‘Needle hunting’ starts pricking stock investors

MARKET REALITY. Winners still exist, but the odds changed, with only 26% beating the Nifty 500 TRI in the last one year period

Kumar Shankar Roy
bl. research bureau

Index fund pioneer John Bogle's famous line about buying the haystack, instead of hunting for the needle, feels like a cliché in bull markets.

But in the last 12 months or so, stock investors searching for the needle felt the prick as the odds flipped in Dalal Street. Sure the benchmark Nifty 500 TRI rose a respectable 12.57 per cent. Yet, only 26 per cent of stocks beat it, with just 39 per cent churning out a positive gain, and the average stock return slipping into negative territory for the first time in at least half a decade.

A study of all NSE-listed stocks in a fixed universe of 1,494 names (those with five-year trading history) across 5-yearly blocks shows how investing in stocks has become unforgiving in recent times (see chart). Contrast this to the 2021 period when the new-found post-Covid enthusiasm in equity

market made stock picking look like a hobby between lunch and a broking app login. Seven in ten stocks beat the index in that period. And a larger share, over eight in ten stocks, clocked positive returns. Those were times an investor could be directionally right without being particularly precise.

Past forward to the twelve months ended February 13, 2026 and the under-performance has gone main-

stream. Excitement got expensive as investors went down the market capitalisation ladder. Large-caps (top 100 stocks) still gave a fight, with 60 per cent scrips, including the likes of RIL, Bharti Airtel and SBI, beating the Nifty 500 TRI. The hit rate of mid-caps (the next 150) has fallen to 50 per cent now from 68 per cent in the February 2023-24 period, but still was respectable with stocks like Marico,

HPCL, BHEL & Aditya Birla Capital outperforming. But small-caps (251st stock and beyond) turned into a veritable graveyard, with only 20.5 per cent, such as Pfizer, Timken and IIFL Finance, beating the benchmark.

Multi-baggers have thinned out sharply now, with far fewer stocks delivering standout gains. Most stocks now cluster in modest-return or loss buckets, showing a market domin-

ated by laggards (see table).

The gap between how the index behaves and how the typical stock behaves is what makes this an unusually tough market.

It is no longer the one-way 2021 market of fair valuations, easy liquidity and euphoric sentiment. Today brings richer valuations, tighter global liquidity, FPI outflows, a weaker rupee and fresh AI anxiety for sectors like tech services.

SHRINKING BREADTH

In February 2021 to February 2022, 69 per cent of stocks beat the Nifty 500 TRI. That is the kind of year that builds faith in stock tips, momentum screens, and the notion that investing is easy.

Many investors remember it as a time when simply investing felt like a skill. Then, the hit rate started dwindling. Nifty 500 TRI benchmark beats dropped to 43 per cent, then rose to 63 per cent, then slipped to 38 per cent, and finally plunged to just 26 per cent in the latest twelve-month period.

Next, look at the profit and loss split. In the year to February 2022, 82 per cent of stocks were positive. In the year to February 2023, that rate surged to 90 per cent.

Then, it started slipping. In the year to February 2026, only 39 per cent were in the black. This is how investors get emotionally whiplashed. The index is up, so the market looks fine. But a stock portfolio often feels like it belongs in Russia, among the worst performing markets globally.

The sector split tells you why stock picking now feels challenging. In the year to Feb 2026, several large sectors (by stock count) saw single-digit or low teens hit rates for beating the index. IT-software had only 11 per cent of stocks outperforming Nifty 500 TRI, as none of the top-10 like TCS, Infosys and HCL Tech beat the index.

Chemicals were near 12 per cent, with the likes of Linde India, Navin Fluoro and Atul holding the fort. Textiles were less than 10

per cent. Meanwhile, pockets like banks (70.6 per cent), finance (37.5 per cent) and auto ancillaries (54.4 per cent) had much higher benchmark beating rates. Steel was over 45 per cent, courtesy JSW, Tata, Jindal and SAIL.

KNOW YOUR EDGE

Each year throws up a few big stock winners and some deep losers. But when market breadth shrinks, those winners do not rescue most portfolios. They merely decorate social media.

Former PIMCO CEO Mohamed El Erian, in an interview to this paper, had offered retail traders a blunt test, borrowing from 'bond king' Bill Gross. If you cannot explain your edge over the crowd, you are not buying a stock. You are then buying a lottery ticket, El Erian had said.

That is when Bogle's haystack logic stops sounding boring. Preferring the index over an individual stock, where you have not done your checks, is not laziness. It is arithmetic.

INVESTMENT. FOCUS

Sun Pharma: Accumulate on dips

Sai Prabhakar Yadavalli
bl. research bureau

Sun Pharma's revenue share from high-value innovative medicines is rising steadily and should continue with launches underway.

In India and other markets, Sun's branded generics business continues to outpace industry growth with further support from the launch of generic semaglutide in India.

The stock trades at 31 times its one-year forward earnings, a 9-10 per cent premium to the industry reflecting the rising share of innovative products in the revenue mix.

Investors with a long-term horizon may consider accumulating the stock, given its improving business mix and defensive characteristics within a broader portfolio.

Bearish sentiments, limited listing gains drag primary issuances in Jan

Suresh P Iyengar
Mumbai

Bearish sentiment in the secondary market has weighed heavily on primary issuances, with just three companies raising ₹4,765 crore in January down from 10 garnering ₹21,858 crore in December.

The primary market rally had already begun tapering in the December quarter. Excluding the ₹10,603-crore IPO of ICICI Prudential Asset Management Company and the ₹5,421-crore issue of Meesho, fund-raise in December would have been a modest ₹5,834 crore.

In November, nine companies raised ₹23,617 crore, led by large IPOs such as PhysicsWallah (₹3,480 crore), PineLabs (₹3,900 crore) and Billion-brains Garage Ventures (Groww) (₹6,632 crore). October was even stronger, with eight companies raising ₹37,459 crore, boosted by Tata Capital (₹15,511 crore), LG Electronics (₹11,607 crore) and Canara HSBC Life Insurance (₹2,517 crore).

RETAIL CONFIDENCE

Apart from bearish market sentiment, the underwhelming post-listing performance of recent IPOs and the absence of bumper listing gains have dampened investor enthusiasm.

Uday Patil, Executive Director, PL Capital Markets, said the IPO buoy-

ancy is closely tied to broader market performance. Subdued post-listing returns have made investors cautious, denting retail confidence.

Many mid- and small-cap IPOs — traditionally strong retail draws — have seen sharp corrections, eroding risk appetite.

Sunil Nyati, MD, Swastika Investmart, noted that after record a fund-raise in 2024-25, mid- and small-cap stocks have undergone a correction, shaking investor confidence.

In such conditions, investors prefer deploying capital in beaten-down listed stocks rather than committing fresh funds to new issues. As a result, several firms are deferring listings until stability returns and valuations improve.

VALUATION CONCERNS

Sonal Minhas, Founder, Prescient Capital, said the median and average trailing twelve-month (TTM) P/E of companies listed since January 2025 stand at 30.2 times and 42.5 times, respectively — levels many companies have struggled to justify post listing.

FPI SELLING

Despite healthy corporate earnings, sustained selling by foreign portfolio investors — driven by India's relatively low AI exposure, elevated valuations and better growth prospects in other emerging markets — has added to macro pessimism and further pressured the primary market.

HIGHWAY AIRSTRIP

RBI clears Bain Capital's 41.66% stake acquisition in Manappuram Finance; open offer for 26% triggered

Our Bureau
Mumbai

Kerala-based Manappuram Finance Ltd (MFL) on Saturday said it has received the Reserve Bank of India's final approval for Bain Capital's proposed acquisition of up to 41.66 per cent of its paid-up equity capital/convertible instruments.

With the clearance, Bain Capital will be classified as a promoter and will jointly control the gold financier along with the existing pro-

motors. The board will be re-constituted to include Bain nominees, in line with the transaction agreements, the company said.

The approval relates to definitive agreements signed on March 20, 2025, under which Bain Capital —

through affiliates BC Asia Investments XXV Limited and BC Asia Investments XIV — committed to invest about ₹4,385 crore. The investment will secure an 18 per cent stake on a fully diluted basis via preferential allotment of equity shares and warrants at ₹236 per share.

The deal also triggers a mandatory open offer to acquire an additional 26 per cent stake from public shareholders at ₹236 per share.

VP Nandakumar, MD and CEO, Manappuram Finance,

said the RBI nod marks a key milestone and underscores the company's governance strength and business model.

With Bain as a joint controlling shareholder, the company aims to accelerate growth in core segments, strengthen technology and risk management capabilities, and build a professionally managed, future-ready financial services platform.

The strategic investment is also expected to support expansion of MFL's branch network across India.

₹10,000 cr Startup India Fund of Funds 2.0 gets Cabinet green-light

Our Bureau
New Delhi

The Union Cabinet on Friday approved the Startup India Fund of Funds 2.0 with a corpus of ₹10,000 crore to mobilise venture capital for the country's start-up ecosystem.

The second phase of the Fund of Funds for Startups (FoF 2.0) will back innovation in non-metro regions and reduce early-stage failures caused by funding gaps, the government said on Saturday.

The Cabinet Committee on Economic Affairs also cleared 8 infrastructure projects with an investment of over ₹1.60 lakh crore.

According to the government, the fund will adopt a targeted, segmented approach to support high-tech breakthroughs that require patient, long-term capital. It will also act as a safety net for innovative ideas, helping curb early-stage failures due to lack of funding.

The fund aims to channel investments beyond major metros to ensure innovation spreads nationwide. It will direct more capital to priority sectors critical for self-reliance and economic growth, while strengthening domestic venture capital base — particularly smaller funds.

Since the launch of Startup India in 2016, the ecosystem has expanded from fewer than 500 start-ups to over 2 lakh DPIIT-recognised start-ups, with 2025 recording the highest-ever annual registrations.

The new fund will have a targeted, segmented funding approach to support breakthroughs in high-tech areas that require patient, long-term capital

FoF 2.0 builds on the performance of Fund of Funds for Startups (FFS 1.0), launched in 2016 to bridge funding gaps and catalyse the domestic VC market.

Under FFS 1.0, the entire ₹10,000-crore corpus was committed to 145 Alternative Investment Funds (AIFs), which have invested over ₹25,500 crore in more than 1,370 startups across sectors.

INFRA PUSH

Among infrastructure approvals, the Cabinet cleared an 11.56-km extension of the Noida Metro Rail Project from Sector 142 to Botanical Garden, with eight elevated stations. The project, costing over ₹2,200 crore, is slated for completion in four years.

The Cabinet approved three railway multitasking projects spanning 12 districts in Delhi, Haryana, Maharashtra and Karnataka. The projects will add about 389 km to the Indian Railways network at an estimated cost of ₹18,509 crore and are targeted for completion by 2030-31.

Dhuraivel Gunasekaran
bl. research bureau

While Indian equity markets swung between peaks and troughs over the past two years, gold and silver glittered and scaled record highs. And one mutual fund category turned this cross-asset divergence to its advantage: Multi-Asset Allocation Funds (MAAFs). By spreading investments across asset classes, MAAF delivered a compelling 16 per cent CAGR during this period, outperforming 8-12 per cent returns by hybrid peers, market-capitalisation-oriented equity funds and broader benchmarks. The MAAF category also attracted nearly ₹93,000 crore in net inflows over two years and now holds ₹1.75 lakh crore in AUM, making it one of the most sought-after segments in recent times.

MAAFs are hybrid mutual funds investing in at least three asset classes — equities, debt and commodities such as gold and silver, with a minimum 10 per cent allocation to each. Currently, 44 schemes operate under this diversification mandate, though they follow widely differing asset-allocation strategies and risk profiles.

This raises two critical questions for investors. First, if a well-balanced, proven portfolio has traditionally been constructed by combining equity, hybrid, debt and commodity funds over time, where does a predefined, all-in-one MAAF fit? Second, with 44 schemes offering vastly different asset mixes and risk profiles, which MAAF truly aligns with your financial goals? Choosing the wrong one could result in unintended risk or missed return opportunities.

In this article, we examine their portfolio strategies, performance track records and assess suitability for different investors.

CLASSIFICATION

Beyond traditional actively-managed MAAF, a newer wave of Fund of Funds (FoFs) has entered the space following regulatory changes in February 2025. Based on their structure and investment approach, these funds broadly fall into three categories.

One: Active Multi-Asset Allocation Funds, which rely on dynamic, model and manager-driven allocation.

Two: Multi-Asset Passive FoFs, which invest in a basket of passive index funds and ETFs across asset classes.

Three: Multi-Asset Omni FoFs, which combine passive and active fund structures within a single umbrella.

ACTIVE MAAF'S

Currently, 33 funds in this category aim to deliver diversification across asset classes including equities, arbitrage strategies, debt, gold, silver, overseas equities, and REITs and InvITs. Of these schemes, six have track records exceeding seven years.

Asset allocation in these funds is largely dynamic and tactical, positioning portfolios in response to shifting market conditions, macroeconomic signals and emerging opportunities. The objective is to optimise risk-adjusted returns. Most schemes blend quantitative inputs such as valuation metrics and economic indicators with active fund manager judgment to fine-tune allocation decisions.

These active MAAF's can be further classified based on their allocation to long equity: Funds with 65 per cent and above in equities, funds with less than 65 per cent in equities and those with nil long equity exposure.

Among funds allocating 65 per cent or more to equities, notable track records are seen in offerings from ICICI Prudential MF, HDFC MF and quant MF. In the below 65 per cent segment, established names include SBI MF and Nippon India MF. Edelweiss MAAF is the only fund in the category with no long equity exposure.

While the common objective across the category is to balance risk and returns, investment approaches vary significantly. Here, we explain the major differences in asset mix that investors need to watch out for.

Nil equity allocation

Most schemes maintain exposure to unhedged equities, with one notable exception — Edelweiss Multi Asset Allocation Fund. Structured as a debt-oriented strategy, the fund primarily relies on arbitrage positions across equities, gold and silver, supplemented by accrual income from debt instruments. Consequently, its return profile resembles that of debt and arbitrage funds. Over the past year, it delivered around 7 per cent, broadly in line with the arbitrage and short-duration fund categories, which generated average returns of about 6 per cent and 6.4 per cent, respectively.

Higher equity allocation

Currently, 21 MAAF's invest at least 65 per cent in equities. Most actively deploy arbitrage strategies. However, funds that maintained higher unhedged equity allocations over the past year include Baroda BNP Paribas, Groww and Kotak MAAF, which held average exposures between 68 per cent and 70 per cent.

Mid- and small-cap heavy portfolios

Some funds maintain a significant tilt toward mid- and small-cap stocks. Over the past year, LIC MF (30 per cent), Bandhan (26 per cent) and HSBC MAAF (26 per cent) had the highest exposure to this segment, compared with the category average of 15 per cent. While this positioning can enhance return potential, it also raises volatility and downside risk. Conversely, funds such as HDFC, Sundaram and Shriram MAAF maintained higher large-cap allocations, averaging 55-57 per cent compared with the category average of 39 per cent.

WISE WORDS.

“ You should have a strategic asset allocation mix that assumes that you don't know what the future is going to hold.

RAY DALIO
Hedge fund legend

MARKET ACTION.

SENSEX

NIFTY

Balance beats bravado when cycles turn

ALL WEATHER. We address two key questions — Where do all-in-one Multi-Asset Allocation Funds fit in diversified portfolios, and which one suits your goals and risk profile?

Exposure to gold and silver derivatives

While most multi-asset funds gain exposure to gold and silver through ETFs or physical holdings, some schemes, for instance, from Edelweiss, ICICI Prudential and WhiteOak Capital, also use commodity derivatives. Derivatives allow managers to take exposure with lower up-front capital and greater tactical flexibility. However, such instruments are meant to capture arbitrage opportunities between spot and futures prices and do not replicate the capital appreciation characteristics of direct holdings.

Exposure to industrial commodities

Tata Multi Asset Opportunities Fund differentiates itself by gaining exposure not only to gold, but also to industrial commodities such as crude oil, copper, zinc and aluminium through exchange-traded commodity derivatives, typically holding up to 5 per cent in these exposures. ICICI Prudential Multi-Asset Fund has also taken small positions in base metal derivatives. These allocations provide indirect access to industrial commodities that are otherwise difficult to hold directly.

Overseas allocation

About seven funds have allocated to overseas equities over the past year. As of January 2026, DSP MAAF (15 per cent), Invesco India MAAF (14 per cent), Bandhan MAAF (8 per cent) and Nippon India MAAF (6 per cent) had notable exposure. While Invesco India primarily allocates to US equities, DSP and Nippon India offer broader global diversification.

Allocation breadth

A few MAAF's from WhiteOak Capital, ICICI Pru and Aditya Birla SL invested across seven asset classes in at least 10 of the past 12 months. These

include domestic equities, arbitrage, debt, gold, silver, overseas equities, and REITs and InvITs.

Silver versus gold

Over the past six months (July 2025 to January 2026), aggregate gold allocation by this category rose from ₹7,700 crore to ₹20,000 crore, while silver exposure declined from ₹6,200 crore to ₹5,500 crore. Funds like Kotak and SBI MAAF's currently allocate more to silver than gold. Unlike gold, which functions largely as a safe-haven asset, silver behaves more like an industrial commodity, adding both volatility and return potential.

PASSIVE FoF MAAF'S

India's FoF landscape has entered a more structured phase following SEBI's standardised framework issued in February 2025. Within this revamped structure, two emerging segments are Multi-Asset Passive FoFs and Multi-Asset Omni FoFs.

A Multi-Asset Passive FoF invests exclusively in passive underlying schemes such as index funds and ETFs across asset classes. These schemes are required to allocate to equity, debt and commodity funds, with a minimum 10 per cent in each. Portfolio construction is largely rule-based and benchmark-aligned, leaving limited scope for fund manager discretion. Currently, five such funds from Aditya Birla Sun Life, Motilal Oswal, Bandhan and Zerodha together manage about ₹392 crore in assets, with regular plan expense ratios ranging between 0.5 per cent and 0.6 per cent.

In contrast, a Multi-Asset Omni FoF combines active and passive underlying schemes within a single structure. This allows AMC's to blend alpha-seeking active strategies in select asset classes with passive exposure. While the Omni

approach can enhance risk-adjusted returns if active calls succeed, it also introduces fund-selection risk and higher layered costs. Currently, six Omni FoFs manage around ₹5,364 crore, with regular plan expense ratios ranging between 1.1 per cent and 1.5 per cent.

Suitability: Investors should examine several aspects before investing. First, FoFs levy their own expense ratio in addition to the costs of underlying schemes. Second, although the framework prescribes minimum allocation thresholds, actual asset weights can vary significantly across schemes. Third, passive FoFs may experience tracking differences due to ETF spreads, while Omni FoFs can face portfolio overlap across active holdings.

The regulatory overhaul has also led to scheme rationalisation. AMC's were required to re-categorise existing FoFs under the new structure by August 31, 2025, which means historical performance may not fully reflect the current mandate. Recently, fresh inflows into ICICI Prudential Passive Multi-Asset FoF were suspended by the fund house. Since its launch, the scheme has maintained exposure to diversified overseas equity assets. However, under the SEBI's revised FoF framework, allocations must now be country-specific, region-specific, or theme/sector-based. To align with the new regulations, the AMC has opted for grandfathering. As a result, the scheme will no longer accept fresh investments and will either be merged or wound up within three years — by January 2029.

In terms of suitability, Multi-Asset Passive FoFs are appropriate for cost-conscious investors seeking disciplined asset allocation through a simple structure. Multi-Asset Omni FoFs may suit investors comfortable with active risk and confident in an AMC's ability to select outperforming funds.

What should you do?

Recent outperformance of MAAF's has been largely driven by allocations to gold and silver.

To evaluate their core capability, it is useful to examine performance before the precious metals rally. Between June 2018 and June 2024, three-year rolling return data show that MAAF's with over 65 per cent equity exposure delivered an average CAGR of 18 per cent, broadly matching the 17.9 per cent return of the Nifty 50 Total Return Index. Category leaders such as quant Multi Asset Fund and ICICI Prudential Multi Asset Fund delivered about 30 per cent and 21 per cent, respectively.

MAAF's have also shown resilience during downturns. In the Covid-led crash of 2020, these funds declined by an average 26 per cent, compared with a 38 per cent fall in the Nifty 50 TRI. However, balanced advantage funds (BAFs) managed to contain well with -23 per cent.

Likewise, during the correction between September 2024 and March 2025, they fell around 8 per cent versus a 15 per cent decline in the index and a 10 per cent fall in BAFs, underscoring their cushioning ability.

From a taxation perspective, MAAF's, including active and passive FoFs, fall into two buckets.

Active MAAF's with 65 per cent or more in domestic equities qualify for equity taxation — 20 per cent short-term capital gains, if redeemed within 12 months, and 12.5 per cent long-term capital gains on gains exceeding ₹1.25 lakh annually, if held beyond 12 months.

Those with less than 65 per cent equity exposure, along with FoFs, are taxed as other-than-specified mutual fund schemes (i.e., those investing less than 65 per cent in debt). Short-term gains (within 24 months) are taxed at slab rates, while long-term gains (after 24 months) are taxed at 12.5 per cent without indexation.

ENSURING PORTFOLIO-FIT

For investors who lack the time or discipline to rebalance across asset classes, a MAAF can serve as a convenient core holding, offering built-in diversification and tactical allocation. For seasoned investors, who are already managing a structured mix of equity, debt and commodities, adding a MAAF may create overlap and reduce control over asset weights.

However, a wrong choice can distort your portfolio's risk profile — either by increasing unintended equity exposure or diluting growth potential. If simplicity and disciplined rebalancing are priorities, a carefully-chosen MAAF can work well. If customisation and precision matter more, a self-constructed portfolio may be preferable only if you are sophisticated enough to manage multiple asset classes.

Investors should look beyond the category label and examine each fund's long-term equity allocation range, commodity strategy and consistency across market cycles. AMC literature provides critical insights into these aspects.

Investors seeking equity-like returns and comfort with drawdowns can consider 65+ per cent equity MAAF's, such as those offered by ICICI Prudential Multi-Asset Fund, quant Multi Asset Allocation Fund and HDFC Multi-Asset Allocation Fund. Those looking for better downside cushioning with lower equity exposure may prefer sub-65 per cent equity options like the Nippon India Multi Asset Allocation Fund, SBI Multi Asset Allocation Fund, and UTI Multi Asset Allocation Fund.

Investors seeking debt-like stability with nil equity participation can consider the Edelweiss Multi Asset Allocation Fund.

How multi-asset allocation funds differ in asset mix

Mutual fund name	1 year return (%)^	As per the latest portfolio (as of Jan 2026) (in %)								As per the last one year portfolio
		Net equity	Arbitrage	Debt	Gold*	Silver*	Industrial metals	Overseas equities	REITs & InvITs	Differentiating factor

MONEY WISE.

Kumar Shankar Roy
bl. research bureau

Two colleagues step out after lunch, trying to decode why inflation got a fresh measuring tape.

Sanket: Bro, why is everyone suddenly talking about a new inflation base year? What's new about inflation?

Suman: Because the government has rebuilt Consumer Price Index (CPI) using a newer shopping basket and then reset the baseline year from 2012 to 2024.

Sanket: CPI sounds like exam syllabus. What is it, simply?

Suman: Think of CPI as a monthly household bill scorecard. It tracks what a fixed basket of common goods and services costs. Also, it counts what people actually pay for. Free handouts do not enter this bill. Inflation is simply how much this CPI number has risen compared with the same month last year.

Sanket: And this base year thing means what?

Suman: Base year is the starting ruler set to 100. In CPI 2024, the average 2024 price level is 100, and later months show how far prices moved from that. For instance, CPI general (rural and urban combined) is 104.46 for January 2026 vs 101.67 in January 2025, implying a 2.75 per cent inflation.

Sanket: Why touch the base at all?

Suman: Because spending habits changed since 2012. More services, more digital buys, different priorities. An old basket merely describes a world that moved on.

Sanket: What did they use to update the basket?

Suman: They used the latest Household Consumption Expenditure Survey (HCES) for 2023-24, which captures what households spend on across rural and urban India.

Sanket: Why did they pick 2024 as the base year?

Suman: To keep the weights and base prices close in time. The weights come from the 2023-24 spending survey, and the base prices were collected through 2024.

Sanket: Did they just change the base year or also expand what they track?

Suman: They expanded it. CPI 2024 covers 1,465 rural markets and 1,395 urban markets across 434 towns. The basket is bigger too, with more goods and services. And it adds 12 online markets in 12 big cities to capture e-commerce prices.

Sanket: With so many markets, how do they turn all those prices into one CPI number?

Suman: Prices are collected from rural and urban markets each month, and from online markets weekly. These prices are converted into indices for items and higher groups using standard index formulas, and then combined using spending weights.

Rural and urban indices are compiled separately first, then merged into the combined CPI using rural and urban weights. At the item level, they use the Jevons index, and at higher levels they use a Young or Modified Laspeyres method.

Sanket: What else is new?

Suman: Price collection has moved from paper to tablets through Computer Assisted Personal Interviewing (CAPI). They also use online sources for some services like airfares and OTT subscriptions, and official administrative data for standard prices like rail fares, postal charges, and fuel.

Sanket: Who actually collects these prices?

Suman: National Sample Survey (NSS) field teams collect the market prices for the Ministry of Statistics and Programme Implementation (MoSPI).

Sanket: Give me one example of a real change people will recognise.

Suman: Rural house rent is included for the first time.

Sanket: Ok, now the real question. As a retail investor, what changes for me?

Suman: Three things mainly. How you read inflation, how you compute real returns, and how you do long-range planning like retirement.

Sanket: Hold on. What is real return?

Suman: Real return is what you earn after inflation. FD gives you a number. Inflation takes a cut. What's left is real return. So, if your FD gives 7 per cent nominal interest and

CPI new series & your retirement math

inflation is 3 per cent, your real return is 4 per cent (7 minus 3). CPI is the inflation number many people use for this subtraction.

Sanket: That sounds like a small technicality!

Suman: No, it can be bigger than it looks. If your retirement planning spreadsheet assumes a certain inflation rate, even a small shift changes the required retirement corpus, the equity allocation comfort, and the withdrawal path after retirement.

Sanket: How should I use CPI for retirement planning then?

Suman: Use CPI as a general living cost guide, not as your personal inflation. Many households face higher inflation in health and education than the headline CPI. So keep separate assumptions for health and education if those are major expenses.

Sanket: You said the basket weights changed. What is the direction of change in simple terms?

Suman: Food has become less dominant in the CPI basket than before. Housing and several service heavy categories have become more important, like transport, health, communication, and personal services.

Sanket: Why should an investor care about that shift?

Suman: Because it affects what the headline inflation number reacts to. If food weight is lower, a food price spike has slightly less pull on overall CPI than earlier. If services have more weight, changes in service prices can matter more for the headline.

Sanket: I hope CPI is not always about dal and milk!

Suman: January 2026 did that nicely. The hottest price jumps were led by silver jewellery at 159.67 per cent, then tomato at 64.80 per cent, coconut copra at 47.18 per cent, gold diamond and platinum jewellery at 46.77 per cent, and coconut oil at 40.44 per cent. Big spikes, but each has a small CPI weight.

Sanket: So, does this basket change automatically make inflation look lower?

Suman: No. It only changes what the index is more sensitive to. The direction still depends on how prices move across food, housing, services, fuel and the rest.

Sanket: What about interest rates and bond yields? Does the new CPI affect them?

Suman: Indirectly. Markets and policy watch inflation prints. If the new CPI measures inflation a bit differently, expectations about the inflation path can shift. That can influence bond yields and debt fund returns over time. Not mechanically on day 1, but through the way inflation is read.

Sanket: What about products that say are inflation-linked?

Suman: If a contract ties payouts or yearly hikes to CPI, a

base change can matter. When the base year changes, the government provides a conversion factor to carry old CPI values into the new series so the contract can continue without a break. The impact then depends on which CPI version the contract names and how that conversion is applied.

Sanket: How about taxes? Anything changes for tax planning?

Suman: Your tax does not change just because CPI base changed. Slabs and rates do not auto-update with CPI in a mechanical way for individuals. CPI is more of a cost of living benchmark than a direct tax trigger.

Sanket: Any other practical takeaways?

Suman: Two. First, update your spreadsheets to use CPI 2024 for current inflation tracking. Second, stop using a single inflation number for all goals. Use ranges, and stress test your plan for higher inflation scenarios, especially for health costs.

Sanket: So, the bottom line is?

Suman: CPI 2024 is a better mirror of today's spending and today's price world. For you, it changes the measuring tape, not the actual prices or your interest rate. But it can change how you judge real returns and how safely you plan long-term goals.

Sanket: Thanks for the explanations. Now let's get back to work before the boss rebases our day to 100!

Ref. No. NSSK/Expansion/779/2025-26Date: 13-02-2026

SHORT TERM TENDER NOTICE FOR DESIGN, ENGINEERING, PROCUREMENT, MANUFACTURING, FABRICATION, TESTING & INSPECTION, SUPPLY, ERECTION AND COMMISSIONING, TRIAL TESTING OF VARIOUS PACKAGES & STEEL MATERIALS FOR THE PROJECT COMPLETION OF CO-GEN PLANT WITH 1 X 220 TPH TRAVELLING GRATE STEAM GENERATOR OF OUR FACTORY
Sealed tenders are invited from bonafide / O.E.M. Manufacturers, who are having GST registration with NCDC/NFCSEI, Approved Vendors/Traders – under Two Stage tender (1st Stage – Technical Bid, 1Ind Stage –Commercial/Price) Bid along with (EMD Envelope) System in the prescribed standard tender documents for the following packages on turnkey basis for design, manufacture, supply, erection & commissioning:

SL NO	Tender Document No	Project Details	Tender Fees (Rs.)	E.M.D.(Rs. Ps)
01	NSSK/Project- ID FAN WITH MOTOR FD FAN - Document No.4-2025395-1000-2158 Volume I -I -25 Sheets & No.2157-16 Sheets REQUEST FOR QUOTATION FOR ID FAN WITH MOTOR & FD FAN	Design, Engineering, Procurement, Manufacturing, Fabrication, Testing & Inspection, Supply, Erection and Commissioning, Trial Testing of - ID FAN WITH MOTOR & FD FAN required Co-gen Plant with 1 X 220 TPH Boiler and 37 MW Turbo Generator for the project completion.	Rs. 25,000/-	2% of tender amount shall have to be paid by way of D.D. of a Nationalised Bank drawn in favour of Nandi Sahakari Sakkare Karkhane Niyamit, payable at Vijayapur (Bijapur), Karnataka State.
02	NSSK / Project- SOOT BLOWERS – Document No. 4-2025395-1000-2160 Volume – I –I -16 Sheets REQUEST FOR QUOTATION FOR SOOT BLOWERS	SOOT BLOWERS- required Co-gen Plant with 1 X 220 TPH Boiler and 37 MW Turbo Generator for the project completion.	Rs. 25,000/-	
03	NSSK/Project- CONTROL VALVE – Document No. 4-2025395-500-0312 – Volume – 58 Sheets – REQUEST FOR QUOTATION FOR CONTROL VALVE.	CONTROL VALVE - required Co-gen Plant with 1 X 220 TPH Boiler and 37 MW Turbo Generator for the project completion.	Rs. 25,000/-	
04	NSSK/Project- ANALYSER Document No. 4-2025395-1300-0752 – Volume I – 17 Sheets –Volume – II – 9 Sheets- REQUEST FOR QUOTATION FOR ANALYSER	OXYGEN ANALYSER - required Co-gen Plant with 1 X 220 TPH Boiler and 37 MW Turbo Generator for the project completion.	Rs. 25,000/-	
05	VARIOUS STEEL MATERIALS & ROOF SHEETS REQUIRED FOR BAGASSE CONVEYING SYSTEM FOR EXPANSION PURPOSE.	SUPPLY OF VARIOUS SIZES OF STEEL MATERIALS AND ROOF SHEETS REQUIRED FOR BAGASSE CONVEYING SYSTEM FOR COMPLETION OF THE EXPANSION PROJECT.	Rs. 5,000/-	

1) Qualification Requirements:
a) For Item SL No. 1 to 4 - Bidders who have supplied and commissioned the above packages of **ID FAN WITH MOTOR & FD FAN, SOOT BLOWERS, CONTROL VALVES & OXYGEN ANALYSER** or bagasse fired boiler of 1 X 220 TPH Co-gen Plant and above with their experience in executing the specified Job. Bidders who do not have proven and established experience in the field will not be considered.
b) Bidders shall have to be documentary evidence to perform the contract in the same field.
c) Bidders offering to supply the goods under this contract, which the bidders does not manufacture, the bidders shall have been duly authorised by the goods manufacture to supply and service the goods in India.
d) Bidders where a collaborator is associated with this bid, the bid shall be accompanied by a document addressed to the Purchaser and duly signed by the Collaborator declaring the collaboration agreement.

2) The tender documents can be obtained from the Nandi Sahakari Sakkare Karkhane Niyamit, Krishnanagar, Post : Hosur, Taluka: Babaleshwara, District : Vijayapur, Karnataka State on working days between **10.30 AM to 5.30 PM from 16-2-2026 to 24-2-2026** on submission of prescribed non-refundable tender fee by way of DD of a Nationalised Bank drawn in favour of "Nandi Sahakari Sakkare Karkhane Niyamit, payable at Vijayapur (Bijapur).

3) All the bidders should send their technical queries, if any, in the bid documents to the following consultant and General Manager of the factory **on or before 27-2-2026** so that the same can be discussed during the pre-bid meeting.

4) The pre-bid meeting for package will be held at Nandi Sahakari Sakkare Karkhane Niyamit, Krishnanagar Site **on 28th February, 2026 at 11.30 A.M.**

5) The Technical and Unpriced (Commercial) bids and along with Commercial/Price) Bids shall be submitted **on or before 5.00 P.M. on 3rd March 2026** at the office of the Nandi Sahakari Sakkare Karkhane Niyamit, Krishnanagar, Tq: Babaleshwara, District: Vijayapur, Karnataka State. Please note that the Three copies of (Technical+Commercial) bids should be submitted in one envelope and Price Bid should be submitted in Second Envelope. DD for EMD amount should be submitted in the Third Envelope. All three envelopes should be clubbed together in one envelope and submitted. All envelopes should be clearly superscribed as Technical & Commercial Bid, Price Bid and EMD DD as the case may be.

6) **The date of opening of technical and un priced commercial bids is scheduled on 5th March, 2026 at 12.00 Noon and the date and time of opening of the price bids is scheduled on 6th March, 2026 at 12.00 Noon only to the qualified bidders.**

7) The bidders are advised to prepare the bids completely in line with the tender requirements without any commercial or technical deviations.

8) For any Technical & Commercial clarification on the tender documents, the bidders may contact Mr.Jayaram Achar, General Manager of the Factory on Mobile No. 9480692594 – Email : nandisugargo@gmail.com or our Project Management Head -M/s Avant Garde Systems, Chennai - Mr. C Damodaran - Mobile No. 098400 43322 Email: cdamodaran@avant-garde.co.in, Project Officer- Mr. G Suresh – Mobile No.099440 95148 – Email: sureshg@avant-garde.co.in and get their points clarified before the submission of the bids.

9) The bidders shall furnish unambiguous information, in the appropriate format of the tender, regarding their qualifications and experience. Non-compliance will entail disqualification of the bidder.

10) With regard to the acceptability of the bids, the decision of the Nandi Sahakari Sakkare Karkhane Niyamit will be final. NSSKN shall not be responsible for any delay/loss in post or non-receipt of tender documents. NSSKN reserves the right to reject any or all tenders in part or in full without assigning any reasons therefor.

bl, research bureau

After a period of prolonged volatility over the past 16 months and many pockets of mid and small-caps especially facing the rough end of the markets, some semblance of order seems to be returning for domestic investors.

With the India-US trade deal agreement in place and penal tariffs removed, following the FTA with the European Union late in January, there is a lot more macro certainty.

Controlled inflation, reasonably low interest rates, revival in domestic demand, a stable Budget and recovery in corporate earnings signal some positivity, though valuations still may not be in the inexpensive zone; that said, some segments have valuation comfort after the correction over the past year and a half. A flexicap fund that straddles market caps with a bias for bluechips may be suited for investors from a long-term perspective. In this regard, Whiteoak Capital Flexicap fund is suitable for investors with a reasonable risk appetite and a horizon of at least five-plus years. Taking the SIP route to investing would help in averaging costs and lowering volatility.

HEALTHY RETURNS

Though Whiteoak Capital Flexicap has only a track record of about 3.5 years, it has proven itself as an above-average performer in the category.

The past three-odd years have seen geopolitical escalations, trade tariffs and wars alongside supply chain and AI-led disruptions.

Steady above-average performance

Source: ACE MF; Fund Factsheet as of Dec 2025

Funds that managed to wade through these challenges and correcting broader markets, and yet delivering sturdy returns, need closer attention. When point-to-point returns are considered over the past one, two and three-year periods, the fund has outperformed the Nifty 500 TRI.

The fund's three-year CAGR stands at 21.4 per cent, while the Nifty 500 TRI delivered 17.6 per cent in the same period.

In rolling 1-year returns from August 2022 to February 2026, the fund has outperformed the Nifty 500 TRI for over 95 per cent of the time.

The mean return of the fund over the aforementioned rolling period and timeframe is 23.3 per cent, while the Nifty 500 TRI gave 18.6 per cent.

A monthly SIP over the

WHY INVEST

- A good diversifier
- Above-average show in the category
- Large-cap heavy portfolio provides stability

past three years in the Whiteoak Capital Flexicap fund would have given 15.6 per cent (XIRR) returns. A similar SIP in the Nifty 500 TRI would have delivered 12.6 per cent.

The fund has an upside capture ratio of 125.4, indicating that its NAV rises much more than the benchmark during rallies.

It has a downside capture ratio of 93.8, suggesting that the NAV falls much less than the benchmark during corrections.

A score of 100 indicates that a fund performs in line with its benchmark.

This inference is based on returns between February 2023 and February 2026. Other key risk measures such as Jensen's alpha, Sortino ratio and Sharpe ratio are all healthy.

All data cited pertain to the direct plan of the fund.

Whiteoak Capital Flexicap maintains an extremely well-diversified portfolio with fairly diffused individual stock holdings.

The number of stocks in the portfolio has always been well over a 100. Its December month portfolio shows 131 stocks being held.

Barring a couple of companies, individual shares account for less than 3 per cent even among the top 10-20 holdings.

In terms of market segments, the fund has always been biased towards large-

cap stocks. These bluechips have generally made up about 55-58 per cent of the overall portfolio.

Mid and small-cap stocks have accounted for 38-45 per cent of the portfolio, with a bias towards the latter market cap segment.

The large-cap heaviness gives the portfolio the needed stability. Given that the stock holdings are highly diffused, a high proportion of mid and small-cap holdings still does not substantially increase the risks of the overall portfolio.

Banking and finance stocks have been the top sector holdings for the fund across timelines. This exposure has helped the fund outperform, as the segment was among the very few in the market that outperformed in the past 18 months.

Interestingly, IT – an underperforming segment in the last 2-3 years – has been among the top holdings of the company over the years. However, the diffused holdings and exposure to mid-cap IT stocks (some of which have done relatively better) have helped the fund remain relatively insulated to the churn in the segment.

In recent portfolios, the fund has reduced exposure to consumer durables and retailing segments due to the structural challenges in these sectors and their relatively lackadaisical market performance.

The fund has upped stakes in automobiles, pharmaceuticals and telecom services firms, all of which are expected to do well for the foreseeable future.

Overall, Whiteoak Capital Flexicap fund is a good addition to the satellite portion of an investor's portfolio as a diversifier.

Lokeshwarri SK

In an exclusive interaction with *businessline*, Devang Shah, Head-Fixed Income, Axis Mutual Fund, discusses RBI's policy rate action, demand supply dynamics in the G-sec market and the way forward for fixed income investors.

Edited excerpts:

The RBI cut 125 basis points between February and December last year. Do you think that the current rate cycle has come to an end?

As you rightly summed up, RBI has taken a lot on monetary policy action in the last 12 months and they have been very supportive to the growth agenda. We also need to keep in mind that there has been more than ₹18 lakh crore of liquidity infusion in the last 12 months through various actions OMOs, CRR cuts, FX swaps etc. This is a big sum.

The Budget has been quite supportive for growth. They have continued with fiscal consolidation, but they're focused on growth too. There is significant increase in spending on capital investment plus increase in expenditure towards major schemes. So, the RBI need not worry about giving any further growth impulse. The second good news in the last few days is the trade deal with the US. If tariffs continued at 50 per cent, the growth in H2 of 2026 could have been weaker.

So, with that context, we believe that growth can be in the 6.75 to 7 per cent band for FY27. As far as inflation goes, yes, there can be an uptick in inflation in the second half of the year, but not immediately. But at this point of time, when we look at the full year inflation, or even the H2 inflation, it doesn't go above 4.75 per cent. And with that context, I think RBI can stay on a pause for most of this year.

If we see a bad monsoon or a significant uptick in inflation, then probably RBI might look at some bit of rate increase in the second half of this year. But I will assign a very low probability to it.

Yes, I think the rate cut cycle has come to an end, because there is no further impulse needed for growth and H2 inflation can be higher due to new inflation series,

'RBI likely to be on a pause through 2026'

EXPERT TALK. No need for the RBI to give further growth impulse, says Axis MF's Head of Fixed Income Devang Shah

● PROFILE

Devang Shah, Head of Fixed Income at Axis Mutual Fund, joined Axis AMC in 2012 as a Fund Manager. With over 20 years of industry experience, he manages fixed-income strategies, navigating bond markets with a focus on risk and yield optimisation

this year is possible, but I would not attribute a significant yield movement due to this.

What is your advice for fixed income investors? What kind of strategies fund managers are likely to pursue?

I think 2024 was the year for duration, when long bonds gave the highest returns; 2025 was a year of liquidity, which led to steepness in the curve, where we saw the short end of the curve massively outperforming long bonds. In 2026, RBI will be on a pause for the most part of the year. If they start getting worried about inflation, a reversal of the interest rate cycle is possible. So, it will be good to stick to the short end of the curve and buy 1-2-year AAA corporate bonds which are available at significantly higher yields.

For investors going for tactical bets, there's a significant rise in spreads for State development loans due to higher supply. Retail investors can look at gilt funds that have a higher allocation to State government securities.

As far as fund strategy is concerned, investors should always focus on two aspects: investment horizon and risk-return analysis.

If an investor is looking for shorter term investment horizons (3-6 months), one should always target parking in solutions like money market strategies. In case of a medium-term investor looking to invest for up to two years, income plus arbitrage fund of funds is a very good category, which is a blend of debt fund and arbitrage fund in the ratio of 65:35. They are also taxed like equity funds, if you stay invested for two years.

inching up to reach 6.80-7 per cent, April onwards. So, I would say for the full year, the band can be between 6.75 to 7 for the most part.

What is your view on the global bond yields? Does the hardening of US yields affect domestic yields as well?

Any kind of larger global reversal in yields does have some bit of impact on Indian bond markets. But, they're now not so massively correlated as they were before. We have time and again explained that the correlation is to a large extent broken between US bonds and Indian bonds.

In 2022, US treasuries were closer to 2 per cent. Today, they are at 4.25 per cent. At the same time, the Indian 10-year yield in 2022 was 7.5 per cent. Today it is at 6.75 per cent. So, despite all the rate hikes, despite all the noise and concerns on the US treasuries, our bond markets have actually rallied.

Global central bankers now would be on a pause because they have done a lot of rate easing over the last 12-18 months.

Hence, we believe the large part of the global rate cut cycle is behind us. A 25-50 bp rate cut by the US Fed

What is the range that the 10-year bond yield can move in the next year or so?

We see the 10-year yield in the 6.60-6.80 band from January to March 2026. But if there is no action, if RBI disappoints a bit on the OMOs or if they happen mostly in the second half of the year, then we might see yields

NOTES:

- The above is an extract of the detailed format of Quarterly Financial Results filed with the Stock Exchanges under Regulation 33 of the SEBI (Listing Obligation and Disclosure Requirements) Regulations, 2015. The full format of the Quarterly Financial results are available on the Websites of the Stock Exchanges and on the Company's Website (www.rubfila.com).
- The above unaudited standalone / consolidated financial results have been prepared in accordance with Indian Accounting Standards (Ind AS) prescribed under section 133 of the Companies Act, 2013 read with relevant rules thereunder and in terms of the Regulation 33 of the SEBI (Listing Obligations and Disclosure Requirements) Regulations, 2015 (as amended) and SEBI Circular dated 5 July, 2016.
- The Consolidated financial results of the Nine Months ended 31.12.2025 includes the financial results of its wholly owned subsidiary M/s Premier Tissues India Limited.
- The company's reportable business segments are "Latex Rubber Thread" and "Corrugated Carton Box" and its subsidiary has one reportable business segment viz "Paper Tissue". The Company publishes the standalone financial results along with the consolidated financial results.
- The number of Investor Complaints pending at the beginning of the quarter was nil, one complaint was received and resolved during the quarter and no complaints were pending at the end of the quarter.
- The above unaudited standalone and consolidated financial results for the Nine Months ended 31st Dec 2025 were reviewed and recommended by the audit committee and approved by the Board of Directors at their respective meetings held on 13th February 2026 and the auditors have issued an unmodified opinion on the same.
- On November 21, 2025, the Government of India notified the four Labour Codes - the Code on Wages, 2019, the Industrial Relations Code, 2020, the Code on Social Security, 2020 and the Occupational Safety, Health and Working Conditions Code, 2020 - replacing 29 existing labour laws, collectively referred to as the 'New Labour Codes'. The Group has assessed the incremental financial impact if any, due to these changes, taking into consideration the best information available read with the FAQs released by the Ministry of Labour & Employment and the Institute of Chartered Accountants of India. Considering the materiality and non-recurring nature of this impact, the Group has no incremental charges in the standalone and consolidated interim financial results for the quarter and nine months ended December 31, 2025, respectively. The Group continues to monitor developments on the rules to be notified by regulatory authorities, including clarifications/ additional guidance from authorities and will continue to assess the accounting implications basis such developments/ guidance if any.

Betting on launched assets and pipeline

PHARMACEUTICALS. New launches, strong portfolio and pipeline support the stock amidst volatile equity markets

Sai Prabhakar Yadavalli
bl, research bureau

With two innovative medicine launches underway in the US and a third expected in the next one year along with generic Semaglutide launch in India, Sun Pharma is positioned well across geographic segments. The company has gradually strengthened its innovative portfolio, which now accounts for 25 per cent of Q3FY26 sales. This has supported an EBITDA margin expansion of 450 basis points in the last five years. With a pipeline of assets, the segment should support the improved margin profile, cash-flow prospects and pricing power, compared to Indian peers. This is captured in the valuations at 31 times one-year forward earnings compared to Nifty Pharma or Sun Pharma's own last five-year average at 28.5 times.

In January 2025, we had recommended that investors accumulate the stock. From the previous call, the stock has returned -4 per cent. We believe for long-term investors, the stock can add value as a defensive stock as part of a diversified portfolio. Hence, investors can accumulate the stock on dips. One potential risk can be from tariff announcement by the US on innovative medicine (generics have been spared) which the company must navigate.

INNOVATIVE MEDICINE

The company has named the segment Global Innovative Medicines from speciality segment earlier. As the new name suggests, the segment generates revenues from patented medicines and not from generics. The segment, with more than \$1 billion in annual revenues (\$368 million in Q3FY26 after adjusting for one-time sales) and a Q3FY26 exit growth rate of 13.3 per cent year on year, is now a mature, self-sustained value generator. This implies that the segment has commercialised assets in the US, Europe and the rest of the world, that can fund a

● ACCUMULATE ON DIPS

Sun Pharma
₹1,698.10

WHY

- Two recent launches in US with one more expected in one year
- Strong India performance should benefit from generic Semaglutide launch
- Modest premium in valuations supported by increasing innovative medicine contribution

future pipeline and keep adding assets.

The leading asset, Ilumya, for plaque psoriasis, an autoimmune disease, reported sales of \$680 million in FY25 globally. Sun Pharma applied for a supplemental application in Psoriatic Arthritis after completing Phase-3 trials. On approval, and with the subsequent launch expected in the next one year, the Psoriatic Arthritis indication should generate 10-15 per cent more sales apart from organic growth of the molecule.

Sun Pharma has launched two more products in the US in the last one year, which should generate sales comparable to Ilumya. In July 2025, it launched Leqeslvi (deuruxolitinib) in the US for severe alopecia areata. The company will initially target new patients, backed by a strong clinical trial data to compete with Pfizer's ritlectinib (Litfulo) and Eli Lilly's bari-citinib (Olumiant); these competing products were launched in 2022 and 2023 respectively.

In January 2026, Sun Pharma launched Unloxcyt (cosibelimab) for advanced Cutaneous Squamous Cell Carcinoma (aC-SCC). This adds a checkpoint inhibitor (anti-PD-L1 antibody) to the portfolio, which belongs to the leading therapy in cancer treatment. Pembrolizumab (Keytruda - from Merck) and

Well diversified and strong growth

Cemiplimab (Libtayo - Regeneron) are the other approved drugs in the class. Sun Pharma has delayed the launch of the molecule to include long-term efficacy data in the label, which should improve its chances against competitors. But aCSCC is a smaller therapy compared to lung cancer their main segment. Sun Pharma will explore life-cycle management for the drugs (which could imply other therapies) and holds large potential, especially Unloxcyt.

Ramp-up in Unloxcyt and Leqeslvi in the early phase, continued growth of Ilumya and other assets, approval and commercialisation of Ilumya for Psoriatic Arthritis will continue to drive Sun Pharma in the medium term. Pipeline assets include Fibromun (Sun Pharma has a 55 per cent partnership with Philogen) in Phase-II and Phase-III trials for glioblastoma and soft tissue sarcoma and GL0034, a product in early trials for type-2 diabetes.

With close to \$3 billion in cash, Sun Pharma can look for acquisitions too, which it has executed well in the past.

INDIA AND OTHERS

Sun Pharma is the industry leader in the Indian Pharma market and has expanded its share and grown faster than industry at 13 per cent CAGR growth in FY21-25 and 14 per cent year-on-year growth in 9MFY26 as well. The company has benefited from expanded field force supporting such growth and product launches. It is the leader in diabetes segment in India and will participate in the first wave of launches of generic Semaglutide. Sun Pharma has secured approvals for both weight loss and diabetes under two brands.

Rest of the World and Emerging Markets combined accounted for 34 per cent of 9MFY26 revenues and reported growth of 17-20 per cent. The company has launched Ilumya in 35 countries; in some markets, the launch was in the last one year. Apart from generic launches, innovative medicine has also supported such high growth in these countries, as per the company. While it has not announced Semaglutide launches in other markets apart from India, innovative medicine and generic semaglutide should be expected to feature in these regions' growth drivers.

Sun Pharma gross margins and EBITDA margins have expanded as shown in the table, benefiting from innovative medicine. It has reported revenue growth of 11 per cent in 9MFY26 and margin expansion, as shown in the figure. The margin expansion will face headwinds in the next one year owing to launch costs of the two products amounting to \$100 million, as per the company. These will be part of the cost structure initially, while sales growth will be gradual. Consensus estimates place revenue and earnings growth of 11 per cent/12 per cent in FY27 after 11 per cent/9 per cent year-on-year growth in FY26.

Hang on, steady ride ahead

AUTOMOBILE. The stock of the commercial vehicle maker trades at a valuation that largely prices in the positives

Nishanth Gopalakrishnan
bl, research bureau

The erstwhile Tata Motors has been demerged into its passenger vehicle (PV) arm and commercial vehicle (CV) arm with effect from October 10, 2025, with books reflecting the demerger retrospectively from July 1, 2025. While the PV arm has been named Tata Motors Passenger Vehicles, the CV arm has been christened Tata Motors. On October 14, 2025, when stock of the erstwhile Tata Motors (which now reflects only the PV arm) traded to reflect the demerger for the first time, the implied price of the CV arm worked out to ₹260. Further, when shares of the hived off CV arm (current Tata Motors) were listed on November 12, they opened at ₹335, indicating value unlocked.

Since then, Tata Motors' shares have seen a one-way ride up to their last traded price of ₹484, reflecting the boom in business post GST 2.0 (though on a low base). The stock trades at 28 times the expected EPS for FY27 and at this valuation, it largely prices in the tailwinds listed under 'Outlook'. On a trailing 12-month basis, it trades at about 30 times earnings, adjusted for one-offs. Peer Ashok Leyland trades at a P/E ratio of 34x. Adding the value of Tata Motors' stake in Tata Capital at a 20 per cent holding company discount, the estimated price, based on FY27 earnings, implies that any upside to the stock price could be limited. It also needs to be watched how the market takes the company's €3.8-billion acquisition of Iveco Group, once it is completed.

Given the long-term growth story for India's CV market is still intact, the valuation appears to balance risks and rewards. While long-term investors can continue to hold the stock, others need not buy the stock at current levels.

BUSINESS, FINANCIALS

Tata Motors manufactures and sells commercial vehicles of all sizes — from light/ small commercial vehicles (SCVs) to

Financial snapshot

	FY23	FY24	FY25	9M FY26
Volume ('000s)	423	405	385	302

PAT (in ₹ cr)	2,870	5,280	6,130	1,240

bei - before exceptional items; figures are rounded off

Volume breakdown

Share of overall volume (Domestic market share) in %

CVs - Commercial Vehicles Based on 9M FY26 Source: Exchange filings

heavy commercial vehicles (HCVs). It has an overall market share of roughly 35 per cent in India's CV market. Product-wise breakdown of volume sold is presented in the chart.

Post-Covid, the CV market has not grown. It is yet to surpass domestic wholesales of about 10 lakh units recorded in FY19. In FY25, CV firms sold about 9.6 lakh units. Between FY22 and FY25, Tata Motors volume (domestic + exports) barely grew, at a CAGR of 2 per cent, to 3.85 lakh units in FY25. For context, in FY19, the company sold about 4.7 lakh units in India. However, financially, the company has been growing as

can be seen in the table.

In 9M FY26, Tata Motors' wholesale volume has grown 9 per cent year on year, largely due to the boom in Q3 FY26. Volume in H1 FY26 grew 3 per cent, while it grew 20 per cent in Q3 FY26. Revenue grew 6 per cent and profit before tax (before exceptional items) grew 27 per cent in 9M FY26. Exceptional items such as the impact of the labour code, de-merger costs and marked-to-market losses from investment in Tata Capital amounting to ₹3,400 crore brought profit before tax of ₹5,400 crore to a net profit of ₹1,236 crore. RoCE stood at 53 per cent and debt-to-equity ra-

● HOLD

Tata Motors ₹484

WHY

- Business generates free cash flows
- Debt-free balance sheet
- Macros in favour of business momentum

tio at 0.8x. The business is free cash flow (FCF) positive with FCF accretion of ₹5,169 crore in 9M FY26.

OUTLOOK

The outlook for the CV segment appears upbeat. There is a good revival in volume post GST 2.0. The management expects the momentum to continue and here are some factors (tailwinds) driving its judgment. One, GST on CVs has been cut from 28 per cent to 18 per cent, bringing down the initial cost and EMLs for operators. Two, GST rate rationalisation has given a boost to consumption, which needs to be supported by logistics. A spike in demand for logistics has meant higher profitability for operators.

Three, lower delinquencies for financiers and lower interest rates for operators should encourage financing for purchases. Four, the government's push towards infrastructure capex continues into FY27 as well. Five, there is a trend of State transport undertakings replacing old buses with new ones.

Per a conclave of analysts held by SIAM (Society of Indian Automobile Manufacturers), the CV market is expected to grow 4-6 per cent in FY27, and this has formed the basis for our estimates. With 17 new models launched this quarter, Tata Motors' market share could grow to about 37 per cent or higher. Driven by strong demand from the West Asia, North Africa, Sri Lanka and the SAARC area, management expects double-digit export volume growth in FY27.

However, rising cost of inputs — especially precious metals (platinum, palladium) followed

by copper and steel could dent margin. It remains to be seen if the 1 per cent price hike undertaken in January would protect the margin.

IVECO ACQUISITION

Tata motors will be acquiring Italy-based CV major Iveco Group (excluding its defence business — thus acquiring the segments of a) Industrials: truck, bus, powertrain and b) Financial Services) for about ₹38,000 crore. The industrials segment constitutes 89 per cent of revenue. The deal done at an EV/EBITDA multiple of about 2.5x is expected to be financed largely by debt. The same multiple for Tata Motors currently is 18x (adjusted for one-offs).

The acquisition will make Tata Motors the fourth-largest OEM of trucks weighing above 6 tonnes and will take its combined revenue to about ₹2.2 lakh crore. The deal is still work-in-progress and is expected to be completed by Q1 FY27. Currently, our analysis does not take into account Iveco's numbers, and we will follow up with a note, once the deal is consummated. However, here's a sneak peek.

Iveco predominantly operates in the European and South American markets. This is one of the reasons for the deal as it complements Tata Motors' current export markets. However, except for buses and some segments such as LCVs in South America, the industry volume in the rest of the markets hasn't grown in 2025.

In CY25, Iveco Group sold 1.4 lakh units, a fall of 13 per cent over CY24. Revenue for the year (ex-defence) fell 7 per cent to €13.4 billion (about ₹1.4 lakh crore) and adjusted EBIT margin (Industrials) declined to 4 per cent from 5.4 per cent in 2024. Tata Motors' EBIT margin for 9M FY26 is 10 per cent and thus, the acquisition will be margin-dilutive.

Unlike in 2024, Iveco Group's Industrials vertical turned FCF negative in 2025, largely suggesting that the acquisition may not pay for itself and has to be supported by current FCFs of Tata Motors.

GLOBAL BOARDROOM CHATTER.

What they say on their India plans

With India being the fastest growing large economy, 'what is your India plan?' is a common topic in boardrooms of most global corporations. One important source to distil their India plans is from their quarterly earnings calls. With the December quarter earnings season in progress, this column will present what CXOs of global corporations are saying about India, along with their perspectives and plans during the current earnings season. Here are some from companies that reported their earnings last week.

The Coca-Cola Company (KO, \$339.9 billion)

Coca-Cola highlighted India as a long-term growth market, underpinned by unprecedented investments with bottling partners, continued capacity expansion and a strong push into digital and AI-enabled customer engagement.

"With scalable digital platforms like Coke Buddy, expanding AI-driven ordering and analytics, and a still-underpenetrated outlet base, India remains a build-ahead-of-the-curve market that we expect to stay ahead of the pack in future growth."

KKR & Co. Inc. (KKR, \$90.4 billion)

KKR identified India as one of its two largest global capital deployment markets, underpinned by structural confidence in the country's long-term middle-class expansion.

"India is one of the two markets where we are deploying the most capital today. We are strong believers in the rise of India's middle class over the coming decades and expect to continue meaningfully increasing our investments. Asia deployment in 2025 is up 70 per cent versus 2024."

Waters Corporation (WAT, \$19 billion)

Waters reported high-teen growth in India, driven by strong demand in pharmaceutical generics and high-volume testing applications.

"Within Asia, India grew in the high teens, reflecting continued strength in pharma generics and robust demand across key testing opportunities."

TransUnion (TRU, \$13.8 billion)

TransUnion noted India declined 4 per cent amid a reset year for unsecured lending and credit card originations, with volumes expected to bottom out in 2025 and early 2026 before

gradually improving.

"We anticipate mid-single-digit growth in India in 2026 and a return to double-digit growth thereafter, supported by easing capital restrictions, reduced uncertainty following the US-India trade agreement, and the roll-out of our full global product and IP portfolio in this high-potential market."

Crocs, Inc. (CROX, \$4.9 billion)

Crocs identified India as a strategic long-term growth market, where it is investing to expand its footprint and close the market share gap versus established geographies.

"Our market share across China, India, Japan, Germany and France is roughly one-third of what we hold in our established markets. India is important to us, and we're making strategic investments to support sustained growth. We're excited about the prospects for 2026 and the medium to long term."

Blackbaud, Inc. (BLKB, \$2.2 billion)

Blackbaud is expanding its India operations as part of a multi-year workforce strategy, scaling its Global Capability Centre to tap into high-quality talent.

"We're significantly expanding our India Global Capability Centre. After establishing a strong footprint over the past year, we expect substantial growth over the next 12-18 months, accessing highly talented direct employees to support our long-term strategy."

Heineken N.V. (HEIA, €44.6 billion)

The brewer reported solid momentum in India, outperforming the broader market and strengthening its premium portfolio.

"In India, volumes grew mid-single digits ahead of the market. As the country's largest brewer, we continued to shape the category, with strong growth in Kingfisher and accelerating momentum in premium brands such as Kingfisher Ultra, Heineken Silver and Amstel Grande."

Voestalpine AG (VOE, €7.7 billion)

The industrial group described India as a smaller but fast-growing market with expanding manufacturing and aerospace ambitions.

"India currently generates around €190 million in revenue, supported by five production sites and 1,000 employees. We are expanding engineering, design and production capabilities, including aerospace supplies and welding consumables, as the market continues to grow."

WHO AM I?.

Are you an avid investor? How well do you know corporate India?

Here's a challenge. Using the five clues below, identify the company that is being talked about here

- 1 While I have just completed 70 years since the business was founded, I am entering my 50th year since incorporation and have never diversified beyond my core business.
- 2 I have averaged about 20 per cent PBT margins and more than 20 per cent return on equity for several years.
- 3 Markets valued me at more than 20 times annual revenue until a few years ago, and now at about 10 times.
- 4 My board includes two founders of equity portfolio management firms.
- 5 My market capitalisation is approximately ₹50 lakh per shareholder, as more than 95 per cent of my ownership is held by fewer than 200 shareholders.

Nifty 50 (25,471) slipped 0.9 per cent last week whereas Nifty Bank (60,187) posted a marginal 0.1 per cent gain. The futures and options data of these indices are on different lines although the major trend with respect to chart is along the same direction. Here is our analysis:

NIFTY 50
Nifty futures (February) (25,519) dropped by 0.8 per cent last week. After opening with a gap-up, it rose to mark an intra-week high of 26,068 on February 11 before moderating to the current level.

Although the chart shows that Nifty futures is experiencing considerable selling momentum, there is a notable support at 25,450. As long as this level holds, bulls will be in the equation.

However, if 25,450 is decisively breached, the outlook can turn bearish wherein the contract can see a quick decline to 25,000 and 24,750. That said, a rebound from 25,450 can lift Nifty futures to 26,000. A break-out of this will help the contract gain further traction and push towards 26,500.

The positioning in options show some weakness as the Put Call Ratio (PCR) of both weekly (0.5) and monthly (0.9) are below 1. A ratio less than one is because of selling of relatively greater number of call options, a bearish sign.

On the other hand, futures also show mild bearishness. As the contract dropped last week, the outstanding open interest (OI) saw an increase from 159 lakh contracts to 162 lakh contracts. This shows short build-up

Venkatesh Bangaruswamy

Many consider options as a hedging instrument. Now, hedging is a process that would be meaningful for companies. This is because companies prefer to manage their financial risk and concentrate more on running their core business.

Should derivative traders also use options as a hedge? This week, we discuss the arguments you should consider before using puts as a hedging instrument.

HEDGING COST

A hedge is a process that is meant to reduce the downside risk in an investment portfolio. This could be done with specific objective of managing the risk associated with a macroeconomic event or to manage the downside risk at the end of a time horizon for a life goal. Can short-dated exchange-traded options be used as a hedging instrument?

Suppose you are long on stocks or have invested in mutual funds. You are anxious to protect the unrealised gains in your portfolio as you are nearing the end of the time horizon for a life goal. You could buy Nifty Index puts to lock-in to the unrealised gains on your portfolio. But that could work only if the gains on the puts offset the loss in the portfolio

No trade zone

BULLION CUES. Sideways trend can extend

Akhil Nallamuthu
bl, research bureau

Gold (\$5,043/ounce) and silver (\$77.50/ounce) saw varying performances for a second week in a row. While the former gained 1.6 per cent, the latter dropped 0.6 per cent.

In the domestic market, gold futures (₹1,55,895/10gm) rose 0.3 per cent whereas silver futures (₹2,44,360/kg) slipped 2.2 per cent. Here is our analysis:

MCX-GOLD (₹1,55,895)
Gold futures (April) was trading flat until Wednesday last week. While it fell on Thursday, it recovered most of that loss on Friday.

That said, at a broader level, the contract appears to be in a consolidation phase. The price action since February 4 shows that gold futures has been oscillating between ₹1,50,000 and ₹1,61,000. The next leg of trend depends on the break of this price band.

Resistance above ₹1,61,000 is at ₹1,75,000 whereas the support below ₹1,50,000 can be spotted at ₹1,38,000.

Trade strategy: As gold futures is now charting a sideways trend, traders can stay out.

F&O TRACKER. Hold longs on index futures but keep risk tight as supports are put to test

albeit at a small scale.

Overall, the bears seem to be in a better position. However, to take full advantage of the prevailing situation, they ought to drag Nifty futures below the support at 25,450.

Strategy: Retain the longs that we suggested on Nifty futures (February) at 25,650. Maintain stop-loss at 25,400. When the contract rises to 26,100, trail the stop-loss to 25,850. Book profits at 26,350.

Traders who bought 25,500-call (purchase price of ₹300) instead of futures, too, can hold on to the trade. The option closed at ₹211 on Friday. Target and stop-loss can be at ₹700 and ₹100 respectively.

NIFTY BANK

Nifty Bank futures (February) (60,321) began last week with a gap-up. After this, it inched up to mark an intra-week high of 60,920 on Thursday. While the contract stayed largely flat during the middle of the week, it fell

MASTERING DERIVATIVES. A hedge is meant to reduce downside risk in an investment portfolio

QUICK TIP

Technically, hedge is applied at a portfolio level, not for individual positions

value. For that to happen, you must buy optimal number of puts on the Nifty Index. This requires you to determine the optimal hedge ratio, taking into consideration the correlation between the Nifty Index and your portfolio

BROAD TREND

- Short build-up in Nifty futures
- Mild short covering in Nifty Bank futures
- Key support levels remain valid

considerably on Friday, erasing almost all the gains it made for the week.

Nevertheless, the contract managed to end the week above a notable support at 60,000, which is an important level from a short-term trend perspective.

So, going ahead, Nifty Bank futures may see a decline from the current level, possibly to 60,000. Then, the contract can see a rebound and rise to 61,300 in the near term. However, if the support at 60,000 is invalidated, the outlook can turn bearish. In such a case, we might see a quick fall to 59,500 first. A breach of this can take the contract further lower

to 58,700, a potential support.

The futures and options positioning are not very consistent with respect to Nifty Bank. The February futures gained by a marginal 0.1 per cent but then the outstanding OI dropped from 14.1 lakh contracts to 12.6 lakh contracts. This shows short covering i.e., some of the sellers made an exit.

On the other hand, the PCR of February options stood at nearly 0.9 on Friday, indicating that the bears have an edge over the bulls.

Broadly, irrespective of the current situation in derivatives position, traders should watch how Nifty Bank futures react to 60,000. As it is now above this level, we cannot reject the possibility of a recovery.

Strategy: Buy Nifty Bank futures (February) at 60,100. Target and stop-loss can be 61,300 and 59,700 respectively.

Instead of futures, one can buy February 60,000-call (₹646.35). Go long at ₹580 with a stop-loss at ₹250. Exit the trade at ₹1,400.

will work only if the loss from long futures is equal to the gains from the long puts. But that may be difficult, unless the put becomes deep in-the-money (ITM). Why? When the put becomes ITM, the intrinsic value moves one-to-one with the underlying. And that movement must be greater than the loss due to time decay.

A deep ITM put will mean that the underlying must fall sharply. If that is what you expect, why hold the long futures position at all, given that it is also a short-dated contract?

OPTIONAL READING

Buying puts to “hedge” long futures position appears to be more an emotional decision than a technical argument; you may feel less anxious of a sharp potential downside in the futures position.

But long put comes at a cost. The best case scenario would be lower gains on your long futures position. The worst-case scenario could be that the long futures position has losses, and the puts expire worthless. That means your total loss will be greater because of the “hedging” cost.

Breakout in sight

CRUDE CHECK. Roll over longs to March futures

Akhil Nallamuthu
bl, research bureau

Oil prices saw some moderation last week. Brent crude oil futures on the Intercontinental Exchange (ICE) (\$67.80/barrel) was down 0.4 per cent whereas crude oil futures in the domestic market (₹5,732/barrel) lost 1.7 per cent. Here is the outlook and trade recommendation.

BRENT FUTURES (\$67.80)
Brent crude oil futures rallied last week to mark a six-month high of \$70.72 on Wednesday. But then, it fell on the back of the resistance band of \$69-71 to close the week at \$67.80. The downside was limited by the 21-day moving average support, which is now at \$67.

Overall, the price action shows a positive bias and we expect Brent crude oil futures to break out of \$71 soon. Such a move can open the door for a rally to \$75.

But if the contract slips below \$67, it can find immediate support at \$65 with subsequent one at \$62.

MCX-CRUDE OIL (₹5,732)
Crude oil futures (March) rallied in the first half of last week. It reached a high of ₹5,986 for the

week on Wednesday and then declined to end the week at ₹5,732.

Price action shows that the contract has a support at ₹5,650 and ₹5,500. Until the latter holds true, the bias will remain positive and the probability for a rally will be higher.

An upswing, either from the current level or after a dip to ₹5,500, can surpass the key ₹6,000-mark and hit ₹6,500 in the near term.

On the other hand, if crude oil futures breaks below the support at ₹5,500, the downswing will most likely to extend to ₹5,300. Subsequent support is ₹5,150.

Trade strategy: Last week, we suggested longs on the February contract at ₹5,750. Traders can consider rolling over the longs to March contract. Target and stop-loss for March futures can be ₹6,500 and ₹5,450 respectively.

F & O QUERY

AKHIL NALLAMUTHU
bl, research bureau

Kindly share your opinion about the near-term outlook of the HDFC Bank for buying call option

Tarun Dutta

HDFC Bank (₹903.90): By mid-January, the stock decisively breached the support at ₹940. While it bounced after making a low of ₹905 on January 27, it could not sustain above ₹940.

Even the euphoria after the announcement of India-US trade deal could not keep the stock above ₹940. Although it rose to ₹994 on February 3, since then, the selling pressure has been constant on the scrip and the price is now back below ₹940.

For the bulls to gain some traction, the stock should reclaim ₹940 and sustain above this level at least for a few trading sessions.

Overall, at the moment, the outlook is weak. Note that the breach of ₹940 confirmed a double-top chart pattern and as per this chart set-up, the price is set to decline to ₹860 in the near term; ₹900 is a potential support but whether it can stop the downtrend is uncertain. Considering the aforementioned factors, we suggest avoiding long positions on call options on this stock.

The weekly chart of Titan shows resistance at current levels. Can you suggest entry and exit levels for futures short positions?

Saravanan Na, Namakkal

Titan Company (₹4,179.20): The stock has been in a long-term uptrend, and the recent leg began in September last year against the support at ₹3,300. After

facing some moderation in the second half of January, the price has moved up again. Notably, it hit a record high of ₹4,378.40 on February 11. So, a short position will be a bet against the prevailing trend.

Yes, the weekly chart shows that last week's candlestick is a bearish pin bar, and the stock appears to be struggling to get a daily close above ₹4,300. However, any decline in price can be short-lived. If you have high risk tolerance and are used to counter trend trades, you can short futures on a rise to ₹4,250 for a better risk-reward ratio. Target and stop-loss can be ₹4,050 and ₹4,390 respectively. Our suggestion would be to stay out.

F&O Strategy

Buy TVS Motor call

KS Badri Narayanan

The outlook for TVS Motor Company (₹3,864.60) is positive. If the stock sustains the current trend, it will scale a new peak above ₹4,000. Immediate support levels are at ₹3,725 and ₹3,549. We expect TVS Motor to sustain the current bullish trend.

F&O pointers: On Friday, TVS Motor Feb futures closed at ₹3,868.30 and Mar futures at ₹3,882.40 against the spot close of ₹3,864.60. The healthy premium signals the existence of long positions. Option trading indicates that the stock could move in the ₹3,360-4,200 range.

Strategy: Consider buying 3840-strike call of TVS Motor. As the option closed with a premium of ₹75.15, this would cost traders ₹13,151.25 for a market lot of 175 shares. This will be the maximum loss and that will happen if the underlying stock fails to hold above ₹3,840 on expiry.

Profit potential is substantial if the stock surges swiftly before expiry. Target can be ₹100. Initial stop-loss can be placed at ₹68. Shift it to ₹75, if the stock opens on a flat note. Avoid this trade if TVS Motor opens either sharply higher or lower on Monday. As the expiry is approaching fast, time decay can intensify. So, risk-averse investors can stay away.

Follow-up: Trade on Sun Pharma might have provided profit opportunities. Those who are still holding can aim for a target of ₹30 with a revised stop at ₹18.

Note: The recommendations are based on technical analysis and F&O positions. There is a risk of loss in trading

Short Take

ONGC F&O contract adjustments

Akhil Nallamuthu
bl, research bureau

Oil & Natural Gas Corporation (ONGC) (₹267.40) has announced an interim dividend of ₹6.25. The face value per equity share is ₹5. The dividend will lead to necessary adjustments in the futures and options (F&O) contracts on this stock on the record date.

The company has decided February 18 as the record/effective date. On this day, the stock price and all derivatives contracts on ONGC will be adjusted appropriately.

With respect to adjustment in futures contracts, the reference rate of the relevant contract on February 17 will be considered. Reference rate will be the mark-to-market settlement price of the relevant futures contract. So, the open positions shall be carried forward to February 18 at the daily settlement price on February 17 minus ₹6.25, the dividend amount.

Suppose the February expiry futures closes at ₹270 on February 17, it will be revised to ₹263.75 (₹270 minus ₹6.25). Hence, the contract value will come down.

Likewise, in options, all the strike prices in the option chain of ONGC will be subtracted by ₹6.25 from February 18. For example, the strike price of 268 and 260 will be modified to 261.75 and 253.75 respectively.

The aforesaid measures are not likely to impact the overall trend of this stock.

Gurumurthy K
bl. research bureau

Nifty 50, Sensex and Nifty Bank index did not see a strong follow-through rise after opening the week on a positive note. Sensex and Nifty fell sharply towards the end of the week giving away all the gains. The indices were down 1.14 per cent and 0.87 per cent respectively. Nifty Bank index also fell but managed to close the week marginally higher by 0.11 per cent.

On the charts, the near-term picture looks weak. The indices can fall more this week. However, supports are there to limit the downside. We expect the Indian benchmark indices to reverse higher again after testing their supports.

FPIS BUY
Foreign Portfolio Investors bought Indian equities for the second consecutive week. The equity segment saw a net inflow of about \$1.27 billion last week. If the FPIs accelerate their purchase, then that could aid in pushing the Sensex and Nifty higher.

NIFTY 50 (25,471.10)
Short-term view: Supports are at 25,200 and 25,100 which can be tested this week. We expect the Nifty to reverse higher from this support zone. Such a bounce can take the index up to 26,000-26,100 initially. A break above 26,100 can then see 26,400 on the upside.

In case the Nifty breaks below 25,100, an extended fall to 24,700 or 24,400 is possible. Our preference will be to see the Nifty sustaining above 25,100.

Medium-term view: The broader picture remains bullish. The region between 24,000 and 23,500 will be a strong support. Nifty can target 27,500-28,000 in the medium term. A break above 26,400 can trigger this rise. In the long term, the index has the potential to see 30,000-31,000 on the upside.

Nifty has to break below 23,500 to negate this bullish view. If that happens, a fall to 22,000 and lower is possible.

NIFTY BANK (60,186.65)
Short-term view: Near-term picture is unclear. Immediate support is at 60,000. Below that, 59,750 and 59,550 are the next key supports. A bounce from the 59,750-59,550 support zone can take the Nifty Bank index higher

Short fall

INDEX OUTLOOK.
The benchmark indices can dip more to test supports and reverse higher eventually

IMMEDIATE SUPPORTS

- Nifty 50: 25,200, 25,100
- Sensex: 82,450, 82,000
- Nifty Bank: 59,750-59,550

this rally. The region around 79,500 is a crucial support. The bullish view will be negated only if the Sensex breaks this support.

NIFTY MIDCAP 150 (21,884.35)

Near-term support is at 21,500. A bounce from here can take the Nifty Midcap 150 index up to 22,800 in the short term. As mentioned last week, the index can gain momentum on an eventual break above 22,800. Such a break can take the Nifty Midcap 150 index up to 26,000-26,500 in the medium term and 28,000-28,500 in the long term.

In case the index fails to bounce back from around 21,500, a fall to 21,000-20,500 can be seen. The levels of 20,500 and 20,000 are crucial supports. A fall below 20,000 is needed to bring the index under pressure. If that happens, 18,500-18,000 levels can be seen on the downside.

NIFTY SMALLCAP 250 (15,988.30)

Immediate support is at 15,850. A bounce from there can take

the Nifty Smallcap 250 index up to 16,600-16,700 in a week or two. An eventual break above 16,700 can then take the index further higher to 17,600 or even 18,300 in the short term.

In case the index breaks below 15,850 now, then a fall to 15,300-15,200 or 15,000 is possible. A fall beyond 15,000 is less likely.

As mentioned last week, the long-term picture is looking quite bullish. The aforementioned rise to 18,300 will indicate the beginning of a fresh leg of upmove. As such, a break above 18,300 will have the potential to take the Nifty Smallcap 250 index up to 22,500-23,000 in the long term.

So, we reiterate that this can be a good time to enter the small-cap segment.

This bullish view will go wrong only if the index declines below 15,000.

AKHIL NALLAMUTHU bl. research bureau

Eternal (Zomato) (₹285.20)

Resumption in uptrend

After witnessing a decline in price in the recent months, the stock of Eternal now shows signs of a recovery. It has rebounded strongly from the support at ₹250 and last week, it formed a higher high. The price is now above both 21- and 50-day moving averages. So, overall, the price action indicates that the scrip has resumed the uptrend after a corrective decline. The price action hints at an upswing to ₹350 in the near term. Go long now at ₹285 and accumulate at ₹270. Stop-loss can be ₹245. When the price touches ₹310, raise the stop-loss to ₹285. Move the stop-loss to ₹310 when the stock hits ₹330. Book profits at ₹350.

Escorts Kubota (₹3,587.65)

Forms morning star pattern

The stock of Escorts Kubota began a fresh leg of rally in March 2025 after finding support at ₹2,850. Since then, it has been moving across a rising channel. Towards the end of last month, the stock rebounded from the lower boundary of the channel at around ₹3,400; the weekly chart shows the formation of a morning star candlestick pattern. Also, the 50-week moving average now lies at ₹3,473. So, the probability of a rally is high, where the stock could reach ₹4,200. Buy at ₹3,587 and ₹3,450. Place stop-loss at ₹3,250. When the price rallies to ₹3,900 and ₹4,100, alter the stop-loss to ₹3,600 and ₹3,900 respectively. Exit at ₹4,200.

Sun TV Network (₹576.30)

At a notable support

The stock of Sun TV Network has been in a consolidation phase for about seven months now. The boundaries are ₹520 and ₹600. Prior to that, it saw a considerable decline in price. The current sideways correction has taken the stock near a notable trendline support at ₹530. On the back of this, early last week, the stock saw a rally, hinting at a revival in bullish sentiment. The stock can build-on to this uptick and rise to ₹750 in the medium term. So, buy at ₹576 and ₹535. Stop-loss can be ₹470. When the price rises to ₹675, raise the stop-loss to ₹600. On a rally to ₹720, alter the stop-loss to ₹690. Exit at ₹750.

US in grip of AI scare trade

GLOBAL VIEW. Here's a look at how various sectors were impacted

Reuters

Wall Street is in the grip of disruption worries from AI. It first started with investors dumping shares of software companies but soon spread to sectors seen as vulnerable to automation, driving sharp losses in US stocks this week.

The AI scare trade did not spare even sectors such as private credit, real estate brokers, data analytics, legal services and insurers.

Global tech stocks took the hit after Anthropic unveiled a legal AI plug-in. But soon the investor unease deepened following a flurry of AI model upgrades and fresh releases.

“With fear driving market sentiment, investors remain in ‘sell first think later’ mode, asking ‘who is next’ and showing no mercy for anything remotely seen as an AI loser,” Barclays equity strategist Emmanuel Cau said.

Here's a look at how various sectors were impacted by the sell off:

The S&P 500 Software & Services index has lost about \$2 trillion in value since its peak in October.

Half of the losses came in the past two weeks, on concerns that fast-advancing AI tools could upend traditional subscription and enterprise tools.

So far this year, the worst-performing Nasdaq 100 stocks include Atlassian down 47 per cent, Intuit down 40 per cent and Workday, which has lost a third of its value.

Salesforce tumbled about 30 per cent in 2026, while Adobe is down 25 per cent and CrowdStrike 12 per cent.

“There's this idea that AI is somehow going to replace built-out models in the near term - models that have been in place for many years and from which companies have profited strongly,” said Robert Pavlik, senior portfolio manager at Dakota Wealth in Fairfield, Connecticut.

The US software sector's worst drawdown in more than three years also knocked down shares of alternative asset managers on con-

DOWN TREND

Worst-performing Nasdaq 100 stocks include Atlassian, Intuit and Workday

cerns over their exposure to loans and leverage tied to the companies. Ares, Blackstone, Blue Owl, Apollo, TPG and KKR slumped between 13 per cent and 24 per cent this year.

About a fifth of the private credit space is exposed to the software sector, according to estimates from BNP Paribas.

The financial industry, particularly brokerages and data analytics firms, were hammered after wealth management firm Altruist introduced AI-enabled tax planning features, stoking fears of the fast-advancing technology upending their business models.

Shares of brokers LPL Financial, Raymond James Financial and Charles Schwab fell more than 7 per cent on Tuesday.

Index provider S&P Global, which issued a downbeat earnings forecast for 2026, has slumped more than 25 per cent in February and was set for its worst month since 2009. Moody's, FactSet Research and MSCI also fell sharply this month.

Nasdaq-listed shares of Thom-

son Reuters touched a near five-year low last week on concerns about AI hurting its legal services business.

Commercial real estate and investment managers took a blow on Wednesday, which KBW analysts said was due to investors rotating out of high-fee, labour-intensive business models viewed as potentially vulnerable to AI-driven disruption.

CBRE Group and Jones Lang LaSalle sank about 12 per cent each on Wednesday, and Cushman & Wakefield slumped nearly 14 per cent. CoStar Group, owner of Apartments.com and Homes.com, fell 5.9 per cent.

“We view market concerns as overstated due to a combination of fragmented CRE end markets and the non core nature of real estate activities for many clients,” Morningstar analyst Sean Dunlop said, noting that their valuations were “not cheap” despite the sell off.

Insurance stocks took a sharp hit. Brokers and underwriters across both sides of the Atlantic plunged after online platform Insurify released on Monday an AI-powered comparison tool on ChatGPT, which allows users to compare car insurance rates.

The S&P 500 insurance index slumped 3.9 per cent on Monday, its biggest single-day drop since mid-October.

TECH QUERY

GURUMURTHY K
bl. research bureau

What is the long-term outlook for Sula Vineyards? I have bought this stock at ₹376

Rohini

Sula Vineyards (₹178): The stock is in a strong downtrend. There is no sign of a trend reversal. Strong resistances are at ₹220 and ₹260. The stock has to rise above ₹260 in order to indicate a trend reversal.

But that is unlikely. There is a danger of seeing ₹100 and even lower levels. So, you must exit this stock now. Always remember to have a stop-loss whenever you enter a trade. It will help in minimising the loss and also help avoid

getting stuck in a wrong trade for a prolonged period of time. Any trade should have a proper strategy. That is, when you get into a trade, have a target and stop-loss. All the more important is strictly adhering to those fixed levels.

I have bought Tata Elxsi shares at ₹7,200. What is the outlook?

Mathew

Tata Elxsi (₹4,821): The trend is down and that continues to remain intact. There is room to see ₹4,100 from here. Resistances are at ₹6,000, ₹6,300 and ₹7,200. The stock has to first rise above ₹6,300 to get some relief. Ideally, a rise above ₹7,200 is needed to indicate a trend reversal and turn the outlook bullish. Only then the chances of revisiting ₹10,000 levels will come into the picture.

But to get such a rise, a strong positive trigger is needed. As such, the chances of a rise above ₹6,300 is unlikely. So, exit the stock now and accept the loss. As insisted in the previous query, understand the importance of having a stop-loss. Next time when you enter a trade, make sure you have a stop-loss in place.

But to get such a rise, a strong positive trigger is needed. As such, the chances of a rise above ₹6,300 is unlikely. So, exit the stock now and accept the loss. As insisted in the previous query, understand the importance of having a stop-loss. Next time when you enter a trade, make sure you have a stop-loss in place.

I have shares of Aster DM Healthcare bought at ₹375. Can I continue to hold the stock or exit?

Navendu Sharma, Ahmedabad

Aster DM Healthcare (₹600): The broader trend is up and that is still intact. The recent bounce from the low of ₹519.80 made earlier this month indicates that

the corrective fall has ended. It also signals that a fresh leg of upmove has begun. Strong support is around ₹500. The stock has to fall below this support to become bearish. The long-term outlook is bullish. The stock can go up to ₹780 in

the coming months. Keep a stop-loss at ₹470 and hold the stock. Revise the stop-loss up to ₹590 when the price goes up to ₹660. Move the stop-loss higher to ₹640 and ₹720 when the price touches ₹690 and ₹750 respectively. Exit the stock at ₹780.

I have bought VA Tech Wabag at ₹1,342. What is the long-term outlook?

Chandrasekar, Chennai

VA Tech Wabag (₹1,284): The trend is down since December 2024. Crucial supports are at ₹1,000 and ₹930. A bounce from either of these two supports and

a subsequent rise past ₹1,400 will turn the outlook bullish. In that case, there are good chances to see a rally to ₹2,200 over the next one-two years. So, you can continue to hold the stock. If you have the risk appetite, then buy more at ₹1,030. Keep a

stop-loss at ₹840. Revise the stop-loss higher to ₹1,220 when the price goes up to ₹1,480. Move the stop-loss higher to ₹1,680 and ₹1,910 when the price touches ₹1,860 and ₹2,090. Exit the stock at ₹2,200. The bullish view will go wrong if the price declines below ₹930.

BANDU'S BLOCKBUSTERS.

On April 1, four years back, piqued by the incessant jokes in the village at his expense, Bandu Barve decided he'd had enough. It was time for him to turn 'smart'. His dead granny's voice rang in his ears — “Read the papers, Bandya, they tell you all!” So, off went Bandu to the stash of newspapers on his father's desk. As luck would have it, the first paper Bandu got his hands on was The Hindu businessline. The stock recos, in particular, had him in thrall. Soon Bandu metamorphosed into an ace investor and trader.

These days, Bandu picks five stocks each Sunday, which he believes will be blockbusters over the next week

- 1 KIMS
- 2 LT Foods
- 3 UNO Minda
- 4 Blue Star
- 5 Aditya Birla Sun Life AMC

Last week's prize winner

Return:
0.33 per cent

Here's your chance to match step with Bandu. Guess the stock that will give the best return by next Friday (BSE prices). By Wednesday noon, mail us your pick and its expected price rise to bandublockbuster@gmail.com with your name, mobile number and address. One lucky winner will get a prize of ₹2,000.

Valuation Drama: The Good, The Bad, The Ugly

The Benchmark indices, Sensex and Nifty 50, were down 1.1 per cent and 0.9 per cent, respectively last week. BSE Auto and BSE Consumer Durables were the top movers, delivering 2.3 per cent and 2 per cent, respectively. BSE IT and BSE Teck declined the most by 8 per cent and 5.7 per cent, respectively last week.

The sector indices are disseminated by S&P BSE.

India AI Impact Summit set to bring together Big Tech CEOs & world leaders

AMBITIOUS EVENT. 45 Ministerial, 30 Vice-Ministerial teams to attend; Nvidia’s Jensen Huang to miss

Amiti Sen
New Delhi

Prime Minister Narendra Modi will chair a roundtable of tech CEOs at the India AI Impact Summit 2026 on February 19, government sources said.

The primary aim of the five-day summit starting Monday — to be attended by over two lakh registered participants, 20 world leaders, and over 100 CEOs—is to highlight the developmental aspects of AI.

“The idea is to have a discourse on the developmental aspects of AI at the summit with a focus on developing countries,” an official said on Saturday. Top global tech CEOs and representatives such as Sundar Pichai from Google, Sam

Altman (OpenAI), Dario Amodei (Anthropic), Demis Hassabis (Google DeepMind), Cristiano Amon (Qualcomm), Brad Smith (Microsoft), and Shantanu Narayen (Adobe), are expected to attend the summit.

KEY ABSENTEE
However, Nvidia CEO Jensen Huang, a star attraction at the summit, will not attend due to “unforeseen circumstances”, the company said on Saturday.

As many as 45 Ministerial delegations and 30 Vice-Ministerial delegations will also attend, the sources said.

STATE, GOVT HEADS
On Friday, the Ministry of External Affairs released the names of 20 global leaders

GEARING UP. Preparations for the AI Summit in full swing in the NDMC Area, New Delhi on Saturday *ANI*

and heads of States who have confirmed their attendance at the summit. French President Emmanuel Macron and Brazilian President Luiz Inácio Lula da Silva, who have confirmed their attendance,

will be on official State visits. The summit will also host Presidents from Estonia, Serbia, Slovakia, Spain, Sri Lanka, and Switzerland and Prime Ministers from Bhutan, Croatia, Finland, Greece, Kazakhstan, Mauri-

tius, and the Netherlands.

The Crown Prince of Abu Dhabi (UAE), the Hereditary Prince of Liechtenstein, and Vice-Presidents of Bolivia, Guyana, and Seychelles, too, will be present.

“The summit will bring together global leaders, policymakers, innovators, and experts from across the world to deliberate on the way forward for AI,” the MEA said.

GLOBAL PLATFORM
The summit will serve as an impact-focussed global platform, shaping AI into measurable outcomes across economies, aligning with the national vision of ‘welfare for all, happiness of all and global principle of AI for humanity’, the government noted.

India must treat AI as public infra for it to work: HUL Chairman

Our Bureau
Chennai

Artificial Intelligence comes with its own set of risks, and the anxiety around AI is legitimate, but this should not lead India to miss the power it has to transform lives, Nitin Paranjpe, Chairman, Hindustan Unilever Ltd, said here on Saturday. He called on India to build strong institutions that ensure that benefits of the technology are “widely shared not narrowly captured”.

The HUL veteran, who started his journey as a management trainee in the 1980s, was delivering the 44th Palkhivala Memorial Lecture on ‘Artificial Intelligence for Aam Aadmi’, in Chennai.

Talking about the rapid advancements in AI and the impact it was having on society, Paranjpe urged the audience to introspect if the technology was contributing to enhancing human equity or quietly shrinking it. “The anxiety surrounding AI is real. And it is legitimate. It must be acknowledged, not dismissed,” he said.

SOME KEY RISKS

He listed a few key risks he perceives with proliferation of AI including the risk of digital colonisation, risk of deception and distortion at scale, the illusion of choice it creates with al-

AI’s true significance lies in the possibility that it may fundamentally change what it means to participate in society

NITIN PARANJPE,
Chairman, Hindustan Unilever Ltd

gorithms driving a narrow world view, and finally the biggest risk concerning job losses.

However, seeing the risks alone will lead to India missing the silent revolution underway, he noted.

“AI’s true significance lies in the possibility that it can fundamentally change what it means to participate in society,” Paranjpe said.

Citing instances of how AI is fundamentally altering the spheres of education, health and other such critical areas, he said that it offers hope for change.

“It begins to break the assumption that the inability to read and write denies you ‘access’ and excludes you from participating in economic activity and progress,” he said.

“If AI is to truly work for India, we must consciously treat it not merely as a private commodity, but as a form of public infrastructure. That means prioritising applications that serve public purpose,” he said. Institutions in India must remain “obsessively

focussed on promoting AI in voice form over text to ensure wider use, grow AI use in Indian languages over English, and on large-scale capability and skill-building.

“Because, it is not AI that will threaten livelihoods, but it is exclusion from AI that will,” he said.

HUL’S AI INITIATIVES

Answering questions from the audience, Paranjpe said that like all organisations, HUL too has been focussed on AI initiatives to improve productivity across R&D, marketing, finance, supply chain and other functions. In the corporate world, the real challenge now is the enterprise-wide AI use, he added.

Over the years, the Palkhivala Memorial Lecture series, organised by the Palkhivala Foundation, has been delivered by distinguished voices including Prime Minister Narendra Modi, Finance Minister Nirmala Sitharaman, and former RBI Governor Shaktikanta Das.

‘PM RAHAT’ plan for road accident victims launched

Our Bureau
New Delhi

The Centre has launched the PM RAHAT (Road Accident Victim Hospitalisation and Assured Treatment) scheme, aimed at providing cashless emergency care to road accident victims and improving survival during the critical “golden hour.”

According to the Ministry of Road Transport and Highways, Prime Minister Narendra Modi approved the launch as the first decision after the PMO shifted to Seva Teerth.

“The decision underscores the government’s commitment to ensuring that no life is lost due to lack of immediate medical assistance after a road accident,” the Ministry said.

Under the scheme, victims on any category of road will be entitled to cashless treatment of up to ₹1.5 lakh per person for a maximum of seven days from the date of the accident.

Besides, stabilisation treatment will be provided for up to 24 hours in non-life-threatening cases and up to 48 hours in life-threatening cases.

This provision, the Ministry said, is subject to police authentication through an integrated digital system.

ROAD FATALITIES

India continues to record a high number of road fatalities

ities each year, with studies indicating that timely hospital admission within the first hour could prevent nearly half of such deaths.

Accordingly, the new initiative is intended to address delays in treatment and the financial uncertainty often faced by hospitals in emergency cases.

Further, the scheme will be integrated with the Emergency Response Support System (ERSS) 112, enabling victims, bystanders, or Good Samaritans to dial 112 to locate the nearest designated hospital and request ambulance assistance.

Meanwhile, the implementation will rely on a technology platform combining the Electronic Detailed Accident Report (eDAR) of the Ministry of Road Transport and Highways with the Transaction Management System (TMS 2.0) of the National Health Authority.

Notably, this system will digitally link accident reporting, hospital admission, police verification, treatment, claims processing and payment.

Police confirmation timelines have been set at 24 hours for non-life-threatening cases and 48 hours for life-threatening cases to ensure both accountability and continuity of care.

As per the ministry, hospital reimbursements will be routed through the Motor Vehicle Accident Fund (MIVAF).

‘ISRO to push ahead with all planned launches of 2026 despite PSLV failure’

Our Bureau
Chennai

Despite the failure of the PSLV-C62 mission last month, the Indian Space Research Organisation will go ahead with all the 18 planned launches for 2026, according to Jitendra Singh, Union Minister of State (Independent Charge) for Science & Technology and Earth Sciences.

The next PSLV launch can be expected by June or July, he added.

Singh was speaking at the Research, Industry, Start-up and Entrepreneurship (RISE) Conclave organised by the Council of Scientific and Industrial Research (CSIR) here on Saturday.

“We have 18 launches planned this year including six private parties, and not a single launch has been cancelled or withdrawn. ISRO’s and the PSLV’s credibility continues to be intact.

We will launch Vyomitra, the female hu-

Jitendra Singh (right), Union Minister of State for Science and Technology, and M Ravi Chandran, Secretary, Ministry of Earth Sciences, at the RISE Conclave in Chennai *BUJOY GHOSH*

manoid robot astronaut, into space by the end of this year and are on track for the Gaganyaan Mission next year,” he told the media on the sidelines of the event.

Addressing the conclave, Singh said that the CSIR’s aim is to comprehensively develop the start-up ecosystem including in core Indian domains like leather, agriculture beyond just AI and IT sector.

He emphasised that the focus now should be on disseminating government schemes to the innovators.

The event also saw the signing of multiple Memoranda of Understanding

between CSIR and academic institutions and their incubation centres to strengthen structured collaboration.

Singh inaugurated the R&D facility of L&T in Chennai at the event.

BIG REFORM

N Kalaiselvi, Director General of CSIR and Secretary to the Department of Scientific and Industrial Research, said that the major reform within the national research labs is the increased collaboration and work synergy between various government divisions, academia and industry.

ixigo buys 60% in Spanish train ticket booking platform Trenes for ₹125 cr

Our Bureau
Mumbai

Online travel portal ixigo has acquired a majority stake in Trenes, second largest online train ticket booking platform in Spain, marking its first overseas acquisition. ixigo will acquire 60 per cent stake in Online Travel Solutions SL (which operates the Trenes brand) for around ₹125 crore, the company informed stock exchange late Friday evening.

Additionally, the company has also picked up for around ₹5 crore a 45 per cent stake in Spanish start up Sqaas that provides technology solutions.

The acquisition comes on the back of last October’s fund raise by ixigo via a 10 per cent stake sale to Prosus for ₹1,296 crore. The acquisition of Trenes is being carried out via ixigo’s Singaporean subsidiary and will be completed before March end. Following the proposed acquisi-

tion of 60 per cent of the paid-up share capital, On-line Travel Solutions, SL shall become a step-down subsidiary of ixigo. ixigo shall also have the right to acquire the remaining shareholding at a future date, subject to the fulfilment of agreed conditions.

Trenes is a fast-growing, profitable, founder-owned online train ticket booking platform serving Spain and Southern Europe.

The platform is integrated with major Spanish and European rail operators, enabling seamless multi-operator rail bookings.

Trenes recorded a revenue of €5.5 million (around ₹60 crore) and a net profit of €1.35 million (around ₹15 crore) in CY 2025. ixigo said the acquisition will bring synergies by combining Trenes’ strong customer base, brand presence, and local operator integrations with ixigo’s AI-led product innovation and technological expertise.

AP FM presents ₹3.32 lakh cr outlay Budget for 2026-27

Our Bureau
Hyderabad

Andhra Pradesh Finance Minister Payyavula Keshav presented the State Budget for 2026-27 on Saturday, proposing a total outlay of ₹3.32 lakh crore — a tad higher than last year’s ₹3.22 lakh crore. The Budget estimates a revenue expenditure of ₹2.56 lakh crore and a capital expenditure of ₹53,915 crore.

Stating that two years (since the TDP government came to power) are not enough to rebuild a State that faced ‘catastrophic events since its inception’, Keshav said the government is building two major growth engines — regional economic zones and a horticultural hub to spur growth in backward regions.

The government also announced plans to set up a dedicated Cybercrime Police Station in every district.

‘MODERN-DAY CRIMES’

These stations will be designed to address “modern-day crimes,” such as digital arrests that traditional policing may not be equipped to handle.

“In the very first year of our governance, the economy bounced back from an average growth rate of 10.3 per cent in 2019-24 to an impressive 11.75 per cent in 2024-25. Then came 2025-

AP Finance Minister Payyavula Keshav presenting the Budget for 2026-27 in the Assembly at Amaravati

26, which has been characterised by headwinds of geopolitical uncertainties,” he said. Presenting the Budget in the Assembly at Amaravati on Saturday, Keshav said the government proposes a ₹30,000-crore plan to promote a horticulture hub in Rayalaseema. “Chief Minister N Chandrababu Naidu has decided to transform the lives of farmers in the Rayalaseema region by making this region into a global horticulture hub. We will increase the area under horticultural crops to 14.41 lakh hectares from 8.41 lakh hectares by 2030,” he said

CARRYOVER DEBT

Denying the Opposition criticism that the debt burden is mounting, the Finance Minister said that the erstwhile government had left the State with liabilities of ₹9.74 lakh crore. We are

KEY ALLOCATIONS

- Amaravati: ₹6,000 cr
- Power Sector: ₹13,934 cr
- Roads, Ports & Airports: ₹13,546 cr
- Industries: ₹3,161 cr
- School Education: ₹32,308 cr
- Health & Medical Dept: ₹19,306 cr

3 KEY REGIONS

Stating that the government has identified three regions of Visakhapatnam, Amaravati and Tirupati as the key growth engines, he said, “We announced an outlay of ₹28,000 crore for the Visakhapatnam Economic Region with 41 high-impact projects across manufacturing, services, infrastructure, urbanisation, and agricultural sectors.” Regarding the Polavaram project, he said the government cleared pending bills totalling ₹5,000 crore. The Budget allocates ₹8,365 crore to Viksit Bharat-Guaranteee for Rozgar and Ajeevika Mission (Gramin) (VB-G RAM G) and ₹638 crore to quantum computing.

Andhra Pradesh gets exclusive ₹53,752 crore Agri Budget

Our Bureau
Hyderabad

Andhra Pradesh Agriculture Minister Kinjarapu Atchannaidu presented a ₹53,752 crore Budget for the Agri and Allied Sectors for 2026-27, including ₹14,277 crore for irrigation, ₹13,722 crore for the power sector, and ₹12,152 crore for the Agriculture Department.

GROWTH RATE

Presenting an exclusive Agriculture Budget in the Assembly at Amaravati on Saturday, the Minister said that the share of agriculture is 33.20 per cent of the Gross

AP Agriculture Minister Kinjarapu Atchannaidu

State Domestic Product (GSDP) of ₹17.62 lakh crore. “Against the national

growth rate of 0.80 per cent in agriculture, the State achieved a growth rate of 7.83 per cent. The State contributes 10 per cent to the national agriculture output,” he said.

MICRO IRRIGATION

The Budget allocated ₹6,600 crore for the farmers’ financial assistance scheme ‘Annadata Sukheebhava-PM Kisan’ scheme.

Stating that the Telugu Desam government had brought an additional 5.5 lakh acres under micro irrigation, he said the Budget proposes to add 3.75 lakh more acres to this water-efficient farming method.
