 on Tuesday. However, the broader fundamental backdrop remains challenging, with persistent foreign outflows, rising crude oil prices and elevated US Treasury yields posing risks to the local currency.

WEEKLY RUPEE VIEW.

Foreign portfolio selling continued. According to NSDL data, net FPI outflows stood at about $2.4 billion over the past week, taking the cumulative outflows in October to $4.7 billion. So far in 2026, net outflows have risen to around $26.8 billion.

Crude oil prices have also emerged as a headwind. After moderating in the second half of September, Brent crude has been rising since early October.

ELEVATED PRICES
Currently trading around $105/barrel, it has gained about 7 per cent so far this month. Elevated oil prices continue to weigh on the rupee, given India's dependence on crude imports.

Meanwhile, US Treasury yields have moderated in the recent sessions. The 10-year yield has declined to 5.18 per cent from a high of 5.37 per cent made on October 7. Nevertheless, yields remain elevated, supporting the dollar and keeping pressure on emerging market currencies, including the rupee.

On the domestic front, retail inflation accelerated to 5.54 per cent in September from 4.83 per cent in August, exceeding market expectations of 5.4 per cent.

This is the highest reading since October 2024 and brings inflation closer to the RBI's upper tolerance limit of 6 per cent.

Additionally, direct dollar supplies to state-owned oil companies could ease demand for the greenback in the foreign exchange market, offering further relief to the local currency.

The rupee has seen a good recovery this week. The rebound happened on the back of the support at 96.80. From the current level, the nearest notable resistance is the 94.90-95 price band. Hence, there is a good chance for rupee to extend the recovery.

This can be supported by a decline in the dollar index (currently trading at 102.25) as the resistance ahead at 102.50 can trigger a corrective decline. While the broader trend is bullish for the index, given that it saw a sharp rally in the recent weeks, a minor fall, possibly to 101.60, is likely to happen.

However, if the dollar index regains strength and breaks out of 102.50, it can extend the rise to 103. Resistance above 103 can be spotted at 103.50. If this rally occurs, rupee can face renewed downward pressure.

A breakout of 102.50 in the dollar index can probably drag the Indian unit to 96.50 or even to 97.

CURRENCY OUTLOOK
Overall, with the dollar index facing resistance and the rupee's price action showing a positive bias, the local currency could extend its recovery towards 95. However, we expect the broader downtrend to resume thereafter, potentially dragging the rupee towards 96 again in the near term.

India and Canada discuss advancing trade pact talks

Press Trust of India
New Delhi

India and Canada on Tuesday discussed advancing negotiations for the proposed trade pact to provide deeper market access for each other's goods and services.

Commerce and Industry Minister Piyush Goyal and his Canadian counterpart, Maninder Sidh, held the discussions.

"Discussed advancing the India-Canada Comprehensive Economic Partnership Agreement (CEPA) negotiations, with a focus on a balanced, mutually beneficial agreement that enhances market access and unlocks new trade and investment opportunities," Goyal said in a social media post.

He expressed confidence that the CEPA will provide fresh momentum to bilateral trade and strengthen economic partnership between the two countries.

FIFTH ROUND
The meeting was important, as India and Canada's chief negotiators concluded the fifth round of talks for the pact on October 9 in Canada.

Both sides aim to conclude the negotiations by the end of this year.

RBI drains out ₹25,000 cr via OMO sale of G-Secs

Our Bureau
Mumbai

The Reserve Bank of India (RBI) conducted an open market operation (OMO) sale of Government Securities (G-Secs) to absorb ₹25,000 crore from the banking system, which continues to remain in surplus.

The banking system had a surplus liquidity of ₹3,35,901 crore as of October 12, 2026, and could impede transmission of the recent repo rate hike into the financial markets.

The RBI is undertaking liquidity drain-out operations, including *via* variable rate reverse repo (VRRR) auctions and OMO sales of G-Secs, so that the overnight call money rate is aligned with the repo rate of 5.5 per cent.

At the auction of six G-Secs, with maturities ranging from 2030 to 2034, market participants offered to sell securities aggregating ₹55,518 crore against the notified amount of ₹25,000 crore. The RBI accepted the notified amount.

At the auction of six G-Secs, market participants offered to sell securities aggregating ₹55,518 crore

STATE BORROWING
Meanwhile, at the auction of state development loans (SDLs) of 13 States, the RBI accepted bids aggregating ₹30,005 crore against the notified amount of ₹31,200 crore. Nuvama, in a report, said that the cut-offs on SDLs at the weekly auction were broadly along expected lines.

BOND YIELDS
"The benchmark 10-year bond (6.94 per cent Government Security/GS 2036) opened two basis points (bps) lower at 7.37 per cent, tracking the decline in 10Y UST to 5.2 levels. 10Y GS touched 7.34 per cent ahead of OMO sales and the weekly SDL auction... 10Y point closed the day two bps lower at 7.37 per cent vs 7.39 per cent," per the report.

Account aggregator framework set to get a boost from pricing revamp, interoperability

Sindhu Hariharan
Chennai

India's account aggregator (AA) ecosystem, the consent-based framework to make financial data sharing seamless, is likely to see improved adoption with a new pricing model in the works alongside the Reserve Bank of India's recent move towards interoperability.

Per a new economic model for the AA ecosystem recommended by the Economic Model Committee, and seen by *businessline*, a structured fee is payable by financial information users (FIUs) every time they successfully fetch/pull data.

REVENUE POTENTIAL
This fee includes three components — the AA's digital public infrastructure utility fee, a fee payable to the financial information provider and an ecosystem management fee. Industry stakeholders told *businessline* that revenue potential has long been a sore point for the sector, and a clearer economic structure could encourage more participants to join the ecosystem.

"We have some structure coming into the entire thing. You will then see more people coming on to the system, more use cases are evolving," an executive at a licensed AA said.

AAs act as intermediaries and facilitate individuals to share financial information with regulated institutions for various purposes based on a consent mechanism.

Besides the new fee, the RBI's recently announced interoperability measures are also expected to address another key challenge — the need for financial institutions to integrate separately with multiple AAs. Under the new mechanism, a customer would be able to use any AA to access a financial institution, even if the two do not have a direct connect.

Sahamati, the RBI-recognised self-regulatory organisation for the AA ecosystem, said the change would make the customer journey smoother and reduce repeated registrations.

MULTIPLE INTEGRATIONS
According to BG Mahesh, CEO of Sahamati, around 40-50 per cent of institutions currently work with only two or three AAs, partly because additional integrations can involve significant operational and legal effort.

"Interoperability could reduce this friction, allowing institutions to focus on expanding the use of AA-powered products rather than managing multiple integrations," he said.

CAMSfinserv, an RBI-licensed AA platform, also welcomed the interoperability move, and added that it was working with ReBIT, Sahamati and other AAs to implement the required technical framework.

Despite the anticipated boost from pricing clarity and interoperability, the industry's underlying challenge remains whether AAs can translate growing transaction volumes into viable businesses. "AAs operate on very thin revenue and margins and are yet to figure out a robust business model," Vivek Iyer, Partner at Grant Thornton Bharat, said.

TVS Capital and Speciale Invest among 14 SLFMs to get funding under RDIF scheme

Sindhu Hariharan
Chennai

TVS Capital Funds, Speciale Invest, Chiratae Ventures, Kalaari Capital and Celesta India AIF are among the 14 second-level fund managers (SLFMs) selected and approved for funding under the ₹1 lakh crore Research, Development and Innovation Fund (RDIF) scheme of the Union government.

Further, IIT Madras Research Park (IITMRP); AI & Robotics Technology Park (ARTPARK), IISc Bengaluru; Centre for Cellular and Molecular Platforms (CCAMP), Bengaluru; Pilani Innovation & Entrepreneurship Development Society (PIEDS), BITS Pilani and Society For Innovation & Entrepreneurship (SINE), IIT Bombay are the five focused research organisations (FROs) also granted funding under the ₹1 lakh crore RDI launched by the government to support deep-tech research and business building. The amount of investment for each fund was not disclosed, but the total commitment of funding for these 19 SLFMs stands at ₹7,131 crore.

FUNDING BOOST
The competent authority has approved funding under the first cohort of RDIF for 14 alternative investment funds (AIFs) and five FROs, with an aggregate approved commitment of ₹7,131 crore, a DST note reads.

The other SLFMs that have been approved for funding are YourNest Capital Advisors, Sixth Sense Ventures, AdvantEdge Investment Managers, IvyCap Ventures Advisors, Ideaspring Capital Fund, Blume Ventures Investment Manager, AMA Capital Advisors, Translation Endeavors and Campus.

These SLFMs are expected to mobilise private capital equivalent to the RDIF contribution

150 APPLICATIONS
The ₹1 lakh crore RDIF scheme was launched by Prime Minister Narendra Modi in November 2025. The fund received over 150 applications for the selection of SLFMs.

The RDIF is being managed by an independent business unit housed within the Anusandhan National Research Foundation, under the Department of Science and Technology, Ministry of Science and Technology.

The 19 institutions approved under the first cohort will play a pivotal role in channelling RDIF capital to eligible tech enterprises undertaking research, development and innovation activities at technology readiness level 4 and above.

PRIVATE CAPITAL
These SLFMs are expected to mobilise private capital equivalent to the RDIF contribution.

"The approval of the first cohort of 19 second level fund managers under the ₹1 lakh crore Research, Development and Innovation Fund is a landmark moment for India's deep tech and innovation ecosystem," Rajat Tandon, President, IVCA, said.

Bank of Baroda Employees Unite for Nationwide Cleanliness Drive Under SHS 2026

Bank of Baroda has actively participated in the Government of India's Swachhata Hi Seva (SHS) 2026 campaign by organizing a nationwide cleanliness drive across its corporate, zonal, regional offices and branches. The initiative, spearheaded by the Department of Financial Services under the Ministry of Finance, forms an important part of the fortnight-long SHS 2026 programme observed from September 17 to October 2, 2026.Employees from Bank of Baroda offices and branches across the country took part in various cleanliness and hygiene awareness activities aimed at promoting responsible waste management, environmental sustainability and public participation in maintaining clean surroundings. The campaign focused on creating awareness about cleanliness while encouraging communities to adopt environmentally responsible practices. Speaking on the occasion, Shri Sanjay Vinayak Mudaliar, Executive Director of Bank of Baroda, emphasized that the Swachhata Hi Seva campaign is a significant national initiative that inspires collective action towards a cleaner and healthier environment. He stated that the bank remains committed to fostering a culture of cleanliness and environmental responsibility while motivating communities to contribute towards building a greener future. Through this initiative, Bank of Baroda reaffirmed its commitment to social responsibility, environmental sustainability and national development

Dr. Rohit Kumar Gupta Assumes Charge as Director of JNARDDC

Dr. Rohit Kumar Gupta has taken over as Director of the Jawaharlal Nehru Aluminium Research Development and Design Centre (JNARDDC), Nagpur, an autonomous institution under the Ministry of Mines, Government of India, effective September 23, 2026. A distinguished metallurgist with more than 26 years of experience, Dr. Gupta has built an impressive career in materials development, processing, characterization, and failure analysis, particularly in the aerospace and strategic sectors. Before joining JNARDDC, he served as General Manager, Materials Development and Production at ISRO's Liquid Propulsion Systems Centre (LPSC), Thiruvananthapuram, and held several key positions at the Vikram Sarabhai Space Centre (VSSC). Dr. Gupta has played a pivotal role in the indigenous development of advanced materials for major ISRO missions, including PSLV, GSLV, LVM3, Chandrayaan, Mangalyaan, Aditya-L1, and Gaganyaan. His contributions have earned him several prestigious recognitions, notably the Metallurgist of the Year Award (Non-Ferrous) from the Ministry of Steel in 2019. As Director, Dr. Gupta will spearhead JNARDDC's research and development initiatives in aluminium and its alloys, critical minerals, metal recycling, materials testing, and certification, further strengthening the Centre's contribution to India's non-ferrous metals and minerals sector.

Axis Bank's MOVES 2026 Engages 43,000 Students to Reimagine Banking for 2035

Axis Bank has announced the winners of its flagship campus engagement programme, MOVES 2026, which attracted participation from more than 43,000 students across over 110 institutions, including leading management and engineering colleges in India. The initiative challenged students to envision the future of banking under the theme "Organization of the Future: Design for 2035," encouraging innovative thinking around customer experience, operations, risk management, workforce design, and AI-driven ecosystems. Designed to strengthen industry-academia collaboration, MOVES 2026 provided students with an opportunity to address real-world business challenges and contribute ideas that could shape the future of financial services. According to Rajkamal Vempati, Group Head - Human Resources, Axis Bank, the programme highlights the immense potential of India's emerging talent and inspires students to tackle opportunities and challenges that will define the banking landscape of tomorrow. The competition concluded with a grand finale in Mumbai, where shortlisted teams presented their ideas before a panel of senior Axis Group leaders. The winning team was from SJMSOM, IIT Bombay, while participants from IIM Bangalore and ISB Mohali secured the first and second runner-up positions, respectively. Winners received cash rewards and career opportunities with Axis Bank.

NTPC Kawas Marks World Tourism Day with Suvali Beach Cleanliness and Awareness Drive

On the occasion of World Tourism Day, NTPC Kawas organized a cleanliness and awareness drive at Suvali Beach under the leadership of Shri Debesh Kumar Padhi, Head of Project (HOP), as part of the Swachhta Hi Sewa–2026 campaign. The initiative focused on the removal of plastic waste, discarded materials, and other debris that had accumulated along the shoreline following Ganpati Visarjan celebrations. The drive highlighted the importance of responsible waste management during public events and community gatherings, emphasizing the collective role of citizens in preserving natural ecosystems and public spaces. In addition to the cleanup activity, the programme also aimed to create awareness among local residents and visitors about environmental conservation, sustainable practices, and the significance of maintaining clean tourist destinations. Aligned with this year's theme, "Swachhta Mein Sahbhag", the initiative reinforced NTPC Kawas' commitment to environmental sustainability, community participation, and responsible tourism. Through active engagement and public sensitization efforts, the organization encouraged greater civic responsibility and promoted the idea that cleanliness is a shared duty. By combining environmental action with community outreach, NTPC Kawas reaffirmed its dedication to building cleaner, greener, and more sustainable destinations while fostering awareness and participation among communities for a healthier future.

IBM, MeitY Startup sign deep-tech MoU

Mumbai: IBM has partnered with MeitY Startup Hub, an initiative of the Ministry of Electronics and Information Technology (MeitY) to share its enterprise offerings with India's start-ups to accelerate the deep tech ecosystem. A key priority will be identifying and nurturing promising innovators from tier-2 and -3 cities. OUR BUREAU

Rupee gets 145 paise boost in last two trading sessions, post RBI's measures

NEW CONCERNS. Disquiet sets in forex market after central bank's new restrictive steps to curb speculation

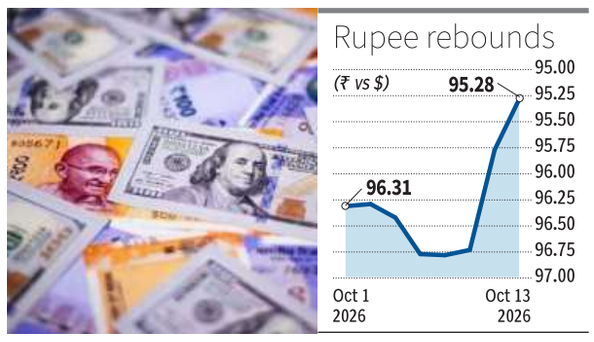

K Ram Kumar
Mumbai

While the rupee got a 145-paise boost in the last two trading sessions after the RBI announced a host of measures over the weekend to curb speculation and volatility in the forex market, concerns emerged after the central bank unveiled additional restrictive measures.

Bank treasury officials said that following the latest RBI measures on risk management and inter-bank dealings announced on Monday, banks may find it difficult to operate their treasury functions effectively.

The rupee appreciated by about 50 paise on Tuesday. One of the main reasons for this is that there are very few buyers in the market. The spot bid/ask spread had widened to around 20 paise at one point in morning trades. By evening, however, the spread had largely normalised to around 2-3 paise.

"If participants buy dollars, they may need to enter into forward transactions or swaps, which could attract additional margin/reserve requirements, going by the latest measures. This is restricting market activity," said a senior dealer with a public sector bank.

FIAT TO BANKS

The RBI on Monday directed banks authorised to deal in foreign exchange (authorised dealers or ADs) to maintain a Foreign Exchange Risk Reserve (FERR) for forex derivative contracts involving the rupee undertaken for hedging the currency risk of their own assets and liabilities.

"As per the latest circular, it appears banks are required to maintain margins on their own positions as well, including positions taken to hedge their assets and liabilities. Banks already have to maintain FERR on forex-related requirements arising from customer transactions. Now, if similar requirements apply to the banks' own books, it will significantly increase their costs," said a treasury official with a private sector bank.

On Tuesday, the rupee ended at a five-week high, gaining 49 paise to close at 95.28 per dollar, compared with the previous close of 95.77.

This came on the heels of the rupee appreciating on Monday to close about 1 per cent higher against the Friday's close of 96.73.

Meanwhile the 10-year G-Sec ended a tad lower, with yields closing at 7.37 per cent against previous close of 7.39 per cent. Kunal Sodhani, Head of Treasury, Shinhan Bank, said, "The RBI has sucked out liquidity with its recent moves. In the next two-three days, 10-year yields are expected to be in the range of 7.2-7.4 per cent. This may solve the interim problem. but the RBI intervention will not succeed in the long term if the global indices stay where they are."

Finance Minister Nirmala Sitharaman, on Tuesday. acknowledged the rupee's depreciation in recent months, and added that the RBI is taking steps to stabilise the currency and curb excessive volatility.

Dilip Parmar, Senior Research Analyst, HDFC Securities, observed that the rupee continued its upward trajectory for the third consecutive session, closing near a one-month high. The advance was driven by regulatory measures implemented by RBI to limit volatility and curb speculative trading, along with the unwinding of long positions, general dollar weakness, lower crude oil prices and recovery in the domestic equity market.

AI costs disrupt Zoho's 'usual pay hike' roll-out

Our Bureau
Chennai

SaaS major Zoho has said that it will not be rolling out "the usual level" of wage increases for its employees this year.

In a post on X, Founder Sridhar Vembu has said that the business outlook for the software industry remains uncertain.

"AI has raised costs dramatically with a four-fold increase in server prices, which we need for data centres. AI usage is also increasing rapidly, leading to much higher expenses, which we are trying to control," he said.

MARKETING BUDGET

Vembu added that the current geopolitical situation has also played a role and that the company has cut its marketing budget. "We have cut down on our marketing budget."

"We have also told our employees that we cannot have our usual pay increase this year. I have apologised for not being able to avoid this," he said.

"We will work hard to avoid mass layoffs, but the outlook for software jobs in general is grim. We have not been growing our employee count for 18 months now," he added.

EMPLOYEE LAYOFFS

While Vembu has been reiterating strongly in previous instances that they will not lay off employees, this is the first time he noted that "we will work hard to avoid mass layoffs".

This reiterates the overall stress in the IT products and services industry due to AI advancements.

In a recent interview with *businessline*, Vembu had said that, considering the West Asia situation and other geopolitical issues, the company's growth globally had been slower this year as compared to last year.

"Data centre expenses as well as token costs from AI usage have gone up significantly. These affect margins," he said.

Adani, Jabil sign a 50:50 JV to manufacture AI and data centre hardware in India

Our Bureau
Ahmedabad

NEW ALLIANCE. Adani Group Chairman, Gautam Adani, and Jabil CEO, Mike Dastoor

Adani Enterprises Ltd (AEL) and the US-based engineering and manufacturing company Jabil Inc have signed a non-binding memorandum of understanding (MoU) to set up a 50:50 joint venture (JV) to manufacture and assemble artificial intelligence (AI) and data centre equipment in India, as demand for computing infrastructure accelerates globally. Adani Group Chairman Gautam Adani and Jabil CEO Mike Dastoor exchanged the agreement documents.

The proposed venture aims to build a multi-gigawatt AI infrastructure manufacturing platform spanning AI racks, servers, storage, networking equipment, power distribution systems, liquid-cooling solutions and transformers. It would offer installation and commissioning services, a release from the Adani Group said on Tuesday.

The MoU follows the companies' June 2026 announcement of their intent to establish a strategic alliance to develop an AI and data centre infrastructure manufacturing ecosystem in India.

The joint venture is expected to serve hyperscalers, neocloud providers, data centre operators and enterprises, catering to both domestic demand and export markets. Its multi-gigawatt manufacturing capacity would support high-performance computing systems with a combined power capacity of several gigawatts.

US PERM suspension unlikely to impact materially: Wipro

Our Bureau
Bengaluru

Wipro has said it does not anticipate any material business impact from the US Department of Labor's suspension of new applications under the permanent labour certification programme (PERM) for certain companies, citing its localisation strategy in the country.

In a BSE filing, Wipro said the suspension relates to a specific pathway to permanent residency and is distinct from broader skilled talent mobility programmes such as the H-1B visa.

The company said more than 80 per cent of its US workforce comprises locally-hired employees.

'UK-India deal could boost annual trade by £25b'

Suresh P Iyengar
Mumbai

The UK-India trade agreement could generate an additional £25 billion (₹3.26 lakh crore) in annual trade over the long term, said UK Business and Trade Secretary Jonathan Reynolds, who led a large British business delegation to India for exploring investment and commercial opportunities.

The delegation, among the largest the UK has taken to any country, comprises three Cabinet ministers, seven mayors and about 200 businesses.

Reynolds said businesses were identifying opportunities across sectors, including advanced manufacturing, life sciences, sports and culture, following the agreement's entry into force. "There's no sector of either of our economies that could not potentially strengthen their relationships," he said.

A file photo of UK Business and Trade Secretary Jonathan Reynolds ANI

UK-MAHA PACT

Reynolds also met Maharashtra Chief Minister Devendra Fadnavis, where the two sides signed a UK-Maharashtra Growth Partnership aimed at translating the trade agreement into commercial opportunities at the State level.

He said the agreement would benefit Indian businesses across a range of sectors, including agriculture, jewellery and leather goods, through tariff reductions. The provisions would also make it easier for businesses and professionals to operate across the two countries.

His meeting with Fadnavis also covered infrastructure development and emerging sectors, particularly financial technology.

LONG TERM BENEFITS

Under the social security arrangement, Indian nationals working in the UK would contribute to India's social security system, while British nationals working in India would contribute to the UK system, reducing the burden of dual contributions and facilitating short-term business mobility.

Reynolds said the benefits would expand over time as tariffs were progressively reduced, creating opportunities for businesses across the UK, including in Manchester.

Highlighting the complementary nature of the two economies, he cited the automotive sector, where businesses in India and the UK serve different market segments, creating scope for collaboration.

Reynolds said he was impressed by Mumbai's infrastructure development and Maharashtra's fintech ecosystem, including developments in tokenisation that could broaden access to asset ownership. "If we can show how it can work here, there's a blueprint there for other parts of India, other Indian States," he said.

EIM advances ₹4,000-crore electric freight plan ahead of Ravindra Energy merger

Amit Vijay Mohile
Mumbai

Energy In Motion (EIM), an electric heavy-truck and battery-swapping company backed by the Murkumbi and J M Baxi groups, will inaugurate its manufacturing facilities at Talegaon, near Pune, on Tuesday, advancing a ₹1,000-crore investment plan in Maharashtra that forms part of a broader ₹4,000-crore bet on accelerating the transition from diesel-powered freight transportation to electric mobility.

The company, which combines electric truck manufacturing with battery subscriptions, charging infrastructure and renewable energy, is preparing to merge with the listed Ravindra Energy. The proposed merger will bring these businesses under a single listed entity, as EIM seeks to make electric freight transportation commercially competitive with diesel.

The Talegaon vehicle manufacturing facility has an annual capacity of 5,000 heavy commercial vehicles per shift, while the adjacent lithium-ion battery assembly plant can produce up to 2.4 GWh of batteries annually, according to Ravindra Energy's investor presentation dated September 29.

CUTTING COSTS

At the core of EIM's strategy is its Maitryi battery subscription model, which separates truck ownership from battery ownership.

Under the model, fleet operators can purchase trucks without the battery pack, reducing upfront acquisition costs by up to 40 per cent. EIM, in turn, generates recurring revenue through battery subscriptions, electricity sales and battery-swapping services.

The company has an exclusive multi-year technology licensing agreement with China's Beiqi Foton and sources battery cells and kits from CATL.n Its 55-tonne Ashwa electric tractor is available with swappable 282 kWh and 350 kWh battery configurations, with battery replacement taking less than seven minutes.

By September, EIM had sold more than 500 electric tractors and is targeting deployments across ports, container freight stations, and the cement, steel and power sectors. EIM currently operates eight battery-swapping stations and plans to expand the network to 40 stations by March 2027, covering roughly 5,000 km of highways and major ports. Its longer-term goal is to establish 160 megawatt-scale charging and swapping stations by FY30.

Funding will be critical to this expansion. With shareholder funds exceeding ₹500 crore, including more than ₹400 crore in equity, EIM estimates it will need an additional ₹800-1,000 crore in equity over the next three years. The company plans to monetise its existing solar assets over the next 18-24 months, while subsidiary EIM Megaplex will manage batteries and charging infrastructure, enabling project-level financing.

F2A secures ₹3,000 cr in subscriptions, eyes ₹3,500 cr

Jyoti Banthia
Bengaluru

Fundamentum Frontier Advisors (F2A), a fund focused on growth-stage artificial intelligence (AI) and deep-tech companies, has secured ₹3,000 crore in subscriptions and received investor approval to expand its corpus to ₹3,500 crore, following commitments that exceeded its initial target.

The fund, which had initially targeted ₹2,000 crore, including a ₹1,000-crore greenshoe option, received subscriptions exceeding ₹3,500 crore. It is negotiating the final ₹500 crore and expects to complete the process in the coming weeks, Vivek Singla, Partner at F2A, told *businessline*.

"We have closed, rather we have held an intermittent close of the fund, at about ₹3,000 crore and we are well on our way to get to ₹3,500 crore," Singla said.

CAPITAL DEPLOYMENT

Nandan Nilekani has anchored the fund with an investment of ₹200 crore. Indian investors account for 70 per cent of its capital base, while overseas investors contribute the remaining 30 per cent. F2A plans to invest in 12-15 companies over the next two-three years, with initial cheques ranging from ₹100 crore to ₹200 crore. The fund expects to deploy capital in around seven companies this year, with three investments in advanced stages of discussion for the next quarter.

"We will be investing into companies which are already well on their runway to developing technology or product... Our capital will go more towards the scale-up side of things," Singla said.

F2A is focusing on companies that have moved beyond the research stage, demonstrated their technology and are ready to scale. Its approach is centred on backing businesses addressing specific domestic requirements rather than competing directly with global technology leaders developing foundational AI models. F2A plans to reserve capital for follow-on investments.

Adani Airports seeks IFSCA nod for GIFT City Treasury Centre; 2nd Adani entity to tap IFSC

Avinash Nair
Ahmedabad

Adani Airport Holdings Ltd (AAHL) has approached the International Financial Services Centres Authority (IFSCA) to set up a global treasury centre in GIFT City through its wholly-owned subsidiary, AAHL Global IFSC.

The proposed entity would be the second from the Adani Group, after ATSOL Global IFSC, a wholly-owned subsidiary of Adani Transmission Step One, which in turn is a wholly-owned subsidiary of Adani Energy Solutions, to pursue treasury operations in the international financial services hub.

The proposed entity has applied to undertake activities permitted under the IFSCA Finance Company Regulations, 2021, as a Global Treasury Centre. AAHL Global IFSC has sought 7.43 sq m of office space and has proposed an initial workforce of two people. The entity will be funded through capital infusion from its parent company.

INVESTMENT PHASE

The move comes as Adani Airports is entering a significant investment phase. Adani Enterprises has earmarked around ₹17,000 crore of its ₹40,000-crore FY27 capital expenditure for its airports business, including expansion of existing airport infrastructure and a new terminal at Ahmedabad ahead of the 2030 Commonwealth Games.

In GIFT City, Global and Regional Corporate Treasury Centres (GRCTCs) function as in-house banks for multinational companies, centralising the management of funds across their group entities. They undertake activities such as lending to group companies, managing cash flows and liquidity, deploying surplus funds and helping businesses manage their financing needs and financial risks across markets.

The framework introduced by the IFSCA allows registered finance companies and finance units in the IFSC to provide treasury services to group entities, including intra-group financing and liquidity management. This enables companies to consolidate treasury operations in Gift City rather than manage funding and cash balances separately across multiple jurisdictions.

GRCTCs in GIFT IFSC reported loans and advances of $6.54 billion as of June, up 140 per cent year-on-year from $2.73 billion in June 2025 and 16.6 per cent from $5.61 billion at the end of March. The lending portfolio has more than doubled over the past year, reflecting a sharp expansion in treasury centres' financing activity.

Gold rises on weaker $ ahead of US inflation data

Gold prices ticked up on Tuesday, as a weaker dollar and lower oil prices provided support, while investors looked out for key US inflation data. Spot gold rose 0.2 per cent to $4,178.97 per ounce by 1319 GMT. US gold futures for December delivery were up 0.3 per cent to $4,202.7. REUTERS

Copper edges up on mine supply disruption

Copper prices rose for a third straight session as persistent concerns over a supply shortage kept the metal within striking distance of an all-time peak. Benchmark three-month copper on the LME was up 0.1 per cent at $14,636.50 a tonne. Supply concerns remained in focus after Chile's Codelco partially suspended operations, while Antofagasta was hit by a union strike. REUTERS

Crude oil eases as traders eye Russia's fuel deal

Crude oil prices fell two per cent as traders monitored attacks on Saudi Arabia and prospects for additional diesel supply from Russia. Brent crude futures were down $2.02 to $104.63 a barrel by 1049 GMT, while US WTI crude futures were down $1.89 at $91.85. Both benchmarks climbed nearly $2 a barrel in the previous session. REUTERS

Govt allocates 16 lt sugar for sale during Oct 16-31

COMBATING PRICE RISE. The next 25 days will be crucial to guard against any further spurt in prices as traders anticipate negligible stock at mill levels

Prabhudatta Mishra
New Delhi

In a proactive move, the Union government has allowed sugar mills to start selling sugar from Tuesday after allocating 14 lakh tonnes (lt) for the second fortnight (October 16-31) of this month.

This is because ex-mill prices have surged by nearly ₹1,000/quintal in the past 10 days. However, the next 25 days will be crucial to guard against any further spurt in prices as traders anticipate negligible stock at the mill level.

The total quantity released for sale in the second fortnight will be 16-14 lt to domestic sugar mills and 2 lt to importers, the order issued by the Food Ministry showed.

Official sources said that in view of the current spurt in ex-mill prices in the past 10 days, the quota announcement was made two days in advance and it would take care of the demand of the trade in view of the upcoming Deepavali festival, to be celebrated on November 8.

The government received complaints that some mills had exhausted their sugar sales quota for the October 1-15 period and thereby were unable to sell; the information is said to have fuelled speculation of low stock and the current price rise, sources said.

NEXT CHALLENGE

While sugar demand for the Dussehra festival, to be celebrated on October 20, is almost over, the next challenge will be for Deepavali.

TIMELY ALLOCATION. The quota announcement, made two days in advance, is expected to meet trade demand ahead of the Deepavali festival

Already 30 mills in Maharashtra have started crushing operations and 10 more are expected in the next few days. Similarly, the government expects 10-15 mills to start crushing in Uttar Pradesh from around October 20. "As the government has already committed to allow mills to sell sugar produced this month without waiting for the quota, if 15 lt is produced there may be some ease in meeting November demand. But the situation is very tight," a source said.

According to the Food Ministry's order, mills in the top three sugar producing States have been allocated 11.59 lt or 83 per cent of the total 14 lt across the country. It includes 4.76 lt (Maharashtra), 4.51 lt (Uttar Pradesh) and 2.32 lt (Karnataka). Of 587 mills, 134 have not received any allocation while 39 mills have got quota up to 100 tonnes.

Also, the government has allocated 1.30 lt to Shree Renuka Sugars and 70,000 tonnes to Shri Dutt India for the second fortnight.

Though these refiners had approval for 2.65 lt imported sugar to sell in the domestic market and the government had allocated 3 lt (1 lt each fortnight) between September 1 and October 15, they could sell less than 60,000 tonnes due to non-parity in prices, sources said.

RETAIL PRICE INCH UP

The government had announced 26.5 lt sugar quota during September and 30 lt for October.

However, apart from imported sugar, some quantity of domestically produced sweetener also could not be sold, sources said.

On the other hand, in Delhi's retail market, sugar prices have inched up to ₹65/kg from ₹60 in some places in the past 2-3 days after a surge in ex-mill prices, whereas in many other places the retail prices are yet to show a rise. In Sonepur, Odisha, sugar is being retailed at ₹50-55.

The ex-mill price in Uttar Pradesh is said to have reached ₹5,400/quintal from about ₹4,450 about 10 days ago. A similar rise has been noticed in other States as well; in Maharashtra, it is neeomg quoted at ₹5,100.

"If imported sugar quota is excluded, total allocation to domestic sugar mills in October is 27 lt against India's closing stock of 32-35 lt on September 30. Since the demand in November may also be around 24-25 lt, India needs at least 12-13 lt production in October to manage the next month's requirement," said a trade source.

Deficit rain, borer likely to hurt arabica coffee crop's prospects this year

Vishwanath Kulkarni
Bengaluru

Amidst erratic rainfall and emerging pest pressures across the Western Ghats, coffee growers see a dent in Indian arabicas as the infestation of white stem borer (WSB), a key pest affecting the crop, has intensified this year due to the prolonged dry conditions.

"The monsoon has been deficit in most plantation areas. In arabicas, there is a severe white stem borer infestation. Certain areas have started harvesting due to the early receipt of blossom showers in January-February this year. We may have a clearer picture on arabica crop in early November, but it is unlikely to cross 1.1 lakh tonnes (lt) during 2026-27," said Sahadev Balakrishna, Chairman of the UPASI Coffee Committee.

In Karnataka and Tamil Nadu, the arabica crop is likely to be lower by 5,000-10,000 tonnes, which is likely to be made up by non-traditional grower Andhra Pradesh, he said.

BORER ATTACKS

India's arabica production was 1.11 lt during the 2025-26 crop year ending September, with Karnataka accounting for 79,145 tonnes.

For the current 2026-27 season, the Coffee Board, in its initial post-blossom estimates, has projected total arabica output of 1.2 lt, of which 84,015 tonnes is expected to come from Karnataka, which is the largest producing State.

The Board, in its initial estimates, projected a total crop of 4.04 lt for 2026-27 — up from 3.73 lt last year. For Karnataka, the total output is projected at 2.79 lt (2.56 lt).

M Salman Baseer, former Chairman of the Karnataka Planters Association, said that the arabica crop in the State is definitely lower than last year, and that he expects a decline of 10-15 per cent.

The key coffee growing regions have witnessed deficit and erratic rainfall patterns this year, while the incidence of WSB is on the higher side, he said.

RAIN DEFICIT

"While the Coffee Board's initial post-blossom estimate sets an optimistic production target of more than 2.79 lt for Karnataka, growers and industry observers emphasise that these early projections assume ideal weather conditions. Given the subsequent uneven monsoon, erratic rainfall deficit and emerging pest pressures across the Western Ghats, the final harvest figures (post-monsoon) are expected to face downside adjustments, particularly in the arabica-heavy zones," Baseer said at the recent annual general meeting of the KPA.

MC Kariappa, Chairman, KPA, said only about a fourth of the total coffee areas in the State had received satisfactory rainfall this year. Besides WSB infestation, the shortage of skilled labour had impacted the control of the infestation.

Tea Board expands auction network to boost price realisation

Our Bureau
Kolkata

The Tea Board of India is expanding the number of auction centres to intensify competition among buyers and to help the producers secure better prices. The board also expects its auction reforms to improve price realisation for the industry.

"Producers are not realising the prices they expect. The Tea Board has taken several initiatives to reform the auction system, which we hope will help the industry secure better prices. We are also diversifying auction centres after detailed discussions with stakeholders," C Murugan, Deputy Chairperson, Tea Board India, said at the 62nd annual general meeting (AGM) of the Tea Research Association (TRA) in Kolkata on Thursday.

AUCTION REFORMS

The board has recently opened two auction centres in Dibrugarh and Jorhat in Assam and plans to open another in Agartala by the end of October.

It is also working to reopen the Jalpaiguri auction centre and conducting a survey in Arunachal Pradesh, Murugan told mediapersons on the sidelines of the AGM.

As part of the auction reforms, the board plans to rationalise sample sizes and allow producers to decide which buyers receive free samples. "Only a limited number of buyers are participating in the auctions. Allowing all the registered buyers to participate in them will increase competition and help improve price realisation," Murugan said.

AI MODEL

Separately, TRA on Thursday launched TocklAI, an artificial intelligence model developed to offer practical guidance to planters, managers and small growers on pest and disease management, soil health, nutrition, clone selection, replanting, climate adaptation, tea processing and food-safety compliance.

The project draws on research from the association's Tocklai Tea Research Institute in Jorhat, which is marking 115 years as a tea research institution. "It is the first of its kind in the global tea industry, and we are proud that it comes from India," said Suneel Singh Sikand, Chairman, TRA.

Indonesia's supply warning casts a shadow on palm oil prices next year

Amit Vijay Mohile
Mumbai

A potential palm oil supply squeeze in Indonesia is casting a shadow over the 2027 input costs for FMCG majors. Major edible oil businesses, including AWL Agri Business, Patanjali Foods, Bunge and ADM Agro Industries, face a procurement challenge as the world's largest producer warned of a possible 4–5 million-tonne production decline in 2027.

Mohamad Fadhil Hasan of the Indonesian Palm Oil Association (GAPKI) projected the decline if El Niño-related disruptions materialise, following a broadly stable output in 2026. Indonesia's domestic consumption could increase by another 2 million tonnes if its B50 biodiesel blending programme is fully implemented, potentially squeezing exports and pushing average palm oil prices above 2026 levels.

However, Dorab Mistry, Director, Godrej International, cautioned against expectations of a runaway price rally. "The outlook for 2027 is bullish, but not super bullish," he said at the recent GLOBOIL India 2026 conference in Mumbai, arguing that elevated prices could weaken consumption while a strong dollar might restrain commodity markets.

Sanjeev Asthana, Chief Executive Officer, Patanjali Foods, told *businessline* higher edible oil prices remained a concern because of their potential impact on FMCG companies' margins. The broader outlook remains worrying and requires close monitoring. The contrasting assessments leave Indian manufacturers with a difficult choice: Secure supplies ahead of a possible shortage or wait for weaker demand to restrain prices.

FUTURE COSTS

The projected shortage concerns 2027, not the current festive season. But procurement decisions made in the coming months could influence the prices companies pay for future supplies.

Mistry welcomed India's reduction in import duties on crude and refined edible oils while preserving domestic refining margins.

Indonesia's evolving trade relationship with the European Union adds more uncertainty. GAPKI outlined an initial annual preferential quota of 1.9 million tonnes of Indonesian crude and processed palm oil for Europe, increasing 3 per cent annually for nine years, subject to implementation and sustainability requirements.

The arrangement could strengthen European buyers' access to supplies, although any resulting diversion from India remains uncertain.

The Council of Palm Oil Producing Countries (CPOPC) has called for closer cooperation with India as producing nations balance edible oil exports against domestic energy requirements.

"India is much more than an export destination for palm oil producing countries," CPOPC Secretary-General Izzana Salleh said, emphasising food security and resilient supply chains.

India's steel demand to grow 8% in 2027, fastest among major markets: worldsteel

Gayathri G
Chennai

India's steel demand is projected to grow 7.9 per cent to 172.4 million tonnes (mt) in 2026 and 8 per cent to 186.2 mt in 2027, driven by infrastructure spending, private real estate activity and manufacturing expansion, according to the World Steel Association (worldsteel).

India will remain the world's fastest-growing major steel market even as global demand stagnates in 2026 amid a prolonged downturn in China's property sector and geopolitical uncertainty in West Asia, worldsteel said in its 'October Short Range Outlook', which was released on Monday.

Infrastructure-led construction will remain the key driver of Indian demand, supported by private real estate, manufacturing and renewable energy projects.

Expanding manufacturing capacity is also boosting steel consumption in electrical and mechanical machinery, while the automotive sector benefits from domestic demand, exports and policy support, the report said.

MUTED DEMAND

Worldsteel expects global demand to remain virtually flat at 1,722 mt in 2026 before growing 1.7 per cent to 1,752 mt in 2027. It has revised its 2026 outlook down from the modest growth projected in April and cut its 2027 growth forecast from 2.2 per cent.

The downgrade largely reflects China, where steel demand is expected to contract 2 per cent in 2026 as the property investment slump persists and infrastructure investment remains negative. The contraction is forecast to narrow to 1 per cent in 2027.

Steel demand outside China is projected to grow 1.5 per cent in 2026 before accelerating to 4 per cent in 2027, supported by industrial recovery in developed economies and continued momentum in developing markets.

INFRA, CLEAN ENERGY

India's demand outlook is underpinned by construction, capital goods and automobiles. Infrastructure development and private investment are expected to sustain consumption, while renewable energy projects will add to the demand for steel-intensive equipment and structures.

India is expected to sustain high single-digit demand growth, while China remains in contraction as its property market adjusts.

However, worldsteel cautioned that the global outlook remained exposed to risks from instability in West Asia and energy market disruptions.

N-E monsoon likely to arrive in two days with a 6-day wet spell

Vinson Kurian
Thiruvananthapuram

The North-East monsoon could set in over the South Peninsula within the next two days, even as the India Meteorological Department (IMD) appeared to have dropped its forecast of a low-pressure area forming over the south-east Bay of Bengal on Tuesday.

The emerging wet spell may instead be triggered by a trough linking cyclonic circulation over the south-west and central Bay of Bengal, off the Sri Lankan coast, with a parent circulation over the South Andaman Sea.

OPENING WET SPELL

The latter has merged with the trough, which could channel the easterlies and usher in the North-East monsoon. The 2026 season is expected to begin with a six-day wet spell from Wednesday or Thursday, with isolated heavy rainfall forecast over several parts of the South Peninsula.

Tamil Nadu, Puducherry and Karaikal are likely to receive the initial spell, followed by Kerala and Mahe from Thursday, the IMD said on Monday.

The rain belt is expected to extend to coastal Andhra Pradesh, Yanam and south interior Karnataka for four days from Thursday, coastal Karnataka, north interior Karnataka and Rayalaseema for three days from Friday, and Telangana on Saturday.

Isolated to scattered rainfall, at times fairly widespread to widespread, is forecast across these regions during the respective periods, with isolated heavy spells.

With the Bay of Bengal poised to mark the final phase of the retreating monsoon, the South is entering a crucial wet phase.

The coming days will determine how quickly the easterlies take hold and whether the expected onset of the North-East monsoon ushers in a sustained spell of rain across the region.

STORMY WEATHER

Fairly widespread to widespread rainfall is expected over Kerala and Mahe for four days from Thursday; coastal Andhra Pradesh, Yanam, Lakshadweep and south interior Karnataka for three days from Friday; coastal Karnataka and north interior Karnataka over the weekend; and Rayalaseema on Thursday and Friday.

Isolated to scattered rainfall may persist over Tamil Nadu, Puducherry and Karaikal for six more days.

Aluminium futures: Stay out for now

Akhil Nallamuthu
bl. research bureau

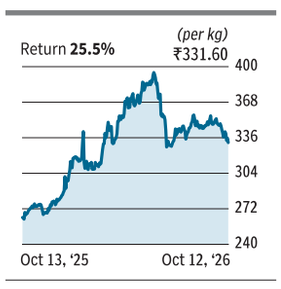

Aluminium futures (₹330/kg) have been in a downtrend for nearly a month. The sell-off was triggered at the resistance at ₹355 in mid-September.

Early last week, the contract found support at ₹333 and saw a minor uptick. But it could not gain beyond ₹342, a resistance, and declined.

While the chart shows that the downtrend is steady, the October futures have support at ₹327. Notably, the price region between ₹325 and ₹327 is a support band.

Aluminium futures are likely to breach the base at ₹325. This could potentially open the door for a fall to ₹315.

However, if there is a recovery on the back of the support band of ₹325-327, aluminium futures could retest the hurdle at ₹342. A breakout of this could lead to a rally to ₹350.

Overall, the outlook remains bearish, but participants must closely watch the contract's reaction to the upcoming support band of ₹325-327.

TRADE STRATEGY

Stay out for now. Short if the price rises to ₹335. Place the stop-loss at ₹342. When the price slips to ₹325, tighten the stop-loss to ₹332. Book profits at ₹315.

Bayer to distribute, market Inera's crop nutrition product

Our Bureau
Bengaluru

Inera, the agricultural biotechnology arm of Absolute, and Bayer have entered into a strategic commercial collaboration to bring a climate-resilient crop nutrition solution to farmers.

The solution aims to improve nutrient use efficiency (NUE) and enhance soil and plant health.

Absolute's NIP platform houses over 35,000 unique microbial strains, biomolecules and enzymes sourced and characterised from extreme habitats worldwide, Inera said in a statement.

AI PLATFORM

Its AI platform, Nature+, analyses biological datasets to predict functions, identify promising molecules and proteins, and design candidates for experimental validation, product development and field trials.

Together, the platforms underpin Inera's agricultural innovation pipeline, which includes RNAi-based biocontrols, peptide-based inputs and AI-discovered bioherbicides designed for performance and stability.

Commercial engagement between the companies has begun, with Bayer set to market and distribute the Inera product through its sales network.

FIELD TRIALS

Inera's development efforts are backed by more than 50,000 field trials and farmer demonstrations across over 100 acres of dedicated trial grounds, which the company describes as among the largest programmes of its kind in India.

Agam Khare, Founder of Absolute, said the collaboration would help make homegrown biological solutions more accessible to farmers.

Inera focuses on solutions that support climate adaptation, biological pest control, soil health and nutrient use efficiency, he added.

Simon Wiebusch, Country Divisional Head of Bayer's Crop Science Division for India, Bangladesh and Sri Lanka, said that the partnership would combine Inera's expertise in biological solutions with Bayer's understanding of farmers' needs, agronomic capabilities and ability to scale innovation.

The collaboration comes amid growing interest in agricultural biologicals in India and aligns with national initiatives, such as the PM-Pranam scheme and the BioE3 policy.

QUICKLY.

MoS L Murugan resigns, to strengthen BJP in TN

New Delhi: Union Minister of State L Murugan on Tuesday resigned from the Modi government and said he wanted to return to Tamil Nadu to strengthen the BJP in the State. His resignation raised speculation about an imminent reshuffle in the Council of Ministers. Murugan has been a member of the Rajya Sabha since September 2021 and was re-elected to the Upper House in April 2024 from Madhya Pradesh. His tenure ends in April 2030. Murugan told PTI, "I requested our Prime Minister to relieve me from the Council of Ministers and the Rajya Sabha because I want to go to Tamil Nadu to strengthen our party.I stated that I want to strengthen our party at the grassroots." PTI

Karnataka to set up Invest Forum offices in 5 nations

Bengaluru: The Karnataka government is considering opening Invest Karnataka Forum (IKF) offices in the US, Japan, Taiwan, South Korea and France to attract investments into the State's industrial sector, Industries Minister MB Patil said on Tuesday. The proposal was discussed at a meeting of the IKF Board of Directors. Patil directed officials to assess the advantages and disadvantages of setting up the offices and submit a report.
"Some State governments have already taken steps to open offices in the countries mentioned above to attract investments. We cannot afford to lag behind," he said.
"Karnataka's economy is at a turning point," Patil said.

MoD to frame long term defence procurement plan for industry

CLEAR PATH. It will chart a 10-15 year capability, technology perspective roadmap to help private industry

Dalip Singh
New Delhi

The Ministry of Defence is revising procurement visibility documents to provide the industry a 10 to 15 year outlook on military requirements, particularly in emerging technology domains such as drones and counter-drone systems, A Anbarasu, Additional Secretary & DG (Acquisition) in the MoD said on Tuesday.

Addressing the launch of an AI powered autonomous fighter aircraft, a first in India, by the Bengaluru-based start-up Flying Wedge Defence & Aerospace, he said the MoD's decision followed domestic industry's long standing demand for sustained business opportunities.

The updated Integrated Capability Development Plan (ICDP) that will lead to a detailed Technology Perspective and Capability Roadmap (TPCR) will enable the private industry to step up R&D efforts, establish production lines and assemblies to meet the requirements of tri-services in a desired timeframe.

Flying Wedge Defence & Aerospace CEO Suhas Tejaskanda (left) with MoD officials at the launch of prototype of the 'FWD Supreme' on Tuesday

FRAMEWORK
Outlining a series of reforms aimed at accelerating defence procurement, simplifying testing procedures and strengthening indigenous manufacturing, Anbarasu said the government was also working on a revamped quality assurance framework to make the process more responsive to the needs of the domestic defence industry.

"From the acquisition side, we are in the process of reducing the timelines, introducing technology readiness levels, accelerating innovation, particularly to solve the issue of value of deals, where successful prototypes languish without orders," he said.

The Ministry has started the exercise of fast tracking acquisition of all the emerging tech proposals, said the senior officer without elaborating on the details.

DRONE CoE
A centre for drone excellence under the IIT Kanpur is also going to be established to act as a one-stop location for research in that domain.

"The government is in the process of coming up with drone standardisation software and automation of the acquisition process so as to speed up the decision making.

We are not happy with the speed at which we are doing business, because the world is changing faster, our process systems have to move faster," he said.

On other policy initiatives, he stated a three-layered quality assurance system will be set-up including a government appointed, industry appointed and third party layers, he remarked.

The official said the reforms in quality assurance, trials and acquisition procedures will collectively create a more efficient and predictable environment for industry.

A central element of the proposed Defence Acquisition Procedure (DAP) 2026 reforms is a shift from the traditional emphasis on manufacturing products domestically to ensuring that India develops and owns critical technologies.

VENDOR REPOSITORY
Industry registration will also be introduced to compile a central repository of defence industry players to help in vendor interaction and evaluation for business engagement.

'Whatever China may claim, Ladakh is integral part of India'

The government assigned standardised names for 28 places on the official map of the Survey of India ANI

Amiti Sen
New Delhi

China has opposed India's recent move to assign standardised names to strategic locations and geographical features in Ladakh, calling it "illegal and void", in a fresh diplomatic flare-up that comes amid efforts to smoothen bilateral economic and strategic ties.

In a sharp rebuttal to Beijing's assertions made on Tuesday, Ministry of External Affairs said that the Union Territory of Ladakh is an integral part of India and the neighbouring country's denial would not change facts.

Earlier in the day, Chinese Foreign Ministry spokesperson Mao Ning, while answering a question at a press briefing, alleged that India had illegally established the Union Territory of Ladakh.

"China has never recognised the so-called 'Union Territory of Ladakh unilaterally and illegally' established by India, and firmly opposes the so-called 'standardised names' publicised by India. This move by India is illegal and void and does not change the fact that the western sector of the China-India boundary belongs to China," she said.

MOUNTING TENSIONS
The remarks underline the continuing divergence between the two countries over their disputed boundary, even as New Delhi and Beijing have taken steps over the past year to ease military tensions along the Line of Actual Control (LAC) following the deadly clashes in the Galwan Valley in June 2020.

"It is reiterated that the UT of Ladakh is an integral and inalienable part of India. No amount of denial by the Chinese side can change this established fact," the MEA said in its statement responding to queries from journalists on the Chinese Foreign Ministry comment.

DISPUTED BORDER
The Ministry of Home Affairs announced on October 2 that 28 places and geographical features in Ladakh had been assigned standardised names for inclusion on the official map of the Survey of India.

The exercise was undertaken in consultation with the Ladakh administration and local stakeholders.

The latest exchange highlights the continuing divergence between the two countries over their disputed boundary, despite steps taken to ease military tensions along the Line of Actual Control (LAC) following the deadly clashes in the Galwan Valley in June 2020.

New Delhi has consistently maintained that peace and tranquillity along the border are essential for the normalisation of bilateral relations.

SC registry clears, numbers Rahul's SIR-CEC plea

Krishnadas Rajagopal
New Delhi

The Supreme Court has registered and numbered for hearing a petition filed by Opposition leaders led by Rahul Gandhi seeking complete disclosure of records and decisions of the Election Commission of India on the Special Intensive Revision (SIR), and an independent probe into allegations of unilateral exercise of power by Chief Election Commissioner Gyanesh Kumar, which led to voter deletions and modifications.

The petition was filed on Monday by Gandhi's legal team headed by senior advocate AM Singhvi even as the Congress leader led a march to the Supreme Court. Gandhi and other leaders across the Opposition political spectrum had walked to the Supreme Court Registry to mark their presence as petitioners in the case.

PENDING PLEAS
The leaders submitted that their decision to move the apex court followed a written communication from Chief Justice of India Surya Kant. In his October 11 reply to a request from the Opposition leaders to meet him, the CJI had informed that petitions raising similar issues were already pending with the Supreme Court, and scheduled to be heard on October 13. The CJI's Bench is itself hearing petitions concerning SIR and the allegations against the Chief Election Commissioner.

The petition was filed on Monday by Gandhi's legal team, headed by senior advocate AM Singhvi, even as the leader led a march to the SC

CLERICAL DEFECTS
The CJI had advised the Opposition leaders that they too could file a petition on October 12 between 10.30 am and 4.30 pm or use the e-filing facility afforded by the apex court to litigants.

However, media reports had emerged within hours of the filing that it was stuck in the Supreme Court Registry due to "defects", which later proved to be routine and clerical in nature. Mr. Gandhi's petition reportedly had featured over 10 clerical defects, including a deficit in court fees and missing *vakalatnamas* for some of the petitioners.

When contacted in the morning on October 13, Gandhi's legal team had said that such defects were "contemplated under the Supreme Court Rules and would be cured in due course".

They said the Registry had found no fault in the substantive legal and constitutional arguments raised in the petition.

Apex court grants interim stay on defamation case against Rahul Gandhi

Aaratrika Bhaumik
New Delhi

The Supreme Court on Tuesday stayed criminal defamation proceedings against Congress leader Rahul Gandhi over his alleged 2018 remark referring to Prime Minister Narendra Modi "commander-in-thief" in the context of the Rafale fighter jet deal.

A Bench of Justices, Vikram Nath and Aparesh Kumar Singh passed the interim order on a petition filed by Rahul Gandhi, the Leader of the Opposition in the Lok Sabha, challenging the Bombay High Court's September 8 decision refusing to quash the proceedings.

"In the meantime, further proceedings before the trial court shall remain stayed," the court ordered.

Senior advocate Abhishek Manu Singhvi, appearing for Gandhi, sought a stay on the ground that the proceedings were not maintainable.

The Bench also issued notice to the Maharashtra government and the complainant, Bharatiya Janata Party (BJP) member Mahesh Shrishrimal, and posted the matter for hearing after four weeks.

COMPLAINT REASON
The complaint arose from two sets of remarks allegedly made by Rahul Gandhi in September 2018. Shrishrimal objected to these references at a rally in Rajasthan on September 20 and in a subsequent social media post.

ALLEGATIONS
Shrishrimal alleged that the remarks imputed theft not only to Modi but also to members of the BJP and others associated with him and sought Rahul Gandhi's prosecution for criminal defamation under Section 500 of the Indian Penal Code.

Proceedings were initiated by a Mumbai magistrate court in 2019. Rahul Gandhi subsequently moved the Bombay High Court in November 2021, denying the allegations and seeking quashing of the proceedings.

Justice NR Borkar of the High Court rejected Rahul Gandhi's contention that the BJP was not an identifiable body for the purpose of the defamation complaint.

"On a *prima facie* reading of the defamatory statement, *inter alia*, describes the Prime Minister, who is also the prominent face of the said political party, as having engaged in the acts of theft while being the Commander of Thieves.

Therefore, at this threshold stage, it cannot be said that the alleged defamatory imputation is incapable of extending to those clearly identified with the party and its leadership, including its office bearers," the High Court had held.

The High Court had also said that whether the alleged remarks affected only the Prime Minister or extended to other BJP members was a matter of evidence to be determined by the trial court.

SC grants Centre time till Thursday to file reply on action taken on SIR protest

Krishnadas Rajagopal
New Delhi

The Union government informed the Supreme Court on Tuesday that its response to petitions alleging illegal detentions, shutdown of public transport, including metro services, in Delhi on October 10 is "ready" but needs more fine-tuning.

A three-judge Bench headed by the Chief Justice of India Surya Kant extended the time for the government to file the reply affidavit by Thursday.

Multiple petitions, including ones seeking contempt proceedings, were adjourned to October 15 as one of the judges on the Bench was unwell.

Solicitor General Tushar Mehta said he had gone through the prepared affidavit. It was final, but he wanted to make it "more comprehensive."

Police personnel detaining protesters at Janpath in New Delhi on Tuesday ANI

FRESH PETITIONS
On the petitioners' request, the court asked him to share the affidavit, if possible, by October 14, a day before the hearing so that the lawyers for the petitioners familiarise themselves on the contents ahead of the hearing on Thursday. The court also agreed to urgently hear fresh petitions seeking an independent probe and contempt proceedings against authorities on the continued police action against journalists, especially women media professionals, covering the anti-CEC/SIR protests despite an apex court order on October 11.

Chief Justice Kant said the pleas would be also put up for comprehensive hearing on Thursday.

A separate petition was orally mentioned by senior advocate Gaurav Bhatia expressed concern about the stampede-like situation and sloganeering that happened in the Supreme Court on October 12 when the Leader of Opposition Rahul Gandhi and others had come to the Supreme Court Registry after filing a petition seeking a probe into the Special Intensive Revision of electoral rolls and allegations of arbitrary functioning and misconduct against Chief Election Commissioner Gyanesh Kumar. Bhatia said a petition filed by advocate Divyansh Bisht has sought initiation of criminal contempt against Gandhi and other Opposition leaders for obstructing justice, a ban on political demonstrations inside court premises, a "neutral framework" to regulate protests near courts, and safeguards against political interference in matters *sub judice*.

Separate petitions filed by organisations of media professionals, including Free Speech Collective and Network of Women in the Media, India, pointed to the violence visited upon journalists, both on October 10 and October 11, during the course of police action.

TN, AP CMs discuss linking of Godavari and Cauvery rivers

Our Bureau
Hyderabad

Andhra Pradesh Chief Minister N Chandrababu Naidu and Tamil Nadu Chief Minister C Joseph Vijay discussed the feasibility of a Godavari-Cauvery river-linking project and its potential benefits for farmers in both States.

Vijay, who arrived in Vijayawada this evening, met Naidu at his camp office in Amaravati. "The two Chief Ministers, along with officials, discussed several issues and Chandrababu Naidu explained the importance of linking the Godavari and Cauvery rivers, describing river interlinking as a permanent solution to drought," an AP government release said.

Andhra Pradesh Chief Minister N Chandrababu Naidu (left) welcomes Tamil Nadu CM C Joseph Vijay in Amaravati

DRINKING WATER
The Tamil Nadu Chief Minister requested Naidu for release of additional drinking water to Chennai through the Telugu Ganga project.

Naidu said that despite reduced Krishna water inflows this year due to El Nino and the resulting water scarcity, Andhra Pradesh remained committed to meeting Chennai's drinking water needs. The State has released 4.08 tmcft of water to Chennai, and will consider releasing more based on availability, he said.

'TN power demand up 30%, short-term bids needed'

Press Trust of India
Chennai

Rejecting the opposition's allegations of mismanagement and high-cost power purchases, Tamil Nadu Minister R Nirmal Kumar on Tuesday defended the State government's decision to call for short-term power tenders.

He attributed the strain on the grid to a 30 per cent spike in demand driven by persistent El Nino-induced heat, along with shortfall in central allocation and wind generation.

Briefing reporters at the Secretariat, Nirmal Kumar said the State's power demand had risen to 21,700 MW, an increase of about 4,900 MW, over the 16,800 MW demand during the corresponding period last year.

"The heat has not subsided because of El Nino, leading to a nationwide surge in electricity demand that national forecasts had largely failed to anticipate," he claimed.

He said NLC India had failed to supply around 1,800 MW from the central quota over the past month.

"Out of 3,500 MW tied up through wind energy agreements, sluggish wind speeds have reduced generation to just 500 MW, resulting in a deficit of 3,000 MW," he said.

Clarifying the scope of the procurement, he said itwas strictly for October 15-31.

Tenders were floated for 3,500 MW to test market availability, but the State intended to procure only 1,500 MW.

Amazon expands delivery infra in TN amid festival rush

Our Bureau
Chennai

Amazon India has added two fulfilment centres and 15 last-mile delivery hubs in Tamil Nadu ahead of its annual Great Indian Festival sale.

At a press meet in Chennai, Srikant Sree Ram, Director, Everyday Essentials, Amazon India said that the company now operates seven fulfilment centres in the State.

"Tamil Nadu is seeing a strong shift in everyday shopping, with purchases across everyday essentials growing 100 per cent over a regular day during the Amazon Great Indian Festival 2026. We have invested in infrastructure expansion not just across fulfillment center, delivery stations," he said.The expansions are part of the e-commerce giant's larger India ramp up for the festive period with investment of over ₹2,800 crore. It also plans to hire 1.6 lakh seasonal workers across 400 cities, spanning both metropolitan areas and tier-2 and -3 locations.

STRONG TRACTION
Ram added that this year, the State has seen a relatively higher than usual sales of whole-wheat breakfast cereals, dry fruits, health and fitness products and other premium clean eating categories.

On Amazon Now, customers in Chennai showed strong demand for everyday convenience and gifting during the festive season, with power banks seeing 3.5x growth, electronic accessories 2.8x growth, building and construction toys 4.4x, compared to a regular day.

Two pilots detained over flydubai incident

Dubai: Two Maldivian pilots employed by flydubai have been arrested by the UAE police in connection with an alleged attempt by an Omani co-pilot to hijack and crash a Dubai-Tel Aviv flight, in which Indian Captain Smit Machchhar was injured while foiling the suspected plot, according to media reports. The duo were taken into custody on October 3, and their families have been formally informed of their detention. PTI

CureMeAbroad expands services to Australia

Mumbai: Medical tourism platform CureMeAbroad is expanding into Australia with a network of experience centres across multiple locations, the Pune-based start-up said, with the first centre scheduled to open in Brisbane on October 15. The plan is for 40 such centres across Australia, the US and the UK, it said, adding that Australia was already one of its "key source markets," along with the US, the UK, Germany and the GCC. OUR BUREAU

Air India expected to review staff travel policy, cost-saving proposals

TIGHTENING PURSE STRINGS. Move comes against the backdrop of substantial losses incurred by Air India, AIX

Rohit Vaid
New Delhi

To rein in spending, the Tata Group-promoted Air India's board is expected to consider several cost-saving measures, including a review of its staff on duty (SoD) policy, sources told *businessline*.

These proposals are expected to be taken up at the airline's board meeting scheduled for October 15. The SoD policy covers employees travelling on official duty.

"These proposals, including the SoD policy, come under the new 'cost-conscious' culture that is being imbibed in the company," sources told *businessline*. "Specifically, the board is expected to take up the proposed new criteria for implementing the SoD policy, whereby strict guidelines would be followed to assess the need for employees' travel."

Earlier, Air India had revised its staff travel arrangements from April 1, 2025, requiring employees, including senior management, to travel in economy.

STAFF POLICY. Air India revised its staff travel arrangements from April 1, 2025, requiring employees, including senior management, to travel in economy REUTERS

Besides, sources said the airline is considering rightsizing some of its backend departments, including information technology, which currently operates out of Kochi. A proposal to shift the department's campus from Kochi to Delhi will also be placed before the board, sources said.

The measures, sources said, remain at the proposal stage, with a final decision yet to be taken.

BOARD REVIEW

However, a senior Air India official, on condition of anonymity, told *businessline* that some cost-saving proposals under the company's 'cost awareness' programme are expected to be reviewed by the board.

Besides, he dismissed the possibility of rightsizing or shifting the location of any department.

The proposed spending review comes amid a broader push for cost savings and consolidation across the Air India Group.

INTEGRATION

As reported earlier by *businessline*, the group is examining a proposal to integrate selected departments of Air India and Air India Express (AIX) through common teams to reduce duplication, improve resource utilisation and achieve economies of scale.

At present, marketing has already been integrated as part of the group's commercial functions.

The airlines also have shared leadership across network planning, sales and distribution, and revenue management.

Unlike the earlier mergers involving Vistara in 2024 and Indian Airlines in 2007, the proposal is limited to integrating selected functional departments.

Consequently, Air India would continue with its full-service positioning, while AIX would retain its low-cost model.

The discussions come against the backdrop of substantial losses. In FY26, Air India and AIX, along with their joint ventures and subsidiaries, reported combined losses of ₹22,238 crore on revenue of about ₹71,870 crore.

On a standalone basis, Air India reported a net loss of ₹15,368 crore, while AIX recorded a net loss of ₹6,767 crore.

Recently, Air India's Chief Executive Officer and Managing Director Tewolde Gebremariam, in his first townhall address to employees, called for closer integration across the group.

Mumbai airport shift plan pushed to summer

Our Bureau
Mumbai

In a relief to airlines, Mumbai airport has agreed not to cut international flights in the winter schedule.

This was decided during a joint meeting of airlines and senior executives of Adani Airport Holdings Ltd, including its Non-Executive Director Jeet Adani and CEO Arun Bansal.

In a statement, Mumbai International Airport Ltd (MIAL) said Adani and Bansal assured the airlines of minimal disruption. Airlines were informed that historical slots allocations will be respected and assured that no slots will be disturbed in the winter schedule.

The meeting was held following the Civil Aviation Ministry's intervention as airlines opposed the initial plan to reduce one-third international flights from October 25. The flight cut was proposed as MIAL plans to redevelop a portion of its Terminal 1B from January, resulting in reduction of capacity. Following a pushback from airlines, the proposal has been deferred for now.

MIAL said a joint working group would work over next two weeks to come up with a plan for implementation of redevelopment of the ageing T1 infrastructure.

AIRLINES' SUPPORT

The airport said airlines had committed to support the redevelopment of T1 and traffic balancing would start from the summer schedule. The airlines were assured of full support for shifting operations to Navi Mumbai.

"Both teams agreed to have a follow up meeting on October 28. The meeting ended with a thankful note across both sides and a renewed positive commitment towards the development of the Mumbai airport to the standard as is deserved by Mumbaikars," MIAL said.

Delhi yet to pick up in HPV vaccination drive, awareness push stepped up

Ankita Upadhyay
New Delhi

Delhi has vaccinated around 20 per cent of its target cohort of girls against the human papillomavirus (HPV) since the launch of the free vaccination campaign in February, with the Health Department stepping up school-based outreach and awareness efforts to address misconceptions and improve uptake.

The city has administered around 30,500 doses as of October 12, according to a Delhi Health Department official, who said vaccination coverage had picked up over the past two months after a slow start.

The progress comes as India administered more than 80 lakh HPV vaccine doses under its nationwide cervical cancer prevention campaign, with several States reporting substantially higher coverage of their identified target populations. "In the first four months, we covered only 5-7 per cent of the cohort," the official said. Under the national programme, 14-year-old girls are being offered a free and voluntary single dose of the vaccine at government health facilities, with parental consent.

According to the data released by the Centre in September, Uttar Pradesh administered more than 22 lakh doses, the highest among the States. Gujarat, Uttar Pradesh, Madhya Pradesh and Mizoram reported 100 per cent coverage of their identified target populations.

MISCONCEPTIONS

Bihar, Andhra Pradesh and Assam had crossed 90 per cent coverage, while Karnataka had crossed 85 per cent. Chhattisgarh, Sikkim, Kerala, Telangana and Odisha reported coverage exceeding 60 per cent.

The Delhi official said misconceptions about the vaccine remained a key challenge, including fears that it could cause infertility among girls.

He said such concerns were not confined to Delhi and were also prevalent in other metropolitan cities, where some educated and affluent families remained sceptical about government-provided vaccines.

"We are trying to overcome this through positive news, campaigns and videos," he said.

To increase uptake, the official said a series of meetings had been held with education officials, while district immunisation officials and medical officers across Delhi's 13 districts were visiting schools and participating in parent-teacher meetings to explain the importance of HPV vaccination and address parents' concerns.

"Teachers are the main channel through which this message reaches students and parents," the official said.

At the national level, the government is using the U-WIN digital platform to monitor vaccination coverage, track beneficiaries and identify eligible girls who have missed vaccination. The programme is being implemented through trained medical officers, with arrangements to manage adverse events following immunisation.

The campaign is part of the government's preventive healthcare efforts to reduce the future burden of cervical cancer.

◉ THE TOPPER

According to the data released by the Centre, Uttar Pradesh administered more than 22 lakh doses, the highest among the States

Flying Wedge Defence unveils prototype of India's first indigenous autonomous fighter jet

Dalip Singh
New Delhi

Bengaluru-based start-up Flying Wedge Defence & Aerospace (FWDA) on Tuesday unveiled a static prototype of the 'FWD Supreme', the country's first indigenous autonomous fighter jet that attempts to enter the global uncrewed military aircraft development race alongside the US, China and Turkey.

The configuration of the 1.5 tonne aircraft has been frozen, and its detailed design is halfway complete, said Girish G Dixit, CTO of FWDA.

TESTS UNDERWAY

Dixit, a former member of the Defence Research and Development Organisation's Aeronautical Development Agency (ADA) team that developed the LCA Tejas, said, "Key technologies will be sourced from a lighter, 250 kg version of the autonomous aircraft." The two smaller variants in this class have already completed taxi trials and will go for certification to the Centre for Military Airworthiness & Certification and the North Atlantic Treaty Organisation in the next two months.

MADE IN INDIA. Barring the engine and some sensors, CEO Suhas Tejaskanda said the entire jet will be indigenous

The AI-powered autonomous combat aircraft, which has the option of being used as a manned platform as well, will have a payload capacity of 350 kg, with maximum speed of Mach 0.8 to 0.85. It has been designed to cruise at about 500-600 kmph over a range of 1,500 km.

The endurance of the aerial platform is over two hours, Suhas Tejaskanda, Founder and CEO of Flying Wedge, said.

Barring the engine and some sensors, Tejaskanda said the entire content will be indigenous. He said they will be making an effort to power the aircraft with DRDO's in-house Manik engine but if that does not happen, they would scout abroad with Czech aerospace company PBS as one of the probables. "With Manik engine, we will have 80 per cent Indian content and without that, it will come down to 60 per cent," he said.

THE ECONOMICS

When asked why the company unveiled the proposed autonomous aircraft model at the static stage itself and did not wait for the workable prototype, the CEO said: "Being a start-up, pooling funds is a huge challenge. Even the investors want to see comprehensive phased development and quality validation to put in their money in the programme."

The development of FWD Supreme will alone require $100 million. Of this, $10 million will go into producing the light version of autonomous fighter aircraft. "But for that, we have already raised $7 million," Tejaskanda said.
