Domestic flows help cash market defy correction

BEATING THE TIDE. The average daily turnover rose during the sell-off as MFs absorbed FPI exits; the strength has continued even after the recent recovery

Akhil Nallamuthu
bl. research bureau

Indian equities may have fallen sharply in early 2026, but the cash market did not freeze. On the contrary, trading activity increased.

The average daily turnover (ADT) in the cash market climbed from ₹1.02-lakh crore in December 2025 to ₹1.35-lakh crore in March 2026, even as benchmark indices corrected about 15 per cent. Such resilience during a sell-off was last seen during the Covid-led market crash.

The difference this time lay in who was driving the trade. Foreign portfolio investors (FPIs) pulled out nearly ₹1.3-lakh crore in the first three months of 2026, but mutual funds pumped in about ₹1.5-lakh crore, helped by steady SIP flows. The result was a market correction without the usual collapse in cash-market activity, unlike the previous three corrections (see table).

In fact, the cash market strength continued even after broader equity sentiment recovered. Cash ADT stood above ₹1.4-lakh crore

Cash activity defies market weakness

in both April and May, hitting a two-year high. This indicates that the turnaround was not confined to the correction phase alone.

For the January-May period, FPI outflows and mutual fund purchases stood at ₹2.25-lakh crore and ₹2.44-lakh crore, respectively.

INSTITUTIONAL MOVES

The latest episode also highlights a structural change in market ownership. During the Covid sell-off, foreign investors remained the dominant force in the market. Over the years, however, domestic institutions have steadily increased their

presence. The shift became evident by March 2025, when domestic institutional investor (DII) ownership surpassed that of FPI.

The DII share of ownership in Nifty 500 companies expanded from 14.9 per cent in March 2020 to 20.9 per cent in March 2026, an all-time high. Meanwhile, the FPI share dropped from 19.9 per cent to a new low of 17.1 per cent during the same period.

The growing influence of domestic investors is also evident in their buying firepower. During the Covid-led sell-off, mutual funds invested a net ₹41,304 crore in equities between January

Cash gains traction as F&O cools

ADT - Average Daily Turnover Source: NSE, BSE

and March 2020. In comparison, net investments by mutual funds during the first three months of 2026 stood at ₹1.53-lakh crore, nearly four times higher. For the January-May period, the figure rose to ₹2.87-lakh crore.

This jump underscores the larger role domestic institutions now play in absorbing selling pressure during market corrections.

The resilience in turnover has also been aided by a revival in participation among non-institutional investors, particularly in the small- and mid-cap segments. Activity in these pockets had slowed during the correc-

tion but has since picked up.

"Small- and mid-cap stocks are seeing greater participation from non-institutional investors. Activity in these segments had fallen earlier but has picked up in recent months. That has helped support turnover in the cash market," said Deepak Jasani, an independent market veteran.

DERIVATIVES GAME

Interestingly, the resilience in the cash segment stands in contrast to developments in the derivatives market.

While cash market ADT rose during the correction, derivatives turnover remained below the levels

The great ownership shift

Source: Motilal Oswal

seen before SEBI tightened norms in the F&O segment. Average daily derivatives turnover across exchanges declined from ₹472-lakh crore in December 2025 to ₹462-lakh crore in May 2026. However, it has recovered significantly from the low of ₹296-lakh crore recorded in December 2024, shortly after the new regulations came into effect.

The sharp decline in late 2024 followed SEBI's measures aimed at curbing excessive speculation, including higher contract sizes for index derivatives and other changes to the trading framework.

Since then, market parti-

cipants have gradually adapted to the new environment.

"Traders have tweaked their systems and processes to better suit the new conditions they are operating in," says Jasani.

The recovery, however, has not been uniform across participants. According to Feroze Azeez, Joint CEO of Anand Rathi Wealth, smaller traders have been affected the most. "The most impacted category has been retail or individual traders, particularly those trading small-sized contracts with limited capital. The higher minimum contract sizes have effectively raised the entry barrier," Azeez says.

INVESTMENT FOCUS.

Tech Call: Finolex Cables — Buy

Gurumurthy K
bl. research bureau

The long-term outlook is bullish for Finolex Cables (₹1,164). The stock has found a good bottom around ₹700 in January and risen well thereafter. It has swinging between ₹960 and ₹1,185 for more than a month now. Cluster of supporters are there in the ₹1,000-900 region.

We expect a bullish breakout above ₹1,185 which can take the stock higher to ₹1,400-1,500 in the next few months.

WHY BUY

From a long-term perspective, there is potential for the Finolex Cables share price to target ₹2,000 over the next couple of years or even earlier. Long-term investors can buy Finolex Cables shares now at ₹1,164. Accumulate on dips at ₹1,040. Keep the stop-loss at ₹820. Trail the stop-loss up to ₹1,340 as soon as the price goes up to ₹1,580. Revise the stop-loss further higher to ₹1,620 and ₹1,840 when the price touches ₹1,740 and ₹1,910 respectively. Exit the stock at ₹1,980.

BJP govt's work for Bengal's development apace, says PM; announces slew of projects

Our Bureau
Kolkata

Prime Minister Narendra Modi on Saturday said the process of reform and progress for West Bengal has already begun after the new BJP government came to power, noting that the State has a key role to play in the country's overall development.

"The era of cut money has come to an end, and the progress for West Bengal has begun," Modi said, while addressing a large gathering at Hooghly's Tarakeswar on the occasion of "Paschimanga Divas" or West Bengal Day.

On the occasion, Modi launched multiple development projects spanning railways, agriculture, rural development, fisheries and animal husbandry. He released the 23rd instalment of

FRESH CHAPTER. PM Narendra Modi being felicitated by West Bengal Chief Minister Suwendu Adhikari during West Bengal Foundation Day event at Tarkeshwar, in Hooghly on Saturday **ANI**

the PM-Kisan scheme worth over ₹18,880 crore, benefitting over 9.44 crore farmers across the country.

AGAINST CORRUPTION

The Prime Minister, who addressed a public gathering, said the new government has already started taking strong

actions against corrupt syndicates and individuals who exploited and looted the people.

Sharpening his attack on the erstwhile Trinamool Congress government, Modi said, "Those who looted public money in Bengal are now being forced to return

it. They are being sent to jail."

He alleged that previous governments in West Bengal pushed the State backwards and turned it into a land of exodus. "Large industries moved out of Bengal. Small industries and businesses shut down. Employment opportunities for the youth kept shrinking. All previous governments encouraged illegal infiltration and the State's resources were increasingly taken over by infiltrators," he added.

NEW JOURNEY

Modi claimed West Bengal has "broken free from its shackles" and embarked on a new journey of development after the new BJP government came to power. He said the State government has started working at a super-fast pace for Bengal's development.

Hormuz shut again; Iran, US teams in Swiss town for talks

Bloomberg

Iran said it has closed the Strait of Hormuz due to what it called a violation of the ceasefire by Israel attacking Lebanon. However, it sent a team to Switzerland for prospective peace talks with the US.

In Washington, Vice-President JD Vance said top US negotiators Jared Kushner and Steve Witkoff were already in Switzerland working through technical details of the negotiations on Iran's nuclear programme.

Talks initially set for Friday were put off after fighting in Lebanon intensified.

Key mediator Pakistan said technical talks will begin on Sunday in Birgenstock, with Qatari mediators also participating.

In a first for India, Vivek Aggarwal named VP of anti-money laundering body FATF

Our Bureau
New Delhi

For the first time, an Indian will be the Vice-President of the Financial Action Task Force (FATF) as Culture Secretary Vivek Aggarwal has been elected for 2026-27.

Aggarwal was earlier an Additional Secretary in the Finance Ministry and Head of the Indian Delegation to the FATF.

"This appointment is a recognition of India's collective effort and of the strength of our anti-money-laundering and counter-terrorist-financing framework. I am deeply honoured to serve and look forward to working with the FATF Global Network to keep the international financial system safe, inclusive and resilient," he

Vivek Aggarwal

said after the plenary elected him during the meeting at Paris. Aggarwal is a 1994 batch Indian Administrative Service officer of the Madhya Pradesh cadre.

SUSTAINED CONTRIBUTION

The Vice-President of the FATF is elected from among members and assists the President in steering the organisation's work.

India's elevation to the vice-presidency reflects the credibility and trust the country has earned within the FATF Global Network of more than 200 jurisdictions.

It builds directly on India's strong showing in its most recent mutual evaluation, and on the country's sustained contribution to shaping global policy on emerging risks, including those associated with virtual asset service providers and digital payments.

Randhir Jaiswal, External Affairs Ministry spokesperson, said: "As India continues to champion a zero-tolerance policy against terrorism, this leadership role reinforces our relentless focus on combating global terrorist financing networks and dismantling illicit financial systems."

Will the RUPEE recovery sustain?

CURRENCY OUTLOOK. Crude oil prices below \$100 and the RBI's FCNR(B) swap window are likely to provide some relief, but only temporarily. A strong dollar and high Treasury yields may play spoilsport

GETTYIMAGES/ISTOCKPHOTO

Gurumurthy K
bl. research bureau

The Indian rupee has been hitting the headlines frequently since the beginning of the year. The domestic currency fell to a new low of 96.96 against the dollar in May this year. It has since recovered and is currently at 94.33, down 6 per cent for the year so far.

The US-Iran peace deal, which has pulled oil prices sharply lower, and the Reserve Bank of India's recent measures to attract foreign money inflows have aided the rupee's recovery from its all-time low.

USDINR & Brent Crude moving in tandem

Source: Bloomberg

It is not only against the dollar that the rupee has weakened. It has also fallen against other major and emerging market currencies.

The rupee is down in the range of 3-5 per cent against the euro, yen and British pound. The picture is poorer against emerging market currencies. The rupee has fallen 10 per cent and 14 per cent against the Brazilian real and Russian ruble, respectively. The domestic currency is down 8 per cent against the Chinese yuan.

Will the recent recovery in the rupee against the dollar sustain? What are the factors that favour rupee appreciation, and what are the factors working against it? We analyse different scenarios to see where the rupee may be headed from here. Before getting into the outlook, let us look at what has dragged the rupee lower so far this year.

THE DRIVING FORCES

Two major factors have dragged the rupee lower so far this year. One is crude oil prices, and the other is strong foreign money outflows.

CRUDE OIL

Brent crude oil (\$80.55) prices spiked from around \$70 per barrel in February to a high of about \$119 in March. Fears of supply disruption after the US-Iran war pushed oil prices higher. Oil is India's major import component and accounts for an average of 25 per cent of the country's total imports.

The surge in oil prices increased India's import bill by 23 per cent, from \$59.59 billion in March to \$73.41 billion in May. This, in turn, widened the merchandise trade deficit from \$20.67 billion in March to \$28.21 billion in May, a sharp increase of 36 per cent.

The chart above clearly shows that the USD/INR pair and crude oil prices have moved in tandem so far this year.

OUTFLOWS

Foreign portfolio investors have been on a selling spree, especially in the equity segment, since last year. They pulled out \$18.91 billion last year. This was the highest full-calendar year outflow, as per data available since 2005.

This year may turn out to be worse. Data show that there has been a net outflow of a whopping \$30 billion so far.

FPIs on a selling spree

*Up to June 19, 2026 Source: NSDL

WHAT NEXT?

Oil price outlook

Brent crude oil, currently at \$80.55 per barrel, has fallen sharply below \$100 over the past one month. This has helped the rupee recover strongly from its all-time low. The fall in oil prices is likely to provide some relief on the import bill in the coming months. But how far can it have a positive impact on the rupee? That will depend on how much further oil prices can fall.

On the charts, there is strong support around \$75 and \$70. Considering the recent sharp fall, it may be difficult for prices to decline below this level. So, there is a good chance that prices could bounce back from around \$70 and move towards \$85 or even \$90. In that case, oil prices may stay in the range of \$70-90 over the next few months. Unless geopolitical tensions worsen again, oil prices are unlikely to move above \$100 again.

Brent Crude Oil: Limited downside from here

Source: Bloomberg

Data from the Petroleum Planning & Analysis Cell show that India's average crude basket price for FY26 was \$71 per barrel. The crude basket is the price at which Indian refiners import crude. The basket price now stands at \$103.9 per barrel for this fiscal year so far. For this to fall to \$70 or lower, oil prices will have to decline and sustain below \$60. That looks less likely.

So, this is unlikely to provide major relief on the import bill compared with last year. The trade deficit may not narrow much even if oil prices stay below \$100. Hence, the relief that the rupee has received from the fall in oil prices may be limited, going forward.

TEMPORARY FIX

The Reserve Bank of India recently announced a swap window for Foreign Currency Non-Resident Bank deposits, or FCNR(B) deposits. This measure is aimed at attracting foreign capital into the country and, in turn, helping the rupee recover. A similar measure was announced in 2013. That move saw deposits increase by \$24.5 billion during the three-month period from September to November 2013, when the swap window was in effect. The rupee appreciated from around 69 to 62 against the dollar during this period.

The FCNR(B) swap window this time is open from June 8 to September 30. According to reports, it is likely to attract about \$50 billion. This can provide some relief for the rupee.

However, the circumstances are different this time compared with 2013. Short-end yields in the US were lower then, with the two-year US Treasury yield at around 0.4 per cent. The Fed funds rate was also near the bottom at around 0.25 per cent, and there were no signs of any rate hikes in the US at that time.

FCNR (B) swap window to give temporary relief

Source: RBI

Now, the US two-year yield is around 4.2 per cent. The Fed funds rate range is at 3.5-3.75 per cent. A possible rate hike is on the cards by the end of this year, as per the latest projection given after the Fed meeting this week.

So, the RBI's move may be a temporary fix rather than a permanent solution to retain rupee strength.

STRONG DOLLAR

The dollar index, currently at 100.85, has seen a strong rise above 100 after the Fed meeting outcome on Wednesday. As seen from the charts, the index has formed a strong base in the 98-96 region. Immediate resistance is around 101. A strong break above this level will boost the bullish momentum. Such a break will open the door for a fresh rally to 106 by the end of this year or in the first quarter of next year.

Dollar Index: Bouncing from a long-term support

Source: Bloomberg

Even if the index fails to breach 101 immediately, any pull-back can find support in the 99.50-99 region. The rise to 106 mentioned above will be negated or delayed only if the dollar index declines below 99.

HIGH YIELDS

The US two-year Treasury yield, currently at 4.2 per cent, has an important resistance at 4.25 per cent. At the same time, strong support is now at 4 per cent. So, even if the yield fails to rise past 4.25 per cent immediately, it is unlikely to fall below 4 per cent.

Rate hike prospects from the Fed can keep the chances high for the two-year yield to breach 4.25 per cent and rise to

Rise in yield to strengthen the dollar

Source: Bloomberg

4.5 per cent. Once this rise happens, 4.25 per cent will then become a strong support. From a long-term perspective, there is potential for the two-year yield to rise to 5 per cent over the next one year.

The dollar index and the US two-year Treasury yield have a strong positive correlation, as seen in the chart above. So, the initial rise to 4.5 per cent in the two-year yield can translate into a rise to 106 in the dollar index going forward.

TAKEAWAY

Crude oil prices below \$100 and the RBI's FCNR(B) swap window are likely to provide some relief for the rupee. But this may be only for the short term. The rupee can gain some ground and move to 93 or 92.50, in a best-case scenario, in the next quarter. But once the strong dollar and high US yields take centre stage, the rupee can begin to lose ground again. We can expect the rupee to weaken back towards 96-97 and even make fresh lows as we head into 2027.

TECHNICAL ANALYSIS

On the charts, the short-term picture looks positive for the Indian rupee, currently at 94.33. The recent price action indicates a lack of strong sellers to drag the domestic currency below 96 again.

Immediate resistance for the rupee is at 94. A break above it can take the rupee higher towards 93.30-93 in the coming months. A break above 93 may not be easy. But if it happens, an extended rise to 92.60-92.50 is possible.

We can expect the rupee to reverse lower either from around 93 or from the 92.60-92.50 region. This leg of decline will have the potential to drag the rupee lower again to 95-96.

If the rupee fails to breach 94 immediately, then a range of 94-96 is possible for a month or two. Thereafter, the rise to 93 can happen.

Broadly, we can expect a range of 94-96 in the short term and 93/92.50-96 in the medium term. Within this range, the preferred path is for the rupee to strengthen towards 93-92.50 first, before weakening again towards 96.

Rupee: Limited room to strengthen

Source: Bloomberg

GETTY IMAGES

Aarati Krishnan

As investors, the main reason many of us hold gold in the portfolio, is to act as a safe haven. When events such as wars, financial crises or calamities arrive, gold acts as a shock absorber, because its prices generally rise when financial assets tumble.

Lately however, gold has been failing in this safe-haven role. Just a day before US-Iran hostilities broke out, gold (24-carat) was ruling at ₹1.6 lakh per 10 gram in India. On war news, it spiked for a single day to ₹1.73 lakh. Thereafter, the journey has been steadily downhill, with prices falling to ₹1.46 lakh by June 19. This is a 16 per cent drop from the peak. In fact, Indian investors have been cushioned by rupee depreciation. Global gold prices have tumbled 22 per cent during this period.

In light of this erratic behaviour, should you continue to hold gold in your portfolio? Can you rely on it as a safe haven? To know this, let's understand the reasons for the recent gold price decline.

WHY GOLD FELL

Gold dons many hats as an asset. Investors own it as a commodity, currency, safe-haven and status symbol, resulting in a dozen factors impacting its prices. The recent price fall though, seems to be due to four factors.

Rising treasury yields

In institutional portfolios, gold

competes directly with US treasuries (US government bonds) as a safe-haven choice. Therefore, whenever the yield on US treasuries soars, gold loses a bit of its lustre. And vice-versa.

Just before President Trump embarked on the Iran misadventure, the 10-year US treasury yield had been on a steady decline, falling from 4.8 per cent in January 2025 to below 4 per cent by February 2026. During this time, US bond markets were pricing in a high possibility of rate cuts by the Federal Reserve, on weakening job growth and benign inflation.

However, the start of the Iran war in February prompted bond markets to abruptly change course. With energy prices soaring and global supply chain disruptions, they began pricing in the possibility of Fed rate hikes instead of cuts. This propelled the 10-year yield from below 4 per cent to over 4.5 per cent in May. Higher yields on US treasuries have taken the shine out of gold, sparking the recent fall.

Central bank sales

One of the key drivers of gold demand and price gains in recent years has been steady demand from the central banks of the world. Central banks are the world's largest hoarders of bullion, owning it as an emergency reserve and a diversifier from the US dollar.

Between 2020 and 2025, central banks added between 208 tonnes and 542 tonnes of gold, annually.

GOLD GUIDE

- Gold can deliver equity-like returns
- Crisis protection does not always work
- Keep allocation steady

However, they tend to add to their holdings when gold prices are low and cut back on purchases at highs. This trend has been playing out lately.

World Gold Council data show that central banks, which bought up about 367 tonnes of gold in Q4 2024 (when prices ruled at \$2,600) cut back to about 243 tonnes by Q1 2026 as prices shot up to \$4,800 levels.

In addition, during times of war or crises, nations pledge or sell gold reserves to raise emergency lines of credit. WGC data show that in Q1 2026 Türkiye, the Russian Federation and Bulgaria together offloaded about 103 tonnes of gold. Central bank sales of gold usually come to light only well after they are concluded. Therefore, the signalling effect of this for investors is limited.

Ebbing ETF flows

If central banks add cautiously to holdings when gold prices are high, investors do the opposite. Buyers of ETFs (exchange traded funds) flock to gold when recent returns look good and abandon it when losses crop up.

This seems to be playing out now. As global gold prices climbed from about \$2,600 in

Q4 2024 to \$4,100 by Q4 2025, ETF buyers ratcheted up their purchases from 20 tonnes to 174 tonnes. As gold prices have moderated from March 2026, ETFs have seen outflows. When gold prices peaked in January 2026, ETF demand stood at 120 tonnes for the month. This fell 26 tonnes in February, a negative 86 tonnes in March (signalling net outflows), went back to 45 tonnes in April and again a negative 16 tonnes in May.

This is likely to have been a big factor behind the recent weakness in gold prices. Given the momentum-chasing nature of ETF investors, their actions magnify gold price trends during both rallies and falls.

Profit-taking

A final explanation could lie in simple profit-booking.

If the last four months have been forgettable for gold investors, the year before it was stellar. In the year from March 2025 to February 2026, gold saw a breathless 90 per cent rally. This was a super-normal return, because the average annual gains for gold over multiple decades is about 10 per cent.

This out-of-the-blue rally took even gold bugs by surprise. It was likely triggered by Trump tariffs, which had central banks hunting for US treasury alternatives, and the fall in US yields.

Therefore, when gold showed signs of topping out in February 2026, investors sitting on super-normal gains were likely tempted to lock into them. As the Iran conflict escalated, stock and bond

markets tanked, making gold one of the few assets where hefty gains could still be booked.

TAKEAWAYS

With reasons for gold's peculiar behaviour spelt out, what does it mean for your investments?

Like other asset classes, gold price moves are extremely hard to predict. In fact, gold prices are harder to predict than stocks or bonds because there are no cash flows to arrive at a 'fair value' for gold.

Long-term rolling return analysis suggests that for Indian investors, gold manages a 12-13 per cent return if held for five years. This makes gold a good asset class to own, with a potential to deliver equity-like returns. Though gold has worked as an effective safe haven in past market crashes and wars, it doesn't work every time. Therefore, hopping on to gold after a major crisis breaks out, is a bad idea.

Market gurus didn't predict gold's stellar rally in 2025. Nor did they expect it to drop like a stone during the Iran war. This tells you that, to capitalise on gold returns, you need a constant allocation to it in your portfolio. Given that gold delivers returns in short bursts, your allocation to it can be 10 or 15 per cent of your portfolio, but it cannot match stocks or bonds.

If you're trying to gauge gold price direction from here, monitor US treasury yields and rate hike expectations. Waning rate hike expectations will be bullish for gold.

AI spends eat into Big Tech buybacks

TECH VIEW. Some firms are also issuing more stock to finance AI ambitions

Bloomberg

The artificial intelligence (AI) race is becoming so expensive that it's snuffing out one of the key forces that has helped keep Big Tech stocks soaring for years: Steady share buybacks.

Of the four biggest AI spenders — Alphabet Inc., Microsoft Corp, Meta Platforms Inc. and Amazon.com Inc., only Microsoft bought back shares in the first quarter. And its \$3.4 billion in repurchases was the lowest total among the group in nearly a decade, according to data compiled by Bloomberg. "The amount of capex that's being spent is dramatically higher than even the high end of what anyone would have thought not just a year ago but three months ago," said Robert Schiffman, a senior credit analyst at Bloomberg Intelligence.

Not only have share repurchases slowed to a trickle, but some companies are issuing more stock to finance their AI ambitions. Alphabet Inc. is planning to raise about \$85 billion in its first equity sale in 20 years to help fund capital expenditures on data centres. And Facebook owner Meta Platforms Inc. is reportedly weighing an offering that could raise tens of billions of dollars.

NEW SHIFT

The disappearance of buybacks and the issuance of new equity represent the latest shift in the way technology giants operate as a result of heavy spending to

TECH THAT

The disappearance of buybacks and the issuance of new equity represent the latest shift in the way technology giants operate today

add AI computing capacity. With the four big AI spenders forecasting as much as \$725 billion in capital expenditures this year, and even more expected in 2027, the outlays are sucking up a larger proportion of free cash flow and prompting them to take on more debt.

Buybacks are a tax-free way to return cash to shareholders. Naturally, they're quite popular with investors. Without that lever, however, the tech giants face more pressure to deliver commensurate returns on invested capital, according to Brent Fredberg, portfolio manager and tech sector analyst at Brandes Investment Partners, which has \$43 billion in assets.

Of the four big spenders, Alphabet has been by far the largest buyer of its own stock. Over the past five years, the Google parent has plowed about \$280 billion into share repurchases, or more than 6 per cent of Alphabet's current market capitalisation, according to data compiled by Bloomberg. The first quarter marked the first time Alphabet didn't buy back shares in nearly 10 years after spending more than \$15 billion on repur-

chases in the same period a year ago.

AVOIDING CAPEX

Of course, not all tech giants have altered their approach to capital returns. Apple Inc. has continued its buybacks while avoiding big capital spending in favour of partnering with companies like Google to help power AI fea-

tures. Nvidia Corp, which is one of the major beneficiaries of all this AI spending, also is actively buying back its stock. For now, investors are giving the biggest capex spenders the green light to dedicate their cash to building out AI rather than buying back more shares. How long that patience lasts, however, is another question.

Impaired Assets Portfolio Management Department
1st Floor, National Business Centre, BKC, Bandra East, Mumbai-400098. E-mail: iapmd.mum@jkbank.com
CIN No.: L65110JK1938SGC000048

EXPRESSION OF INTEREST (EOI) FOR EMPANELMENT OF FINANCIAL ADVISOR AGENCY UNDER THE PROVISIONS OF SARFAESI ACT, 2002 FOR SALE OF NPA ACCOUNTS.
Jammu and Kashmir Bank Limited invites expression of interest (EOI) from the eligible entities for the purpose of empanelment of Financial Advisor's for providing services in sale of portfolio of impaired financial assets which have become Non Performing Assets (NPAs)/ Non Performing Loans (NPLs) in the books of the Bank as per RBI guidelines.
Eligibility Criteria:

- Only Agencies (Partnership Firms, Companies & Corporations etc.) with sufficient means/ resources/ field expertise/competence to perform the task/experience shall be considered for engagement.
- The Agency must have 5 years of past experience in this activity with satisfactory business reputation and compliance.
- The Agency having PAN India presence or having multiple States/UTs presence shall be given preference.
- Must have highest professional and ethical standards.
- The period of Contract shall be 03 years subject to annual assessment/review of the performance.
- The Agency should not have any Criminal Background and should not be blacklisted by any other Bank/Financial Institution.
- The FA/s should have successfully completed / assisted in conducting sale of NPA portfolio involving an amount of not less than **Rs.100.00 crore.**
- No adverse action initiated by / pending with any institution / banks / court / authority against the FA/s, its partners/ and or directors (Past and present).
- The advisor must facilitate the sale in line with the Master Directions on Transfer of Loan Exposures and Master Direction-Reserve Bank of India (ARCI), which govern how Banks identify and sell NPAs.
- The advisor must adhere to the seller banks internal policies and RBI guidelines.
- The advisor shall be legally and strictly binding to NDAs.
- The advisor should have experience in debt restructuring, valuation and legal documentation.
- The Advisory Agency must possess requisite License to get engaged for sale of NPA accounts to ARCs.
- The eligibility criteria stated herein is mere indicative and the Financial Advisor should possess all such eligibility as will suffice to undertake the assignment as a Financial Advisor in accordance with Regulatory guidelines. Bank reserves the right to cancel, postpone, and modification of terms of empanelment without assigning any reason.

Documents required:

- Documentary proof in support of all above
- Overall profile of the Agency.
- Note on the methodology adopted by the Agency for recovery.
- Success story / achievements if any.

NOTICE OF 31st ANNUAL GENERAL MEETING AND E-VOTING INFORMATION
Notice is hereby given that the **31st Annual General Meeting** ("AGM") of the Dodla Dairy Limited ("Company") will be held on **Tuesday, 14 July 2026 at 11:00 A.M** (IST) through Video Conference ("VC") / Other Audio-Visual Means ("OAVM") to transact the business, as set out in the Notice of the AGM. The company has sent the Notice of AGM & Annual Report for financial year 2025-26 by electronic mode to those Members whose email address was registered with the Company / Depository Participants / Company's Registrar and Share Transfer Agent (Kfin Technologies Limited) in accordance with the Ministry of Corporate Affairs ("MCA") General Circular No. 03/2025 dated 22 September 2025 read with the circulars issued earlier on the subject (collectively referred to as 'MCA Circulars') and Regulation 36(1) (b) of the Listing Regulations, the company has also sent letter containing the exact web link and QR Code of the Annual Report for financial year 2025-26 to those shareholders who have not registered their email address. Members may note that the Notice of AGM and Annual Report for financial year 2025-26 also available on the company's website i.e., www.dodladairy.com, website of KFin Technologies Limited ("RTA") i.e. <https://evoting.kfintech.com/>, BSE Limited at www.bseindia.com and National Stock Exchange of India Limited at www.nseindia.com. Alternatively, Members may scan the above QR Code to access the Notice of the AGM and the Annual Report for the financial year 2025-26.
In compliance with Section 108 of the Act, read with Rule 20 of the Companies (Management and Administration) Rules, 2014, as amended from time to time, Regulation 44 of the SEBI Listing Regulations and the Secretarial Standard on General Meetings (SS-2) issued by the Institute of Company Secretaries of India, the Members are provided with the facility to cast their votes on all resolutions set forth in the Notice of the AGM using electronic voting system (e-voting) provided by KFin Technologies Limited. Members have an option to cast their vote on any of the resolution using remote e-voting facility either during the e-voting period or during the AGM.

Remote e-voting details	
EVEN	9797
Cut-off date to determine entitlement for e-voting	Tuesday, 07 July 2026
Start date and time	Friday, 10 July 2026 from 9.00 a.m. (IST)
End date and time	Monday, 13 July 2026 till 5.00 p.m. (IST)

Members are requested to take note of the following:

- Once the vote on a resolution is cast by the Shareholder, the Shareholder shall not be allowed to change it subsequently;
- The facility for voting will also be made available during the AGM, and those Shareholders present in the AGM through VC facility, who have not cast their vote on the resolutions through remote e-voting and are otherwise not barred from doing so, shall be eligible to vote through the e-voting system during the AGM;
- The Shareholders who have cast their votes by remote e-voting prior to the AGM may also attend the AGM but shall not be entitled to cast their votes again; and
- Only those persons whose name is recorded in the register of Shareholders or in the register of beneficial owners maintained by the depositories as on the cut-off date shall be entitled to avail the facility of remote e-voting or e-voting at the AGM;

Any Individual Shareholders holding securities in dematerialized mode and who acquires shares of the Company and becomes a Member of the Company after sending of the Notice and holding shares as of the cut-off date may follow steps mentioned in Notice of the AGM.

Record date and Dividend: The Board of Directors at its meeting held on 16 May 2026, have recommended a final dividend of INR 5 per equity share of face value INR 10 each. The Record Date for the purpose of payment of final dividend, it approved at the 31st AGM, is fixed as 07 July 2026. For TDS related instructions on the dividend payment, members are requested to kindly refer to the AGM Notice.

The Board of Directors have appointed M/s. MNM & Associates, Company Secretaries represented by Mrs. Sridevi Madati, Practising Company Secretary (Membership No. F6476 and CP No. 11694) as the Scrutinizer for scrutinizing the e-voting process as well as e-voting at the AGM in a fair and transparent manner.

For details relating to e-voting, please refer to the notice of AGM. If you have any query relating to e-voting, Members may refer to the Frequently Asked Questions (FAQs) and E-voting user manual available at the download section of <https://evoting.kfintech.com> (KFinTech Website) or contact evoting@kfintech.com / enward.ris@kfintech.com or call KFinTech's toll free No. 1800 309 4001.

Three engines, one ride

FUND CALL. Nippon India Multi Cap blends size exposure with disciplined stock selection

GETTYIMAGES/ISTOCKPHOTO

Dhuraivel Gunasekaran
bl. research bureau

The multi-cap fund category was introduced by SEBI in February 2021, requiring schemes to allocate at least 25 per cent each to large-cap, mid-cap and small-cap stocks. Today, the category comprises 32 schemes. Among them, only two funds from Invesco Mutual Fund and Nippon India Mutual Fund have maintained a portfolio structure broadly aligned with the current multi-cap mandate for more than seven years.

Within the category, Nippon India Multi Cap Fund (NMCF) has emerged as a strong performer. With assets under management of ₹53,411 crore, it has delivered the highest five-year return among multi-cap funds. Even before SEBI formalised the category in 2021, the fund maintained 16-25 per cent exposure to small-cap stocks while allocating at least a quarter of its portfolio each to large-cap and mid-cap companies.

Launched in March 2005, the scheme has built a two-decade track record of returns, delivering a compounded annualised return of 17.4 per cent since inception. The fund has also benefited from continuity in management, with Sailesh Raj Bhan at the helm since launch.

INVESTMENT APPROACH
NMCF typically evaluates investments with a three- to five-year horizon and often holds quality businesses for much longer. This approach has resulted in a portfolio turnover ratio of about 29 per cent, one of the lowest in the category, where the average is around 80 per cent. Several holdings, including SBI and Infosys, have remained in the portfolio for nearly two decades.

Stock selection is guided by

How the fund performed on rolling return basis

The chart illustrates the fund's performance based on 3-year and 5-year rolling returns calculated from the last 7 year NAV history, highlighting the minimum, average, and maximum returns achieved over these periods. Source: ACEMF Value as of June 18, 2026

Portfolio asset class break-up (%)

three pillars: Business quality, management quality and valuation. The fund seeks companies with durable competitive advantages, capable management teams and strong governance standards. At the same time, it remains valuation conscious, avoiding businesses where future growth expectations are already fully priced in.

A key metric in its evaluation framework is return on equity (RoE). Preference is given to companies capable of sustaining or achieving 15-20 per cent RoE over the medium term.

The fund also adopts a contrarian lens, identifying sectors and companies where valuations have been compressed by temporary external factors rather than a deterioration in fundamentals.

Portfolio construction combines large-, mid- and small-cap

stocks, with a strong emphasis on bottom-up stock selection and compounding. Over the years, the fund has broadly maintained 40-45 per cent allocation to large-caps, 25-30 per cent to mid-caps and 25-30 per cent to small-caps.

SMALL-CAP ALLOCATION

Unlike most other equity fund categories, multi-cap funds tend to hold a larger number of stocks, particularly within the small-cap segment, irrespective of asset size. This diversification helps mitigate stock-specific and liquidity risks while allowing participation in the potential of smaller companies.

For instance, WhiteOak Capital Multi Cap Fund and ICICI Prudential Multi Cap Fund held 179 and 162 stocks respectively as of May 2026. NMCF itself owns 123 stocks, of which 58 are

WHY INVEST

- Two-decade return track record
- Disciplined all-cap allocation
- Small-cap exposure, risk controlled

small-cap companies. According to the fund manager, small-cap investing is approached with a long-term perspective, with holdings often retained for several years to allow businesses to realise their potential.

Importantly, the small-cap universe itself has evolved. Many companies classified as small-caps today have market capitalisations exceeding ₹10,000 crore, making them significantly larger and more liquid than traditional small-cap companies of the past.

Reflecting this approach, 80-90 per cent of the fund's small-cap allocation is invested in companies with market capitalisations above ₹10,000 crore. Exposure to companies with market values below ₹5,000 crore accounts for less than 5 per cent of the overall portfolio, limiting liquidity risk.

Currently, the fund is overweight on private sector banks, pharmaceuticals, consumer discretionary businesses and the power sector.

The fund manager finds private sector banks particularly attractive, noting that sustained foreign institutional investor selling over the past two years has depressed valuations.

Conversely, the fund remains selectively underweight on IT services and metals. Its largest sector exposures are banks, retailing and electrical equipment. Over the past year, allocations to pharmaceuticals, retailing and consumer durables have in-

creased, while exposure to finance, capital markets and banks has been pared back.

PERFORMANCE

Over rolling five-year periods during the past seven years, the fund delivered an average annualised return of 26 per cent compared with 22 per cent for the Nifty500 Multicap 50:25:25 TRI. Across these periods, annualised returns ranged between 18 per cent and 36 per cent. On a three-year rolling basis, the fund generated an average annualised return of 25 per cent, ahead of the category average of 21 per cent.

The regular plan carries an expense ratio of 1.43 per cent, lower than the category average of 1.93 per cent. The direct plan's expense ratio of 0.72 per cent is also marginally below the category average of 0.77 per cent.

SUITABILITY

Multi-cap funds are suitable for investors seeking a single equity fund with exposure across large-, mid- and small-cap segments. The mandated allocation framework enables participation in the stability of large-caps while capturing the growth potential of mid- and small-cap companies.

That said, the compulsory exposure to small-caps can result in greater volatility than flexi-cap funds during market corrections.

Investors should therefore have an investment horizon of at least five-seven years and preferably invest through systematic investment plans to ride the market cycles.

The multi-cap category has been excluded from our *bl* portfolio MF star rating framework because it contains only two schemes with a track record of at least seven years while adhering to the multi-cap mandate.

ALERTS.

Zerodha Fund House launches India's first Life Cycle funds

Zerodha Fund House has announced the launch of its Life Cycle Fund series, claiming to be the first AMC in India to offer target-date maturity funds. Each Life Cycle fund is structured around a specific maturity year, called the target year, and invests across a mix of asset classes including equity, debt and commodities like gold and silver. The portfolio follows a pre-defined asset allocation that shifts systematically from a growth-oriented allocation in the early years to a more

HDFC AMC cuts creation unit sizes in some ETFs

HDFC Asset Management Company has revised the creation unit size for direct transactions in select HDFC Mutual Fund ETF schemes, effective June 22. The creation unit size of HDFC NIFTY Private Bank ETF has been reduced to 25,000 units from 75,000 units. For HDFC NIFTY Bank ETF, it has been cut to 12,500 units (62,500 units), while HDFC NIFTY PSU Bank ETF will move to 10,000 units (20,000 units). HDFC NIFTY50 Value 20 ETF will have a revised size of 7,500 units (15,000 units). HDFC NIFTY100 Low Volatility 30 ETF and HDFC NIFTY200 Momentum 30 ETF will be reduced to 75,000 units (1.5 lakh units) and 50,000 units (1 lakh units). All other scheme terms remain unchanged.

Taking global exposure without international funds

INVEST RIGHT. Several domestic equity schemes, mandated to hold at least 65 per cent in Indian equities, have quietly built sizeable overseas exposure

Dhuraivel Gunasekaran
bl. research bureau

Dedicated international funds have been among the better-performing diversification options for Indian investors, but many of them are not easy to access today. With industry-level overseas investment limits largely exhausted, several schemes have suspended or restricted fresh inflows. For investors still looking for global exposure, the work-around may lie within domestic equity-oriented schemes themselves.

However, gaining exposure to overseas markets through dedicated international funds is not straightforward. The RBI has capped the mutual fund industry's overseas investments at \$7 billion, with an additional \$1-billion limit for overseas ETFs. As these limits have largely been exhausted, many international funds have suspended or restricted fresh subscriptions. Consequently, among the 66 dedicated international funds available, only a handful remain open for investments at any given time. This makes it difficult for investors to access overseas opportunities.

Interestingly, several domestic equity schemes, which are required to maintain at least 65 per cent exposure to Indian equities, have quietly built meaningful allocations to overseas stocks.

Currently, 40 such schemes hold overseas exposure of up to 29 per cent of their portfolios. Together, the overseas allocation of these schemes stood at ₹35,941 crore, compared with ₹84,142 crore managed by dedicated international funds. They span categories such as flexi-cap, value, contra, multi-asset and aggress-

ive hybrid funds, as well as sectoral and thematic strategies focussed on technology, healthcare, innovation and commodities.

Here, we analysed the portfolio composition, performance and suitability of 24 domestic mutual fund schemes that allocate at least 5 per cent of their assets to overseas equities.

FLEXI-CAP FUNDS

Among flexi-cap funds, Parag Parikh Flexi Cap had 12 per cent of its assets, or ₹17,070 crore, invested in overseas equities as of May 2026. It has been one of the category's most consistent long-term performers. Its value-oriented investment approach, strategic international allocation and timely cash calls have helped it emerge as a category leader. Historically, the fund invested up to 30 per cent of its portfolio overseas, though the allocation varies based on market conditions and regulatory constraints. Over the past three years, its international allocation has declined from 30 per cent to 12 per cent. The overseas portfolio is primarily concentrated in leading US technology companies such as Alphabet, Amazon, Facebook and Microsoft. The fund's five-year annualised return of 14 per cent is ahead of the category average of 12 per cent. However, the fund's strong return cannot be attributed to overseas exposure alone.

FOCUSED FUNDS

SBI Focused Fund held 12 per cent of its assets, or ₹5,545 crore, in overseas equities. The fund has tactically maintained international exposure between 5 per cent and 15 per cent over the past five years. Its current overseas portfolio is concentrated in two holdings — Alphabet and EPAM Systems. The fund's five-year an-

GETTY IMAGES/ISTOCKPHOTO

MIND IT

International exposure not only provides geographical diversification, but also access to global leaders and niche sectors

nualised return of 13 per cent exceeds the category average of 12 per cent.

VALUE FUNDS

DSP Value Fund held 15 per cent of its assets, or ₹274 crore, in overseas equities. Its international portfolio is diversified across sectors such as technology, healthcare, industrials and energy, and across regions including the US, Europe, China, Taiwan and Canada. Over five years, it has delivered an annualised return of 14 per cent, in line with the category average.

DIVIDEND YIELD FUNDS

Two schemes, Franklin India Dividend Yield and Aditya Birla Sun Life Dividend Yield, held overseas allocations of 11 per cent and 5 per cent respectively.

Franklin India Dividend Yield

Fund's international allocation has ranged between 11 per cent and 19 per cent over the past five years. It primarily invests in dividend-paying stocks in emerging markets such as China, South Korea and Taiwan. Aditya Birla Sun Life Dividend Yield Fund, on the other hand, favours the US and global companies. Over the past five years, these funds have delivered annualised returns of 14 per cent and 15 per cent respectively, compared with the category average of 15 per cent.

CHILDREN'S FUND

SBI Children's Fund-Investment is the only scheme in the children's fund category with overseas exposure. It allocated 15 per cent of its assets, or ₹974 crore, to international equities. Structured as a hybrid fund, it has delivered a strong five-year annualised return of 24 per cent. However, the fund's strong return cannot be attributed to overseas exposure alone, given its broader hybrid portfolio.

MULTI-ASSET FUNDS

Of the 34 multi-asset allocation funds (MAA), four schemes held

Domestic oriented equity funds with global exposure

Name	Holding (%)	Global holding value (₹ cr)	Category
PGIM India Aggressive Hybrid	11	23	Aggressive Hybrid

*Edelweiss MSCI India Domestic & World Healthcare 45 Index fund
Source: ACEMF

Portfolio data as of May 2026

overseas exposure: Invesco India MAA (14 per cent), DSP MAA (13 per cent), Bandhan MAA (8 per cent) and Nippon India MAA (5 per cent).

Invesco India MAA gains overseas exposure through the Invesco US Value Equity Fund, while the other schemes invest globally through ETFs and direct equities. Their one-year returns stood at 15 per cent, 18 per cent, 16 per cent and 16 per cent respectively. The one-year return has been highlighted because most of these schemes do not yet have a five-year track record.

TECHNOLOGY FUNDS

Five technology funds held overseas exposure: Edelweiss Technology (29 per cent), Franklin India Technology (22 per cent), SBI Technology Opportunities (14 per cent), ABSL (6 per cent) and ICICI Prudential Technology (5 per cent). These funds predominantly invest in the US technology leaders providing investors access to global technology trends.

HEALTHCARE FUNDS

Two healthcare funds held meaningful international allocations: Edelweiss MSCI India Domestic

& World Healthcare 45 Index Fund (29 per cent) and DSP Healthcare (18 per cent).

Funds from other categories with international exposure include Kotak Pioneer (20 per cent), Axis Innovation (16 per cent), DSP Natural Resources & New Energy (13 per cent), Axis Large & Mid Cap (9 per cent) and ICICI Prudential Commodities (8 per cent).

TAKEAWAYS

With at least 65 per cent invested in domestic equities, these schemes continue to enjoy equity taxation while offering investors a gateway to overseas markets. International exposure not only provides geographical diversification, but also access to global leaders and niche sectors such as artificial intelligence and semiconductors that are difficult to access through Indian equities alone. However, investors should choose funds based on their primary investment mandate rather than overseas exposure alone. Flexi-cap, focused, value and dividend-yield funds can form part of a core equity allocation. Multi-asset funds suit investors seeking diversification across asset classes and geographies.

Children's funds can be considered for long-term goals.

Sectoral funds such as technology, healthcare and commodities are better used as satellite allocations, given their dependence on specific global themes and higher volatility.

Thematic and innovation-oriented strategies are best suited for investors with a higher risk appetite and a long investment horizon. Overseas exposure should be viewed as a portfolio enhancer, not the sole reason for investing in a fund.

Nishanth Gopalakrishnan
bl. research bureau

The IPO of fintech player Turtlemint Fintech Solutions (TFSL) is open for subscription until June 23. The ₹883-crore issue is a mix of offer for sale (OFS) of shares worth ₹222 crore and a fresh issue of ₹661 crore. Promoters' (current stake of 17.2 per cent) and certain investors are set to offload a fraction of their stake in the OFS. Post the issue, promoters' stake would drop to 14.7 per cent.

TFSL is in the business of digital distribution of financial products — largely insurance (accounting for about 98 per cent of revenue), alongside mutual funds, loans and deposits. Unlike a plain aggregator business, Turtlemint adopts the PoSP (point of sale person) model, which enables assisted distribution of insurance.

The IPO values TFSL at a post-issue market cap of ₹4,476 crore or at an EV to revenue multiple of 5.3x based on FY25 proforma revenue or 3.8x based on annualised 9M FY26 revenue. The company is loss making at the EBITDA level. PB Fintech is the only listed peer which trades at a EV/revenue of 10.9x. PB Fintech has been profitable for three years now.

TFSL has all the advantages of a platform business — operating leverage that comes with scale, to be specific. However, in the backdrop of a weak financial track record, that remains a 'show me' story. The current valuation, in our view, builds in retaining margin, retaining market leadership and a flawless execution in a highly competitive, low entry barrier business — leaving little room for slip-ups due to risk factors discussed. Hence, investors can skip the IPO for now. Those interested for the long-term can monitor progress in key metrics such as revenue growth, active transacting digital partners, service margin and fixed costs to revenue ratio before taking a position.

BUSINESS MODEL

TFSL follows the PoSP model of distributing insurance products. A PoSP is basically a person certified under IRDAI's regulations to sell insurance. There are four parties in TFSL's business model — insurers, digital partners (PoSPs), customers and TFSL itself — which brings them together on its digital platform. TFSL lists vari-

IPO WATCH. Turtlemint Fintech Solutions has all the advantages that can accrue with growth, but given the weak financial show, that remains a 'show me' story

How financials stack up

	FY23	FY24	FY25	9M FY26
Platform premium (₹ cr)	2,216	2,273	2,946	2,632
Digital partners (lakh)	3.77	4.45	5.44	6.32
Revenue* (₹ cr)	538	564	700	741
Net loss* (₹ cr)	-284	-187	-203	-187
Adj EBITDA margin (%)*	-54.3	-32.3	-26.6	-14.6
Variable costs to revenue (%)*	-112.0	-90.1	-88.1	-89.0

Fixed costs to revenue (%)*	-47.9	-50.1	-44.8	-29.9

*Subsidiary Turtlemint Insurance Broking Services was acquired by parent TFSL in Q1 FY25. FY23-25 figures taken from proforma financials prepared to reflect business as if the acquisition had been done prior to FY23.
Adj EBITDA = EBITDA adjusted for share-based payment expense
Variable cost + Fixed cost = Total expenses
Variable cost = Customer acq. costs (commission) + Direct employee costs + Direct operations (tech) cost Service margin = Revenue - Variable cost
Source: RHP

ous policies offered by the insurers. Individuals who seek gainful employment (full-time/part-time/gig) enrol themselves as digital partners. They become PoSPs on completion of the certification. Next, they find prospective customers from among their social circles, hand hold them from choosing the right policy to extending claim support — all taking place on TFSL's tech platform. TFSL earns a commission on premium earned by insurers and passes it on to digital partners, after retaining a portion for itself (service margin, see table).

Despite rising financial literacy, DIY insurance still remains a complex subject for many. Per the RHP, over 90 per cent of India's retail insurance distribution is still through intermediaries — explaining the rationale behind TFSL's PoSP model instead of a plain B2C aggregation business. There is incentive for

digital partners too, to enrol on TFSL's platform, as it gives them the option to offer customers quotes from multiple insurers for the same risk cover — which would not have been possible under the traditional agency model. As of last December, TFSL had the largest network among peers with a strength of 5.1 lakh PoSPs.

WHAT WORKS

TFSL has built a scalable platform in India's underpenetrated insurance market. Per the RHP, the total addressable market for digital distribution of retail insurance is estimated at about \$37 billion as of FY25 and is projected to reach \$62-68 billion at a CAGR of 11-13 per cent by FY30. Retail insurance demand growth in markets beyond the top 30 cities (B30+) is expected to be 1.6x higher than that in top 30 cities over FY25-30. This is where TFSL has entrenched it-

IPO rating

Turtlemint Fintech Solutions

Business	★★★★★

Price band	₹144-152
Market cap	approx. ₹4,500 cr

self with B30+ accounting for 75 per cent of platform premium as of 9M FY26. Owing to this and its small base, TFSL's platform premium has grown about 3x higher than the market's CAGR of 10 per cent in FY20-25.

TFSL has been unprofitable so far but bets on operating leverage towards a positive bottom line. TFSL's variable costs account for roughly 88-90 per cent of revenue. The rest 10-12 per cent forms the service EBITDA margin. All other expenses are classified as fixed costs and it can be observed that they are on a decline with scale up in revenue. TFSL would roughly break even when the service margin grows large enough to absorb the fixed costs. Any further growth would trickle straight down to the bottom line.

Besides, TFSL has a few more levers. The payroll cost and tech cost within the above said variable costs (see table footnote) are not entirely variable in

nature. Thus, there could be operating leverage, implying service margin could inch higher. Second, only about 20 per cent of the revenue is from commission on renewal premiums currently. It is important for this figure to grow because the resources required to secure policy renewals are relatively lower than those needed to acquire new business. Third, with the issue proceeds, the company expects to build agentic AI-based capabilities for use-cases such as renewal reminder calls, customer support, among others. This could help bring fixed payroll costs down.

RISKS

TFSL's model is not without vulnerabilities. Its profitability is a function of scale and improvement in service margin. Any issues therein could delay breaking even. Further, scaling up is not entirely within TFSL's control, as it depends significantly on the ability of its digital partners to acquire new business. Yet what TFSL can control is to add and retain digital partners, which appears challenging given insurance distribution is a crowded space.

RenewBuy from the unlisted space and PB Fintech's 'PB Partners' (its PoSP distribution business) are direct PoSP model rivals. PB Partners also has the backing of a profitable income statement. Besides, any development or initiative such as IRDAI's own Bima Sugam platform that could make life easy for DIY consumers may work against TFSL's prospects.

Value-added push to drive next leg of growth

STEEL. Improved margin outlook and capacity addition should support Shyam Metalics despite premium valuations

Sai Prabhakar Yadavalli
bl. research bureau

We had earlier recommended that investors accumulate Shyam Metalics in February 2025, when the stock was trading at ₹711 per share, or 7.5 times one-year forward EV/EBITDA. The stock has returned 36 per cent since then. The recommendation was based on its strong capex programme and foray into a value-added product mix.

The company continues on its expansion path and is eyeing an increasing contribution from its value-added portfolio over the next three years, overtaking the contribution from basic steel. The stock is now trading at 8.8 times one-year forward EV/EBITDA, which is a 10 per cent premium to even its last two-year average — a period of strong growth.

Despite the premium valuation, we reiterate the accumulate call on the stock, considering its expansion and margin improvement prospects. With the imposition of safeguard duties on imports of cheaper steel, domestic steel realisations have also improved, which should further support the stock. The consensus estimates from Bloomberg indicate a revenue/EBITDA/PAT CAGR growth of 24/26/33 per cent for next two years which supports the premium valuation the stock is trading at currently.

EXPANSION

In the next one year, volume growth will be aided by recently-commercialised plants, while longer-term investments continue.

The company commercialised a cold rolling (CR) mill at its Jamuria, West Bengal plant in Q2FY26. This product accounted for 7 per cent of Q4FY26 revenues. This is a value-added steel product, with average realisations at a 75 per cent premium to normal steel prices.

●

ACCUMULATE

Shyam Metalics and Energy ₹968.10

WHY

- Expansion and margin improvement prospects
- Value added mix to improve
- Consistent capacity addition

The company will expand the capacity to 400,000 tonnes per annum (tpa) from 250,000 tpa earlier. On full utilisation of the recent and earlier plants, the value-added CR mill segment should contribute 12-14 per cent of the sales mix in FY27-28.

Aluminium foils accounted for 4 per cent of sales in Q4FY26, and the segment will also double capacity in the next fiscal with a new plant constructed at a total cost of ₹800 crore. The new facility also includes a backward-integrated plant, which will manufacture the aluminium flats used to make foils. Integration allows for higher value capture and increased production. With aluminium foils having a margin that is 2-2.5 times that of finished steel, the profitability of the consolidated entity should improve despite the segment's low revenue contribution.

The company has also commercialised a 450,000-tpa blast

Value added product mix to increase

Improved product mix support margin expansion (in ₹ cr)

furnace for making intermediate steel at its Kharagpur plant, which should start sales gradually in FY27. More importantly, it has already initiated a steel downstream facility at the same location to produce value-added products from intermediate steel. The 800,000-tpa steel melting shop (SMS) will include long products such as bar and wire mill, and should be com-

mercialised by FY30.

The SMS plant, at an expected cost of ₹900 crore, is part of the ₹2,700-crore capex announced by the company. The remaining ₹1,800 crore will be used to expand stainless steel capacity from 150,000 tpa to 750,000 tpa by FY30, which also includes value-added processes. With stainless steel realisations at a 220-250 per cent premium to

carbon steel, stainless steel, along with aluminium foil and CR mill, will drive top-line growth and margin improvement in the short to medium term.

MARGIN EXPANSION

The company announced capex of ₹9,500 crore in the first phase after its IPO in June 2021 and is nearing completion of the same. In the first phase, it added capacities in intermediate to finished steel and forayed into value-added products. It has announced its next phase of capex, wherein it will invest around ₹3,000 crore per year for the next three years.

In the next phase, the company will add capacity in the value-added segment, including hot and cold rolled mills, colour-coated sheets, long products and others. It expects to capatively consume a large portion of intermediates — carbon steel, pig iron, iron billets and sponge iron — to increase the proportion of its value-added portfolio. As the low-value mix declines in the portfolio to support the growth of high-value products, margin improvement should strengthen, along with strong top-line growth.

The company funded the expansion in the first phase through internal accruals and a minor debt portion, and is likely to continue the same approach for the next three-year expansion as well. It had a net debt-to-EBITDA ratio of 0.2 times in March 2026, which is low for the steel industry.

Considering the strong growth outlook, execution capability, improved steel prices and margin outlook, we recommend that investors accumulate the stock, despite premium valuations and volatile raw material costs in the short term from coal, logistics and iron ore. The company has also added power plants and is nearing a phase of complete grid-independent power generation at a stated cost of ₹2.5 per unit.

WHO AM I?

Are you an avid investor? How well do you know corporate India?

Here's a challenge. Using the five clues below, identify the company that is being talked about here

- 1 My founder is a gold medalist from a premier institute and was managing a company that later became a PSU.
- 2 I was founded through my founder's professional savings and loans in the 1980s. Over the next couple of decades, I have become the world's largest in a couple of products.
- 3 More than half of my revenues come from exports to more than 40 countries, and I am a leader in my segment.
- 4 Despite delivering negative returns to shareholders over the last one/three/five years, I have delivered about 18 per cent CAGR over several decades.
- 5 My promoters continue to hold the maximum holding allowed for a controlling shareholder. I have four women members on a 10-member board.

Last week's stock: Electrosteel Castings
Last week's winner: Kausar Sayyed

Nifty 50 (24,013) and Nifty Bank (57,686) gained 1.7 per cent and 1.5 per cent respectively over the past week, extending their recovery for a second consecutive week. The derivatives data suggests that the rebound is gaining traction, although it continues to be driven largely by short covering rather than fresh long additions.

FIIs (Foreign Institutional Investors) remained net short on index futures, although the position narrowed 7 per cent over the last week to 2.3 lakh contracts. However, they increased net short positions on index call options by 44 per cent to 3 lakh contracts and raised net long positions in index puts by 16 per cent to 6.3 lakh contracts. This suggests that while FIIs reduced some bearish futures exposure, they continued to maintain a cautious stance through the options segment.

At the broader level, the positioning appears relatively stable. Combined net short positions on index futures increased marginally from 63,223 contracts to 64,138 contracts. On the other hand, net short positions on call options declined 17 per cent to 1.55 lakh contracts. Net put shorts, too, reduced from 1.70 lakh contracts to 1.48 lakh contracts, suggesting that bearish conviction among traders has eased further.

The derivatives data broadly mirrors the recent price action. Both Nifty and Nifty Bank have extended their recovery, with the former breaking above a key resistance level and the latter building on the breakout witnessed during the week before the last one. Overall, market sentiment has improved, although the continued defensive

Bulls gain the edge

F&O TRACKER.
Nifty breaks above resistance and Bank Nifty builds on its breakout as bearish sentiment eases

positioning of FIIs suggests that foreign investors remain cautious.

NIFTY 50
Nifty futures (Jun) (24,057) began last week with a gap-up above the resistance at 23,800. The contract extended the gains and hit a high of 24,210 on Thursday before easing on Friday to close the week at 24,057. The rally was driven largely by short covering for the second consecutive week. While Nifty June futures gained 1.6 per cent during the week, its open interest declined 9 per cent to nearly 165 lakh contracts.

Despite Friday's correction, the contract continues to trade above the key support levels of 23,900 and 23,800. The 21-day moving average is currently at 23,700 and as long as this level remains intact, the near-term outlook will stay positive.

We expect Nifty futures (Jun) to resume the rally either from

- RELATIVELY STABLE
- Nifty futures reclaims 23,800
- Nifty Bank futures eyes 59,000
- Key breakouts hold firm

the current level or after a brief corrective decline. Such an up move can take the contract to 24,380. A breakout above this level can extend the rally to 24,550, where profit-booking could emerge. On the other hand, if the contract breaks below the support at 23,700, it can decline to 23,500 and subsequently to 23,300. However, given the prevailing price action and improving sentiment, the bias remains bullish.

Strategy: Go long on Nifty futures (Jun) if it declines to 23,900. Place stop-loss at 23,650 and book profits at 24,500.

Alternatively, if the contract

does not witness a dip and breaks above 24,210, traders can initiate fresh longs with a stop-loss at 24,000. Book profits at 24,500.

NIFTY BANK
Nifty Bank futures (Jun) (57,862), like Nifty futures, opened with a gap-up last Monday. Although the contract surrendered part of the gains during the session, it regained momentum in the subsequent days and touched a high of 58,049 before settling at 57,862 on Friday.

The rally was supported by short covering. While Nifty Bank June futures advanced 1.7 per cent last week, its open interest (OI) declined 13 per cent to 20.8 lakh contracts.

The chart continues to reflect a positive bias. Although the contract could witness a corrective decline in the near term, the outlook will remain bullish as long as the support at 56,600

stays valid. A rally, either from the current level or after a minor dip, can lift Nifty Bank futures (Jun) to 59,000. Resistance above this level is at 60,000.

On the other hand, if the contract slips below 56,600, the bears could regain some traction. Such a breakdown can drag Nifty Bank futures towards 55,600, where the 21-day and 50-day moving averages converge. Nevertheless, the prevailing price structure remains favourable for the bulls.

Strategy: Buy Nifty Bank futures (Jun) on a dip to 57,200. Place an initial stop-loss at 56,400. When the contract rises to 58,200 and 58,750, revise the stop-loss to 57,800 and 58,400 respectively. Book profits at 59,000.

Alternatively, if Nifty Bank futures (Jun) breaks above 58,100 without seeing a dip, traders can initiate fresh longs with a stop-loss at 57,750. Book profits at 59,000.

in anticipation of the Nifty Index moving above that strike. This argument may not work when you are approaching expiry as both longs and shorts typically close their positions to take profits or cut losses. At other times, if shorts close their position based on their outlook of the Nifty Index, why would the longs do too? Retail traders typically initiate long positions. Also, as these traders have an upside bias, they have a strong reason to keep their positions open to capture gains or reduce losses.

OPTIONAL READING
You should apply the change in OI as additional evidence; your primary view on an underlying should come from reading price charts. Note that an increase in OI is best used as a metric for understanding price movements in the Nifty Index, not necessarily for stocks. Also, the interpretation may not work with futures.

The author offers training programs for individuals to manage their personal investments

Understanding change in OI

MASTERING DERIVATIVES. Your interpretation depends on who is likely to dominate the price movement

Venkatesh Bangaruswamy

Previously in this column, we discussed why change in open interest (OI) can be used as a metric to understand an option's liquidity. This week, we discuss how change in OI can be used as an indicator to understand the near-term movement in the Nifty Index.

SHORTS SIGNAL
OI increases when open positions on a strike are added to existing OI, based on a day's trading. Suppose 20,000 contracts are added at the end of a trading day to the current OI. This means 20,000 new long positions and equal number of short positions were carried forward out of the total volumes traded during the day. Both the longs and the shorts believe they will win. Your interpretation of the change in OI depends on who is likely to dominate the price movement. The shorts typically have more power. For one, the risk involved in going short is greater than in going long. Short calls have high risk and limited

GETTY IMAGES

reward. Long calls have limited risk and high reward. So, the premise is that a trader will short only if they have the power to manage such risk. For an-

other, shorts are typically initiated by professional and institutional traders, who have the capital and experience to back their trades.

- POWER MOVE
- The shorts typically have more power as they are initiated by professional and institutional traders

If shorts have the power, how does change in OI help understand the movements in the Nifty Index? If a Nifty call strike shows significant increase in OI, it could mean that the index may not go above that level. Why? An increase in OI means that the shorts have building more short positions in that strike. They will stand to gain only if the Nifty Index stays below that till contract expiry; they are attempting to capture gains from time decay.

Similarly, an increase in OI for a put strike could mean that the shorts do not expect the Nifty Index to decline below that level; for if it does, the shorts will lose on their put positions.

Some argue that a decrease in OI for calls means that the shorts are closing their position

Supports give way

BULLION CUES. Futures may continue to decline

Akhil Nallamuthu
bl. research bureau

Precious metals slipped over the last week. Gold (\$4,155/ounce) and silver (\$64.9/ounce) depreciated 1.5 per cent and 4.6 per cent respectively. Similarly, in the domestic market, gold futures (₹1,47,203/10 gm) lost 2.2 per cent and silver futures (₹2,33,185/kg) was down 5.3 per cent.

MCX-Gold (₹1,47,203)
Gold futures (Aug) opened last week with a gap-up at ₹1,53,829 versus previous week's close of ₹1,50,528. But there was no follow through rally, and the contract was mostly consolidating in the first half of last week.

However, in the last two sessions, the contract faced strong downward pressure and breached a support at ₹1,49,000. The price action is bearish, and the likelihood of further decline is high. We expect gold futures to touch ₹1,41,000 in the near-term.

If there is a recovery, the contract will face resistance at ₹1,50,000.

Trade strategy: We suggested shorting gold futures if it slips below ₹1,49,000. Retain this position with the stop-loss at ₹1,51,000. Exit at ₹1,44,000.

Traders with higher risk tolerance can move the target from ₹1,44,000 to

₹1,41,000 as the current price action hints at a deeper fall.

MCX-Silver (₹2,33,185)
Silver futures (Jul), similar to gold futures, began last Monday's session with a gap-up open. But what followed was a sideways crawl before seeing a decline on Thursday and Friday.

The contract broke below a support at ₹2,40,000, made a low of ₹2,28,162 before wrapping up the week at ₹2,33,185.

We anticipate another leg of a decline from the current level, which can potentially drag the contract to ₹2,20,000 in the near-term. In order to change the trend bullish, silver futures ought to surpass ₹2,55,000.

Trade strategy: We suggested going short on silver futures if the price declines below ₹2,35,000.

Traders can hold on to this position and maintain the stop-loss at ₹2,42,000. Book profits at ₹2,20,000.

Trend remains weak

CRUDE CHECK. However, corrective rise possible

Akhil Nallamuthu
bl. research bureau

Crude oil prices extended the downward trend over the last week. Brent crude oil futures on the Intercontinental Exchange (ICE) (\$80.60/barrel) and crude oil futures in the domestic market (₹7,262/barrel) slipped 7.7 per cent and 8.9 per cent respectively.

BRENT FUTURES (\$80.60)
Brent crude oil futures invalidated an important support at \$86 early last week. It dropped further to mark an intra-week low of \$76.54 on Thursday before recovering to \$80.60.

While the trend is bearish, there is a chance for the contract to witness a corrective rise from the current level. Such a move can take the contract back to \$86 or even to \$90-92 resistance band, where the 21-day moving average now lies.

However, post this move, Brent crude futures can resume to fall, eventually declining to \$73. Support below \$73 is at \$70. In case the contract breaks out of \$92, it can rally further to \$98. But as it stands, the bias is bearish.

MCX-CRUDE OIL (₹7,262)
Crude oil futures (Jul) opened last week with a gap-down and fell to make a weekly low of ₹6,897 on Thursday. On

Friday, it recouped some of its losses and ended at ₹7,262.

The chart shows that the support at ₹7,000 helped the bulls in putting up a fight. Nevertheless, the outlook remains bearish, although there could be a temporary uptick in price.

From the current level, crude oil futures might move up to ₹8,000-8,200 price band. But then, this rise can draw fresh selling, eventually leading to another downswing. That fall can drag the contract to ₹6,000.

That said, in case crude oil futures breaks out of ₹8,200, it can turn the outlook positive. Notable resistance above ₹8,200 is at ₹9,000.

Trade strategy: Stay out for now. Initiate fresh short position if crude oil futures (Jul) rises to ₹7,900. Place stop-loss at ₹8,300.

When the price drops below ₹7,000, tighten the stop-loss to ₹7,500. Exit the trade at ₹6,500.

F & O QUERY

AKHIL NALLAMUTHU, bl. research bureau

I bought PAGEIND 39500 CE at a premium of ₹1,325.75. Please suggest the outlook.

Aniket Karajikar

Page Industries (₹39,975): The stock has been rallying since mid-March. Last week, it gained 3.4 per cent and closed above a resistance at ₹39,500. While the price action shows that the scrip is struggling to break out of ₹40,000, given the

momentum, we expect the price to surpass ₹40,000 soon.

A breakout of ₹40,000 can lead to an upswing to ₹42,000 before the end of this expiry. If this uptick happens in about a week, the premium of 39500-call (now at ₹1,023.60) can rise to nearly ₹2,500.

On the other hand, if the stock falls off ₹40,000 and slips below ₹39,000, it can lead to a deeper correction and the potential breakout of ₹40,000 can be delayed. In this case, holding on to the option can lead to loss due to time decay. Considering the above factors, here is our recommendation. Hold on to the trade and exit if the premium rises to ₹2,000. But in case the premium slips below ₹500, consider exiting since a recovery after such a fall is less likely.

What is your outlook on Dixon Technologies? Is it the right time to buy a call option? Suggest a strike.

Saravanan Na

Dixon Technologies (India) (₹12,517): By gaining over 8 per cent last week, the stock has broken out of a barrier at ₹11,800. This has turned the outlook bullish. Unless the price slips back below ₹11,800, the trend will remain bullish.

The possibility of a rally from the current level is high.

However, we cannot rule out a price correction to ₹12,100 before the next leg up. If you have higher risk tolerance you can buy a call option right away. But if you prefer playing a little safer, you can go long on call if the stock price moderates to ₹12,100.

With respect to the strike, we suggest buying the 13200-call of July series, which closed at ₹367.60 on Friday. With respect to target and stop-loss, you can decide based on the price of the underlying. That is, when the stock price hits ₹13,600, exit the option at the prevailing price. But in case the stock falls below ₹11,800 book loss and exit.

Nifty 50, Sensex and Nifty Bank index opened the week with a wide gap-up last week. Thereafter they broadly stayed stable but higher all through the week. All the three indices were up over 1.5 per cent each last week. The US and Iran agreeing for a peace deal trigger this gap-up open last week.

On the charts, the picture is positive. Sensex and Nifty have resistance ahead. They are likely to breach this hurdle and move further higher. Nifty Bank index on the other hand can remain in range for some time. Eventually it is likely to make a bullish breakout of its range and go higher.

FPIS BUY

The Foreign Portfolio Investors (FPIs) snapped their eight-week selling spree. They bought \$251 million in the equity segment. If they start to accelerate their purchase, then it can aid the Nifty and Sensex to gather bullish momentum. We will have to wait and watch.

NIFTY 50 (24,013.10)

Short-term view: The follow-through rise last week turns the picture positive. Support is in the 23,800-23,600 region. Resistance is at 24,250. Nifty can breach this hurdle and rise to 24,500 and 24,800 in the coming weeks.

The short-term picture will turn negative only if the Nifty declines below 23,600. If that happens, a fall to 23,300 and 23,000 can be seen again. But that looks less likely. The price action on the chart suggests that the Nifty can sustain very well above the 23,800-23,600 support zone.

Medium-term view: Nifty seems to have resumed its up-move within the broad 22,000-26,500 range. A break above 24,800 from here will clear the way for a rise towards 26,500 – the upper end of the range.

The overall picture continues to remain positive. As such we expect the Nifty to make a bullish breakout above 26,500 eventually in the coming months. Such a break can take the index higher to 28,000 and 30,000 in the long term.

The bullish view will go wrong only if the Nifty declines

below 22,000. That looks less likely at the moment.

NIFTY BANK (57,685.75)

Short-term view: The break above 57,000 and the rise to 58,000 happened in line with our expectation. Last week's candle indicates a kind of indecisiveness in the market.

Support is at 56,500 and resistance is at 58,800. Nifty Bank index can oscillate in a range of 56,500-58,800 for some time now. However, the bias remains positive. So, an eventual break above 58,800 can take the index higher to 60,500-61,000.

The index will come under pressure for a fall to 56,000 or

55,000 only if it declines below 56,500.

Medium-term view: The outlook remains bullish. Key resistance to watch will be the 60,500-61,000 region. A decisive break above 61,000 can boost the momentum. It can then take the Nifty Bank index up to 65,000 in the medium term. From a long-term perspective, the index has potential to target 68,000-69,000 on the upside.

SENSEX (76,802.90)

Short-term view: Sensex touched a high of 77,492 and has come off from there. The region between 76,300 and 76,000 will now be a very good support.

IMMEDIATE RESISTANCE

- Nifty 50: 24,250
- Sensex: 77,800
- Nifty Bank: 58,800

Resistance is around 77,800.

We expect the Sensex to sustain above 76,000 and breach 77,800 in the coming days. Such a break can take it up to 78,500-79,000 and even higher.

The above-mentioned rise will get delayed only if the Sensex declines below 76,000. In that case, a fall to 75,300 and even lower levels is possible.

Medium-term view: There is no change in the broader bullish outlook. For, now the Sensex is stuck inside the broad 71,000-86,000 range. Within that it is now moving up.

Intermediate resistance is around 80,000. A break above it can take the Sensex up to 86,000 – the upper end of the range, in the medium term.

An eventual break above 86,000 can strengthen the momentum. It will then open the doors for the Sensex to target 90,000 and even 94,000 in the long term.

The bullish view will get negated only if the index falls below 71,000.

NIFTY MIDCAP 150 (22,972.95)

The 21,700-23,000 range remains intact. The index has moved up within that and has come closer to the upper end of the range. Another strong resistance is around 23,150. So, the index has to break 23,000 and then get a subsequent rise above 23,150 in order to gather fresh bullish momentum. Such a break will then trigger a fresh rally to 26,000-26,500 in the medium term. It will also keep the upside open for the Nifty Midcap 150 index to target 28,000-28,500 in the long term.

Failure to rise above 23,000 or 23,150 can continue to keep the index inside the sideways range for some more time. The short-term picture will turn negative only if the index breaks below 21,700. That looks less likely. But if such a break happens, then Nifty Midcap 150 index can fall to 21,000-20,800.

The long-term bullish view will go wrong only if the index declines below 20,800.

NIFTY SMALLCAP 250 (17,713.80)

The rise last week indicates that the index could be gaining momentum. Crucial resistance to watch will be the 18,000-18,300 region which can be tested this week. The bias is positive to breach 18,300 eventually. Such a break can take the Nifty Smallcap 250 index up to 22,500-23,000 and even 24,000 in the long term.

Failure to breach 18,300 from here can take the index down to 17,600-17,500. The short-term outlook will turn negative only if the index declines below 17,500. If that happens, a fall to 17,200 can be seen.

For the long-term bullish outlook to go wrong, the Nifty Smallcap 250 index has to decline below 14,000.

TECH QUERY

GURUMURTHY K, bl.research bureau

I have bought Ashok Leyland shares at ₹162. Can I accumulate now or wait? What is the outlook? Amogh Deshpande

Ashok Leyland (₹157): The trend is down since March. However, the monthly chart paints a different picture. The 21-Month Moving Average (MMA) has been giving very good support since 2022. The recent bounce is also happening

from this 21-MMA. That leaves the bias positive and keeps the chance high for the stock to breach ₹173, a key resistance. Such a break can trigger a fresh rally to ₹270 in a year or two. You can accumulate on dips at ₹149. Keep the stop-loss at ₹128. Move the stop-loss higher to ₹163 as soon as the stock goes up to ₹180. Revise the stop-loss higher to ₹195 and ₹220 when the price touches ₹215 and ₹245 respectively. Exit the stock at ₹260.

Can I buy Persistent Systems now? My investment time frame will be three-four years.

Beena, Kochi

Persistent Systems (₹4,728): The short-term picture is weak. The stock has been struggling to rise past ₹5,600. That keeps it vulnerable for a fall to ₹4,200-4,000, a crucial support zone. Failure to bounce back from this support zone

will increase the danger of the price tumbling towards ₹3,500. A strong bounce either from ₹4,000 itself or from ₹3,500 will have the potential to target ₹6,500 on the upside. Considering your investment time frame, you can buy stock in three tranches at ₹4,230, ₹4,110 and ₹3,760. Keep the stop-loss at ₹3,120. Move the stop-loss up to ₹4,640 when the price goes up to ₹5,120. Revise the stop-loss higher to ₹5,380, ₹5850 and ₹6,120 when the price touches ₹5,750, ₹6,050 and ₹6,230 respectively. Exit the stock at ₹6,380.

What is the outlook for Jupiter Life Line Hospitals? Can I buy this stock now?

Siddhu, Hyderabad

Jupiter Life Line Hospitals (₹1,336): The trend is down since March last year. This fall is happening inside a bear channel. Within that the stock is now moving up from the lower end of this channel. Resistance is in the ₹1,430-1,450 region

which can be tested in the short term. A downward reversal from this resistance zone will keep the bear channel intact. That in turn can drag the share price down to ₹1,200-1,000 in the coming months. A strong break above ₹1,450 is needed to mark the end of the downtrend. Only then the sentiment can turn positive, and the share price can rise to ₹1,800-1,900. It is better to stay out of this stock for now. You can consider entering this stock only if it breaks above ₹1,450 from here.

I am having Inox Wind shares. My purchase price is ₹129. Can I accumulate now and hold it ? Yuvaraj J

Inox Wind (₹90): The long-term trend is down. There are no signs of a bullish reversal yet. Strong resistances are at ₹95 and ₹110. As long as the stock stays below ₹110, there is a danger of seeing a fall to ₹63 in the coming months. In a

worst-case scenario, the downside can remain open to see ₹43 as well. A strong break above ₹110 is needed to get a breather. That can trigger a relief rally to ₹140. Ideally the stock has to rise past ₹150 to indicate that the downtrend has ended. Only then the upside will open up for a fresh rally to ₹200 and higher. But that looks unlikely at the moment. Exit the stock and accept the loss.

BANDU'S BLOCKBUSTERS.

On April 1, four years back, piqued by the incessant jokes in the village at his expense, Bandu Baive decided he'd had enough. It was time for him to turn 'smart'. His dead granny's voice rang in his ears — "Read the papers, Bandya, they tell you all." So, off went Bandu to the stash of newspapers on his father's desk. As luck would have it, the first paper Bandu got his hands on was The Hindu businessline. The stock recos, in particular, had him in thrall. Soon Bandu metamorphosed into an ace investor and trader.

These days, Bandu picks five stocks each Sunday, which he believes will be blockbusters over the next week

Last week's prize winner **Prafful Lalwani**

Last week's winning stock **Aegis Vopak Terminals**

Closing price (June 12) **₹218.55**

Closing price (June 19) **₹238.55**

Return: **9.35 per cent**

Here's your chance to match step with Bandu. Guess the stock that will give the best return by next Friday (BSE prices). By Wednesday noon, mail us your pick and its expected price rise to **bandublockbuster@gmail.com** with your name, mobile number and address. One lucky winner will get a prize of ₹2,000.

MOVERS & SHAKERS

AKHIL NALLAMUTHU, bl. research bureau

Aurobindo Pharma (₹1,493.60)

Regains momentum

The stock of Aurobindo Pharma has been in a steady uptrend since February. It established the uptrend on the back of the support at ₹1,120. However, after hitting a high of ₹1,550 on May 21, the price moderated. Last week, particularly in the second half, it saw a good

recovery, indicating that the scrip has resumed the rally. We expect the stock to advance further from the current levels and touch ₹1,700 in the medium term. So, one can buy now at ₹1,493 and accumulate at ₹1,425. Place stop-loss at ₹1,370. When the stock rises to ₹1,580 and ₹1,650, tighten the stop-loss to ₹1,500 and ₹1,590 respectively. Liquidate the longs at ₹1,700.

Bharat Electronics (₹427.15)

Rebounds from a base

The stock of Bharat Electronics Ltd (BEL) rallied 5.1 per cent last week. It rebounded from the support at ₹400. Notably, this is the third bounce off this level since the beginning of this year, denoting good buying interest at lower levels. During the earlier recoveries, the

resistance band of ₹460-470 restricted the rally. Even if the stock is unable to breach this time, the price is likely to retest ₹460-470. But a breakout can lift it to ₹500. So, traders can buy at ₹427 and ₹415. Stop-loss can be at ₹390. When the stock rises to ₹460, liquidate three-fourth of the holdings. For the remaining position, revise the stop-loss to ₹440. Exit the balance at ₹500.

Trent (₹3,204.25)

Confirms inverted head and shoulder

The stock of Trent, after hitting a two-year low of ₹2,184.07 in April, reversed the trend and has been appreciating since then. While it was largely staying sideways since mid-April, it regained traction last week and broke out of a key barrier at ₹2,970. This also confirmed an inverted head and shoulder pattern, indicating a bullish trend reversal. We expect the stock to extend the rally and hit ₹4,000 in the coming months. So, participants can go long now at ₹3,204 and buy more shares if the price dips to ₹2,970. Place stop-loss at ₹2,600. When the stock rallies to ₹3,600 and ₹3,800, raise the stop-loss to ₹3,380 and ₹3,700 respectively. Exit at ₹4,000.

Skinny Fed approach

GLOBAL VIEW. Kevin Warsh turns consoler-in-chief for Wall Street

Reuters
Washington

US Federal Reserve Chairman Kevin Warsh put his stamp on the job fast this week at a debut policy meeting that produced a return to stripped-down, 1990s-style central banking, before this century's crises put the Fed center-stage in economic management and turned its leader into a consoler-in-chief for Wall Street and Main Street alike.

The question now is whether the reduced role he seeks for the Fed and in effect for himself is compatible with a world grown more complex, a more-intense and polarised information environment, and markets now accustomed to a steady diet of top policymaker commentary.

RATE HIKE

Whether he intended it, Warsh's emphasis on inflation in Wednesday's press conference, without any more-nuanced commentary about what might clear the bar for a rate hike, led investors to conclude an increase was coming soon and begin bidding up bond yields.

The market reaction "was massively amplified by Warsh's press conference that combined a hawkish near single-mandate emphasis on the need to deliver price stability with a total absence of any modulating discussion of the Fed's strategy or reaction function," wrote Krishna Guha, a former top communications official at the New York Fed. "Discussion of the reaction function and strategy, supports more effective central banking," a main tenet of current central bank practice.

The Fed at Warsh's first meeting held rates steady in the 3.50-3.75 per cent range where they've been since December, announcing it in a spare policy statement reminiscent of those penned in the 1990s by then-Chair Alan Greenspan, famously reluctant to let the public into his thinking..

MORE QUESTIONS

Spare statements also don't necessarily mean clear ones, and

● JURY STILL OUT

Whether the new style is sustainable will hinge on factors including market reaction over time

some of the changes raised as many questions as they answered about the Fed's new era.

Instead of the simple factual statement that "inflation is elevated" used under former Chair Jerome Powell, for example, the first Warsh statement was conditional, saying inflation was elevated "relative to the Committee's 2 per cent target." The wording could mean inflation is not considered excessive in an absolute sense.

Warsh, while reaffirming the 2 per cent target, also has said the decimal point values don't matter, hinting at some tolerance of inflation merely near the Fed's goal.

On economic growth overall, the statement highlighted aspects Warsh sees as important to the future and currently booming — productivity and capital investment — without running through the full list of components of gross domestic product including: consumption, net exports, debt, tariffs and government spending.

An assessment of the relative risks to the Fed's inflation and employment goals was dropped altogether in favor of a final, declarative statement: "The committee will deliver price stabil-

ity." Whether the new style is sustainable will hinge on factors including market reaction over time and perhaps more so how the world evolves, with Fed leaders often finding that firm "first principles" wear thin in a crisis.

OLD GHOSTS

Likewise, Warsh announced five task forces geared to Fed reform, with a question mark over whether they "will be agents of regime change or just more commissions to rehash old debates," wrote JP Morgan Chief Economist Michael Feroli, noting communications reform was discussed last year but ended with a stalemate despite high-level analysis by former Chair Ben Bernanke and deep interest from Powell.

After more than a decade of sharp criticism of the Fed, Warsh likely had to follow through in some fashion after promising he would be "knocking some heads."

The pandemic expanded the Fed's role with a multi-trillion-dollar effort to support the economy, and Powell's center-stage role explaining it in prime-time media appearances designed to reassure worried households and jittery markets.

In suggesting all that might be dialed back, Warsh isn't just fighting old ghosts.

The two other task forces, on productivity and the use of real-time alternative data in policymaking, are issues many in the Fed are grappling with.

A customer applies for a loan. Along the way, an insurance cover is added. A credit card is sold as free, but the fee waiver depends on minimum spending. A mobile banking app flashes a limited-period loan offer with a countdown timer. An agent says a third-party product is “from the bank”, though the bank is only a distributor. These are familiar situations for many financial consumers. The RBI’s latest amendment directions on advertising, marketing and sale of financial products and services try to address precisely this grey zone between selling and mis-selling.

On June 15, 2026, RBI issued final amendment directions covering a wide set of regulated entities. These include commercial banks, small finance banks, payments banks, local area banks, regional rural banks, urban and rural co-operative banks, All India Financial Institutions, housing finance companies, and most NBFCs. However, Core Investment Companies, Account Aggregators, Non-Operative Financial Holding Companies, and NBFCs with no customer interface are excluded from these rules. The directions will come into effect from January 1, 2027. The core message is simple — Financial products cannot be pushed through confusing consent, hidden add-ons, unsuitable recommendations, misleading ads or manipulative digital design.

CLEAR CONSENT

One of the most important changes is the focus on explicit consent (i.e. clear and specific permission). A financial product or service, whether offered by the regulated entity itself or by a third party, can be sold only with the customer’s specific and informed consent.

This consent may be through a signed declaration, OTP approval, digitally recorded confirmation, or a clearly separated section in the agreement. They must also keep proof of the customer’s consent for one year after that product or service relationship ends.

This matters because many customers do not always realise what they have agreed to. In loan, card or account-opening journeys, multiple products can be placed in the same form. The new rules say each product or service must be clearly listed, and the customer must have the option to choose only what is desired. The default choice for consent on any interface must be “No” or “I do not agree”.

To ensure customers fully understand what they are signing, all sale documents and terms for the entity’s own products must be made available in the local regional language or a language understood by the customer. Furthermore, following an application, the entity must send a secure message or email acknowledging receipt, which must contain a phone number the customer can call for any further queries.

RBI has defined mis-selling in a wider way. A sale can be treated as mis-selling if the

MAJOR CHANGES

- Explicit consent required for all sales
- Forced bundling of products is banned
- Deceptive dark patterns are strictly prohibited

product is unsuitable for the individual customer’s profile evaluated specifically at the time of sale, if correct and complete information was not provided, if consent was not explicit, or if another product was compulsorily bundled with the requested product.

Importantly, even explicit consent may not protect the seller if the product was unsuitable for the customer’s profile at the time of the sale. However, basic products determined by the institution’s policy to be suitable for all customers are exempt from this strict suitability profiling.

NO FORCED ADD-ONS

The new rules also target compulsory bundling (forcing one product along with another). A regulated entity cannot make one product conditional on another product, whether its own or from a third party. For example, a customer taking a loan should not be forced to buy insurance only from the lender’s preferred partner. If a product is genuinely needed as a risk mitigant, the customer must be allowed to buy it from any provider. Additionally, lenders are strictly prohibited from funding

the purchase of any product or service (whether their own or a third party’s) out of the customer’s sanctioned loan facility without the customer’s explicit consent.

Another major area is dark patterns (app or website tricks that push users into choices). RBI has listed several examples relevant to financial services. These include false urgency, basket sneaking (adding paid extras without clear permission), confirm shaming (making users feel guilty for saying no), forced action (making users do something unnecessary to continue), subscription traps, and interface interference (design that hides or highlights choices unfairly).

There is also bait-and-switch (promising one thing but giving another), drip pricing (revealing charges only later), disguised advertisements, nagging, and trick wording.

The new rules put responsibility on regulated entities for their DSAs (direct selling agents), DMAs (direct marketing agents), sub-agents, and third-party representatives. These agents cannot mislead customers about their identity or falsely present themselves as employees of the bank or NBFC. Furthermore, any outsourced agent or third-party representative selling products inside a branch must be visually distinguishable from regular employees, including wearing clear ‘on-person’ identification.

To remove the root motivation for aggressive mis-selling, employees of regulated entities are barred from directly or in-

directly receiving any sales incentives or commissions from third-party product providers. Entities must also maintain updated lists of DSAs and DMAs on their websites.

Sales calls and visits are restricted to between 09:00 hours and 19:00 hours, and visits to a customer’s premises need explicit consent.

QUESTIONS TO ASK

Before agreeing to any financial product, customers should ask basic questions: Is this product compulsory or optional? Is it from the bank or a third party? What are the fees, charges, lock-in, exit terms and penalties? Has any add-on been selected by default?

If a product appears to have been mis-sold, the customer can complain to the regulated entity within the timeline specified by the regulator. If no timeline is specified, the rules provide a 30-day window from receipt of the signed agreement. If mis-selling is established, the entity must refund the amount paid and compensate the customer for losses.

Regulated entities must also build a mechanism to seek feedback within 30 days of a sale, which may involve randomly selecting customers.

To ensure a fair and objective review, this feedback must be collected by a separate department that was not associated with selling the product.

The takeaway is clear. Saying yes to a financial product should be an informed choice, not the result of pressure, confusion or design manipulation.

INSURANCE QUERY.

TAPAN SINGHEL

I am 30 and want to increase my sum insured this year. Do I need to undergo medical tests again?

Aryan

Aryan, this is a question many young policyholders are asking today, and it reflects a welcome shift in how people are thinking about health insurance. As per industry sources, medical inflation in the country is rising at approximately 13-14 per cent, which is two to three times of the pace of general inflation. With changing healthcare needs, reviewing and enhancing one’s sum insured at regular intervals is both prudent and necessary.

You would be happy to know that in most cases, increasing your health insurance sum insured does not automatically mean you will have to undergo fresh medical tests, particularly at your age. The requirement for medicals is evaluated on a risk-based approach and depends on factors such as age, overall health condition, any pre-existing diseases, and the extent of the increase you are opting for. For younger and healthy individuals, insurers often allow reasonable enhancements without insisting on additional tests.

Let’s go through some facts for better understanding. Under the latest IRDAI

guidelines (2024–2025), insurers are required to simplify processes, reduce unnecessary medical tests unless risk factors clearly justify them, and make preventive care more accessible. This ensures that policyholders are not subjected to any additional procedures where they are not needed.

Age-related risks: Medical tests are usually required above a certain age, commonly post-45 years, or if you choose to opt for a significant increase in sum insured, or if you have had any pre-existing disease or discovered a disease. In other cases, and for younger and healthy individuals, insurers usually allow increases without medical tests. **Sum insured increase:** If you are raising your cover from a modest level (e.g., ₹5 lakhs to ₹10 lakh), many insurers may not insist on tests. But for higher jumps (₹20–50 lakh or more), medical underwriting is common.

Preventive health focus: IRDAI’s 2025 reforms emphasize preventive health check-ups and wellness programs. Many insurers now include annual check-ups in standard policies, which can serve as a substitute for fresh medicals when increasing cover.

Government push for accessibility: The regulator has removed age limits for health insurance, reduced waiting periods for pre-existing diseases, and mandated wider cashless networks.

Inclusivity for high-risk conditions: Insurers cannot deny coverage for severe conditions like cancer, heart disease, renal failure, AIDS, etc., subject to underwriting, but they

can still require medicals if risk assessment demands it.

Steps you should take: The first thing you can do is check your policy terms. Some insurers specify in the policy documents whether medicals are needed for sum insured enhancement and in which scenarios. Another way to increase the sum insured is through top-up or super top-up plans, which insurers may allow without fresh medical tests, especially when you already have a base policy. If medicals are required, and your policy includes annual preventive health check-ups, those reports may be accepted instead of fresh tests, provided the reports are not too old.

Risks and considerations: This question arises when the person is 45 years or older or has chronic conditions like diabetes, hypertension, or heart disease. In such scenarios, there is a possibility that insurers are more likely to require medicals. Also, in cases where one is increasing coverage from very

basic to very high levels, it triggers medical underwriting. Even if medicals are waived, premiums will rise proportionally with the increased sum insured.

It is also important to note that after increasing your sum insured, any waiting period for pre-existing diseases will generally apply only to the enhanced portion of the cover and not to the original sum insured. If medical tests are required, current regulations mandate insurers to bear at least 50 per cent of the cost, and in many cases, the entire cost is covered when tests are conducted at network facilities. At the same time, policyholders must ensure full and honest disclosure of any new medical conditions since the last renewal, as non-disclosure can adversely impact claims.

So, at the age of 30, if you are in good health and planning a reasonable increase in coverage, you may not need to undergo medical tests again. What is far more important is to review your health cover proactively, understand the terms clearly, and enhance it in a way that keeps pace with medical inflation. A practical approach is to reassess your sum insured every 2-3 years, depending on life events and changing health needs. A well-chosen health insurance policy is not just about meeting today’s needs, but about securing long-term financial and healthcare confidence for the future.

Source : ACE MF. NAV for the growth option as on 19-06-2026. Returns for regular plans considered. Expense ratios for certain schemes are based on the previous month's data, as the latest month's figures were not available at the time of publication
*Ann refers to annualised

Our Ratings Methodology

Our rating is based on the historical performance of funds (regular plans) measured both in terms of return (rolling return) and risk (sortino ratio). Rolling returns help identify schemes that have delivered relatively consistent returns during various market cycles and over the long run. We have considered one-, three- and five-year rolling returns for a total of seven-year NAV history for equity and hybrid funds. For debt-oriented funds, we have considered one-, two- and three-year rolling returns for a total of five-year NAV history. Sortino ratio measures the performance of the schemes during downturns, thus capturing the downside risk. One-year trailing return is also considered to assess the fund's recent performance. To arrive at the final score, we have assigned a 60 per cent weightage for past performance based on rolling returns. Sortino ratio and one-year performance is given a 30 per cent and 10 per cent weightage respectively. The final score is used to rate funds within each category, from 5-star to 1-star, with 5-star being the best rating. Ratings for all funds now are based on data as on December 31, 2025.

WHAT'S ON OFFER

On the equity side we additionally showcase select passive funds and on the debt side, liquid and arbitrage funds are included. Expense ratio for both direct and regular plans are disclosed. For equity, passive and solution-fund categories, 10-year returns are shown to give long-term investors, a perspective. Three vital metrics for all funds — sortino ratio (equity, solution categories), tracking error (passive) and exposure to 'AA & below' rated instruments (debt, cash categories) are also shown. While the ratings will be revised only at fixed intervals, returns data shown here are updated weekly. For all other metrics, the latest available data is considered.

RATINGS EXCLUSIONS

Funds with a corpus of less than ₹100 crore, those that have less than a seven-year or five-year NAV history, categories that have less than five funds, and schemes that have undergone a drastic change in their mandate and portfolio (including multi-cap category) are not rated. Retirement funds and children's funds are also not rated as the investment styles of funds within each of these categories are not homogeneous. Passive funds cannot be rated based on return metrics and hence excluded. Since liquid and arbitrage funds are predominantly short-term parking grounds for cash, we haven't rated these as well.

Data Quality score of SFBs, private banks dips in March

MIXED TREND. SDQI of PSBs down 0.3 in March against Dec; foreign banks improved

Our Bureau
Mumbai

The Supervisory Data Quality Index (SDQI) score of small finance banks (SFBs) and private sector banks (PVBs) dropped 1.5 and 1.3, respectively, while that of foreign banks (FBs) rose 0.7 in March compared to December 2025, according to the Reserve Bank of India.

SDQI measures data quality in terms of the accuracy, timeliness, completeness and consistency in the submission of returns and microdata by banks for supervisory assessments.

MARGINAL DROP
The SDQI score of public sector banks (PSBs) declined marginally by 0.3 in

QUALITY ASSESSMENT. SDQI measures data quality in terms of the accuracy, timeliness, completeness and consistency in the submission of returns and microdata by banks for assessments REUTERS

March compared to December 2025. Overall, the SDQI score of scheduled commercial banks marginally declined by 0.2 in March

As at end-March, the SDQI score of SFBs, PVBs and PSBs declined to 90.4

(from 91.9 as at December-end 2025), 89.3 (90.6) and 90.7 (91.0), respectively. Only FBs reported an improvement in the score to 91.4 (90.7).

Overall, the SDQI score of scheduled commercial

SDQI score of scheduled commercial banks declined marginally by 0.2 in March 2026

banks declined marginally to 90.7 in March from 90.9 in December 2025. Banks are required to report to the RBI data (Supervisory Returns: all periodic/ad-hoc data submitted to the RBI in formats prescribed from time to time, irrespective of the technology platform, periodicity and the mode of submission) on their domestic and overseas operations, including the operations of IFSC Banking Units (IBUs) and Overseas Banking Units (OBUs), wherever applicable.

DGCA turns to AI, ML for aviation regulation 2.0

Rohit Vaid
New Delhi

The civil aviation safety regulator is working on a next-generation version of its eGCA platform, with plans to incorporate artificial intelligence (AI), machine learning (ML), blockchain and predictive surveillance capabilities as part of a major digital transformation of the country's aviation regulatory ecosystem, industry insiders told *businessline*.

According to tender documents reviewed by *businessline*, the aviation regulator is seeking a Technology Project Management Unit (Tech-PMU) to support the implementation of eGCA 2.0.

The proposed platform is expected to place significant emphasis on emerging technologies, regulatory technology solutions, cybersecurity and data protection compliance.

TECHNOLOGY-DRIVEN
Besides, the documents indicate that the new framework will utilise technologies such as decision-intelligence solutions and predictive surveillance tools to strengthen regulatory oversight and improve the efficiency of aviation-related approvals and monitoring mechanisms.

Per the document, the proposed system is expected to focus on application framework design, integration planning, risk management, cloud hosting strategies, cyber security architecture, disaster recovery systems, dashboards and analytics capabilities.

Speaking to *businessline*, industry insiders said the initiative could significantly enhance the regulator's ability to undertake data-driven supervision, automate workflows and identify safety or compliance risks through

predictive and intelligence-based tools.

The development assumes significance at a time when India's aviation sector is witnessing rapid expansion in passenger traffic, fleet induction and airport infrastructure development, necessitating a more technology-driven and scalable regulatory architecture.

SEEKS EXPERTISE
Additionally, according to the tender documents, the selection process for the technology partner will follow an '80:20 Quality-cum-Cost-Based Selection' (QCBS) methodology, with substantial weightage assigned to capabilities in AI, machine learning, blockchain, regulatory technology, aviation domain expertise, cybersecurity and compliance assurance.

The documents further indicate that the DGCA is seeking specialists with expertise in emerging technologies, including AI, ML, blockchain, advanced analytics, cloud computing, natural language processing and digital intelligence, as part of the proposed programme management structure. Insiders said the new platform is expected to lay the foundation for a more integrated, transparent and technology-enabled aviation regulatory ecosystem capable of supporting the long-term growth of India's civil aviation sector.

Centre bans 16 fixed-dose combination medicines

Our Bureau
Mumbai

NATIONWIDE BAN. The manufacture, sale, distribution and supply of the identified 16 FDCs for human use are prohibited with immediate effect across the country

As part of its ongoing crackdown on irrational and potentially unsafe drug combinations, the Centre has prohibited the manufacture, sale and distribution for human use of 16 Fixed Dose Combinations (FDCs), with immediate effect.

The prohibited FDCs belong to various therapeutic categories, including dermatological preparations, analgesic and antispasmodic medicines and antibiotic-based formulations.

The decision follows directions of the Supreme Court, which had mandated a comprehensive review of FDCs available in the country, the Union Health Ministry said. Subsequently, the Drugs Technical Advisory Board (DTAB) constituted an Expert Committee to examine various FDCs and identify those that are irrational, lack therapeutic

justification, or may pose risks to human health, it added.

FOUND INEFFECTIVE
"Based on the scientific assessment and recommendations of the Expert Committee, the government has taken action against 16 FDCs that were found to lack therapeutic justification and whose continued use was not considered beneficial in relation to the potential risks involved," the note said.

The Centre has in the past banned several irrational FDCs following detailed scientific review, in

India to host 2-day meet of top BRICS security officials

Press Trust of India
New Delhi

Chinese Foreign Minister Wang Yi, Russian NSA Sergei Shoigu and top BRICS security officials will converge in New Delhi on Monday for a two-day conclave that will focus on pressing geopolitical and regional security challenges. The conclave of BRICS National Security Advisers will be chaired by NSA Ajit Doval.

China has already announced that Wang will attend the deliberations. The Chinese Foreign Minister is also expected to hold a bilateral meeting with Doval.

It is learnt that Iranian Supreme National Security Council's Deputy Secretary Nezamipour is also expected to join the conclave that is set to prepare the ground for the BRICS summit to be held in September in India.

New Delhi is hosting the summit in its capacity as the current chair of the bloc.

Top BRICS security officials are expected to deliberate extensively on the overall regional security scenario including the situation in West Asia as well as the Russia-Ukraine conflict.

The Indian side is likely to raise its concerns over terrorism including cross-border terrorist activities targeting Jammu and Kashmir by terror groups based in Pakistan.

The Pakistan-Afghanistan hostilities may also figure in the deliberations, people familiar with the matter said.

"During the meeting, the National Security Advisers/Heads of Delegation of BRICS member countries will exchange views on the theme 'Non-traditional security challenges confronting the world today,'" the Ministry of External Affairs said. It said the officials will also discuss the rapidly evolving nature of national security challenges as well as the role of new technologies in emerging security threats.

'India's LPG use to double to 2 mb/d in 25 years'

Rishi Ranjan Kala
New Delhi

Liquefied petroleum gas (LPG) use in the world's second largest consumer is projected to double in 25 years to 2 million barrels per day (mb/d).

According to OPEC's *World Oil Outlook 2026*, the demand growth in LPG will come from the residential sector, which accounts for almost 90 per cent of the annual requirement. Besides, an expanding petrochemicals segment is also pushing usage. The outlook period is from 2026 to 2050.

"India's petrochemical sector also contributes to ethane/LPG demand growth. Additionally, LPG use is widespread in India's residential sector and the country is projected to see higher demand for this product going forward. Overall, ethane/LPG demand is projected to double between 2025 and 2050 to reach nearly 2 mb/d," OPEC said.

Rising energy access in India will support LPG use in the long term, it anticipated.

"In the light products sector, the largest increase is expected for ethane/LPG, with demand increasing by 3.5 mb/d," the report projected.

A back-of-the-envelope calculation shows that the country's average LPG usage stood at roughly 90,991 TPD in FY26, 85,830 TPD in FY25 and 81,271 TPD in

FY24. Almost 90 per cent is consumed by households for cooking with the remaining going to the industrial sector.

The Petroleum Planning and Analysis Cell (PPAC) expects India to consume around 34.69 million tonnes (mt) of LPG in the current financial year, ending March 2027. This is a growth of roughly 4.5 per cent on an annual basis.

India's cumulative LPG consumption rose 6 per cent y-o-y to 33.21 mt in FY26 provisionally, which is the highest annual growth in usage since FY19.

LONG-TERM GROWTH
Overall, OPEC projects that the primary sources of long-term oil demand growth are India, Other Asia, the Middle East, Africa and Latin America.

Demand in these regions is set to increase by 25.2 mb/d between 2025 and 2050, with India alone adding 8.1 mb/d. At the same time, oil demand in Other Asia, the Middle East and Africa is set to increase by 5.3 mb/d, 4.7 mb/d and 4.3 mb/d, respectively.

Oil demand in Latin America is projected to increase by 2.8 mb/d and China by 1.1 mb/d over the same period, it added.

From a sectoral perspective, OPEC anticipates that oil demand growth out to 2050 is set to be driven by road transportation, aviation and petrochemicals, with increases of 5.7 mb/d, 4.2 mb/d and 4.6 mb/d, respectively.

Ahead of IPO, Zepto finds biggest cost lever in customer acquisition efficiency

Jyoti Banthia
Bengaluru

Quick commerce firm Zepto's improving unit economics ahead of its proposed initial public offering have been driven more by a sharp reduction in customer acquisition costs than by logistics efficiencies, according to its draft red herring prospectus.

The company disclosed that its digital marketing cost per order dropped sharply from ₹33.75 in FY25 to ₹4.31 in FY26, before falling fur-

ther to ₹1.01 per order in the quarter ended March 2026. The decline comes as Zepto relies increasingly on repeat customers and benefits from its Everyday Low Prices strategy, reducing the need for aggressive user acquisition spending.

The reduction in marketing expenses stands out as the largest per-order cost improvement disclosed in the filing and has played a significant role in improving the company's overall unit economics as it prepares to tap public markets. In compar-

ison, savings from supply chain operations have been relatively modest. Zepto's supply chain variable cost per order declined from ₹63.03 in the June 2023 quarter to ₹61.24 in the March 2026 quarter, a reduction of ₹1.79 per order.

Zepto has also reduced its reliance on third-party software vendors by developing in-house tools for warehouse management, workforce planning, customer support and search functions, helping lower operating expenses.

W. Asia crisis sends container freight spot rates soaring; recovery post Hormuz opening may take till September

T E Raja Simhan
Chennai

The disruption to global shipping caused by the West Asia conflict has sent container freight rates soaring across major trade routes, including lanes that do not directly transit the Strait of Hormuz, underscoring the ripple effects of the crisis on global supply chains.

According to data from Xeneta, the Denmark-based ocean and air freight intelligence platform, spot rates from the Far East to the US West Coast rose 192 per cent between February 28 and June 19, increasing to \$5,493 per forty-foot equivalent unit (FEU) from \$1,879.

The pace of increase has accelerated in recent days. In

Container freight rate per FEU			
	Feb 8, 2026	June 19, 2026	% change
Far East to US West Coast	\$1,879	\$5,493	192
Far East to US East Coast	\$2,651	\$6,850	158
Far East to North Europe	\$2,220	\$4,572	106
Far East to Mediterranean	\$3,329	\$5,884	77
North Europe to US East Coast	\$1,477	\$2,318	57

Source: Xeneta

the past week alone, rates jumped 29 per cent on the Far East-US West Coast route and 25 per cent on the Far East-US East Coast route, said Peter Sand, Chief Analyst at Xeneta.

"Spot rates will keep climbing for as long as the Strait of Hormuz is not fully open," Sand said. "That could be four more weeks or longer depending on how complex the de-mining oper-

ation turns out to be. Shippers should plan for a peak around the point the strait formally reopens, followed by a gradual easing."

Xeneta's analysis highlights the scale of disruption. Before the conflict, 99 container services operated in or transited the Arabian Gulf, deploying 3.2 million TEUs, or about 10 per cent of the global container fleet. Following the blockade, only 11

services remain active, representing a total of just 74,000 TEUs of capacity. Of the 488 vessels deployed on these routes before the conflict, only 18 remain in the region today, while 470 ships have been diverted across global networks.

WAIT & WATCH
Industry experts believe freight markets will remain elevated even after shipping resumes through Hormuz.

"The reopening of Hormuz removes a major risk to global container trade, but freight rates are unlikely to revert to February 2026 levels anytime soon," said Jagannarayan Padmanabhan, Senior Director and Global Head-Consulting, Crisil Intelligence. Elevated insurance costs, network re-

balancing requirements and continued diversification of cargo routing will keep logistics costs above pre-crisis levels, he added.

According to J Krishnan, Partner at S Natesa Iyer Logistics LLP, the Indian container trade remains heavily dependent on foreign shipping lines. "The opening of Hormuz, if it sustains, is the first step to the Suez route normalisation," he said.
