Equity MF inflows slump 40% in May over April

UNCERTAINTIES. Heightened market volatility, FPI exits drag flows to one-year low

Suresh P Iyengar
Mumbai

Volatility in equity markets and concerns over economic growth dampened inflows into mutual fund schemes, including SIPs, in May.

According to AMFI data released on Wednesday, equity inflows fell to a one-year low, dropping 40 per cent to ₹22,908 crore in May from ₹38,440 crore in April, as investor sentiment was hit by a market downturn driven by persistent foreign portfolio outflows and heightened volatility. Inflows into hybrid schemes nearly halved m-o-m to ₹10,560 crore (₹20,565 crore), while debt funds registered an outflow of ₹96,949 crore in May as against an inflow of ₹2.47-lakh crore in April.

SIP inflows also edged down to ₹30,954 crore (₹31,115 crore) with the number of contributing accounts slipping marginally to 9.64 crore (9.65 crore).

RIISING CONFIDENCE

Venkat Chalasani, CEO, AMFI, said, "Despite lower SIP flows, they remain above

Source: AMFI

the ₹30,000-mark, reflecting investor confidence in MFs." He stated that while there are no absolute data, the majority of fresh SIPs opened are from B30 (beyond top-30) cities, as investors look to reap the benefit of the country's long-term economic growth potential.

Archit Doshi, Senior Vice-President at PL (Prabhudas Lilladher) AMC, said, "The m-o-m decline in SIP contributions was marginal but marked a second consecutive drop, following a 3 per cent decline in April, signalling a cause for concern."

With flat to negative returns observed in several SIP vintages over the last one-

two years, retail investors are viewing sustained allocations as a challenge, which is testing their long-term conviction, he said.

NET INFLOWS

Vaibhav Chugh, CEO, Abakus Mutual Fund, said, "The moderation in net inflows during May reflects a degree of geopolitical uncertainty and investor caution."

He added that the outflows seen in fixed income categories are indicative of liquidity management and corporate treasury requirements, rather than weakening demand.

In the current environment, where opportunities

exist across market-caps, it becomes increasingly important to rely on experienced investment managers for stock selection, he said.

After 13 months of positive inflows, gold ETFs registered net outflows of ₹725 crore in May (inflow of ₹3,040 crore in April) as investors preferred to book profit. The hike in import duty to 15 per cent pushed up domestic gold prices despite weak global trends. Silver ETF outflows increased to ₹2,133 crore (outflow of ₹127 crore).

Nehal Meshram, Senior Analyst, Morningstar Investment Research India, said, "The reversal in gold ETFs was driven by profit-booking and a shift in investor risk appetite leading to shift away from safe-haven assets."

The rising opportunity cost of holding gold, particularly in an environment of relatively attractive yields in fixed income, also contributed to the pull-back, she added. SIF inflow was steady at ₹1,396 crore in May (₹1,219 crore in April) with AUM increasing 12 per cent to ₹13,814 crore (₹12,329 crore).

Centre likely to extend ₹500 cr loan support to Pawan Hans

Rohit Vaid
New Delhi

State-owned helicopter operator Pawan Hans is likely to receive an approximately ₹500 crore Centre-backed loan with a tenure of 10 years, sources told *businessline*.

The Centre is examining the chopper operator's proposal, along with its plans to acquire new aircraft as well as expand operations.

The proposal is currently under consideration, with discussions focused on the financing structure and terms of support.

FLEET EXPANSION

"At the present moment, only the determination of the interest rate is being deliberated upon," the source added.

The interest rate on the proposed loan could be a nominal 2 per cent.

The funds are to support a range of strategic initiatives, including the acquisition of new helicopters, expansion of offshore operations, re-entry into the seaplane segment and the development of other specialised aviation services.

Details **p3**

Banks kick off rate hikes for NRI dollar deposits

Our Bureau
Mumbai

Banks have kicked off rate hikes on FCNR (B) US dollar deposits in the three-five years tenor, with interest increased to 6-7 per cent from the earlier 3 per cent levels.

The sharp rise in the interest rates on Foreign Currency Non-Resident (Bank) deposits denominated in US dollars follows the RBI's measures to bolster dollar inflows, including by bearing the full hedging cost for raising fresh 3/5-year FCNR (B) deposits.

RATES RISE

On an FCNR (B) deposit of up to \$1 million and above \$1 million in the three years and above but less than four years tenor, State Bank of India is now offering interest of 5.25 per cent and 5.5 per cent, respectively. Earlier, the rate on these deposits, irrespective of the amount, was 3.35 per cent.

On an FCNR (B) deposit of up to \$1 million and above \$1 million in the four years and above but less than five years tenor, India's largest bank is quoting interest rate of 5.5 per cent and 5.75 per cent, respectively. The earlier rate was 2.95 per cent.

On an FCNR (B) deposit of up to \$1 million and above

\$1 million of five years tenor, SBI is quoting interest rate of 5.75 per cent and 6 per cent, respectively. The earlier interest rate was 3.05 per cent.

"The RBI's move to attract dollars via FCNR (B) deposits is a win-win for all stakeholders — depositors, banks and the RBI. Depositors will get better returns, banks' deposits will be augmented at a time when credit growth is healthy and the central bank can achieve its objective of reducing volatility in the rupee," said K Arvind, Head – Treasury, Tamilnad Mercantile Bank (TMB).

Karur Vysya Bank has increased its FCNR(B) US dollar deposit rates for maturities of three to five years to 7 per cent per annum from the earlier 2.63 per cent with effect from June 10.

TMB, too, has upped its FCNR (B) US dollar deposit rates for maturities of three to five years to 7 per cent from the earlier 3.50-3.90 per cent.

Bosch launches third-gen SiC chips for EV market

Bengaluru: Bosch has launched the third-generation Silicon Carbide semiconductors. These advanced chips control energy flow within the vehicle's power electronics, specifically the inverter. This delivers roughly 20 per cent higher performance, translating to a longer driving range without the need for larger batteries, and a lower total cost of ownership, according to the company. **OUR BUREAU**

Tata Sons board meet to focus on performance, growth roadmap

LEFT OUT. No contentious issue will be taken up for discussion on Friday

Janaki Krishnan
Mumbai

The board meeting of Tata Sons on Friday will be focused on approving the accounts for last year and setting out the agenda for the current year's operating plans, according to sources with knowledge of the agenda. The meeting, which falls on the first anniversary of the crash of an Air India Ahmedabad-London flight, will also take forward the questions that had been raised by Tata Trusts Chairman Noel Tata on the functioning of the loss-making entities, the new ventures that the Tata group has forayed into and the overall group performance, the sources said.

CONTENTIOUS ISSUES None of the contentious issues are on the agenda, and they are unlikely to be discussed even as 'other matters', the sources said. The continuance of Venu

NOT ON AGENDA

- Continuance of Venu Srinivasan as a nominee director of the Trusts on the board of Tata Sons
- Reappointment of Tata Sons Chairman N Chandrasekaran
- Listing of Tata Sons

Srinivasan as a nominee director of the Trusts on the board of Tata Sons is not likely to be taken up at this meeting.

It is an item to be discussed at the trustees level, and that will happen only if both Sir Dorabji Tata Trust and Sir Ratan Tata Trust (SRTT) can hold the meetings together.

SRTT cannot hold a meeting, pending an enquiry by the Maharashtra Charity Commissioner into the composition of the Trusts' board of trustees. While discussions on the reappointment of Tata Sons Chairman N

Chandrasekaran are in progress, they are unlikely to be taken up at the meeting on Friday, with the focus being more on the roadmap presented by him for the future trajectory of the group.

Some of the concerns raised by Tata had already been addressed at the May 26 meeting, said the sources.

They pointed out that there was time till February next year, when Chandrasekaran's current term comes to an end.

The third contentious issue of the listing of Tata Sons, over which sharp divisions have arisen among the

trustees, is also unlikely to be decided on Friday, though it is likely to be discussed informally by board members, sources said.

"This is still something that the Trusts have to decide," said the source.

AMICABLE SOLUTION Insiders with knowledge of the matter said that Tata was trying to settle many of the differences that had arisen among the trustees and arrive at an amicable compromise.

The trustees have also been roiled by allegations filed by complainants, including trustee Venu Srinivasan, over non-compliance with the provisions of the Maharashtra Public Trusts Act that governs the composition of the trustee boards, and the alleged 'unlawful' transfer of 833 shares of Tata Sons from a charitable trust to Naval Tata in 1989.

Tata Trusts has rejected both allegations. There was no reply to e-mails sent to Tata Trusts and Tata Sons.

Mega IPOs do not always deliver

The upcoming initial public offering (IPO) of Elon Musk's SpaceX, at an implied valuation of \$1.75 trillion, has kindled interest in the sheer volume of the money involved. However, *businessline* analysis shows two of the biggest global IPOs, Saudi Aramco and Alibaba, have generated modest returns for their investors. In the case of India, all of the biggest IPOs have generated negative returns since listing.

Hyundai Motors is the biggest IPO in India, however Reliance Power remains one of the most over-subscribed

Meta and Reliance Industries partner to develop 168 MW, AI-enabled data centre in Gujarat

Vallari Sanzgiri
Mumbai

Meta Inc is set to have its own 168 MW capacity artificial intelligence-enabled data centre in Jamnagar, set up by Reliance Industries (RIL), within two years.

The data centre, separate from the 1 GW facility that was announced by Reliance in 2025, will act as part of Meta's global infrastructure, supporting its core business and AI compute needs.

As the first built-to-suit (BTS) data centre capacity in India for Meta, the project underlines India's emergence as a global hub for AI infrastructure.

Meta will lease capacity from the facility, expanding the company's global infrastructure, supporting its core business and AI compute needs, while RIL will provide end-to-end services for the data centre lifecycle.

This includes design, ongoing management of utilities, renewable power supply, network connectivity and fully-managed operational services.

"Building India's first built-to-suit data centre for a global technology leader of Meta's scale demonstrates India's readiness to be at the forefront of the global AI revolution. Jamnagar will become a landmark destination for hyperscale AI

computing, and we are proud to partner with Meta to make this vision a reality," said Mukesh D Ambani, Chairman and Managing Director, Reliance Industries.

SCALE INFRA

Similarly, Mark Zuckerberg, Founder and CEO, Meta, said the facility will help the company scale its AI infrastructure globally while deepening long-term investment in India's economy.

A BTS facility indicates intention to host AI models like Llama for its Indian customers and offer the AI infrastructure as a service to India as well as global customers, according to Rajiv Ranjan, Associate Research Director at IDC.

"A 168 MW capacity points to a long-term commitment of Meta to host its AI services here in India. Usually for traditional workloads, the rack power densities range from 5 to 20 kw per rack. For AI workloads, it starts anywhere from 40 kw to up to 150 kw. Meta might be starting with a smaller footprint and scale to 168 MW in a few years depending AI demand," he said.

The tech giant is assembling an energy position in India, by taking up the single-tenant project at roughly a tenth to a seventh of India's operational data centre base, while separately backing the country's renewable energy, said Sanchit Vir Gogia, Founder-CEO of Greyhound Research.

The project positions Reliance as a single-window solutions provider for hyperscale AI infrastructure in India.

The data centre will be powered by renewable energy and cooled with desalinated seawater, demonstrating both RIL's and Meta's commitment to sustainability.

Zepto's marketplace pivot may hold key to profitability

Jyoti Banthia
Bengaluru

RELOOK AT BIZ. Under the marketplace model, third-party sellers list products on the platform while Zepto earns commissions, advertising income and service fees

As quick commerce company Zepto prepares for its proposed ₹8,010-crore initial public offering (IPO), one of the more significant disclosures in its updated draft red herring prospectus (UDRHP) is its transition to a marketplace-led business model, a move that could have implications for both profitability and regulation.

The company, which filed updated IPO papers with SEBI earlier this week, is looking to raise funds through a fresh issue of shares, while existing investors including Nexus Venture Partners and Contrary Capital will participate in an offer-for-sale. Zepto plans to use the proceeds

primarily to expand its dark-store network, fund lease payments, invest in technology and cloud infrastructure, support marketing initiatives and pursue strategic acquisitions.

Amid those expansion plans, the marketplace transition signals a shift in how the company intends to

monetise its rapidly-growing user base.

Under the marketplace model, third-party sellers list products on the platform while Zepto earns commissions, advertising income and service fees rather than relying solely on inventory ownership and product sales. The company noted in

its filing that it has limited operating history under this structure.

The move comes at a critical juncture. Despite more than doubling revenue from operations to ₹22,624 crore in FY26 from ₹11,110 crore a year earlier, Zepto's losses widened to ₹5,905 crore (₹4,700 crore) as it continued investing heavily in dark stores, logistics and customer acquisition.

CAPITAL EFFICIENCY

Industry observers say a marketplace model can potentially improve capital efficiency by reducing inventory-related risks and working-capital requirements. More importantly, it opens up additional revenue streams such as commissions, merchant services and advertising, areas that typic-

ally carry higher margins than product sales.

The transition could also help Zepto align itself with India's evolving e-commerce regulatory framework, where inventory ownership and seller relationships have often come under scrutiny. Marketplace structures have historically been viewed as more compliant with foreign investment norms governing e-commerce operations.

For investors evaluating Zepto's IPO, the marketplace pivot may prove as important as its revenue growth.

While the company continues to prioritise scale, the shift suggests the management is also focused on building a less capital-intensive business model capable of generating higher-margin revenues over time.

Exponent Energy secures ₹200 cr

Aishwarya Kumar
Bengaluru

Bengaluru-based Exponent Energy has raised ₹200 crore in a funding round co-led by 360 ONE Asset and TDK Ventures.

The fresh capital will be used to expand into new cities and vehicle categories, while deepening investments in R&D. With this fundraise, the company has raised a total of \$65.7 million.

The round marks 360 ONE Asset's maiden investment in the EV sector. It also represents Hitachi Ventures' first investment in India's energy sector, while existing investor TDK Ventures increased its stake through a follow-on investment, while existing investors participated.

Despite near-term global uncertainties, long-term investment case for India remains intact, says KKR

Suresh P Iyengar
Mumbai

Despite near-term global uncertainties, leading global investment firm KKR believes the long-term investment case for India remains intact, positioning the country as a key beneficiary of emerging market consumption growth.

In a report, *The Divergence Comundrum*, KKR said India is witnessing one of the world's fastest expansions in affluent and upper-middle-income households, creating significant opportunities across consumer-facing sectors and premium products and services. Rising incomes are driving a shift in spending patterns from basic goods toward higher-value

services and experiences, including healthcare, financial services, education, travel, sports, entertainment and leisure, said KKR.

Increased access to credit, financial products and digital financial services has been accelerating consumption upgrades and expanding the addressable market for businesses in India, it added.

However, higher energy prices and artificial intelligence (AI) disruption in legacy IT services are tempering near-term growth, but the structural case remains intact for long-term investors, it said.

INFLATION, A CONCERN

A broadening productivity boom is extending the economic cycle, but inflation is

A broadening productivity boom is extending the economic cycle, but inflation is likely to remain stickier than expected

likely to remain stickier than expected as geopolitical tensions rise and countries prioritise resilient supply chains over efficiency, it said.

KKR expects inflation to remain structurally above consensus expectations in most regions outside China, as goods inflation becomes less disinflationary and geo-

political shocks become more frequent. The report warned that the global monetary easing cycle is losing momentum. As of May-end, 10 per cent of the world's top 30 central banks were raising interest rates, compared with 3 per cent at the end of 2025, while only 40 per cent were still cutting rate.

"The cycle is not over, but it is becoming more selective," said Henry McVey, Head of Global Macro and Asset Allocation at KKR.

As Asia becomes increasingly self-reliant and intra-regional trade deepens, India stands to benefit from significant investment opportunities in logistics, digital infrastructure, energy transmission and supply-chain modernisation, said the report.

TECH DIGEST.

Lenovo launches the
IdeaPad Slim 3 Gen 11

Lenovo has launched the IdeaPad Slim 3 Gen 11 in India. The laptop is manufactured locally and targets students, professionals and home users seeking a general-purpose PC with built-in AI features. The device runs on Intel

Core Ultra Series 3 processors and is classified as a Copilot+ PC, supporting on-device artificial intelligence features, such as real-time assistance, search, translations and captions. It includes Intel Arc graphics, up to 16 GB RAM and up to 512 GB SSD storage.

The IdeaPad Slim 3 Gen 11 comes in 14-inch and 15-inch options with a 16:10 display, up to 400 nits' brightness.

Connectivity options include Wi-Fi 6, Bluetooth 5.3, USB Type-A, USB Type-C with DisplayPort and Power Delivery, HDMI, SD card reader and a 3.5 mm audio jack. It also features Dolby Audio speakers and an FHD IR camera with a privacy shutter.

The laptop packs a 60 Wh battery with rapid charge boost (up to two hours use in 15 minutes). The IdeaPad Slim 3 Gen 11 ships with Windows 11 and is priced from ₹1,09,990.

Samsung unveils next-gen
Galaxy Watch features

Samsung Electronics has announced an update to its Samsung Health app, adding new data tracking and analysis features for upcoming Galaxy Watch devices.

The update introduces several metrics based on biometric data, including Vitals, which monitors overnight

data such as heart rate, heart rate variability, respiratory rate, skin temperature and blood oxygen, and flags deviations from baseline levels. It also adds a heart health score that combines sleep, stress, activity and body composition into a single metric for daily cardiovascular tracking. Daily cardio load measures cardiovascular strain during exercise and provides recommendations on training intensity and recovery time, while the fitness index uses VO₂ max, heart rate and step data to assess overall fitness levels and track progress over time.

Additional updates include expanded dietary tracking through the antioxidant index, background monitoring via the AGEs index and a new hearing health feature that tracks ambient noise exposure.

The rollout began on June 8.

Dell announces XPS 13 and
Alienware gaming monitors

Dell Technologies announced the XPS 13, along with a new line-up of Alienware gaming monitors, including a 39-inch 5K OLED

display with RGB stripe technology, at Computex 2026. The Dell XPS 13 features a CNC-machined aluminium chassis and measures 12.7 mm in thickness, weighing

starting at 1 kg. It is powered by Intel Core 5 320 or Core Ultra 7 355 processors, with support for Intel Core Ultra chips post-launch. Memory options range from 8 GB to 32 GB LPDDR5x, and storage goes up to 1 TB PCIe Gen4 SSD. The device includes an integrated neural processing unit delivering up to 49 TOPS on higher-end configurations. It has a 13.4-inch 2.5 K (2560 x 1600) touch display with 500 nits brightness, 100 per cent DCI-P3 colour gamut, 120 Hz variable refresh rate, and Dolby Vision support. Connectivity includes two USB-C/Thunderbolt 4 ports with DisplayPort 2.1 and power delivery. It supports Wi-Fi 7 and Bluetooth 6.0. Additional features include a 1080p IR camera with Windows Hello, quad speakers with Dolby Atmos, and a 52Wh battery with ExpressCharge.

Apple goes all out on AI
at WWDC 2026

Apple outlined updates to its artificial intelligence (AI) strategy at its Worldwide Developers Conference (WWDC), focusing on incremental

improvements to existing platforms and features. The announcements include updates to Siri, Apple Intelligence and core operating systems

across iPhones, Macs and iPads.

A new version of Siri introduces improved conversational capabilities, deeper integration across Apple devices and the ability to access on-device and web-based information.

It will be available later this year in beta on supported hardware, starting with iPhone 15 Pro and newer devices.

Apple Intelligence is being expanded across apps such as Messages, Mail, Safari, Photos and Shortcuts, adding features such as automated suggestions, natural-language inputs, tab organisation and enhanced editing tools.

New software versions will drop support for some older devices, including Intel-based Macs and select iPads, while requiring newer Apple silicon hardware for full feature access.

A welcome refresh

APPLE AIRPODS MAX 2. Exceptional spatial audio, signature design and the comfort of the Apple ecosystem

Ashwin Rajagopalan

“If it ain’t broke, don’t fix it”. Apple might have applied this design approach for the latest refresh for one of the world’s most instantly recognisable pair of over-ear headphones. The 2026 edition of the Apple AirPods Max might well be the most comprehensive version. The first gen dropped at the end of 2020 when hybrid work lifestyles were the norm and the farthest you could travel with your headphones was probably your local beach or park.

The 2024 edition was a minor update with a couple of enhancements — a USB-C charging port and support for lossless audio. The AirPods Max 2 marks the most significant overhaul for the AirPods Max but it’s not one you’re likely to notice from a distance. It might look identical to its earlier siblings but it’s a whole new beast on the inside. Are these the over-ear headphones to beat in 2026?

DESIGN

Edgy, polarising. The AirPods Max 2 is likely to draw very different reactions across users. Apple hasn’t altered the design or the overall form factor. Many of the minor cribs, from the case to the left, still remain and yet it still stands out in a cluttered market, six years after launch. The 2026 version come with all the design elements that I loved about the AirPods Max.

You get the same premium build with aluminium cups, telescoping arms and the remarkably comfortable knit-mesh. The Max 2 comes in five colours, including a stunning shade of Blue. While the headphones are comfortable to wear for hours together, there’s no escaping the heft (386 g). I wore these headphones mostly at the gym and on a few domestic flights, and I didn’t feel any serious fatigue.

The smart case continues to divide the internet for its odd shape. The case doesn’t offer full physical protection (only the ear cups are covered) and is also the only way to turn off the headphones (once you holster them in the case). While the

NEW UPGRADES. At the heart of the AirPods Max 2’s enhanced audio performance is the new H2 chip that provides improvements in the soundstage and ANC ASHWIN RAJAGOPALAN

case has its share of critics, it’s less bulky and occupies less space in your backpack than some of the other premium headphone cases out there. There’s no physical on/off button. There are two physical buttons — the Digital Crown, that you can use for volume controls and also to answer/reject calls. It also doubles up as a media control button to skip, shuffle and play/pause tracks. The headphones also come with a noise control button that allows you to toggle audio modes (like ANC and transparency) and activate Siri. The smart case needs to be handled with care to prevent dust. You can swap the ear cushions with Apple accessories or third-party options.

SOUND

Whether you’re moving from the first-gen AirPods Max or most other premium over-ear headphones, you will notice a significant difference. At the heart of the AirPods Max 2’s improved audio per-

formance is the new H2 chip that provides improvements in the soundstage and ANC (active noise cancellation).

I found that the Max 2 delivers a more refined sound profile with a sparkling treble and clearer mids. Bass is precise, while these ear cans do a great job with vocal separation. It’s not inaccurate to call these ‘bass forward’ headphones but they do ace songs with a wide mix of notes.

I enjoyed listening to *The Week-end* by SZA with smooth, warm mids and punchy bass. The soundstage might be down to personal preferences. You can tweak the settings with an equaliser option that most rivals offer.

The AirPods Max 2 might well be the best in the ANC department. Apple claims a 1.5x improvement over the first gen, powered by the H2 chip and it truly hits the spot. These headphones set a new standard in filtering out external sounds, something I experienced in typically noisy environments like the

At the heart of the AirPods Max 2’s enhanced audio performance is the new H2 chip that provides improvements in the soundstage

gym and on flights. These AirPods also come with handy features like live translation and conversation awareness that automatically lowers the volume when you begin conversations. This is a feature we’ve seen on multiple earbuds and over-ear headphones.

BATTERY LIFE

Apple claims 20 hours of listening time on a single charge with ANC on. I never really used these headphones without ANC, and they managed about 20 hours over a couple of charging cycles. A five-minute charge gives you 1.5 hours of playtime. Battery life is par for the course.

It’s certainly not the best in class but should work for most average users who are likely to use these headphones for a few hours a day aside from daily commutes or flights. You need to be mindful when you slip them back into the smart case to ensure they stay in ultra-low-power state.

VERDICT

It’s easy to recommend the Apple AirPods Pro Max 2 for users who are deeply entrenched in the Apple ecosystem. It connects and works seamlessly with your iPhone and comes with add-ons, such as spatial audio and dynamic head tracking.

Some of the design quirks remain, and that might well be a love or loathe thing. These headphones come with a premium build and score with their noise cancellation and sound stage, making them one of the best over-ear headphones you can buy in 2026 at a premium price tag.

● SNAPSHOT

Price: ₹67,900

Pros: Premium design, active noise cancellation, acoustics, great for Apple users

Cons: Average battery life, no major design update

At the core of it

ONEPLUS NORD CE6. Brighter display, massive battery and key hardware updates

Ashwin Rajagopalan

RAM shortages, increased input costs: Smartphone manufacturers are being tested in a year where consumers are dealing with sticker shock and holding back on purchases in an uncertain economic climate. The Nord CE line (CE stands for core edition) has remained OnePlus’ entry-level offering and typically features two models each year — the CE and the cheaper CE Lite version. The Nord CE6 has been launched at a significant premium over last year’s CE5.

Like most other brands that have effected price increases, OnePlus has aimed to pack more upgrades in this year’s CE device to justify the increase. The big question is whether these enhancements justify the price increase and make the CE6 a compelling option around the ₹30,000 mark, where smartphones from brands such as Nothing and Motorola loom large.

DESIGN

Understated. That’s one way to describe the CE6 that may lack the oomph of some of its rivals but scores with its practical appeal. The device sticks to the same design language we saw with OnePlus’ flagship offerings such as the OnePlus 15. We like the curves (OnePlus calls it Golden-Ratio curves) that make the device easier to grip and add to its visual appeal.

The device comes in three colour ways — Pitch Black, Lunar Pearl and the Fresh Blue that we checked out. This colour stands out with its pastel blue appeal; OnePlus has bundled a matching blue silicone case that complements the smartphone.

OnePlus goes one up on the competition on durability and day-to-day protection with an IP66, IP68, IP69 and IP69K rating. The CE6 is ready for your outdoor adventures and the occasional drop. OnePlus keeps the heft to 215 g and the thickness under 9 mm despite a massive battery. The device doesn’t feel clunky in your hand.

DISPLAY

One of the visible upgrades over the 2025 CE5 is the display with improvements all around. The 6.78-

A STEP UP. The 6.78-inch 1.5K AMOLED panel (1272 x 2772 pixels) is a significant bump up over the FHD+ display from last year ASHWIN RAJAGOPALAN

Lowlight image quality is improved using in-built AI tools

inch 1.5K AMOLED panel (1272 x 2772 pixels) is a significant bump up over the FHD+ display from last year. This one features a 144 Hz refresh rate and hits a peak brightness of 3600 nits. I watched two episodes of *The Legends* on Netflix and the colours were quite punchy in both outdoor and indoor shots. The

The camera shoots crisp images in optimal light

device supports HDR playback on Netflix and the improved dual speaker set-up (The CE5 was limited to a single bottom-firing mono speaker).

PERFORMANCE

It might be a case of a few steps forward and a few steps back when you

pit the CE5 versus the CE6. The chipset is a case in the point. On paper, the processing power of the CE6 is a step down vis-à-vis the CE5. At the heart of the CE6 is the Qualcomm Snapdragon Gen 4 chipset. While it’s certainly no slouch, our Geekbench benchmark results revealed that the CE5 with its Dimensity 8350 Apex chipset certainly has the upper hand. The CE6 consistently clocked around 3100 in our Geekbench (multi-core test). The CE6 handled app switching and gaming without a fuss. The device comes in a choice of 8 GB/128 GB and 8 GB/256 GB options.

The Nord CE6 runs on Oxygen OS 16.0 that’s based on Android 16. It remains one of the more customisable OS options and is easy on the eye. OnePlus offers two years of Android OS updates and six years of security updates. This is a quite a drastic comedown from the CE5 that offered four years of Android OS updates. I think OnePlus missed a trick here, given that most rivals in this price segment offer at least three years of OS updates.

BATTERY

OnePlus has billed the Nord CE6 as a battery heavyweight. This is an area where the CE6 slays its rivals with what might effectively be a two-day battery for most average users. I rarely reached out for my charger until the end of day two despite reasonably extensive usage. The CE6 comes with an 8000 mAh battery under the hood, OnePlus has bundled an 80 W SUPERVOOC charger that should power up this device in about an hour and a half.

The phone also doubles up as a power bank with a 27 W reverse charger that can charge accessories like your wireless earbuds.

CAMERA

OnePlus has opted to give the ultra-wide lens a miss. Most of the rear camera duties are handed by the 50 MP primary lens with occasional assistance from the 2 MP depth sensor. This omission may not be a deal breaker for most average users but does reduce the versatility of the rear shooter. There’s also a 32 MP selfie cam. This is certainly not the best option in the segment if camera performance is your primary purchase driver, but it holds its own in optimal lighting conditions and gets a lot of help from in-built AI tools and tricks that result in images that are good enough for your social media feed.

VERDICT

OnePlus seems to have redefined the Core Edition’s priorities for 2026. While the battery and display have been bumped up, OnePlus has reduced the OS update support and tweaked the chipset and camera to balance the costs. The result is a solid all-round smartphone that should please most heavy duty users. The CE6 faces formidable rivals in this segment like the Nothing 4a and Motorola Edge 70 Fusion but holds its own in the battery and display department.

● SNAPSHOT

Price: ₹31,999 onwards

Pros: Massive battery, vibrant display, Ingress protection and durability
Cons: No ultra-wide camera, only two years of Android OS updates

Indian students fast-track loan repayments amid visa, job woes

DEBT PAYOFF. Amidst uncertainties in the US, many are opting for lump-sum payments

G Naga Sridhar
Hyderabad

Students who have availed themselves of education loans to pursue higher studies in the US are increasingly fast-tracking repayments amid uncertainties over visa norms and concerns about job security.

Typically, students who secure jobs in the US after completing their studies take about five to six years to repay their education loans.

However, bankers say a growing number of borrowers have accelerated repayments over the last year by opting for higher monthly instalments and making lump-sum payments.

“Most education loans come with a moratorium period of 12 to 18 months after completion of studies. Of late, we have been witnessing early repayments through higher instalments as well as bulk payments, which is a welcome trend

CAREER JITTERS. A woman software engineer who recently secured employment in the US said visa regulations had become increasingly unpredictable

from the portfolio quality perspective,” a senior SBI official told *businessline*.

An Indian technology professional working in the US, who joined a reputed company six months ago after completing his post-graduation, said he was keen to clear his liabilities at the earliest. “It will be very difficult to repay my education

loan if I suddenly have to return to India, as compensation packages back home may not allow me to set aside enough funds for quick repayment,” he said.

IMMEDIATE GOAL
His immediate goal is to repay the ₹50 lakh loan, which could swell to around ₹75 lakh if spread over three

years, and remain “prepared” to return to India if circumstances warrant.

A woman software engineer who recently secured employment in the US said visa regulations had become increasingly unpredictable.

“Unlike earlier, I no longer think it is practical to plan for a long-term or permanent stay in the US. Many of us want to work here, repay our loans as quickly as possible and eventually return to India for work,” she said.

In some cases, parents have begun servicing loans even before their children secure jobs. According to a Punjab National Bank official, concerns over the challenging job market in the US had prompted families with the financial capacity to start repayments early in order to reduce the overall interest burden.

According to data from the Ministry of Finance, gross non-performing assets in the education loan portfolio stood around 2 per cent.

Centre clears ₹2,169 cr for Ahmedabad metro airport link

Our Bureau
Ahmedabad

Ahmedabad’s airport is set to get long-awaited metro connectivity after the Union Cabinet on Tuesday approved a ₹2,169 crore project to extend the metro network to the Sardar Vallabhbhai Patel International Airport, closing a gap in the city’s urban transport infrastructure.

The 6-km extension will provide direct metro access to the airport, which has remained outside the city’s rail

transit network, despite the rapid expansion of metro services across Ahmedabad and Gandhinagar in recent years. The project is expected to improve connectivity for passengers, airport employees and daily commuters while reducing the dependence on road transport for access to one of Gujarat’s busiest transport hubs.

The approved Phase 2(A) of the Ahmedabad Metro Rail Project will have a length of 6,032 km with five stations (four elevated and one underground). On operationalisation of Phase 2(A),

Ahmedabad-Gandhinagar will have 77.63 km of active metro rail network. Stations in the Phase 2(A) corridor are Ashram Road, Koteswar Prachin Mandir, Sabarmati River, Sardar Nagar and Airport.

COMMERCIAL HUB
The airport link assumes significance as Ahmedabad continues to emerge as a major commercial and investment destination, with growing passenger traffic and increasing movement between Ahmedabad, Gandhinagar and GIFT City.

A direct metro connection is expected to integrate air travel more closely with the region’s expanding public transport network. While metro services have expanded across key residential, commercial and institutional corridors, travellers heading to the airport have largely depended on private vehicles, taxis and buses.

The new corridor is expected to offer a faster travel option, while supporting broader efforts to encourage the use of public transport and reduce congestion on roads leading to the airport.

MEPZ SEZ exports remain flat at ₹2.22 lakh cr in FY26

Our Bureau
Chennai

Exports from the MEPZ special economic zone (SEZ) stood at ₹2.22 lakh crore in FY26, registering marginal growth from ₹2.13 lakh crore in the previous fiscal, according to Alex Paul Menon, Development Commissioner, MEPZ.

The cumulative investment in the zone reached ₹82,844 crore during FY26, while total employment touched 6.26 lakh people.

The Tamil Nadu, Andaman & Nicobar Islands, and Puducherry (TAP) region continues to be the country’s largest SEZ cluster, with 50 operational SEZs out of a total of 62 notified zones.

Three more SEZs are expected to become operational over the next three

JOBS BOOST. The cumulative investment in the zone reached ₹82,844 crore during FY26, while total employment touched 6.26 lakh people BUOY GHOSH

years. The region currently houses 749 operational SEZ units and 288 export oriented units (EOUs).

KEY DRIVER
Highlighting the region’s long-term growth trajectory, Menon said exports from the TAP region have more than tripled over the last decade, rising from ₹68,104 crore in

FY2015 to a record ₹2.2 lakh crore in FY26.

Investment in the region has also doubled during the period, increasing from ₹41,489 crore to ₹82,844 crore. Of the cumulative investment, domestic investments account for ₹74,165.75 crore, while foreign direct investment (FDI) stands at ₹8,677.9 crore.

Employment generation has been another key driver of growth. The workforce in the region expanded from 2.87 lakh to 6.26 lakh over the past decade, creating more than 3.39 lakh additional jobs. During FY26 alone, SEZs and EOUs in the region generated 18,888 new jobs, reflecting continued industrial and export-led expansion.

Beyond digital services, the manufacturing landscape is highly diversified. Engineering, electronics and hardware emerged as the leading manufacturing vertical, contributing 7.4 per cent to the export basket with ₹16,384 crore.

Additionally, the non-leather footwear sector demonstrated strong resilience and growth, increasing by 10 per cent year-on-year from ₹3,669 crore to ₹4,027 crore.

Cabinet endorses PM Modi’s vision of Viksit Bharat@2047

Our Bureau
New Delhi

The Union Cabinet approved a resolution on Wednesday endorsing Prime Minister Narendra Modi’s ‘Viksit Bharat @2047’ vision. Introduced during the Cabinet meeting, the resolution also honoured Modi as India’s longest-serving elected Prime Minister.

The Cabinet praised Modi’s leadership across national security, inclusive growth and social justice as he became India’s longest continuously serving elected Prime Minister.

The resolution congratulated him on surpassing Jawaharlal Nehru’s record of 4,398 days in office, expressing confidence that under his guidance, India will continue to thrive as a self-reliant, secure and prosperous nation.

In a strong endorsement

LEADERSHIP MILESTONE. Prime Minister Narendra Modi receives a standing ovation from Union Ministers during the Cabinet meeting in New Delhi on WednesdayANI

of the government’s political and developmental agenda, the Cabinet expressed its “full support” for Modi’s leadership in building a developed India by 2047 and lauded “his tireless dedication to public service”.

The resolution appreciated Modi’s efforts towards “inclusive growth and social justice” and praised his leadership in strengthening national security and protecting India’s interests.

The Cabinet also credited the Prime Minister with driving welfare programmes for the poor and empowering

marginalised sections, noting that more than 25 crore people had overcome poverty during his tenure.

The resolution comes as the BJP-led NDA government completes 12 years in office under the leadership of Modi.

REFORMS PUSH
The Cabinet resolution highlighted a range of reforms and policy decisions undertaken during the last 12 years, including the abrogation of Article 370, implementation of GST, One Rank One Pension, new criminal

laws, and measures aimed at boosting manufacturing and self-reliance.

It further cited the government’s actions on national security, efforts to tackle Left-wing extremism, peace initiatives in the North East and India’s growing global profile through platforms such as the G20.

The document emphasised improved national security, evidenced by strict action against terrorism like surgical and cross-border air strikes, Operation Sindoor, and the suspension of the unjust Indus Water Treaty.

India’s outward FDI falls 49% in May: RBI

Press Trust of India
Mumbai

India’s total outward foreign direct investment commitments declined 49.02 per cent month-on-month to \$4.49 billion in May 2026 from \$8.84 billion, mainly due to lower equity investments, loans and guarantees

issued by Indian companies, according to RBI data.

However, total financial commitments by Indian entities under overseas investment increased 34.6 per cent year-on-year in May 2026 from \$3.34 billion, data showed.

Equity investments abroad dropped sharply to \$1,247.82 million in May

from \$3,537.35 million in April, marking a decline of about 64.72 per cent.

Overseas loans extended by Indian companies also declined to \$632.12 million in May from \$1,299.69 million in April.

Guarantees issued, which formed the largest component of overseas commitments, fell to \$2,608.83 million in May from \$3,999.79 million in April, declining around 35 per cent.

Shifting trade relations

India-US trade ties are more strategically balanced

Vibhuti Garg
Saloni Sachdeva Michael

A key focus, during US Secretary of State Marco Rubio's visit last month, was strengthening energy security cooperation and stabilising bilateral ties amid trade and regional frictions.

A major highlight was India and the US signing a dedicated pact on critical minerals and rare earths. The agreement focuses on securing supply chains for semiconductors, electric vehicles (EVs), defence systems, and clean energy technologies.

For the US, it brings India into a trusted partner network designed to reduce Chinese dominance. For India, which has limited processing capacity and depends on China for many rare earths, it opens alternative sources, processing partnerships, and technology collaboration. This builds on the broader US-India Bilateral Trade Agreement (BTA) framework signed in February 2025, under which India committed to purchasing \$500 billion worth of American goods over the next five years.

For a country that has long enjoyed a healthy trade surplus with the US, this marks a shift. India-US bilateral trade crossed \$140 billion (₹12 lakh crore) in FY26. Though India still exports more than it imports, but the gap is narrowing and the composition of that trade is changing.

ENERGY FOCUS

The clearest shift is energy. India is diversifying away from heavy dependence on West Asia and discounted Russian oil, both of which carry geopolitical risks from the Russia-Ukraine war and the recurring tensions around the Strait of Hormuz. The US is emerging as a key alternative supplier. Indian state-run refiners recently signed the country's first structured long-term liquefied petroleum gas (LPG) import agreement with US suppliers. Under the deal, India will import around 2.2 million tonnes of LPG from the US in 2026, equivalent to roughly 10 per cent of India's annual LPG imports.

Crude oil and liquefied natural gas (LNG) tell a similar story. India's crude oil imports from the US jumped by about 50 per cent in a single year, rising from \$6.6 billion (₹55,367 crore) in FY25 to \$9.9 billion (₹86,530 crore) in FY26.

Similarly, LNG imports nearly doubled from \$1.41 billion (₹11,709 crore) in FY24 to \$2.46

TRADE. Changing dynamics
GETTY IMAGES

billion (₹20,730 crore) in FY25. This signals that India is edging away from a surplus-heavy export relationship towards a more strategically balanced trade structure.

India's ambitious production-linked incentive (PLI) scheme has faced setbacks, including protectionist measures from the US, tariff escalation, and rollbacks of the Inflation Reduction Act.

Export-led growth tied to a single market now looks riskier. Instead, India is trying to embed itself deeper within trusted supply chains. This shift is now visible in new frameworks and deals. Initiatives like the TRUST Initiative, FORGE, and Pax Silica aim to integrate India into US-aligned technology ecosystems. The Quad has committed roughly \$20 billion toward critical mineral supply chains across the Indo-Pacific.

This marks a deeper strategic shift in the India-US relationship from traditional trade to co-building upstream control over key materials and technologies required in high-growth sectors. But this strategy carries trade-offs. As India increases imports of US oil, gas, technology, and industrial goods, it also becomes more exposed to US policy shifts, tariff changes, and geopolitical priorities.

That is the paradox of the moment. India is buying more from the US to reduce vulnerability and secure critical resources and technologies, yet in doing so it ties its economic future more closely to a US-centred system. Whether this delivers greater strategic autonomy or a new form of dependence will hinge on how India balances diversification with domestic capacity-building over the coming decade.

Garg is Director - South Asia; Michael is Lead Energy Specialist, India Clean Energy Transition - South Asia, at Institute for Energy Economics and Financial Analysis

A NARAYANAMOORTHY

After the massive ₹36,585-crore farm loan waiver announced by the BJP-led government in Maharashtra in June, benefitting 56 lakh farmers, the newly formed Tamilaga Vettri Kazhagam (TVK)-led government in Tamil Nadu has announced a conditional farm loan waiver for cooperative bank borrowers in May.

Aimed at fulfilling a electoral promise and helping Tamil Nadu's heavily indebted farmers, this initiative will provide some respite to small and marginal farmers.

However, can a one-time debt relief solve deep-rooted farm issues faced by the farmers?

The scheme allocates ₹2,044.46 crore to benefit approximately 14.22 lakh farmers, but its eligibility criteria apply strictly to short-term crop loans availed through cooperative banks between May 1, 2025 and February 28, 2026.

Rather than following a blanket write-off, the government has introduced an innovative Graded Relief system that gives the quantum of waiver based on outstanding loan amounts and farm-size classifications. Under this framework, marginal farmers holding debts up to ₹50,000 will receive a complete waiver, whereas small farmers within the same debt bracket are eligible only for a 50 per cent relief.

This policy design follows a progressive, variable economic logic where the rate of relief systematically decreases as the outstanding credit volume scales upward. Specifically, agricultural loans falling between the brackets of ₹50,001 and ₹60,000 receive a fixed waiver of ₹40,000. This benefit declines as the debt size increases. Consequently, the large landholders and other categories of farmers with debts exceeding ₹1,00,000 will receive a waiver of just ₹5,000. Though the one-time debt write-offs are never a permanent panacea for systemic agrarian distress, the innovative use of an explicit graded scale used to fix the relief deserves due recognition.

HISTORY OF DEBT WAIVERS

There's a long history of farm loan waivers in India. Citing droughts, monsoon failures and floods, various state governments have implemented small-scale relief schemes since 1987. However, driven by an alarming escalation in nationwide farm suicides and taking into account the grim findings of the Radhakrishna Committee Report on Indebtedness (2006), the Centre launched a massive nationwide Agricultural Debt Waiver and Debt Relief Scheme in 2008.

This scheme wrote off nearly ₹60,000 crore, covering about 3.7 crore small and marginal farmers and 60 lakh other farmers, though the CAG flagged severe institutional irregularities in its audit report later.

VENGADESH R

Farm loan waivers are just a band aid solution

AGRI FOCUS. To aid distressed farmers, the new TN govt and other States must ensure fair prices, adequate procurement and secure markets

Since then, several States have routinely announced debt waivers. Policymakers have operated under the assumption that these measures would completely arrest farmer suicides. But, empirical data reveal that even after the massive 2008 intervention, the tragedy of farm suicides persisted.

The pre-waiver period of 1995-2008 recorded an average of 41 farmer suicides per day, but this tragic figure actually rose to 43 during the post-waiver period of 2009-2011.

THE CORE MALADY

The primary reason farmers default on credit is that the absolute returns realised from crop cultivation are abysmally low. According to the situation assessment survey of agricultural households (2021), the average monthly net receipt from crop cultivation for a farm household in Tamil Nadu was just ₹2,641, amounting to a meagre daily income of about ₹88. Can a farm family manage basic household expenditures with this amount?

This suppressed income is primarily driven by escalating cultivation costs juxtaposed against highly

In 2021, the average monthly net receipt from crop cultivation for a farm household in Tamil Nadu was just ₹2,641, amounting to a meagre daily income of about ₹88

unremunerative farm-gate prices. For instance, an analysis of data published by the Commission for Agricultural Costs and Prices spanning from 1974-75 to 2021-22 shows that paddy cultivators in Tamil Nadu realised profits in only 15 of those years in terms of total cost of production (cost C2).

Shockingly, in the period following 2000-01, paddy cultivation was profitable in just three years. In such dire conditions, a one-time debt relief acts merely as a stop-gap measure. When farmers take loans for the next cropping season under the same unprofitable conditions, they are bound to fall into a debt trap again.

Furthermore, the Rangarajan Committee Report on Financial Inclusion (2008) highlighted that over 66 per cent of India's small and marginal farmers (who constitute more than 80 per cent of the farming households) lack access to formal institutional credit, forcing them to depend on informal, usurious money lenders. Since the Tamil Nadu government's waiver targets only cooperative bank borrowers, the vast majority of vulnerable smallholders trapped under informal debt nets remain entirely untouched, marking critical limitation of this relief scheme.

LOOKING AHEAD

Neither the massive loan-waiver of Maharashtra nor the graded loan-waiver announced by Tamil Nadu can insulate the resource poor farmers from structural debt vulnerabilities permanently. To ensure debt-free livelihoods, many proactive policy interventions need to be implemented,

particularly focusing on markets.

First, farmers currently face stiffer challenges in marketing and selling their produce than in the production side. Government agencies must accelerate and streamline the procurement of major commodities. Following other States, Tamil Nadu should actively implement a robust Market Intervention Scheme (MIS) to shield farmers during severe market price crashes.

Second, as recommended by the National Commission on Farmers (2006) headed by MS Swaminathan, the State government should fix the Minimum Support Price at 50 per cent above the comprehensive cost of cultivation by backing it with a dedicated state price stabilization fund.

Third, the acute shortage of storage facilities at procurement centres leads to catastrophic post-harvest losses, as harvested paddy bags are routinely drenched and germinated in open yards during rains.

Warehousing capacity must be created across districts, mapped directly to local production volumes.

To conclude, a one-time debt waiver cannot eradicate unremitting rural indebtedness. As long as agriculture is deprived of fair pricing, adequate procurement, secured markets and assured irrigation, indebtedness will continue to haunt the farmers.

The State government must seriously focus on restructuring farm markets.

TWENTY YEARS AGO TODAY.

June 11, 2006

SEBs stymie open access

Faced with the prospect of competition for the first time, State electricity boards, backed by their respective Governments, seem to be in no mood to give up their monopolistic position and are raising a bevy of protectionist barriers to stymie the implementation of key reform provisions promised in the Electricity Act 2003.

DoT's rural dream may be sold short

After failing to meet the Village Public Telephone targets, one of the Government's largest projects under the Universal Services Obligation for providing telephones in rural households seems to be under threat of falling short of the expected numbers.

'Work on 2nd Mumbai airport after ICAO clearance'

The Government plans to start work on construction of the second airport in Mumbai within the next two months after the International Civil Aviation Organisation (ICAO) gives the clearance for the project to come up. "We have sent a communication to ICAO and hope to get a response in the next two months.

China taps commercial oil stockpiles to weather Gulf shock

Bloomberg News

China has started tapping its commercial crude reserves to help offset the supply shock from the Iran war, although the world's biggest oil importer is continuing to prioritise lower refinery use and fuel export limits to manage the fallout.

Inventory draws are expected to average about one million barrels a day in the coming months, according to estimates from Vortexa Ltd., Kpler and Energy Aspects. That's about a third of the crude that China is no longer receiving since the conflict led to the near-total closure of the Strait of Hormuz, but still pales in comparison

with the roughly 1.2 billion barrels the nation has in its commercial and strategic stockpiles.

The price reaction to what the International Energy Agency has called the biggest oil market shock on record has been relatively muted, as China refrained from tapping international markets to make up for the lost barrels. Global benchmark Brent is up less than a third since the conflict started, with analysts estimating that the nation's imports could remain subdued for months to come — helping ease pressure on prices.

China has filled up its inventories to unprecedented levels over the past year. It started tapping those reserves

OIL SUPPLIES. Under pressure

in May, and drew down almost 25 million barrels in the month to June 7, Energy Aspects said, citing data from its satellite-tracking Kayros unit.

While that is sizable — global consumption is just over 100 million barrels a day — weaker downstream

demand has made an even bigger difference. State-owned refiners have cut processing rates to record lows, fuel exports have been constrained under wartime measures aimed at preserving domestic supply and the switch to electric vehicles has accelerated.

"China's transport system has become structurally more flexible than in previous oil shocks," said Emma Li, lead China market analyst at Vortexa. The rapid adoption of EVs has contributed to a drop of about one million barrels a day in fuel demand this quarter, she said.

Some observers have argued that the demand destruction may not be permanent.

Nuvama Wealth gets final approval to enter MF biz

Mumbai: Nuvama Wealth Management has received final approval from SEBI to commence MF operations through its asset management arm, Nuvama Asset Management. As the next step, the AMC will seek necessary approvals to launch investment products under the Specialised Investment Fund framework, followed by a broader range of mutual fund offerings over time, the company said on Wednesday. Ashish Kehair, MD & CEO, Nuvama Group, said the fund house's investment expertise, distribution reach and strong client base position it well to scale a distinctive asset management business. Nuvama's wealth management platforms currently manage assets of over ₹4.5 lakh crore (as of March 2026) and have over 1.3 million affluent, HNI and UHNI clients. **OUR BUREAU**

ASK Property Fund to raise ₹3,500 crore for new fund

New Delhi: ASK Property Fund will raise ₹3,500 crore from domestic and foreign investors for its fourth debt fund and deploy the capital for the development of mid-income housing projects. In a statement on Wednesday, ASK Property Fund, which is part of the Blackstone-backed ASK Asset & Wealth Management group, said it has launched a fourth debt fund with a target corpus of ₹3,500 crore. The fund named 'ASK Real Estate Special Situations Fund IV (ASK Debt Fund IV)' aims to raise capital from both domestic and offshore investors. **BTI**

CMR Green Tech makes strong debut, ends 29% higher on day 1

Our Bureau
Bengaluru

Shares of CMR Green Technologies made a strong debut on Wednesday, after robust investor demand emerged for the company's ₹631-crore initial public offering (IPO). The stock debuted at ₹275.40 on the BSE, marking a premium of 43.4 per cent over the issue price of ₹192 a share. On the NSE, the stock listed at ₹268, up 39.5 per cent from the IPO price. However, it closed at ₹241.20 and at ₹247.90 on the NSE and BSE, respectively, ending with a gain of 26 per cent and 29 per cent respectively. According to Shivani Nyati, Head of Wealth at Swastika Investment Ltd, the strong debut reflects investor interest in the company's position as a leading non-ferrous metal recycler and secondary aluminium producer. "Follow-

Banks can lend only to SEBI-registered and listed REITs, InvITs, says RBI

Our Bureau
Mumbai

Banks can lend to Real Estate Investment Trusts (REITs) and Infrastructure Investment Trusts (InvITs) only if they are registered with and regulated by SEBI and are listed, according to RBI's final guidelines. Further, a bank can lend to a REIT/InvIT if it has at least 80 per cent of its underlying assets generating positive cash flows from operations for a period of not less than one year. Lending to REITs can be undertaken by overseas branches of Indian banks. The sub-limit for a bank's aggregate exposure towards REITs will be subject to a prudential ceiling of 10 per cent of the bank's eligible capital base. As per RBI guidelines, which will be applicable with effect from October 1, 2026, the aggregate exposure of all

Sensex pares gains, Nifty slips into red as rising W. Asia tensions hit sentiment

RISK-OFF TRADE. Mid-cap, small-cap stocks witness selling pressure; 2,747 stocks edge down on BSE

Madhu Balaji
Bengaluru

Benchmark indices erased early gains and settled marginally flat on Wednesday as escalating geopolitical tensions in West Asia, weak global cues and profit booking at higher levels weighed on investor sentiment. The BSE Sensex ended 64.42 points higher at 73,983.18, after hitting a high at 74,613.01. But the Nifty 50 suffered more, as it ended weak by 27.15 points at 23,214.95; the index rose to a high of 23,425.35. Markets surged in the morning session after a muted opening, supported by easing crude oil prices and stable domestic financial conditions. However, senti-

ment deteriorated sharply in the second half after weak European market openings and renewed geopolitical concerns triggered profit booking across sectors. Broader Asian markets also fell, with AI stocks continue to remain under pressure. Foreign portfolio investors maintained their selling stance by offloading ₹2,125 crore worth shares. **CAUTIOUS OUTLOOK** According to Choice Institutional Equities, although geopolitical tail risk may have faded, the macroeconomic aftershocks are only beginning to emerge. The scenario with Brent at \$89/bbl is likely to cause India's CAD from -0.6 per cent in FY26 to -2.2 per cent in FY27. "Further, decline in

GDP growth from 7.7% in FY26 to 6.5 per cent in FY27E and a Nifty that de-rates to 17-18x, is not a scenario that warrants an aggressive long-India posi-

tion," the domestic brokerage cautioned. Broader markets remained under pressure throughout the session, with both mid-cap and small-cap

indices declining over 1 per cent, reflecting weak risk appetite. Market breadth also remained negative. Of the 4,369 stocks traded on the BSE, 1,473 advanced, while 2,747 declined. Ajit Mishra, SVP, Research, Religare Broking, said investor sentiment remained fragile amid rising geopolitical tensions. Sectorally, Media stocks witnessed significant pressure, followed by Energy and Realty. Metal stocks also fell due to weak global commodity prices, stronger dollar and concerns over slowing industrial demand in China. However, FMCG stocks rose sharply on expectations of price hikes, while private banking stocks gained after RBI eased FCNR(B) deposit and ECB norms.

HC casts doubt on SEBI's online dispute tool for complex issues

Our Bureau
Mumbai

The Bombay High Court has raised questions over the use of SEBI's Online Dispute Resolution (ODR) mechanism for complex disputes involving allegations of fraud, while setting aside an arbitral award passed against ABB India Ltd in a decades-old share transfer case. Justice Somasekhar Sundaresan quashed an August 2024 arbitral award that had directed ABB to restore 1,550 shares of the company and 310 shares of Hitachi Energy India to investor Sunil Jaisingh or compensate him based on the market value of the shares. Justice Somasekhar Sundaresan observed that

"whether a dispute of the instant nature can at all form the subject matter of the ODR mechanism is a wider question that has arisen in the matter".

ONLINE DISPUTE R The court was critical of the manner in which the arbitration proceedings were conducted under the ODR framework. It said the tribunal appeared to have treated a 60-day timeline for completion of proceedings as mandatory, despite dealing with a complex dispute involving allegations of fraud, limitation issues and third-party rights. Justice Sundaresan said the tribunal had adopted a "completely irrational, arbitrary and non-judicial ap-

The dispute traces its origins to 175 ABB shares originally held by an investor's father in 1988, that now translates to 1,550 ABB shares, 310 Hitachi Energy shares

proach to adjudication" by deciding the dispute without granting further hearings after the pleadings were completed and without fully examining contested questions of fact. The observations came while the court was hearing ABB India's challenge to an

August 2024 arbitral award passed under the ODR mechanism. The dispute traces its origins to 175 ABB shares originally held by Jaisingh's father, who died in 1988. Jaisingh sought transmission of the shares in 1992. According to court records, ABB's then registrar and transfer agent returned the documents and sought probate of the will before processing the request. Jaisingh later claimed that the original share certificates were misplaced by his lawyer and resurfaced only in 2021. By then, however, the shares had already been transferred and dematerialised in 1998-99. Following bonus issues, a stock split and ABB's demerger of its power business, the original holding would have

translated into 1,550 ABB shares and 310 shares of Hitachi Energy India. After complaints filed with SEBI were closed and conciliation under the ODR framework failed, the matter proceeded to arbitration before a three-member tribunal appointed through a BSE-empanelled ODR institution. "The fraud in issuance of share certificates lies at the heart of the proceedings, making the dispute non-arbitrable," the court held. The judgment said that the shares had already been transferred to third parties, including institutional investors, and said questions relating to how the shares were transferred and dematerialised required investigation.

BROKER'S CALL.

Geojit Retail Equity Research

MAHINDRA & MAHINDRA (BUY)
Target: ₹3,508
CMP: ₹2,951.90
Mahindra & Mahindra's standalone revenue from operations rose 26.2 per cent to ₹39,554 crore, led by growth in the automotive and farm equipment segments. In Q4FY26, the automotive segment's revenue increased 24.6 per cent to ₹31,116 crore. The farm equipment business grew 32 per cent to ₹8,483 crore, aided by increased sales in both domestic and export markets. Higher revenue led to a 18.8 per cent increase in EBITDA to ₹5,564 crore. However, EBITDA margin declined 80 bps to 14.1 per cent. Reported profit after tax rose 53.3 per cent to ₹3,737 crore, owing to a robust performance by the automotive and farm equipment businesses. The company is now demonstrating a rare combination of growth, margin resilience and portfolio optionality. The core SUV franchise is strengthening structurally through market share gains, premium mix improvement and capacity-backed growth visibility, while the farm business remains a dependable earnings anchor with disciplined profitability. The EV business reaching operating profitability is a major strategic positive and reduces execution risk around future mobility investments. With the management showing consistent execution, improving return ratios and a diversified profit engine, M&M remains well placed to compound earnings and sustain positive re-rating support. Therefore, we retain the Buy rating on the stock, with a rolled forward target price of ₹3,508 based on SOTP valuation.

Motilal Oswal Research

ICICI LOMBARD (BUY)
Target: ₹2,240
CMP: ₹1,733.25
Over the last 25 years, ICICI Lombard has served 500 million customers while building digital infrastructure, strengthening distribution capabilities and enhancing customer engagement. FY26 reflects a shift toward monetising these investments through enterprise-wide execution. The company's outperformance in retail health has been a function of strengthening distribution; continued innovation; tech enhancement; and customer engagement. Motor segment remains a cornerstone of the franchise, protecting over 250 million drivers since inception. FY26 witnessed a slow start due to low vehicle sales, which improved after GST rationalisation in H2FY26. The general insurer's distribution engine has been strengthened further with transition to a multi-line business model from a single-product business model to drive cross-selling, higher customer lifetime value, strong retention and agent productivity. In FY26, it introduced a broader vision of intelligent transformation powered by artificial intelligence, building on an existing strong data foundation. ICICI Lombard appears well positioned to harness the profitable growth opportunities in the under-penetrated general insurance sector. We expect GWP/PAT to expand at a CAGR of 12 per cent/19 per cent over FY26-28 as CoR declines to 101.7 per cent by FY28. Reiterate a Buy rating on the stock with a TP of ₹2,240 (based on 28x FY28E EPS).

SEBI mulls easing salary disclosures for MF honchos

Our Bureau
Mumbai

The Securities and Exchange Board of India (SEBI) has proposed to ease salary disclosure norms for mutual fund (MF) executives amid raising concern from the industry.

In a consultation paper issued on Wednesday, SEBI said the industry had raised concerns that the public disclosure of individual remuneration will expose employees to risks relating to misuse of personal information. In addition, the MF industry competes for talent with other segments such as Portfolio Management Services and Alternative Investment Funds (AIF), where similar disclosure requirements are not applicable. This asymmetry may place asset management company's (AMCs) at a competitive disadvantage and could have implications for talent retention, it added. Investors comments on the proposal should be submitted to SEBI by June 30.

INVESTMENT DRIVERS The MF industry said investment decisions are typically driven by factors such as scheme performance, risk management, asset allocation, investment strategy and expense ratios. Individual-level remuneration disclosures may not materially influence such decisions or improve investor outcomes. Moreover, it said MFs operate as trust structures which are pass-through vehicles, where investors are unit holders rather than shareholders and do not exercise direct ownership rights over the AMC. Following the industry's submission, SEBI has proposed that instead of disclos-

ure of individual employee remuneration, AMCs may disclose consolidated remuneration along with the employees count mandated under the disclosure. This will enable unit holders to assess the overall quantum of remuneration at the senior management level. This apart, MFs have to disclose the salary of CEO, CIO and COO besides top 10 employees in terms of remuneration and annual remuneration of all employees whose annual remuneration is over ₹1.02 crore or monthly remuneration of ₹8.5 lakh, if employed for part of the year.

AT SCHEME LEVEL SEBI proposed that scheme-level consolidated disclosure of total remuneration paid to fund managers at scheme-level may be made available upon specific request of unit holders and may be limited to the schemes in which the investor has made an investment. Abhishek Paliwal, Partner, King Stubb & Kasiva, Advocates and Attorneys, said the proposed changes represent a notable shift in the regulatory approach to transparency and governance in the MF sector. For retail investors, transparency is a cornerstone of trust in the MF ecosystem. Any revised framework should ensure that the reduction in individual-level disclosures does not inadvertently weaken governance standards or diminish investor confidence, he added.

After surge in AI adoption, firms shift focus to returns

WRONG SIDE. Rising infra costs making largescale AI deployment significantly expensive

Sindhu Hariharan
Chennai

After all the frenzy around AI adoption, enterprises are now beginning to focus on the return of investment (RoI) from AI spending.

Companies are increasingly evaluating and discussing the complexity in enterprise AI adoption: increasing AI use comes with higher costs, and in that case does AI's positioning as a cost saving tool hold good?

MAJOR ISSUE

A major concern is that rising compute and infrastructure costs are making large-scale AI deployment significantly more expensive without any direct linkages to returns. Ramprakash Ramamoorthy, Director of AI at software major Zoho Corporation, told *businessline* that for the first time in two years, the whole conversation around RoI on AI is getting louder. The input cost has gone up by a huge

SCREAMING FOR HELP. For the first time in two years, the whole conversation around RoI on AI is getting louder

margin for enterprise adopters of AI, he said.

"Every software company's balance sheet is going to look very different because compute costs are going through the roof. Typically, your HR cost is the biggest item, but now we may see this change if the prices [AI hardware/infra] continue to remain at the same rate they are right now. The same spec of hardware that we got in December 2025 is 4X more expensive in June 2026," he added.

Zoho is dealing with the rising costs in various ways. "Right sizing models is one strategy that we have been practising and have been selling to our customers as well; only when you need that extra creativity, use a small language model or a medium language model," he said.

Measuring performance per watt also becomes strategic, he added, noting that it's important for organisations to optimise compute usage. Speaking at the com-

pany's annual AI forum last week, Cognizant CEO Ravi Kumar S said the buzz around AI has led to massive token consumption without linkages to RoI and outcomes. "There is a gap between AI capability and production value because of the reckless token consumption without linkage to outcomes. Companies need to create more efficient, more predictable and effective economics for token consumption," he added.

Take Uber for instance. Speaking on a global podcast recently, Uber President and Chief Operating Officer Andrew Macdonald said it was still hard for them to draw a direct link between the company's rising use of Claude Code and product features/innovations for consumers.

Cognizant's Kumar added that the issue of token consumption will create opportunities for system integrators such as Cognizant.

Data centre fire hits Google Cloud services in Delhi, Mumbai, Chennai

Our Bureau
New Delhi

Google Cloud said on Wednesday its traffic originating from Delhi, Chennai, Mumbai and surrounding areas were experiencing network disruptions and elevated latency due to a fire at a third-party data centre in the national capital on Tuesday.

"A fire at a third-party data centre facility required an emergency power shutdown of networking equipment, isolating a non-compute local point of presence in Delhi and reducing available network capacity in the metro area. We rerouted significant traffic from the impacted facility in Delhi to address reduced local serving capabilities," the company said. "Customers may experience slightly elevated latency and non-optimal network routing into Google Cloud until the affected facility is fully restored. There is no workaround at this time."

The company said it will provide the next update on Thursday.

Zoho enters hardware space with designed-in-India server Nathu La

Our Bureau
Chennai

Eyeing tech sovereignty in the data hardware space and in a step to build the full enterprise technology stack, Zoho has launched its indigenously designed server Nathu La.

Zoho said with Nathu La it has achieved equivalent performance, with 12-18 per cent lower power consumption and 20-30 per cent lower total cost of ownership.

In Zoho's marquee style, the R&D work for the server platform was entirely done out of Nagpur by local talent recruited and trained by the company.

The Nathu La server motherboard and chassis platform is the result of over five years of R&D across hardware, firmware and systems management.

Based on Intel® Xeon® 6 Processors, the server is designed to optimise performance for virtualisation, high performance computing (HPC), AI inference and storage applications.

The launch makes Zoho one of the few technology

Zoho's Nathu La server chassis

companies to have designed a homegrown server platform with the intellectual property owned in India.

DEPLOYMENT PLANS

We plan to hit about 2,000 servers by the end of this year, and these will be across multiple configurations to suit various processes such as Zoho Mail, Zoho Meeting, Ramprakash Ramamoorthy, Director of AI, Zoho Corporation, told *businessline*.

The company does not intend to commercialise the server platform at this stage. Zoho did not disclose the investment behind the product.

Zoho Corp has already made 1,000 units of Nathu La operational as part of its India DCs.

"We have identified specific workloads where we have a clear edge over global OEMs; so, the first task will be to deploy this in those specific areas. Nathu La is also AI ready," said Ramamoorthy.

KEY ELEMENTS

Mangesh Sadafale, Head of Hardware Development, Zoho Corp, explained that the majority of key elements in the Nathu La server platform — the hardware, the electronics and the firmware — have been made in-house by Zoho.

"The metal sheet was manufactured in Pune, the metal bending and other processes were done in Nagpur ... We imported the PCB, but the assembly was done in Chennai, and testing in Bengaluru, and testing and the hand holding was also done by Intel India," he said.

With our goal to be a predictable company to do business with, we have always wanted to find a way to bear such shocks, he said, adding that for the first time in two years, the whole ROI on AI conversation is getting louder, Ramamoorthy added.

India's \$1.5 t D2C market comes of age

Amit Vijay Mohile
Mumbai

From Nykaa, Mamaearth and Minimalist to newer brands such as Snitch, The Whole Truth and Yoga Bar, India's new-age consumer brands are increasingly paying rents to win trust.

Rising customer acquisition costs and more demanding consumers are pushing the country's direct-to-consumer (D2C) market into a more mature phase, driven by repeat purchases, credibility and omni-channel retail.

In one of the clearest signs of this shift, D2C companies leased nearly 595,000 sq ft of retail space in H1 2026, accounting for 18 per cent of India's total retail leasing activity, up from 8 per cent a year earlier.

FMCG SEES RESET

A report by Strategic Growth Advisors, titled *The Pulse 2026*, said India's D2C ecosystem is moving beyond discounts, influencer-led discovery and scale-at-all-costs growth, with authenticity and long-term consumer relationships becoming more important.

SETTING A TREND. The D2C ecosystem is moving beyond discounts, influencer-led discovery and scale-at-all-costs growth

The transition is reshaping the fast-moving consumer goods (FMCG) market as legacy consumer companies increasingly acquire digital-first wellness, skincare and premium food start-ups to access younger consumers and high-margin categories.

Marico's digital-first portfolio, including Beardo, Plix, True Elements and Cosmick, recently crossed ₹1,000 crore in annual recurring revenue, while Hindustan Unilever's acquisition of Minimalist and ITC's acquisition of Yoga Bar reflect the growing strategic importance of D2C brands.

The beauty and personal care market is projected to grow from \$24 billion in FY25 to \$40-45 billion by FY30, with online penetration expected to rise to 34 per cent by FY30 from 6 per

cent in FY20. For Gen Z-focused start-ups, creator-led discovery and rapid trend cycles are redefining retail.

"At NEWME, we measure the trend-to-product cycle in days, not seasons," said Sumit Jasoria, Co-founder and CEO of fashion start-up NEWME.

"The founder who cracks Patna today is building something as valuable as the one who dominated Powai a decade ago," said Rahul Jain, CEO of Strategic Growth Advisors, in the report.

The rise of Shark Tank India reflects the same shift. According to the report, 80 per cent of brands featured on the show were digital-first at the time of pitching, while 30 per cent later raised follow-on funding.

"Gen Z consumers have fundamentally changed the way brands think about dis-

covery, engagement and commerce," said Ashutosh Valani, Co-founder of RENEE Cosmetics.

"Consumers don't think in categories, they think in identities," said Abhinav Pathak, Co-founder and CEO of travel and luggage platform Escape Plan, adding that discovery is increasingly being driven by "creators and communities", rather than traditional advertising. The report also highlighted growing demand for ingredient-aware consumption.

Hitesh Dhingra, Founder of skincare brand Puresta, pointed out that the trend had also led to "overwhelm" among consumers who were experimenting without proper guidance.

BETTING ON TRUST

Yet even digital-native brands are increasingly betting that trust is built offline as much as online.

"We are not building a digital-only brand. We are building an omni-channel fashion brand," said Jasoria, adding that NEWME had accelerated from five stores a year to nearly five stores a month.

NDR Group to invest over ₹2,000 crore in warehousing, expansion of industrial parks

T E Raja Simhan
Chennai

The Chennai-based NDR Group is stepping up investments in warehousing and industrial infrastructure, with projects worth more than ₹2,000 crore under development over the next couple of years as it looks to capitalise on growing demand. The group has around 7 million sq ft under active construction across warehousing and industrial parks through its development arm, NDR Smart Spaces.

These are part of a larger 13 million sq ft land and development pipeline being built for eventual transfer to the group's infrastructure investment trust (NDR In-

N Amrutesh Reddy, MD, NDR Warehousing BUJOY GHOSH

vIT Trust), N Amrutesh Reddy, MD, NDR Warehousing Pvt Ltd, told *businessline*.

Reddy said the warehouses were leased out to 100+ tenants such as DHL, FedEx, Havells, Apollo Tyres, Amazon, Maersk and Lenovo under long-term contracts with a fixed payment stream.

In FY26, the rental income increased 30 per cent to ₹420 crore over ₹324 crore in the

previous fiscal. Reddy said the company is also expanding its geographical footprint beyond established industrial hubs. While it has a presence in locations such as Coimbatore, Hosur and Pune, it is entering markets such as Varanasi where rising consumption and e-commerce activity are driving demand for modern warehousing facilities.

Industrial parks, where NDR rents out the entire space to a single company, are emerging as a growing segment for the group. Of its

total portfolio of about 22 million sq ft, nearly 2 million sq ft is devoted to industrial assets. Occupiers include manufacturing, engineering and pharmaceutical companies.

IPC INVESTMENT

To fund its expansion plans, NDR Smart Spaces is set to receive \$50 million investment from the International Finance Corporation (IFC). Due diligence is on and the transaction is expected to be completed in a month, said Reddy.

Kinaxis eyes 60% y-o-y growth in CY2026

Rohan Das
Chennai

Kinaxis, a provider of cloud-based software-as-a-service solutions for supply chain management, is eyeing its India business to grow by 60 per cent year-over-year in CY2026.

Speaking to *businessline*, Razat Gaurav, CEO of Kinaxis, said India has evolved into a fast growing market for the Canada-based company. He added that the company posted a similar growth in 2025 albeit from a smaller base. "The infrastructure investments in the country, especially in high tech industries and manufacturing, is creating increased demand for advanced supply chain solutions."

Kinaxis' India customer base includes large enterprises such as Mahindra Group, Sun Pharma, Dr. Reddy's, Lupin, Tata Consumer Products and Mother-son. The company predominantly serves clients across three verticals — automobiles, pharmaceuticals and consumer products with the business evenly distributed across these sectors.

Looking ahead, Gaurav said the company wants to expand into sectors such as aerospace, defence and high-tech manufacturing.

He added that the company has a headcount of about 450 employees in India and plans to increase it by 22 per cent over the next year.

NOTICE

For transfer of equity shares of the Company to Investor Education and Protection Fund (IEPF)

The notice is published pursuant to provisions of the Investor Education and Protection Fund Authority (Accounting, Audit Transfer & Refund) Rules, 2016 ("the Rules") as amended from time to time. The Rules, inter alia, contain provisions for transfer of shares in respect of which dividend has not been claimed by the shareholder for seven consecutive years or more to IEPF Authority.

Shareholders are requested to note that in respect of final dividend declared on July 20, 2019 if the dividend is not claimed on or before August 19, 2026, the said dividend along with those equity shares in respect of which dividend remains unclaimed, including all benefits accruing on such shares, shall be transferred to IEPF Authority as per timelines and procedure prescribed in the Rules, without giving any further notice to the shareholder and no liability shall lie against the company in respect of which equity shares so transferred.

The Company has communicated to the concerned shareholders individually whose shares are liable to be transferred to the IEPF Authority under the said Rules for taking appropriate action in compliance with the said Rules.

The Company has also updated the details of such shareholders and shares due for transfer to the IEPF Authority on its website at unitednilgiratea.com. Shareholders are requested to verify the details of unclaimed dividends and the shares liable to be transferred to the IEPF Authority on the Company's web-site under 'Corporate' at unitednilgiratea.com.

Shareholders may note that both the unclaimed dividend and corresponding shares transferred to the IEPF Authority including all benefits accruing on such shares, if any, can be claimed back from the IEPF Authority after following the procedure prescribed in the Rules. In case the shareholders have any queries or need any further information/clarification on the subject matter of the Rules, they may contact the Company Secretary, The United Nilgiri Tea Estates Company Limited, No. 3, Savitri Shannugam Road, Race Course, Coimbatore - 641 018 (or) the Company's Registrar and Share Transfer Agent M/s. SPECIAL WINDOW FOR RE-LODGE/MENT OF TRANSFER REQUESTS OF PHYSICAL SHARES

Pursuant to the Securities and Exchange Board of India ("SEBI") Circular No. HO/38/13/11(2)2026-MIRSD-PD/13/750/2026 dated January 30, 2026, we bring to your notice that another special window has been opened for a period of 1 year from February 05, 2026 till February 04, 2027 ("special window period") to facilitate transfer and dematerialization of physical shares which were sold/purchased prior to April 01, 2019. The special window shall be available for (i) re-lodgement of transfer requests which were submitted prior to April 01, 2019 and were rejected/returned/not attended to due to deficiency in the documents/process/or otherwise and (ii) fresh lodgement of transfer requests which were not submitted prior to April 01, 2019, provided that the original share certificate is available.

The shares transferred during this special window period shall be mandatorily credited to the transferee only in demat mode and shall be under lock-in for a period of one year from the date of registration of transfer. Such shares shall not be transferred/lien-marked/pledged during the said lock-in period. Due process as prescribed under the said Circular shall be followed for such requests. Further, (i) cases involving disputes between transferor and transferee (to be settled through court/NCLT process), (ii) shares which have been transferred to Investor Education and Protection Fund (IEPF) and (iii) re-lodgement / fresh lodgement of transfer requests executed prior to April 01, 2019 where original share certificate is not available, will not be considered during this special window period.

Eligible investors are requested to avail this opportunity by submitting the transfer requests along with all the requisite documents as mentioned in SEBI Circular No. HO/38/13/11(2)2026-MIRSD-PD/13/750/2026 dated January 30, 2026 to MUFG Intime India Pvt Ltd (formerly "Link Intime India Private Limited"), the Registrar and Share Transfer Agent (RTA) of the Company within the above stipulated time, whose details are as follows:

Gold trims losses on softer US inflation data

Gold pared losses on Wednesday but remained near more than a two-month low after the release of cooler-than-expected US inflation data, while traders shifted their focus to the risk of a wider US and Iran war. Spot gold was down 2.6 per cent at \$4,151.86 per ounce by 1302 GMT. US gold futures for August delivery shed 2.6 per cent to \$4,174.70. Silver fell 1.1 per cent to \$64.63. REUTERS

Copper hits 3-week low as W. Asian hostilities weigh

Copper sank to its lowest in three weeks as hostilities in West Asia and concerns about the implications for global economic growth outweighed the market impact of reduced inventories. Benchmark three month copper on the LME was down 1.4 per cent to \$13,430 a tonne. LME copper stocks decreased by 3,075 tonnes to 369,975 tonnes, the lowest level since April 1. Aluminium shed 1.9 per cent to \$3,480.50, while zinc slipped 1.6 per cent to \$3,498 and nickel slid 2.7 per cent to \$17,580. REUTERS

Crude oil steadies on renewed US-Iran tensions

London: Crude oil prices were steady as renewed US-Iran hostilities muddled direction and investors weighed lower Chinese demand with global inventory draws. Brent futures were down 25 cents at \$91.24 a barrel at 1008 GMT, while US WTI crude was down 14 cents at \$88.06. REUTERS

After rice, China turns the heat on Indian red chillies

SETBACK FOR SHIPPERS. Largest buyer rejects some consignments, suspends three Indian firms for presence of methamidophos residue

Vishwanath Kulkarni
Bangaluru

China has rejected at least three cargoes of dried chilli consignments and has suspended three Indian exporters over the alleged presence of methamidophos residues in the commodity. This comes close on the heels of Beijing rejecting Indian rice cargoes.

China, the largest buyer of Indian dry red chillies, has suspended imports from three Indian firms after detecting excessive levels of methamidophos, which is feared to affect the nervous system.

This has triggered concerns among the exporters, who are already facing reduced offtake from the neighbour.

China consistently ab-

sorbs over a third of India's red chilli exports annually driven by rising demand from the oleoresin, food and culinary sector.

China buys mainly the Teja variety for oleoresin extraction. The annual shipments to China fluctuate between 1.5 and 1.9 lakh tonnes (lt). During 2024-25, chilli exports to China registered a growth of 31 per cent to touch a high of 2.36 lt in volumes.

India's chilli exports touched 7.15 lt during 2024-25, registering a 19 per cent increase over the previous year's 6.01 lt.

"The detection of methamidophos in exported chilli consignments is a matter of concern because it is not separately registered for agricultural use in India. However, methamidophos may occur as a metabolite of acephate,

Losing sting				
Chilli exports to China				
Year	Quantity (lakh tonnes)	Value (₹ crore)	Value (\$ million)	
2020-21	1.8	3,144	424	
2021-22	1.91	3,131	420

Source: Spices Board

an insecticide that remains registered for use on certain crops in India and is reportedly used by some chilli growers," said Bhagirath Choudhary, Founder-Director, South Asia Biotechnology Centre (SABC).

HEIGHTENED SCRUTINY "The rejection of a chilli consignment by China should

not be viewed merely as an isolated compliance issue but as a reminder of the increasingly stringent food safety and residue standards being applied in international trade. Recent trade-related concerns involving agricultural consignments of rice and chilli indicate that China is exercising heightened scrutiny over

food safety parameters, including pesticide residues and GMO-related requirements. Such incidents can affect the reputation of an entire commodity sector, even when they involve only a few consignments," Choudhary said.

Sources said China had made record purchases of Indian chillies in 2024-25, taking advantage of lower domestic prices and building inventories.

While details of imports during 2025-26 were not immediately available, offtake has reportedly slowed because of higher carryover stocks and rising chilli prices in India following a smaller crop.

According to trade sources, around 3,000 containers of chilli have been exported to China this year, of which 10-15 per cent re-

portedly faced quality issues, mainly due to excess moisture and pesticide residues.

QUALITY CONCERNS The spurt in chilli prices has prompted Chinese importers to seek lower prices from suppliers, bringing product quality concerns to the fore, sources said. High moisture content has emerged as a key issue, with sources attributing it to inadequate post-harvest handling and quality control measures driven by cost considerations.

Despite the quality concerns, none of the affected consignments have been returned. Instead, importers are reportedly negotiating price discounts with suppliers to compensate for deficiencies. Sources added that major exporters are not involved in these transactions, which largely comprise

traded consignments of whole chilli. Sources at the Spices Board maintained that they have no information on the matter.

Choudhary further said, "India already faces a significant trade imbalance with China, and safeguarding market access for agricultural exports should be a strategic priority. This calls for stronger farmer-awareness programmes, improved stewardship of crop-protection products, residue surveillance and faster adoption of safer and more sustainable integrated pest-management practices. Strengthening compliance across the value chain will be essential to protect India's competitiveness in global spice markets."

With inputs from V Sajeev Kumar in Kochi

Bangladesh's stiff norms likely to keep Indian wheat exporters out

Subramani Ra Mancombu
Chennai

Bangladesh has floated a global tender to import 50,000 tonnes of wheat, but India is unlikely to participate because of the stringent quality specifications and the competitive pricing offered by other origins.

On Tuesday, the procurement division of Bangladesh's Directorate General of Food issued a tender for importing milling wheat. The tender, which opened on Wednesday, will close on June 24.

Per the tender, 60 per cent of the wheat consignment has to be delivered at the Chattogram port and the rest at Mongla port.

"But the catch is in the specifications. The minimum test weight is 76 kg/

hectolitre with one per cent minimum dockage," said New Delhi-based exporter Rajesh Paharia Jain.

JORDAN TENDER BIDS The minimum test weight for Indian wheat is 72-74 kg/hl, while the dockage is over 2 per cent. Only if the wheat is sorted can Indians exporters match the specification.

The minimum test weight for Indian wheat is typically 72-74 kg/hl, while dockage levels are generally above 2 per cent. Indian exporters can meet the specifications only after additional sorting and cleaning.

In a tender floated by Jordan recently, sample analysis showed a test weight of 78 kg/hl and a higher protein content of 12.4 per cent.

"Only wheat from Madhya Pradesh can match these specifications," said Jain.

Export sources said Indian wheat costs around \$280 a tonne free-on-board (f.o.b.). Adding freight charges of about \$30 a tonne would take the cost-and-freight price to \$310-315 a tonne.

"In comparison, in the Jordan global wheat import tender that closed on Tuesday, none of the bids crossed \$280 a tonne," said Jain.

BLACK SEA WHEAT In the Jordan tender for delivery during September-October, the lowest quote was submitted by Olam at \$276.50 a tonne, followed by Ameropa (\$277.87), Cargill (\$279.90) and LDC (\$280). ITC, meanwhile, shipped wheat to the UAE on behalf of a Singapore-based firm at \$278.40 a tonne f.o.b.

"If you add freight (\$30 a tonne), liner expenses (\$8 a

STRINGENT CONDITIONS. The minimum test weight for Indian wheat is typically 72-74 kg/hl, while Bangladesh requires a minimum of 76 kg/hl

tonne), trade margins and the cost of financing, given that 95 per cent of payment is received against the letter of credit after three months, India cannot compete," said the New Delhi exporter.

The new wheat crop from the Black Sea region is currently quoted at \$233-238 a tonne f.o.b. Even after adding freight charges of

about \$40 a tonne and liner-out expenses, it remains competitive, as the f.o.b. price already factors in the trade margin. "The difference in prices is \$25-30 a tonne, which is significant in global trade," said Jain.

INDIAN EXPORTS On the other hand, Indian wheat was exported to the

United Arab Emirates last month from Kandla port, with ITC shipping 31,000 tonnes and Gurudeo 4,450 tonnes at around \$280 a tonne.

India's wheat production is estimated at a record 120.65 million tonnes (mt) this year despite quality concerns arising from unseasonal weather. In addition, the government has procured 35 mt of wheat at the minimum support price.

The record production estimate has encouraged India to resume exports after a three-year hiatus. India is expected to export at least 2 mt of wheat, aided by developments in the global grains market, including geopolitical tensions and weather-related disruptions. US wheat production is also projected to fall to a 57-year low.

Last month, the US De-

partment of Agriculture raised its forecast for Indian wheat exports to 2 mt from 1.75 mt, even as global wheat production for 2026-27 was pegged at 819.1 mt, down 24.8 mt from the record 2025-26 harvest.

Earlier, India's wheat exports were expected to remain below 3 lakh tonnes. However, fertilizer shortages in Australia, the US and Canada, along with prolonged dry weather, have altered the global trade landscape. North America, particularly the US, has endured a difficult winter growing season.

Developments post the Bangladesh tender will need to be watched out for, said trade sources. In the global market, wheat prices have gained 16 per cent this year and this should keep Indian hopes alive, they said.

Monsoon stalls, rain belt shifts to South, East India

Vinson Kurian
Thiruvananthapuram

The belt of heavy to very heavy rainfall has shifted away from India's West Coast and is now concentrated over Tamil Nadu, Puducherry and Karaikal, while extending eastward to the sub-Himalayan districts of West Bengal and Sikkim.

Mumbai, meanwhile, missed its tryst with the monsoon on Wednesday, with forecasts suggesting a further delay of a few days.

The northern limit of the monsoon remained stalled for the third consecutive day on Wednesday.

WEATHER WARNING. The outlook for Thursday said the heaviest rainfall might be recorded around Mangaluru

MANGALURU IN FOCUS According to the European Centre for Medium-Range Weather Forecasts (ECMWF), Mangaluru in coastal Karnataka could receive the heaviest rainfall on Thursday, with the accumu-

lations exceeding 17 cm. Neighbouring north Kerala districts, including Kasargod, Kannur, Kozhikode and Malappuram, are also expected to receive intense rainfall, while lighter showers may extend south-

ward along the coast up to Alappuzha. Subdued rainfall over west India has widened the seasonal deficits.

During the first nine days of June, rainfall was more than 60 per cent below normal in Saurashtra, Kutch,

Konkan, Goa and Madhya Maharashtra. The current forecasts provide little indication of an early return of widespread heavy rain capable of substantially narrowing these deficits.

RAIN FOR KONKAN-GO A Isolated heavy rainfall is, however, likely over Konkan and Goa on Thursday as a western disturbance moves into the adjoining parts of North-West India.

Over the next six days, isolated to scattered showers are forecast across east Gujarat, Konkan, Goa, Madhya Maharashtra and Marathwada, while Saurashtra and Kutch may witness similar activity for three days from Sunday.

Thunderstorms, accompanied by lightning and gusty winds, are likely over Konkan and Goa on Thursday, and over Madhya Maharashtra and Marathwada through Friday.

NCDEX may relaunch pepper futures by end-June

Akshata Gorde
Mumbai

The National Commodity and Derivatives Exchange (NCDEX) is preparing to relaunch pepper futures by the end of June.

The contract could be among the first agri derivatives to benefit from the market regulator's proposed cash-settlement-first framework, sources said.

Pepper futures were among the NCDEX's most actively traded spice contracts in the early 2010s before being discontinued due to quality disputes and delivery-related litigation.

With most of the legacy issues now resolved, the exchange is set to reintroduce the contract.

NCDEX has secured the required regulatory approvals and established warehousing infrastructure in Kerala, which is expected

to serve as the base delivery centre.

The relaunch is expected to support the NCDEX's ef-

forts to expand its presence in South India. The relaunch could strengthen domestic pepper price discovery, redu-

cing reliance on Vietnam-driven global benchmarks despite India being a major producer.

Planet sizzles as May becomes 2nd warmest on record globally

Srikrishnan PC
Chennai

May 2026 was the second warmest ever recorded globally on land and sea, the Copernicus Climate Change Service (C3S), implemented by the European Centre for Medium-Range Weather Forecasts (ECMWF), reported. The ERA5 record shows May 2026 was the second warmest May on record, with an average surface air temperature of 15.81°C, or 0.55°C above the 1991-2020 average, only surpassed in 2024. This was 1.42°C higher than the estimated average for 1850-1900, before industrialisation.

The average May 2026 SST (sea surface temperature) in the 60°S-60°N band was tied for the second warmest on record for the month at 20.90°C, behind 2024

The average May 2026 sea surface temperature was the second warmest on record for the month at 20.9°C, behind 2024 (20.93°C)

(20.93°C). Europe swung from unusually cold conditions to one of the earliest and most intense heatwaves on record in Western Europe this month.

HEAT EXTREMES The heatwave shattered several year records, particularly in France, the UK, Ireland and Portugal. Rainfall patterns were sharply divided.

Much of western, central and eastern Europe, including Italy and Spain, remained

drier than average, while parts of northwest Europe, Scandinavia, Finland, Turkey and the Black Sea region saw above-normal rainfall, triggering widespread flooding in Turkey, Bulgaria and Moldova.

Samantha Burgess, strategic lead for climate at ECMWF, said: "May 2026 was the second warmest May on record globally, with near-record temperatures in both the atmosphere and the ocean. In Europe, an unusually early and intense heatwave demonstrates how quickly climate extremes are becoming the new normal rather than the exception."

SSTs continue to be very warm over a broad expanse of the tropical Pacific as the equatorial Pacific shifts towards El Nino conditions that are forecast to develop during the next few months, the report added.

Short copper futures at ₹1,325 with stop-loss at ₹1,350

Akhil Nallamuthu
bl. research bureau

Copper futures (₹1,315/kg) have been on a decline over the past week. While the broader uptrend remains valid, there are signs of a corrective decline at the current juncture.

COMMODITY CALL.

The June futures, after failing to rally above ₹1,385 last week, reversed the path and are on a decline. On Wednesday, the contract slipped below the support at ₹1,325, where the 23.6 per cent Fibonacci retracement of the previous upswing coincides.

The breakdown below the support at ₹1,325 has opened the door for further decline. While it may be too early to call the dips a bearish trend reversal, we will most

likely see the price dropping to ₹1,265. Support below ₹1,265 is at ₹1,230.

On the other hand, if copper futures resume the rally, they ought to reclaim ₹1,325 for the bulls to gain traction. If this occurs, the contract could extend the rally to ₹1,385. Overall, as it stands, the near-term outlook is weak and so traders can consider selling.

TRADE STRATEGY Short copper futures at ₹1,325. Target and stop-loss can be ₹1,275 and ₹1,350, respectively.

NOTICE

Transfer of Equity Shares of the Company to Investor Education and Protection Fund (IEPF)

NOTICE is hereby given that pursuant to the provisions of Section 124 of the Companies Act, 2013, read with the Investor Education and Protection Fund Authority (Accounting, Audit, Transfer and Refund) Rules, 2016, as amended ("the Rules"), the final dividend declared during the financial year 2018-19, which has remained unclaimed or unpaid for a period of seven consecutive years will be credited to IEPF on October 01, 2026. The corresponding equity shares in respect of which the dividend has remained unclaimed or unpaid for a period of seven consecutive years will also be transferred to IEPF Authority, as per the procedure set out in the Rules.

In compliance with the Rules, an individual communication is being sent to all the concerned shareholders at the latest available address, informing them of the impending transfer of share(s) to the IEPF Authority under the said Rules for taking appropriate action(s). The details of such shareholders is made available on the Company's website at <https://www.elgi.com/in/investors/investor-iepf/>

The concerned shareholder(s) holding shares in physical form and whose shares are liable to be transferred to the IEPF Authority, may note that upon transfer of shares, the original share certificate(s) which are registered in their name will stand automatically cancelled and deemed non-negotiable. In case of shares held in dematerialised form, shares to the extent liable to be transferred, shall stand debited from the shareholder's account.

In case the Company does not receive any communication from the concerned shareholders within three months of the date of this Notice, the Company shall transfer the liable dividend and equity shares to IEPF Authority, without any further notice as per the procedure set out in the Rules. Shareholders may also note that both the unclaimed dividend and corresponding shares transferred to the IEPF Authority including all the benefits accruing on such shares, if any, can be claimed from the IEPF Authority after following the procedure prescribed by the Rules in form IEPF-5. The same is also available at IEPF website i.e. www.iepf.gov.in.

For any queries on the above, the shareholders are requested to contact the Company's Registrar and Share Transfer Agents at the below given details:

MUFG Intime India Private Limited (Formerly Link Intime India Private Limited),
Address: Surya 35, Mayflower Avenue, Behind Senthil Nagar, Sowripalayam Road, Coimbatore - 641 028,
Tel No. : +91 422 231 4792 / +91 422 495 8995, e-mail: coimbatore@in.mpms.mufg.com

Shareholders may also write to the Company at investor@elgi.com for any further assistance.

INFORMATION ON SPECIAL WINDOW FOR TRANSFER AND DEMATERIALIZATION OF PHYSICAL SECURITIES

Additionally, as required under SEBI Circular No. HO/38/13/1(2)2026-MIRSD-PDI/3750/2026 dated January 30, 2026, all Shareholders are hereby informed that a Special Window shall be opened for a period of one year, from February 05, 2026 to February 04, 2027 for transfer and dematerialisation ("demat") of physical securities which were sold/purchased prior to April 01, 2019. The said special window shall also be available for such transfer requests which were submitted earlier and were rejected/returned/not attended to due to deficiency in the documents/process/or otherwise. Further, the securities so transferred shall be mandatorily credited to the transferee only in demat mode and shall be under lock-in for a period of one year from the date of registration of transfer. Such securities shall not be transferred/lienmarked/pledged during the said lock-in period. The cases involving disputes between transferor and transferee; and securities transferred to IEPF shall not be considered under this window. Shareholders may avail this opportunity by submitting the requisite documents to the Company's Registrar and Share Transfer Agent as per the details set out above.
