UJJIVAN SMALL FINANCE BANK

'SMALL' FINANCE BANK. REALLY?

When people hear the word 'small', they sometimes assume it reflects the size of the institution or the ticket size of the loans we offer. It doesn't, and here's why.

Your money grows faster with Ujjivan's attractive interest rates on Savings and Deposits. Our loan offerings start at ₹6,000 to over ₹250 crore**.

We bank in your language, so that nothing's ever lost in translation.

We've got over 800 branches across 26 states and union territories.

Feel free to drop in for coffee and a conversation. Because over 1 crore customers did exactly that. They trusted us and realised their dreams and aspirations.

NOTHING SMALL ABOUT US

Ujjivan Small Finance Bank

- A Scheduled Commercial Bank
- Over 26,500 employees
- ₹48,129 crore Deposits and ₹42,903 crore Gross Loan Book
- Up to 7.15%# interest p.a. on Savings Accounts
- Up to 7.8%# interest p.a. on Fixed Deposits

OUR OFFERINGS

- Savings Accounts
- Current Accounts
- Term Deposits
- Loans
- Co-branded Credit Cards
- Debit Cards
- Mutual Fund Distribution Services^

April-Oct STT mop up surges 52% despite market volatility; direct tax collection up 13%

POLICY RESET. Rise in securities transaction levy could lead to a rethink on its overlap with LTCG tax in Budget 2027, say experts

Shishir Sinha
New Delhi

With extreme volatility in the stock market, collections through the Securities Transaction Tax (STT) surged around 52 per cent during April 1 and October 14 of the current fiscal year (2026-27 or FY27), the Income Tax Department reported on Thursday.

Experts believe the trend in STT collection provides an opportunity to cut not this just levy but also the long term capital gains tax.

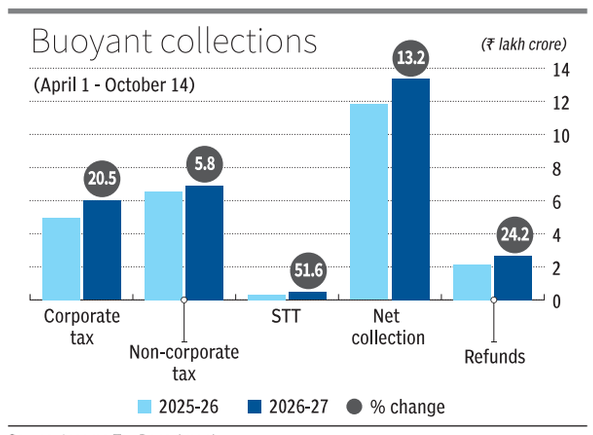

Meanwhile, overall net direct tax collection rose by over 13 per cent during the period under consideration.

BUDGET ESTIMATES
Data from the Income tax Department showed that the collection from STT grew to ₹46,840 crore in April 1-October 14, 2026-27 against ₹31,000 crore in 2025-26. This means that over 63 per cent of the budget estimates have already been met.

"The STT number needs to be carefully looked at. The jump owes more to higher STT on futures and options announced in Budget 2026, not from markets momentum," said Sandeep Sehgal, Partner at AKM Global.

MORE COMPETITIVE
With corporate tax collections growing at this pace, the government has room to reduce the overlap between the STT and long-term capital gains (LTCG) tax in Budget 2027.

"That would make Indian equities more competitive for global capital, support the rupee and help reverse foreign outflows, without putting revenue targets at risk," he said.

Source: Income Tax Department

Meanwhile, corporate tax grew by 20 per cent while mop up through non-corporate tax increased around 6 per cent.

Non corporate tax includes taxes paid by individuals, HUFs, firms, AoPs, BoIs, local authorities and artificial juridical person. However, the majority of non-corporate taxpayers are individuals.

CURRENT GROWTH
With the current growth rate of net collections, experts are hopeful of meeting the direct tax target which is ₹26.97 lakh crore.

"With the net direct tax collections reaching around 50 per cent of the FY27 Budget Estimate of ₹26.9 lakh crore in the first 6.5 months, the government's tax collections appear to be on track," said Jayesh Sanghvi, Tax Partner at EY India.

SHARP RISE
Net corporate tax collections are significantly ahead of non-corporate tax collections, primarily due to the sharp rise of nearly 67 per cent in refunds in the latter category, which could be indicative of excess tax withholding/advance tax for certain taxpayers.

"Going forward, the trajectory of collections and refunds in the second half will be important to watch as the government progresses towards its full-year target," Sanghvi said.

REVENUE STREAMS
Richa Sawhney, Partner at Grant Thornton Bharat, said the latest direct tax numbers reflect healthy tax buoyancy, with broad-based growth across key revenue streams.

Equally significant is the sharp increase in refunds, particularly for non-corporate taxpayers, which reflects the administration's focus on faster processing of taxpayer claims.

"This suggests that revenue growth is being achieved alongside improved taxpayer service, pointing to a tax ecosystem that is increasingly focused on both compliance and facilitation," she said.

From Nov 1, you can see names of callers

S Ronendra Singh
New Delhi

Effective November 1, the government has made calling name presentation mandatory for all telecom service providers in an effort to protect consumers from unsolicited commercial calls.

In an October 13 notice, the Department of Telecommunications (DoT), said, "Trials have been carried out by telecommunication service providers for introduction of calling name presentation service in wireless terrestrial networks established using 4G and higher generation technologies... All TSPs who hold authorisation or licence to provide access services are hereby instructed to introduce calling name presentation service ... across all service areas from November 1, 2026."

CNAP SERVICE
It also said that the introduction of the CNAP service in 2G and 3G services and in public switched telephone networks will be considered separately, after examination of the matter.

The development comes after the Telecom Regulatory Authority of India's recommendations on 'Introduction of Calling Name Presentation (CNAP) Service in Indian Telecommunication Network', dated February 23, 2024, after which the DoT came out instructions on November 21, 2025, in respect of handling of know your customer issues during implementation of CNAP service in India.

"Every new authorised entity shall ensure presentation of calling line identification to a called user — (a) in a manner that is secured from tampering; and (b) in accordance with such requirements as may be specified on the portal," the DoT said. In respect of calling name presentation service for a user who holds business connections or bulk connections, a facility of presenting a "preferred name" in place of the calling name identity may be offered by the originating TSP, it said.

However, there are some conditions for such business connections too. The user who holds business connections or bulk connections may be given an option by originating TSP to present its "preferred name" in place of its name as recorded in subscriber data record of originating TSP, it said.

Also, the preferred name of the user should be recorded in both the customer application form and subscriber data record and document(s) evidencing proof that the user is registered under such name would be presented in original to the originating TSP and true copies thereof should be attached to the customer application form by the originating TSP.

SUBSCRIBER DATA
Similarly, for existing connections, the originating TSP should establish an appropriate mechanism to enable the user to submit requisite application for recording its preferred name in subscriber data record, and upon examination and proper verification of such application such preferred name of such user may be updated by the originating TSP in subscriber data record, the DoT noted.

No 'right of first refusal' to Fairfax for residual stake sale in IDBI

Shishir Sinha
New Delhi

The successful bidder of IDBI Bank's strategic restructuring, Canada Inc (parent entity Fairfax Financial Holdings Ltd) will not get the 'right of first refusal' (ROFR) in any future sale of residual stake by the Centre or the LIC, a top government official told *businessline*.

NO PROVISION
"There is no provision for ROFR in the share purchase agreement," the official said.

The right of first refusal is a contractual right that gives an individual or entity the right to match an offer to sell before the asset is sold. This means that if the owner receives an offer from a third party, the holder of the ROFR has the right to match the offer before the transaction can be completed.

On Wednesday, the Cabinet Committee on Economic Affairs (CCEA) approved Canada Inc as the strategic buyer for this transaction for a purchase consideration of over ₹52,878 crore for the acquisition of 60.72 per cent stake in the IDBI Bank Ltd.

SHAREHOLDING
Accordingly, the government will sell 30.48 per cent and LIC offload 30.24 per cent of its equity shareholding.

STRATEGIC SHIFT
The decision comes amid open-market alternatives for minority stake sales and follows a Supreme Court ruling on Hindustan Zinc that influenced the ROFR discussion

Post the completion of the deal, the government will have a residual stake of 15 per cent; the LIC will have 19 per cent, though it needs to dilute 4 per cent of residual within two years.

Also, the CCEA has delegated powers to alternative mechanism to undertake minority stake sales of the government for residual shareholding through the open market in accordance with the standard operating procedure.

INTERNAL PROCEDURES
The LIC will be free to manage its residual shareholding in accordance with its internal procedures while ensuring compliance with the directions of its regulators.

However, the question of ROFR arose as this is only one out of 13 strategic disinvestments completed between 2014 and 2026, in which the government will continue to have direct equity shareholding in an entity, where majority holding along with management control to a private party.

When asked about the provision of ROFR in some of the strategic disinvestment processes completed between 1999 and 2004, the official reminded that those cases and IDBI Bank are not the same considering the nature of businesses.

SHARES DEAL
Also, a Supreme Court ruling in the matter of Hindustan Zinc provided a strong ground not to include ROFR in the share purchase agreement of IDBI Bank.

In the matter between National Confederation of Officers Association of Central Public Sector Enterprises Versus Union of India, the top court on November 18, 2021, allowed the Centre to disinvest its residual stake in Hindustan Zinc in the open market as it ceased to remain a government company.

This will ensure that the best price is realised for the sale of the shareholding. Now, the government hopes the same for IDBI Bank, in case it monetises its residual stake in the future.

Tata Trusts rejects Mistry's objections, calls them extraneous, non-maintainable

Our Bureau
Mumbai

Tata Trusts has said former trustee Mehli Mistry's objections to the change reports filed with the Charity Commissioner of Maharashtra (CCM) are extraneous and thus not maintainable.

Mistry stepped down as a trustee in three trusts last October after members voted against his reappointment.

Subsequently, Tata Trusts filed change reports notifying the Charity Commissioner about the end of Mistry's term. In June, Mistry filed objections on the change reports raising questions about governance and misconduct by trustees.

In its reply to Mistry's complaints, Sir Dorabji Tata Trust and Bai Hirabai Jamsetji Tata Navsari Charitable Institution said the objections raised were not relevant to the change reports. The Trusts also said Mistry had no *locus standi* to raise objections as he ceased to be a trustee last October.

One of Mistry's complaints pertains to the composition of the Bai Hirabai Trustn whose trust deed states that its trustees shall be from the Parsi Zoroastrian faith and residents of Mumbai or the Navsari region.

STEPPED DOWN
Mistry's complaint targeted trustees Vijay Singh and Venu Srinivasan, who stepped down in the past few months.

Mistry had asked the Charity Commissioner to conduct a detailed inquiry into the affairs and administration of the trusts and examine the allegations raised in his objections.

Mehli Mistry

In its reply, Bai Hirabai Trust called out contradictory actions of Mistry, saying he approved the reappointment of Singh and Srinivasan during his tenure as trustee. Particular clauses of the trust deed, which restrict membership to the Parsi Zoroastrian faith are bad in law and of no legal effect.

Mistry is expected to file his rejoinder to the Trusts' response; the matter will be heard again on November 5.

On Thursday, the Bai Hirabai Trust filed an application naming Noel Tata as reporting trustee for the complaints. In response, Mistry's lawyer said the application should be accompanied by an affidavit from Tata which states that he is qualified to be a trustee of Bai Hirabai Trust. Mistry has sought directions from the CCM in the matter.

Separately, Mistry's lawyer objected to repeated adjournments sought by the Sir Ratan Tata Trust (SRTT) to file its response to his objections. The trust's lawyers said SRTT is barred from holding meetings because of a CCM order of May 15 and unless that stay is vacated no response can be filed.

Bank deposits, credit see robust growth in the first half of 2027

Our Bureau
Mumbai

In a clear indication that the economy has been strong, and the economic momentum remains broad-based, all scheduled bank deposits and advances grew at 17.7 per cent and 19.09 per cent y-o-y, respectively, in the first half (H1) of FY27.

All scheduled banks had reported deposit and advances growth of 9.93 per cent and 11.27 per cent, respectively, in the first half of FY26.

Year-to-date (YTD: March-end to September-end) the deposit growth was higher at 8.11 per cent on the back of FCNR(B) deposits (aggregating $133 billion) mobilised by banks under the RBI's limited period foreign currency (USD-INR) swap window between June 8, 2026 and August 31, 2026.

The deposit growth in the year ago period was 7.42 per cent.

FOREX SWAP
To attract foreign capital, the Reserve Bank of India had announced a series of measures on June 5, including a forex swap facility bearing the full hedging cost to Authorised dealer banks for raising fresh 3-5-year FCNR (B) deposits.

YTD advances growth was lower at 4.17 per cent against 4.6 per cent a year ago. Banks are expecting to deploy the proceeds of the FCNR(B) deposits in the next couple of months.

"Bank credit growth became broad based and strengthened further... A large interest rate differential in favour of small savings could lead to migration of deposits away from banks, thus widening the credit-deposit gap in the banking system. Transmission to deposit rates further strengthened in H1, while it moderated in the case of lending rates," according to the RBI's latest Monetary Policy report.

The credit-deposit gap narrowed to 81 basis points (bps) in the fortnight ended September 15, 2026, from over 89 bps in the corresponding period last year, the RBI said.

BS VII rules could make SUVs costlier by ₹75,000

Amit Vijay Mohile
Mumbai

The proposed Bharat Stage VII (BS VII) emission standards could cost automakers an estimated ₹50,000-75,000 crore through FY32, forcing expensive upgrades to engines, exhaust-treatment systems and electronics while putting affordable cars, diesel SUVs and heavy trucks under pressure.

The transition forms part of a wider regulatory overhaul involving CAFE-III fuel-efficiency standards, E20 fuel compatibility, onboard diagnostics and tractor emission (TREM) norms.

COMPLIANCE BURDEN
Preliminary industry estimates place the combined compliance burden at ₹0.85-1.25 lakh crore through FY32, although the calculations remain unverified and may include overlapping investments.

BS VII alone could add ₹15,000–75,000 to passenger-vehicle manufacturing costs and ₹1.4–2.6 lakh to that of heavy trucks, while creating opportunities for component suppliers. Electric vehicles face separate battery-durability and monitoring requirements.

TECH UPGRADES
Two- and three-wheelers could need upgraded catalysts, oxygen sensors and electronic controls, adding ₹4,000-12,000 and ₹12,000-18,000, respectively.

Their specific BS VII requirements remain unconfirmed. Small petrol and CNG cars may require improved catalysts, sensors and diagnostics, costing ₹15,000-22,000.

Mid-size petrol SUVs could incur ₹22,000-32,000, while strong hybrids may need ₹18,000-28,000 for enhanced exhaust treatment and calibration. Compact diesel SUVs could require selective catalytic reduction upgrades, particulate filters and urea-dosing systems, adding ₹35,000-48,000, rising to ₹45,000-75,000 for larger diesel SUVs.

COMPLIANCE COSTS. Compact diesel SUVs could require selective catalytic reduction upgrades, costing ₹35,000-48,000, and rising to ₹45,000-75,000 for larger diesel SUVs

Small goods vehicles and pickups could incur ₹25,000-35,000, light trucks ₹45,000-65,000, medium trucks ₹75,000 to ₹1.1 lakh and heavy trucks ₹1.4-2.6 lakh for advanced SCR systems, filtration, sensors and durability upgrades.

PLUG-IN HYBRIDS
Electric cars and plug-in hybrids could need improved battery-management systems, thermal controls and durability testing to retain at least 75 per cent battery energy after five years or 1 lakh km and 67 per cent after eight years or 1.6 lakh km. No reliable incremental EV compliance cost estimate is available. All quoted vehicle costs are preliminary manufacturing estimates, not confirmed showroom increases.

SUPPLIERS' GAIN
Bosch, Tenneco and Cummins Emission Solutions could gain from demand for catalysts, sensors and exhaust-treatment systems. Battery-management and electronics suppliers could benefit from EV durability requirements.

Brake requirements from 2032 could benefit Brakes India, while tyre provisions could create opportunities for Apollo Tyres and CEAT.

An R&D executive at a leading PV maker said "overlapping BS VII, E20, CAFE-III, onboard diagnostics and tractor emission requirements will strain engineering resources, testing facilities and investment budgets."

GROWTH SLUMP

Wipro Q2 net dips 4.7% q-o-q; deal bookings fall

Bengaluru: Wipro's September quarter performance underscored the challenge of reviving growth momentum, with the net profit falling 4.7 per cent sequentially to ₹3,201 crore and total deal bookings plunging 22.9 per cent. The IT services major's outlook for the December quarter remains subdued, with revenue expected to decline by up to 1.5 per cent or grow by a maximum of 0.5 per cent in constant currency terms. **p2**

BUCKING THE TREND

Sensex, Nifty rebound amid Asian market turmoil

Mumbai: Markets staged their sharpest single-day rally in weeks on Thursday, defying a regional bloodbath that saw South Korea's Kospi plunge 7.57 per cent, its seventh straight session of losses, and trigger an emergency trading halt, while Japan's Nikkei shed 4.56 per cent. The BSE Sensex closed at 74,315.61, up 1,533.72 points or 2.11 per cent and the Nifty ended at 22,997.35, gaining 374.65 points or 1.66 per cent. **p6**

SC upholds Bombay HC order quashing Yes Bank AT-1 write-off

PAY TIME. Lender's liability may top ₹13,000 crore; top court raps bank, the RBI

Our Bureau
Mumbai

The Supreme Court on Thursday upheld the 2023 Bombay High Court judgment quashing Yes Bank's March 14, 2020, decision to write down Basel III-compliant Additional Tier-I (AT-1) bonds worth ₹8,415 crore, in a major setback to the private lender and potentially opening the door to significant payouts to bondholders.

A Bench of Justices Dipankar Datta and Augustine George Masih dismissed appeals challenging the Bombay High Court verdict in the Axis Trustee Services Ltd vs Yes Bank case. "We see no reason to interfere with the impugned judgment. The appeals are dismissed. Interim order, if any, stands vacated," the court said.

The Bench also clarified that annual coupon payments on the AT-1 bonds, carrying interest rates of 9.5 per cent on ₹3,000 crore issued in December 2016 and 9 per cent on ₹5,415 crore issued in October 2017, would remain unaffected and must be paid in accordance with the bonds' Information Memoranda.

Key timeline

Dec 23, 2016: Yes Bank issued ₹3,000 cr worth of Basel III-compliant AT-1 bonds carrying a 9.5% coupon

Oct 18, 2017: The lender raised another ₹5,415 crore through AT-1 bonds carrying a 9% coupon

2019–20: The bank's financial position deteriorated amid rising bad loans and capital erosion. Its CET-1 ratio fell significantly

March 5, 2020: The RBI superseded the Yes Bank board and appointed Prashant Kumar as Administrator

March 2020: The RBI notified the YEs Bank Reconstruction Scheme, 2020, paving the way for an SBI-led capital infusion

March 14, 2020: Yes Bank's Administrator ordered the full write-down of AT-1 bonds, wiping out bondholders' investments

March 2020: Bondholders challenged the write-off before the Bombay High Court

January 2023: The Court quashed the AT-1 bond write-off, holding that the Administrator lacked the authority

2023: Yes Bank, SBI and other parties challenged the Bombay High Court's ruling before the Supreme Court

Legal experts said the lender has limited legal options left, with the low likelihood of a review petition succeeding.

"The liability could exceed ₹13,000-14,000 crore, including interest. The impact is likely to be absorbed through reserves and shareholder funds rather than the profit and loss account, effectively transferring the burden to existing shareholders. While the judgment brings finality to the dispute, it may also reshape investor perception of AT-1 instruments and their risk profile in India," a banking sector expert said.

Banking expert V Viswanathan highlighted that Yes Bank had strong shareholder funds of ₹52,338 crore as of June-end 2026, indicating that the bank could meet the liability from reserves, subject to RBI approval.

"The bank can pay the bondholders from its reserves after obtaining RBI approval, as its annual net profit is sufficient. It will also have to pay the contracted interest for the years in which it reported net profits. In that case, the liability will be higher," he said.

'QUESTIONABLE'

The judgment was particularly critical of what it termed the "triumvirate" of Yes Bank, the Reserve Bank of India and the bank's then administrator.

The court held that only two parties could trigger an AT-1 bond write-down under the Information Memorandum and RBI norms: Yes Bank, which did not exercise the option, or the RBI, which neither invoked the power nor retained the relevant write-down clause. The bench said the administrator could not assume RBI's regulatory role and termed the actions of the RBI, the administrator and Yes Bank as "questionable".

The judges said investor losses could have been avoided had RBI and Yes Bank followed the Master Circular, adding that AT-1 bonds are meant to act as a capital buffer during stress. The court also criticised the RBI for being a "mere bystander" while Yes Bank's CET-1 ratio fell to 0.6 per cent, against the prescribed 7.375 per cent.

Investor concerns over the financial fallout of the ruling hit the stock, with Yes Bank shares falling 14.4 per cent to ₹18.15 on the BSE, after touching an intra-day low of ₹16.98, amid fears of compensation and coupon payout liabilities.

At $44.4 b, Sept exports up 23%; trade deficit narrows on slower import growth

Amiti Sen
New Delhi

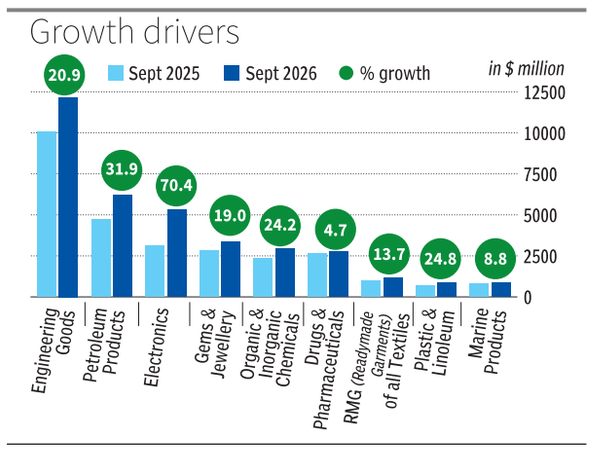

Goods exports surged 23.04 per cent year-on-year in September to $44.40 billion, propelled by key sectors such as engineering goods, chemicals, petroleum products and electronics, according to quick estimates shared by the Commerce Department on Thursday.

The trade deficit narrowed to $30.21 billion in September 2026, compared with $33 billion in the same month last year, as imports grew at a slower 8 per cent at $74.61 billion. However, the deficit was higher than the $26.86 billion recorded in August.

"The trend of export growth has continued. Export growth in Q2 was higher than in Q1. Goods exports were much more robust in Q2," Commerce Secretary Rajesh Agrawal said at a media interaction on trade data.

BULLION IMPORTS DIP

Import of gold and silver declined steeply by 81.27 per cent and 49.11 per cent, respectively, to $ 1.8 billion and $665 million in September. Crude oil arrivals, on the other hand, rose 30.76 per cent to $18.34 billion. Import of coal and coke, chemicals, electronics, machinery and dyeing materials also increased substantially.

Amid the growing geopolitical uncertainties, exporters have called for continued policy support, competitive export finance, predictable trade and logistics costs, and faster market diversification to sustain growth.

"The priority now is to translate this momentum into sustained orders and deeper market penetration. With an enabling policy environment, India can expand high-value and technology-intensive exports, build on its traditional strengths and strengthen its participation in global value chains," FIEO chief SC Ralhan said.

DESTINATIONS

Significantly, key export growth destinations driving these shipments included the US and China, along with Singapore, South Africa, Malaysia and many markets across Europe and Asia. Exports to the UAE, the Netherlands, Australia, Saudi Arabia, Bangladesh and Sri Lanka declined.

Imports rose significantly from China, Russia, Oman, South Korea and Hong Kong, and moderately from the US, while declining from Saudi Arabia, Japan and Switzerland.

EXPORTS UP IN H1, TOO

During April-September this fiscal, exports rose 18.51 per cent to $259.89 billion, while imports increased 16.31 per cent to $437.53 billion. The trade deficit widened to $177.64 billion in the first half of 2026-27 from $156.88 billion in April-September 2025-26.

SEBI retains existing formula to calculate settlement price of index, stock derivatives

Akshata Gorde
Mumbai

The Securities and Exchange Board of India has retained the existing methodology for calculating settlement prices of expiring index and stock derivatives contracts, opting to use the volume-weighted average price (VWAP) of trades during the last 30 minutes of continuous trading rather than introduce a formula incorporating the Closing Auction Session (CAS).

SEBI said settlement prices would continue to be determined using the VWAP of the underlying index's constituent stocks or the underlying stock during the last 30 minutes of the continuous trading session (CTS) in the equity cash segment.

The review follows concerns over sharp price movements during the 10-minute CAS, particularly on expiry days, since its implementation on August 3 for stocks in the futures and options (F&O) segment.

Earlier during the day, the regulator's Secondary Market Advisory Committee met to discuss the September 12 consultation paper and recommended retaining the earlier method for settlement of prices on expiry days rather than a blended method. The settlement price of expiring index derivatives will be based on the value of the underlying index calculated using the "volume-weighted average prices (VWAP) of the constituent securities during the last 30 minutes of the Continuous Trading Session (CTS) in the equity cash segment," SEBI said in a circular on Wednesday.

TRADING HOURS

The regulator also revised trading hours around the closing auction. CAS will run from 3.30 pm to 3.40 pm, with a one-minute transition from continuous trading, followed by order entry and matching. Trading in stock derivatives will continue until 3.45 pm on all days, including expiry days.

Trading in index derivatives will also continue until 3.45 pm, except for expiring index derivatives contracts, which will stop trading at 3.30 pm on expiry days.

The changes, other than those relating to the transition of unexecuted orders from continuous trading to CAS, will take effect from December 7. Changes to the handling of unexecuted limit and iceberg orders will come into effect from February 8, 2027.

Under the revised framework, unexecuted limit orders will generally carry forward to CAS, subject to specified exclusions. Eligible iceberg orders will be carried forward as fully disclosed limit orders, unless the market participant has opted out of the transition.

The stock exchanges and clearing corporations have been directed to modify their standard operating procedures in consultation with SEBI within seven days of the circular's issuance.

Cochin Port set to cruise into future of AI immigration

For travellers, it means no more waiting for passport scans

Aneesh Phadnis
Mumbai

India is all set to introduce its first AI-driven immigration corridor at Cochin Port, allowing international cruise travellers to clear border control by simply walking past cameras. Instead of waiting to scan passports, travellers can walk through a corridor lined with smart cameras that verify their identity in real time.

This cutting-edge pilot project at the Cochin Port — a collaborative effort by the Bureau of Immigration and the Indian Ports Association (IPA) — would be the first India deployment of AI-driven facial recognition processing to streamline border control. The system will be able to flag suspicious persons who would be questioned by immigration officials monitoring the process. Dubai airport introduced an AI-powered immigration lane at its Terminal 3 for business and first-class passengers last August.

TESTING THE WATERS. The pilot will cover cruise travellers, with wider rollout depending on its outcome VIBHU H

SMOOTH SAILING

The AI-driven immigration initiative is being proposed as part of the government's 'Cruise Bharat Mission', which aims to grow cruise passenger traffic at Indian ports to one million by FY2029. A number of initiatives are being taken to streamline Customs and immigration processes to aid growth. In FY26, ports in India handled 212 cruise vessels and 4.63 lakh domestic and international passengers. International traffic accounted for around 10 per cent of the total, with 46 foreign vessel calls bringing 48,514 passengers

"At present, cruise passengers are required to submit fingerprint biometrics at immigration counters at a cruise terminal upon arrival in India. At times, immigration officials collect fingerprint biometrics from passengers when the vessel is *en route* to India. This is inconvenient as it also results in blocking off a few rooms for sale," says IPA Managing Director Vikas Narwal.

GAME-CHANGER

"The Indian Ports Association will be supporting the project through its own budget. We are considering an expression of interest or a tender to have a fair and transparent process. The reform would be a gamechanger for cruise tourism in India and will put us on a par with developed countries," he added.

A source said the pilot is being proposed only for cruise travellers at Cochin Port. Based on its operation, a decision could be taken on whether to implement it on a larger scale.

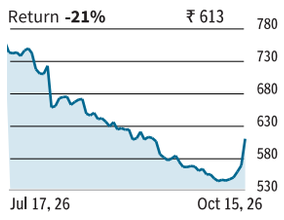

The Ministry of Home Affairs did not respond to an email query on the topic.

QUICKLY.

Butterfly Gandhimathi's net profit up 19% at ₹20 cr

Chennai: Butterfly Gandhimathi Appliances reported a net profit of ₹20 crore for Q2 FY27, up 19 per cent y-o-y. Revenue stood at ₹331 crore, up from ₹293 crore. For H1 FY27, its PAT came in at ₹29 crore, up 24 per cent. OUR BUREAU

Heritage Foods Q2 PAT down 39% at ₹31 crore

Hyderabad: Heritage Foods Ltd posted a consolidated net profit of ₹30.9 crore in Q2 FY27, down 39 per cent from the year-ago period. Its revenue, however, grew 19 per cent y-o-y to ₹1,319.6 crore. The average landed cost of milk procurement rose 11 per cent y-o-y to ₹47.73 a litre, driven by sustained demand, limited improvement in arrivals, and higher feed and fodder costs. OUR BUREAU

Wipro Q2 net dips 4.7% q-o-q, large deal bookings fall 59%

BLEAK PICTURE. Q3 outlook subdued, top line may fall by 1.5% or grow 0.5% in CC terms

Sanjana B
Bengaluru

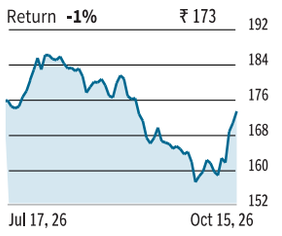

Wipro's September-quarter performance underscored the challenge of reviving growth momentum, with net profit falling 4.7 per cent sequentially to ₹3,201 crore and total deal bookings plunging 22.9 per cent.

The IT-services major's outlook for the December quarter remains subdued, with revenue expected to decline by up to 1.5 per cent or grow by a maximum of 0.5 per cent in constant currency (CC) terms. Wipro reported a 1.9 per cent year-on-year decline in profit after tax to ₹3,201 crore in Q2 FY27. Revenue increased 1.1 per cent sequentially and 9.1 per cent year-on-year to ₹24,752 crore.

Mixed bag

	Q2FY26	Q2FY27
Revenue (₹ crore)	22,697	24,752
Profit (₹ crore)	3,246	3,201
Margin (%)	17.2	16.5
Guidance (%)	-0.5 to 1.5	-1.5 to 0.5
Total deals bookings ($ billion)	4.7	2.6
Attrition (%)	14.9	13.8
Employee count	2,35,492	2,36,328

Source: Company

'BULLISH ON Q3'

IT-services revenue stood at $2,611.5 million, down 0.1 per cent q-o-q but up 0.3 per cent y-o-y. Total bookings fell 22.9 per cent sequentially in CC terms to $2.6 billion, while large-deal bookings declined 58.6 per cent CC to $0.7 billion.

Among Wipro's geographies, revenue declined 2.3 per cent q-o-q in the Americas 1 market, while Americas 2 grew 0.8 per cent. Europe reported 0.5 per cent growth, and Asia Pacific, Middle East and Africa recorded the strongest growth at 2.9 per cent.

Srini Pallia, Wipro's CEO and MD, said, "A few deals were awarded to us but had not yet been signed. These will flow into Q3, and we are bullish about our performance next quarter. The US market is doing very well, and we have a very strong pipeline across both SMUs. The pipeline comprises net-new, transformational and AI-specific deals."

Across industry segments, consumer revenue grew 2.4 per cent sequentially, followed by BFSI, which rose 1 per cent. Energy, manufacturing and resources grew 0.8 per cent. Technology and communications revenue declined 2.8 per cent, while healthcare recorded the steepest fall of 3.9 per cent.

FRESH HIRES

Wipro onboarded around 1,000 freshers in the first half of FY27 and plans to bring in more campus hires, primarily in Q4. The company had hired around 7,500 freshers in FY26.

Addressing the PERM certificate cancellations, Saurabh Govil, President and Chief Human Resources Officer, said the company had not filed any PERM applications in the past three years, and therefore expected minimal long-term impact.

Wipro is lagging its peers on growth and deal momentum, said Praveen Bhadada of Neovay Global. "As clients move towards larger, AI-led transformation programmes, the opportunity is expanding, but Wipro must demonstrate that it can convert this into meaningful deal wins."

Tech Mahindra wins $1 billion+ new deals for 4 quarters in a row

Our Bureau
New Delhi

Tech Mahindra's consolidated net profit rose 32.8 per cent year-on-year to ₹1,586 crore in the second quarter ended September, outpacing its 15.6 per cent revenue growth, as the IT-services company sustained business momentum with more than $1 billion in deal wins in each of the last four quarters.

Revenue rose to ₹16,180 crore from ₹13,995 crore in the year-ago quarter, while constant currency growth stood at 7.2 per cent, indicating underlying business growth after excluding the impact of exchange-rate fluctuations.

STRONG QUARTER. Mohit Joshi (left), MD and CEO, Tech Mahindra, with Rohit Anand, CFO, during a post-results interaction in New Delhi on Thursday

Earnings snapshot *(in ₹ cr)*

	Q2FY26	Q2FY27	% change

Revenue	13,995	16,180	15.6
Interim dividend (₹)	15.00	15.00	-
Total headcount	1,52,714	1,52,206	-0.33

Source: Company

AI COMPONENT

"Deal wins exceeding $1 billion in each of the last four quarters reflect the strength of our customer relationships and the trust we have built. With 7.2 per cent y-o-y constant currency growth, we continue to sustain business momentum... We look ahead with confidence," Mohit Joshi, MD and CEO, said.

Nearly all the company's large deal wins, he said, would have an AI component, as clients, particularly those signing large, multi-year contracts, were seeking productivity gains enabled by AI. This reflects the growing importance of AI-led efficiency improvements in technology services contracts.

US ISSUES

On visa-related issues in the US, Joshi said the company had a low dependence on the H-1B visa programme, with visa holders accounting for only about 1 per cent of its overall workforce.

"We have always been very thorough and very focused on compliance with visa and more broadly across the world, and we continue to do that... We have a very robust US and a global talent strategy that really focuses on hiring globally."

The company also declared an interim dividend of ₹15 per share on a face value of ₹5 each and announced a 1:1 bonus issue.

Camso acquisition to EBITDA break-even by March 2027: CEAT

bl.interview

Amit Vijay Mohile
Mumbai

CEAT Ltd is betting on stronger sales, higher capacity utilisation and the transfer of customers from Michelin to turn around its $225-million Camso acquisition, which is still operating at a loss.

The off-highway tyre business recorded 35 per cent sequential sales growth in the September quarter, while its negative operating margin narrowed from around 10 per cent to 2 per cent.

Executive Director and CFO Kumar Subbiah expects the business to reach EBITDA break-even or a marginally positive margin by March 2027.

Subbiah also discusses CEAT's growth outlook, rising input costs and its international expansion strategy.

Edited excerpts:

How do you see CEAT's growth shaping up in H2 FY27?

We have sustained double-digit growth for more than 10 quarters. Earlier, volumes drove growth; now pricing also contributes.

International operations and OEMs led the September quarter. After growing over 20 per cent in the first half, maintaining that pace will be difficult because last year's GST reductions created a higher comparative base. Nevertheless, we expect double-digit growth in both remaining quarters.

How much more pricing power does CEAT have?

Raw-material costs rose approximately 9 per cent sequentially in Q2 and will increase further in Q3. Price increases have lagged inflation, keeping margins below our internal threshold. OEM prices generally follow quarterly adjustment formulas, while replacement-market increases vary across categories. Freight costs have also risen sharply. We need further pricing action and cost improvements.

> We expect double-digit growth in both remaining quarters
>
> **KUMAR SUBBIAH**
> Executive Director and CFO

Heavy-duty truck tyres can cost ₹15,000 to over ₹55,000. Are higher prices beginning to hurt replacement demand?

Overall tyre prices have risen approximately 12–14 per cent since April. Commercial vehicle operators are price-sensitive and may postpone replacements. Repeated increases risk suppressing demand.

Is the festival demand providing relief?

OEM demand remains strong. Tyres supplied during August and September supported vehicles manufactured for festival sales. That momentum continued into October, although replacement demand remains mixed, particularly for CV and PV tyres.

Will CEAT moderate its capex?

Our FY27 capex guidance remains around ₹1,400 crore because capacity utilisation is high. Debt increased approximately ₹400 crore during Q2, reflecting capex, dividend payments and additional working capital. It is higher than initially anticipated, partly because of margin pressures.

What has changed operationally at Camso since the acquisition?

The business grew approximately 35 per cent sequentially in Q2, albeit from a low base. Its negative operating margin improved from around 10 per cent to 2 per cent as volumes increased. We now directly service 85 per cent of customers, with the remaining 15 per cent transferring from Michelin during Q3.

What gives you confidence that Camso can break-even by March?

The priority is sustaining top-line growth. As production increases, fixed costs can be spread over larger volumes. We expect sequential growth in both Q3 and Q4.

How important are exports?

Standalone exports grew approximately 25 per cent y-o-y in Q2. Their share of standalone net revenue increased from 19.3 per cent in Q1 to around 20 per cent.

Exports are structurally profitable, although passing on raw-material inflation overseas remains challenging. International growth will also help utilise our expanded manufacturing capacity.

Stellantis to launch 12 cars by 2030, invest ₹4,000 cr

S Ronendra Singh
New Delhi

European automobile conglomerate Stellantis on Thursday said it will invest ₹4,000 crore by 2030 to develop and launch 12 products — seven all-new and five refreshed versions of the existing vehicles across the Citroen and Jeep brands, the company said.

The future portfolio will follow a multi-energy strategy, spanning efficient internal combustion engines, hybrids, plug-in hybrids and battery electric technologies, it added.

COME NEXT YEAR

"Today's announcement reaffirms our belief in long-term conviction in the Indian markets, backed up with fresh investment, and offering strong product guidance along with options for customers to exercise multi-energy technology," said Shailesh Hazela, MD and CEO. He said the first product will be launched in the second quarter of next calendar year. Hazela also said the company will leverage its partnership with Tata Motors to bring shared-platform technology to India and globally. With this, the company's cumulative investment in India is expected to reach up to ₹15,000 crore by 2030.

On October 12, Stellantis India, Tata Motors Passenger Vehicles and its subsidiary Tata Passenger Electric Mobility signed up for a partnership in advanced technology and product collaboration. Stellantis will build upon Tata Motor's technology and vehicle architecture to address the requirements of more than 50 global markets.

"We want to increase our market share by 3x. Currently, we have 0.25-0.27 per cent of the country's PV industry," Hazela added.

British luxury carmaker Bentley restructures India operations

Amit Vijay Mohile
Mumbai

British ultra-luxury carmaker Bentley Motors has restructured its India operations, strengthening its dealer-investor network across Delhi, Mumbai and Bengaluru to capitalise on lower import duties under the India-UK Free Trade Agreement (FTA).

The move could make its premium models, particularly the Bentayga Extended Wheelbase (EWB), more competitively priced, with sources estimating annual sales rising from 60-70 to 180-200 vehicles.

PRICE CUT? Sources estimate the Bentayga EWB could become cheaper, with its price potentially falling from about ₹5.9 crore to ₹4.2 crore, following lower import duties REUTERS

GROWTH OPPORTUNITY

Confirming Bentley's renewed India push, Axel Dewitz, board member of Bentley Motors, said: "For Bentley, this is a wonderful growth opportunity in the market and also from a UK perspective. We have restructured our setup in India over the past few months with highly valued investors. We now have a strong investor base in Delhi, as well as investors in Mumbai and Bengaluru."

Sources estimate the Bentayga EWB could become cheaper, with its price potentially falling from about ₹5.9 crore to ₹4.2 crore.

The revised pricing remains a market estimate and has not been confirmed by the company. The Bentayga EWB's blend of SUV practicality and limousine-like comfort makes it particularly attractive to India's ultra-high-net-worth buyers.

Bentley's other key models include the Continental GT grand tourer and the Flying Spur luxury sedan, both offered with plug-in hybrid powertrains.

PRICING OPPORTUNITY

Under the India-UK Comprehensive Economic and Trade Agreement, customs duties on qualifying British-origin petrol vehicles with engines above 3,000 cc and diesel vehicles above 2,500 cc have been reduced from 110 per cent to 30 per cent in the first year, subject to import quotas. The preferential duty rate will decline further to 10 per cent by the fifth year.

The immediate benefit applies to conventional petrol models such as the Bentayga EWB, while Bentley's plug-in hybrid models will qualify for preferential quota access from the sixth year.

Sources said lower prices, coupled with a stronger distribution network, could significantly expand Bentley's customer base and support annual sales of 180-200 vehicles over time. However, the forecast remains an industry estimate, not a company target.

'HERE TO STAY'

For Bentley, the restructuring reflects a longer-term commitment to India beyond the immediate tariff benefits.

"Bentley is here to stay. It is not a short-term investment in this market. This is, and will remain, a growth story for everyone's benefit," Dewitz said.

Nestle India's Q2 profit jumps 35.9%, sales 20.5%

Good show *(in ₹ cr)*

	Q2FY26	Q2FY27	% change
Consolidated net profit	743.17	1,009.61	35.85
Total sales	5,630.23	6,782.17	20.45

Source: Company

Meenakshi Verma Ambwani
New Delhi

Nestle India posted a consolidated net profit of ₹1,009.6 crore for the September quarter, up 35.85 per cent over ₹743.17 crore reported in the year-ago period.

Total sales grew 20.5 per cent to ₹6,782.2 crore while domestic sales grew 20.4 per cent. Manish Tiwary, CMD, Nestle India, said the quarter saw a "continuation of strong and broad-based growth across all product groups... driven by robust, double-digit volume growth."

DOUBLE-DIGIT GROWTH

"We continued to focus on efficiencies across our operations while significantly increasing investments behind our brands, with advertising and marketing spends up by 46 per cent," Tiwary said. "Rising inflation, particularly food inflation, is a reality. We remain focused on navigating these external challenges through continuous innovation and renovation, sustained investments, and an intensified focus on productivity and operational efficiencies to mitigate commodity cost pressures."

The confectionery portfolio recorded volume led double-digit growth, driven by continued market share gains in Kitkat and sustained momentum across Munch and Milkybar.

"Our continued investments behind the Nescafe brand, coupled with a dual focus on expanding category penetration and accelerating premiumisation, continue to strengthen category relevance and reinforce our long-term growth ambitions," Tiwary noted.

STRONG EXPORTS

Nestle India said that exports maintained strong double-digit growth momentum, driven by portfolio expansion and continued market development. During the quarter, Maggi Masala-ae-Magic was launched in Canada, while Nescafe Sunrise was launched across five West African markets.

In terms of commodity outlook, the company said, "Coffee and wheat are expected to remain range-bound, while sugar and edible oils have stabilised at elevated levels. Cocoa remains volatile due to weather-driven crop concerns in key origins. Milk prices have strengthened seasonally but should ease as flush supplies arrive."

Younger generation buyers driving Rolls-Royce Motor's growth in India

Our Bureau
Chennai

Rolls-Royce Motor Cars is seeing a younger generation of buyers enter India's super-luxury car market, with entrepreneurs and members of wealthy business families increasingly seeking highly personalised vehicles rather than upgrading.

VISIBLE TREND

The average age of a Rolls-Royce driver globally has fallen to the early 40s, around 13 years lower than in 2010, reflecting a shift in the customer profile, said Julian Jenkins, Director of Sales and Brand at Rolls-Royce Motor Cars.

"We are seeing a new generation as well. There is a younger audience for us," he said on the sidelines of the inauguration of the company's revamped showroom in Chennai.

The trend is also visible in India, where the company is attracting customers moving up from the luxury car segment, alongside younger members of established wealthy families and existing Rolls-Royce owners purchasing additional vehicles.

CHANGING PROFILE

India has recorded four consecutive years of double-digit growth for Rolls-Royce, with around 20 cars sold last year. Jenkins expects the growth to continue, supported by new buyers as well as the existing customer base, though he emphasised that the company prioritises value over volumes.

NEW SHOWROOM. Vasanthi Bhupathi (left), Dealer Principal, Rolls-Royce Motor Cars Chennai, with Julian Jenkins, Director of Sales and Brand, Rolls-Royce Motor Cars, in Chennai BIJOY GHOSH

India was its highest-growth market in the Asia-Pacific region in 2025, according to Rolls-Royce.

"A lot of people are moving into that spectrum," said Vasanthi Bhupathi, Dealer Principal, Rolls-Royce Motor Cars Chennai, operated by KUN Exclusive.

The changing customer profile is accompanied by a growing appetite for bespoke rides, with buyers including businessmen and film personalities, seeking to make their cars reflect their individual personalities through distinctive colours, interiors and finishes.

Many youngsters are buying Rolls-Royces for their parents, Bhupathi added.

"What they want and what they expect from Rolls-Royce is still that customisation, that personalisation, individualisation," said Jenkins said.

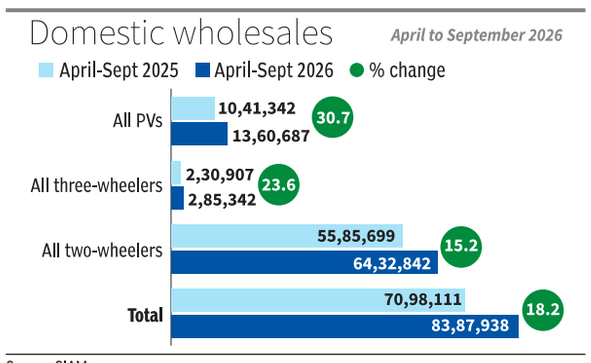

The company currently has authorised retail dealerships in Delhi and Chennai, and workshops in Mumbai and Hyderabad.

GST 2.0, resilient demand drive auto industry growth: SIAM

GOOD SEASON. Vehicle wholesales up 20% in H1 FY27; clean fuel seeing more adoption

S Ronendra Singh
New Delhi

Source: SIAM

Continued investments in infrastructure, sustained economic growth, and rising adoption of cleaner and more efficient mobility solutions are expected to support the automobile industry's growth through the second half of FY27, the Society of Indian Automobile Manufacturers (SIAM) said on Thursday.

Although reported growth rates may moderate as the sector begins to grow against a higher base, the demand fundamentals remain supportive, aided by the festival season, product launches, last-mile mobility requirements, infrastructure spending and fleet replacement, it said.

ALL-ROUND GROWTH

According to the latest data shared by SIAM, vehicle wholesales (dispatches to dealers) across categories grew around 20 per cent year-on-year (y-o-y) to 1.58 crore units during the April-September period compared with 1.31 crore units in the same period last year. Total vehicles sales across categories grew 18.2 per cent y-o-y to 83.87 lakh during the September quarter, compared with 70.98 lakh in the same period last year.

Total PV dispatches grew around 31 per cent y-o-y to 13.60 lakh in the domestic market in Q2. Improved affordability post GST 2.0, lower base of last year, new vehicle technologies including alternate fuels and EVs besides strong financing support have helped the growth, SIAM said.

Total two-wheeler dispatches also grew 15.2 per cent y-oy to 64.32 lakh units during the period. Total three-wheeler sales, meanwhile, grew 23.6 per cent to 2.85 lakh units. Sales of commercial vehicles also saw a growth of 28.7 per cent to 3.09 lakh.

MORE AFFORDABLE

"The Indian automotive industry delivered a strong performance in the first half of FY27, following a robust second quarter and a strong September. This stellar performance across all segments has been supported by improved affordability following GST 2.0, resilient rural and urban demand, healthy freight movement, infrastructure-led economic activity, and a gradual replacement cycle across vehicle segments," said Shenu Agarwal, President, SIAM.

The EV ecosystem also continues to mature with multiple offerings, improving charging infrastructure and supportive policy measures, he added. "At the same time, alternative fuel technologies are witnessing increasing acceptance and are expected to play an important role in India's sustainable mobility transition."

Having said that, Agarwal also said the industry remains cautiously optimistic due to prevailing geo-economic uncertainties.

In the monthly domestic sales, PV dispatches grew by 22 per cent y-o-y to 4,54,574 units in September, compared with 3,73,347 units in the same month last year.

Meanwhile, total two-wheeler sales grew 13.5 per cent to 24,63,103 units compared with 21,70,100 units in September 2025, SIAM data indicated.

Total three-wheeler sales also grew by 16 per cent y-o-y to 98,162 units compared with 84,635 units in the year-ago period.

Mahindra takes on Tata, Maruti in CNG SUV race

Amit Vijay Mohile
Mumbai

Mahindra & Mahindra has entered India's compact SUV CNG market with the XUV 3XO ZNG priced from ₹9.99 lakh, sticking to its premium SUV strategy in a category estimated at around 30,000 vehicles monthly and led by Tata Motors and Maruti Suzuki. With the launch, Mahindra is betting on turbocharged performance, twin-cylinder CNG technology and premium features to attract buyers seeking lower running costs without sacrificing SUV appeal.

MARKET OPPORTUNITY

The ZNG starts approximately ₹1.69 lakh above Tata's Nexon iCNG and ₹1.09 lakh above Maruti's Brezza S-CNG, based on indicative rival prices. Available in four variants priced up to ₹12.27 lakh, it faces Tata's wider variant choice and Maruti's emphasis on affordability and fuel efficiency.

The broader compact SUV and crossover CNG category includes Tata's Punch and Nexon iCNG, Maruti's Brezza and Fronx CNG, and Hyundai's Exter CNG. Leading models generate an estimated 26,000-28,000 monthly sales.

According to FADA, CNG/LPG vehicles accounted for 23.11 per cent of September's 427,213 passenger-vehicle registrations. At illustrative fuel prices of ₹105 per litre for petrol and ₹80 per kg for CNG, the ZNG's certified mileage implies running costs of ₹3.24 per kilometre, against ₹8.08 for a petrol SUV returning 13 kmpl.

The launch precedes tighter CAFE III fuel-efficiency standards expected to take effect in April 2027, potentially supporting Mahindra's fleet-average efficiency.

A fair deal

IDBI Bank sale to foreign owner, a significant move

The Government of India's stake sale in IDBI Bank marks a milestone in the Centre's efforts to reform the banking system, and provides a playbook for monetising stakes in some public sector banks in the future.

IDBI Bank has come a long way, from being placed under the Reserve Bank's Prompt Corrective Action framework in 2017 for high bad loans and negative return on assets, to attracting India's largest financial sector foreign direct investment. Life Insurance Corporation's acquisition of 51 per cent stake in 2019 alongside capital infusion by the government helped the bank turn around, rebounding in capital adequacy and returning to profitability. The latest deal — in which Fairfax Financial Holdings of Canada will acquire 60.72 per cent in the bank for about ₹52,878crore — signals confidence in the bank as well as the prospects of India's financial system. The bank's finances have been nurtured back to health through pragmatic capital deployment and patience, lifting its valuation, thus allowing the government to realise ₹26,500 crore for 30.48 per cent stake. The IDBI-Fairfax deal will serve as the 'proof-of-concept' that investors will keenly watch. How regulators manage voting rights, fit-and-proper criteria for foreign capital, ownership of multiple banks and minority protection will dictate investor appetite for other banks shortlisted as disinvestment candidates by the NITI Aayog in 2021, following their financial turnaround.

That India's financial services sector is becoming attractive for global investors is now indisputable. Fairfax itself is said to have expressed interest in acquiring stake in non-banking financial services firm IIFL. Japan's MUFG (Shriram Finance) and West Asian major IHC (Samman Capital) have already ventured into the Indian financial sector with significant investments. The sale will make it easier to attract foreign investors for future stake sales in public sector banks; reports indicate that the government has been considering raising the ceiling for foreign ownership in public sector banks from 20 per cent to 49 per cent. The sector has overcome past vulnerabilities. The government must capitalise on this emerging opportunity to command fair value, which is a far cry from distress-sale valuations that were bandied about several years ago.

The conclusion of the deal with Fairfax will help shore up the government's finances with Miscellaneous Capital Receipts (MCRs) expected to rise to ₹88,000 crore for the year, compared with the earlier estimate of ₹80,000 crore. But the question is whether a capital receipt should at all be used for bridging the revenue-expenditure gap. Indeed, the idea of parking these proceeds (which has been reduced to a trickle in most years) in a corpus for dedicated uses has been discussed before. As a corollary, it is important to regard strategic sale as an end in itself, rather than as a means to bridge any budgetary gap.

The Guardian

Trump's deal with Putin: Not gamechanging

When Donald Trump pledged to end the war in Ukraine within 24 hours of re-entering the White House last year, no one with any depth of insight into the conflict believed him. But Mr Trump took his own words seriously enough to feel the lack of a ceasefire as an affront to his self-image as a master dealmaker. After a period when it seemed that Kyiv's European allies had steered the US president away from pro-Kremlin partisanship, he has reverted to the grotesque view that Ukrainian capitulation is a necessary precondition for peace. These are the perilous circumstances in which President Volodymyr Zelenskyy met Andy Burnham in Downing Street. The US president has called for a change of government in Ukraine. He claimed that a partial ceasefire had been agreed, while Russia escalated its bombardments. (LONDON, OCTOBER 14)

The National

Why trust in AI is hard to earn and easy to lose

Trust, it is often said, is earned in drops but lost in buckets. When it comes to realising the potential of artificial intelligence, trust is arguably as important as computing power or economic returns. Just how much ordinary people are willing to trust this technology is a critical question — and one that is difficult to answer quantifiably. Nevertheless, it is a pertinent question for the UAE, a country that has positioned itself at the forefront of this technology. Dubai's announcement to offer a $1 million prize in collaboration with the World Economic Forum for meaningful AI innovation is another expression of that commitment. However, as the technology becomes more capable, its success will depend on more than just the ability to build it. (ABU DHABI, OCTOBER 15)

India-US deal remains a puzzle

PATIENT NEGOTIATIONS. India should resist turning trade into economic or geostrategic alignment, compromising procurement choices or ties with other countries

After nearly one-and-a-half years of negotiations, the US keeps moving the goalposts and, with them, the finish line. The real test of a negotiation is not how much is agreed, but what survives the final bargain.

Both sides are negotiating from positions of strength. India has diversified markets through a series of FTAs, giving it greater room to absorb the cost of tariff escalation. India's strategy, therefore, is not to secure a deal at any cost, but to preserve negotiating space until the bargain is balanced, predictable and durable. A delayed deal may carry costs; a bad deal could lock them in. In that calculus, India may rationally prefer no deal over a deal that sacrifices long-term strategic interests for short-term tariff relief.

UNCERTAINTY BEYOND TARIFFS

First, the US appears to be moving the goalposts from trade concessions towards demands touching India's FDI regime, FEMA provisions, digital taxation, GST, corporate taxation and broader regulatory architecture. This is no longer simply a negotiation over tariff preference; it risks becoming a negotiation over legal and policy sovereignty. India should resist turning trade into economic or geostrategic alignment, compromising strategic procurement choices or relations with other countries.

Second, the central issue for India is 'tariff certainty' not merely 'tariff preference'. A concession loses much of its value if Washington subsequently offers a lower rate to another trading partner. India should therefore seek a 'forward-MFN clause' ensuring that any future preferential tariff granted to another partner on a covered product is extended to India *mutatis-mutandis*. Hence, any fair deal must abolish CVDs, anti-dumping and other strategic duties, ensuring Indian exporters compete fairly with China, Bangladesh and ASEAN economies.

Third, India should negotiate an 'investor-MFN' provision alongside reciprocal market access. If Washington seeks greater access for US investors, India should demand equivalent treatment across manufacturing, critical minerals, electronics, shipbuilding, ports, semiconductors and supply-chain relocation, with preferential treatment automatically extended to the other. More importantly, the US should end the practice of using tariff escalation, regulatory investigations or threats of secondary sanctions to pressure Indian companies in steel, crude-oil refining, pharmaceuticals and solar manufacturing into investing in US as investment decisions must follow commercial logic, not coercive trade leverage.

Fourth, given the US ever-expanding demands and tactical use of tariffs and trade investigations, India should insist on a five-year 'sunset and mandatory review' clause. Politically sensitive commitments should not become permanent simply because circumstances change. Review provisions would give both sides flexibility while preventing today's concessions from becoming tomorrow's irreversible disadvantage.

Fifth, India should also demand reciprocal gains in trade deal. Washington should ease visa restrictions, withdraw remittance taxes, resolve F404 engine bottlenecks for Tejas, and ensure commercially viable F414 engine pricing. India should also seek a larger role in the semiconductor value chain beyond testing and packaging. A credible bargain cannot demand unilateral adjustment from India; reciprocity must translate into market access, technology, mobility and strategic industrial participation.

A trade agreement cannot become a vehicle for rewriting India's FDI regime, FEMA provisions, taxation, GST, digital economy or regulatory architecture

WAY FORWARD

The way forward is not to force a comprehensive deal at any cost, but to redefine the bargain around reciprocity, certainty and strategic balance. India should distinguish trade alignment from economic alignment. A trade agreement cannot become a vehicle for rewriting India's FDI regime, FEMA provisions, taxation, GST, digital economy or regulatory architecture. Negotiations should remain issue-specific, with measurable commitments and clear limits, rather than drift into open-ended economic or geostrategic alignment.

First, conclude an interim agreement on issues that are mature, while ring-fencing politically or strategically sensitive matters for structured negotiations. Second, make tariff certainty the core bargain through forward-MFN, sunset and review, snap-back and robust rules-of-origin provisions. Third, agriculture should be handled through tariff-rate quotas (TRQs), allowing calibrated US market access while protecting Indian farmers from sudden import shocks.

Fourth, reciprocity must extend beyond tariffs. India should seek movement on professional visas, withdrawal of the remittance tax, resolution of F404 supply constraints for Tejas, fair pricing negotiations for F414 engines, greater participation in semiconductor value chains beyond testing and packaging, and elimination of CVDs, anti-dumping and other discriminatory strategic duties.

Fifth, the bargain should be anchored in TRUST: Tariff certainty, Reliability of commitments, Understanding of strategic sensitivities, Strategic alignment and Technology collaboration. The reported plateau need not signal failure; it may simply mean conventional bargaining has reached its limits. India should therefore negotiate patiently: take the deal where the interests converge, ring-fence where they do not, and never exchange long-term strategic space for short-term tariff relief.

In economic statecraft, value is not claimed; it is created, defended and captured. The US has forgotten this in pursuing shifting demands and a moving finish line. India should negotiate from strategic confidence, protecting policy space while demanding reciprocity, certainty and durable commitments. It must remain prepared to retaliate proportionately, targeting US interests where pressure is consequential, if Washington imposes discriminatory or coercive measures.

Yet retaliation should never close the door to dialogue: diplomatic and trade channels of communication must remain open. The lesson is timeless: in negotiation, you do not get what you deserve; you get what you negotiate. India needs a fair, balanced and sustainable bargain.

A genuine gap in the new UPI dispensation

Education and EMIs, two of the largest and most frequent expenses through UPI, not seen as essential and protected

Ganesh Valiachi

After Diwali, India's Unified Payments Interface will stop being free for everyone. The government has introduced a Merchant Discount Rate (MDR): a 0.4 per cent charge on payments to merchants above ₹2,000, a flat ₹5 fee for a protected list of essentials, and 0.02 per cent for capital-market transactions. Payments between individuals stay completely free, and banks have been told merchants cannot pass this cost on to customers.

UPI is still mostly a person-to-person system: 63-70 per cent of all UPI transactions are personal transfers, which this new rule does not touch at all. Payments to merchants make up the rest, and the average payment size there is ₹1,200-1,300, already below the ₹2,000 mark that triggers the charge. And, more important, NPCI's own numbers show that only about 4 per cent of merchant transactions will actually attract this fee. But that small slice carries roughly two-thirds of the total money moving through merchant payments. So, the charge touches very few transactions, but it lands exactly where the big money is.

The government has also carved out clear protections. A flat ₹5, no matter how large the payment, applies to railways, fuel, telecom, insurance premiums, electricity and water bills, farm-related payments, credit card bill payments, and tax payments to the government. Mutual funds and stockbroking get a lighter 0.02 per cent charge. And small shopkeepers doing up to ₹1 lakh a month through UPI QR codes pay nothing at all, which covers the vast majority of India's small stores and street vendors.

Most people assume online shopping, travel bookings, and big retail purchases will take the biggest hit, since these are the payments people usually think of as crossing ₹2,000. The data tells a different story. Credit cards, not UPI, still handle most of India's high-value and online spending.

SECTORS THAT WILL FEEL IT

Look closer at where India's big, repeated UPI payments genuinely happen, and a different picture forms. School and college fees are one clear example. These payments are large, often paid once a term or once a year, almost always cross ₹2,000, and have been shifting onto UPI-linked bill platforms simply because it's convenient for parents. Unlike fuel or insurance, nobody thought to add education to the protected list, even though, for most families, it is one of the biggest and most unavoidable expenses they have.

UPI. Mostly a person-to-person system

Loan repayments and "buy now, pay later" platforms sit in a similar spot. These are smaller for any one person, but they add up fast; bill-payment platforms processed nearly ₹14.8 lakh crore in the first half of 2025 alone, a jump of 93 per cent over the year before, driven largely by education fees and EMI repayments. These platforms lean on UPI specifically because their younger customer base prefers it over credit cards.

Stockbroking is a third case, and one the industry has already spoken up about. Some brokerages have pointed out that simply moving money into a trading account — even without making a trade — could now attract a charge. The government's response was to create a separate, lower 0.02 per cent rate just for this category, which shows the concern was taken seriously. Local big-ticket purchases, jewellery, furniture, and larger retail bought through a shop's QR code also fall into the exposed zone, simply because these purchases are usually well above ₹2,000 and were never given a special exemption like fuel or insurance was.

WHAT THIS REALLY MEANS

None of this means UPI is "no longer free". For the vast majority of what people use it for — sending money to family, buying groceries, paying for a cup of tea, topping up a phone — nothing changes at all.

What has changed is that blanket free acceptance for merchants is over, and it has ended unevenly. Fuel stations and insurers were given a tiny, fixed fee. Schools, lending platforms, and brokerages were not.

If there's a genuine gap in this policy, it isn't that a fee was introduced; it's that the list of "essential" categories feels slightly out of step with how households actually spend today. Education and consumer credit have quietly become two of the largest, most frequent expenses running through UPI, and somehow, neither made the list of things worth protecting.

Suspension of PERM

The editorial 'PERM challenge' (October 15) rightly highlights how the US administration's suspension of the Permanent Labour Certification process creates fresh uncertainty for Indian tech talent. However this hurdle presents a major opportunity for India. To retain top talent, India must urgently address structural deficiencies like low R&D spending, currently at 0.6-0.7 per cent of GDP and foster deeper industry-academia collaboration. With global MNCs expanding capability centres in India, policy reforms, patient capital and liveable cities can transform this immigration obstacle into an engine for domestic innovation and growth.

AC Vineeth Kumar
Thrissur, Kerala

Disinvestment proceeds

It is quite interesting to note that the term 'disinvestment' is now out from the Budget document and called Miscellaneous Capital Receipts (MCR), and the proceeds under MCR exceed ₹90,000 crore this fiscal year, 2026-27 (October 15). But at the same time, it has little significance for the people who have invested their hard-earned money in public sector undertakings. If the government privatises them for fulfilling its financial or budgetary needs, then it has only betrayed the trust of investors.

S Ramakrishnasayee
Chennai

Support apple farmers

This refers to 'Kashmir apple growers hit as labour costs double to over ₹1,300 a day as harvest starts' (October 15). The government cannot afford to ignore the hardships faced by farmers and others dealing in Kashmiri apples which are a source of livelihood to nearly 35 lakh people. The authorities should improve infrastructure including the transport system and roads so that Kashmiri apples can move swiftly to various parts of India. The farmers should also be given full support to make various other food items from the apples like juices, jams and jellies so that the farmers earn extra revenue.

Veena Shenoy
Thane

Unfair land deals

Apropos 'What about insider trading in land?' (October 15), the misuse of confidential information about proposed infrastructure projects can enrich a few people at the expense of farmers and ordinary buyers. Governments should publish project plans and land acquisition details promptly, and maintain accessible digital land records. Also,farmers need timely information and fair compensation before acquisition begins.

Case against NSE self-listing

Regulator and participant must remain separate

Ram Kumar Kakani

Self-listing by India's dominant exchange collapses the separation between regulator and participant, a separation global capital views as non-negotiable.

NSE Chairman Srinivas Injeti's remarks after the exchange's market debut last fortnight are revealing. Self-listing, he said, "may not be permitted today, but may be permitted tomorrow", subject to SEBI's assessment of conflicts of interest. With NSE now valued at about ₹4.5 lakh crore and ranked among India's 10 most-valuable listed companies, the question is no longer theoretical.

The commercial logic is not frivolous: NSE is the country's deepest pool of liquidity, and self-listing would spare it from being policed by its chief rival. Injeti also rightly made any change conditional on SEBI's satisfaction. Yet, some doors are best left not merely shut, but bricked up. NSE shares trading on the NSE is one of them.

REFEREE AND PLAYER

A stock exchange is not merely a marketplace; it is the frontline regulator of everything listed on it. It vets listings, polices disclosure, runs surveillance, sets circuit filters, and refers suspected manipulation to SEBI, and each of these is a discretionary judgment about a company's conduct and its share price.

Now put NSE's own scrip before that bench. Would NSE's surveillance team flag unusual trading in NSE shares ahead of its own quarterly results with the zeal it brings to a volatile mid-cap? Even if the honest answer were yes, outside investors could never be certain. In governance, the appearance of conflict is itself the injury.

That is why Regulation 45 of SEBI's Stock Exchanges and Clearing Corporations Regulations, 2018, permits an exchange to list on any recognised exchange other than itself. BSE has traded on NSE since 2017; NSE now trades on BSE. The symmetry is not an accident. It is a firewall. A fair critic will ask whether a rival makes a better referee, especially now that BSE competes hard with NSE in options. But the incentives run the right way. A competitor's temptation is to scrutinise closely, rather than look away, and excessive scrutiny is the safer error for investors.

SEBI's framework for listed exchanges already provides for an independent oversight committee at the host exchange to watch for such conflicts.

STOCK EXCHANGE. It is not merely a marketplace

COMMON ABROAD

The other rejoinder: self-listing is common abroad. Nasdaq is listed on Nasdaq; Intercontinental Exchange on the NYSE it owns; HKEX on its own board. True, but look at the guard rails. In Hong Kong, the Securities and Futures Commission, not HKEX, performs the listing functions for HKEX's own shares, precisely because the conflict was judged unmanageable in-house. In the US, trading is fragmented across many venues; no single one controls price discovery, surveillance and derivatives pricing the way NSE does.

According to its offer document, NSE handled nearly 93 per cent of India's cash market turnover in FY26 and 99.8 per cent of equity futures turnover; even in options, where BSE is gaining ground, it held three quarters of premium turnover. An NSE share listed on NSE would trade in a market NSE owns, supervises, prices through its own derivatives and disseminates through its own data feeds. If this step is to be taken, some caveats are in order.

First, treat Regulation 45's bar on self-listing as settled policy, so that any proposal to alter it requires public consultation and a demonstrated benefit to investors, not to the exchange.

Second, strengthen the host exchange's oversight: periodic independent audits and published surveillance metrics for each exchange's stock, so that rivalry cannot colour enforcement either way.

Third, set the minimum bar for any future change at the Hong Kong standard, where the regulator, not the exchange, supervises the exchange's own stock.

Why India must develop military might in space

SKY IS THE LIMIT. With China and Russia advancing rapidly in this area, militarisation of space is now an inescapable reality for the nation

RAJAT PANDIT

Despite running a robust civilian space programme for decades, India has largely lagged behind in leveraging the final frontier for military use. The recent official confirmation by the US that it has deployed weapons in space serves as yet another wake-up call for India that it must build robust resilience and deterrence in this domain.

Washington said its orbital deployments aim to deter and defend against the expanding counter-space capabilities of China and Russia. While the specific details are not known, these weapons are likely to be high-powered jammers, designed to restrict an adversary's use of space by degrading or disrupting its satellites.

WARFARE IN SPACE

With China, in particular, continuing to develop an extensive arsenal of anti-satellite (A-Sat) weapons, ranging from kinetic ones like direct ascent missiles and co-orbital killer satellites to non-kinetic ones like directed-energy lasers, jammers and electro-magnetic pulse weapons, India needs to develop strong capabilities to secure its assets in space.

Counter-space strikes threaten not only a country's critical economic and social infrastructure, it can effectively blind and deafen its armed forces by knocking out satellites used for surveillance, intelligence gathering, communications, missile early-warning and long-range precision targeting.

In 2022, China used its Shijian-21 satellite, equipped with robotic arms or claws, to physically dock with an old navigation satellite and then drag it to a graveyard orbit. Such complex rendezvous and proximity operations constitute a potent A-Sat capability to push an enemy satellite out of its operational orbit, or disable it during conflict.

China uses cyberattacks against foreign satellite networks. India has only a handful of dedicated military satellites, primarily for surveillance, navigation and secure communications. The cross-border hostilities with Pakistan in May last year strongly reinforced the urgent need to augment deep and persistent surveillance over enemy territory.

While India primarily used domestic satellites such as Cartosat to track military movements across the border during Operation Sindoor, it also had to procure high-resolution imagery from foreign commercial ones.

MILITARY SATELLITES

Consequently, India must accelerate the deployment of its planned constellation of 52 military satellites under Phase 3 of the Space-Based Surveillance (SBS) programme.

Approved by the PM-led Cabinet Committee on Security at a cost of ₹26,968 crore in October 2024, SBS-3 entails the launch and positioning of the 52 satellites — 21 built by ISRO and 31 by three private companies — across Low Earth Orbit (LEO) and Geostationary Orbit (GEO).

Building operational resilience against counter-space weapons requires deploying scores of cheaper and smaller satellites across LEO, Medium Earth Orbit (MEO), GEO and Highly-Elliptical Orbits (HEO). This ensures that even if an adversary takes down some of the satellites, the broader space network does not collapse. Towards this end, the Indian armed forces need well over 100 big and small military satellites, as well as effective launch-on-demand capabilities in the coming years.

China, Pakistan and the Indian Ocean Region have to be adequately covered with high-resolution imagery, with shorter revisit times or intervals between consecutive surveillance sweeps of the same locations for real-time tracking of troop movements and other military activities. India also requires a full-fledged Aerospace Command, which the armed forces had proposed over 20 years ago, instead of the truncated Service Defence Space Agency that came up in 2019.

Counter-space strikes threaten not only a country's critical economic and social infrastructure, it can effectively blind and deafen its armed forces by knocking out satellites used for surveillance and intelligence gathering

China has the dedicated People's Liberation Army Aerospace Force that manages all space-based military reconnaissance, tracking, communication, navigation and missile early-warning systems, as well as potent capabilities to degrade, disrupt and destroy enemy satellites. The US, too, has a Space Force as a separate branch of its military.

According to one estimate, China has over 700 satellites with direct or dual-use military functions. Even Pakistan's military space capabilities are fast expanding with Chinese support. This includes LEO satellites for reconnaissance, early-warning and target acquisition, PRSS-1 and 2 (Pakistan remote sensing satellite) for high-resolution imagery, as well as electro-optical fleet series, and hyperspectral imaging satellites such as HS-1, among others.

Pakistan also has access to China's BeiDou Navigation Satellite System for high-precision, encrypted military signals for guidance of cruise and ballistic missiles. A top Army officer disclosed last year that China had provided Pakistan with live satellite inputs on Indian military movements and deployments during Operation Sindoor.

Given China's ever-growing counter-space capabilities, India needs a wide array of advanced defensive measures to protect its satellites from hard and soft-kill weapons. Some work on this has been underway, but much more is needed.

Satellites, for instance, equipped with high-thrust or electric propulsion, can swiftly execute automated evasive manoeuvres on detecting an incoming A-Sat missile. Similarly, hardening and shielding measures against directed energy weapons range from EMP hardening and Faraday cages to optical limiters and shutters.

Defensive measures alone will not do. Credible deterrence requires counter-strike capabilities. India did test an A-Sat interceptor missile to destroy a 740-kg Microsat-R satellite, at a limited altitude of 283-km in LEO, under Mission Shakti in March 2019.

NEED SAFEGUARDS

Such direct-ascent, kinetic kill weapons should be further refined, while other counter-space capabilities such as powerful DEWs and co-orbital killers also need to be developed as a safeguard against threats in space.

While India in the past has rightly advocated against any arms race in space, the writing on the wall is clear: militarisation of space is now an inescapable reality. Along with land, air, sea and cyberspace, space is also a critical domain for military operations, drastically shortening the sensor-to-shooter loop, while enhancing survivability of own forces. India must act decisively to secure both its defensive shield and offensive deterrence in orbit.

Europe's leaders lack tools to ease war-driven energy shock

John Ainger

European Union leaders are searching for ways to ease soaring energy prices, but President Donald Trump's war against Iran has left them with few affordable options. Surging energy costs form the cornerstone of a broader debate on European competitiveness that will open a two-day summit in Brussels starting on Thursday. The conflict in the Persian Gulf has pushed up oil and gas prices, boosting inflation and weighing on economic growth across the 27-nation bloc.

"The economy is weak," said Latvian Prime Minister Andris Kulbergs ahead of the meeting. "Why is it weak? Energy. Energy is the fuel for the economy, for exports, for production. If we don't fix that, we all suffer."

The European Commission, the EU's executive branch, is expected to tell the bloc's leaders that there's no silver bullet to combat high energy prices, according to a senior EU official.

The Iran war has so far added more than €100 billion ($111 billion) to Europe's fossil fuel import bill, while leaving the region's gas storages at record low levels before the winter heating season.

JOINT ENERGY PURCHASE

EU member states are similarly hobbled: price caps and tax cuts come with a heavy fiscal cost at a time when government budgets are increasingly stretched. Soaring interest rates are compounding the challenge. The EU has few, if any, quick fixes. The commission is looking to extend joint energy purchases, while postponing a climate rule to tackle methane in fossil fuel imports and prolonging state aid to hard-hit industries. But neither of those do anything to curb prices in the short term, with the region dependent on oil and gas imports. Italian Prime Minister Giorgia Meloni said she was nearing a deal with the commission to be able to cap the price of natural gas used to generate electricity.

IRAN WAR. Adds over €100 billion to Europe's fossil fuel import bill

ELECTRICITY TAXES

German Chancellor Friedrich Merz has also proposed a significant cut in electricity taxes for all consumers, but it remains unclear whether the finances exist to implement it. EU leaders will call on the commission to put forward further measures to address soaring energy prices in the short term. But they stop short of saying what those will be. BLOOMBERG

Excess sugar sales by UP mills under scanner

The government has launched investigations into the alleged sale of sugar in excess of their free sale quotas by mills in Uttar Pradesh. The Food Ministry has sent teams to find out discrepancies, if any, in the actual physical stocks held by mills in UP and the levels being reported to the Sugar Directorate.

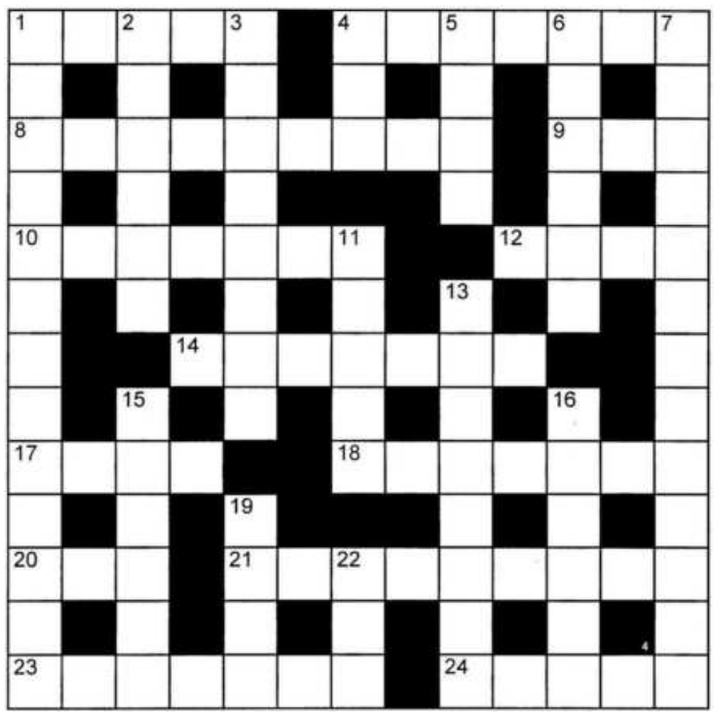

DoT plans audits to prevent long-distance undercutting

With over 10 new companies planning a foray into the longdistance telephony segment, the DoT is planning to conduct billing and equipment audits on a regular basis to avoid undercutting and misuse of the licence. The move comes in the wake of the Data Access case, where the company came into the market with low tariffs and ended up with huge debts and finally lost its licence.

Ministry favours new airport regulator

The Civil Aviation Ministry will submit a proposal for a new airport regulator that will regulate issues related to airport functioning. "We are going to present a proposal before the Cabinet tomorrow," the Civil Aviation Minister, Mr Praful Patel, told presspersons on the sidelines of Air India's platinum jubilee celebration here today.

FRIDAY - OCTOBER 16 - 2026

QUICKLY.

Carnelian MF to debut with small-cap fund NFO

Mumbai: Carnelian MF will debut with the launch of its first-ever new fund offer (NFO) on Friday in the small-cap space. The fund will identify businesses with sustainable earnings growth, durable competitive advantages and attractive risk-reward characteristics, while remaining disciplined on valuations. The scheme will have a cap of ₹5,000 crore. The cap is intended to preserve agility in portfolio construction and enable the investment team to remain selective as the fund grows, prioritising investment opportunities over asset gathering. Carnelian will be the 56th fund house to enter an industry, which has an AUM of about ₹80 lakh crore. OUR BUREAU

Axis MF launches EV Index fund, NFO opens today

Mumbai: Axis Mutual Fund on Thursday launched the Axis Nifty EV & New Age Automotive Index Fund, positioning it as India's first index fund tracking the Nifty EV & New Age Automotive Index. The new fund offer (NFO) opens on Friday and closes on October 30 with a minimum investment of ₹100. The open-ended passive scheme will replicate the Nifty EV & New Age Automotive Total Returns Index, giving investors exposure to companies across the electric vehicle value chain — including vehicle manufacturers, battery makers, component suppliers, raw material producers and advanced automotive technology firms. The fund will be managed by Nandik Malik and Rohit Gautam. OUR BUREAU

Nifty regains 23,000, Sensex climbs 1,533 points as India bucks Asian rout

BROADER PICTURE. Mid-cap and small-cap indices falter on selling pressure; Kospi, Nikkei plunge

Anupama Ghosh
Mumbai

The markets staged their sharpest single-day rally in weeks on Thursday, defying a regional bloodbath that saw South Korea's Kospi plunge 7.57 per cent, its seventh straight session of losses, and trigger an emergency trading halt, while Japan's Nikkei shed 4.56 per cent.

The BSE Sensex closed at 74,315.61, up 1,533.72 points or 2.11 per cent and the Nifty ended at 22,997.35, gaining 374.65 points or 1.66 per cent.

However, the Nifty Midcap 100 fell 0.36 per cent, and the Smallcap 100 declined 1.31 per cent.

Bank Nifty rose 494.5 points or 0.89 per cent to 55,810.5. Large-caps drove the rally; Tech Mahindra surged 4.75 per cent, ICICI Bank rose 3.8 per cent, Bharti Airtel gained 3.98 per cent, Reliance Industries added 3.5 per cent and HCL Technologies climbed 3.1 per cent.

The divergence was striking, but the celebration on Dalal Street came with a caveat. "Thursday's Nifty number is misleading. The real story is in what it hides... Advances came in at 1,343, declines at 2,218... This was not a rally. It was a rotation," said Sarvam Goel, Founder of Pocketful.

STOCK-SPECIFIC MOVE

Yes Bank fell 14.53 per cent after the Supreme Court upheld the Bombay High Court's decision to cancel the ₹8,415 crore write-off of its AT1 bonds, creating a potential financial liability for the lender.

Goel warned the ruling "weakens the entire framework that allows distressed banks to be rescued without taxpayer money... Every future bank restructuring just got more complicated."

Separately, IDBI Bank fell over 7 per cent after the government approved the sale of its 60.72 per cent stake to Fairfax Financial Holdings for ₹52,878 crore at ₹81 per share, a price well below the stock's previous close.

Canara Bank shed 6.12 per cent as PSU banks broadly declined 1.55 per cent on AT1 bond risk concerns.

Nestlé India dropped 7.76 per cent on disappointing quarterly results, with premium FMCG under pressure from input costs and weak volumes.

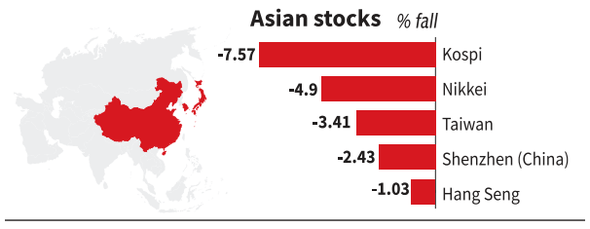

Ajit Mishra, SVP-Research at Religare Broking, cautioned that "geopolitical uncertainty and persistent foreign fund outflows continue to pose risks to a sustained recovery".

HDFC Mutual net profit up 4% on better earnings

Our Bureau
Mumbai

HDFC Asset Management Company has reported that its net profit in the September quarter was up 4 per cent at ₹749 crore against ₹718 crore logged in the same period last year. Revenue increased 14 per cent to ₹1,170 crore (₹1,027 crore).

However, other income fell to ₹71 crore (₹96 crore). Other income primarily consists of financial returns and valuation changes from the company's treasury and investment portfolio.

Overall expenses were up at ₹265 crore (₹248 crore) as employees benefit increased to ₹142 crore (₹124 crore).

The company has re-assessed its income-tax position in the September quarter and reversed income tax provision of ₹47 crore, resulting in additional credit to the net profit, it said.

The average quarter asset under management (AUM) increased 10 per cent to ₹9.69 lakh crore (₹8.81 lakh crore) while equity-oriented AUM was up 14 per cent to ₹6.08 lakh crore (₹5.34 lakh crore). However, debt AUM was down 13 per cent at ₹1.62 lakh crore (₹1.86 lakh crore) while liquid AUM increased 10 per cent to ₹86,000 crore (₹78,200 crore).

Systematic transactions inflows was up 6 per cent at ₹4,800 crore (₹4,510 crore) year-on-year, while it was down marginally. The fund house has surplus of ₹8,746 crore invested largely in debt and liquid funds.

NEW LAUNCH

The fund house expects to launch products in the SIF category over the next couple of quarters and plans to add contra and life cycle funds after SEBI's recent classification changes.

Paras Healthcare fixes IPO price band at ₹660-693

Our Bureau
Mumbai

Paras Healthcare Ltd has fixed the price band at ₹660-693 a share for its initial public offering (IPO) that opens on October 21.

The total offer size is ₹1,450 crore, consists of a fresh issue (₹450 crore) and an offer-for-sale of (₹950 crore) by the selling shareholder.

UTILITY OF FUNDS

The company will use the funds raised from fresh issue for prepayment or scheduled re-payment, in full or part, of certain outstanding borrowings; investment in the wholly owned subsidiary, Plus Medicare Hospitals Private Ltd (which also operates its hospital in Srinagar), for repayment/prepayment of borrowings, in full or part, of this hospital; besides general corporate purposes, the company said.

Bids can be made for a minimum of 21 shares. The anchor investor bidding will open on Monday, it added.

The shares will be listed on the BSE and the NSE.

JM Financial Ltd, BofA Securities India Ltd and Nuvama Wealth Management Ltd are the book running lead managers to the issue.

Angel One consolidated Q2 PAT jumps 58.2% to ₹335 crore

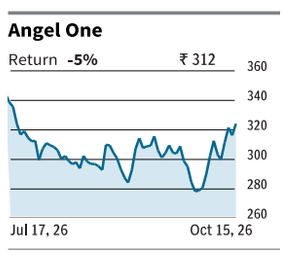

Our Bureau
Mumbai

Angel One reported a 58.2 per cent year-on-year (y-o-y) rise in consolidated net profit to ₹334.9 crore for the September quarter, compared with ₹211.7 crore in the previous year.

Revenue rose 17.8 per cent to ₹1,426.9 crore (₹1,211.7 crore). The EBITDA margin expanded to 45.1 per cent from 34.5 per cent in the previous quarte.

INTERIM DIVIDEND

The company also announced an interim dividend of ₹1.40 per share. The company's average client funding book continued to expand, reaching a record ₹7,450 crore in the second quarter of FY27, up 40.5 percent year-on-year. Average daily orders rose to 5.8 million in September, approaching pre-Closing Auction Session (CAS) levels after changes to market structure temporarily affected broking activity.

"The second quarter reinforced the resilience of our client franchise despite significant changes in India's market structure, including revised bank funding norms and introduction of the Closing Auction Session in cash equities," said Ambarish Kenghe, Group CEO at Angel One.

"While these changes temporarily impacted broking activity, client engagement recovered steadily, with our average daily orders reaching 5.8 million in September 2026, approaching pre-CAS levels."

Kotak Mutual stops fresh flows into medium term, credit risk funds

Our Bureau
Mumbai

Kotak Mutual Fund has suspended fresh investments in Kotak Medium Term Fund and Kotak Credit Risk Fund from Thursday.

The decision follows the Supreme Court judgment ruling that Yes Bank's write-off of ₹8,415 crore in Additional Tier-1 bonds was illegal and arbitrary.

Both these schemes had invested in AT1 bonds of Yes Bank. These bonds were valued at a nil (zero) market value during the reconstitution of Yes Bank in March 2020, said the fund house.

Kotak MF has stopped fresh additional lump sum/switch-ins transactions and fresh SIP/STP registration in both these funds temporarily.

"Earlier today, we proactively suspended subscriptions in both funds as a prudent measure to safeguard the interests of our investors," it said.

"We have taken similar proactive measures in the past and remain committed to acting in the best interests of our unit holders," said Kotak Mahindra AMC.

SEBI seeks IRDAI's help to make insurance details available on eCAS

Ashokamithran T
Mumbai

The Securities and Exchange Board of India has sought coordination from the Insurance Regulator Insurance Regulatory and Development Authority of India (IRDAI) to make the insurance details of policyholders available in the online Consolidated Account Statements (CAS), SEBI Chairperson Tuhin Kanta Pandey said at an event.

Speaking on the sidelines of an event conducted by Sahamati, he mentioned different use cases of making different account aggregators (AA) interoperable from the capital market investors' point of view. He said the AA framework will be used to improve upon the CAS.

"Now you have, for example, the security markets, information, both demat, non-demat, mutual funds, stocks, across brokers. The RBI Governor announced the other day that semi-regulated depositories, which is basically CDSL and NSDL, could also have the access to get the information on funds and places like deposits. I have also written to IRDAI chair that we should also have this insurance information as well, so that you get it virtually like your financial ledger," he said.

Tuhin Kanta Pandey, Chairman, SEBI PTI

DATA SHARING

The Reserve Bank of India announced as part of its regulatory and development measures that account aggregators, the facilitators of data sharing between financial institutions, are interoperable. This means that depositors can now choose which AA they want to process their payments and share data.

The SEBI Chairperson's proposal to the IRDAI means that customers will have information of bank deposits, investments and insurance policy details at one place.

The regulator also spoke about the now-paused roll-out of the MDR. The NPCI said that a merchant discount rate of 0.02 per cent on UPI payments will be implemented on capital market transactions. Many brokers including founder of Zerodha, Nitin Kamath, had underlined the potential losses to the industry because of this. Pandey, on this, said the SEBI is "in conversation with NPCI".

The SEBI chairman also said discussions and meetings regarding the Stock Lending and Borrowing Mechanism were underway in the working group, and a consultation paper regarding that is a "high priority".

Insurance reforms: IRDAI chief allays job loss concerns

Ashokamithran T
Mumbai

Concerns about losing livelihoods due to the potential implementation of the insurance regulators' proposals to overhaul the sector are misplaced, said Ajay Seth, Chairperson of the Insurance Regulatory and Development Authority of India (IRDAI).

The insurance brokers' body wrote to the Prime Minister's Office, expressing concerns about proposals to change the economic model on which the insurance industry works.

The new proposals included 30-plus limits on commission, which would reduce brokers' revenue by one-third and lead to the loss of about 10 lakh jobs.

"This concern about loss of livelihood, to our mind, is sort of misplaced," said Seth, adding that the intent was not to disrupt any business model, but to make an "orderly transition."

"There are enough provisions, enough suggestions wherein more business opportunities can be created within the insurance sector and even beyond the insurance sector," he added. The challenge for developers and regulators is to ensure an orderly transition, he emphasised. He said he would listen to suggestions to ensure there were no disruptions in the market.

The brokers body had requested that the deadline to submit comments on the consultation paper be extended. To this, Seth said it was good not to preclude the possibility of deadline extension. "The request is, come out with business and economic logic, how it will help the policy holder; that will get a careful consideration," he said.

HD Fire Protect IPO subscribed 131.7 times

Press Trust of India
New Delhi

The initial public offering of HD Fire Protect Ltd was subscribed 131.7 times on the final day of bidding on Thursday.

The company's ₹712-crore IPO received bids for 242.6 crore shares against 1.84 crore shares on offer, as per NSE data.

The quota for qualified institutional buyers (QIBs) garnered 256.65 times subscription. The category for non-institutional investors received 203.21 times subscription and the portion for retail investors was subscribed 30.49 times.

HD Fire Protect raised ₹213.11 crore from anchor investors on Monday. The company has fixed a price band of ₹258-271 a share for the issue, which is entirely an offer for sale.

BROKER'S CALL.

PL Capital

CANARA BANK (BUY)
Target: ₹160
CMP: ₹117.25
Canara Bank delivered a strong quarter with an all-round beat as core PPoP was 13.3 per cent higher, led by better NII (superior NIM), fees and opex. Loan growth was healthy at 6.5 per cent q-o-q; excluding FCNR(B) related loans too, domestic credit growth was strong at around 5 per cent q-o-q mainly aided by corporate/agriculture. NIM may sustain at current level supported by rise in corporate/agri loan yields, upcoming festive season that could spur demand for retail credit, low LDR at about 80 per cent and EBLR repricing.
Bank expects loan momentum to sustain as corporate pipeline is ₹47,000 crore and festive demand is expected to support retail lending. FCNR(B) deposits of $5.8 billion helped avoid raising wholesale funding of ₹30,000-35,000 crore; which was partly offset by low spreads of 40-50 bps on FCNR(B) related advances.
Lower net slippages and reversal in NPI provisions led to lesser overall provisions at ₹1,780 crore (PLe ₹2,220 crore). Core PAT was 26.6 per cent above PLe at ₹4,740 crore, while reported PAT stood at ₹5,170 crore.
One-time ECL provision is estimated at ₹12,000–15,000 crore, which is expected to be absorbed over 2 years, against RBI's 5-year dispensation supported by strong capital buffers (CET-1: 12.8 per cent).
For FY27/28E we raise NIM by 7/6bps and core PAT by average about 6 per cent. We keep multiple at 1.0x but raise TP to ₹160 from ₹150 as we roll forward to Sep'28 ABV. Retain 'Buy'.

Axis Capital

ACME SOLAR HOLDINGS (BUY)
Target: ₹550
CMP: ₹407.85
Acme Solar Holdings is transitioning from a plain vanilla solar IPP (3GW operational) to a complex RE project developer (about 95 per cent of its 5.4GW pipeline) and a leading BESS adopter (est ~17GWh).
Acme aims to commission its first complex project by Dec-2026. We expect the full portfolio to be operational by FY30E (1-year delay due to industry-wide transmission constraints).
This should drive run-rate EBITDA (ex other income) of ₹8,900 crore (38 per cent FY26-31E CAGR).
With about ₹52,000 crore of capex, equity is fully funded using internal accruals, cash at hand and QIP proceeds. Net debt to EBITDA to improve to 5.9x by FY30E (F26:7.2x) and OCF post interest of ₹3,000 crore.
Based on our comparative analysis framework, we apply a discount to Acme vs the larger peers given its higher dependence on single resource (solar), penalties risk in seasonally weaker years, risk of increase in BESS augmentation capex, higher run rate leverage and smaller OCF to fund future growth. We value Acme Solar at 11x FY30E run-rate EV/EBITDA and discount back to Sep-27 TP of ₹550/share. We initiate with buy.
Risks and concerns: Transmission connectivity delays; Increase in curtailment; increase in cost of funding; increasing competitive intensity resulting in lower tariff discovery in bidding; inflationary pressures leading to increased capex per MW; and Standalone BESS projects of Acme are bit at highly competitive prices, which could face risk to IRR with increase in BESS prices.

TODAY'S PICK.

Coforge (₹1,932.70): BUY

Akhil Nallamuthu
bl. research bureau

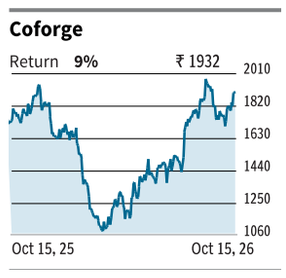

The stock of Coforge has been rallying since the beginning of this month, gaining about 10 per cent. It bounced off the support at ₹1,720.

Early this week, it surpassed the resistance at ₹1,885, a noticeable indication that the uptrend has resumed.

While there might be a minor correction in price from the current level, possibly to ₹1,885, we expect the stock to eventually restart the bull trend and rise to ₹2,200 in the near-term.

Participants can buy the stock now at ₹1,932 and accumulate at ₹1,885. Place the stop-loss at ₹1,785. When the price rises to ₹2,050, raise the stop-loss to ₹1,950.

Tighten the stop-loss further to ₹2,100 when the stock rallies to ₹2,150. Book profits at ₹2,200.

Note: The recommendations are based on technical analysis. There is a risk of loss in trading

Pts: Impact on index movement

First tranche of US trade deal ready: Commerce Minister

EXPORT PUSH. It will be operationalised once India secures competitive advantage, says Goyal

Amiti Sen
New Delhi

Commerce Minister Piyush Goyal

Commerce & Industry Minister Piyush Goyal has said that the first tranche of the India-US trade deal has been finalised and was going through final contouring and legal drafting but it would be operationalised once India gets competitive advantage over peer countries.

"And the US bilateral trade agreement (BTA) first tranche has been finalised. It's going through the final contours, the legal drafting, and we hope to be able to finalise that soon and operationalise that once we get comparable advantage or competitive advantage over our peer countries," the Minister said at the SRCC Centenary Conclave on Thursday. He added that his comments on the deal were exactly what he had said in the past week or three months ago. "So, nothing new in that," he said.

Commerce Secretary Rajesh Agrawal, in a separate interaction with the media, said the India-US trade deal was moving in the right direction. However, India must secure preferential market access with its competitors.

"The idea is when you do a trade deal, the trade deal has also a very important component that it gives you not only market access in each other's market. So in that context, India has to get a preferential market access with their competitors. And that is something which will come as a part of the new tariff framework that the US is working on," Agrawal said.

On the impact of the US Trade Representative's Section 301 investigations on concerns related to excess capacity on the trade talks, the Secretary said that all other issues should get settled as part of the deal.

RUSSIA SANCTIONS BILL

India also hopes for more clarification on the US' Lindsey O Graham Sanctioning Russia and Iran Act of 2026, which authorises US President Donald Trump to impose tariffs up to 100 per cent on largest buyers of Russian oil and gas, when the trade deal is signed. "Hopefully when it (pact) is signed, hopefully we will have more clarification on that. But definitely India will look at more tariff stability and trade stability as a part of the deal," he said.

Efforts on to conclude India-US trade deal: Gor

Amiti Sen
New Delhi

The India-US trade deal talks have not yet concluded because of the complexity of negotiations involving the two large economies and changes in the US tariff regime following a Supreme Court ruling, but the broad framework and major issues have been settled, US Ambassador to India Sergio Gor said on Thursday.

He expressed confidence that an agreement would be concluded.

Gor also said US President Donald Trump was expected to decide within the next 10 days on whether to use his powers under a new US law to impose sanctions-related tariffs on countries buying Russian oil and gas, a measure that could affect India.

INTERIM DEAL

The Ambassador said that efforts were on to conclude the interim trade deal. "We're getting there. I'm confident we will have a trade deal here... I will say keep in perspective that this is a very complex trade deal. A lot of smaller countries do not have tens of thousands of points to figure out," Gor said at the Bloomberg New Economy Forum on Thursday.

Gor said the two countries remained actively engaged in trade negotiations re-working the deal reached earlier this year as the Supreme Court gave an adverse ruling on reciprocal tariffs. "As you know, we had a trade deal...The trade deal was offsetting. You had higher tariffs that then were offset by a trade deal. The Supreme Court had ruled that law unconstitutional. So, the administration has had to go back and rework some of those things," he said.

He said the negotiations involved extensive discussions on product-level details, including tariff percentages.

"With a place like India, you got 1.4 billion people, it's a complex place, we're a complex place, and so matching everything is not going to be done overnight."

Sergio Gor,
US Ambassador to India

On the Lindsey O. Graham Sanctioning Russia and Iran Act of 2026, signed into law by Trump on September 18, Gor said the President was expected to make a determination within the statutory deadline, which he put at the next 10 days.

The law authorises the President to impose tariffs of up to 100 per cent on major buyers of Russian energy, but the duties are not automatic.

Gor said Trump understood that countries could not overnight change their energy arrangements.

"I don't think he expects anyone to overnight turn off their lights," he said, adding that the objective was to reduce the flow of funds supporting Russia's war in Ukraine rather than punish individual countries.

"The goal is not to punish anyone. The goal is to try to bring an end to this war," he said.

Asked whether India could receive an exemption or relief, Gor said the decision rested with Trump. The sanctions question needs to be settled as India and the US work towards finalising the deal, sources had earlier indicated.

Gor said the trade negotiations had been under way for about a year and a half, describing the pace as unusually fast compared with the nearly 20 years taken to conclude the European Union-US trade deal.

Share of coal-fired power generation rises in Sept as RE, hydro decline

Rishi Ranjan Kala
New Delhi

The share of coal-fired electricity generation in the country's power mix rose marginally to 64.86 per cent in September from 63.17 per cent in August 2026.

Analysts and officials said the same is a reflection of higher coal burn by thermal power plants considering peak electricity demand in 2026 has been higher by 45-50 GW per day. Peak evening and night demand (non-solar hours) also added to higher consumption of the dry fuel.

An El Nino year, which led to a fall in hydro power generation, also led to more coal burn. Hydro power acts as a clean energy source providing power backup to the grid. Low power generation from this source puts additional pressure on coal-fired capacity for base load and grid stability.

The share of hydro power fell to 11.27 per cent in the total power generation mix last month from 11.96 per cent in August. On an annual basis, hydro power generation down by almost 20 per cent and by 9 per cent m-o-m. The share of renewable energy sources also fell from 19.53 per cent in August to 16.95 per cent last month. Power generation by renewables rose 25 per cent y-o-y. However, it fell by roughly 16 per cent on a monthly basis.

During July to September, energy consumption rose by 11.5 per cent y-o-y to roughly 502 billion units. The consumption last month was at 162 BU, higher by 11 per cent on an annual basis.

Coal consumption in power plants remained around 79 mt per month from June through September, as per Finland-based the Centre for Research on Energy and Clean Air. According to the Coal Ministry, stocks fell by 7.28 mt over the month, an average of 0.24 mt per day during September.

Essar Oil bags 5 coal bed methane blocks across 3 States

Our Bureau
New Delhi

Essar Oil & Gas said the government had awarded it five new coal bed methane (CBM) blocks through its Special CBM (SCBM) bid rounds 2025 and 2026.

The blocks add roughly 1,281 sq km of new acreage across West Bengal, Madhya Pradesh and Telangana, with an estimated 6.6 trillion cubic feet (TCF) of gas-in-place resources.

The two newly-awarded blocks in the Raniganj region of West Bengal, together spanning around 330 sq km, will expand Essar's existing Raniganj East footprint of around 500 sq km to around 830 sq km. The proximity of the new blocks to the company's existing producing asset will create significant synergies in infrastructure, operations, and technical capabilities, enabling the development of an integrated CBM producing field expected to become India's largest CBM producing field, the firm said. The Singrauli block in Madhya Pradesh further strengthens its presence in an established CBM region, providing an opportunity to leverage the broader ecosystem associated with CBM development in the basin.

The blocks in Telangana's Godavari valley mark an expansion into a new CBM geography, allowing Essar Oil & Gas to apply its established expertise to developing new resource areas.

Pankaj Kalra,
CEO of Essar Oil & Gas

SUSTAINABLE GROWTH

Pankaj Kalra, CEO of Essar Oil & Gas, said, "Building on our proven track record at Raniganj, we see substantial opportunities to leverage our technical expertise, operational capabilities and established infrastructure to accelerate the development of these resources.

Our focus will be on translating this expanded acreage into sustainable production growth, creating long-term value and contributing meaningfully to India's energy security by strengthening domestic natural gas supplies and reducing dependence on imports."

Bhuwan Chandra Tripathi, Chairman of Essar Oil & Gas, noted that natural gas will continue to play an important role in India's energy mix as energy demand grows.

"As a group, we remain focused on supporting India's energy security through responsible development of domestic hydrocarbon resources, while contributing to the country's transition towards a more balanced and sustainable energy mix," he added.

GROWTH AMBITIONS

Essar Oil & Gas has invested more than ₹6,000 crore in exploration and production at Raniganj.

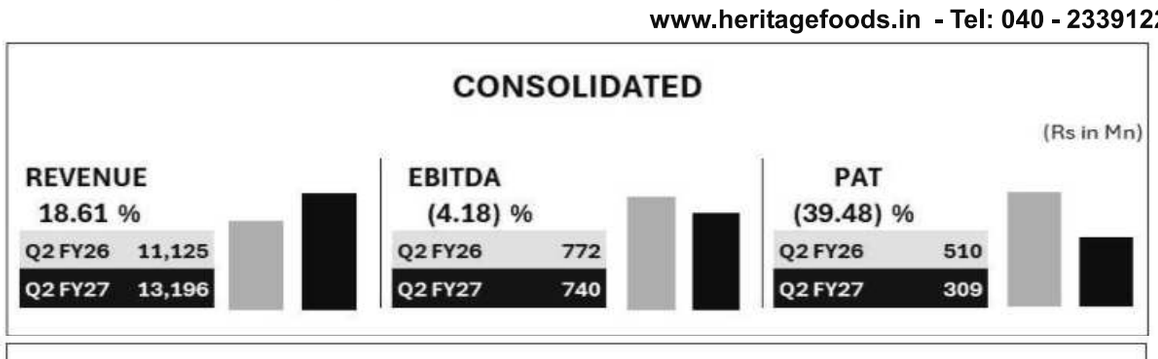

It produces 950,000 standard cubic metres of gas per day, accounting for nearly 50 per cent of India's CBM production.

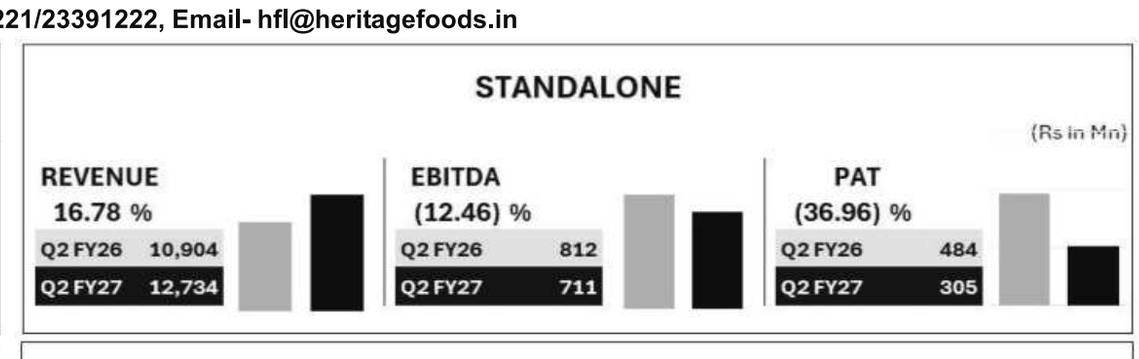

Its broader ambition is to contribute 5 per cent of India's natural gas production by progressively developing its CBM portfolio and unlocking additional domestic gas resources.

QUICKLY.

Current account deficit narrows to $5.2 b in Aug

Mumbai: India's current account deficit narrowed to $5.2 billion in August from $6.1 billion a year ago, aided by a lower merchandise trade deficit and higher surpluses in services trade, according to preliminary data released by the RBI. The net deficit in the merchandise trade account declined to $26.6 billion in August from $27.6 billion in the same month last year. Merchandise exports rose to $44.7 billion from $35.1 billion a year ago, while imports increased to $71.3 billion from $62.7 billion. Net transfers also increased to $66.8 billion from $55.6 billion. The overall balance of payments recorded a surplus of $45.4 billion, compared with a deficit of $5.6 billion a year ago. PTI

Sundaram Finance raises deposit rates by 30 bps

Chennai: Non-banking finance company Sundaram Finance on Thursday increased deposit interest rates for one-year tenure by 30 basis points while increasing it by 25 basis points for two-three-year tenures. The interest rate for regular one-year deposits has been increased from 6.7 per cent per annum to 7 per cent per annum. Sundaram Finance currently has a deposit base of ₹6,088 crore. OUR BUREAU

Canara Bank expects NIM to improve, rules out margin squeeze

GROWTH TRAJECTORY. The bank's global business grew 15.88 per cent year-on-year to ₹30.72 lakh crore

bl.interview

Aishwarya Kumar
Bengaluru

Canara Bank is looking to carry its double-digit business growth into the rest of FY27, with MD & CEO Brijesh Kumar Singh expecting the lender to outperform its 10-11 per cent growth guidance while ruling out a squeeze on net interest margins.

The bank's global business grew 15.88 per cent year-on-year to ₹30.72 lakh crore, while its net interest margin is expected to edge up from 2.55 per cent as the lender leans on granular deposits and advances to sustain momentum.

Individual savings deposits rose 11.7 per cent and retail term deposits grew 17.17 per cent, providing funding support for the bank's expansion. In an interaction, Singh outlined the levers underpinning growth in the coming quarters.

Edited excerpts:

> Branches remain our primary source of business growth and we plan to open 250 branches this fiscal
>
> **BRIJESH KUMAR SINGH**
> MD & CEO, Canara Bank

Net interest income grew 20 per cent y-o-y, while net profit rose 8 per cent. Can the core banking business sustain this momentum without a recovery in treasury income?

Our core business is net interest income (NII). Average advances continue to grow, underwriting remains calibrated, and stress in the book is minimal, with gross NPAs at 1.33 per cent.

We are controlling costs and deploying resources into good-yielding advances. NII has grown consistently quarter-on-quarter since September 2025, and we expect it to improve further.

Treasury earnings move in cycles, and these tend to even out over the longer term.

The bank has also increased provisions, which have weighed on earnings, but the core banking business continues to grow at a healthy pace.

Retail, agriculture and MSME lending are growing faster than overall advances. Are you pricing aggressively to gain market share?

Pricing is driven by market forces. If you price too high, you lose business; if you price too low, earnings suffer. The difference between lenders is generally limited.

Our risk-adjusted returns are good, and retail lending offers diversification. Quarterly slippages were 0.15 per cent, while annualised slippages are around 0.5-0.6 per cent. Our credit cost is 0.47 per cent, and we expect to keep it below 0.5 per cent.

We are also seeing lower risk concentration, with 87 per cent of borrowers with exposures of ₹50 crore and above rated A or better.

Net interest margin (NIM) stood at 2.55 per cent. Is this the floor for the second half?

Our guidance is 2.5-2.6 per cent, and we are maintaining it. We do not expect contraction going forward. NIM should improve by a few basis points, and we are confident of protecting margins.

With advances growing faster than deposits, how are you strengthening your deposit franchise?

Branches remain our primary source of business growth. We plan to open 250 branches this fiscal year, of which 45 have already opened.

Individual savings deposits are growing 11.7 per cent, while retail term deposits have increased 17.17 per cent.

We are building granular deposits rather than relying on bulk deposits.

Does the proposed UPI merchant discount rate offer a meaningful revenue opportunity for banks?

Around 96 per cent of UPI transactions by volume are below ₹2,000. There are also exemptions and a cap on the fee, which is shared among several participants, including issuing and acquiring banks and payment service providers.

Canara Bank operates across these roles and has its own payment platform. However, we have not calculated the overall revenue opportunity, and we do not expect a significant impact.

What is your expectation about the festive quarter? What are you seeing in consumption demand?

The third quarter is festive, so we have established products and processes, and our pricing, promotions, and placements are calibrated well.

We are upbeat about the coming quarter and subsequent quarters.

L&T Finance PAT up 33% on cost-efficiency in Q2FY27

Ashokamithran T
Mumbai

L&T Finance increased its net profit 33 per cent to ₹968 crore as costs were under control in the quarter-ended September 30, 2026, as against ₹727.71 crore in the year-ago period.

Sequentially, the NBFC increased profit by over 8 per cent.

The net interest income (NII) increased 32.6 per cent to 3,187.36 crore in the reporting quarter, as against ₹2,403 crore in the year ago period. On a quarter-on-quarter basis, the NII increased about 9 per cent.

GROSS DISBURSALS

The gross disbursals increased 27 per cent to ₹24,027 crore on a year-on-year basis but stayed flat sequentially.

The moderation over the previous quarter came on top of a decline in lending to farmers and rural business finance.

Farmer finance dipped 1 per cent to ₹1,643 crore on a year-on-year basis and was down 33 per cent from the Q1FY27 number of ₹2,453 crore.

The pattern was the same, *albeit* less severe, in rural business finance, with a marginal 1 per cent growth in lending to ₹6,356 crore compared with the corresponding quarter last fiscal and a 9 per cent dip from last quarter.

RURAL BUSINESS

"We tempered the disbursements in rural business finance as well as farm equipment finance because there was this huge monsoon-related overhang in July and August, so we obviously decided it was prudent for us not to fire our rural distribution much."

"So we have ensured that the growth comes from gold, which is a completely secured asset, and SME finance," said Sudipto Ray, CEO of L&T Finance.

The NBFC's net interest margin and fees increased about 20 basis points to 10.48 per cent in the recently concluded quarter, as against the 10.2 per cent in the year ago period.

The gross stage three delinquency assets as a share of gross disbursements reduced to 2.53 per cent in Q2 FY27 as against 3.29 per cent in the year ago period.

Net stage 3 too reduced to 0.85 per cent from 1 per cent, reflecting better asset quality.

"Our disbursements have been relatively robust for the past couple of quarters," said Ray. "Our opex also has been under control, in spite of the very fast build-out of the gold loan branches," he added.

UCO Bank Q2 net jumps 27%; aims at 12-14% credit growth

Our Bureau
Kolkata

Public sector lender UCO Bank on Thursday reported 26.76 per cent y-o-y growth in its net profit at ₹785.64 crore for the second quarter this fiscal, backed by around 16 per cent increase in operating profit.

The Kolkata-based lender had posted a net profit of ₹619.76 crore for the second quarter last fiscal.

The bank's operating profit rose to ₹1,872.36 crore for the second quarter of FY27 from ₹1,613.20 crore for the corresponding period of FY26.

Net interest income (NII) grew by 13.96 per cent on a y-o-y basis to ₹2,886 crore for Q2 FY27 as against ₹2,533 crore for Q2 FY26. Net interest margin on a global basis held at 3.00 per cent compared with 2.90 per cent in the year-ago period.

> **NII grew by 13.96% on a y-o-y** basis to ₹2,886 cr in Q2 FY27 as against ₹2,533 cr in Q2 FY26

UNDER CONTROL

UCO Bank MD & CEO Rajendra Kumar Saboo said, "NIM improved during the period as our cost of deposit was under control. Fresh slippages were low and asset quality improved." Saboo said the bank has guided for a NIM of 2.80-2.90 per cent for FY27. The lender is aiming at a credit growth of around 12-14 per cent during this fiscal.

During the second quarter this fiscal, its gross advances grew 24.70 per cent on y-o-y basis, while total deposits rose by 14.36 per cent on y-o-y. The bank's gross NPA reduced by 60 basis points y-o-y to 1.96 per cent as on September 30, 2026, whereas net NPA reduced by 25 bps y-o-y to 0.18 per cent.

Pernod Ricard India sales grow 19%

Press Trust of India
New Delhi

French spirits maker Pernod Ricardon Thursday reported a 19 per cent sales growth in India for the September quarter. Separately, the company said its proposed initial public offering (IPO) in the country remains under discussion and is awaiting board approval.

Double-digit sales growth in the quarter was "driven by strong demand and continuing premiumisation", it said.

"Growth is broad-based across the portfolio, with imported spirits seeing strong double-digit growth," said the company. Pernod Ricard said preparatory steps for a potential IPO in India had resulted in a favourable pipeline-filling effect, contributing to sales growth in the first quarter.

IPO PLANS

The company also said it was "taking preparatory steps for a potential IPO, which is leading to a favourable pipe-fill effect that is further benefitting sales." However, the "decision to proceed to an IPO remains subject to board approval," it added.

Steady growth across segments lifts South Indian Bank Q2 profit 21%

Our Bureau
Kochi

South Indian Bank (SIB) has reported a 21 per cent year-on-year increase in net profit at ₹426.13 crore for the second quarter of FY27, compared with ₹351.37 crore in the corresponding period of the previous fiscal, driven by consistent growth across its targeted business segments.

The Thrissur-based lender recorded its highest-ever net interest income of ₹1,116 crore, up 38 per cent y-o-y. Operating profit rose 37 per cent to ₹732 crore, while net interest margin improved to 3.33 per cent from 2.80 per cent. The bank also reported an improvement in asset quality, with gross non-performing assets declining to 1.24 per cent from 2.93 per cent a year earlier.

Net non-performing assets fell to 0.09 per cent from 0.56 per cent. Mahesh Muralidhar Pai, Managing Director and CEO, said its strategy continued to focus on sustained profitability, superior asset quality, a resilient loan book and a strong retail liability portfolio. The bank is also strengthening its organisational structure and leveraging digital technology to achieve its business objectives.

Mahesh Muralidhar Pai, MD & CEO, South Indian Bank

CONSISTENT GROWTH

The bank, he said, had maintained consistent growth across its targeted segments, focusing on acquiring quality assets in corporate lending, MSME loans, housing loans, auto loans and gold loans. The liability franchise remained a priority, with an emphasis on active customer engagement and quality customer acquisition. "Aligned with our strategic intent of 'profitability through quality credit growth', we have successfully on-boarded new advances with low-risk profiles, ensuring a well-balanced and healthy credit portfolio," Pai said.

RETAIL DEPOSITS UP

Retail deposits increased 15 per cent y-o-y to ₹1,29,353 crore from ₹1,12,625 crore, while non-resident Indian deposits rose to ₹38,203 crore from ₹33,195 crore, an increase of ₹5,008 crore.

The current account and savings account (CASA) portfolio grew 17.56 per cent, with savings bank deposits increasing 14.34 per cent and current account deposits rising 31.19 per cent. The gold loan portfolio increased by ₹7,758 crore to ₹26,603 crore from ₹18,845 crore a year earlier.

Indian Bank net profit up 15% cr on NII boost

Our Bureau
Chennai

Public sector lender Indian Bank reported a net profit growth of 14.7 per cent year-on-year (y-o-y) at ₹3,462 crore for the quarter ended September 2026 (Q2FY27).

Profit growth was driven by a robust increase in net interest income along with a 14 per cent growth in total business. Net interest income (NII) grew 18 per cent y-o-y to ₹7,719 crore.

Further, the bank's non-interest income grew to an outlier of 58 per cent to ₹3,953 crore in the quarter, partially aided by income from the listing of National Stock Exchange shares. While this led to a 46 per cent growth in reported operating profit, the real growth in operating profit without the impact of NSE listing gains stood at 18 per cent.

"Credit growth came in at 16 per cent, much better than my earlier guidance," Binod Kumar, MD and CEO, Indian Bank, said. All sectors of RAM — retail, agriculture and MSME — have grown around 17 to 18 per cent.

Scorecard *(in ₹ cr)*

	Q2FY26	Q2FY27	% change
Net profit	3,018	3,462	14.7
Net interest income	6,551	7,719	17.8
Total advances	6,20,324	7,21,982	16.4
Total deposits	7,76,946	8,74,036	12.5
GNPA %	2.6	1.6	100 bps
NNPA %	0.16	0.14	2 bps

Corporate credit also saw a robust growth of 9 per cent on the back of power and infrastructure-related lending, he added. Gross advances stood at ₹721,982 crore in September 2026 compared to ₹620,324 crore as of September 2025.

Given the performance of Q1 and Q2, the bank is also upping its guidance marginally and now expects a credit growth of 13-14 per cent and deposit growth of around 11-12 per cent for FY27.

DEPOSITS RISE

Total deposits increased by 12.5 per cent y-o-y and reached ₹874,036 crore as of September 2026. Indian Bank said it mobilised fresh FCNR(B) deposits amounting to ₹22,486 crore and also raised OFCB of ₹3,806 crore in this period.

"There was a lot of expectation that NIMs would see strain due to FCNR(B) mobilisaiton, but we have been able to manage NIM. In fact, gone up by one basis point," Kumar said. In fact, we strategically reduced bulk deposit (including CD) by 5.6 per cent on a q-o-q basis, from ₹1.62 lakh crore in June 2026 to ₹1.52 lakh crore in Sepember 2026, he added.

Net interest margin (NIM) domestic stood at 3.42 per cent in Q2FY27 compared to 3.41 per cent in Q1FY27 and 3.23 per cent in Q2FY26.

Asset quality improved with gross NPA decreasing by 99 bps y-o-y to 1.61 per cent in Q2FY27 and net NPA reducing by 2 bps to 0.14 per cent in September 2026. However, provisions excluding tax increased to ₹2,222 crore in Q2FY27 from ₹739 crore in Q2FY26. Kumar explained that this included an expected credit loss (ECL) provision of ₹1,500 crore made in this quarter.

With regard to deposit mobilisation, Kumar acknowledged the pressures of raising deposits. "Our focus will be both on a small value deposit and a large value deposit. During the half year, we have added 250,000 salary accounts compared to 300,000 accounts added in the whole of the last fiscal year," he said.

FUNDRAISING PLAN

Separately, Indian Bank's board approved a fundraising plan of up to ₹7,000 crore. This includes long-term infrastructure bonds worth up to ₹5,000 crore to finance or refinance infrastructure and affordable housing and up to ₹2,000 crore through Basel III-compliant additional tier 1 (AT1) and tier 2 bonds.

Maruti Suzuki gets favourable Income Tax Appellate Tribunal order

Press Trust of India
New Delhi

Maruti Suzuki on Thursday said it has received a favourable Income Tax Appellate Tribunal order covering eight financial years and sees a positive tax impact of approximately ₹13,000 crore.

"The company has received the Income Tax Appellate Tribunal order for eight years from FY14 to FY20 and FY22 wherein the issues have been majorly allowed in favour of the company, having a positive tax impact (including interest) of ₹13,000 crore," Maruti Suzuki said in an exchange filing.

"The company would be reducing primarily the interest component from the contingent liability to the tune of ₹6,300 crore.

"The company will file an application before the jurisdictional assessing officer to give effect to this order," it added.

HDFC Life Insurance Q2 net up 13.6% at ₹508 crore due to increase in y-o-y net premium income

Our Bureau
Kolkata

HDFC Life Insurance on Thursday reported a 13.61 per cent year-on-year jump in its standalone net profit at ₹508 crore for the second quarter of this fiscal, backed by a 15.71 per cent y-o-y increase in net premium income during the period.

The life insurer had registered a net profit of ₹447.15 crore for the second quarter of last fiscal. According to a stock exchange filing, its net premium income increased to ₹21,727.37 crore in Q2FY27 from ₹18,777 crore in Q2FY26.

The first-year premium increased 9.69 per cent y-o-y at ₹3,926.66 crore, whereas the renewal premium rose 10.47 per cent y-o-y to ₹11,419.87 crore for the second quarter of this fiscal.

Single premium increased 31.39 per cent y-o-y to ₹7,055.96 crore during the period under review.

Scorecard

	Q2FY26	Q2FY27	% change
Net profit	447.15	508.00	13.61
Net premium income	18,777.31	21,727.37	15.71

(All figures are in ₹ crore, except percentages)

VNB MARGIN

The life insurer's overall annualised premium equivalent for the first half of this financial year (H1FY27) grew 11 per cent y-o-y at ₹8,245 crore, while value of new business (VNB) increased 12 per cent y-o-y at ₹2,037 crore for the period.

VNB margin stood at 24.7 per cent for H1FY27 compared with 24.5 per cent for H1FY26.

Commenting on the results, Vibha Padalkar, MD & CEO, HDFC Life, said, "In Q2, individual weighted received premium grew 11 per cent, ahead of the private industry at 10 per cent. This took our H1 growth to 9 per cent, with market share improving to 16.2 per cent from 16.1 per cent in Q1." The number of individual policies grew 9 per cent in H1, ahead of the industry.

"On the regulatory front, IRDAI has released consultation papers on the economics of insurance distribution, which propose significant changes for the industry. The regulator has encouraged industry participants to share their feedback backed by data and policyholder interests," Padalkar said.

During the earnings call, the management said the proposed reform would impact the agency channel at the industry level, but the brokers would be the most impacted.

Karur Vysya Bank reports 37% growth in Q2FY27 through sustained performance

Our Bureau
Chennai

Karur Vysya Bank recorded a robust net profit growth of 37.3 per cent y-o-y at ₹788 crore for the quarter ended September 2026 (Q2FY27).

Net interest income increased by 18.7 per cent to ₹1,497 crore from ₹1,261 crore for the same previous year quarter. For the first half of the fiscal year, net profit registered a growth of 40.9 per cent and stood at ₹1,543 crore from ₹1,095 crore during the corresponding half year of the previous year. Net interest margin (NIM) for Q2FY27 stands at 4.3 per cent as compared to 4.2 per cent for the corresponding quarter of the previous year. The bank's total business as of September 30 stands at ₹ 239,712 crore, registering a y-o-y growth of 18 per cent. Total deposits stand at ₹1,28,123 crore, registering a y-o-y growth of 16 per cent. Total advances stand at ₹111,589 crore, registering a y-o-y growth of 20 per cent. Gross NPA percentage stood at 0.69 per cent as of September compared to 0.76 per cent last year quarter. Net NPA percentage was almost flat and stood at 0.18 per cent from 0.19 per cent last year.

Ramesh Babu B, MD & CEO, Karur Vysya Bank

KEY PRIORITIES

"The business growth has been balanced and broad-based, with sustained performance across our three key priorities: growth, profitability and asset quality. This reflects the continued strength and resilience of our operating performance since the year's outset," Ramesh Babu B, MD & CEO, Karur Vysya Bank, said.

Jio Financial Services Q2 net profit declines 51%

Press Trust of India
New Delhi

Jio Financial Services Ltd on Thursday reported a 51 per cent decline in consolidated net profit to ₹340.44 crore for the September quarter, hit by higher expenses. The company posted a net profit of ₹695 crore in the year-ago period.

Its total income rose about 70 per cent to ₹1,699.41 crore in the second quarter of FY27 from ₹1,002.40 crore in the corresponding quarter of the previous fiscal year, according to a regulatory filing.

Shares of Jio Financial Services settled at ₹218.75 on the BSE.

QUICKLY.

Funskool eyes topline of ₹400 crore in FY27

Chennai: Funskool is expecting to close the financial year ended March 2027 with a topline of ₹400 crore, a 20 per cent growth compared to the ₹329 crore it posted last financial year. The company, wholly-owned by tyre giant MRF, is banking on a robust double-digit growth in its export businesses supported by a growing network of licensing, manufacturing and distribution deals with global brands like Simba Toys (Germany), Molto (Spain), Buffalo Games (USA) and Sanrio (Japan). Exports currently contribute around 70 per cent of the company's business. "The toy business is cyclical so we probably won't be able to do that much in the next six months but we are confident we will be able to post a healthy double digit growth for the year," KA Shabir, CEO, Funskool, said during a media roundtable here on Monday. OUR BUREAU

Jio Platforms plans to monetise tech stack abroad through partnerships

BIZ DRIVERS. Expects growth to be led by its mobility, enterprise, home broadband and digital services

Suresh P Iyengar
Vallari Sanzgiri
Mumbai

OUTLINING STRATEGY. Akash Ambani, MD of Jio Platforms, addressing the Jio IPO announcement event in Mumbai ANI

Reliance Jio Platforms plans to commercialise its technology stack in international markets through partnerships. Instead of selling hardware or software licences, it intends to operate as a managed services partner, offering its technology to telecom operators in both developed and emerging economies.

Jio expects growth to be driven by its mobility, enterprise, home broadband and digital services businesses. Rather than depending primarily on per-gigabyte pricing, the company plans to introduce additional services that can generate higher revenue per user.

INFRA INVESTMENTS

Akash Ambani, Managing Director of Jio Platforms, said the strategy would be to leverage the infrastructure investments already made, expand the range of services offered, and translate greater customer value into sustained earnings growth. He talked of three pillars around technology, digital gateway and infrastructure to address "India's $1.4 trillion digital economy by FY31." Ambani pointed out how pricing per GB data moved from ₹228 to ₹7.5 following Jio's entry in the telecom market while usage moved from less than 0.2 GB per customer per month to 26.7 GB per customer per month.

While the growth focus will remain on India, Ambani said the company will also assess overseas opportunities based on their potential contribution to profitability, rather than committing to a fixed domestic-international revenue mix.

The shift towards services and technology monetisation is expected to complement Jio's established connectivity business while supporting profitability after its listing, he said, while addressing the media ahead of the company's IPO, which opens on Wednesday.

IPO PLAN

The company intends to use the entire proceeds of ₹30,213 crore from its IPO to eliminate its nearly $3 billion in net debt, while funding future expansion through internal cash flows.

The proposed offering is expected to leave Jio in a net-debt-free position, strengthening its balance sheet as it seeks to monetise investments in 5G infrastructure, home broadband, and digital services. The company generates about 30 per cent of its revenue in the form of free cash flow, which it expects to deploy towards continued investments in technology and customer services, Ambani said.

Representing the merchant bankers for the issue, Uday Kotak said the price band had been determined after extensive consultations with institutional investors.

At the upper end of the price band, Jio's valuation translates into 34 times FY26 earnings, compared with 41 times for its closest peer, he said.

The comparison implies that Jio is being valued at a lower earnings multiple than its peer. On a like-for-like basis, the 34x earnings multiple represents a discount of about 17 per cent to the 41x multiple. However, the peer was not identified, and the comparison alone does not establish whether the IPO is undervalued.

Responding to concerns about profitability after listing, Ambani said Jio's EBITDA margin had risen from 50 per cent to 53 per cent in the latest quarter. Further improvements would come from optimising technology operations and introducing services beyond its licensed telecom businesses.

The company also sees scope to increase utilisation of its 5G network, which covers 99 per cent of India's population, according to Ambani.

In home broadband, Jio said its proprietary technology could expand its serviceable market from 14 million homes to 100 million homes.

Tata Power approaches West Bengal govt for land for solar projects

Our Bureau
Kolkata

Tata Power has approached the West Bengal government for land to set up multiple solar projects, with a total installed capacity of around 500 MW, which may require an investment of ₹2,500 crore.

"Right now, it is very preliminary. So, we are identifying land. They (State government) have given us three-four locations. We have to go and see the viability of these locations," Tata Power CEO & MD Praveer Sinha told mediapersons here.

MULTIPLE PROJECTS

According to Sinha, multiple solar projects may be located in multiple locations in the State as getting a large land parcel may not be possible in West Bengal.

"The solar power projects can vary between 100 MW and 500 MW. Everything will not happen in one place. In some places 100 MW will happen, in some places 200 MW, depending upon how much land we have," he added. Tata Power said the West Bengal government has shown a lot of keenness to promote rooftop solar adoption in the State under "Ghar Ghar Solar" initiative. The company has suggested that the State government consider providing additional incentives to households to encourage adoption of rooftop solar.

"West Bengal should come up with some State subsidy, similar to what is available in Odisha, Bihar and Assam, ranging from ₹15,000 to ₹25,000 per project, so that rooftop solar adoption in the State increases exponentially," said Sanjay Banga, CEO and MD, Tata Power Renewable Energy.

When asked whether the leadership and governance differences between Tata Sons and Tata Trusts could disrupt the company's expansion plans, Banga said the Tata Power subsidiary is independently managed by its board and that the differences would not impede its growth.

Bajaj Consumer bets on Aarohan 2.0, targets 60,000 retail outlets annually

Amit Vijay Mohile
Mumbai

Bajaj Consumer Care plans to add approximately 60,000 retail outlets and 1,000 distribution partners annually under Project Aarohan 2.0 from FY28, building on a 66 per cent jump in second-quarter consolidated profit, as the maker of Almond Drops Hair Oil expands its product portfolio to support a larger nationwide distribution network.

Describing Aarohan 2.0 as a shift "from a one-time project to an annual growth engine," the company said its earlier eight-quarter programme added more than one lakh outlets and appointed over 1,100 distribution partners across several States.

Bajaj plans to complete Aarohan's third phase, covering Bihar, Jharkhand, Odisha, Punjab and Gujarat, during H2 FY27. Productivity improvements across earlier phases are scheduled for Q4 FY27, followed by annual nationwide expansion beginning Q1 FY28.

PRODUCT EXPANSION

Bajaj Almond Drops Hair Oil recorded domestic revenue growth exceeding 30 per cent in both Q2 and H1 FY27, supported by double-digit unit-volume expansion.

Bajaj is also revamping non-sticky *amla* oils and nourishing body lotion while testing colour shampoo, lip balm and premium fragrance products in selected markets and channels, targeting mass-market general trade and premium organised retail.

General trade grew in the mid-twenties during Q2, with rural markets marginally outperforming urban markets.

Organised trade grew in the high twenties, while quick commerce remained the fastest-growing sub-channel within organised retail.

International operations continued growing faster than the company average during Q2 FY27. Bajaj Consumer Care said its rest of the world markets, excluding Nepal, Bangladesh, the Gulf countries and Africa, continued their turnaround, while Nepal, the Gulf countries and Africa recorded strong growth.

Bangladesh maintained double-digit growth despite a challenging operating environment.

However, elevated light liquid paraffin and refined mustard oil prices, alongside rising copra costs, remain potential margin pressures.

Sustaining growth through H2 FY27 will depend on Almond Drops' volume momentum, improving distribution productivity and converting newer personal care products into meaningful revenue contributors.

'Railways, data centres must build 100% redundancy in lines connecting to grid'

M Ramesh
Chennai

Large electricity consumers, such as railways, metro rail systems, refineries, steel plants, hospitals and data centres, should plan their grid connections with 100 per cent redundancy, and as much as possible, access to two different sources of supply, the Central Electricity Authority has said.

In *Manual on Transmission Planning Criteria, 2026*, released on Wednesday, the CEA signalled a sharper emphasis on continuity of electricity supply to facilities where an interruption could have serious operational, economic or public-safety consequences.

Redundancy means having alternative supply arrangements available if the normal supply path fails. In practice, this could involve independent grid connections, alternative transmission or distribution paths or appropriately configured substations and associated equipment.

COST IMPLICATIONS

The manual's wording is significant in two respects. First, it specifies 100 per cent redundancy for the listed critical loads. Second, it says the connections should, as far as possible, be from two different sources of supply. Merely having two feeders would not necessarily provide meaningful redundancy if both depend on the same vulnerable upstream infrastructure.

The provision could have cost implications. Providing additional feeders, substations, transformers, switchgear, protection systems and associated infrastructure may require fresh investment or modifications to existing installations.

CEA Chairman Ghanshyam Prasad said in the foreword that the CEA had brought out the manual against the backdrop of the "rapid transformation" in the power sector requiring large-scale integration of variable renewable energy, longer distance power transmission, advances in technology and also rising fault levels and right-of-way issues. Prasad noted that while the 765 kV transmission system had come up well, there was now need for 1150 kV ultra high voltage alternating current (UHVAC) transmission as it offers higher power transfer, lower losses and help in dealing with RoW issues.

CapitaLand India unveils data centre in Chennai

Our Bureau
Chennai

CapitaLand Investment Ltd on Thursday inaugurated its first data centre in Tamil Nadu, CapitaLand Data Centre Chennai 01, developed through its listed fund platform, CapitaLand India Trust (CLINT).

The facility will house 53 MW of gross power once it is completed and expects to be tenant-ready by this year-end.

SECOND CENTRE

This is CLINT's second data centre development, after its first in Navi Mumbai in 2025, a 108 MW facility which has been fully leased to a leading global hyperscaler.

The data centre was unveiled by Singapore's Deputy Prime Minister and Minister for Energy, Trade and Industry (Trade), Gan Kim Yong, and Chief Minister of Tamil Nadu C Joseph Vijay.

"This is our first digital infrastructure project in Tamil Nadu. It is a project which was kickstarted in the year 2024 and has been under development for the last 30-33 months," Gauri Shankar Nagabhushanam, CEO, CLINT, told *businessline*.

"The facility is roughly about 600,000 sq ft over a four-acre parcel, ground plus seven floors," he added.

The data centre has a total planned investment of approximately ₹1,940 crore.

CapitaLand Data Centre Chennai 01 is jointly held by CLINT and CapitaLand India Data Centre Fund.

Located in Ambattur, the data centre will have 34 MW of IT power capacity across 13 data halls, which will be supported by a dedicated 110 kV substation.

Nagabhushanam said they expect the data centre to support customers to work with the latest GPUs as it is designed as an AI-ready facility with high power density.

Alstom gearing up for ₹2,000 cr CMRL order

T E Raja Simhan
Chennai

Alstom is preparing to bid for a Chennai Metro Rail contract worth around ₹2,000 crore to supply 168 metro cars for the existing Phase I network.

This comes at a time when it is set to begin production of another 96 cars for the city's expanding metro system in November, said Champak Panda, Managing Director of Rolling Stock and Component Business of Alstom India.

The tender for the 168 cars, for which bids in the next few days, will require trains customised to Chennai Metro's existing infrastructure, including its signalling systems, platforms and door-spacing specifications.

This differs from the requirements for trains being supplied for Phase II, he told *businessline* at its Sri City plant on *Wednesday*.

"We don't want to miss an opportunity to serve the people of Chennai, and we want to continue our association with Chennai Metro," he added.

Alstom is yet to finalise its bid price, with the cost of metro trains rising by an estimated 20-25 per cent amid higher prices of steel, copper and electrical equipment. Geopolitical disruptions and increases in oil prices have added to the pressure on commodity costs, Panda said.

Alstom's Sri City facility, which began operations with its first Chennai Metro Rail Ltd (CMRL) project in 2010, has supplied around 1,500 cars and currently manufactures 250-300 cars annually, he said. The CMRL is also introducing additional safety features in the trains under the new tender, which Alstom is prepared to implement, he added.

Alstom has invested over ₹2,500 crore across its Indian facilities over the past five to 10 years. Further investments will depend on project requirements and the need to upgrade manufacturing technologies, he said. Operators seeking to introduce driverless services on new lines while retaining driver-operated systems on older corridors must address the challenges of integrating the two systems, Panda said.

Panda said Alstom's overall order backlog in India was 900-1,000 cars, with approximately 600 at Sri City and another 300-400 across at Savli in Gujarat that is more in to exports.

"We have built enough capacity and this is why we are careful in taking additional global orders," Panda said.

QUICKLY.

Gold up on softer $, yields ahead of inflation data

Gold prices climbed more than one per cent on Thursday as the dollar and US Treasury yields remained under pressure, while investors looked to fresh US inflation data for rate hike clues. Spot gold was up 1.3 per cent to $4,156.58 per ounce by 1124 GMT. US gold futures for December delivery rose 1.7 per cent to $4,178.50. Silver gained 1.9 per cent to $56.69 per ounce, platinum rose 0.7 per cent to $1,617.50 and palladium climbed 3.5 per cent to $1,132. REUTERS

Copper hits 10-day low on profit taking

London: Copper prices eased to their weakest in 10 days, hit by profit-taking on reduced worries about supply. Benchmark three-month copper on the LME shed 0.9 per cent to $14,360 a tonne. Aluminium added 0.2 per cent to $2,994; zinc fell 1 per cent to $3,681. Lead lost 0.4 per cent to $1,888.50, nickel slid 2.6 per cent to $15,100 and tin gave up 1.1 per cent to $49,900 after hitting its lowest level since June. REUTERS

Crude oil down on talks of fleet sanction relief

London: Crude oil prices fell by about two per cent as potential US steps to ease restrictions on Russia's "shadow fleet" tankers soothed price concerns. Brent crude futures fell $2.28 to $103.78 a barrel by 0729 GMT, while US West Texas Intermediate crude futures were down $1.34 to $93.75. REUTERS

Gadchiroli sets an example in water conservation under PMDDKY scheme

FARM TRANSFORMATION. Once Naxal-hit & drought-prone, the region is now greener and scaling new highs in output

Prabhudatta Mishra
New Delhi

ROAD TO REVIVAL. Under PMDDKY, the Centre aims to boost agricultural productivity, promote crop diversification, strengthen post-harvest storage, expand irrigation and improve credit access across 100 selected districts

Once known for being affected by Naxalism, Gadchiroli district in Maharashtra has done exemplary work in water conservation and drought management, transforming drought-affected areas into greener landscapes and achieving new milestones in agricultural production under the Centre's Prime Minister Dhan-Dhaanya Krishi Yojana (PMDDKY).

Despite receiving 1,200-1,400 mm of rainfall during the June-September monsoon season, Gadchiroli faces water-retention challenges. Nearly 84 per cent of the district's area lies on metamorphic or hard rock, limiting natural water retention.

Consequently, surface water levels decline rapidly during the post-monsoon period (October-February). In summer (March-May), agricultural fields face moisture stress and are often left fallow, while drinking water needs compete with irrigation requirements.

In the current fiscal, the district's monthly ranking under PMDDKY slipped to 42 in September from 26 in July, not because of a decline in performance but owing to improvements in other districts.

Its composite score, based on 121 parameters, has risen steadily from 16.08 in April 2026 to 59.54 in September. In March 2026, Gadchiroli ranked 96 among the 100 districts covered by the scheme.

NO SEPARATE ALLOCATION

Under PMDDKY, the Centre aims to improve agricultural productivity, promote crop diversification, strengthen post-harvest storage, expand irrigation and improve access to credit in 100 selected districts. These districts were identified on the basis of three key indicators: Low agricultural productivity, low cropping intensity and low credit disbursement.

The scheme has no separate Budget allocation, with 36 existing schemes across 11 departments prioritised for implementation in the selected districts. The Centre has also appointed a senior nodal officer for each district, although no accountability mechanism has been specified.

Avishyant Panda, Collector of Gadchiroli, told *businessline* that 6,820 water conservation structures had been completed under PMDDKY in the past year. These include recharge shafts, farm ponds, farm bunding, honeycomb technology and desiltation works.

"This has resulted in creation of additional 18,831 TMC (thousand million cubic feet) of new storage for protective irrigation in the district," he said, adding that this was enough to irrigate over 9,000 hectares of farmland.

IMPROVING WATER SECURITY

Panda said assured irrigation had helped expand the area under rabi cultivation to 45,143 hectares from 35,661 hectares earlier. The district has 2.11 lakh hectares of farmland cultivated during the kharif season.

In his presentation at the recent PMDDKY event, Panda highlighted the interventions in Nelgunda, a village 173 km from the district headquarters, along the Chhattisgarh border.

The village, he said, demonstrated how patient, trust-led engagement could improve water security in some of India's most remote, Left-Wing Extremism (LWE)-affected villages. The creation of water storage capacity of 282 TCM in Nelgunda had provided assured irrigation to 62 hectares of farmland.

In early 2025, when the *taluka* (tehsil) agriculture officer visited Nelgunda, he was met with curiosity and scepticism amid poor road connectivity and difficult terrain.

Development projects were virtually absent, making even a discussion on water conservation unusual, Panda said. However, patient dialogue, repeated visits and community participation gradually built trust over the past year as residents began to see the results of the water conservation works.

Edible oil imports up 3.27% in Nov-Sept on higher palm oil shipments

Our Bureau
Mangaluru

Edible oil imports increased by 3.27 per cent during the first 11 months of the oil year 2025-26 (November-October), supported by higher palm oil imports.

According to the Solvent Extractors' Association of India (SEA), India imported 151.64 lakh tonnes (lt) of edible oil in the first 11 months of oil year 2025-26 (November-October) against 146.83 lt in the corresponding period of the previous oil year 2024-25.

Total palm oil (including RBD palmolein and crude palm oil) imports increased to 73.52 lt in November-September 2025-26 from 69.8 lt in the corresponding period of the previous oil year, registering a growth of 5.32 per cent.

SOYOIL IMPORTS UP

India's soybean oil imports increased by 3.25 per cent from 50.13 lt in November-September 2024-25 to 51.76 lt in November-September 2025-26.

However, sunflower oil imports declined by 1.9 per cent from 26.75 lt in November-September 2024-25 to 26.24 lt in November-September 2025-26.

BV Mehta, Executive Director of SEA, said imports of refined oils from Nepal to India continued at significant levels. During November-September 2025-26, Nepal exported 6.82 lt of refined oils to India. This included 6.05 lt of refined soybean oil, 37,734 tonnes of refined sunflower oil, 31,633 tonnes of RBD palmolein and 7,189 tonnes of rapeseed oil.

He said Nepal is importing mainly crude soybean oil and small quantities of crude sunflower oil and crude palm oil. After refining, it is exporting refined oil to India. Nepal enjoys nil import duty under the Safta agreement for export to India, he said.

CRUDE VS REFINED OIL

Imports of refined edible oils declined sharply to 7.4 lt in the first 11 months of the oil year 2025-26, from 16.89 lt in the corresponding period of the previous oil year.

Stating that the share of refined edible oils in the total edible oil imports declined to 5 per cent from 12 per cent earlier, Mehta attributed this to the negligible imports of refined palmolein from Indonesia and Malaysia during the period.

However, crude edible oil imports increased from 129.93 lt in November-September 2024-25 to 144.23 lt to November-September 2025-26. He said this increase was primarily driven by higher imports of crude palm oil, which replaced imports of refined palmolein.

MAJOR EXPORTERS

Argentina was the largest supplier of edible oils to India with 34.43 lt. This included 27.14 lt of crude soybean oil and 7.29 lt of sunflower oils.

Russia exported 12.89 lt of edible oils to India. This included 11.76 lt of crude sunflower oil followed by 1.12 lt of crude soybean oil.

India imported 29.76 lt of palm oil from Malaysia, while Indonesia exported 29.05 lt of palm oils to India.

Ramesh Chand panel to tackle challenges in sugarcane sector

Our Bureau
New Delhi

The Food Ministry has set up a five-member committee headed by former NITI Aayog member Ramesh Chand to recommend policy measures to ensure remunerative returns for sugarcane farmers and examine whether the statutory ex-mill price of sugar should be raised. "Pursuant to the decisions taken during the meeting of representatives of sugarcane farmers from Karnataka and Maharashtra with Agriculture Minister Shivraj Singh Chouhan and Food Minister Pralhad Joshi, a committee is constituted to examine the issues raised by sugarcane farmers and related matters concerning the sugar sector," the Ministry said in a notification. The other members are Agriculture Commissioner, Joint Secretary (Sugar), Joint Secretary (Legal Metrology) and Director (Sugar), representing the Agriculture, Food and Consumer Affairs Ministries.

KEY MEMBERS

After meeting farmers on October 12, the government said the panel would include representatives of the Centre, the Karnataka and Maharashtra governments, farmers' organisations and sugar mills, besides subject experts and scientists.

However, the notification does not include these stakeholders as committee members. Instead, the Ministry has asked the panel to "consult relevant stakeholders, including farmers, sugar mills, State governments, concerned Ministries/Departments, research institutions and experts".

There is also no deadline for the panel to submit its report. The Chand-led panel will also review testing and reporting mechanisms and recommend measures for independent verification, accuracy and transparency.

N-E monsoon storms into South, heavy rain in offing

Vinson Kurian
Thiruvananthapuram

The 2026 North-East monsoon set in over the South Peninsula on Thursday, with the India Meteorological Department (IMD) warning of isolated very heavy rain over Tamil Nadu, Puducherry and Karaikal on Thursday and Friday, Kerala and Mahe on Thursday, and south interior Karnataka on Friday.

The onset coincided with the IMD declaring the withdrawal of the South-West monsoon, which had recorded a rainfall deficit, from the entire country. A network of troughs and cyclonic circulations over adjoining sea and land have already set the stage for a wet opening spell.

TROUGHS AND CIRCULATIONS

A cyclonic circulation over the Gulf of Mannar shifted towards south coastal Tamil Nadu. A trough extended from there across the south-west and west-central Bay of Bengal to the north-west Bay off the Odisha coast. This zone of low pressure provided a pathway for moisture-laden easterlies and north-easterlies to converge, bringing rain along the eastern seaboard from Tamil Nadu and Puducherry to Andhra Pradesh and Odisha.

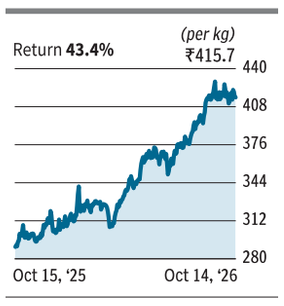

Isolated heavy rain is likely over Kerala and Mahe for six days and over Tamil Nadu, Puducherry and Karaikal for five days from Saturday. Coastal Karnataka is likely to receive heavy rain on Friday and Saturday, while south interior Karnataka faces a prolonged wet spell from Saturday. Coastal Andhra Pradesh, Yanam and Rayalaseema are on alert for Thursday and Friday, with Telangana likely to see rain on Sunday.

The Western Ghats could bear the brunt of the opening spell. The European Centre for Medium-Range Weather Forecasts flagged the Ghats straddling Tamil Nadu and Kerala for some of the heaviest rain through Friday. Udhagamandalam, Valparai, Coimbatore, Dindigul, Madurai and Sivakasi are among the areas to watch in western and southern Tamil Nadu. Tirunelveli, Panangudi and Nagercoil are also at risk.

The rain threat extends eastward to Salem, Namakkal and Kancheepuram, as well as the Cauvery delta districts. Tirupati, Visakhapatnam, Chirala and Machilipatnam in Andhra Pradesh and Brahmapur and Bhubaneswar in Odisha could also receive heavy rain. Karnataka's Chikkamagaluru, Shivamogga and Hassan are also likely to see wet weather.

Retain longs in zinc futures with stop-loss at ₹395

Akhil Nallamuthu
bl. research bureau

Zinc futures (₹415/kg) have been trading in a range for nearly two weeks.

But key support levels are still in place, keeping the bullish bias intact.

The October futures have been oscillating between ₹412 and ₹422.

Currently trading at ₹415, it is now hovering near a trendline support.

In case the contract rebounds from the current level and breaks out of ₹422, it could establish a fresh leg of uptrend, potentially taking the price to ₹435.

The next barrier above ₹435 is at ₹440.

On the other hand, if zinc futures fall from the current level, it could find support at ₹405 and ₹400.

Only a breakdown below the support at ₹400 will turn the outlook bearish. Notable support below ₹400 is at ₹385.

Overall, the bullish inclination will remain if the zinc futures trade above ₹400.

TRADE STRATEGY

We had suggested buying zinc (October) futures at ₹410 a couple of weeks ago.

Since the contract is trading above the support at ₹400, consider holding this trade. Maintain stop-loss at ₹395.

When the contract rises to ₹430, tighten the stop-loss to ₹420. Book profits at ₹435.

Water stress

Storage in India's 178 major reservoirs fell below 70 per cent of capacity this week, with levels in the southern region dropping below 45 per cent, data from the Central Water Commission (CWC) showed. The onset of the North-East monsoon, however, is expected to bring some relief to the region.

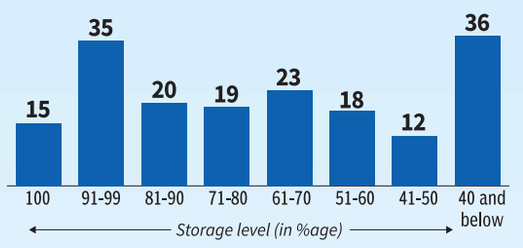

In its weekly reservoir status report, the CWC said storage stood at 126.7 billion cubic metres (BCM), or 68.6 per cent of the total capacity of 184.8 BCM. Fifteen reservoirs were full — four in Jharkhand and three each in Maharashtra and Madhya Pradesh. Aliyar reservoir in Tamil Nadu was empty.

Storage in several key reservoirs in the South, including Somasila and Kandaleru in Andhra Pradesh; Lower Bhavani, Mettur, Vaigai, Sholayar, Karayar and Manimuthar in Tamil Nadu; Periyar in Kerala; and Singur in Telangana, was low.

While storage in the southern region was below 45 per cent of capacity, levels in the western and central regions remained above 80 per cent.

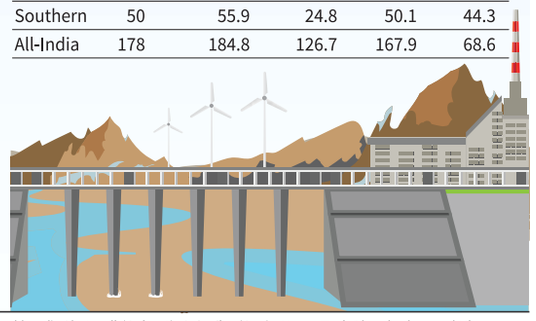

With the North-East monsoon setting in and rain expected over Tamil Nadu, Karnataka, Kerala and Odisha in the coming days, reservoir storage in the southern region could improve.

Dropping storage

Region-wise storage

Region	Number of reservoirs	Live capacity (in BCM*)	Storage (in BCM)	Storage last year (in BCM)	%age level to capacity
Northern	11	19.8	11.4	17.3	57.3
Eastern	31	21.9	17.5	18.0	79.9
Western	58	38.6	31.2	37.6	80.7
Central	28	48.6	42.0	44.9	86.4
Southern	50	55.9	24.8	50.1	44.3
All-India	178	184.8	126.7	167.9	68.6

Sapua (Odisha), Maithon, Panchet Hill, Tilaiya and Konar (Jharkhand), Shetrunji (Gujarat), Salaulim (Goa), Upper Tapi, Bhandardara and Nira Deoghar (Maharashtra), Bansagar, Bargi, Rajghat (Madhya Pradesh), Sirsi and Maudaha (Uttar Pradesh) are full. Aliyar Dam in Tamil Nadu is empty.
Worrisome States: Tamil Nadu (25.5%) and Andhra Pradesh (30%) *Billion cubic metres Source: Central Water Commission

Crystal Crop to launch early harvest sweet corn variety seeds

Subramani Ra Mancombu
Bengaluru

New Delhi-based Crystal Crop Protection Ltd (CCPL) will launch seeds of a new sweet corn variety next month, while introducing varietal seeds of seedless cucumber, cabbage, tomato and a long fresh chilli before the end of 2027.

"The sweet corn variety, Madhuram, can be harvested early and will be sweeter," said Anurag Bajpai, Business Head, VF (vegetables and flowers) Seeds of CCPL. The seeds division is headquartered in Bengaluru.

Most of the seeds that the company plans to introduce are early-harvest varieties, with a focus on disease tolerance and climate resistance, he said. "The seedless cucumber is not exactly shorn of seeds. But it will have a lesser number and will not stop consumers from enjoying it. It is an early harvest variety," said G Ramamohan, Vice-President, Technology, CCPL VF Seeds.

FLAVOUR TOMATO

In the case of cabbage, farmers can hold back from harvesting for 10-15 days if the market prices are low. "They can harvest it when the prices improve. Cabbage tends to open up on the farm if the harvest is delayed. This will help solve that issue," said Bajpai.

The tomato variety will be one with enhanced flavour and will be ready for harvest in 50-55 days.

"The last time we had a tomato with flavour was the Pusa one. Focus on transportation of tomatoes led to less flavour. We have focused on the taste component," said Purshothama MG - Biotech Lead - VF Division of CCPL.

Anurag Bajpai, Business Head, VF (vegetables and flowers) Seeds of CCPL

The long fresh chilli variety will be glossy with a higher yield, which is suitable for the northern parts, Maharashtra and Madhya Pradesh, said Ramamohan.

Bajpai said Crystal had been actively breeding sweet corn varieties that could be adaptable for Indian breeding. These varieties are becoming popular as they are of short duration and are being used for feed.

SWEET CORN

"We are working on coloured sweet corn, particularly on the health aspects. These purple coloured corns are good antioxidants and are nutritionally superior," he said.

"Our research and development (R&D) is farmer-focused, directly connected with the 1.5 lakh farmers enrolled in our *Krishi Sampark* programme," said Bajpai, adding that CCPL is among the less than 20 Indian seed companies doing R&D in seeds and flowers.

The Department of Scientific and Industrial Research has recognised its R&D as it has all the technology required, he said.

NEW SWEET PEPPER

CCPL is making efforts to come out with a new *popti* (sweet pepper) variety that is popular in Maharashtra.

"It has a distorted appearance but we are creating a hybrid with a distinct flavour, though not looking attractive," said Ramamohan.

The company is focusing on this because it gives consistent returns, and demand is regular. Crystal is working on a hybrid of ice-box watermelon, a small and compact variety, that will be easy to transport and store. It is also trying to come up with beetroot varieties.

"Demand for beetroot is increasing as it is increasingly being used for health purposes," said Bajpai.

The writer was in Bengaluru at the invitation of CCPL

Lift ban on sales of non-subsidised fertilizers in UP, Maharashtra, Bihar: FAI

Our Bureau
New Delhi

The Fertiliser Association of India (FAI) has urged Uttar Pradesh, Maharashtra and Bihar to reconsider restrictions on the sale of non-subsidised fertilizers and speciality crop nutrition products by companies that supply subsidised fertilizers.

The restrictions, introduced in Uttar Pradesh and Maharashtra and more recently in Bihar, have affected farmers' access to specialised crop nutrition products covered under the Fertiliser Control Order (FCO), 1985, FAI said. The industry body warned that the restrictions during the current rabi season could affect farmers who rely on the products to meet crop- and soil-specific nutritional requirements. In a statement on Thursday, FAI called for a balanced approach that addresses concerns over inappropriate sales practices while ensuring farmers retain access to approved agricultural inputs.

CONVENTIONAL FERTILIZERS

Agriculture had expanded beyond conventional fertilizers to a wide range of science-based crop nutrition products, including micronutrients, water-soluble and beneficial-element fertilizers, liquid and organic-based inputs, biofertilizers, biostimulants and nano-fertilizers, FAI said.

"These products complement conventional fertilizers (urea, DAP, MoP) and are particularly relevant as Indian agriculture deals with multiple nutrient deficiencies, soil-health challenges, low nutrient and water-use efficiency and changing climatic conditions," it said.

Speciality products support balanced nutrient management and can improve nutrient-use efficiency, crop productivity and produce quality. FAI said the industry had invested significantly in research and product development, field extension, technical services and farmer outreach to develop and promote improved crop nutrition solutions.

Curbs on these products could discourage further investment and innovation, slowing the adoption of technologies aimed at improving nutrient-use efficiency and promoting sustainable farming practices, it said.

QUICKLY.

Unemployment rate stable at 5% in Sept

New Delhi: The overall unemployment rate among persons aged 15 years and above remained stable at 5 per cent in September 2026, a government survey said. Unemployment rates declined year-on-year for both genders. PTI

NHAI removes curbs on FASTag at Delhi airport

New Delhi: National Highways Authority of India on Thursday said that the restrictions on vehicles with FASTag at the Delhi Airport have been removed. This follows a complaint by former NITI Aayog vice-chairman Rajiv Kumar who had pointed out that the Indira Gandhi International Airport was not allowing cars with annual FASTag to enter the departure lanes of Terminal 3. PTI

'Enlighten us' on the prohibitory orders, preserve all visuals: SC

PLEAS GALORE. Over 40 petitions were filed in connection with the Oct 10 protests, CJI ordered notice on all

Krishnadas Rajagopal
New Delhi

The Supreme Court on Thursday directed the Union government to "enlighten" it about the prohibitory orders slapped on Delhi that led to mass detentions of people, particularly journalists, lawyers and protesters, during the October 10 demonstrations to demand the resignation of Chief Election Commissioner Gyanesh Kumar.

"We want to be enlightened about the prohibitory orders issued under Section 163 BNSS (Bharatiya Nagarik Suraksha Sanhita, 2023)," Justice Joymalya Bagchi, part of the two-judge Bench headed by the Chief Justice of India Surya Kant, said.

The prohibitive orders were a "ghost" as of now, Justice Bagchi said, and the court would bring them under constitutional scrutiny after the government's response in an affidavit.

UNRELENTING. Protestors demanding the resignation of CEC Gyanesh Kumar in New Delhi, on Thursday SUSHIL KUMAR VERMA

Rajya Sabha MP John Brittas, who was present in the crowded court room, intervened to narrate how he had been "pounced upon" by security personnel while addressing the media on the streets. He had written to the Chief Justice about it, he said. The CJI asked him to file a petition.

'WHY DENOTIFICATION'

The court passed a general order to the authorities to preserve "all CCTV footage" concerning the protest, including of detention centres.

The Bench directed the Centre to explain the denotification of Jantar Mantar on a petition which said the move was meant to distance dissent away from the power centres in the national capital. But the court refused to pass any interim orders on the issue without first hearing from the authorities.

The court also issued notice to Gyanesh Kumar and the two Election Commissioners, Sukhbir Sandhu and Vivek Joshi, to respond to a petition filed by Opposition bloc leaders led by Rahul Gandhi, for a full disclosure of the Special Intensive Revision (SIR) exercise records. The petition, represented by senior advocates Kapil Sibal, AM Singhvi and advocate Prasanna S, further sought an independent probe into allegations that Kumar had acted in a unilateral and arbitrary manner during the massive exercise that has so far left about 13 crore people without the power to vote.

The court also issued notice to the Centre, the Delhi Police Commissioner, and Gandhi on a petition filed by advocate Digant Mishra and others.

They have sought *suo motu* criminal contempt action against Gandhi and other Opposition leaders for leading a "political procession" into the Supreme Court precincts on October 12. Senior advocate Gaurav Bhatia, representing the petitioner, said the attempt was to browbeat the judiciary.

"Nobody can browbeat the judiciary," Chief Justice Kant said. The court ordered the CCTV footage of the Supreme Court premises to be preserved.

The Delhi Union of Journalists, represented by senior advocate CU Singh, alleged that the devices of journalists covering the protests were seized by security personnel. Mehta denied the submission. The court directed the government to "make good the statement in an affidavit".

Senior advocate Indira Jaising, for the Network of Women in Media, India, said women journalists were detained and these incidents must be investigated by an independent committee.

It was a tumultuous scene in Court as lawyers for various parties presented over 40 petitions. The CJI ordered notices on all the petitions.

MoD signs deals worth ₹4,106 cr to buy satellite for IAF, torpedoes for Navy

A Anbarasu (Centre) Secretary and DG (Acquisition), alongside senior officials from Ministry of Defence, IAF, Navy, and other industry representatives, in New Delhi PTI

Dalip Singh
New Delhi

The Indian Air Force will have a dedicated satellite, GSAT-7C, with Ministry of Defence (MoD) on Thursday signing a contract worth ₹2,563 crore, with Bengaluru-based New Space India Ltd for secured communication capabilities.

The satellite will be designed, developed, and manufactured by the Indian Space Research Organisation (ISRO). The satellite will provide end-to-end encrypted voice, data, and video communications for the IAF and support software-defined radios (SDR), which DRDO is in the final stages of developing as it is scouting for a production partner. This will allow the IAF to seamlessly connect ground stations, radar hubs, airbases, and airborne platforms.

The move will also aide network-centric warfare, given that GSAT-7C will act as a force multiplier by enabling real-time data sharing across fighting platforms, significantly boosting the IAF's network-centric warfare capabilities. Besides that, the MoD also signed a contract with defence PSU Bharat Dynamics Ltd, Hyderabad, valued at ₹1,543 crore, for acquisition of Varunastra Heavy Weight Torpedoes (HWTs) for the Navy. Varunastra is an indigenous ship-launched anti-submarine torpedo developed by the Naval Science and Technological Laboratory. After the induction, Varunastra will replace older heavy weight torpedo from naval ships.

The contracts were signed in the presence of Additional Secretary and Director General (Acquisition), Department of Defence A Anbarasu, on Thursday.

SC holds reservation not applicable after religious conversion

Krishnadas Rajagopal
New Delhi

The Supreme Court on Thursday declared that a Hindu belonging to a Backward order cannot claim the same reservation benefits on conversion to Islam or other religions.

"A person who converts from a Hindu social order to a non-Hindu social order cannot claim affirmative action under Article 16(4) of the Constitution merely on the basis of the social backwardness associated with his pre-conversion status," the court held.

It clarified the law while dismissing a Tamil Nadu government appeal seeking confirmation of a government order issued by the State government in March 2024 to provide reservation benefits to members of Backward Classes, Most Backward Classes, De-notified communities and Scheduled Castes who embraced Islam.

'NOT IMMUTABLE'

A Bench headed by Justice Prashant Kumar Mishra held that a member of a Backward Hindu community does not automatically become a member of a notified Backward Muslim community merely by going through the act of conversion.

The court said a caste identity cannot be treated as an immutable personal attribute irrespective of a change in religious affiliation.

It said the constitutional benefits of reservation under Article 16(4) cannot be made to travel from the religion in which the relevant backwardness arose to a religion of which basic theological structure did not recognise caste as its foundational basis.

LEGAL FOUNDATION

"No statutory benefit, protection, reservation or other entitlement under Article 16 (4) of the Constitution, the enjoyment of which is predicated upon a particular Hindu social order, can be claimed or extended merely on the basis of such antecedent membership after the person has converted to Islam, Christianity or any other non-Hindu social order.

Conversion severs the legal foundation of an entitlement specifically conditioned upon membership of that Hindu social order," the court held.

STATE'S APPEAL

The State's appeal followed a Madras High Court decision rejecting the petition of a convert to Islam, Sameer Ahamed.

The Thoothukudi resident, born to Hindu parents, changed his faith to Islam in 2015.

Confirming the High Court's decision to deny him quota benefits, the court explained that the identity of a Backward class of Muslim community was historically constituted by social membership. A declaration of conversion cannot be treated as proof of such membership.

TN launches semiconductor scheme with customised sops

Our Bureau
Chennai

To position Tamil Nadu as a leading semiconductor and advanced electronics manufacturing hub in India, the new TVK-led Government of Tamil Nadu has launched the Tamil Nadu Semiconductor Ecosystem Scheme.

Chief Minister Joseph Vijay launched the scheme here on Wednesday on behalf of the Industries, Investment Promotion and Commerce Department.

The Tamil Nadu Semiconductor Ecosystem Scheme is proposed to be implemented under two categories.

Investment projects approved under the Government of India's Semicon India Programme 2.0 / India Semiconductor Mission shall be provided additional incentives and support by the Government of Tamil Nadu.

Further, the Government of Tamil Nadu shall provide eligible investment projects not covered under the Government of India's scheme, but considered important for Tamil Nadu's semiconductor ecosystem, with customised support and incentives based on their requirements.

The government had earlier also announced a "Semiconductor and Electronics Park" that would be established at Maduramangalam in Kancheepuram District.

"Covering wafer fabrication, assembly, testing, packaging, equipment and raw materials, this initiative will strengthen our domestic supply chains, attract investments and create high-value jobs. We are building the industries of tomorrow in Tamil Nadu," TN Industries Minister S. Keerthana said.

MoD approves ₹2,400 cr indigenous procurement

Our Bureau
New Delhi

The Ministry of Defence has approved a ₹2,400-crore shopping list for purchases from start-ups and MSMEs, Defence Minister Rajnath Singh said on Thursday.

Speaking at an event here, Rajnath Singh also said that defence projects worth over ₹1,500 crore have been approved to develop new technology, underscoring the Ministry's resolve to make the tri-services future war-ready. Over 8,000 to 12,000 MSMEs and more than 600 start-ups are engaged as vendors, suppliers, and sub-tier partners for Defence Public Sector Undertakings (DPSUs), ordinance factories, and the private-sector defence ecosystem.

SELF-RELIANCE

The Defence Minister said India has achieved over 90 per cent self-reliance in ammunition variants, with 159 of the 175 variants in the Indian Army's inventory being indigenous. The maturing self-reliance effort is also reflected in the increase in defence exports, which India is making to nearly 100 countries.

Defence exports have grown from ₹686 crore in 2013–14 to over ₹38,000 crore in 2025–26, the Minister flagged. Singh advocated that the nation must adapt to an era of "hybrid, high-tech and hyper warfare", as traditional military challenges intersect with digital and non-conventional threats.

FERR applicable only to rupee derivative deals

Press Trust of India
Mumbai

New requirements related to the foreign exchange reserve ratio will be applicable only to derivative contracts involving the purchase of foreign currency against the rupee, the Reserve Bank said in a detailed set of FAQs on Thursday. The RBI, on October 10, announced several regulatory measures, including the introduction of Foreign Exchange Risk Reserve (FERR), for the foreign exchange market against the backdrop of significant rupee depreciation. Since then, the domestic currency has strengthened against the US dollar. The RBI said the FERR requirement applies to specified derivative contracts undertaken by authorised dealers with users having a notional value exceeding USD 2 million equivalent. "Accordingly, a derivative contract having a notional value of USD 2 million equivalent or less undertaken by an authorised dealer with a user is not subject to the requirement," it said.

Authorised dealers should guard against structuring of derivative transactions for avoidance of provisions.

AUCTION NOTICE

It has been decided to conduct public auction of ornaments pledged under the below mentioned Gold Loan accounts, which are overdue as on 30-09-2026 in our various branches by borrowers who failed to redeem their ornaments despite being individually notified by Registered Post. The Auction will be held at our District level auction centres as shown below. Interested bidders should remit EMD of Rs.5,00,000/- in company's bank account at least one day prior to the date of auction and produce their PAN card, valid and acceptable Photo ID. The decision of the company with regard to eligibility/number of bidders, terms and conditions, EMD, finalization of bid etc. shall be final and binding. The company has the right to postpone or to change the venue in case of non participation of sufficient number of bidders or non realization of base amount or any other valid reasons.

Air India looks to reduce costs by rejigging contracts, insourcing services

SAVINGS PLAN. Under the 'PRABHAV' programme, the airline has identified various ways to tighten its belt

Rohit Vaid
New Delhi

The Tata Group-promoted Air India is looking to cut costs through contract rejigs and insourcing of services as part of efforts to strengthen its financial position.

Accordingly, the airline has invited employees to suggest cost-saving and revenue-enhancing measures under its programme 'PRABHAV', said CEO and MD Tewolde Gebremariam in a memo to employees, which was reviewed by *businessline*.

Besides the employee-led cost-saving drive, the airline's board considered a broader set of measures to enhance efficiency, drive up synergies between Air India and Air India Express, and strengthen the Group's financial position at a meeting on Thursday.

GROUP EFFORT. Air India has established a full-time cost savings team to systematically review expenditure

Under 'PRABHAV', the airline has identified areas, such as contract optimisation and renegotiation, insourcing of outsourced activities, improved utilisation of resources, efficient procurement of goods and services and waste reduction.

Notably, employees have been encouraged to suggest ways to maximise revenue through new opportunities and derive greater value from existing products, services and capabilities.

To drive the exercise, Air India has established a full-time, multidisciplinary, cross-functional cost savings team to systematically review expenditure and identify savings across functions.

As per Gebremariam, cost consciousness has to become a part of the airline's culture, alongside operational excellence, with a focus on frugality, accountability and thoughtful decision-making.

"We should continually challenge ourselves to ask — is this expenditure necessary? Is there a more efficient way to achieve the same outcome?" he said.

STAFF POLICY

Further, sources earlier told *businessline* that Air India's board was expected to review its staff travel policy and cost-saving proposals.

In the memo, Gebremariam said that the airline had revised its SoD approval matrix, with all approvals routed through the head of the department, the CXO and the CEO, effective October 1.

Previously, Air India had revised staff travel arrangements from April 1, 2025, requiring employees, including senior management, to travel in economy. Upgrades to premium economy or business class were permitted only if seats remained unsold 50 minutes before departure, prioritising availability for paying passengers.

The latest measures come amid a broader push for cost savings and closer integration across the Air India Group.

Last week, sources told *businessline* that the airline's board would examine a proposal to integrate selected departments of Air India and Air India Express through common teams to reduce duplication, improve resource utilisation and achieve economies of scale.

AI cuts Europe flights in schedule change

Aneesh Phadnis
Mumbai

Air India is cutting flights to Europe in a network rejig that also adds frequencies to Australia and Japan in its winter schedule.

The network changes come amid rising jet fuel prices and the continued closure of Pakistan's airspace, which has raised costs for the airline.

In its winter schedule, Air India is suspending its nonstop flights from Delhi to Copenhagen and Vienna. Frequencies to Birmingham, London (Gatwick) and San Francisco are being reduced as part of a network overhaul. Vienna will continue as a technical stop for select US/Canada flights.

ADDED SERVICES

Meanwhile, the airline will enhance connectivity to Australia. Frequency on the Delhi-Sydney route will increase from seven to 11 flights per week. This will add around 170,000 extra seats annually to the Sydney market, giving passengers more choice and strengthening connections between Australia, India, the UK and Europe.

On Thursday, Air India announced flights between Delhi and Osaka. The four-weekly service will begin next February, further increasing connectivity between India and Japan, the airline said. Osaka will be Air India's second destination in Japan after Tokyo (Haneda), which is served from Delhi and Mumbai.

An executive said the airline is reviewing its network amid a tough operating environment. "We are looking at routes on a case by case basis. Decisions on continuing a route or withdrawing service are being taken in view of high aviation turbine fuel prices and continued airspace closures," he added.

ChatGPT usage doubles in India over past year; OpenAI expands Hindi voice capabilities

Sanjana B
Bengaluru

OpenAI has seen ChatGPT usage in India double over the past year as the company steps up efforts to expand access to AI through localised voice capabilities, affordable subscriptions and tools for developers and enterprises.

India is among OpenAI's largest developer markets, with adoption spanning education, coding, communication and enterprise applications.

Addressing the media ahead of its DevDay India in Bengaluru, Vijaye Raji, Chief Technology Officer, Applications at OpenAI, said the company is looking to make its products more accessible to India's multilingual, mobile-first user base, including through improvements to voice interactions.

Vijaye Raji, Chief Technology Officer, Applications at OpenAI

"ChatGPT Go is primarily targeted at India because we want to reduce the cost and make sure that people can access frontier models. We want to make sure that people can access intelligence. It's not just enough that we build all these capable products, but we want to make it usable," Raji said.

VOICE TECH UPGRADE

OpenAI is rolling out GPT-Live-1.1, an upgrade to its voice technology, with improved pronunciation, better handling of multilingual and mixed-language speech, and more natural conversational transitions. The update also introduces 13 new voices across seven languages, including two Hindi voices Neer and Leher.

"India is an audio-first market. That is a learning that we're taking back to the product team," Raji said.

Pricing is another part of the strategy. OpenAI introduced its ChatGPT Go subscription tier in India to lower the cost of accessing its models and features, before expanding the offering to other markets. "We launched ads in India, and so will invest in the country again. This is a great way for our advertisers in the Indian market to reach people with the relevant context. Looking ahead, we see a lot of growth and adoption from India, which means we will invest quite a bit," he said.

'Constructive dialogues are ongoing between BARC, IBDF and the government for television ratings'

Vallari Sanzgiri
Mahesh Ravidas Nayak
Mumbai

The Broadcast Audience Research Council (BARC) remains optimistic of resuming its television ratings systems, Gaurav Banerjee, Chairman of BARC and the CII National Council on Media and Entertainment, as well as the CEO and MD, Sony Pictures Networks India, told *businessline*. Speaking at the CII Big Picture Summit, Banerjee acknowledged that the television ecosystem is going through a difficult time and needs a currency.

"The absence of that currency is a very large problem for all of us. Also for advertisers who have rights to know exactly how their campaigns are faring. Those are challenges that we are working very hard to find solutions to," he said.

However, asked whether there is a change in advertising trends because of this restriction, he dismissed any big trends so early. Stating that all advertisers know the value of television, Banerjee said BARC is making enormous progress in making the rating infrastructure modern, contemporary and robust. Looking at the industry at large, Banerjee stressed focus on IP building and talent discovery as clear priorities across television, digital, gaming and animation. "From a talent development perspective, the industry needs to be going deeper on talent discovery and creative and talent development." Banerjee also stressed the significance of India as a digital market where his own company is has a "fast growing play."

Gaurav Banerjee, CEO and MD, Sony Pictures Network

Asked where players can make a good RoI, he said, "Across all businesses, provided you have the right strategy. My advice to investors is to begin by having a sharp differentiated strategy."

"We need a policy framework that is open, that is certainly conducive to building an environment such as this," he said.

Novo India slashes by up to 35% prices of hormone drug Norditropin FlexPro

Our Bureau
Mumbai

Novo India has dropped prices by up to 35 per cent on its growth hormone therapy Norditropin FlexPro for adults and children.

The India-specific price, effective from Thursday, would cover two dose strengths, the company said — with the 10 mg device price being slashed 33 per cent from ₹16,836 to ₹11,300 while the 15 mg device price was cut by 35 per cent, from ₹25,254 to ₹16,450. This would result in savings of ₹5,539 and ₹8,802 per pen respectively, it added.

Novo said the move was aimed at expanding access and affordability to essential therapies for people living with growth hormone deficiency and related conditions across India.

VIAL VS PEN

Industry insiders pointed out that less expensive generic versions of the drug were available in the market, from Sun Pharma, Serum Institute and Reliance Lifesciences, however, in vial formats.

Novo's is a pen, more convenient for children, the industry representative said.

Growth hormone deficiency occurs when the pituitary gland does not produce enough growth hormone to support normal growth. The deficiency may be present from birth or may develop later, with causes including genetic or structural abnormalities and damage to the pituitary region; in many children, no specific cause is identified, the company explained. Norditropin FlexPro is a pre-filled pen designed for children requiring long-term therapy, Novo said, adding that the device is designed to support ease of use and adherence for youngsters and their caregivers managing a long-term treatment journey.
