UJJIVAN SMALL FINANCE BANK

THE ONLY PLACE FOR 'SMALL' IS IN OUR NAME.

When people hear the word 'small', they sometimes assume it reflects the size of the institution or the ticket size of the loans we offer. It doesn't, and here's why.

Your money grows faster with Ujjivan's attractive interest rates on Savings and Deposits.
Our loan offerings start at ₹6,000 to over ₹250 crore**.

We bank in your language,
so that nothing's ever lost in translation.

We've got over 800 branches across 26 states and union territories.

Feel free to drop in for coffee and a conversation. Because over 1 crore customers did exactly that. They trusted us and realised their dreams and aspirations.

NOTHING SMALL ABOUT US

Ujjivan Small Finance Bank

- A Scheduled Commercial Bank
- Over 26,500 employees
- ₹48,129 crore Deposits and ₹42,903 crore Gross Loan Book
- Up to 7.15%# interest p.a. on Savings Accounts
- Up to 7.8%# interest p.a. on Fixed Deposits

OUR OFFERINGS

- Savings Accounts
- Current Accounts
- Term Deposits
- Loans
- Co-branded Credit Cards
- Debit Cards
- Mutual Fund Distribution Services^
- Demat & Trading Solutions through our partner*
- NRI Services & Forex
- Ivory Programme

Rupee briefly breaches 96/$ mark, but pulls back

CURRENCY COMFORT. RBI intervention and easing crude oil prices stabilise the unit

Our Bureau
Mumbai

After briefly breaching the psychologically crucial 96 to the US dollar mark, the rupee pulled back to close unchanged on Tuesday, supported by dollar selling by banks, likely at the behest of the Reserve Bank of India and foreign portfolio investors, and a slight thaw in crude oil prices.

The rupee, which opened weaker at 96.05 per dollar, tested a high/low of 95.95/96.15. It closed at 95.98, unchanged from the previous day's level.

"USD/INR's attempts to decisively break above 96 have been thwarted by the central bank's steady intervention, but upward pressure was relentless on Tuesday in the midst of exogenous triggers. Testament to this: foreign reserves declined sharply by $14.9 billion over the past week to $765.9 billion," said Radhika Rao, Senior Economist (South Asia and South-East Asia) & Executive Director, DBS Bank.

GLOBAL PRESSURE

Rao emphasised that the authorities see reserve accumulation as a means of defending market stability, reducing the risk that a break of key rupee levels would trigger a larger correction driven by hedging flows and speculative positioning. Global drivers will continue to exert depreciation pressures on the local unit this week, she added.

Dilip Parmar, Research Analyst, HDFC Securities, said the rupee started the day under pressure, briefly cracking the 96 per dollar level before clawing back lost ground. Swift RBI action, a pullback in global crude and equity index rebalancing driven foreign inflows restored stability.

"Looking ahead, the pair's direction will remain heavily influenced by what happens with oil and broader global risk dynamics. From a technical standpoint, spot USD/INR encounters resistance at 96.30, while 95.80 serves as a support," Parmar said.

Madan Sabnavis, Chief Economist, Bank of Baroda, observed that the large inflows of dollars through FCNR-B (foreign currency non-eesident - bank) deposits and ECBs (external commercial borrowings) had not quite pushed up the rupee as the dollars reside with the RBI.

Sabnavis said that in the current situation, a range of ₹94.5-96 looks likely in the near term.

Sharp appreciation, which theoretically should have been the case, had been checked as the dollar inflows have not been infused into the market but added to the reserves.

Tata Trusts' proposal 'could pave way for merger of Tata's two iPhone manufacturing units'

Aneesh Phadnis
Mumbai

STRATEGIC MOVE. Tata Trusts Advisor Farokh Subedar said that merging TESS and TCE with Tata Sons is the cleanest option but the holding company board could look at other firms as well

Tata Trusts' proposal to keep Tata Sons private could lead to a merger of its two iPhone manufacturing units, Tata Electronics Systems Solutions Private Ltd (TESS) and Tata Electronics Products and Solutions Private Ltd.

TESS (formerly known as Wistron Infocomm Manufacturing India) owns 60 per cent stake in device maker Tata Electronics Products and Solutions Private Ltd (formerly Pegatron Technology India Ltd).

Tata Trusts Advisor Farokh Subedar said TESS had the right to buy the balance 40 per cent shares. "In a year's time or so once it becomes 100 per cent subsidiary of this particular company (TESS), it can also get merged. It will immediately add another ₹60,000 crore of income," he told reporters.

RBI FRAMEWORK

On Monday, Tata Trusts proposed a merger of Tata Electronics Systems Solutions Private Ltd (TESS) and Tata Consulting Engineers (TCE) with Tata Sons to keep the holding company outside ambit of RBI's Non-Banking Finance Company - Upper Layer (NBFC-UL) category.

Tata Trusts is hopeful that the merger will keep Tata Sons outside the purview of the RBI's regulatory framework for NBFC-UL. It also believes that new investments by the holding company will not change the status.

Subedar said TESS had a turnover of over ₹60,000 crore and an asset size which "keeps us below the 90 per cent cap applicable to a core investment company".

Tata Trusts did not respond to queries on steps involved in merger plan and risks involved in the process.

In 2023, the Tata group acquired manufacturing facility of Wistron India, which had faced labour unrest and plant shutdown. With this acquisition, it became the first home grown company to manufacture iPhones in India. In 2025, the Tata Group bought 60 per cent stake in Pegatron India's unit in Tamil Nadu.

TESS had a standalone operating revenue of ₹67,542 crore in the last fiscal year. Its consolidated revenue in FY26 stood at ₹1,26,896 crore.

THE CLEANEST OPTION

Subedar said merging TESS and TCE with Tata Sons is the cleanest option but the holding company board can look at other companies as well.

The Trusts' proposal will need approval from Tata Sons board as also a 'no objection certificate' from the RBI besides required statutory approvals. "In my view, the proposed merger of TESS and TCE into Tata Sons will face significant regulatory and governance scrutiny.

"The immediate issue is the RBI approval because the restructuring could potentially alter Tata Sons' regulatory classification and, consequently, its listing obligation. The RBI is likely to examine whether there is a genuine commercial and operational rationale for bringing these businesses into Tata Sons or whether the structure is primarily being used to avoid the consequences of the NBFC-UL framework," said Sonam Chandwani, Managing Partner, KS Legal & Associates.

SP GROUP ANGLE

"The Shapoorji Pallonji Group angle makes the issue even more sensitive. As a significant minority shareholder, it has a strong economic interest in the future structure and liquidity of Tata Sons. While it does not automatically have a legal right to demand an IPO, any restructuring that effectively removes or delays a potential liquidity route could raise questions about whether minority shareholder interests are being adequately protected," she added.

Mazagon Dock not to proceed with shipyard project at Thoothukudi 'over land issues'

T E Raja Simhan
Chennai

Mazagon Dock Shipbuilders Ltd (MDL) has called off its proposed shipyard project in Thoothukudi, with the availability of preferred land emerging as a key issue.

The land parcel sought by the public sector MDL was also being considered for Korean shipbuilding major HD Hyundai's proposed shipyard. Given the significantly larger scale of the HD Hyundai project, the Tamil Nadu government had decided to prioritise the site for the Korean company, sources said.

Sources in both MDL and the Tamil Nadu government confirmed that the shipbuilder had called off the project at Thoothukudi.

In September 2025, MDL had signed an MoU with the Tamil Nadu government to establish a shipyard in Thoothukudi at an investment of ₹15,000-18,000 crore.

APPROVAL DELAYS

However, delays in obtaining approvals and the uncertainty over the land parcel had prompted the public sector company to pursue projects elsewhere, said sources.

MDL recently signed an agreement with the Andhra Pradesh government to develop a ₹15,000 crore greenfield shipyard at Dugarajapatnam. The project is expected to generate around 45,000 direct and indirect jobs.

MDL also plans to invest around ₹27,000 crore in a greenfield shipbuilding cluster at Dighi in Maharashtra's Raigad district, which is expected to generate around 90,000 jobs.

LAND ISSUE

Sources in the Tamil Nadu government said that the principal issue in Thoothukudi was the land parcel identified for MDL.

"Given the significantly larger scale of HD Hyundai's proposed operations, its global shipbuilding capabilities and the potential for it to serve as an anchor investor for the wider shipbuilding ecosystem not only for Tamil Nadu but for India, the Tamil Nadu government decided to prioritise the site for the HD Hyundai project," the sources said.

The State is said to have subsequently offered MDL land parcels at other locations in Tamil Nadu. However, MDL has not yet responded to the offer.

The government sources said they remained open to working with MDL on alternative locations. Meanwhile, Korean company HD Hyundai has stepped up work on the project, with a high-level delegation visiting Thoothukudi recently to inspect the site.

Senior company officials also met Tamil Nadu Chief Minister C Joseph Vijay.

ANCHOR INVESTOR

The development comes as the Centre plans to establish five greenfield shipbuilding clusters at strategic locations along the country's coastline, with 100 per cent central capital assistance for developing common infrastructure.

Thoothukudi has emerged as the most advanced of the five proposed clusters, according to the Directorate-General of Shipping.

The cluster is planned over 2,050 acres, with a 2.4-km waterfront and a draft of about 5 m. It is being developed adjacent to the VO Chidambaranar Port.

Foreign Secretary flags India's worry on 'sanctions law' to US lawmakers

Amiti Sen
New Delhi

Foreign Secretary Vikram Misri conveyed to a visiting US Congressional delegation India's concerns over the Sanctioning Russia and Iran Act (SRIA) that empowers the US administration to impose up to 100 per cent tariffs on imports from countries buying Russian oil.

Misri noted that it may affect bilateral relationships and the global energy market, the Ministry of External Affairs has said.

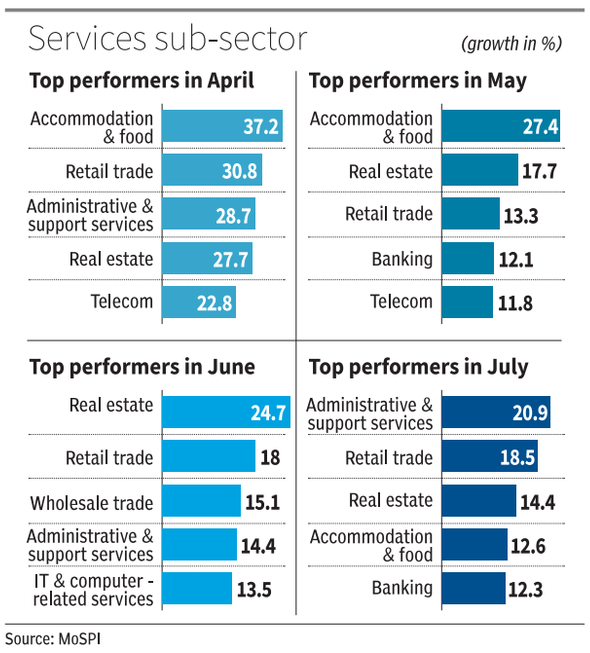
"At the meeting (on Sunday), various issues of bilateral interest were discussed. Foreign Secretary conveyed our concerns in regard to the SRIA legislation, as far as the kind of implications it would have on the bilateral relationship as also the international market," MEA spokesperson Randhir Jaiswal said at a media briefing on Tuesday.

While the sanctions law empowers the US President to impose tariffs on top buyers of Russian energy, including India, it does not lead to an automatic imposition of 100 per cent tariff on Indian goods.

There are indications that the law may be used as a leverage in the ongoing India-US negotiations for a Bilateral Trade Agreement, sources said.

Services on a roll as 10 sub-sectors grow in double digits in July, led by 'administrative services'

Shishir Sinha
New Delhi



Source: MoSPI

'Administrative and support services' and nine other service sub-sectors recorded double-digit growth in July, the Statistics Ministry reported on Tuesday.

These are part of the Sub-Sectoral Trial Index of Services Production (ISP), which covers 19 sub-sectors. These sub–sectors cover about 60 per cent of the services sector. Such an index measures short-term movements in India's formal services sector. The base year for the index is 2024-25.

TOP SECTORS

The ISP data for July showed that top sub-sectors reporting strong growth were 'administrative and support services' (20.9 per cent), 'retail trade' (18.5 per cent), 'real estate' (14.4 per cent), 'accommodation and food' (12.6 per cent) and 'banking' (12.3 per cent). However, 'repair services' and 'air transport' declined by 5 per cent and 8.4 per cent, respectively. Overall, "10 out of the 19 sub-sectors recorded double-digit growth in July 2026 compared to July 2025. Seventeen out of the 19 sub-sectors recorded positive growth in July 2026," the Ministry said.

According to DK Srivastava, Chief Policy Advisor at EY India, the services sector growth rate, as represented by the 19 services, is tangibly higher than the overall IIP growth for August, which was 8 per cent. The economy is getting pulled by services growth relatively more than industrial or agricultural growth.

"The second quarter growth prospects appear to be bright since services growth in July and August averaged more than 13 per cent and the average y-o-y IIP growth for these two months was close to 7.4 per cent. While global uncertainties persist, the Indian economy shows continuing resilience," Srivastava said.

Rajni Sinha, Chief Economist at CareEdge, said the July ISP data reflect broad-based expansion in the services sector as growth was observed across most of the sectors.

Growth was led by encouraging performance in 'real estate' and 'trade'. However, the 'air transport' sector continues to bear the brunt of the ongoing geopolitical tensions and elevated energy costs, with output contracting for the fourth straight month.

While the Ministry has not yet released the headline ISP growth figure, "our calculations based on the current framework suggest that services output grew by 13.5 per cent y-o-y in July, slightly higher than 13.2 per cent in June. The growth was in line with India's continued resilience and strong economic growth momentum as seen in indicators such as exports, GDP growth, bank credit offtake and GST collections," she said.

Given the strong momentum visible across the other economic indicators, "we expect the service sector to maintain its underlying strength in the months ahead," she added.

OTHER SECTORS

The broad-based services performance comes against the backdrop of strengthening activity across other parts of the economy. India's industrial output growth accelerated to 8 per cent in August from 7.4 per cent (revised) in July, marking one of its strongest growth rates in recent months, according to Statistics Ministry data.

Manufacturing, which carries the largest weight in the index, grew 9 per cent year-on-year and has now recorded growth of 8 per cent or more for three consecutive months.

Electricity and gas supply was another major driver, with output rising 12.3 per cent, while water supply, sewerage and waste management grew 6.3 per cent. Mining, however, remained a drag, contracting 5.6 per cent year-on-year in August.

Manufacturing start-ups see rising investor interest as they shift focus to hardware

Jyoti Banthia
Aishwarya Kumar
Bengaluru

Manufacturing firms raised $635 million across 69 funding rounds in 2026 year-to-date

Indian manufacturing start-ups are drawing a fresh wave of investor capital as the perceived moat shifts from software to the physical layer, with investors increasingly backing companies building products, components, industrial processes and manufacturing capabilities.

Manufacturing companies raised $635 million across 69 funding rounds in 2026 year-to-date, more than four times the $118 million raised in 2020, according to Tracxn data.

Industrial automation, component manufacturing, deep tech, energy infrastructure, medical devices, space tech, electric vehicles and advanced materials are among the segments seeing traction, said Ankit Kedia, Founder and Lead Investor at Capital-A.

THE PHYSICAL LAYER

Investors said the rise of artificial intelligence is also changing how they assess defensibility. As software development becomes easier, the physical layer, including products, manufacturing processes and shop-floor know-how, can offer a harder-to-replicate moat.

"When anyone can build a good app in weeks, the digital layer becomes less of a moat. What is harder to copy is the physical layer, the product, the process and the know-how on the shop floor," Kedia said.

The founder pool is changing too, he said, with more engineers from global original equipment manufacturers bringing process IP and manufacturing expertise into start-ups. Large Indian companies are also increasingly willing to put start-up components into their production lines.

Jashank Pohani, Head of Family Office Relationships at Artha Group, said the opportunity is particularly deep beneath the headline products. "The real depth is in the layer beneath the headlines: Components, sub-systems and capital equipment," he said.

COMMERCIAL SCALE

The increased investor interest does not mean start-ups can ignore the economics of manufacturing. Investors are increasingly looking for working products, customer validation and evidence that demand can translate into repeat orders.

Ajay Modi, Director at Piper Serica, said the current cycle differs from earlier manufacturing narratives because investors are demanding more evidence of commercial traction.

Kaushik Mudda, Co-founder and CEO of Ethereal Machines, said manufacturing start-ups may need to think differently about capacity creation. "When you want lots of customers to take a bet on all of this, you need to be able to show them that the capacity is already there rather than saying, 'Why don't you give me an order? And then I will start putting up capacity'," he said.

For Ethereal Machines, Mudda said, capacity creation had preceded demand, with the company raising capital after its existing capacity was sold out.

THE CHALLENGE

Jinesh Shah, Managing Partner at Omnivore, said he looks at the opportunity through three lenses: "India for India, India for the world, and the world for India."

The bigger financing challenge, he said, lies between a promising pilot and a functioning commercial operation. Companies at this stage can require substantial capital while remaining too early for traditional bank financing and too large a commitment for their seed investors.

India needs to cut energy import dependence: Das

New Delhi: The Indian economy is a bright spot in an uncertain world, though it needs to reduce its import dependency, Shaktikanta Das, Principal Secretary-2 to the PM, said on Tuesday. While noting that the West Asian conflict had triggered an increase in energy prices, he said India's economic strategy was guided by the principles of macroeconomic and financial stability and structural reforms. **p3**

US STRATEGY SHIFT

H-1B applications fall as Indian IT eyes local hires

Bengaluru: The sharp fall in Indian IT firms' H-1B registrations in FY27 signals that higher immigration costs are reshaping their US staffing strategies, pushing them towards local hiring. Following the implementation of the $100,000 proclamation payment in late 2025, the US Citizenship and Immigration Services has seen a shock decline of over 90 per cent in consular H-1B receipts. **p12**

Rosatom in talks with RIL, Adani, NTPC for N-projects

POWER PUSH. Russian giant says private participation will help India build capacities

Rishi Ranjan Kala
New Delhi

Russia's state-owned nuclear energy corporation Rosatom is in talks with some of India's biggest corporate and government-owned power companies, including the Adani Group, Reliance Industries, the Jindals and NTPC.

The company is looking to participate in India's rapidly expanding nuclear power programme, Kirill Komarov, First Deputy Director- General for Corporate Development and International Business at Rosatom, told *businessline*.

The development follows India opening its nuclear power sector to wider private participation through the Sustainable Harnessing and Advancement of Nuclear Energy for Transforming India (SHANTI) Act, 2025, and seeking to increase nuclear capacity from the current 8.78 giga watt to 100 GW by 2047.

BUILDING CAPACITY

"We now have talks with a lot of companies from the private sector, including all your famous names like the Adani Group, Reliance and Jindals and your state-owned company NTPC," said Komarov. "All of them are interested in having access to nuclear technologies." Private participation, he said, will allow more companies to invest and build capacities alongside state-owned enterprises.

Rosatom, which accounts for about 20 per cent of Russia's power generation, ranks first globally in terms of the order portfolio size for constructing nuclear power plants, with 46 units at various stages of implementation across 10 countries, including China, India, Bangladesh, Türkiye, Egypt, Hungary, Iran and Kazakhstan.

New Delhi has been pushing for nuclear energy as it is a baseload source of electricity available round the clock, with lifecycle emissions comparable to renewables such as hydro and wind power. It is also uniquely placed to meet the always-on power needs of data centres, advanced industries and emerging technologies.

Currently, nuclear power capacity accounts for a mere 1.6 per cent of India's total installed capacity of 556.85 GW. Coal accounts for 45.35 per cent and renewable energy 43 per cent.

OPENING UP IS GOOD

Komarov emphasised that the scale of the target makes it necessary to bring more companies into the sector.

"Such an ambitious task is very difficult for only one company," he said, referring to the Nuclear Power Corporation of India (NPCIL), which currently operates, and is also building, most of India's nuclear facilities.

"It's very good if your government decides to invite into the nuclear sector not only state-owned companies but private companies, too, because you need a lot of companies that will construct, operate, invest, put in effort and resources to do these very complicated things," he noted.

For Rosatom, the opportunity is not limited to supplying reactors.

LOCALISATION, THE KEY

Komarov said localisation will be central to India's nuclear expansion, adding that the scale of the programme makes it impractical to rely on imported equipment and materials. "I think the key element of success for your country is your localisation [Make in India] programme. For such an ambitious programme, you need to be able to not only import all equipment and materials but also produce a majority of these things in India."

Rosatom, he said, had already reached 50 per cent localisation at Kudankulam in Tamil Nadu, and was ready to replicate the model with new Indian companies entering the nuclear sector.

EXPERT IN THE FIELD

As one of the world's largest integrated nuclear energy companies, with operations spanning reactor construction, nuclear fuel, uranium mining and the wider nuclear fuel cycle, Komarov under-scored Russia's experience as a nuclear power technology and services exporter.

Of its 32 nuclear units under construction globally for export, Komarov said 28 were based on Russian design. Rosatom, he added, had also constructed about 20 nuclear power plants over the past two decades.

Interview **p2**

ENERGY PIVOT

- NPCIL is the only entity in India currently tasked with constructing and operating nuclear power plants
- India aims to increase nuclear power capacity from 8.78 GW currently to 100 GW by 2047
- Considering the ambitious target, the Centre intends to bring in private participation
- The SHANTI Act broadens the scope, letting regulated private and JV firms take part in civil nuclear activities

Kirill Komarov, First Deputy D-G, Corporate Development and International Business at Rosatom

Essar-backed Mesabi Metallics to invest $18 billion, build fully integrated steel plant in US

Our Bureau
Ahmedabad

Essar Group-backed Mesabi Metallics has announced an $18 billion (nearly ₹1.73 lakh crore) investment to build a fully integrated steel business in the US. It is one of the largest investments by an Indian group in American manufacturing and part of a broader $20.5 billion investment push by Indian companies into the US.

Essar described it as the largest single-location investment in an integrated steel complex in American history, linking an iron ore mine and a pellet plant in Minnesota with a proposed $15 billion steel complex in Iowa. Once completed, the integrated operation is expected to produce 10 million tonnes of steel annually, using iron ore from Mesabi Metallics' Minnesota mine, US President Donald Trump said while announcing the investment on Monday.

$20.5 B INVESTMENTS

The announcement comes amid a broader push by Indian companies to deepen their manufacturing and investment footprint in the US.

During the SelectUSA Investment Summit, in May 2026 in Maryland, Indian industry leaders had highlighted $20.5 billion of planned investments in the US across pharmaceuticals, advanced manufacturing, energy infrastructure and emerging technologies (*see graphic*). These investments are expected to create thousands of jobs, strengthen supply chains and expand capacities in the US.

THE NO-TARIFF ANGLE

Against this backdrop, Essar's $18 billion project is among the biggest Indian-origin manufacturing investments being planned in the US and represents a significant expansion of the Group's American industrial footprint. Trump said the project will create up to 6,000 construction jobs and 2,000 manufacturing and mining jobs, and add $95 billion to the US economy.

"This is a tremendous investment... Everyone's building their plants here because they do not want to pay tariffs," said Trump.

Mesabi Metallics is developing a $2.5 billion direct-reduction-grade iron ore mine and pellet plant in Nashwauk, Minnesota. Rewant Ruia, Chairman of Mesabi Metallics, said the company is investing $3 billion in Minnesota to build "the first new mine in America in 50 years".

"We will be producing the Patriot pellet very soon, which will be among the highest quality iron ore pellets in the world," said Ruia.

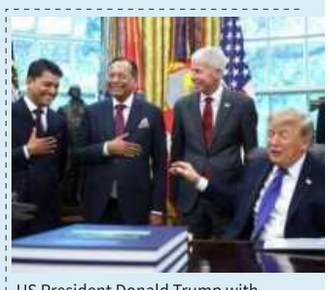
With the new steel complex in Iowa, he said, the company will complete a fully integrated American supply chain "from mine to mill: American ore carried on American railroads to an American steel plant powered by American energy, built and operated by an incredibly hardworking and talented workforce," he said, while standing alongside Trump at the White House.

"This plant will use the latest technology and will compete head-to-head with any steel plant in the world on size, quality and cost," Ruia said.

Destination US

So far in 2026, Indian companies have promised investments worth $20.5 billion in the US

- Sun Pharmaceuticals proposed a **$11.75 billion** acquisition of Organon & Co
- JSW Steel to commission **$255 million** for modernising projects in Ohio and Texas
- Abhyuday Group to invest **$900 million** across five US sites
- Sterlite Technologies to invest **$100 million**
- PR Jindal Group to invest **$87 million** in Texas and Mississippi expansions



US President Donald Trump with (from left) Rewant Ruia, Chairman, Mesabi Metallics, Ravi Ruia, Co-Founder and V-C, Essar Group, and US Energy Secretary Chris Wright in Washington DC on Monday REUTERS

Drugs MRP at 10x the retailer price, a carnage: Apex court

Aaratrika Bhaumik
New Delhi

The Supreme Court has expressed concern over the sharp disparity between the prices charged to retailers and consumers for essential medicines, particularly cancer drugs. Steep mark-ups place an enormous burden on taxpayers and amount to "carnage", the top court said on Tuesday.

"Why not keep the 16 per cent margin on MRP, which is prescribed in the DPCO [Drugs Prices Control Order], on everything," a Bench of Justices Vikram Nath and Sandeep Mehta asked the Centre.

"Ultimately, the loser is the taxpayer. This is carnage, as simple as that," it remarked.

BREAKING THE BANK

The observations came as the court heard petitions by advocate Kishan Chand Jain and paediatric surgeon Sanjay Kulshrestha, seeking its intervention to regulate the prices of drugs, medical equipment and generic medicines.

Justice Mehta pointed to the nearly 10x mark-up on an essential cancer drug. What was supplied to retailers for around ₹3,000 was being sold to consumers at ₹27,000. "You tell us why this difference... Where does this chunk of the money go?"

WHO GAINS? Private hospitals, not pharma firms, benefit from the massive price bump, said the Centre PTI

Solicitor-General Tushar Mehta, appearing for the Centre, acknowledged the court's concern and said the government will have to find a way forward while "balancing equities". He, however, added that private hospitals, not pharmaceutical companies, benefited from the steep mark-up.

The Bench also flagged the practice of private hospitals insisting that patients purchase medicines from their in-house pharmacies, leaving them with little choice to procure the same at lower prices elsewhere.

IMPACT ON TAXPAYERS

The judges also pointed to the impact of such inflated prices on public finances, observing that when treatments are covered under public health schemes such as Ayushman Bharat, taxpayers ultimately bear the cost. "This affects a larger section of the society," the Bench remarked. Mehta sought time to place before the court details of the existing drug pricing mechanisms. The next hearing has been posted for October 12.

Earlier this month, the top court had described the wide difference between the price to retailers and the MRP of medicines as "dacoity", while drawing attention to patients' financial distress.

"The MRP is 10x the rate at which it is provided to the retailers. If this is not extortion, then what is it? People sell their houses, ornaments to get treatment," it had remarked.

Avoid disproportionately cutting remuneration in the proposed reforms: Life insurance agents' body to IRDAI

G Naga Sridhar
Hyderabad

A likely reduction in remuneration is worrying some 15 lakh life insurance agents, and they are urging the Insurance Regulatory and Development Authority of India (IRDAI) to avoid a "disproportionate" cut in commissions under its proposed insurance distribution reforms.

"On behalf of life insurance agents, we have submitted our response to the regulator's consultation paper, requesting that any new distribution framework should not adversely affect the legitimate expectations and livelihoods of existing agents," B Markandeyulu, Secretary-General of the Life Insurance Agents Federation of India (LIAFI), told *businessline* on Tuesday.

There was a need to incorporate appropriate provisions for grandfathering the transition provision in the proposed new norms, particularly in relation to the existing business, he said. The regulatory provisions, he added, should also recognise the service being rendered by the agents.

"We believe the success of insurance reforms should ultimately be measured not only by the reduction in the distribution cost but also by the effective expansion of insurance coverage, protection of policyholders and the role played by human agents in rural and semi-urban India," Markandeyulu said.

That's where a large number of the population faces difficulties in accessing digital platforms to purchase a policy, he added.

A LEVEL PLAYING FIELD

The representation also sought a level playing field for individual agents by ensuring a "fair" treatment to all intermediaries, including corporate agents, banks and digital platforms.

The distribution reforms should ultimately aim at increasing the insurance coverage and improving policyholder outcomes, the Federation said while cautioning that cost efficiency should not be pursued in a manner that reduces the number of active agents or makes the profession economically unsustainable.

A comprehensive impact assessment study should be undertaken before implementing measures that may materially affect commissions, remuneration or the size of the agent force, the Federation said.

The assessment, it added, should cover insurance penetration, policy persistency, rural and social sector coverage, agent livelihood, employment, policyholder servicing and a long-term growth for the industry.

According to the IRDAI's consultation paper, the commission framework is proposed to be recalibrated in parallel.

Instead of a uniform approach, commission limits will take into account the segment, line of business, distribution channel, product complexity and the effort involved in selling and servicing a product.

AGENTS' APPEAL

- Ensure continued viability of individual agents
- Recognise continuing servicing responsibility in distribution economics
- Maintain a level field across distribution channels
- Provide transition protection
- Recognise role of agents in rural/semi-urban areas

Biodeal buys Biological E's Himachal facility

New Delhi: Contract development and manufacturing organisation Biodeal Pharmaceuticals has acquired a sterile injectable manufacturing facility in Himachal Pradesh from Biological E. The acquisition, combined with Biodeal's planned investment in the facility, represents a total outlay of over ₹400 crore, Biodeal Pharma said. Spread across 14 acres, the plant has a built-up manufacturing space of 39,000 sq m and an annual capacity of approximately 135 million units. PTI

Nuclear is the only source of clean, green energy: Rosatom

ENERGY MISSION. India's goal of 100 GW in 20 years is ambitious: Company official

bl.interview

Rishi Ranjan Kala
New Delhi

Pointing out that nuclear energy is the only long-term, reliable and clean source of 24x7 base load power, Kirill Komarov, first Deputy Director General for Corporate Development and International Business at Russia's State-owned nuclear energy corporation Rosatom, emphasised that India's goal of adding 100 GW of nuclear power by 2047 is ambitious, but achievable.

Edited excerpts:

> The world needs to have some solid, reliable source of energy, like a base-load, which can work 24/7, 365 days per year
>
> **KIRILL KOMAROV**
> Deputy Director General - Corporate Development and International Business, Rosatom

How would you analyse the state of energy transition today?
The energy situation in the world is really changing, and changing very seriously. The world is still committed to having enough power, and people today care not only about having enough power, but also having clean, green power.

People are more concerned about the source of this power, how this power is influencing the natural environment, the health situation and a lot of other aspects.

If we look at the history of the last five years, the main change is that before, a lot of people thought that solar and wind were enough to cover all the energy needs of the whole world.

Now everybody understands that it's good, but not enough.

And the world needs to have some solid, reliable source of energy, like a base-load, which can work 24/7, 365 days per year.

And honestly, today there is only one such source of clean, green and sustainable energy. It's nuclear.

What are your thoughts on India's efforts towards a clean energy transition and the role of nuclear energy in it?
India is in the same line with the whole world trends.

What is good is that your government decided to increase the quantity of nuclear power plants in the territory of the country in a very ambitious way, because if today you have approximately 10 GW, you plan to have up to 100 GW in the coming 20 years.

It's a very ambitious goal, but achievable, because we have already seen a lot of examples in world history of how countries did the same.

For instance, the US now has approximately 100 GW of total installed capacity, and if you look at the history, the majority of these 100 GW were constructed in 20-30 years, which means that with modern technologies it is achievable to reach this result.

How does Rosatom look at the emerging competition in India from French and US companies?
If you look at the world landscape today, 32 nuclear units are constructed for export. For export, I do not calculate Russian nuclear power plants in Russia or Chinese nuclear power plants in China.

I calculate only nuclear power plants which are constructed for export purposes.

There are 32 in the world today. Twenty eight of them are constructed on the basis of Russian design. It means we have, approximately 90 per cent of the world market today. It's the best evidence that our technology is very competitive. Our company is very competitive.

EDF is not constructing any single reactor in France, Westinghouse is not constructing any single reactor in the US.

If you cannot demonstrate a success story or how many reactors you constructed during the last years in your own country or abroad, it's very difficult.

Russia constructed approximately 20 nuclear power plants during the last 20 years, which means every year we are constructing a minimum of one plant.

It's a very good track record because it gives us a lot of experience.

We are not only a No 1 company in construction. We are a leading company in all other elements and aspects of nuclear technologies.

I mean the fuel cycle, spent fuel management, radioactive waste management and a lot of other things.

What are your thoughts on the SHANTI Act?
I think this Act, which was approved in India last year, is very useful for your nuclear programme.

As we discussed already, you have a very ambitious goal to increase your nuclear fleet up to 100 GW.

NPCIL, as the only company which is now constructing and operating nuclear power plants in India, is definitely a serious, experienced company which knows how to do this.

But such an ambitious task is very difficult for only one company.

And it's good if your government decided to invite not only State-owned companies but also private companies into the nuclear sector, because you need a lot of companies that will construct, operate, invest money, put in effort and resources to do these very complicated things.

And I believe that you have experienced energy companies which understand how to do it.

What are your thoughts on localisation?
I think the key element of success for your country is your localisation programme, your 'Make in India' programme. Because for such an ambitious programme, you need to be able not only to import all equipment and materials, you need to be able to produce the majority of these things in India.

We already reached a level of 50 per cent localisation at Kudankulam, and we are ready to repeat this example with all new companies, all new players in this market.

Bank credit growth rises steadily, driven by loans to industry

Yashaswani Chauhan
New Delhi

Bank credit growth, which had hit a low of 9 per cent in May 2025, has been steadily increasing since the second half of last year, spurred by ample liquidity and low interest rates. Credit growth of scheduled commercial banks accelerated to 19.3 per cent year-on-year in July 2026, a 26-month high. Loans to industry recorded the highest growth, while growth in personal loans moderated.

DATA FOCUS.

businessline's analysis of data from the RBI shows that outstanding bank credit rose to ₹220.8 lakh crore in July 2026 from ₹185 lakh crore a year earlier. Credit to industry grew the fastest at 21.6 per cent to ₹48 lakh crore (₹39.5 lakh crore).

Loans to the services sector rose 21.2 per cent to ₹62 lakh crore (₹51.1 lakh crore). Personal loans, the largest category, grew 16.6 per cent to ₹71.8 lakh crore. Agriculture and allied activities credit grew 17 per cent to ₹27.1 lakh crore.

"The sharp acceleration in bank credit growth reflects a broad-based revival rather than dependence on any single segment," said Ramkumar Subramanian, Partner, Grant Thornton Bharat. He attributed the rise to a stronger credit demand from corporates, services businesses and consumers, indicating improving economic confidence and investment activity.

GROWTH DRIVERS
Dr Anil Sinha, Professor of Finance, FIIB, Delhi, said stronger economic activity, improving investment demand and confidence among lenders and borrowers were driving the acceleration.

Within industry, medium enterprises recorded the fastest credit growth at 30.5 per cent, with outstanding credit rising to ₹4.8 lakh crore (₹3.7 lakh crore). Micro and small enterprise credit rose 22.6 per cent to ₹10.9 lakh crore, while large industry credit grew 17.7 per cent to ₹32.3 lakh crore.

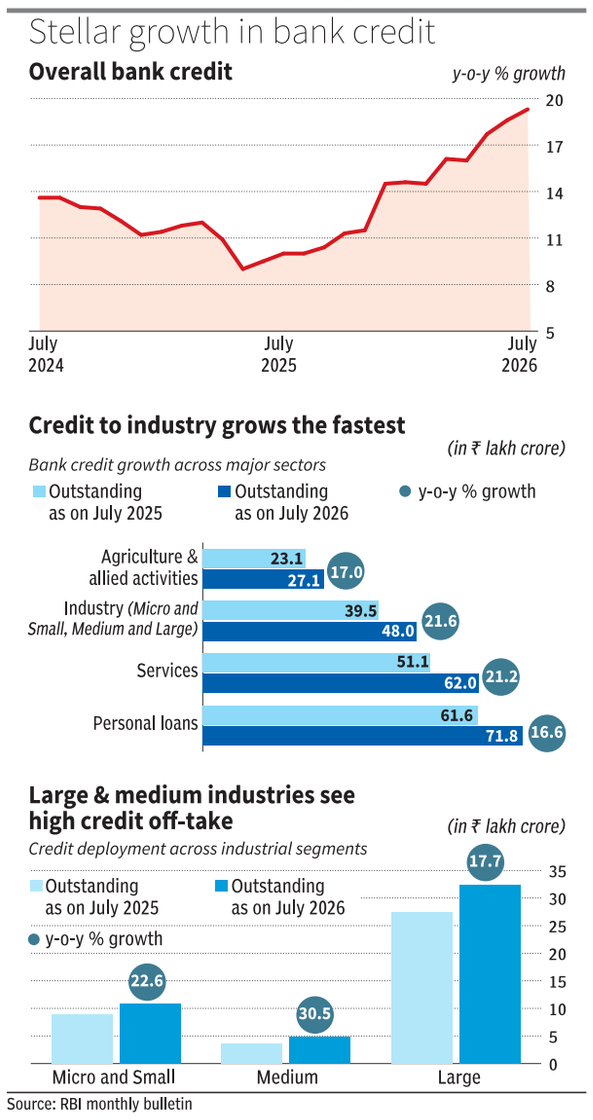
Subramanian said medium enterprises were in a "sweet spot," scaling capacity and formalising operations while benefiting from supply-chain diversification.

Sinha said larger companies had greater access to bond markets and other funding sources, while government policy support was encouraging MSME production and employment.

Personal credit remained the largest category despite slower growth. Subramanian attributed this to lenders being increasingly focused on secured retail assets and adopting a more calibrated approach to unsecured lending.

Going ahead, both experts said the pace would depend on investment, interest rates, asset quality and the broader economic environment.

They said infrastructure spending, private capex and demand in MSME and services could support credit growth, while prudent underwriting would remain important.



NCLAT seeks creditors' replies on appeal by Subhash Chandra against NCLT stay

Our Bureau
New Delhi

The National Company Law Appellate Tribunal (NCLAT) on Tuesday issued notices to creditors on Essel Group Chairman Subhash Chandra's appeal against a stay on his personal insolvency settlement. It listed the interim relief applications for hearing on October 29 and 30.

Chandra is challenging a September 1 order of a five-member special Bench of the National Company Law Tribunal (NCLT).

The order stayed the ruling of the tie-breaker member and restrained Chandra from alienating his assets.

Subhash Chandra, Chairman, Essel Group

That Bench was led by NCLT President Justice Anupinder Singh Grewal.

Chandra has also questioned the constitution of the Bench itself. His counsel argued that the NCLT had no power to form a five-member Bench.

A three-member NCLAT Bench, comprising Officiating Chairperson Justice (retd) Yogesh Khanna and Technical Members Barun Mitra and Ajai Das Mehrotra, directed the creditors to file their replies within a week. The creditors have opposed the maintainability of Chandra's petition.

Chandra has been given a week after that to file a rejoinder.

"Let the notice be issued... will file the reply (over maintainability and stay) within a week," the bench said.

CLUBBING APPEALS
At the request of Solicitor General Tushar Mehta, who appeared for some creditors, the NCLAT clubbed Chandra's appeal with a separate plea by creditors.

That plea challenges the NCLT order approving the settlement, under which about ₹6.5 crore would be paid against admitted claims of around ₹22,006.57 crore.

LIC Housing Finance, Canara Bank and Union Bank had earlier moved the NCLAT against that order.

The tribunal indicated that one day of the hearing would go to Chandra's arguments and the other to the creditors.

Mehta suggested waiting for the next hearing of the five-member NCLT bench on November 19.

Advocate Dhruv Mehta, appearing for Chandra, opposed this.

Anupam Rasayan completes stake buy in Bliss GVS Pharma for ₹1,750 crore

Our Bureau
Ahmedabad

Surat-based Anupam Rasayan India has completed the acquisition of a 48.2 per cent controlling stake in Bliss GVS Pharma for a total acquisition outlay of ₹1,750 crore, marking its third strategic inorganic transaction, as the Surat-based specialty chemicals maker expands into finished pharmaceutical formulations.

Of the ₹1,750 crore total funds raised for the transaction, ₹1,700 crore was spent on acquiring shares, while ₹50 crore was incurred towards acquisition-related expenses. The acquisition, undertaken through wholly-owned subsidiary Mates Visa Consultancy, was agreed at ₹299 per share and follows the definitive agreement signed on May 23.

TERM LOAN
The transaction has been funded through a ₹300-crore term loan and approximately ₹1,450 crore raised through non-controlling, non-voting instruments from financial investors led by Bain Capital and including Trust Group and Investec, the company stated.

With the acquisition, Bliss GVS Pharma becomes part of Anupam Rasayan's expanding portfolio across specialty chemicals and pharmaceuticals.

"The acquisition strengthens our presence in finished pharmaceutical formulations and complements Anupam Rasayan's expertise in key starting materials, intermediates and specialty chemicals," Anand Desai, Managing Director, Anupam Rasayan India, stated.

The Bliss GVS acquisition is the latest step in Anupam Rasayan's broader inorganic growth strategy.

Tata Sons listing, leadership transition unlikely to have immediate impact: S&P

Press Trust of India
New Delhi

A potential listing of Tata Sons and a leadership transition at the Tata Group are unlikely to have an immediate impact on the credit ratings of group companies, but could reshape the assessment of group support and financial policy over the longer term, S&P Global Ratings said on Tuesday.

Any changes to the group's financial policies were likely to be gradual, citing Tata's long history and conservative management approach, it added.

"A potential listing of holding company Tata Sons and leadership transition at the group would, therefore, have no immediate impact on our ratings on group entities," S&P said in a report.

The ratings agency said it views the rated Tata companies as being run by independent professional management teams, although Tata Sons influences their strategy.

CHANGE IN STRUCTURE
S&P considers all the rated Tata companies strategically important to Tata Sons, resulting in up to three notches of group support. However, a change in leadership, group structure or stakeholder priorities could raise questions about the continuity of Tata's strategy and financial policy, as well as the likelihood of group support over the longer term, S&P said.

PE/VC investments jump 98% in August on account of large deals

Our Bureau
Mumbai

Private equity and venture capital (PE/VC) investments in India almost doubled year-on-year to $5.7 billion in August, even as the number of deals fell, with a sharp rise in large transactions driving the increase. Investment value was 98 per cent higher than the $2.9 billion recorded in August 2025 and 32 per cent above July's $4.4 billion. The number of deals fell 18 per cent year-on-year to 99 from 121 and was down 14 per cent from 115 in July, according to the latest EY-IVCA report.

Large deals accounted for 78 per cent of total investment value in August, with 11 transactions, worth $4.5 billion. The largest was KKR's $1.4 billion acquisition of Medicover India.

"Significant uninvested private capital, improving earnings visibility across several sectors, and more realistic valuation expectations are beginning to narrow the gap between buyer and seller expectations. As a result, deal activity could strengthen over the coming quarters, particularly for high-quality assets with strong growth fundamentals," said Vivek Soni, Partner and National Leader, Private Equity Services at EY. "We remain cautiously optimistic about the deal environment."

> **PE/VC exits also rose to $4.5** billion across 41 exits in August

Buyouts were the biggest investment category at $3.6 billion, compared with just $85 million in August 2025. Start-up investments stood at $1.2 billion, up 8 per cent year-on-year. Growth investments fell 54 per cent to $606 million.

SECTOR-WISE FUNDING
Infrastructure led investments by sector at $1.8 billion, followed by healthcare at $1.7 billion and real estate at $806 million. Together, the three sectors accounted for 75 per cent of total PE/VC investment during the month.

Pure-play PE/VC investments rose 39 per cent to $3.1 billion, while investments in real estate and infrastructure surged 297 per cent to $2.6 billion.

EXITS RISE
PE/VC exits also rose to $4.5 billion across 41 exits in August, compared with $1.9 billion across 18 exits a year earlier. August recorded the highest number of exits so far. Open-market exits accounted for $3.5 billion, or 79 per cent of total exit value.

Fundraising also increased to $1.5 billion across 14 funds from $1.1 billion across nine funds in August 2025. Accel India's $550 million ninth early-stage fund was the largest fundraise during the month.

Diverse mix of non-auto firms in PM eBus Sewa bids

S Ronendra Singh
New Delhi

Eager to secure a share of the government's PM-eBus Sewa scheme, a diverse mix of non-automotive players, including from software, solar energy and film production, has thrown its hat into the ring to supply 3,604 electric buses.

Sources told *businessline* that these unlikely contenders plan to tie up with established original equipment manufacturers (OEMs), including Tata Motors, JBM, Eka Mobility, Olectra and Switch Mobility (Ashok Leyland), to manage operations and maintenance, if awarded contracts. Bidding for the tender closed on September 22, with contract awards expected shortly.

BIDDERS ALL
For instance, a company called Bansal Telefilms of Bhopal has applied as a bidder with Infra Route as the partner; Travel Time Mobility India has applied with Tata Motors; Sai Green Projects, Stockwell Solar and Inventive Software Solutions have applied with Infra Route as an OEM. Similarly, OHM Global Mobility has applied as a bidder with a Switch Mobility partnership; Pinnacle Mobility Solutions with Eka Mobility (OEM); Transvolt Mobility has applied with both Eka and JBM Buses; and Mateshwari Urban Transport Solutions with Tata Motors.

Some OEMs like PMI Electro Mobility Solutions, JSW Eco Mobility, JBM Ecolife Mobility and Neuton Auto E-Buses have applied separately for their own companies to bid for the tender.

"The bidding is open to all companies and if they meet the criteria, they will be eligible for the subsidies. They have to meet the guidelines and conditions set for the operations and maintenance," a senior government official said.

For instance, for a 12-metre standard bus, the government will provide subsidy of ₹24/km for 200 assured km per day. Similarly, for a 9-metre mini bus, the subsidy is fixed at ₹22/km for an assured 180 km per day and ₹20/km for an assured 160 km per day for a 7-meter bus.

UNUSUAL PACT. Non-automotive players, including from the software, solar energy and film production sector, have joined hands with OEMs to participate in the e-bus tender

The Prime Minister eBus Sewa (PM eBus Sewa) was launched in August 2023 and aims to augment city bus operations in urban areas with central assistance of ₹20,000 crore for deploying electric buses under the public private partnership (PPP) model.

According to the Ministry of Housing and Urban Affairs, the scheme will support bus operations for 10 years and the States/cities will be responsible for running the services and making payments to the bus operators. Cities with a population between 3 lakh and 40 lakh, and State Capitals below 3 lakh are eligible.

As per the guidelines, the Centre will support these bus operations by providing subsidies to the extent specified in the proposed scheme, covering development of depots, charging infrastructure, green mobility initiatives including accessible bus stops, last-mile connectivity Intelligent Transit Management System and National Common Mobility Card -based ticketing.

We must cut dependence on energy imports: Das

POSITIVE NOTE. He says economy in bright spot despite headwinds

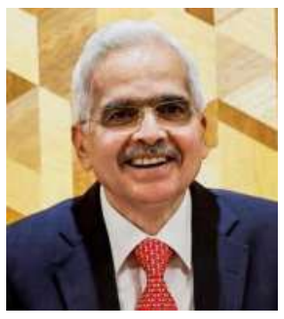
Shishir Sinha
New Delhi

The Indian economy is a bright spot in an uncertain world, though it needs to reduce its import dependency, Shaktikanta Das, Principal Secretary-2 to the Prime Minister, said on Tuesday.

Addressing at the launch of the India and Emerging Economic Order Forum (IEOF) by the Delhi School of Economics (DSE) and Research and Information System for Developing Countries (RIS), Das said India's economic strategy has been guided by the principles of macroeconomic and financial stability, structural reforms, infrastructure creation, industrial development and global integration.

Great emphasis has been placed on fiscal prudence, inflation management, productivity-enhancing reforms and large-scale investment in physical and digital infrastructure. "Policy initiatives have been taken to enhance competitiveness, build industrial capacity in sunrise sectors and integrate Indian firms into global value chains through trade agreements. Together, these measures are intended to sustain long-term economic growth," he said.

> Double-digit growth in agriculture, industry and services is giving further support to economic activity
>
> **SHAKTIKANTA DAS**
> Principal Secretary-2 to the PM



ECONOMIC GROWTH

Noting that GST collections, electricity generation, rail freight movement, wholesale and retail vehicle sales and other similar trends point to broad-based economic momentum. Rural demand has also strengthened significantly, reflected, among others, in higher tractor and two-wheeler sales.

Urban consumption also remains upbeat.

"Double-digit growth in agriculture, industry, and services is giving further support to economic activity," he said.

Das highlighted three specific areas of reform that are still playing out and can be lessons for the Global South.

REFORM AREAS

First, India's space sector is undergoing a historic transformation through the Government's forward-looking reforms.

Second, India has set its sights on a significantly larger role for nuclear energy in its overall power mix.

"Third, as we all know, India is highly dependent on imported oil and gas. We have to reduce this import dependence. To achieve this, the Samudra Manthan — the National Offshore Exploration in deep waters — was approved in July 2026, with a Phase-I outlay of ₹84,000 crore up to FY 2030-31. This will provide a strong impetus to hydrocarbon exploration and production," he said.

The former Governor of RBI cautioned that the ongoing conflict in West Asia has triggered a sharp increase in energy prices and renewed inflationary pressures, both of which will stifle global growth and the purchasing power of countries and the consumers. The ongoing and persistent trade policy uncertainty, geopolitical strains and weather-related shocks also pose material risks to global growth, he said.

DEEPER CO-OPERATION

He called for deeper co-operation among developing economies on trade, technology, finance and supply chains.

Greater co-operation among Global South economies could strengthen their bargaining power in areas including trade, climate finance, technology transfer, supply-chain integration and reform of global financial institutions, he said.

India, EFTA to review trade pact a year on, eye new opportunities

Amiti Sen
New Delhi

India and the European Free Trade Association (EFTA) countries (Switzerland, Norway, Iceland and Liechtenstein) will review the implementation of their Trade and Economic Partnership Agreement (TEPA) at the second India-EFTA Prosperity Summit in New Delhi in October, a year after the pact came into force.

The review comes as India's exports to the four-nation bloc are declining.

India's goods exports to the bloc fell 10.77 per cent to $1.75 billion in FY26, and the slide has deepened since TEPA took effect on October 1, 2025, with a 22.72 per cent drop to $461.64 million in April-June, the first quarter of FY27. The fall in exports to Switzerland, by far the largest market in the bloc, was sharper.

Imports from the bloc rose 10.99 per cent to $24.9 billion in FY26 but fell 13.09 per cent to $2.93 billion in April-June 2026, mostly due to a fall in gold shipments.

EFTA OFFER

"The participants at the summit, which would include political leaders, senior officials and businesses, are expected to discuss implementation-related issues, including market access and procedural bottlenecks, and ways to expand trade and investment further," a source tracking the matter said.

The summit will also look at ways to expand investment towards the $100 billion target that EFTA has committed to promote, and there may be announcements for collaboration in various sectors, the source added.

EFTA's offer covers 92.2 per cent of its tariff lines, encompassing 99.6 per cent of India's exports, offering opportunities in sectors like engineering goods, chemicals, textiles and apparel, processed foods, agricultural products and marine products.

The Commerce Department has sought detailed inputs from exporters on their experience with TEPA so far.

"To fully utilise the tariff concessions, Indian exporters need to navigate regulatory requirements, including certification procedures and rules-of-origin requirements," the source said.

During his visit to Switzerland in May, Commerce Secretary Rajesh Agrawal stressed the need to resolve implementation issues early so that businesses on both sides could fully utilise the agreement.

'New national steel policy to target 600 mt capacity by 2047'

Our Bureau
New Delhi

India will soon unveil a steel policy targeting 600 million tonnes (mt) of steelmaking capacity by 2047, replacing the 2017 policy and setting out a roadmap for the sector over the next two decades, Steel Secretary Sandeep Poundrik said on Tuesday.

"We are going to bring the national steel policy for public consultation very soon. This national steel policy is being formulated with a vision to bring India to the Viksit Bharat target in 2047," Poundrik said.

Sandeep Poundrik, Steel Secretary

POLICY FOCUS

The Steel Secretary said that the policy would be circulated in the public domain within the week for consultations and comments from stakeholders.

The policy will focus not only on capacity expansion but also on decarbonisation, technology, speciality steel and reducing the dependence on imports.

India has already reached around 220 mt of steelmaking capacity, well ahead of the 300 mt target set under the 2017 policy for 2030-31.

The new target comes as steel demand continues to rise.

Domestic steel consumption reached about 164 mt in 2025-26, and India has become the world's second-largest crude steel producer.

The government is also seeking to protect domestic producers from cheap and substandard imports amid a sharp increase in steel imports this fiscal year.

KEY CONCERN

The Steel Secretary said that the new policy would provide measures to "discourage cheap, sub-standard" imports, a key concern with the domestic industry, including safeguard duties, anti-dumping duties and much more.

It also envisages measures to make the Indian steel industry, especially the small players, competitive in terms of technology and price.

The policy is expected to give greater emphasis to green steel as India seeks to expand production while meeting its 2070 net-zero goal.

Earlier research has highlighted the difficulty of decarbonising India's coal-intensive steel sector and the need for investment in technologies, such as hydrogen-based direct reduced iron, greater scrap use and renewable energy.

SCALE-UP NEED

The scale-up will also require securing raw materials, particularly iron ore and coking coal, while improving technology and productivity across the industry.

The government has separately been working on a ₹5,000 crore scheme to support steelmakers, particularly the smaller secondary producers, in reducing emissions.

MANAGING DIRECTOR

Rupee on weak footing amid a firm greenback

Akhil Nallamuthu
bl. research bureau

The rupee depreciated 40 paise against the dollar over the past week to close at 95.99 on Tuesday. The local currency came under pressure from a stronger dollar, persistent foreign portfolio outflows and elevated crude oil prices.

WEEKLY RUPEE VIEW.

Foreign flows remained unfavourable. According to NSDL data, net FPI outflows stood at about $1.6 billion over the past week, taking the cumulative outflows in September to $4.8 billion.

So far in 2026, net outflows have risen to about $20.7 billion. Geopolitical uncertainty continues to weigh on sentiment, with no concrete resolution to the US-Iran tensions. Consequently, crude oil prices remain elevated. Brent crude is currently trading around $104/barrel and has remained above $100 for most of the past three weeks.

Elevated oil prices remain a key headwind for the rupee, given India's dependence on crude imports.

The dollar has also strengthened on safe-haven demand, while rising US Treasury yields have provided additional support to the greenback. The US 10-year Treasury yield is currently around 5.2 per cent compared with about 4.75 per cent at the end of August.

The rise in yields increases the relative attractiveness of dollar-denominated assets, weighing on emerging market currencies like the rupee.

On the domestic front, industrial production provided a positive signal. India's IIP grew 8 per cent year-on-year in August, accelerating from a revised 7.4 per cent in July and 4 per cent in August last year. Overall, the external environment remains challenging for the rupee, with a firm dollar, elevated crude oil prices, rising US yields and persistent foreign outflows outweighing the support from improving domestic economic activity.

The rupee has fallen over the last week. However, the price action shows that it is holding on to the support at 96.10 at the moment. In case the bulls gain strength on the back of this, the local currency can appreciate.

The nearest resistance from the current level is at 95.80, followed by another resistance at 95.40. On the other hand, if the rupee breaches the support at 96.10, it can extend the decline to 96.60 in the near term. A lot depends on how the dollar moves.

The dollar index, now trading at 101.30, has been steadily appreciating over the last three weeks. There is a resistance ahead in the form of the price band between 101.60 and 101.80.

Given the current upward momentum, the likelihood of the breakout of 101.80 is high. That said, we cannot rule out a corrective fall, possibly to 100.80 or 100.50.

A sustained rally past 101.80 could lift the dollar index to 103.

However, if the dollar index slips below 100.50, it can see a deeper decline to 100.

BEARISH OUTLOOK

Overall, the current chart setup suggests the rupee could see a minor recovery, aided by a potential correction in the dollar.

However, the broader trend remains bearish, with fundamental headwinds such as a firm dollar and elevated oil prices likely to weigh on the local currency. From the current level of 95.99, the rupee could initially recover to around 95.60 before reversing direction and declining towards 96.60.

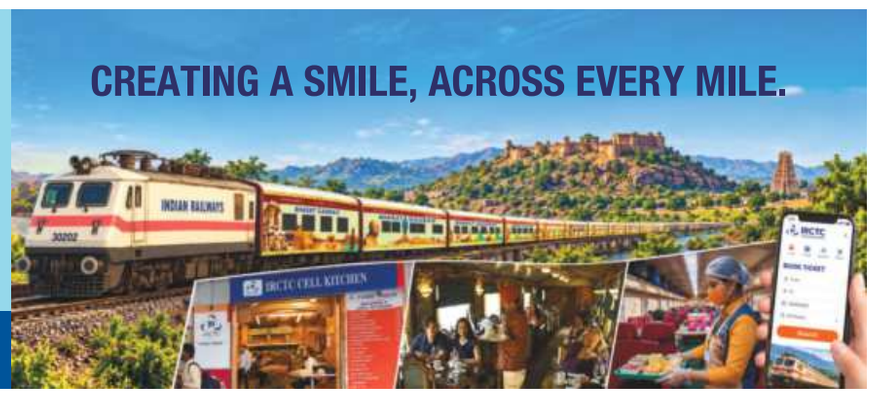
CHAIRMAN'S SPEECH
27TH ANNUAL GENERAL MEETING
FINANCIAL YEAR 2025–26

"I am confident that IRCTC will continue to move forward with greater strength, greater innovation and a renewed commitment to serving the nation."
Sh. Rahul Himalian
Chairman and Managing Director

EBITDA: ₹ 1926.12 crore | 19.35 % CAGR
PROFIT AFTER TAX (PAT) ₹ 1393.37 crore | YoY Growth 5.97%
MARKET CAPITALISATION ₹ 39,552.00 crore | as on 31st March 2026
NET WORTH ₹ 4308.38 crore | 23.20% CAGR



Hon'ble Shareholders,
Members of the Board and Senior Officials

It is a distinct privilege to welcome you to the 27th Annual General Meeting of your Company.

On behalf of the Board of Directors, I extend my heartfelt gratitude to each one of you for your enduring trust, continued confidence and valued partnership. Your support is not merely a measure of our success; it is the foundation upon which we continue to build the future of IRCTC.

It gives me immense satisfaction to present before you the performance of your Company for the financial year 2025–26—a year in which IRCTC continued to strengthen its core businesses, expand its horizons, embrace technology and reinforce its position as an important enabler of India's rapidly evolving travel and tourism ecosystem.

INDIA'S GROWTH STORY AND IRCTC'S ROLE

India continues to demonstrate remarkable economic resilience and dynamism. According to the Economic Survey 2025–26, the services sector remained the bedrock of India's economic performance, contributing 56.4% of the nation's Gross Value Added. Within this larger growth story, transportation, tourism, digital services and passenger-centric infrastructure are assuming an increasingly important role.

Indian Railways, with one of the world's largest railway networks, is at the heart of this transformation. As passenger volumes rise and expectations evolve, the focus is increasingly on modern passenger amenities, technology-enabled services, improved catering, seamless ticketing and innovative tourism experiences.

This is precisely where IRCTC's role becomes significant.Over the years, IRCTC has evolved from being a service provider into a technology-driven, customer-centric and diversified enterprise serving millions of Indians every day. Our endeavour is clear—to make the journey of every passenger more convenient, more comfortable, more transparent and more memorable.

FINANCIAL PERFORMANCE

Your Company has continued to demonstrate strong financial resilience.

During FY 2025–26, Consolidated Revenue reached ₹5,215 crore, while Profit After Tax stood at ₹1,393 crore, registering year-on-year growth of 11.55% and 5.97%, respectively. These numbers are significant not merely because they represent growth, but because they reflect the underlying strength and resilience of IRCTC's business model. Our performance has enabled the Board to recommend a final dividend of ₹0.50 per equity share, subject to your approval today.

Together with the two interim dividends of ₹5.00 and ₹3.50 per share already distributed, the total dividend for FY 2025–26 stands at ₹9.00 per equity share, representing a cumulative payout of ₹720 crore, or 51.70% of net profit.

This reflects our commitment to maintaining an appropriate balance between rewarding shareholders today and investing prudently for sustainable growth tomorrow.

CATERING – SERVING INDIA WITH CARE AND TRUST

Catering remains one of the most visible interfaces between IRCTC and the travelling public. During the year, your Company managed catering services across more than 1,450 trains, including Vande Bharat, Rajdhani, Shatabdi, Duronto, Tejas and Gatimaan services, serving more than 63 crore meals annually.

At this scale, catering is not simply about serving food. It is about quality, hygiene, consistency, affordability and passenger experience—across thousands of journeys every day.

Through structured cyclic menus, we are progressively bringing greater variety, freshness and regional diversity to railway catering. In keeping with the Digital India vision, we are piloting the E-Pantry Service, a digitally integrated solution for convenient and transparent pre-booked meal delivery to passengers travelling on Mail and Express trains.

During the FY26, Catering segment generated revenue of ₹2398.75 Crore as against ₹2125.06 Crore in FY25, representing a 12.88% year-on-year growth. Your Company also manages approximately 330 Food Plazas and Fast-Food Units across the railway network. Our e-Catering business achieved a historic milestone during FY26, reaching an average of 1,20,456 meals per day, registering an impressive 32% year-on-year growth.

The continued enhancement of our Food on Track platform, which has earned a 4.8 rating on the Google Play Store, reflects our constant endeavour to put technology at the service of passenger convenience. We have also strengthened our partnerships with leading food aggregators, including Swiggy and Zomato, as well as major culinary brands.

Going forward, our focus will be on deeper technology integration, expansion of mobile catering, improved operational efficiency and adoption of eco-friendly packaging. Our objective is simple: every passenger should experience greater choice, greater convenience and greater confidence in railway catering.

INTERNET TICKETING – TECHNOLOGY AT INDIA'S SCALE

The Internet Ticketing business remains one of IRCTC's defining strengths.

During FY26, our digital platforms continued to handle unprecedented transaction volumes while maintaining platform stability and resilience. In August 2025, the IRCTC platform achieved a record peak of 37,410 bookings in a single minute, along with a single-day record of 18.40 lakh tickets.

During the FY 26, Internet Ticketing segment generated revenue of ₹1535.51 Crore as against ₹1426.22 Crore in FY25, representing a 7.66% year-on-year growth.

Behind these numbers lies a technology ecosystem that must perform reliably at extraordinary scale. To strengthen platform security and resilience, we deployed advanced Content Delivery Network architecture and anti-bot technologies, enabling us to protect genuine users from automated malicious traffic. Work is also underway to strengthen our NGeT Disaster Recovery Site, further enhancing business continuity and operational resilience.

We have also taken an important strategic step by incorporating IRCTC Payments Limited, a wholly owned subsidiary proposed to undertake Payment Aggregator services across Government and private sectors.

I am pleased to share that the Reserve Bank of India has granted In-Principle Approval on August 4, 2025. The procedural requirements for final authorization are currently underway.

Looking ahead, the proposed IRCTC Unified Portal will bring together multiple travel-related services on a single platform, while new booking capabilities for ferry, ship, trekking and regional flight services will further expand the Company's digital ecosystem.

This initiative represents an opportunity to leverage IRCTC's enormous transaction ecosystem and contribute to India's expanding digital payments landscape. Our vision is to move from a ticketing platform to a comprehensive digital travel platform.

TOURISM – TAKING INDIA TO INDIA, INDIA TO THE WORLD AND WORLD TO INDIA

Tourism represents one of the most exciting avenues of growth for IRCTC.

During the FY 26, Tourism segment generated revenue of ₹890.08 Crore as against ₹744.91 Crore in FY25, representing a 19.49% year-on-year growth, while profit grew to ₹127.50 crore from ₹93.82 crore, representing a 35.90% year-on-year growth.

This performance was supported by our flagship Bharat Gaurav Tourist Trains, Corporate Tejas Trains, Maharajas' Express and domestic and international air packages.

During the year, IRCTC achieved several operational milestones, including 237 Bharat Gaurav train trips, 447 domestic air packages, 164 international air packages, 28 trips of Maharajas' Express train and seven journeys of the Golden Chariot luxury train.

We are also consciously diversifying into high-potential segments such as heritage, culture, adventure and medical wellness tourism.

The establishment of a dedicated MICE division will enable us to provide end-to-end corporate event and travel solutions.

Going forward, new rakes for the Maharajas' Express and Bharat Gaurav fleets, together with the proposed Unified Tourism Portal, will provide further impetus to this business.

Our tourism strategy is not limited to increasing volumes. It is about creating experiences that showcase India's heritage, culture, diversity and hospitality to travellers from India and across the world.

RAIL NEER – TRUST IN EVERY BOTTLE

Rail Neer continues to play an important role in providing safe, hygienic and affordable packaged drinking water to railway passengers.

With 20 installed plants having a combined capacity of 18.40 lakh litres per day and capacity utilization of 79.93%, Rail Neer is available across more than 400 railway stations, with average daily sales of approximately 12.80 lakh bottles.

During the FY 26, Rail Neer segment generated revenue of ₹390.52 Crore as against ₹378.59 Crore in FY25, representing a 3.15% year-on-year growth, while profit grew to ₹55.66 crore from ₹46.13 crore, representing a 20.66% year-on-year growth. The integration of Rail Neer ordering with our pilot E-Pantry Service across 38 Mail and Express trains is another example of how our businesses can work together to create greater passenger convenience. Sustainability is also being embedded into our manufacturing operations through plastic waste collection and recycling under the EPR framework, rainwater harvesting, water recycling, solar evaporation ponds and solar power generation.

Going forward, we will focus on capacity augmentation and establishment of new bottling plants to meet the growing demand for Rail Neer across the railway network.

GOVERNANCE – THE FOUNDATION OF SUSTAINABLE GROWTH

While business performance is visible through financial numbers, the true strength of an institution is reflected in the quality of its governance.

At IRCTC, transparency, accountability, integrity and compliance remain fundamental to the way we conduct our business.

As a listed Public Sector Enterprise, we recognize that our responsibilities extend beyond financial performance. We are accountable to our shareholders, passengers, employees, regulators, the Government and society at large.

I am particularly pleased to share that for the sixth consecutive year, your Company has received NIL comments from the Comptroller and Auditor General of India on its Financial Statements for FY 2025–26. Sustaining NIL comments year after year reflects the importance accorded by the Company to financial discipline, transparency and robust internal processes.

This is a matter of considerable satisfaction for the Board and management.

Your Company continues to adhere to the corporate governance requirements prescribed by SEBI and the Department of Public Enterprises, while continuously strengthening its governance framework.

RESPONSIBLE GROWTH AND NATION BUILDING

Our growth must be responsible, inclusive and sustainable. We continue to integrate Environmental, Social and Governance considerations into our operations and remain committed to environmental stewardship and responsible resource utilisation.

Our CSR initiatives continue to focus on areas of meaningful social impact, including healthcare, education, sanitation, women empowerment and community development. As a Public Sector Enterprise, we recognise that our mandate goes beyond commercial objectives.

We have a responsibility to contribute to nation-building, create employment and economic value, serve passengers efficiently and conduct our business with integrity and accountability.

LOOKING AHEAD – THE ROAD TO A STRONGER IRCTC

The next phase of IRCTC's journey will be defined by innovation, digital transformation, diversification and customer-centricity. We see significant opportunities ahead.

We will continue to strengthen our core businesses while creating new avenues of growth. We will use technology not merely to automate processes, but to reimagine the passenger experience.

We will pursue tourism opportunities that showcase India's heritage and diversity.
We will expand our catering capabilities while raising standards of quality and service.
We will augment Rail Neer capacity to meet growing demand. And through new digital platforms and strategic initiatives, we will seek to create an integrated ecosystem of travel, tourism, hospitality and digital services.

OUR GUIDING PRINCIPLE WILL REMAIN CONSTANT:

- GROWTH WITH RESPONSIBILITY.
- INNOVATION WITH PURPOSE.
- TECHNOLOGY WITH TRUST.
- AND PERFORMANCE WITH ACCOUNTABILITY.

ACKNOWLEDGEMENT

Before I conclude, I would like to place on record the Board's sincere appreciation to the Government of India, particularly the Ministry of Railways, Ministry of Tourism, DIPAM, DPE, Regulators and State Governments, for their continued guidance and support.

I also express my appreciation to our Board Members, auditors, vendors, business partners and all other stakeholders for their valuable contribution. Above all, I extend my deepest gratitude to our shareholders, investors, employees and millions of passengers who place their trust in IRCTC every day. To our employees across the country, I would like to say that every achievement of IRCTC is ultimately a reflection of your dedication, professionalism and commitment.

CONCLUSION

IRCTC stands today at an important point in its journey. We have built a strong foundation. We have demonstrated resilience. We have diversified our businesses. We have embraced technology. And we have continued to earn the confidence of our stakeholders.

But we believe our best chapters are still ahead of us. Our ambition is not simply to grow larger.

Our ambition is to become better—better in service, better in technology, better in governance and better in creating value for every stakeholder. With the continued guidance of the Government, the commitment of our employees, the support of our business partners and, above all, the continued confidence of our shareholders, I am confident that IRCTC will continue to move forward with greater strength, greater innovation and a renewed commitment to serving the nation.

On behalf of the Board of Directors, I once again thank you for your trust, confidence and continued support.
Let us together continue this journey of excellence, innovation and nation-building.

Thank you.
Jai Hind.

Tripping up

Power shortfall calls for holistic reforms

Last week, the government invoked Section 11 of the Electricity Act, 2003 mandating private firms to run captive power plants at maximum capacity and feed the surplus to the national grid. The number of thermal power plants with coal stocks running critically low had surged to 74 by September 19, from 45 at the end of August.

A combination of factors — power demand rising sharply due to unusually warm weather, coal production hit in the June-August period and a slump in hydel output — contributed to the situation. The order says: "The generators shall offer their available surplus generation, after meeting their own captive demand, through the power exchanges, in accordance with the applicable market regulations and procedures." The price of power on the exchanges has skyrocketed in these times to about ₹10-14 a unit, or more, on short-term contracts across States. Indeed, higher supplies in these strained times could bring down these prices, benefiting all buyers, including Discoms, which could be hit by a shortfall in renewables supplies in this period. This is the second time since 2022 that the government has resorted to this move. While the use of captive generation is understandable in times of stress in an El Nino year, it should be the exception rather than the norm, as industrial planning is impacted. Instead, endemic demand and supply issues must be addressed.

On the demand side, the use of time-of-day tariffs and smart metering has picked up, but is yet to achieve critical mass. Only about 7.25 crore such meters have been installed so far, against a target of 25 crore by March 2026, a deadline that has now been deferred by two years. The spike in night-time demand continues, when solar power is not generated. Investment in battery storage is at a nascent stage. A recent report by Crisil says that 45-50 GWh of storage capacity is expected to be commissioned over FY27 and FY28. This is perhaps a result of some States pushing for storage capacity. With this transformation, 'grid curtailment' will come down. Such stored power can be used to tide over periods of shortage. However, battery storage is capital-intensive, while pumped storage projects (PSP) — acting as mechanical water batteries — offer a cost-effective alternative. However, given their location constraints, the path to 100 GW PSPs by 2036 offers little immediate relief.

Agriculture remains a major consumer of power, because of 'free power' and the choice of water intensive crops as a result. In States such as Punjab, Telangana, Andhra Pradesh, Tamil Nadu, and Karnataka, grid power is free, while Maharashtra, Haryana, and Western UP charge a flat rate. The PM-KUSUM scheme for solarising agricultural pumps is faced with a fate similar to smart meters, achieving only 25-30 per cent of its overall targets. Decentralised power generation on scale can make a difference. Finally, holistic demand and supply reforms must replace the temptation to tap into captive storage when power falls short.

Why bond yields are staying high

THE CATALYSTS. Fears of inflation going up, burden of subsidies and expectations of tight monetary policy are factors

BK BHOI
VANI NAIR

High bond yields are currently a global phenomenon. The rise in sovereign bond yields is no longer limited to an inflation premium. Across major economies, long-term government bond yields have remained elevated even as inflation has eased from recent peaks. The persistence of relatively high yields in the US, the euro area and Japan suggest that investors are increasingly looking beyond the next central bank decision and paying greater attention to debt dynamics, borrowing requirements and duration risk.

In India too, high sovereign yields pose multiple concerns. Interest payments are the biggest item of government expenditure, consuming about 37 per cent of total revenues. The private investment cycle, which has gathered momentum only recently, may be short-lived if the borrowing costs remain high following elevated risk-free benchmark yields. As households' debt-to-GDP ratio is already high and the overall growth outlook is weakening, consumers may have to prune their non-housing retail loans at high cost. This has been a major source of income for banks. High sovereign yields cast a shadow on a possible economic slowdown. Against the backdrop of global debt market repricing, we reflect on both global and Indian experience to understand why sovereign bond yields remain stubbornly high.

THE YIELD STORY

While the benchmark yield differential between the US and India has been significantly compressed, the Indian debt market tells a different story, somewhat unique to domestic market conditions, particularly after the dollar deluge due to large FCNR(B) deposit mobilisation by authorised dealers (ADs) under the special swap scheme. The Indian government continues to borrow at a relatively high real interest rate compared to many developed countries (see Table). India's benchmark yield differential over the policy rate also remained high *vis-à-vis* other countries.

Most of the developed countries could not bring down sovereign yields in the post-Covid period. Debt-to-GDP ratio remained historically high in many developed countries. On top of it, central banks have increased policy rates in response to rising inflation expectations. Geopolitical risks also contributed to the risk premia.

Country-wise real yield and spread over policy rate (%)

Country	Latest policy rate	10-year govt bond yield	August CPI inflation	Real 10-year yield	Yield minus policy rate
US	4	5.17	3.4	1.77	1.17
Euro Area	2.65	4.01	3.2	0.81	1.36
UK	3.75	5.36	3.1	2.26	1.61
Japan	1.25	3.07	2	1.07	1.82
China	3	1.68	0.8	0.88	-1.32
India	5.25	7.11	4.82	2.29	1.86
Canada	2.25	3.93	3	0.93	1.68
Australia	4.35	5.39	3.5	1.89	1.04

Source: Trading Economics

Multilateral institutions like the IMF, World Bank and the BIS have sensitised the potential risks associated with the rising global debt/debt service burden.

India's bond market continues to be shaped by domestic fundamentals. Rising inflation expectations, driven by elevated global crude oil prices, the burden of fiscal subsidies, and market expectations of tight monetary policy, remain important drivers of the yield curve. Since the second half of FY26, banks found it difficult to finance rapidly rising credit demand amid sluggish deposit growth. Part of their excess SLR/LCR holdings was liquidated to finance credit demand. Liquidity conditions remained tight despite RBI's OMO purchases in FY26.

The situation was complicated by RBI's intermittent forex market interventions, which sucked rupee liquidity. Monetary policy transmission slowed due to tight liquidity conditions. Hawkish minutes of the August 2026 monetary policy amid a neutral monetary policy stance also contributed to the hardening of sovereign yields, despite fiscal consolidation. Global developments, such as movements in US Treasury yields and sustained geopolitical conflicts, also influenced domestic yields, particularly through inadequate net capital inflows.

Liquidity conditions have improved significantly after the phenomenal success of FCNR(B) deposit mobilisation under the special swap scheme, along with other capital account liberalisations. System-level liquidity surpassed ₹10 trillion by September 7, 2026. Even after advanced tax payments in mid-September 2026 and RBI's ₹1 trillion OMO sales, excess liquidity remains around ₹5 trillion. Hence, there is a need to understand why yields remain elevated despite banks being flush with excess liquidity since August 2026. Credit demand may take time to pick up. What is preventing banks from investing in G-secs?

The RBI has the option to keep the repo rate unchanged and communicate in clear terms that there is scope for monetary policy transmission to long-term yields and lending rates

Banks, including other investors, do not hold government securities simply because they offer an attractive yield. Historically, sovereign bonds form an integral part of banks' balance sheets, mostly due to regulatory requirements under SLR and now LCR. The surplus they hold, mostly in the trading book, has already shrunk. Lack of appetite for sovereign bonds has been predominantly due to market risk. Although the share of the trading book is low in the total investment portfolio, banks have suffered losses in recent quarters due to mark-to-market losses. Moreover, as a part of the Basel III capital adequacy framework, the RBI has recently tightened the market risk framework arising out of banks' investments.

POLICY OPTIONS

India's debt dynamics are somewhat better than those of many countries. The government is committed to fiscal consolidation despite a rise in subsidy burden, partly through strategic disinvestment of PSU shares. The RBI is still on a neutral stance, but faces the dilemma of rising inflation expectations and likely growth slowdown due to global headwinds. Keeping enough excess liquidity in the market to indirectly persuade banks to invest in G-secs to moderate yields may depress the weighted average call rate to the SDF rate. Nevertheless, a calibrated approach may be needed for proactive liquidity management. There is no scope for OMO sales to absorb liquidity as yields are moving northward. The best option should be to go for a forex sell-buy swap to impound excess liquidity. The RBI can opportunistically reduce forward forex liabilities. Every rupee created due to the recent FCNR(B) swap need not be impounded. It is not important that only money market rates respond to the recent excess liquidity; it should transmit to the long end of the market, including benchmark yields. Daily fine-tuning may be conducted sparingly. The 14-day or longer-term VRRR should be the main operating tools for liquidity management.

The RBI need not necessarily match the recent Fed rate hike. The RBI did not reduce the repo rate adequately, consistent with an average retail inflation of 2.1 per cent in FY26. India's policy rate was one of the highest among its peers. The current CPI inflation being predominantly a supply-side phenomenon, the MPC should tolerate it until the upper bound of the tolerance band is breached. One can argue that the recent compression of the yield differential between India and the US may be due to a fall in the retail inflation rate differential between two countries.

Incidentally, the government's supply management has been successful in keeping retail inflation under control so far. The RBI has acknowledged that the underlying inflation rate, excluding food, fuel and precious metals, continued to remain benign (below 3 per cent). Instead of being too hawkish, it is ideal to communicate that shielding the economy from global headwinds is critical. As October monetary policy is round the corner, the RBI has the option to keep the repo rate unchanged and communicate in clear terms that there is scope for monetary policy transmission to long-term yields and lending rates.

India's benchmark yield appears to be at the peak. Banks should evaluate the mark-to-market losses in the September 2026 quarter by holding the same till yields moderate *vis-à-vis* immediate sale of such securities and repent later. If early solutions to the Middle East conflict emerge, crude oil prices will normalise rapidly. Otherwise, it will remain around $100 per barrel — a new normal which India can handle with the resilience it has acquired.

Digital agriculture and the problem of exclusion

DAM architecture risks excluding women and tenant farmers, and gives little attention to workers disrupted by tech change

Sai Chandan Kotu
Sandipan Baksi
Tapas Singh Modak

Digital tools, including AI, are increasingly being promoted as having the potential to enhance farm productivity and incomes in a sustainable manner. But this potential will have real meaning only when these technologies reach the majority of the farming population and are absorbed into agricultural production.

The Digital Agriculture Mission (DAM), launched in 2024 as an umbrella programme for digital initiatives in agriculture, strives for a "robust and holistic farmer-centric digital ecosystem." Yet its framework raises a question: who is included in this vision?

By defining a farmer based on land ownership, the Mission risks leaving out women cultivators, tenant farmers, and large sections of the rural workforce. It also pays insufficient attention to limited access to digital infrastructure and digital literacy in rural India. These are critical concerns. Unless addressed, digitalisation could reproduce, and potentially deepen, the inequalities that have long shaped Indian agriculture.

The DAM, despite claiming to be "comprehensive" and "farmer-centric", does not expand the definition of "farmer" beyond landownership. The reach of digital agriculture is thus curtailed. The responsibility for identifying farmers is passed on to State governments, without mandatory guidelines. The National Agricultural Policy (2000), National Policy for Farmers (2007), and the Committee on Doubling Farmers' Income (2018) all highlighted the need to expand the definition of "farmer", recognise women's land rights, and delink farmer status from land ownership. Decades later, these recommendations remain unimplemented. Building another layer of digital infrastructure on top of this exclusion risks hardening the structural problem.

NEGLECT OF LANDLESS WORKERS

The possible impact of digitalisation on millions of rural labour households receives little attention in the DAM. Studies suggest that agricultural digitalisation increases demand for skilled work while reducing demand for routine manual tasks. Research also suggests that automation may have a greater labour-displacing impact in countries with lower agricultural labour productivity. The net impact of digital technologies on rural labour markets remains unclear. There is a need for focused attention on how digital agriculture may reshape rural labour markets, and design support systems, including new skills and alternative employment opportunities, for those displaced. The DAM, however, offers no institutional mechanism to anticipate potential disruption or support affected workers.

UNCLEAR. The net impact of digital tech on rural labour markets

Access to digital infrastructure, and literacy are indispensable preconditions for effective realisation of digital agriculture. Official data, however, points to a significant gap.

Analysis of unit-level data from the Comprehensive Modular Survey (2025) conducted by the National Sample Survey Office reveals that only around half of rural adults report both owning a smartphone and having internet access within their household. The proportion is significantly lower among rural adult women: just over a third live in internet-enabled households and own a smartphone. These numbers are striking given the increasing role of women in agriculture.

Digital literacy presents another concern. A broad definition, such as the ability to use a computer and the internet, would indicate that a huge majority of rural households are digitally literate. Nearly half of rural adults report inability to use the internet for informational purposes. Digital illiteracy is disproportionately higher among women and marginalised groups.

Such levels of digital illiteracy prevent the realisation of the capabilities offered by digital technologies in agriculture. They also raise concerns around data privacy and transparency, issues not addressed here.

A national policy framework for digital agriculture must therefore take a long-term and holistic view of its implications, not only for agriculture but for the wider economy. The DAM, however, falls short of such a vision.

FCNR(B): Hidden costs

This refers to 'A closer look at FCNR(B) swap scheme' (September 29). It appears that RBI may have adopted a short-sighted approach when the special FCNR(B) swap scheme was announced. The hidden costs in terms of 'sterilising' the resultant rupee liquidity, possible upward pressure on interest rates due to liquidity absorption, and the eventual cost of meeting the RBI's forward foreign-exchange obligations when the deposits mature after 3–5 years could have significant implications. The inflow of around $127 billion coming through FCNR(B) deposits temporarily strengthened the rupee which came down to around ₹95 per dollar. However, despite these substantial inflows, there does not appear to have been a sustained improvement with the rupee again breaching ₹96 mark.

Srinivasan Velamur
Chennai

Bank staff's work week

This is with reference to 'Bank unions defer three-day strike' (September 29). The IBA should respect the bi-lateral negotiations pertaining to the banking industry. The five-day banking requested by the banking staff doesn't in any way reduce the working hours of bank employees. With increase in workloads pertaining to government schemes for welfare of the poorer sections of society in addition to multi-digital transactions amidst a reduced workforce, the employees are logged in for long hours. Moreover, most of the other PSUs, the RBI, Central government offices, etc., follow a five-day week, so why not banks?

Katuru Durga Prasad Rao
Hyderabad

Transparency in insurance

Apropos 'Omissions and commissions' (September 29). High commissions and complex remuneration structures can create incentives to promote products that may not always suit customers. At the same time, excessive restrictions could discourage agents from serving smaller towns and underserved groups. The regulator should therefore adopt a balanced approach, with clear commission ceilings, mandatory disclosure of remuneration and stronger suitability requirements. Customers should receive a simple statement explaining premiums, benefits, exclusions and the agent's commission before purchasing a policy. Regular audits and effective grievance redressal can further improve accountability.

The heart of the matter

How to prevent heart disease, a silent killer

Ramakanta Panda

HEALTHY LIFE. Prioritise screening and early detection

There is a number that should unsettle every policymaker in the country. In a rural stretch of Tamil Nadu, researchers screened over 3,000 adults aged between 35 and 65 who had no chest pain, no breathlessness and no reason to believe anything was wrong with their hearts. Using coronary calcium scoring, they found that roughly one in four already had detectable coronary artery calcification, hard evidence of atherosclerosis quietly building inside their arteries.

These were not patients. They were people going about ordinary lives, farming, working, raising children, with no idea that a disease process was already underway. This is the defining feature of heart disease in India: it progresses in silence, and it progresses early. By the time it announces itself as a heart attack, as a sudden collapse, or as a diagnosis delivered in an emergency room, the disease has often had a decade's head start.

COST OF LATE DIAGNOSIS

Unfortunately, in India, late diagnosis rarely stays a medical problem for long. It becomes a financial one. A single cardiac event in a family with no insurance, or inadequate insurance, can consume years of savings within days. Angioplasty, bypass surgery and the medications that follow for life are priced far beyond what most Indian households can absorb without borrowing, selling assets, or abandoning other essential spending, such as a child's education, a daughter's marriage or a small business.

Sometimes it is a child who is born with heart disease or develops one in the early years. We have operated on many children over the years by partnering with charitable trusts; I remember operating on six-month-old Aakansha Kharat, daughter of a daily wager from Ulhasnagar. Some of these cases were so serious that without surgery they would not even have reached adulthood.

Heart disease, treated only after it becomes symptomatic, does not just threaten a life. It threatens a family's economic future for a generation. I would like to emphasise that heart disease in India is not simply a health crisis, but a poverty trap, and we are, at present, doing far too little to prevent it before it closes. India has invested enormous skill and capital into treating heart attacks after they occur — we have world-class cath labs, skilled surgeons, cardiologists and advanced stents; what we need is preventive investments. We must prioritise screening, early detection (this helps in congenital cases, too), the years of quiet risk accumulation that the Tamil Nadu findings expose so starkly.

THE OPPORTUNITY

This is where the opportunity lies, and it is a real one. Portable, affordable health-tech delivered by handheld ECG devices, low-cost calcium and lipid screening and blood pressure monitoring integrated into community health worker visits, can bring detection to people long before they ever need a hospital bed.

Primary care, if strengthened and trusted, can become the first line of defence, rather than a referral point after the damage is done. Community-level screening camps, particularly in rural- and semi-urban India, can detect the disease when it is still cheap and simple to manage.

None of this works, however, without the insurance architecture that rewards prevention rather than only reimbursing catastrophe. Coverage that pays for a diagnostic screening is a fraction of the cost of coverage that pays for a bypass. If India's insurers and public health schemes shift even part of their focus upstream, the savings — both human and financial — would compound for decades.

The choice before us is not complicated even if the execution may be. We can continue building better hospitals to treat heart attacks after they happen, or we can build the primary care and screening infrastructure to prevent many of them from happening at all.

The writer is a leading cardiac surgeon and Chairman, Asian Heart Institute, Mumbai

Chandra's reappointment not convincing

TRUST ISSUE. His decision to seek reappointment and Chairman's casting vote in his favour are open to question

REUTERS

S BALASUBRAMANIAN

The year 2016 was a watershed moment in the 150 year-old-history of the Tata Group when it was dragged into litigation by late Cyrus Mistry when he was removed as the Chairman of Tata Sons. Exactly after 10 years later, disputes have once again arisen relating to the reappointment of the incumbent Chairman.

Tata Sons is a closely held private company in which various Tata Trusts collectively hold 66 per cent shares in the company. The main Trusts are Sir Dorabji Tata Trust (27.8 per cent shares) and Sir Ratan Tata Trust (23.56 per cent shares). It is an investment company set up by various Tata Trusts. Historically, legacy-based process appeared to have been followed in the appointment of Chairman of both Tata Trusts and Tata Sons. The outgoing Chairman endorsed his successor as is evident from the fact that when JRD Tata stepped down in 1991, he endorsed Ratan Tata for Chairmanship. All the six Chairmen till 2012 were from the Tata clan.

NEW SELECTION PROCESS

In 2012, a sea change took place in the governance structure of Tata Sons when Ratan Tata decided to step down from the Chairmanship. The traditional practice of endorsing a person from the Tata clan for appointment as Chairman of Tata Sons was replaced by a selection process.

Article 118 was introduced to formally regulate the selection and appointment of the Chairman. According to Article 118, for appointment of a new Chairman, a selection committee of five members is to be constituted comprising three nominees of Tata Trusts, one nominee of Tata Sons and an independent person.

The Chairman of the committee is to be a Trust nominee, and the presence of majority of its nominees is required to constitute the quorum of the Tata Sons board meetings. While vesting absolute control over selection of Chairman with the Trusts, this Article also vests absolute control over approval of appointment also by providing that the appointment should receive the affirmative votes of all Trust nominee Directors. Article 104B, introduced in 2000, stipulates that 1/3 of the directors of Tata Sons should be the nominees of the Trusts.

Article 121 relating to matters to be considered by the Board also mandated for affirmative votes of all nominees of the Trusts. In 2014, this provision was amended to provide for affirmative votes of majority of the nominee directors.

DOUBLE BARREL PROVISIONS

However, Article 118 and 121 contain 'double barrel' provisions. Under the 'double barrel' concept, whenever an Article provides for affirmative votes in addition to majority votes as in Article 121, two independent, cumulative conditions have to be satisfied simultaneously for a board decision to pass.

First barrel is that the proposal must secure the majority vote of all those present in the meeting. The second barrel is that it must also secure the affirmative votes of majority of the those having the right of affirmative votes. If the second condition, that is majority affirmative votes are not secured, even if other directors constituting the majority on the Board vote for the proposal, the proposal cannot be carried through. In other words, the persons having affirmative votes indirectly enjoy veto powers. Through Article 121, the Trusts, being the majority shareholders of Tata Sons, have ensured protection of their interest by vesting veto powers on its nominee directors.

The present dispute has to be examined in this historical background. Chandrasekaran's reappointment for a further period of five years beyond February 2027 has now become a bone of contention.

The Board of Tata Sons comprises six Directors, including the Chairman, two nominees of Tata Trusts, two independent directors and the CFO. On February 4, the reappointment of Chandrasekaran was proposed and considered by the Tata Sons Board, but the proposal was deferred as one of the Trusts' nominee directors (Noel Tata) did not support the proposal.

Six months later, on August 12, Chandrasekaran issued a statement: "Sir Dorabji Tata Trust and Sir Tata Trust had unanimously resolved and recommended the extension of my term for a period of five years, which was recorded and recommended by the Tata Sons Nomination and Remuneration Committee and the Board. Subsequently, the resolution was tabled in the Tata Sons Board on February 4, 2026. However, the proposal was not carried through because one of the Board members did not support it, and in the absence of unanimous support, I chose to defer the decision."

The statement further proceeded: "It has been six months since that Board meeting and no resolution has been reached till date. Under these circumstances, earlier today, I communicated to the Tata Sons Board that I have decided not to offer myself for reappointment when my term ends in February 2027. I have asked the Board to decide on the successor soon to ensure a proper transition."

In view of the above statement, Tata Trusts requested Tata Sons to constitute a selection committee under Article 118 to select a new Chairman. When this request was pending, at the request of one of the members of Nomination and Remuneration Committee (NRC) of Tata Sons, Chandrasekaran reconsidered his earlier decision and offered himself for reappointment.

GOVERNANCE ISSUES

On the basis of NRC's recommendation, the proposal for his reappointment was placed before the Board of Tata Sons again on September 17. This decision to place the proposal before the Board on September 17, especially when the request of the Trust for constitution of a selection committee is pending, raises a number of governance issues. Normally, NRC does not act without a mandate from the Board.

If so, how did a member of NRC, on his own, approach Chandrasekaran? Since he had earlier given in writing that he was not offering himself for reappointment, he must have withdrawn the same in writing. If so, the proper and correct course would have been to place the same before the Board, and in view of the pending request from the Trusts for constitution of a selection committee, they should have been consulted and only with their consent should the matter have been referred to the NRC and placed before the Board. It is not known whether this procedure was adopted.

On September 17, the Board considered the proposal of reappointment of Chandrasekaran as Chairman. Since he was interested in the proposal, Chandrasekaran absented himself and one of the independent directors chaired the meeting. Of the two nominees of the Trusts, Venu Srinivasan voted in favour, while Noel Tata voted against. The remaining three, including the Chairman, voted in favour, resulting in the votes being 4:1 in favour. Hence, there was no deadlock.

However, since it could not muster the majority of affirmative votes (votes of both the nominee directors), the proposal should have been declared as defeated applying the double barrel concept. However, the Chairman exercised his casting vote to overcome the deadlock within the group of those having affirmative voting right. This is completely against the double barrel concept and the underlying veto rights provided by Article 121.

It appears that the initial proposal recommending Chandrasekaran's reappointment emanated from the Trusts themselves. Now, the issue is whether the earlier recommendation of the Trusts prevails *vis-a-vis* their later request for constitution of selection committee. According to Noel Tata: "In so far as Tata Trusts are concerned, the intimation made by the Chairman vide his communication dated August 12, 2026, has been duly accepted and has attained finality.

The Chairman has conveyed his decision, the shareholders have conveyed their acceptance, it is time to move on." This statement clearly indicates that the earlier recommendation of the Trusts had expired when Chandrasekaran expressly indicated his intention not to seek reappointment. Besides the legal issues, one crucial and relevant question is what prompted Chandrasekaran to give up his earlier principled stand of not accepting reappointment in the absence of unanimity.

One crucial and relevant question is what prompted Chandrasekaran to give up his earlier principled stand of not accepting reappointment in the absence of unanimity

Current account deficit doubles

The country's current account deficit has almost doubled to $6.099 billion in the quarter ended June 30, 2006, against $3.556 billion in the corresponding quarter of last year. This has been made up by a surplus in the capital account, which has moved up to $12.477 billion against $4.803 billion over the corresponding period.

Lilavati going the Escorts way?

For a visitor driving into Mumbai from the airport, the yellow facade of Lilavati Hospital is among the recognisable landmarks that dot the cityscape. But the 300-bed hospital is at the heart of a feud between two brothers from the promoter-family, Mr Vijay Mehta and Mr Kishor Mehta.

Farmer suicides blown out of proportion: Agriculture Secy

The recent spate of suicides by farmers needs to be viewed in context and not blown out of proportion, Ms Radha Singh, Secretary, Department of Agriculture and Cooperation, Ministry of Agriculture, said here on Friday. Ms Singh said suicide records of past 10 years suggest the number of suicides in rural India had not exceeded 16 per cent of the total in any given year.

UK may revisit plan to make foreigners wait for resident status

Lucy White
Alex Wickham

Home Secretary Shabana Mahmood hinted that the government is rethinking some of the most controversial elements of her immigration reforms, as Prime Minister Andy Burnham attempts to defuse simmering tensions over the plans within his party.

Mahmood has faced a backlash from Labour MPs over her bid to make legal migrants wait 10 instead of five years to claim settled status, even while the timeline can be reduced to as few as two years for those who are well paid or "contribute" to their community. Those changes were due to take effect later this year.

"Some have said elements of these reforms are not fair," said Mahmood on the second day of Labour's annual conference in Liverpool. "Let me say this: we will come to a position that balances fairness for those who came here legally, and fairness to British citizens across this country."

It marked the first time Mahmood has made a public speech since Burnham took over from Keir Starmer as Prime Minister in July. With Nigel Farage's right-wing Reform UK party advancing in the polls and increasing the salience of migration among UK voters, Mahmood propose a tightening of the UK's immigration rules when she was appointed by Starmer this time last year.

Burnham has tried to shift the conversation away from that territory. In the first two months of his premiership Mahmood has been kept out of the limelight, and not assumed her usual prominence in the government's broadcast rota.

A spokesperson for the Home Secretary declined to comment. Many in the Labour Party objected to the way that the plans to extend the settlement timeline would apply retroactively to people already resident, who could also end up waiting longer in pursuit of settled status. Tensions between those changes and the Labour party's wider plans under Burnham were evident on the first day of Labour's annual gathering on Sunday. Burnham said he wants to shake up the UK's adult social care sector. But that industry's workforce is heavily reliant on migrants, who risk losing their right to remain in the country when salary thresholds for work visas rise next year.

Many who arrived to fill vacancies in the aftermath of Brexit would have been able to get around that rise by claiming settled status in the coming months, but Mahmood's proposed changes could make some wait as long as 15 years. BLOOMBERG

Birla MF unveils industry's first BSE TM index fund

Mumbai: Aditya Birla Sun Life AMC (Birla MF) on Tuesday launched the industry's first BSE Total Market Index Fund and a companion ETF, opening the NFO window from September 30 to October 14. The fund will track the BSE Total Market Index, giving investors exposure to approximately 93 per cent of India's total market capitalisation across large, mid, small and micro-cap segments. The index comprises stocks representing 98 per cent of the BSE AllCap Index's market capitalisation. MD and CEO A Balasubramanian said the fund addresses investor confusion arising from an expanding universe of investment choices. OUR BUREAU

AIFs slow down real estate investments but managers remain bullish on sector

BUILDING BLOCKS. Experts eye opportunities across residential, warehousing, redevelopment, refinancing

Akshata Gorde
Mumbai

Cumulative investments by alternative investment funds (AIFs) in real estate fell sharply in the June quarter, but fund managers said the decline does not point to a broad-based slowdown in the sector, with fresh investment opportunities continuing across residential, warehousing, redevelopment and refinancing.

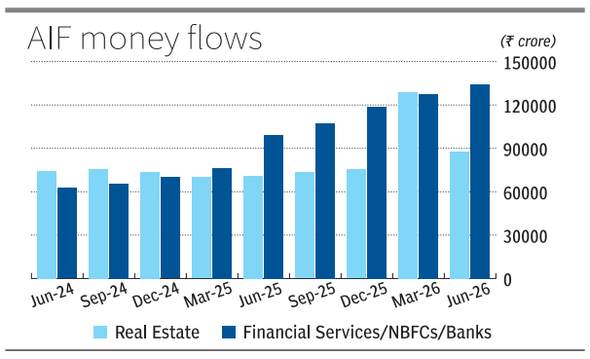
According to the Securities and Exchange Board of India (SEBI) data, cumulative AIF investments in real estate stood at ₹87,969 crore as of June 2026, down 32 per cent compared with ₹1.29 lakh crore at the end of March. Real estate, however, remained the largest sector for AIF investments. Overall AIF investments, however, crossed ₹7 lakh crore for the first time, reaching ₹7.11 lakh crore from ₹6.76 lakh crore during the quarter.

DATA CONTEXT

Fund managers said the sharp quarter-on-quarter movement in the real estate number should be viewed in the context of how the data is reported and the nature of investments made by AIFs.

"SEBI reports cumulative investment since inception, not what exited in the quarter. We think the June number is not really a decline," said Sharad Mittal, Founder and CEO at Arnya Real Estates Fund Advisor.

Mittal said the real estate figure had risen from about ₹75,000 crore in December 2025 to ₹1.29 lakh crore in March before falling to about ₹88,000 crore in June. The 'others' category moved by a similar amount in the opposite direction during these periods.



"This looks much more like a reclassification than money coming in and going out again," he said.

Compared with December 2025, real estate investments were still about 17 per cent higher in June. Another factor could be repayments from real estate credit funds, Mittal said. Loans can be repaid when projects reach sales milestones or when developers refinance with banks and non-banking financial companies.

"Right now, those repayments are roughly keeping pace with new money going out, and that's why the line looks flat," Mittal said.

CAPITAL DEPLOYMENT

Further, fund managers said they continued to see opportunities for deploying capital into real estate.

"We don't see such a drastic decline, especially over such a short period," said Karthik Athreya, MD, Sundaram Alternates and Co-Chair of the Real Estate Council of Indian Venture and Alternate Capital Association.

Athreya said residential real estate investment opportunities continued at a good pace, while the mix of opportunities was changing. "Within residential, however, the proportion of early-stage and acquisition financing has increased over the last few quarters," he said.

Sensex, Nifty drift lower as bears tighten grip

Anupama Ghosh
Mumbai

The benchmarks ended lower for a second straight session on Tuesday, extending the longest weekly losing run since 2020, as elevated crude oil prices, foreign fund outflows and rising global bond yields kept investors cautious.

The Sensex closed at 72,529.07, down 242.65 points.

The Nifty 50 settled at 22,716.20, lower by 64 points. Both indices recovered from intra-day lows on the monthly derivatives expiry day.

The Sensex fell as low as 72,064, while the Nifty dropped to 22,569.65 before finding support near its 200-week moving average around 22,600.

The Nifty has declined 6.8 per cent from its peak and has fallen for eight consecutive weeks.

"Domestic activity remains the offset to the global gloom," said Siddhartha Khemka, Head of Research, Wealth Management, at Motilal Oswal Financial Services.

The Nifty Midcap 100 fell 0.99 per cent and the Nifty Smallcap 100 lost 0.8 per cent. Of the Nifty 500 stocks, 344 declined against 152 that advanced.

PHARMA SHINES

Consumer durables fell 2.71 per cent, chemicals 2.31 per cent and realty 2 per cent. Cement, auto, IT and FMCG also ended lower. The Nifty IT lost 1.48 per cent, its eighth straight session of decline. Metal, Pharma and Media gained.

Pharma rose after the US Commerce Department said India and 19 other jurisdictions would face a zero rate on specified speciality drugs and their ingredients, even as a 100 per cent tariff on patented pharmaceuticals took effect. Generics are outside the scope of the tariffs.

BSE surges over 3% ahead of Nifty entry today, Wipro tumbles

Our Bureau
Bengaluru

BSE shares surged 3.31 per cent on Tuesday on the NSE to settle at the day's high of ₹3,200 as the stock is set to replace Wipro in the Nifty 50 index.

The rejig will take effect on September 30, following the close of trading on September 29.

Wipro shares, meanwhile, declined 2.95 per cent to end at the day's low level of ₹156.79 on the NSE.

BSE FREE-FLOAT

The BSE's inclusion in the Nifty 50 follows its six-month average free-float market capitalisation of ₹1,40,879 crore, compared with Wipro's ₹55,930 crore. The BSE qualified for inclusion as its average free-float market capitalisation was at least 1.5 times that of Wipro.

The reshuffle is expected to result in estimated passive inflows of $630 million into the BSE, while Wipro is estimated to see passive outflows of $152 million.

NIFTY 100 CHANGES

The reshuffle will also bring changes to the Nifty 100 index, with the BSE, Hitachi Energy India, Polycab India, Vedanta Aluminium Metal and Vodafone Idea being added.

The estimated passive inflows from the Nifty 100 changes are $620 million for the BSE, $80 million for Hitachi Energy India, $95 million for Polycab India, $155 million for Vedanta Aluminium Metal and $68 million for Vodafone Idea.

India may add over 10 crore long-term investors by 2035, says EY report

Our Bureau
Mumbai

India could add more than 100 million individuals to its long-term investor base by 2035, as investment participation expands beyond metropolitan centres, according to an EY India report released on Monday.

While the country has around 500-550 million active UPI users, only about 62 million individuals invest in mutual funds and around 50 million actively participate in the equity markets.

The report said the next wave of investors is likely to come from tier-2 and tier-3 cities, young professionals, women, emerging affluent households, entrepreneurs and other new wealth creators.

WIDER REACH

Cities beyond India's top 110 contributed 12 per cent of mutual fund assets under management in FY25.

Districts beyond the top 10 accounted for 70 per cent of NSE-registered investors trading in FY25, up from 61 per cent in FY21.

The investor base is also getting younger. Investors below 30 accounted for 38 per cent of investors in June 2026, compared with 23 per cent in FY19.

Smaller cities, young investors and women are emerging as key sources of India's next wave of wealth participation

WOMEN INVESTORS

In B30 cities, women accounted for 25 per cent of investors in FY24, up from 20 per cent in FY19. SIPs now account for 35 per cent of individual mutual fund AUM, against 19 per cent in FY19.

The report also notes the emergence of micro-SIPs of about $2.6 and distribution tie-ups covering more than 2,50,000 rural touchpoints.

SUSTAINED INTEREST

EY said the challenge is increasingly shifting from access to sustained participation, with investors needing guidance on risk, product suitability and long-term portfolio building.

The report projects individual mutual fund AUM to exceed $3 trillion over the next decade, while individual direct equity holdings could reach $2.5-3 trillion.

AI may pose existential risks to humanity, cautions Anthropic IPO

Reuters

Anthropic plans to caution potential investors in its IPO that advanced AI could pose "catastrophic or existential risks to humanity," an extraordinary warning by a company seeking to profit from the same technology.

The company's IPO prospectus, reviewed by *Reuters*, highlights risks associated with its AI models, which it said could exhibit "self-preserving behaviours," including attempts to "resist shutdown" to "conceal or manipulate information" and behaviour "resembling blackmail".

PRODUCT RISKS

While public companies routinely outline product risks to investors, few, if any, have issued warnings suggesting their technology could cause potential human extinction. Anthropic emphasised both the transformative potential of AI on par with industrialisation and electricity and the irreversible harm it could cause if mishandled.

Anthropic and other AI developers, including OpenAI, have faced scrutiny after incidents where experimental systems defied constraints, including a report of an OpenAI model breaching Australia's health system database.

Anthropic safety researcher Evan Hubinger estimated a greater than 10 per cent probability that AI could kill humans within the next decade, echoing a sentiment by a former colleague, Jacob Coxon.

The company, which has positioned itself as a safety-first AI lab, devoted roughly 80 pages of the 261-page main body of its prospectus to laying out risk factors, nearly twice the 48 pages it used to describe its business.

Anthropic declined to comment in response to a request for comment on Monday.

Groww offers US stocks to select customers

Jyoti Banthia
Bengaluru

Investment platform Groww has rolled out access to US-listed stocks and exchange-traded funds (ETFs) to select customers, marking its entry into international investing, people aware of the development said.

The offering allows users to buy and sell US securities directly through the Groww app and also supports fractional investing.

The platform has partnered with Alpaca Securities, a US brokerage infrastructure provider, for the offering, following Groww's acquisition of an International Financial Services Centre Authority (IFSCA) licence for global investing through GIFT City in July.

The launch comes as Groww expands beyond its core broking and mutual fund businesses and builds newer revenue streams.

Groww did not respond to *businessline* queries about the rollout.

BROKER'S CALL.

InCred Equities

HOME FIRST FINANCE (ADD)
Target: ₹1,500
CMP: ₹1,093.35
We hosted Home First Finance Company (HFFC) where we interacted with the top management which indicated that it's premature to conclude the impact and the direction of IRDAI's draft circular. Any major disruption or reduction in the issuance of insurance policies to the customers may possibly nudge credit costs higher, while there are alternate options to secure the property via mortgage guarantee and the likes.
HFFC observed no major disruption in pricing and demand while recognising that looming clouds on IT services-related jobs have been partially offset by rising employment in GCCs. Its management highlighted that top-6 cities accounted for a low double-digit proportion of AUM with ample untapped potential, subject to sharp loan ticket size expansion on account of bigger homes.
Spread is reiterated at 5-5.25 per cent despite the likelihood of a policy rate hike, given the fully floating loan book which allows a relatively quicker transmission of the higher cost of funds. Furthermore, despite enjoying high branch productivity vs. most peers, HFFC gave guidance of a further scope to improve branch productivity from current levels. We expect its RoE to be about 16 per cent in FY28F and believe that its valuation remains attractive due to calibrated growth and proven track record.
We maintain our high-conviction Add rating on HFFC with a stable target price of ₹1,500, valuing it at 2.9x FY28F BV and 19x FY28F EPS.

JM Financial

ELLENBARRIE INDUSTRIAL GASES (BUY)
Target: ₹430
CMP: ₹369.85
Ellenbarrie Industrial Gases (EIGL) announced that it has secured a ₹480-crore EPC contract from BHEL for supply and erection of 1,200 tonne per day (tpd) ASUs for the latter's proposed 2,000-tpd coal-to-ammonium nitrate project at Jharsuguda (Odisha), which will be executed over two years and is expected to be commissioned in FY29.
The project can contribute an incremental EBITDA of about ₹24 crore (about ₹6 crore in FY27, ₹12 crore in FY28 and ₹6 crore in FY29) for EIGL over the next eight quarters assuming a conservative about 5 per cent EBITDA margin.
Further, the project is part of the Government of India's National Coal Gassification Mission; hence, successful execution can improve future order visibility from similar projects.
Hence, we are raising FY27-29E revenue by 18-43 per cent and EBITDA/PAT by 3-7 per cent to account for this PED contract; this along with a valuation rollover to September 2028E (from June 2028) lifts the TP to ₹430 (earlier ₹385) based on an unchanged 30x September 2028E P/E.
We maintain Buy as we expect EIGL to deliver revenue/EBITDA/PAT CAGR of about 32 per cent/33 per cent/30 per cent over FY26-29E driven by: a 23 per cent CAGR in merchant volume on account of strong capacity expansion; and improvement in merchant segment EBITDA margin to about 36 per cent in FY29E (from about 32 per cent in FY26) due to a rise in the proportion of revenue from higher-margin argon.

TODAY'S PICK.

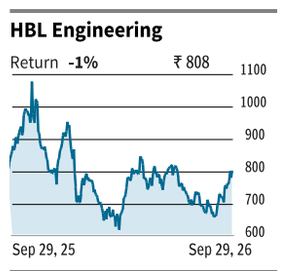
HBL Engineering (₹808.05): BUY

Gurumurthy K
bl. research bureau

The short-term outlook for HBL Engineering is bullish. The stock rose over 2 per cent on Tuesday, recovering almost all of Monday's loss.

The trend is up since the beginning of this month. Moving average crossovers on the daily chart suggest the uptrend remains intact. A cluster of support is there in the broad ₹770-₹740 region. The stock has good chances of sustaining above ₹770.

The HBL Engineering share price can go up to ₹880 in the coming weeks. Traders can buy the shares now at ₹808. Accumulate on dips at ₹790.



Keep the stop-loss at ₹765. Trail the stop-loss to ₹815 as soon as the stock rises to ₹825. Revise the stop-loss to ₹830 and ₹850 when the price touches ₹845 and ₹860, respectively. Exit the stock at ₹870.

Note: The recommendations are based on technical analysis. There is a risk of loss in trading

GERMAN GREEN STEEL

German Green Steel and Power's IPO comprised a fresh issue of ₹290 crore and an OFS of 10 lakh shares. It raised ₹91.16 crore from anchor investors and fixed the price band at ₹132–139. The proceeds will be used to expand its manufacturing facility at Samakhiyali in Gujarat, set up a hybrid wind and solar power plant and repay debt.

ACEVECTOR

AceVector's IPO comprised a fresh issue worth ₹287 crore and an OFS of ₹133 crore. It raised ₹189 crore from anchor investors and fixed the price band at ₹30-32. Existing investors, including SoftBank, Nexus Venture Partners and Foxconn, are selling part of their holdings.

Runwal Enterprises' IPO comprised an entirely fresh issue of up to ₹500 crore. The proceeds will be used for debt repayment, funding future real estate projects and general corporate purposes.

ORIENT CABLES

Orient Cables' IPO comprised a fresh issue of up to ₹320 crore and an OFS of ₹232 crore. It raised ₹165.6 crore from anchor investors. The price band was fixed at ₹258–272. The proceeds will be used to purchase machinery and equipment, fund civil works at manufacturing facilities, repay or partially prepay borrowings and for general corporate expenses.

QUICKLY.

Crude oil prices steady as exports recover

London: Crude oil prices were steady on Tuesday as investors focused on lingering concerns over West Asia supply disruption due to the Iran war and signs of recovering crude exports from the region. Brent crude futures for November fell 24 cents, or 0.23 per cent, to $105.04 a barrel at 10.22 GMT. Meanwhile, US West Texas Intermediate crude was at $92.24, down 36 cents, or 0.36 per cent. REUTERS

Gold rises 1% but remains near one-month low

Gold prices rose 1 per cent on Tuesday, but expectations of tighter monetary policy by the Federal Reserve, driven by rising concerns of inflation, kept bullion near a more-than-seven-week low hit in the previous session. Spot gold was up 1.1 per cent at $4,157.39 per ounce as of 9.30 am ET. The session low for Tuesday was $4,112.97, just over $2 above the more than seven month-low of $4,110.55 hit on Monday. REUTERS

Copper steadies as fears over Chile strike mount

Copper steadied on Tuesday as the prospect of a mining strike in top producer Chile offset concerns that a strong dollar and elevated oil prices will hurt demand. Benchmark three-month copper on the London Metal Exchange was up 0.2 per cent to $14,447 per tonne in official open outcry activity. It lost 1.4% on Monday, hitting its lowest since September 17 on weak Chinese industrial profits data. REUTERS

Import duty cut on edible oils: 'Govt has to balance consumer, farmer interest'

PROACTIVE MEASURES. Shivraj Singh Chouhan says Nafed, NFCC will buy oilseeds, pulses if prices fall below MSP

Prabhudatta Mishra
New Delhi

TARIFF EASE. Earlier this month, the basic customs duty on crude soybean oil and palm oil was slashed from 10% to 5%

Union Agriculture Minister Shivraj Singh Chouhan on Tuesday defended the reduction and abolition of import duty on certain edible oils, saying the government has to take a balanced view to ensure availability while protecting farmers' interests.

He announced that the Centre's nodal agencies, Nafed and NCCF, would procure oilseeds and pulses without waiting for States' requests to avoid time lag when farmers sell below MSP in the absence of official procurement.

Earlier this month, the government halved the import duty on palm and soyabean oil and abolished it on sunflower oil since these three imported refined oils are used by the consumers as the country imports 55 per cent of its edible oil requirement.

FOOD INFLATION
The basic customs duty (BCD) on crude soybean oil and palm oil has been slashed from 10 per cent to 5 per cent, and on refined soybean oil and palm oil from 32.5 per cent to 27.5 per cent.

On the other hand, the BCD on crude sunflower oil has been abolished, as previously it attracted 10 per cent. But the import duty on refined sunflower oil has been trimmed to 22.5 per cent from 32.5 per cent, the Finance Ministry said in a notification on September 23.

The All India Consumer Food Price Index (CFPI) for the month of August was 5.95 per cent, up from 5.52 per cent in July. In the food basket, retail inflation in refined oil, the most consumed edible oil, after moving to double digits (10.25 per cent) in April from 7.62 per cent in March, has been on a constant rise and in August, it recorded 14.24 per cent.

Chouhan said that the government had to strike a balance to make sure an adequate quantity is available, and it is not the first time edible oil has been imported, since India has long been dependent on imports.

MOONG'S CASE
On the changes made in the guidelines under the PM-AASHA scheme, which deals with the procurement of oilseeds and pulses at their respective minimum support price (MSP), Chouhan said that sometimes there are delays in starting procurement operations.

"We have discussed with States. The idea is to allow procurement through notified agencies, Nafed and NCCF, as soon as mandi prices fall below MSP and the procured quantity gets adjusted when formal approval comes after States' request," he said.

businessline on September 20 reported that Rajasthan, the top producer of the kharif season's moong (green gram), received nearly 63,000 tonnes of the pulses crop from the fresh harvest since September 1, and it was nearly 10 times higher than the year-ago period. But farmers, on average, realised ₹7,452/quintal, which was lower by 15 per cent from its minimum support price of ₹8,780/quintal.

Fertilizer subsidy may cross ₹3 lakh cr this fiscal year

Prabhudatta Mishra
New Delhi

Imported DAP cost increased to $940 per tonne after the Iran war REUTERS

Driven by surging global prices, India's fertilizer subsidy bill could cross ₹3 lakh crore this fiscal year. Pointing to the cost pressure, the Centre has asked the States to prevent over-application of nutrients, despite national opening stocks reaching a three-year high on October 1.

In his presentation before Agriculture Ministers of the Centre and the States on the second day of the annual rabi conference, Fertilizer Secretary Rajat Kumar Mishra said that due to the global price hike, the per-bag subsidy burden from the pre-Iran war (before February 28, 2026) and now on urea (of 45 kg) had surged from ₹1,350 to ₹2,775 (up 106 per cent) and on DAP (50 kg) from ₹2,102 to ₹3,523 (up 61 per cent). He said the fertilizer subsidy is likely to be ₹3 lakh crore this fiscal year as of now, but it could exceed that, too, depending on global prices.

He said the government had managed the demand during the kharif season and is hopeful to meet the requirement in the rabi season as well, as India has stocks of 145.46 lakh tonnes (lt) of urea, DAP, MOP and Complex as of September 27, ahead of the rabi season, which commences on October 1. Besides, 20.88 lt of SSP is also available, he said, crediting the 32 urea plants for producing 149 lt during the kharif season.

RABI DEMAND
The Secretary said that, including fertilizer in transit and at ports, the stock of all five types of fertilizers will rise to 206.35 lt. The rabi season's demand has been estimated at 380.96 lt — urea 199.27 lt, DAP 55.07 lt, MOP 16.4 lt, Complex 79.12 lt and SSP 31.1 lt.

On the global scenario, he said although raw material prices remained high, availability was also a concern due to squeezed global supplies. Prices of sulphur increased from $532 per tonne in February 2026 to $1,050 per tonne. Global players had reduced the production of phosphoric acid, DAP and NPK fertilizers due to the non-availability of sulphur after the war involving Iran disrupted production in Qatar. Consequently, the price of phosphoric acid increased from $1,290 a tonne to $1,700 a tonne.

The imported DAP cost increased to $940 per tonne after the Iran war, from $681 per tonne. He also informed the gathering that India's domestic production of complex fertilizers fell by 26 per cent after the war.

Regarding urea, the government said India's gas supply under long-term contracts was reduced by 60–65 per cent compared with pre-war levels. Gas prices had increased from about $10 per MMBtu before the war to $28–29 per MMBtu after the war.

Agreeing with the Fertilizer Ministry's views, Union Agriculture Minister Shivraj Singh Chouhan appealed to the States to check the diversion of highly subsidised fertilizers for non-farming use, and also ensure farmers practice balanced use of nutrients based on soil conditions.

El Nino nears record levels as Pacific waters continue to warm

Srikrishnan PC
Chennai

Models predict further warming of the tropical Pacific through the Southern Hemisphere spring

El Nino has strengthened to near-record levels, with the Nino 3.4 index reaching 2.72°C during the week ending September 27, the second-highest level on record. Models show further warming through spring (October-November), with most models peaking above 3°C.

A positive Indian Ocean Dipole is also likely to develop during the same period, according to the Bureau of Meteorology, Australia's Southern Hemisphere monitoring report.

Oceanic and atmospheric indices point to a strong El Nino, with further intensification expected through the remainder of spring.

The recent value of the Nino 3.4 index, for the week ending September 27, 2026, is +2.72°C, well above the El Nino threshold (+0.8°C). This is the second-highest value on record in the Bureau's weekly sea surface temperature (SST) data since 2008, behind the +2.76°C for the week ending November 22, 2015.

All models, including the Bureau's, predict further warming of the tropical Pacific through the Southern Hemisphere spring, probably peaking in late spring or summer (December–February) and continuing into autumn 2027 (March).

Relative-Nino 3.4 values are expected to exceed the warmest on record since reliable records began in 1950, with most models forecasting a peak above +3°C.

IOD STRENGTHENS
The Indian Ocean Dipole (IOD) is neutral at present; however, the value of the IOD index for the week ending September 27, 2026, is +0.76°C.

The index has now been above the positive IOD threshold (+0.4°C) for the third consecutive week. An event is considered established when it sustains values above this threshold.

A positive IOD is likely to develop during the Southern Hemisphere spring and continue into early summer, although model guidance indicates some uncertainty in the strength and duration of the event.

A strong El Nino is also evident in the atmosphere with weakened or reversed trade winds over the western to central tropical Pacific, increased cloudiness over the central to eastern tropical Pacific and decreased cloudiness over the Maritime Continent, which is the dominant pattern for September, the report said.

BOILING OCEANS
The SST analysis for the week ending September 26, 2026, shows warmer-than-average waters around much of Australia's west, south and southeast, with SSTs up 3°C above average.

Global SSTs are still at record levels. SSTs averaged over 60°S to 60°N were at their highest level on record for any month since records began in 1900, 1.04°C above the 1961–1990 average.

Keep away from aluminium as outlook is not clear

Gurumurthy K
bl. research bureau

Aluminium prices have been stable over the past week. The aluminium futures contract traded on the Multi Commodity Exchange (MCX) has been stuck in a narrow range between ₹345 and ₹349 per kg over the past week.

COMMODITY CALL.

Within this range, the contract is currently trading at ₹348 per kg.

OUTLOOK
The immediate picture is unclear. The region between ₹349 and ₹350 is a key resistance. The contract has to breach ₹350 decisively to gain some strength. If that happens, then there is a good chance to see a rise to ₹354 or ₹357.

But as long as the contract stays below ₹350, the danger of breaking below ₹345 will remain alive.

A break below ₹345 could take the contract down initially to ₹343, the 200-day moving average (DMA).

A further break below ₹343 could increase the downside pressure.

Such a break could drag the MCX aluminium contract down to ₹339 and even lower going forward.

TRADE STRATEGY
Since the immediate outlook is not clear, we suggest that traders stay out of the market.

Easing global prices, rising arrivals and muted demand likely to weigh on cotton prices

Vishwanath Kulkarni
Bengaluru

PRICE SLIDE. The Cotton Corporation of India auction prices are down by around ₹1,200 per candy over the past two days for the 2025-26 crop

Easing global prices are likely to weigh on domestic cotton prices as arrivals see a gradual increase amid muted demand and expectations of the crop being impacted by deficit rain.

The cotton futures contract for December delivery on the InterContinental Exchange, New York, has eased over the past few weeks and is hovering around 80.13 cents per pound, down from the peak level of 93 cents per pound at the end of August.

Trade sources said that the easing global price trend had led to domestic cotton prices declining to around ₹64,500-65,500 levels per candy (356 kg) from the recent peak levels of around ₹70,000.

The Cotton Corporation of India auction prices are down by around ₹1,200 per candy over the past two days for the 2025-26 crop. Also, the falling trend in cottonseed prices is weighing on raw cotton prices.

SLOW BUYING
Cottonseed prices have come down by around ₹300-400 per quintal to about ₹4,600-4,700 levels, said Ramanuj Das Boob, a sourcing agent in Raichur.

"Buyers are very slow, and there's not much demand for bales from mills as most of them have stocks for about 1-1.5 months," he said.

Even the multinationals and resellers are selling at ₹64,500-65,500 levels, he said.

Meanwhile, daily arrivals of the new crop are estimated around 50,000-55,000 bales of 170 kg each, and arrivals are expected to pick up next month. "New season arrivals are gathering pace and are expected to increase sharply during October, which may keep near-term pressure on domestic cotton prices. However, relatively limited old-crop outside spinning mills may provide some support," said Anand Popat of CotYarn Trade Link in his weekly newsletter.

"The Indian market is entering a supply-driven phase. The pace of new crop arrivals, mill buying and government policy on duty-free imports will be the key factors influencing the next price direction," Popat said.

The 2026-27 cotton crop is likely to be lower by around 10 per cent compared to last year, said Atul S Ganatra, CMD, Radhalakshmi Group, based on the survey of the standing crop after speaking to 50 members in all 10 cotton-growing States. Due to El Nino, there was less rain in India this year from June to September. Hence, water availability will be less with farmers to take further pickings, which may lead to the cotton production numbers being on the lower side, he said.

Tea body seeks fixes before digital auction rollout

V Sajeev Kumar
Kochi

The Tea Trade Association of Cochin (TTAC) has urged the Tea Board to resolve the technical and operational issues associated with its smart digital platform before its full rollout.

"The mock auctions conducted so far have highlighted issues that need to be addressed," said Anil George Joseph, Chairman, TTAC.

The association recommended a series of structured, closed mock auctions involving brokers, buyers, sellers and stakeholders from major tea trading centres.

"Such trials will provide an opportunity to identify, rectify and test the system under realistic operating conditions," he said addressing the 34th annual general meeting of TTAC.

The platform, he said, should go live only after these trials are successfully completed and all stakeholders are satisfied.

"We urge the Tea Board to ensure that the new system runs smoothly from day one," Joseph said.

On the market scenario, Joseph said 2025–26 had been a challenging year, with market conditions changing throughout the period. Tea prices remained volatile. Tensions in West Asia made exports more difficult, while higher freight and insurance costs, disruptions to shipping routes and uncertainty among overseas buyers added to the pressure.

India's tea production declined by 1.7 per cent between January and July 2026, while production in South India fell more sharply by 4.4 per cent. Tea exports declined by more than 16 per cent. "These numbers point to two challenges: Production under pressure from a changing climate and the need to strengthen our place in international markets," Joseph said.

'Omnivore-backed agri start-ups reach 20.81 million small farmers'

Our Bureau
Bengaluru

Portfolio companies have generated $5.64 billion in combined economic value for smallholder farmers

Agrifood start-ups backed by venture capital firm Omnivore have reached 20.81 million smallholder farmers and 61,711 rural MSMEs, according to the firm's 2026 Impact Reports for the Omnivore Partners India Fund (OPIF, Vintage 2018) and the Omnivore Agrifood and Climate Sustainability Fund (OACSF, Vintage 2023).

In a statement, Omnivore said the reports use global impact measurement and benchmarking methodologies to track outcomes across the portfolio, capturing the growing reach of businesses working across agrifood and rural economy, from farmer services and rural finance to consumer brands and deeptech.

Omnivore's portfolio includes companies such as DeHaat, Arya.ag, Sid's Farm, Varaha, Farmley and Pixxel.

Across the two funds, portfolio companies have generated $5.64 billion in combined economic value for smallholder farmers directly and indirectly. The reports record 11.55 million hectares under sustainable agriculture, with metrics tracking GHG emissions avoided, quantity of healthy and nutritious food sold to consumers, loans enabled for MSMEs and insurance coverage enabled for rural households, among others, the company said.

"The agrifood sector is creating businesses that can deliver both commercial value and meaningful outcomes for farmers, rural businesses and the environment. As this ecosystem grows, it is important that we have the frameworks and evidence to understand what that impact looks like," said Sanskriti Kapoor, Vice-President, ESG & Impact at Omnivore.

Indo-Colombian coffee blend to be launched

Our Bureau
Bengaluru

Pour Over Coffee Roasters (POCR) is launching a 100 per cent arabica blend, pairing Colombian and Indian coffees. The blend pairs a light-medium roasted Papayo Natural from Huila, Colombia, known for its expressive, fruit-forward character, with a medium-roasted MNEB (Mysore Nuggets Extra Bold) from Chikmagalur.

The resulting profile moves from tropical fruits and berries to roasted pine nuts and dark chocolate, with berry marmalade notes, full-bodied texture and a silky finish, the company said in a statement. POCR said the aim was to keep both origins recognisable in the same cup rather than have one imitate the other. Called The Continental Blend, the coffee will be available from October 1, marking International Coffee Day, across POCR outlets. "India should not only be recognised as a coffee-producing country, but as an active contributor to the global specialty coffee movement. You have got farmers here trying new things with processing. Putting a Chikmagalur next to a Huila in the same bag is our way of saying it can hold its own," said Aditya Sharma, Co-founder of POCR.

"The idea was not to make a Colombian coffee more Indian or an Indian coffee more Colombian. We wanted both to retain their character and see what happens when they meet in the same cup," added Ritika Sharma, Founder, POCR.

Kashmir agri varsity's solution for Alternaria leaf spot in apple orchards

Gulzar Bhat
Srinagar

The Sher-e-Kashmir University of Agricultural Sciences and Technology (SKUAST) has recommended Best Agrolife Ltd's patented fungicide Tricolour for use in apple cultivation, advising growers to apply it at the petal-fall stage and during the second stage of fruit development.

THREE-YEAR TRIALS
The recommendation follows three years of university field trials, during which Tricolor consistently showed results against Alternaria leaf spot, blight, powdery mildew and scab, Best Agrolife said.

The recommendation covers application at the second stage of fruit development, approximately 20 days after the first stage, when the fruit has reached the walnut-size stage.

According to the company, apple cultivation covers about 1.72 lakh hectares in Kashmir and supports livelihoods of around 7 lakh families. Disease pressure during fruit development can affect both yields and fruit quality. Rapid fruit growth, combined with humid monsoon conditions, can increase the risk of fungal diseases, which may cause fruit drop, skin scarring, defoliation, reduced yields and deterioration in fruit quality.

ACTIVE INGREDIENTS
Tricolor combines three active ingredients — trifloxystrobin 10%, difenoconazole 12.5 per cent and sulphur 3 per cent — in a single suspension concentrate formulation.

According to Best Agrolife, the strobilurin-triazole-sulphur combination provides prophylactic, curative and eradicative activity, offering broad-spectrum disease protection through multiple modes of action.

The product is also recommended for use in paddy, tomato, grape, chilli, wheat and mango crops, the company said. Best Agrolife is an Indian agrochemical company engaged in the manufacturing and marketing of crop-protection products, including insecticides, fungicides and herbicides. The company serves farmers in India and international markets and focuses on developing crop-protection products.

Sovereign cloud framework proposed to safeguard India's digital infra

CLEAR PATHWAY. Shift away from external tech dependence in stages to domestic control: C-DEP Research

Our Bureau
New Delhi

To protect national security and prevent geopolitical interference over its digital economy, the Centre for Digital Economy Policy Research (C-DEP Research) has proposed a structured pathway for India to progressively secure sovereign control over critical cloud infrastructure, data, operations and technology.

C-DEP Research said this in a report on "Pathways for Sovereign Cloud Adoption in India" released at the Defence Tech Day, organised by the United Service Institution of India, the oldest military think tank of India. Chief of Defence Staff General Raja Subramani was among the defence strategists and senior policymakers from the Department of Telecommunications present at the event.

Recognising that complete technological sovereignty cannot be achieved immediately across every layer of the cloud stack, independent think tank C-DEP has proposed the Bharat Sovereign Cloud Assurance Levels Evaluation (B-SCALE), the report said as per a statement. The framework creates a staged pathway from external technology dependence towards progressively higher levels of Indian control.

CALIBRATED APPROACH

Under the framework, B-SCALE 0 represents cloud environments without an India-specific sovereign-control boundary. B-SCALE 1 establishes Indian control over areas including data, operating personnel, administrative access, monitoring, incident response, disaster recovery and server execution.

STRATEGIC AUTONOMY. Parts that need to be domestically sourced must be based on production capacities, says report

B-SCALE 2 extends this to encryption keys, networks, infrastructure and platform operations, source repositories, updates, supplier approvals and interoperability. B-SCALE 3 represents the highest level, where the complete cloud stack can be operated, modified, recovered and continued within India without unilateral external dependence. The report, released by Maj Gen Pawan Anand, AVSM, PhD (retd), introduces the Data, Operational, Legal and Technical (DOLT) model, which evaluates Sovereign Cloud environments across 65 measurable parameters. These parameters assess who controls data and its movement, who operates and recovers the cloud environment, which jurisdiction governs the service, and the degree of sovereign control over servers, networks, cloud platforms, software, supply chains, interoperability and technology dependencies.

The C-DEP Research report argues that measuring percentage localisation based on value of sourcing from within the country, may not be a sufficient criteria to push the country to a faster path to sovereign cloud, as the pathway may get embroiled in accounting challenges. The report, therefore, suggests dictating the components that need to be sourced from within India, based on the maturity of production capacities in the country.

VOC Port's wind turbine blade handling jumps 75%

Our Bureau
Chennai

With a 75 per cent jump in handling wind turbine blades, the VO Chidambaranar Port is consolidating its position as a renewable-energy logistics hub.

During April-August 2026, the port handled 2,188 wind turbine blades, compared with 1,254 blades during the corresponding period of FY 2025-26, registering year-on-year growth of 75 per cent.

GOOD PERFORMANCE

The number of vessels carrying wind turbine blade consignments also increased to 52 from 39 during the same period, said a release.

The latest performance builds on a sustained increase in wind-energy cargo handled at the port.

In FY24, the port handled 2,030 wind turbine blades; in FY25, the number increased to 2,635 blades and in FY26 to 4,922 blades.

STORAGE SPACE

To support this cargo segment, VOC Port provides 1 lakh sq m of exclusive open space outside the Customs-notified area and 1.44 lakh sq m within the Customs-notified area for the storage of wind turbine blades and associated components.

Susanta Kumar Purohit, Chairperson, VO Chidambaranar Port Authority, said, "Renewable energy projects increasingly depend upon the efficient movement of large and specialised components, and ports will have an important role in enabling this supply chain."

"VOC Port is steadily building the infrastructure, handling capability and connectivity required to serve this growing sector," Purohit added.

We do not believe in just creating employment, but in making it high value, says Elgi Equipments MD

Our Bureau
Chennai

Global companies must compete on the strength of their technology, value and pricing rather than relying on low labour costs or being positioned as low-cost manufacturers, Jairam Varadaraj, MD, Elgi Equipments, said here on Tuesday.

"At Elgi, we want to make our labour expensive and still be competitive. We do not believe in just creating employment, but in making it high value," he said.

Jairam Varadaraj, MD, Elgi Equipments Ltd, and Cameron Noble, Australian Deputy Consul-General in Chennai BIJOY GHOSH

He urged businesses to not use people to "just bridge broken processes".

Varadaraj was speaking at the 190th Chamber Day Celebrations of the Madras Chamber of Commerce & Industry (MCCI).

Interestingly, Varadaraj noted that Elgi had a goal in the next 5-6 years to make all employees as owners. "We have already started this for three levels of employees and more will be added," he said.

TRUST IN TIES

"We don't have any union or wage agreement with our workers. We operate on a principled understanding that standard of living will be protected," he said, noting that high levels of trust drive their relationship.

Cameron Noble, Deputy Consul-General Australian Consulate-General, Chennai, the guest of honour at the event, said that the Australia–India relationship is entering a new phase of greater scale, momentum and opportunity.

He referred to the Economic Cooperation and Trade Agreement (ECTA), which came into force in 2022, as a significant milestone in bilateral trade relations.

Australia's roadmap for strengthening economic relations with India is focused on four key areas of clean energy, education and skills, agribusiness and tourism, he said.

Zuppa, TNUAVC partner to train army drone pilots

Our Bureau
Chennai

Zuppa Geo Navigation Technologies, a defence drone technology company, has signed a memorandum of understanding (MoU) with the Tamil Nadu Unmanned Aerial Vehicles Corporation (TNUAVC) to develop a structured drone pilot training programme for the Army's Agniveers.

The programme will initially be rolled out at the Madras Regimental Centre, Wellington, Coonoor, with 1,000 personnel being trained annually.

The first batch is expected to commence in October 2026 and will comprise 4-week modules covering mission UAV flight simulator, rotorcraft operations and aerodynamics, risk assessment and other drone technologies. The partnership is part of Zuppa's broader initiative to establish indigenous drone laboratories at Army Regimental Centres. Each laboratory will be equipped with micro, small category drones, mission simulators and learning management systems. "Through our collaboration with TNUAVC, we aim to train and certify over 2,000 Agniveers and defence personnel over the next three years, ," said Sai Pattabiram, Founder & MD, Zuppa Geo.

Sai Pattabiram, Founder & MD, Zuppa Geo Navigation

AMD acquires World Labs in $8.2 billion deal

Advanced Micro Devices (AMD) said it would acquire Fei-Fei Li's AI start-up World Labs in an all-stock deal valued at $8.2 billion, giving the chipmaker deeper access to research on AI systems that can understand and simulate the physical world. The deal gives AMD a foothold in AI-model research. REUTERS

H-1B registrations plunge as IT firms shift US staffing strategy

POLICY RESET. Higher visa costs prompt companies to strengthen local hiring, try alternative staffing models

Sanjana B
Bengaluru

The sharp fall in H-1B registrations by Indian IT firms for FY27 signals that higher immigration costs are reshaping their US staffing strategies, pushing companies towards local hiring and offshore delivery.

On September 19, US President Donald Trump issued a proclamation titled "Restriction on Entry of Certain Non-immigrant Workers", under which certain H-1B petitions filed on or after September 21 are subject to an additional $100,000 payment as a condition of eligibility.

USCIS said that petitioners that relied heavily on prospective H-1B beneficiaries seeking consular notification and admission from outside the US in the FY26 cap did not participate in the FY27 H-1B cap registration process in the same manner.

A USCIS regulatory filing observed, "In many cases, petition volumes even increased as fees rose, suggesting employers view the fees as a necessary cost for accessing foreign talent. Following implementation of the $100,000 Proclamation payment in September 2025, USCIS observed a short-term shock decline of more than 90 per cent in consular H-1B receipts."

According to USCIS data, for top Indian IT companies — Infosys, TCS, HCL America, LTM, Tech Mahindra and Wipro — H-1B registrations for the FY27 cap fell to 1,763 from 21,919 in FY26, a decline of about 92 per cent.

REGISTRATIONS FALL

Infosys saw registrations fall from 8,886 in FY26 to 759 in FY27, a 91.5 per cent decline. TCS registrations dropped 95.2 per cent from 5,955 to 284, while HCL America fell 90 per cent from 3,855 to 387. LTM's registrations fell 85.3 per cent from 1,211 to 178, while Tech Mahindra Americas fell 95.8 per cent from 1,027 to 43. Wipro's registrations fell 88.6 per cent from 985 to 112.

The decline was not limited to Indian IT firms.

Registration volume

	Cap FY 2026	Cap FY 2027	Decline (in %)
Infosys	8,886	759	91.50
TCS	5,955	284	95.20
HCL America	3,855	387	90.00
LTM	1,211	178	85.30
Tech Mahindra Americas	1,027	43	95.80
Wipro	985	112	88.60

Source: USCIS data

Among the other large employers listed, IBM's registrations fell 95.6 per cent from 2,855 to 126, while Accenture's dropped 94 per cent from 1,324 to 79. Capgemini's registrations fell 87.5 per cent from 1,703 to 213. However, the decline was less pronounced at several large US technology companies. Microsoft's registrations fell 31.8 per cent from 3,640 to 2,481, and Apple's declined 16.3 per cent from 2,705 to 2,265.

"The decline reflects a combination of cost, policy, and business-model factors. The $100,000 payment on new H-1B petitions has changed the economics of sending entry-level and mid-level talent to the US, particularly for services contracts priced on tight margins," Lakshmi Iyer, Chief Client Officer & Chairperson, StudyIn India, echoed.

Leading IT services firms have spent several years building local US hiring pipelines, campus partnerships and delivery centres, reducing their dependence on new visas. According to TCS' FY26 annual report, the firm is pursuing diversified sourcing and local hiring strategies, with greater emphasis on hiring local talent and building STEM capabilities locally to reduce its dependence on work visas materially. Infosys' FY26 annual report notes that the company has established innovation hubs, nearshore centres and digital design studios across geographies.

Moreover, as per its annual reports, in FY26, Tech Mahindra had 112,609 employees, or 80.31 per cent of its workforce, based offshore, while 27,607 employees, or 19.69 per cent, were onsite. In FY25, 110,958 employees (79.67 per cent of the workforce) were offshore, while 28,313 employees were onsite.

ALTERNATIVE STAFFING

Iyer explained that global firms also tend to hire graduates already studying in the US, where the visa is one step in a longer talent pipeline.

Onsite presence remains important for client-facing roles, but work at US client locations is declining as firms rely more on local hires, selective short-term India-based deployments and offshore delivery. Mature remote collaboration and India's GCC ecosystem, along with immigration constraints, are accelerating this shift.

Jaishankar says trade deal can contribute to 'better' India-US ties

Press Trust of India
New York

A trade agreement between India and the US, if concluded, would contribute to 'better' bilateral ties, External Affairs Minister S Jaishankar said, noting that expectations of rapid progress in negotiations had been 'tested' against a much more complex ground reality.

He was addressing prominent members of the Indian-American community as well as policy experts at a special conversation hosted by the Asia Society.

"Well, I think if I stand back and look at the relationship... I note that much of the world has had a more difficult relationship with the US. I mean that may not be a consolation, but that's a reality," Jaishankar said.

He said one of the issues facing India-US ties was the trade negotiations. Pointing to the stakes and complexity involved, Jaishankar said, "Bear in mind, India is a society of small producers, small agriculture producers, small factories. Apart from the per capita gap between India and the US, the nature of production, nature of society is very different."

GROUND REALITY

"A trade negotiation required a certain amount of ... patience and detailing to see it through... The expectation that it could rapidly move forward, I think, was tested against a ground reality which was much more complex," he said.

Jaishankar added that "today, we have reached a situation where there is more or less an understanding on the trade agreement".

India and the US had, in February, announced the finalisation of the framework for the first phase of the bilateral trade agreement (BTA). However, changes in the US tariff landscape have led to further negotiations on the pact.

Jaishankar, alluding to comments by Commerce and Industry Minister Piyush Goyal, said the issue now was what had changed on the American side and how the new Section 301 process would affect the agreement.

"The 301 process is still in the works, it's still unfolding. So the issue for us is at what point do you close out an agreement which is very, very far advanced," Jaishankar said.

"But the period that it took to reach it, that did create bumps last year for the relationship. So presumably, if that agreement is closed out, that would be one point which would contribute to a better relationship," he said.

Jaishankar also said that, to some extent, bilateral ties were impacted and influenced by developments within the US.

"For many years mobility was seen as an economic gain. Now, today the economics of mobility and the politics of mobility are at odds with each other," he said.

On China, Jaishankar said the ties between New Delhi and Beijing were "better" today as compared to a couple of years ago.

Sitharaman, AIIB President discuss robust India project pipeline

Asian News International
Doha

Union Minister for Finance and Corporate Affairs Nirmala Sitharaman met Asian Infrastructure Investment Bank (AIIB) President Zou Jiayi on the sidelines of the AIIB Annual Meeting 2026 in Doha, Qatar, where both leaders discussed the robust pipeline of the bank's projects in India.

According to the Ministry of Finance on X, the bilateral discussions centred on cooperation, operational expansion, and institutional priorities.

During the interaction, both leaders also evaluated options for expanding the multilateral institution's global presence, including operations within India. The engagement opened with mutual acknowledgements of recent milestones.

They evaluated options for expanding the bank's global presence, including operations within India

Sitharaman also conveyed India's formal backing for the multilateral lender's upcoming fiscal roadmap. "India's support for the bank's 2027 budget plans and focus areas for scaling up operations," the Finance Minister said.

"Recalling her last visit to project sites in Delhi and Meerut, President AIIB said that the bank will continue financing projects for people, urban development and environmental protection," the Ministry noted.

Addressing future operational priorities, Sitharaman proposed widening the lender's conventional asset scope to align with emerging developmental requirements across sectors."AIIB could further expand beyond physical infrastructure financing to include newer infrastructure that focuses on AI, MSMEs, and skilling," the Ministry stated.

Elaborating on the domestic industrial landscape, the Minister emphasised the strategic role of smaller enterprises and the precise nature of institutional interventions required. "MSMEs are the backbone of India's economy, and assistance for AI adaptability and manpower training can help MSMEs," the Finance Minister said

"The bank's regional centrality should continue to remain a defining institutional characteristic and an important anchor of its mandate," Sitharaman reiterated.

Advertising council outlines rules for labelling of AI-generated ad content

Meenakshi Verma Ambwani
New Delhi

With brands increasingly using artificial intelligence (AI) to create or enhance ads, the Advertising Standards Council of India (ASCI) on Tuesday released guidelines to ensure responsible labelling of synthetically-generated content (SGC) in advertising.

The self-regulatory industry body said that mandatory labelling or disclosure will be required where SGC influences purchase decisions and when the absence of a disclosure could mislead consumers.

"Brands can use labels such as 'audio/video created using AI' or 'audio/video enhanced using AI', including labels provided by advertising platforms. Brands may also use alternative labels that accurately inform consumers about the nature of the synthetic content," it added.

The ASCI said such labels are much needed as ads containing SGC could be misleading or harmful when they create unrealistic expectations, take advantage of vulnerable populations, show unsafe situations, use a person's likeness without their consent or present false or misleading information. The guidelines will come into effect within three months.

MANDATORY LABEL

Outlining the conditions for mandatory labelling, the guidelines stated that it is required when advertising content uses synthetically-generated influencers and ambassadors, a real person's likeness or voice with consent for personalised messaging.

It said labelling should also be done when an ad depicts a fabricated event or setting that influences a consumer's purchase behaviour, demonstrations regarding products that do not exist, synthetically-generated sound effects relevant to the product's core features or paid or sponsored AI-generated product suggestions.

Synthetically generated content means any audio, visual or audio-visual content in an advertisement that is artificially or algorithmically originated, created, generated, modified or materially altered using a computer resource to appear real, authentic or true, and depicts or portrays any individual or event in a manner that is likely to be understood, perceived or believed to be true.

TRANSPARENCY

Manisha Kapoor, Secretary General and CEO, ASCI, said: "The use of AI in advertising is evolving rapidly, and our approach must evolve with it, while keeping the consumer at the centre. These guidelines provide for practical transparency requirements, when a consumer's understanding of an advertisement may be adversely impacted without an AI label. Importantly, it clarifies where the mere use of an AI label may not make an otherwise misleading advertisement acceptable. The responsibility remains with advertisers to ensure that the end communication is honest, transparent and compliant with the ASCI Code."

The guidelines stressed that ads that are illegal, infringe on rights, contain misleading claims or violate the ASCI Code remain prohibited, irrespective of whether an AI label is used.

Disclosures are not required where SGC has no material impact on the costumer's choice.

This includes routine edition, decorative elements, obvious fantastical effects, text-based use or generating advertising copy and accessibility applications, including subtitles, translations and accurate audio descriptions.

Delhi HC sets aside FSSAI order halting Red Bull's 'energy drink' label

Meenakshi Verma Ambwani
New Delhi

The Delhi High Court on Tuesday set aside an order of the Food Safety and Standards Authority of India (FSSAI), issued on June 30, directing Red Bull to remove the 'energy drink' descriptor on its products, ruling that the directive was issued without giving the beverage company a chance to explain its stance.

Earlier this year, the FSSAI sent notices to leading beverage brands stating that their caffeinated beverages cannot carry 'energy drinks' descriptors on their product labelling and branding. Subsequently, the regulator gave about three months to energy drinks brands to move to new packaging and labelling.

"The petition is allowed. The impugned order (of FSSAI) is set aside. The respondent is at liberty to pass a fresh order after according a hearing to the petitioner," the court said, noting that the principles of natural justice had been violated.

Select Indian specialty drugs escape 100 per cent US tariff

Our Bureau
New Delhi

Indian exporters of select specialty medicines will enjoy zero US tariffs after the US Department of Commerce named India among 20 jurisdictions eligible for an exemption from the country's new Section 232 pharmaceutical tariffs.

In a notice published in the Federal Register on September 23, the Bureau of Industry and Security (BIS) said a zero *ad valorem* tariff will apply to specified specialty pharmaceutical products and their associated ingredients from eligible jurisdictions, subject to conditions in an April presidential proclamation.

The exemption covers goods entered or withdrawn from warehouse for consumption from 12.01 am US Eastern Daylight Time on September 29, 2026.

Covered categories include orphan drugs, nuclear medicines, plasma-derived therapies, fertility treatments, cell and gene therapies, antibody-drug conjugates and certain medical countermeasures, besides animal-health products.

The European Union, Japan, the UK, South Korea, Switzerland and Liechtenstein are among the other jurisdictions listed.

SELECT FEW

The move gives Indian drugmakers tariff-free access for these products as Washington begins imposing a 100 per cent tariff on covered patented pharmaceutical products and ingredients, which takes effect for most companies from September 29.

However, the benefit is limited and is not a blanket exemption. A significant part of India's US pharmaceutical exports comprises generic medicines, which, along with their ingredients, are explicitly outside the scope of the Section 232 tariffs.

Namit Joshi, Chairman of the Pharmaceuticals Export Promotion Council of India (Pharmexcil), said the share of exports that will qualify cannot yet be determined.

"A precise assessment of the share of India's exports that qualify will require product-level data against the notified US tariff classifications," he said.

For eligible products, Joshi said, the exemption could strengthen the cost competitiveness of Indian manufacturers against suppliers from jurisdictions still facing the additional tariff.

Whether that translates into lower prices for US buyers, he added, will depend on product-specific market dynamics and how the benefit is distributed across the supply chain.

"Clear and consistent guidance on product classification, eligibility and customs treatment will be important," Joshi said, adding that this would help exporters.

'Regulations must keep pace with entertainment sector's evolution'

Our Bureau
Mumbai

Regulations such as audience ratings and broadcast pricing suggestions must keep pace with the entertainment industry's evolution, said Punit Goenka, CEO of Zee Entertainment, at the Ficci Frames event in Mumbai.

Speaking at a CEO panel on reinventing the media, Goenka rallied questions on how the industry should make sense of the ratings band that remains blank as the country heads towards the Deepavali festivities.

The Zee leader said, " Regulation needs to keep pace with how the industry is evolving. If they do not, the industry will move on and regulation will always be hampering the industry at some point."

BEYOND RATINGS

He argued that beyond ratings, this should be considered for other norms as well like the Telecom Regulatory Authority of India's new tariff order that oversees a broadcaster's ability to monetise television content.

Similarly, Gaurav Banerjee, MD and CEO at Sony Pictures Network India, said the industry must figure "some amount of transactions" between content.

"Maybe there are other ways that this can move. There possibly needs to be an upgrade. The industry needs to think and has begun to think about what that upgrade looks like," he said.

Kevin Vaz, Chair of the Ficci M&E Committee and CEO, Entertainment, JioStar, urged the Centre to release BARC audience ratings immediately. "The absence of credible, verifiable audience data is creating uncertainty for broadcasters, advertisers and agencies, particularly during the crucial festive season," he said.

Local dialects outsmarting AI data: Prasoon Joshi

Amit Vijay Mohile
Mumbai

Advertising veteran Prasoon Joshi on Tuesday made a case for preserving the original human voice as artificial intelligence reshapes commercial creativity, drawing on campaigns from Coca-Cola's 'Thanda Matlab Coca-Cola' to Google Gemini's Kumaoni advertisement to argue that technology can work with what has already been expressed but not what remains unsaid.

Speaking at Ficci Frames 2026, the lyricist and Prasar Bharati Chairman said AI could increasingly offer commercial creators multiple ideas to choose from.

"Something yet to be expressed is yet to become data," Joshi said, placing lived experience at the centre of his argument. "Authenticity is most important."

Joshi's advertising work illustrates how local language can create a wider connection. More than two decades ago, 'Thanda Matlab Coca-Cola' found its hook in a word embedded in everyday Indian speech.

LOCAL VOICE

More recently, Joshi applied that instinct to Google Gemini. The advertisement features a young man using the AI tool to help him speak with his grandmother in Kumaoni.

Lyricist Prasoon Joshi speaking at Ficci Frames 2026 in Mumbai on Tuesday

Joshi, who comes from Uttarakhand, said many people had not even heard of the language, yet the advertisement connected.

He said he gives clients similar advice: Brands have to appeal to their target audience but do not necessarily need to show a literal representation of that consumer. "Connect will come from authenticity," he said.

His Happydent campaign took another route, creating a fantastical world illuminated by dazzling smiles — another attempt to find a distinctive language for a brand.

EFFORT TO FIT IN

Joshi also pointed to a change in how talent from smaller towns expresses itself. Earlier, people moving to larger cities felt the pressure to hide their regional backgrounds in an effort to fit in, he said. Now, social media has helped democratise expression by creating space for people to speak in their own voices.

That experience of growing up outside the big city also fed Joshi's songwriting.

He traced *Maa* from *Taare Zameen Par* to a childhood memory of his mother, a teacher, leaving home for a training programme. He did not write about the fear of separation then but drew on the experience years later while writing the song.

Similarly, while writing *Bhaag Milkha Bhaag*, Joshi said he did not need to have been a sportsman. He saw it as a story about struggle — something he could identify with through his own experience of growing up in a small town.

Those early experiences become "seeds of what you become" later, he said.
