Kunal Shah to lead WhatsApp as Meta pumps \$900 m into CRED

MEGA DEAL. Funding values fintech firm at \$4.5 b; Miten Sampat named interim CEO

Jyoti Banthia
Aishwarya Kumar
Bengaluru

Meta is investing \$900 million (about ₹8,550 crore) into fintech start-up CRED, valuing the company at \$4.5 billion, while founder Kunal Shah will step away from the business to take over as the global head of WhatsApp, marking one of the most high-profile leadership transitions in India's start-up ecosystem.

The investment, part of a Series H funding round comprising primary and secondary share purchases, gives Meta a minority stake, specific details of which were not provided, in CRED but it will not get access to CRED customer data.

As part of the deal, Shah will relinquish his operating responsibilities at CRED and join Meta's senior leadership ranks as the next global head of WhatsApp. While he will initially continue to be based in India, he is expected to spend significant time travelling between India and Meta's headquarters in California before relocating permanently. "He will start from

CRED shareholding pattern

Kunal Shah's journey

- Graduated with a Bachelor of Arts in Philosophy from Wilson College, Mumbai
- Dropped out of a part-time MBA programme at NMIMS to pursue entrepreneurship
- In 2010, co-founded FreeCharge, an online recharge and utility payment platform
- FreeCharge was eventually acquired by Snapdeal in 2015 for approximately \$400-450 million, roughly ₹2,800 crore at that time
- Started CRED in 2018 with personal investment of \$1 m

India and travel in between, though he will eventually join the team in MPK (short for Menlo Park, California)," a Meta spokesperson said.

20% STAKE BUY

At CRED's \$4 billion pre-money valuation, a \$900 million investment implies a stake of around 20 per cent. But with nearly half the deal structured as secondary share purchases from existing investors, likely at a discount to the headline valuation, Meta is expected to emerge with a larger-than-20 per cent ownership position in the fintech start-up.

People familiar with the matter said Shah will continue to remain a share-

holder in CRED but will not be part of the board and will have no involvement in the company's day-to-day operations.

Meta Chief Executive Mark Zuckerberg said Shah's experience building and scaling CRED made him the right choice to lead WhatsApp, a platform that has increasingly become central to the company's commerce and payments ambitions.

Meta said its investment reflects confidence in both India's digital economy and CRED's growth prospects. "CRED is one of India's most promising technology companies that provides financial services helping India's economy grow. We're excited

about the progress to date and to see how this investment will fuel continued success for CRED," a company spokesperson said.

Industry observers view Shah's appointment through the lens of WhatsApp's monetisation challenge. "One of the issues WhatsApp is facing is how to monetise. They have launched WhatsApp Payments in India, but the uptake was not significant," said Satish Meena, adviser at Datum Intelligence.

With Shah departing, Chief Financial Officer Miten Sampat will take charge as interim Chief Executive as CRED prepares for its next phase of growth.

CSE revival, new airports top BJP govt's first Budget for Bengal

Mithun Dasgupta
Kolkata

Presenting the first Budget of the BJP government in West Bengal on Monday, Finance Minister Swapan Dasgupta proposed to support the revival of the Calcutta Stock Exchange (CSE), set up a greenfield airport near Kolkata, along with three new airports across the State, build a thermal power plant under the PPP mode, and allocated ₹5,000 crore for incentivising fresh investment.

Tabling the State Budget of over ₹4.38 lakh crore for FY27 in the West Bengal Assembly, Dasgupta said, "The Calcutta Stock Exchange, an 118-year-old institution, is on the verge of closure due to several hurdles. The government proposes to support the revival of the CSE."

"The government will identify 1,000-1,500 acres near Kalyani to set up a greenfield airport near Kolkata," he said. The Budget also proposed to set up three new airports across the State.

The government plans to build a thermal power project at Santaldih in Purulia district to overcome any electricity shortage in the State.

India seeks US tariff safeguards, market edge over trade rivals

Amiti Sen
New Delhi

India is unlikely to be rushed into a trade deal with the US and is expected to prioritise securing safeguards against future unilateral US tariff actions and also better market access than competitors, such as Bangladesh and Vietnam, during US Trade Representative Jamieson Greer's two-day visit to New Delhi, beginning Tuesday, sources said.

The US, on the other hand, is expected to anchor the negotiations around the 18 per cent additional tariff on Indian goods proposed in the interim trade deal framework agreed to in February, even though the broader 25 per cent reciprocal tariff regime on which the proposal was based was later struck down by a US court.

BALANCED DEAL

"New Delhi may also prefer to wait for greater clarity on the Section 301 proceedings being pursued by the USTR against India, which could themselves face legal challenge. It would definitely insist on firm commitments on advantage over rivals and a guarantee of no future penal measures," a source

TRADE BARGAIN

- India wants trade deal to provide better US market access than rivals like Bangladesh and Vietnam
- The US may use 18% tariff, which was proposed in February, as the negotiating benchmark
- New Delhi likely to await clarity on USTR's Section 301 probes before finalising
- Visit of USTR Jamieson Greer (in pic) on June 23-24 to advance trade talks amid Section 301 probe concerns

tracking the matter told *businessline*.

Trade experts argue that India should avoid rushing into an agreement and instead seek a balanced deal that provides long-term stability for industry.

"The proposed trade pact is increasingly neither balanced nor stable. Washington wants India to make permanent commitments on market access for agriculture, energy, defence equipment, aircraft, digital services and advanced technologies, and purchases of up to \$500 billion of American goods over five years, limiting digital regulations and aligning more closely with US economic and security objectives," said Ajay Srivastava of the Global

Trade Research Initiative.

In return, the principal US concession was a reduction in the reciprocal tariff from 25 per cent to 18 per cent, he said, adding that the offer lost its legal basis after the court ruling against the reciprocal tariff regime.

According to Srivastava, Washington is now seeking to regain the same bargaining leverage through Section 301 tariffs. For India, this could mean that tariffs under the two ongoing Section 301 investigations, would be capped at 18 per cent if New Delhi signs the pact.

"What's the hurry? Section 301 tariffs, too, could face legal challenges. India must see how the situation evolves," said Biswajit Dhar, former JNU professor.

CBI arrests former
CEOs of RCFL, RHFL

New Delhi: The CBI arrested the former CEOs of Reliance Commercial Finance Ltd (RCFL) and Reliance Home Finance Ltd (RHFL) on Monday in connection with separate cases pertaining to an alleged fraud of ₹7,623 crore in multiple public sector banks, officials said. The CBI arrested the former RCFL Director and CEO Devang Mody and former Executive Director and CEO of RHFL Ravindra Sudhalkar. “In the RCFL case, the accused have caused a loss of ₹4,097 crore to 13 PSBs, whereas in RHFL, the loss is ₹3,526 crore to 10 PSBs,” said a CBI spokesperson. The CBI probe had shown that Mody, who was the CEO of RCFL from April 2017 to December 2018, “was a key decision-maker” and responsible for managing the operations of the company, the agency said.

For CRED, Meta’s \$900 million investment is only half the story

THE NEXT CHAPTER. CRED must prove it can grow without the founder who defined its identity

Jyoti Banthia
Vallari Sanzgiri
Bengaluru/Mumbai

Meta’s \$900 million investment in CRED may have reset the fintech’s valuation, but the bigger test begins now. For the first time since its founding in 2018, CRED must prove it can grow without the founder who defined its identity. Kunal Shah’s move to Meta as global head of WhatsApp marks the most significant leadership transition in CRED’s history, shifting the spotlight from fundraising to succession. The question is no longer whether CRED can attract capital, but whether it can institutionalise decision-making ahead of a potential public listing. “CRED’s future should be viewed as an institutionalisation story rather than a founder-exit story,” said Sanchit Vir Gogia, Chief

REAL PICTURE. The future of CRED should be seen as an institutionalisation story, rather than a founder-exit story

Analyst and Echief Executive at Greyhound Research. “CRED moves from founder gravity to operating architecture.” Gogia believes the transition will succeed only if interim Chief Executive Miten Sampat and the broader leadership team are empowered to take independent calls rather than operate in Shah’s shadow. “The strongest outcome is

its strongest operating phases. In FY25, the company reported revenue of ₹2,803 crore while narrowing losses by 11 per cent to ₹1,460 crore. Monthly transacting users grew 14.5 per cent to 1.26 crore, payment volumes rose 23 per cent to ₹8.5 lakh crore, and assets under management touched ₹22,000 crore. The Meta investment also gives CRED fresh financial firepower. “The infusion provides CRED with a substantial runway,” said financial analyst Chirag Prabhu. “It allows the company to aggressively scale lending, insurance and wealth management without constantly worrying about raising capital in a tight funding environment.” Prabhu said CRED’s affluent customer base and transaction data offer significant opportunities to deepen cross-selling across financial products, potentially improving monetisation over time. For Gogia, however, Meta’s investment is about far more than capital. “Meta’s investment in CRED is best read as the purchase of a founder, with the stake serving as the currency that made him available,” he said. According to Greyhound Research, the deal reflects Meta’s broader strategy of acquiring entrepreneurial talent through minority investments, rather than outright acquisitions. CRED’s recently secured RBI payment aggregator licence also provides the payments infrastructure that could support future WhatsApp commerce initiatives. Still, analysts caution that execution risks remain. Nirav Shah, Managing Director (BFSI & Fintech) at Equirus Capital, said India’s fintech landscape remains intensely competitive, with consolidation accelerating across the sector.

Danube Industries to get \$50 m investment from Fox Petroleum

Avinash Nair
Ahmedabad

Ahmedabad-based listed company Danube Industries Ltd said on Monday that it is set to receive a \$50 million (about ₹472 crore) investment from New Delhi-headquartered Fox Petroleum Group, marking a major strategic shift, as it prepares to expand into AI, defence and other technology-led businesses. The investment, proposed to be made in two tranches of \$25 million each, will see Fox Petroleum join the company as a strategic investor and growth partner, subject to regulatory and corporate approvals. “It is a strategic partnership, and so we will not be selling any stake. We will be part of the Fox Petroleum Group, and we have applied to the RoC for changing our name to Fox Danube Technologies Ltd. The company will soon be renamed. The money will be invested through the direct FDI route. The parent company, Fox Capital and Investment Ltd, will make this investment,” Sunil Rajdev, Founder and Chief Financial Officer of Danube Industries, told *businessline*.

AERO DEFENCE The company also announced plans to unveil its aero defence division on August 15, marking its proposed entry into aerospace, defence and advanced technology-related initiatives. “One of the key initiatives under this collaboration would be to launch activities related to Maharashtra Aerospace and Defence manufacturing corridor that will be executed under Fox Danube Technologies Ltd,” said Rajdev. The proposed investment is expected to support Danube Industries’ diversification into technology-led businesses, while providing a platform for future acquisitions and expansion into high-growth sectors.

Jindal Poly Films shareholders move SC to revive class-action suit

Suresh P Iyengar
Mumbai

A group of 29 minority public shareholders of Jindal Poly Films (JPFL) has approached the Supreme Court, seeking to revive a shareholder class action involving alleged diversion of corporate value and its impact on public investors. Earlier, minority shareholders of the company had raised concern over the Supreme Court judgment setting aside the NCLT and

NCLAT orders, disposing of the corporate class action suit with consent, and appointing Justice (retd) Manindra Mohan Shrivastava as the sole arbitrator. The affected shareholders have now written to the Chief Justice of India and have pleaded to implead in the case and recall the applications. They also raised concerns on how a representative proceeding affecting public investors was concluded without hearing the very class it was meant to protect.

FACTUAL DETAILS In a detailed representation addressed to the Chief Justice of India, the minority shareholders have placed on record the full factual background leading up to the order dated passed by the Supreme Court. The representation highlights that the underlying proceedings arose from an admitted shareholder class action concerning alleged large-scale diversion of corporate value and its impact on public shareholders of a listed company. The share-

holders have stated that the matter involved not just a bilateral dispute, but a representative proceeding affecting a wide body of public investors, with multiple intervention petitions pending and regulatory findings already part of the proceedings. Shareholders pointed out that during court vacation, the appeal was mentioned and disposed of on the same day by the consent of only two parties, resulting in the dispute being referred to arbitration, without notice to or participation of the broader shareholder class or other stakeholders. The statutory remedy designed to protect minority investors should not be effectively extinguished without the Court being apprised of the full factual context, including the representative character of the proceedings and the existence of multiple affected parties, said the affected investors. The minority shareholders formally approached the Supreme Court seeking to

implead as parties to the proceedings, so that the class of minority shareholders, for the first time, has a direct voice before the Court in a matter affecting their rights. They also sought to recall the July 8 order of SC on the grounds that the proceeding was disposed of without hearing the necessary and affected parties, and without placing before the Court the complete factual matrix, including the nature of the class action and the absence of any authorised representative of the class to bind it.

Online shopping sees higher spends, orders in Jan-May period: Admitad

Our Bureau
New Delhi

India’s e-commerce market is not just witnessing higher number of orders, but also growing number of spends. Continuing with strong growth momentum, online order growth was pegged at 16 per cent year-on-year and Gross Merchandise Value (GMV) grew by 18 per cent in the first five months of 2026, as per an analysis by Admitad, a partner marketing platform.

“The average order value increased from \$32 to \$35. Moreover, there was a rise in the number of purchases made via mobile phones from 45 per cent to 49 per cent. Hence, almost half of all the orders on Indian online stores are made via a mobile phone,” it added. More than 71 per cent of all transactions in India were done through marketplaces,

CLICKBAIT. Fashion led online orders with a share of 24%, followed by home goods at 21% and electronics at 16 %

indicating the growing significance of multi-seller marketplaces as the favoured platform of choice for consumers. In terms of categories, fashion led the online orders with a share of 24 per cent, followed by home goods at 21 per cent and electronics at 16 per cent. Meanwhile, beauty & self-care and toys & hobbies accounted for 7 per cent, auto-

mobiles, parts & accessories 5 per cent and sports & entertainment’s share was about 4 per cent. **TRAVEL CATEGORY** While the travel category has been gaining ground in terms of online shopping, the online services sub-category, including online education, ticket services, mobile services and many others, accounted for more than 7 per cent of the total purchases during this time period. “Three sectors have been the most successful so far in the first five months of 2026 in terms of year-over-year gains. The biggest increase was observed in mobile services, where sales rose by 35 per cent because of the increasing usage of smartphones and growing number of Indians who use mobile-first internet access. Furniture and home furnishings increased by 19 per cent, while online sales of electronics grew by 18 per cent,” a statement from Admitad added. Online articles, videos, reviews and even comparative analysis accounted for more than 20 per cent of the total online purchases. Over 11 per cent of customers made their buying decisions after being influenced by content creators or social media communities.

Any breakdown in the interim US-Iran peace agreement may reignite material risks, including heightened inflationary expectations, disruptions to critical energy infrastructure, delays in investment spending, food security concerns, adverse financial stability outlook and structurally lower growth, cautioned RBI officials in the central bank’s monthly bulletin.

IMPACT ON OUTLOOK The uncertainties could have an impact on the outlook through international trade, cost pressures, capital flows and commodity prices, they said. They noted that the global economic landscape remains fragile despite some respite gained through the

RBI officials noted that the global economic landscape remains fragile despite some respite gained through the interim US-Iran peace agreement

interim US-Iran peace agreement. “The Indian economy entered this turbulence with much better fundamentals relative to many other countries to sustain the shock. India maintained a consistently high growth, anchored inflation expectations, sustained fiscal consolidation, manageable current account balance and foreign exchange buffers over the previous few years, which adds to its strength vis-à-vis sim-

ilar other events in the past,” said the officials in the *State of the Economy* article published in the bulletin. They cautioned that an adverse south-west monsoon, if materialises, may weigh on the domestic growth-inflation outlook. **BUFFER STOCKS** The authors observed that high-frequency indicators during the first two months suggest sustained economic momentum in 2026-27. “Domestic demand conditions remained resilient, supported by urban demand... Record buffer stocks of rice and wheat are likely to provide cushion against any adverse impact of El Niño,” they said. In May, the all-India unemployment rate measured by current weekly status, witnessed an increase driven by rural areas, while the urban unemployment rate declined, per the bulletin. The demand for work under MGNREGS continued to decline for the eleventh consecutive month. **GDP ESTIMATES** The Indian economy displayed strength in terms of the provisional GDP estimates (7.7 per cent) for 2025-26. GDP growth during Q4 2025-26 remained robust at 7.8 per cent, driven by private consumption and fixed investment, according to the bulletin. **ON INFLATION** The RBI officials noted that despite a pick-up in May, CPI-inflation remained anchored. CPI headline inflation inched up sequentially to 3.9 per cent (y-o-y) in May 2026 from 3.5 per cent in the preceding month, driven by broad-based increases in all the three categories – food & beverages, fuel and core components.

NOVA Control Tecnologix plans to invest ₹100 crore in rail safety tech

Our Bureau
Bengaluru

NOVA Control Tecnologix is set to invest over ₹100 crore in R&D to develop indigenous railway signalling, Kavach train protection, and operational technology cybersecurity systems. The company is also evaluating strategic acquisitions in AI and deep-tech, while collaborating with Tata Elxsi to integrate cybersecurity into rail safety networks.

COMPANY SIZE Earlier, in an exclusive interaction with *businessline*, NOVA Control Tecnologix revealed that these strategic tech acquisitions are part of a broader roadmap to triple the company’s size, aiming for ₹1,000 crore in revenue by FY29. Historically operat-

ing as a core system integrator that executed metro design projects for global OEMs, the company is leveraging its current order book to pivot into proprietary products and expand into overseas markets such as South-East Asia. By FY29, parent company e2E Rail expects nearly 30 per cent of its revenue to come from products, while the remaining 70 per cent will continue to flow from system integration.

“We have maintained a CAGR of over 40 per cent during the last three years and closed FY26 with revenue of around ₹380 crore. With our current order book of over ₹1,000 crore and a strong project pipeline, we expect to maintain, if not improve, this growth momentum,” said Sourajit Mukherjee, Director & CEO of NOVA Control Tecnologix, and CEO, e2E Rail. Promoter Chairman Vinay Rao said, “The focus will be on building intellectual property and deep-tech capabilities that strengthen railway safety, enhance technological self-reliance and create export opportunities. We believe India’s railway modernisation journey can become a catalyst for developing world-class railway technologies for international deployment.”

Renault begins Duster exports with first shipment to S. Africa

Our Bureau
Chennai

Renault India has begun exports of the all-new Duster, with the first shipment of 750 vehicles departing Kamarajar port in Chennai for South Africa.

GLOBAL MARKETS The shipment marks the beginning of Renault India’s export programme for the new Duster, with additional international markets planned in the coming months. Stephane Deblaise, CEO of Renault Group India, said, “The start of exports of the all-new Duster is an important moment for Renault India and a strong validation of the quality, capabilities and competitiveness of our operations in Chennai. It reflects the progress we have made in building India into

an integral part of Renault’s global industrial footprint. India possesses all the fundamentals required to emerge as a leading automotive export hub: world-class manufacturing capabilities, engineering talent, scale and a rapidly evolving logistics ecosystem.” Deblaise added, “As Renault continues to expand its international footprint, India will play an increasingly strategic role in our future plans. We remain committed to contributing to the country’s manufacturing ambitions, and are working towards our objective of generating €2 billion in annual exports from India by 2030.” The new Duster is the first Renault vehicle in India to be built on the Renault Group Modular Platform, a flexible architecture designed to support multiple powertrain technologies.

Ambuja Cements, Leilac plan low-carbon cement projects

Our Bureau
Ahmedabad

Ambuja Cements, the cement and building materials company of Adani Group, has partnered with UK-headquartered clean technology firm Leilac Ltd to develop one of the world’s largest commercial-scale pathways for low-carbon cement production at its Sanghipuram plant in Gujarat’s Kutch district, the company said on Monday. The companies will evaluate Leilac’s carbon capture and hybrid electrification technology through a commercial demonstration project at Ambuja’s 6.6 MTPA Sanghi plant. The technology is designed to reduce emissions, lower fuel consumption and increase the use of renew-

able electricity in cement manufacturing, with the potential to reduce coal consumption to zero, while enabling the flexible use of alternative fuels. However, Adani Group sources told *businessline* that no cost commitments have been made for the demonstration project at this stage. The company was also silent regarding timelines for this project. **FIRST PHASE** Under the first phase of the agreement, both companies

have agreed to collaborate on developing the technical and commercial feasibility of designing, developing and implementing the technology before any investment decisions are taken, sources said. The partnership forms part of Ambuja Cements’ broader decarbonisation strategy and supports its Science-Based Targets initiative-validated net-zero target for 2050.

MEPZ SEZ okays
₹710 cr investments

Chennai: The unit approval committee of the MEPZ Special Economic Zone, chaired by Alex Paul Menon, Zonal Development Commissioner, has approved seven new SEZ units and four export-oriented units in June. The approved projects represent a combined investment of ₹710 crore and are projected to generate 15,424 employment opportunities. The approved projects include TKG Taekwang India Pvt establishing a non-leather footwear manufacturing unit at ELCOT SEZ, Tiruchirappalli, with a projected investment of ₹515 crore and employment generation potential of 13,364 persons. **OUR BUREAU**

India levies anti-dumping duty on chemical imports

New Delhi: India has imposed an anti-dumping duty for five years on a chemical, used in the rubber and tyre industries, imported from China, the European Union and the US. According to a notification of the Finance Ministry, the duty was imposed following a recommendation for the same by the Commerce Ministry's arm, the Directorate General of Trade Remedies. The duty ranges between \$75 per tonne and \$1,748 per tonne. India has also extended the levy of anti-dumping duty on aluminium foil imported from China, Malaysia, Thailand and Indonesia. The duty will be in force till December 15 this year, the Department of Revenue said in a separate notification. **PTI**

Growth of eight core industries dips to seven-month low of 0.5% in May

MARKET SENTIMENT. Experts feel this will have an impact on the overall industrial growth print

Our Bureau
New Delhi

With five sub sectors recording de-growth, growth of the eight core industries slipped to 0.5 per cent in May against 1.8 per cent of April, the government reported on Monday. This is the lowest in seven months. Experts feel this will have impact on overall industrial growth print, data for which will be out on June 29.

The combined Index of Eight Core Industries measures the combined and individual production performance of eight core industries — coal, crude oil, natural gas, refinery products, fertilizers, steel, cement and electricity.

The eight core industries comprise 40.27 per cent of the weight of items included in the Index of Industrial Production (IIP). During the month under consideration, the production of steel, ce-

ment and electricity recorded growth, while that of coal, crude oil, natural gas, refinery products and fertilizers was in negative territory, data showed.

DEMAND FACTOR
Madan Sabnavis, Chief Economist at Bank of Baroda,

feels the lower growth number on low base can be attributed more to the decline in production from the petro-based sector. Crude oil, natural gas and refinery products registered decline in production.

This could be attributed more to higher import of

crude and softening of prices in international market. In the case of natural gas, with supply chains being addressed, domestic production tended to fall. Lower exports of petro products also contributed to decline in production.

Coal registered negative

growth as companies focussed on managing inventory in a more efficient manner and cut down on production. Fertilizer production was down due to pressure on input supplies (gas) even as imports increased. Steel and cement continued to grow at a steady rate, mainly due to higher infra-activity in the areas of roads and housing besides railways. Electricity production grew 8.7 due to higher demand coming from households due to extreme heat conditions. Renewables contributed to this growth as coal-based generation took a secondary role. “We may expect IIP growth of 1-1.5 per cent for May,” Sabnavis said.

According to Rahul Agrawal, Principal Economist at ICRA, refinery products witnessed the sharpest decline in 42 months, partly reflecting the fallout of the West Asia crisis.

India again pivots towards US for LPG, LNG imports in June

Rishi Ranjan Kala
New Delhi

As the blockade of the Strait of Hormuz nears 120 days with the US-Iran peace talks see-sawing, India continues to import record volumes of liquefied petroleum gas (LPG) and liquefied natural gas (LNG) from Washington, which has already emerged as New Delhi's top supplier for the two commodities in the first 90 days of the West Asia conflict.

In fact, LPG and LNG imports from the US to India during May 2026 were at record levels, Kpler data show. LNG imports (till June 19)

stood around 0.41 million tonnes (mt) on a provisional basis, which is a decline of 55 per cent from the record LNG import in May (0.91 mt).

On an annual basis, shipments were up 46 per cent, according to the latest numbers from the real time data and analytics provider. Similarly, LPG imports stood at roughly 0.50 mt (till June 19th), a decline of 21 per cent from the record 0.63 mt imported last month. Imports were higher by 52 per cent on an annual basis, it added.

“While this improves diversification, it can raise delivered costs due to longer-haul freight. For further di-

versification, India can look to Saudi Arabia, Qatar, the UAE, Kuwait, and Australia. Additionally, investing in technology to increase domestic LPG yields or shifting the consumer base to PNG could help guard against future disruptions,” Sumit Ritolia, Kpler's Kpler's Lead Research Analyst for Refining & Modeling, told *businessline*.

IMPORTS IMPACTED
Besides, India remains structurally dependent on Gulf supply, though sourcing patterns shifted during recent disruptions... Crude imports were more resilient due to bypass routes and incremental volumes from Russia,

Brazil and Venezuela, he added. Qatar's share dropped sharply in recent months, while the US, Oman, Nigeria and Angola became more important sources of supply.

During the March-May 2026 quarter, Washington supplied 1.5 mt of LNG to India, compared to a mere 0.1 mt by Qatar. This is against Qatar supplying 3 mt during March-May 2025 against 0.5 mt by the U.S. India's cumulative LNG imports for the first 90 days (March- May 2026) stood at 5.8 mt, a decline of 6.5 per cent on an annual basis. On the other hand, India imported around 3.37 mt of LPG in March to May 2026, a decline of almost 40

per cent on an annual basis. India imported roughly 1.49 mt LPG from the US during the quarter ended May 31, 2026, a whopping growth of 1,556 per cent from 0.09 mt in the year-ago period.

LPG imports fell sharply from above 2 mt per month in January-February 2026 to around 1-1.2 mt a month in March-May, with lower West Asian availability partly offset by higher US inflows.

Under our base case of a gradual reopening from early July, the initial focus will be on clearing trapped cargoes and restoring shipping flows before Gulf exporters can materially increase exports,” Ritolia anticipated.

‘India, EU expedite legal vetting of text for early 2027 rollout of trade deal’

Amiti Sen
New Delhi

India and the EU are expediting the legal scrubbing process for the bilateral free trade agreement (FTA) text to ensure the formal signing of the pact by the year-end and a possible implementation by early 2027, said EU Ambassador to India Herve Delphin.

While there are no immediate relaxations on EU's Carbon Border Adjustment Mechanism (CBAM) regulations for India, the Ambassador said the EU was committed to immediately extending to India any simplification it grants to any other country while “accelerating” EU support for decarbonisation of the Indian economy.

“Both sides are working very hard to complete the process of the so-called legal vetting of the text and in such a way that by the end of the year, there will be a possibility to sign the FTA,” Delphin said, addressing reporters on the sidelines of the Annual Erasmus+ Pre-Departure Event 2026 on Monday.

CARBON CHANGES

The European Parliament will then have to give its consent to the deal before it enters into force and an early 2027 timeline seemed to be a realistic one for implementation, he said.

Addressing Indian industry's concerns over CBAM, under which carbon-related charges will be imposed on imports of products such as steel and cement, Delphin said any simplifications made to the framework for any other country would also be offered immediately to Indian exporters.

“There will also be an acceleration of EU support in

EU Ambassador to India
Herve Delphin

terms of the decarbonisation of the Indian economy, which is India's own plans, and we are very much supporting it,” he added.

The EU's €500 million programme and platform to support India's decarbonisation efforts, including hard-to-abate sectors such as steel and cement, expansion of renewable energy capacity, electricity grids, storage infrastructure and green hydrogen, is being accelerated, he said.

STUDENT BLOC

Highlighting the scope for collaboration between India and the EU in education, the EU Ambassador noted that the EU-India Student Ambassadors' Network launched by the bloc will bring together 40 “student ambassadors” from 20 Indian universities to raise awareness about European academic and research opportunities, while fostering deeper engagement about the EU-India partnership among the youth across the country.

The EU also awarded 75 Indian students the prestigious two year-long Erasmus Mundus Joint Master Degree (EMJMD) scholarships for the 2026–2028 academic cycle. This “cemented” India's position as the top recipient of these scholarships since 2004 and placing it among the top three countries globally for this year's intake, according to the EU.

GOOD ENERGIES THAT WORK

The world is changing, and so must energy.
Energy landscapes are evolving from intermittent to dependable, expensive to accessible, and fragmented to integrated. All this without depleting the planet.
This is the shift that will make the new world work.

Because good energy is everything.

Value of coal

Coal exchanges will facilitate transparent price discovery

The government has recently notified the Coal Exchange Rules, 2026, clearing the way for the establishment of multiple coal exchanges in the country. The case for coal exchanges in India is strong. Coal production has been rising steadily and is projected to touch 1.5 billion tonnes by 2030, up from about one billion tonnes today.

Coal India Ltd (CIL) and its subsidiaries still account for roughly three-fourths of the country's coal output. Of CIL's production, only about 13 per cent is sold through auctions, the rest being supplied under long-term contracts. As production expands and more coal becomes available for market-based sales, auction volumes too are likely to increase. Price discovery is generally more efficient when multiple sellers and buyers participate in a market, as against auctions being conducted by a single dominant seller. The emergence of commercial miners, captive mine owners with surplus coal and traders creates conditions for a broader marketplace. Coal exchanges can help discover market prices, even if within a relatively narrow band, since most coal will continue to be traded through long-term agreements.

Coal, unlike electricity, is not a homogeneous product. Its value depends on several quality parameters such as calorific value, ash content and moisture content. Quality is, of course, a consideration in many commodities, including crude oil and foodgrains. But coal exhibits particularly wide variations in quality and is traded in enormous volumes. A well-functioning market therefore requires not merely trading platforms but also trusted mechanisms for quality verification and settlement. The Rules recognise this reality. They provide for independent coal sampling agencies, and envisage a system in which the final settlement price is adjusted on the basis of certified quality. Such a framework should reduce disputes over grade and quality. Equally important is the regulatory architecture. The government has vested oversight in the Coal Controller Organisation, designated as the Authority under the Rules. Exchanges are free to devise their own bidding, price-discovery and transaction-scheduling mechanisms, but these must receive the Authority's approval. The objective appears to be to foster competition while preserving market integrity.

The Rules also wisely limit exchanges, at least initially, to physical delivery-based transactions. Derivatives have been kept out for now, allowing the market to develop depth before more sophisticated instruments are introduced. The National Stock Exchange, Multi Commodity Exchange and Indian Energy Exchange have all indicated their intent to establish coal exchange businesses through dedicated subsidiaries. Coal exchanges will not diminish the importance of long-term supply contracts, nor should they. But they can complement existing arrangements by introducing competition, transparency and efficiency into the market while creating credible benchmark prices for India's most important fuel.

POCKET

RAVIKANTH

PRITAM BANERJEE

The debate on industrial policy and WTO reform has intensified amid geo-economic competition, technological shifts, and renewed state intervention in strategic sectors. As industrial policy instruments increasingly shape trade outcomes, permissible state support and the adequacy of WTO disciplines to ensure that such policies do not distort trade or undermine a level playing field have moved to the forefront. For developing countries, this debate is also intrinsically linked to ensuring they have the policy space flexibility necessary for structural transformation.

Two perspectives frame the discourse. The first, held by developed countries, blames global imbalances on unfair trade practices and market distortions. It claims state subsidies and non-market interventions undermine competitive neutrality, generate surplus production, and disadvantage market-based firms. Consequently, the US, EU, Japan, and others are pushing for stronger subsidy discipline, transparency, and stricter WTO enforcement. While primarily targeting China's industrial dominance, other large developing nations remain potential targets.

For large developing countries like India undergoing genuine development transitions, global rule-making that inhibits the use of flexible industrial policies presents a severe challenge. Restraining state support risks undermining India's ability to create the millions of middle-class jobs required for the socio-economic transformation envisioned under its Viksit Bharat vision.

Conversely, the second perspective views imbalances through structural inequities in the international economic system. Disparities in capital, technology, productive capacity, and global value chain integration constrain developing countries from high value-added activities. From this standpoint, industrial policy is a legitimate and necessary instrument for economic diversification, technological upgrading, and development catch-up.

The Centre for WTO Studies working paper *Navigating the Development Divide: The Case for Policy Space in India's Industrial Policy Strategy Amid Rising Global Protectionism* and a follow-up discussion paper *India's Push for Balancing Industrial Policy Space in WTO: A Developing Economy*, published by RIS, highlight that China and the developed West account for the bulk of global industrial subsidies. India and other large developing countries account for

The need to secure industrial policy space

WTO REFORMS. For large developing countries like India, global rule-making that inhibits the use of flexible industrial policies presents a severe challenge

REUTERS

miniscule shares. Recent micro-level firm data from the OECD's MAGIC Database of Industrial Subsidies confirms this.

Across major sectors, corporate subsidies in India, Brazil, and Indonesia represent a fraction of the revenue percentage seen in China and fall well below advanced European and East Asian levels. In absolute terms, their financial support remains extremely modest compared to the US, China, and advanced economies.

The March 2026 US 301 investigations into manufacturing overcapacity show how this threat of industrial overcapacity and unfair trade can be weaponised. This action targets major powerhouses like the EU, China, Japan, and Korea alongside developing nations like India, Brazil, and Indonesia. Read with US Deputy Secretary of State Christopher Landau's candid remark that the US will not repeat the mistake of "allowing India to develop markets unchecked" like it did with China, the indication is clear.

There will be an attempt to frame global rules that undermine the rise of large developing countries to neutralise

The March 2026 US 301 investigations into manufacturing overcapacity show how this threat of industrial overcapacity and unfair trade can be weaponised

any future competitive threat. This poses a real danger to countries like India.

A critical and fair balance requires framing rules that hold dominant, non-market players like China accountable to prevent unfair practices, while ensuring developed nations do not use rule-making to inhibit future competition from rising developing economies like India. The two aforementioned papers offer a combination of recommendations to bridge this divide.

BALANCED TRADE REFORM

Objectively define industrial dominance: Subsidies and unfair practices by dominant countries with significant sectoral shares of global output and trade have the most trade-distortive effects, and developed countries with higher per-capita incomes should not be allowed to defend their actions in the name of development transition. The proposed framework establishes three conditions to define industrial dominance: a country's per-capita income must be above \$14,000, and its overall manufacturing exports must be under 10 per cent of the world total or three times its global GDP share, whichever is higher. Additionally, its export share in that specific product must also be under 10 per cent or three times its global GDP share, whichever is higher.

Flexibilities for non-dominant developing countries: While dominant countries meeting these conditions must strictly adhere to rules under the WTO Agreement on Subsidies and

Countervailing Measures (ASCM) and Trade Related Investment Measures (TRIMS), non-dominant developing countries below these thresholds should enjoy full policy flexibility. They must be freed from existing constraints under these WTO rules, with the sole exception of prohibited export subsidies under the ASCM.

Countering greater distortion potential: Although ASCM rules allow members to block unfair trade causing material retardation to domestic industries, strict evidentiary requirements make it difficult to counter dominant global suppliers. Stricter rules must apply to industrially dominant players. Meeting the dominance criteria should constitute prima facie evidence of capacity to distort trade, allowing provisional anti-dumping or countervailing duties for up to one year to shift the burden of proof to the dominant supplier.

Stricter accountability and transparency: The ASCM mandates subsidy reporting but fails to effectively penalise non-compliance. If a dominant player hides a subsidy, it should be presumed illegal and harmful, permitting other members to immediately levy temporary protective tariffs without lengthy harm-proving processes. These penalties remain until full disclosure occurs. Limiting this rigorous discipline to truly dominant players ensure it avoids placing undue institutional burdens on developing countries and LDCs.

TN's finances require a structural shake-up

The recent White Paper attributes revenue shortfalls to systemic corruption, tax leakages and unassessed transactions

A Narayanamoorthy

The TVK-led government released the *White Paper on the Fiscal Management of Tamil Nadu* on June 16, exposing the stark reality of the fiscal condition of the State.

Far from being a routine bureaucratic summary, this comprehensive document lays bare an accelerating structural imbalance, stretching from stagnant tax efforts to an unsustainable accumulation of public debt.

ACCUMULATION OF PUBLIC DEBT

At the heart of Tamil Nadu's immediate fiscal crisis is an unprecedented accumulation of public debt. Per the White Paper, the State's outstanding liabilities have effectively doubled over the last five years, sharply increasing from ₹5.13 lakh crore in April 2021 to a unprecedented ₹10 lakh crore by March 2026. For the 2026-27 fiscal, the projections indicate that this mountain of debt will increase further to approximately ₹10.71 lakh crore.

As a result, interest payments alone now consume about 23 per cent of total revenue receipts and a staggering 35 per cent of the State's Own Tax Revenue (SoTR). At ₹67,050 crore, the annual interest bill alone exceeds the State's total annual capital expenditure by approximately one-third.

Importantly, the White Paper underscores that while economic peers like Gujarat, Maharashtra and Karnataka

actively utilised the post-pandemic recovery window to consolidate their finances and pare down debt-to-GSDP ratios, Tamil Nadu's ratio remained structurally elevated at 28.3 per cent. This has locked in a long-term interest burden, with the State effectively borrowing just to fund current consumption and debt servicing rather than asset creation.

LEAKY REVENUE BUCKET

The most paradoxical finding in the State's fiscal paper is the collapse of its revenue mobilisation despite a highly robust underlying economy, including a highly diversified manufacturing and service track.

Yet, Total Revenue Receipts (TRR) have steadily tapered as a percentage of GSDP, descending from about 10 per cent in 2021-22 to 8.32 per cent in 2025-26.

The decline in the State's internal tax effort is particularly concerning. The ratio of SoTR to GSDP fell from 5.93 per cent in 2021-22 to 5.45 per cent in 2025-26, marking the lowest domestic tax effort recorded by the State in the past two decades. Had the State simply maintained its transient 2022-23 tax collection ratio of 6.33 per cent, it would have realised an additional ₹51,000 crore in revenue over the subsequent three years.

The White Paper openly attributes this revenue shortfall to systemic structural and administrative vulnerabilities. Systemic corruption,

REVENUES. Sluggish growth REUTERS

unchecked tax leakages and unassessed transactions within the Commercial Taxes Department have severely depressed absolute GST collections, leaving Tamil Nadu significantly behind economic peers like Karnataka and Gujarat.

Furthermore, a deep sectoral skew is also noticed. While the services sector drives 53.6 per cent of the State's economy, it yields only 37.8 per cent of its GST receipts. Additionally, compliance failures, stagnant mining royalties and artificially depressed stamp duty guideline values have similarly choked off internal revenue flows.

SQUEEZED CAPITAL FORMATION

With flattened revenue growth, the State budget has developed a structural rigidity. Committed expenditure (the mandatory outlays required to cover government salaries, pensions and interest payments) has ballooned to ₹1.89 lakh crore, absorbing an alarming

64.4 per cent of total revenue receipts. This is far higher than the ratios maintained by neighbouring States. When combined with non-discretionary statutory grants to local bodies and central matching shares, an astonishing 87 per cent of the State's revenue is entirely pre-committed before a single rupee can be assigned to new welfare policies or infrastructure projects.

Consequently, capital expenditure has dropped to just 1.44 per cent of GSDP and the capital expenditure-to-total expenditure ratio has fallen to 11.8 per cent. The White Paper warns that this sustained under-investment in public infrastructure risks damaging the State's long-term competitiveness.

In addition, the collective debt across these State-backed entities has mounted to ₹3.18 lakh crore, forcing outstanding State government guarantees to triple from ₹91,975 crore to ₹1,79,782 crore over a five-year period.

With elderly population (declining workforce) rising faster than in any other major State, Tamil Nadu will have to spend significantly more on healthcare, pensions and social support in the future.

Therefore, instead of announcing more freebies, the government must focus on structural measures that can reshape the fiscal health of the State.

Factoring in climate risk

Apropos 'Integrating climate finance into banking regulatory framework' (June 22), the proposal to establish the Reserve Bank Climate Risk Information System (RBCRIS) is an utmost need to strengthen risk mitigation measures while originating and delivering credit to fund economic activities. Among the factors that impact the quality of loan assets, volatile climate is a significant contributor. Therefore it is imperative to take into account and assess the risks to enable lenders

to foresee the likelihood and quantum of deterioration in the quality of the loans. While calculating the Expected Credit Loss, the proposed RBCRIS will be of much help to lenders to assess the provision requirements.

VSK Pillai

Changanassery, Kerala

Monsoon woes

Apropos, 'Monsoon worries' (June 22). India's monsoon has commenced under a troubling cloud, registering a 46 per cent rainfall

deficit. This is not a marginal aberration but a substantial meteorological setback with far-reaching economic consequences. El Nino conditions and sluggish wind circulation have constrained precipitation, jeopardising agricultural productivity at a time when fertilizer supplies remain under pressure. The implications extend beyond farms, threatening higher food inflation, depressed rural incomes and weakened consumption demand. As climate volatility increasingly

supplants historical weather patterns, policymakers must prioritise irrigation expansion, water stewardship and climate-resilient agriculture.

N Sadhasiva Reddy

Bengaluru

Inflationary paradox

This refers to 'External sector resilience and domestic concerns' (June 22). The RBI's simultaneous moves to attract foreign inflows through FCNR(B) incentives and stabilise the rupee through dollar

sales reflect the genuine complexity of managing external sector resilience while keeping domestic inflation contained. The West Asia stabilisation, if it holds, provides some relief on crude, but the El Nino forecast adds uncertainty on the agricultural side. A gradual approach to interest rate normalisation, combined with targeted supply-side interventions for food commodities, would help navigate this difficult combination.

QUICKLY.

Markets recover most of Friday losses on optimism

Mumbai: Markets bounced back on Monday, recouping a large part of Friday's losses as easing geopolitical tensions and softer crude oil prices lifted investor sentiment. The recovery, however, came with a caveat — trading was narrow and volumes thin, with NSE cash market turnover running about 8 per cent. The Sensex closed at 77,094.07, up 291.17 points or 0.38 per cent, while the Nifty 50 settled at 24,102.90, a gain of 89.80 points or 0.37 per cent. The Nifty opened with a gap-up of over 93 points and briefly touched an intra-day high of 24,168, but trimmed gains through the second half as profit booking kicked in, pulling the index nearly 88 points off its peak. The session's intra-day range of just 95 points was the narrowest since January 1, 2026. **OUR BUREAU**

Keynes' grand fall: InGovern spots gaps in governance, lack of vision on guidance

CHIPS DOWN. Guidance cuts, disclosure lapses and weak cash conversion overshadowed 33% revenue growth

Our Bureau
Mumbai

Governance concerns need not involve fraud to erase billions in market value. Keynes Technology's nearly 60 per cent decline from its October 2025 peak shows how repeated guidance revisions, disclosure lapses, weak cash conversion and stretched working capital can undermine investor confidence despite strong revenue growth, according to a report by corporate governance advisory firm InGovern.

According to the report, investor focus gradually shifted from the company's growth prospects to "cash conversion, execution discipline, disclosure quality and governance oversight."

During FY26, Keynes reported revenue of ₹3,626 crore, up 33 per cent year-

on-year, EBITDA of ₹574 crore with a margin of 15.8 per cent and profit after tax of ₹364 crore. The company also maintained an order book of over ₹8,000 crore.

However, the report said that the company materially missed its original FY26 revenue guidance of ₹4,500 crore after successive downward revisions during the year. Working capital stood at 125 days at the end of FY26, against the company's earlier guidance of 85 days.

"A key area of investor focus was the gap between the original FY26 revenue guidance of ₹4,500 crore and the reported FY26 revenue of ₹3,626 crore," the report said.

ACCOUNTING SCRUTINY Multiple downward revisions over the year indicate that management's forward visibility was weak, or its

guidance discipline was too aggressive for the underlying cash and execution reality.

The report also revisited the disclosure-related developments that surfaced in December 2025 following observations made by Kotak Institutional Equities on related-party transaction disclosures, inter-company balances and accounting treatment for acquisitions and intangible assets.

Keynes had clarified that certain transactions were in-

advertently omitted from standalone financial statement disclosures but were eliminated appropriately during consolidation and that the issue related to disclosure and presentation rather than recognition of the underlying transactions.

InGovern said the episode showed "the importance of maintaining consistency and completeness across statutory filings", adding that it increased stakeholder focus on financial reporting con-

trols and review processes.

The developments led to Crisil placing certain bank facilities under "rating watch with developing implications", citing accounting and reporting-related observations along with working-capital intensity, while CARE Ratings reaffirmed its stable outlook, recognising the company's operating capabilities and market position.

Despite the governance concerns, Keynes continues to retain attractive long-term positioning through its differentiated EMS and OSAT capabilities, the report said.

Going forward, it said rebuilding investor confidence will depend on demonstrable improvement in working-capital efficiency, cash-flow generation, disclosure controls, predictable execution and transparent communication.

AMFI rejig expected to see a marginal rise in large-cap cut-off, drop in mid-cap bar

Our Bureau
Mumbai

The large-cap cut-off in the semi-annual AMFI stock reclassification is set to increase marginally to ₹1.07 lakh crore against ₹1.05 lakh crore in December, according to Nuvama Alternative Research report.

However, the threshold for mid-cap classification will fall to ₹32,800 crore against ₹34,800 crore logged last December.

The divergence in large-cap and mid and small-cap was largely due to the skewed market movement, with quality stocks finding favour after the recent fall in valuation.

Vedanta has split its business into four new companies and listed them on the exchanges. Based on current valuation, Vedanta Aluminium (₹1,84,222 crore) will qualify as large cap, while Vedanta Power (₹16,091 crore), Vedanta Oil & Gas (₹13,765 crore) and Vedanta Iron & Steel (₹8,646 crore) will fall under small cap.

NEW LARGE-CAPS

The potential large-cap entrants include BSE, Vodafone Idea, Hitachi Energy, Jindal Steel, Indian Bank, Indus Towers, Billionbrains Garage Ventures, BHEL and Vedanta Aluminium.

Companies that will be downgraded from large-cap to mid-cap will be Lodha Developers, Indian Hotels Co, Mazagon Dock Shipbuilders, Max Healthcare Institute, LG Electronics India, Dr Reddy's La, Siemens Energy, Bosch and Hero Motocorp.

The potential mid-cap entrants include Hindustan Copper, NLC India, Aia Engineering, Ajanta Pharma, Aster DM Healthcare and

Sona BLW Precision, while companies that will be downgraded from Mid Cap to Small Cap are Keynes Technology, SJVN, Cholamandalam Fin Holdings, Physicswallah, Global Health and Crisil.

New small-cap entrants could be Bharat Coking Coal, Fractal Analytics, CMPDI, Clean Max Enviro, Shadowfax, Amagi Media Labs, Sedemac Mechatronics, Powerica, Kvality Walls, Omnitech Engineering, Aye Finance, Sai Parenteral, PNGS Reva Diamond, CMR Green Tech and Hexagon Nutrition.

Sriram BKR, Senior Investment Strategist, Geojit Financial Services, said while the cut-off market cap of large- and mid-cap companies has moved differently, it would be interesting to see how their average and median market caps have been in this period to get a fair idea of the respective segments' performance.

Going by the Market cap Index ratios to the broader market (Nifty-500), as of May, large-caps are at a discount of 5.4 per cent, mid-caps are at a premium of 16 per cent and small-caps are at a premium of 8 per cent as compared to their five-year averages, said Sriram.

Nikunj Saraf, CEO, Choice Wealth, said, "The broad-brush exposure to mid and small-cap segments without earnings conviction is a risk that the current macro environment does not reward."

Sri Priyanka Geo Commex's ₹94.5 crore IPO opens tomorrow on NSE-SME

Our Bureau
Chennai

Sri Priyanka Geo Commex Ltd (SPGCL), a Chennai-based diversified commodities company engaged in the supply of barite, fluorspar, copper cathodes and the manufacturing of rice bran oil, plans to launch its ₹94.5 crore initial public offering (IPO) on the NSE Emerge platform on Wednesday. The company is promoted by Nuthalapati Venkata Sai Shiv Prasad and his family members, Nuthalapati Ravi Kumar, Nuthalapati

Srikrishna and Nuthalapati Veera Vikram. The IPO, an entirely fresh issue of up to 44.58 lakh shares, comes with a price band of ₹207-212 a share. The issue will close on June 29.

FUND ALLOCATION

The funds are to strengthen working capital, repay debt and support the expansion of its overseas operations, according to the Red Herring Prospectus.

Of the IPO proceeds, ₹47 crore will be invested in wholly-owned Singapore subsidiary Geo Min Commodities Pte Ltd for work-

ing capital requirements, ₹16.5 crore will fund working capital needs of the parent company, and ₹10 crore will be used towards repayment or prepayment of borrowings. The remaining funds will be used for general corporate purposes.

Post listing, promoters will hold 72.54 per cent of the company's equity, while public shareholders will own 27.46 per cent. The company reported revenue from operations of ₹248 crore and profit after tax of ₹18 crore for the nine months ended December 2025.

SEBI moots consolidating technology norms across market institutions

Our Bureau
Mumbai

The Securities and Exchange Board of India (SEBI) on Monday proposed a comprehensive overhaul and consolidation of information technology-related regulations applicable to market infrastructure institutions to simplify compliance requirements, remove redundancies and ensure consistency.

SEBI has proposed merging provisions of the master circulars for stock exchanges and clearing corporations with those of commodity derivatives, while also creating

a consolidated circular covering common IT-related areas such as cyber security, cyber resilience, annual system audits, business continuity planning and disaster recovery, capacity planning and technology advisories.

SEBI has suggested removing repeated references to the Cyber Security and Cyber Resilience Framework from various sections of existing circulars, while also harmonising capacity planning requirements across exchanges, clearing corporations and depositories.

"In general, if actual capacity utilisation of any component of stock exchanges

and clearing corporations exceeds 75 per cent of the installed capacity, immediate action shall be taken by the MII, such as fine-tuning the applications/systems or enhancing the capacity. SCOT shall oversee such action taken by the MII," it said.

The regulator has further proposed merging provisions relating to co-location and co-hosting facilities in the commodity derivatives segment with the broader technology framework applicable to stock exchanges, while retaining segment-specific requirements.

Public comments have been sought until July 13.

Waterways Leisure Tourism : Expensive ticket, uncharted oceans ahead

Kumar Shankar Roy
bl.research.bureau

Domestic ocean cruise operator Waterways Leisure Tourism (Cordelia Cruises) is aiming to raise ₹585 crore via its IPO, which opens on June 23. It is a completely new issue, with no offer-for-sale component. The company is promoted by NRI Rajesh Chandumal Hotwani and Global Shipping and Leisure. The promoters hold a 99.27 per cent stake pre-IPO and would hold about 89 per cent post-IPO. The company proposes to use about \$50.4 million, or ₹480

IPO ANALYSIS.

crore, from the IPO proceeds to fund deposits, advance lease rentals and charter hire payments through its step-down subsidiary, Baycruise Shipping and Leasing (IFSC). The remaining IPO proceeds are earmarked for general corporate purposes.

Baycruise IFSC, incorporated in November 2024 and based in GIFT City, will lease two vessels, Norwegian Sky and Norwegian Sun. The total lease rental for each vessel is \$160 million, or about ₹1,523 crore, per RHP. The company has already paid a total of \$22 million from internal accruals (\$16 million for Norwegian Sky and \$6 million for Norwegian Sun). The balance of lease rentals would have to be paid over time by the company.

The IPO is a bet on whether a one-vessel operator can quickly become an efficient three-vessel platform without hurting occupancy, yields or margins. The small-cap company has first-mover advantages in a niche domestic cruise market, but the issue is aggressively priced, even assuming successful execution rather than current earnings.

The risk-reward, therefore, appears better suited to investors who can wait for post-listing evidence of demand absorption and cash-flow stability.

BUSINESS

Waterways Leisure Tourism currently runs a single cruise vessel, the 35-year-old 'MV Empress' with a passenger capacity of 2,005 guests (796 cabins), which has been in operation since September 2021. The company has outsourced cruise opera-

IPO rating

Category	Rating
Business	★★★★★
Financials	★★★★★
Management	★★★★★
Valuation	★★★★★
Overall	★★★★★

Rankings 1 to 5, 1 denoting lowest and 5 highest

Offer period	June 23-25, 2026
Issue size	₹585 cr
Price band	₹769-808
Market cap	₹5,850 cr (at upper end of the band)

One of the main reasons EBITDA margin decreased in FY26 was a structural change in vessel charter arrangements. Consequently, major operational costs previously borne by the promoter were recorded as direct operating expenses in FY26.

As of FY26, it had short- and long-term borrowings and lease liabilities totalling ₹118 crore, and cash & cash equivalents totalling ₹63 crore.

EXPANSION

Cordelia Cruises accounts for nearly 79 per cent of the market share in value terms in FY25, per RHP. However, the overnight ocean and coastal cruise industry in India was estimated at just Rs 732 crore, a niche and small market. The market grew at an 8 per cent CAGR over the FY20-25 period, partly affected by Covid disruptions. Still, the future growth projection of 20-25 per cent for the FY26-31 period mentioned in the RHP is quite ambitious, even if we account for the company's expansion plan and government initiatives to boost cruise tourism in India. Total cruise passenger CAGR for CY23-25 showed just 1.2 per cent growth.

That being said, the company, to accommodate demand and offer more diverse itineraries, is adding two vessels, Norwegian Sky (2,004 guests/1,002 cabins) and Norwegian Sun (1,936 guests/968 cabins) to its fleet. It intends to introduce cruises aboard Norwegian Sky by FY2027 and Norwegian Sun by FY2028. The new vessels are around 23-25 years of age. The

vessels are currently pending delivery and are not yet operational.

The two new vessels are broadly the same size as MV Empress. So the business case is simple - replicate the current ship economics across two more ships. Revenue will almost certainly rise if new vessels are commercialised. The risk is whether occupancy and margins will hold. At some point over the next 18-20 months, the current capacity will triple, but lease rentals will also jump, and the company will have to absorb this supply with demand, or else revenue yields will get compressed.

It remains to be seen how the company handles this extra capacity. Note that a new cruise vessel needs a minimum of 12-18 months, or one to two full sailing seasons, to reach an 80-90 per cent occupancy on a sustainable basis.

VALUATION

At the upper end of the IPO price band, Waterways Leisure Tourism is priced at 112x P/E based on FY26 reported PAT (Rs 52 crore). Shares of much larger global peers trade at 12-36x P/E based on the trailing twelve-month period, per Bloomberg. On an EV/EBITDA basis, the issue is similarly demanding at 50x FY26 EV/EBITDA (45x post-issue cash-adjusted) versus 9-24x for global cruise peers. Waterways Leisure Tourism is also expensive compared to domestic listed entertainment parks and hotel stocks.

While one can argue that, at FY26 unit economics, a mature three-vessel fleet could generate around ₹1,700-1,900 crore in revenue, and EBITDA could move towards ₹325-375 crore (19-20 per cent margin) by FY29-30. But current valuations ignore execution risks. Investors are being asked to pay a valuation for it today as if execution would be absolutely clean and smooth.

A better approach is to track the company after listing and watch three things: occupancy after Norwegian Sky enters service, revenue per passenger cruise day, and cash strain from lease commitments. If these hold up, the business may become investable later. At the IPO stage, the valuation already prices in a successful three-vessel journey, while execution risk lies ahead.

TODAY'S PICK.

Gabriel India (₹1,242): BUY

Gurumurthy K
BL Research Bureau

The short-term outlook has turned bullish for Gabriel India. The 4 per cent rise has taken the share price well above the key resistance level of ₹1,210. It also confirms an inverted head and shoulder pattern on the chart. Moving average indicators on the daily chart also signal bullishness. Support is now in the ₹1,210-₹1,200 region. Fresh buyers are likely to come into the market and limit the downside. Gabriel India share price can rise to ₹1,500 in the coming weeks. Traders can buy Gabriel India shares now at ₹1,242. Accumulate on dips at ₹1,215. Keep the stop-loss at

IPO-bound Laxyo bags ₹200 cr order in Zambia

New Delhi: Laxyo Ltd, an integrated infrastructure and mining services company, on Monday said that it has expanded its operations in Africa and bagged a ₹200 crore contract in Zambia. The project, being executed through its subsidiary, Laxyo Evapeta Zambia Ltd, represents the company's first overseas raise-boring contract and currently accounts for 12.6 per cent of its total order book. **PII**

RBI net sold \$8.944 b in spot market in April

Mumbai: The Reserve Bank of India (RBI) net sold \$8.944 billion in the spot currency market in April, according to the central bank's monthly bulletin released on Monday. This is the second consecutive month of selling by the central bank amid pressure on the rupee. In March, the RBI sold \$9.758 billion in the spot currency market. On a gross basis, the central bank purchased \$16.225 billion in April, and sold \$25.169 billion, as per the bulletin. **PII**

Bankers expect RBI to issue FAQs on high-interest FCNR (B) deposits

CLEAR GUIDANCE SOUGHT. Regulatory ambiguity potentially putting banks at risk during inspections

K Ram Kumar
Mumbai

Raising interest rates on the limited period high interest rate FCNR (B) deposit scheme is only half the job for banks in their bid to attract foreign capital. The other half is answering customer queries and bankers' own anxiety to be on the right side of regulations with regard to such deposits.

Hence, bankers are expecting the Central bank to issue detailed FAQs (frequently asked questions) to address customer as well as their own concerns regarding mobilising resources under the limited period high interest rate foreign currency non-resident (bank) or FCNR (B) deposit scheme.

Non-resident Indian (NRI) customers' queries relate to whether their balances in a non-resident ordinary (NRO) and non-resident external

WOOLING FUNDS. Overseas Indians can send foreign earnings to NRE accounts for investments and family maintenance in India

(NRE) deposit can be routed into FCNR (B) deposits, which are now fetching attractive interest rates of 6-7 per cent thereabouts.

NRO deposits help NRIs manage income earned within India. Overseas Indians can also send their foreign earnings to NRE accounts for investments and family maintenance in India. Both deposits are denominated in rupees.

Bankers have their own queries in terms of allowing premature closure of NRI deposits in the backdrop of fresh FCNR (B) dollar de-

posits offering higher interest rates.

Offering leverage on a FCNR (B) deposit has emerged as a grey area. For example, a large Indian bank is offering its NRI customers, who are maintaining a FCNR (B) deposit of a minimum of \$1 million with it in India, a loan of nine times the deposit amount from its overseas branch. The total amount (\$1 million deposit and \$9 million loan) is parked as a FCNR (B) deposit with the bank.

Further, small and mid-sized banks, which do not

have overseas presence, are extending stand-by letter of credit (SBLC) to their FCNR (B) deposit customers so that they can approach select foreign banks for loans against the SBLC. Such loans, in turn, will be parked with Indian banks as FCNR (B) deposits.

Since there is regulatory ambiguity on providing leveraged facilities against FCNR (B) deposits, the Central bank should clearly spell out whether such arrangements are kosher, bankers said.

LEVERAGE FACILITY

Senior bank executives fear that if the RBI does not come up with requisite clarifications and banks go ahead and provide leverage facility to FCNR (B) depositors, they may get hauled over the coals during annual inspection if the central bank's inspection team considers such a facility as not in keeping with the regulations.

Bankers noted that providing leverage will require changes in banks' lending policy. "A change in lending policy will require board approval. Provision of a leverage against a FCNR (B) deposit will require sign-off from the risk management committee of the board. This may take some time," a senior executive with a public sector bank said.

FOREIGN CAPITAL

In a bid to attract foreign capital, RBI Governor Sanjay Malhotra had announced on 5 June that RBI will be bearing the full hedging cost on fresh 3-5 year FCNR (B) deposits raised by banks up to 30 September 2026.

To ensure that banks go the full nine yards in mobilising NRI deposits by offering higher interest rates, RBI exempted fresh FCNR (B) and NRE deposits from statutory reserve ratios such as cash reserve ratio and statutory liquidity ratio.

RBI chief calls MSMEs key partners in India's growth, pushes digi infra

Our Bureau
Kochi

Sanjay Malhotra, RBI Governor

Reserve Bank of India (RBI) Governor Sanjay Malhotra has urged banks and financial institutions to view micro, small and medium enterprises (MSMEs) not merely as beneficiaries of regulatory mandates or government schemes, but as long-term business partners, whose growth drives both economic and social development.

Addressing an awareness programme for MSME entrepreneurs in Kochi on the occasion of the International Day of MSMEs, the RBI Governor called on banks to leverage India's digital public infrastructure, including the TREDS, account aggregator and ULI frameworks, to build a more inclusive and efficient credit ecosystem.

CRITICAL ROLE

Emphasising the critical role of small businesses in achieving India's development goals, Malhotra described MSMEs as the "nursery of entrepreneurship" and stressed the need for a financial system that effectively serves enterprises across districts and towns.

While acknowledging the persistence of a significant credit gap, he expressed confidence that ongoing policy initiatives and technological interventions would help improve access to finance.

Highlighting the sector's contribution to the economy, the Governor said MSMEs account for nearly 31 per cent of India's GDP, 45 per cent of manufacturing output, almost 50 per cent of exports and provide employment to around 33 crore people, making them the country's largest source of employment outside agriculture.

CALL FOR PROACTIVITY Malhotra encouraged entrepreneurs to invest in technology, innovation and research, actively participate in digital lending platforms, engage with RBI through consultation mechanisms and register on the Udyam portal to benefit from gov-

ernment support schemes.

He reiterated that the RBI would continue strengthening financial infrastructure, reducing barriers to credit access and working closely with stakeholders to enhance the growth and resilience of MSMEs nationwide.

Around 140 MSME entrepreneurs from across Kerala attended the programme, which focused on improving financial literacy, expanding access to formal credit and facilitating interactions among entrepreneurs, banks and government agencies.

Referring to Kerala's entrepreneurial ecosystem, the Governor said the State and Kochi exemplify the dynamism of the MSME sector, drawing strength from traditional industries such as coir, spices and tourism, while emerging as hubs for innovation in information technology, electronics, fintech and clean energy.

Praveen Kumar Vasantha Ramachandran, Regional Director for Kerala & Lakshadweep, RBI, Thiruvananthapuram; R Giridharan, CGM, FIDD, RBI, Central Office; and Pramod Kumar, GM (O-i-C), RBI, Kochi, addressed the inaugural session.

AI will be all-flash, hard disks are not fast enough: Everpure CEO

bl.interview

Sanjana B
Las Vegas

Everpure expects AI to accelerate the shift from hard disk drives to flash storage, with Charles Giancarlo, Chairman and CEO, saying AI workloads will be "all flash" because traditional disks cannot deliver the speed required for next-generation applications. The company is expanding its push into hyperscale data centres and betting on reliability, lower power consumption and smaller footprint of flash technology to drive growth.

Edited excerpts:

Could you highlight some developments you believe are noteworthy? We've become the number one provider of all things flash storage and can now support all our customers' storage needs, not limited to a product or category. This

year, we are the largest investor in data storage from an R&D standpoint. We'll probably ship as much flash storage as all of our competitors combined, while also growing faster than any other player. Customers need to consider architecting their IT environment differently. For the last 30 years, IT environments have been designed around applications. For agents to be valuable, they need data from different applications.

AI has highlighted that it's impossible to share data with many vendors. We're introducing a new type of data architecture. With data primacy, as opposed to applications, the data is at the centre. The company now defines the environment, because they define the data. After all, context matters. The other capability we're introducing is the ability to extract that understanding and embed it with the data, so the data is self-describing.

We want the enterprise to have shared context, which

We'll probably ship as much flash storage as all of our competitors combined, while also growing faster than any other player

CHARLES GIANCARLO
Chairman and CEO, Everpure

gives it the optionality between the vendors they use to process it and the workflow. Because today, the data is stuck with the vendor, and not the customer.

As you expanding beyond hardware into data management and software, how significant is the revenue contribution from the latter?

It's still early. Data storage is currently over 90 per cent of our revenue. But if we do a good job of saving our customers' time, effort, money,

and helping them drive their business, we'll be rewarded. To some extent, this allows customers to have fewer copies of their data, which is better from a labour standpoint since they don't require as much equipment. More importantly, it reduces their attack surface from a cyber standpoint. If the customers can make better use of their data, we'll benefit too.

How significant is India to Everpure's global growth strategy? It's one of the highest growth areas. We came into India

rather late, about 8-10 years ago. Once we started investing in India, from an R&D and sales standpoint, about five years ago, it has grown substantially. Part of the reason is that we were flash only and by far the most expensive then. That's why it took us longer to enter the market. Indian buyers at that time were much more price sensitive, but this has evolved a lot.

The AI boom is creating massive infrastructure demands, particularly around power and water usage. What is the opportunity for Everpure?

It's huge. We're beginning to sell to hyperscalers. Typically, we sell about 6-8 exabytes a year to our enterprise customers. We will sell many times that to the hyperscale customers because 90 per cent of their storage is hard disk. We are less than one-tenth of the power space of a hard disk. It's incredibly dense and highly efficient

storage. Last year, flash had almost the same total cost of ownership as a hard disk, which had been cheaper. This year, however, all the costs have gone up. While we're better than SSDs, it may take a few more years before we can replace hard disks from a price-performance standpoint.

As demand for flash storage and AI infrastructure grows, are you hiring more to keep pace?

I never understand companies that think AI will take over their jobs. If you're growing, you need more people. AI might reduce costs and allow you to do things faster, but it won't come up with new ways of doing them. We continue to hire and are growing as a company. As we create new areas, we need smart people who understand that environment and can innovate.

The correspondent was in Las Vegas at the invitation of Everpure

Property sector sees turnaround as Iran-US tensions ease

Our Bureau
Mumbai

Real estate developers and consultants expect improved execution and reduction in construction costs in the second half of CY 2026 following a peace understanding between Iran and the US. "As geopolitical tensions begin to ease, we expect greater stability in energy prices, shipping costs and raw material availability. This should support smoother project execution, improve cost visibility and create a more predictable operating environment for the sector over the coming quarters," said Ashish Raheja, Managing Director and CEO of Raheja Universal.

The conflict between the two countries had pushed up the prices of aluminium, steel and other commodities. While there are green shoots such as easing of freight rates, cost pressure will ease gradually. According to Anuj Puri, Chairman of Anarock Group, any meaningful relief on construction inputs — steel, PVC pipes, cables and petrochemical linked materials — will take 4-8 weeks to percolate through supply chains. "Developers should not expect an overnight reset. The benefits will be incremental, but the direction of travel will be positive for project execution timelines in H2 2026," Puri added.

Around 5.4 lakh homes are due for delivery this year, and 70 per cent of those are in Mumbai, Pune and Bengaluru.

AbbVie to buy Apogee
Therapeutics for \$10.9b

AbbVie Inc agreed to buy Apogee Therapeutics Inc for \$10.9 billion, one of its largest deals in recent years, to bolster its anti-inflammatory portfolio amid growing competition for its best-selling drug. The acquisition will give AbbVie the size and expertise to address some of the most complex diseases in immunology, the drugmaker said on Monday. The all-cash deal reflects a roughly 49 per cent premium to Apogee's closing price of \$90.38 on Thursday. BLOOMBERG

Gas export terminal blast
kills 13 people in Qatar

Dubai: Qatar's Energy Minister said on Monday that an explosion killed at least 13 people at a key gas export terminal. Saad Sherida al-Kaabi gave the toll during a news conference in Doha, Qatar's capital, and described that the explosion was related to an industrial accident. The blast at the Ras Laffan industrial area could cause further chaos in global energy markets. Qatar remains one of the world's top natural gas producers. Qatar shut down its production after Iran shuts down Hormuz. PTI

Vance hails progress in Iran talks as US waives oil sanctions

DEAL ADVANCES. US V-P says Tehran should use unlocked funds to buy American goods

Bloomberg

POSITIVE STEP. US Vice President JD Vance speaking to the media after the talks REUTERS

US Vice President JD Vance said talks with Iran over the weekend were “very, very good,” as the sides attempt to reach a peace deal within two months and formally end a war that’s reverberated through the global economy. His comments echoed those from Iranian officials after all-night discussions in Switzerland, with Vance leading the US team and Iran’s Speaker of Parliament, Mohammad Bagher Ghalibaf, doing the same for the Islamic Republic.

Vance, speaking to reporters, dismissed criticism of last week’s interim agreement between the US and Iran and said it would bring relief to Americans in the form of lower energy prices. He added that Tehran would buy American soy, wheat and corn with frozen funds it may be allowed to use as part of the deal.

“If Iranian assets are ever unfrozen, they’re going to go to make American farmers richer and to feed the Iranian people,” Vance said, explaining that the US and Qatar would have approval over the process.

It’s unclear if Iran agrees and the memorandum of understanding it signed with the US last week states that the Iranian central bank will

be able to designate the beneficiaries of unfrozen funds.

Vance spoke just before the US Treasury waived sanctions for some Iranian oil and petroleum products, a condition of the MoU. Iran has ramped up oil exports in recent days thanks to the US lifting a naval blockade that was squeezing the Islamic Republic’s economy.

REMAINING OBSTACLES Plenty of obstacles remain in the talks, which will continue throughout this week at the Swiss resort of Bürgenstock. They include Israel’s war in

Lebanon against Hezbollah, an Iran-backed militant group. At one stage on Sunday, Iran said it would suspend talks — but never actually did — after US President Donald Trump threatened military action against the Islamic Republic over its funding of proxy groups in the Middle East.

On Monday, Iranian Foreign Minister Abbas Araghchi said the mediators, Qatar and Pakistan, had managed to ease some of the tensions over Lebanon. He added Iran was beginning to see financial benefits from last week’s agreement.

“Tireless Pakistani and Qatari mediation has delivered major progress to end Lebanon War,” Araghchi said on X. “Oil and petrochem exports are waived, blockade lifted, some frozen assets released, and major reconstruction & development plan launched for Iran.”

Iran and the US have set up a communication line to “avoid incidents and miscommunication” related to maritime traffic through the Strait of Hormuz, where shipping volumes have picked up, even if they’re still far off pre-war levels.

Burnham poised for power in UK after PM Starmer agrees to step down

Bloomberg

Andy Burnham appears set to become the UK’s seventh Prime Minister in a decade after Keir Starmer set out a timeline for his own departure and potential rivals backed a quick transition to the popular Manchester politician.

Burnham’s path to 10 Downing Street, which only months ago seemed remote, suddenly cleared on Monday when Starmer announced that he would relent to pressure and step aside as leader of the Labour Party with “good grace”.

The schedule he set out could see Burnham, 56, installed as Prime Minister as soon as July 17, if no other challenger surfaces.

“I will put myself forward as part of this process,” Burnham wrote on X shortly after Starmer announced his decision in Downing Street. “As we move forward, our priority must be to work together to get the country back to where we all want it to be.

People want to see progress on economic growth, cost of living, public services, housing and opportunities for the next generation.”

Moments later, a chief rival for the role, former Health Secretary Wes Streeting, issued his own statement backing Burnham. “We could spend the summer exaggerating small differences, or we can roll up our sleeves and help him deliver the

Keir Starmer

Andy Burnham

change our party and our country needs,” Streeting said. “That is the choice I am making.”

The episode capped a dramatic fall for Starmer after leading the left-leaning Labour to a landslide general election win in 2024, just five years after its worst defeat since 1935. The beleaguered premier was beset by record low favourability ratings and a string of missteps, unpopular policy decisions and costly u-turns.

LABOUR LOSSES

Meanwhile, Nigel Farage’s populist Reform UK surged to the top of national polls and made huge gains in local elections last month, alongside the left-wing Greens, with Labour losing almost 60 per cent of the seats it was defending.

That resounding defeat crystallised the rebellion within Labour’s ranks and prompted about a quarter of the party’s 403 MPs to call on the premier to go. After that, everything began to break for Burnham, the Mayor of

Greater Manchester, who had twice previously sought the Labour leadership and lost.

A Member of Parliament from the outskirts of Manchester stepped down, creating the vacancy he needed to return to the House of Commons.

Starmer, weakened and isolated, decided not to block him from seeking the seat in Makerfield.

Burnham’s resounding victory over Reform’s candidate in the contest on Thursday made Starmer’s efforts to cling on to power increasingly untenable, especially as Farage’s party had taken all seats available on the same turf in local elections just six weeks earlier. With it, the self-styled “king of the north” proved he could bridge voter expectations in an increasingly fractured and polarised electorate.

Starmer said nominations for his successors as Labour Party would close on July 16 with any contest decided by September 1.

Former US Fed chair Greenspan dead

Reuters

Alan Greenspan (1926-2026)

Alan Greenspan, hailed as the greatest Federal Reserve Chairman when he retired in 2006 but derided for a severe financial crisis that followed barely two years later, died on Monday aged 100, his wife said.

Greenspan, who exerted a powerful influence on the US economy during his tenure at the helm of the Fed from August 1987 to January 2006, died at his home from complications of Parkinson’s disease, Andrea Mitchell said in a statement.

“He was a giant of a man who helped shape the US economy for decades under presidents of both parties, but was always honest in acknowledging his mistakes,” Mitchell said.

“He will be remembered for his brilliance and his kindness. Being his life partner was the joy of my life,” she added.

ECONOMIC ‘MAESTRO’ Greenspan oversaw the second-longest economic expansion in US history, an uninterrupted decade of growth from March 1991 to March 2001. His decision to let the economy run — despite pressure to raise interest rates against an infla-

tion threat that never materialised — helped foster years of US prosperity and earned him rock star status as an economic “maestro.”

His intuition in that moment is still a touchstone for policymakers, and has been referred to by former Fed Chair Jerome Powell as an example of how judgment can sometimes outperform technical models of the economy.

However, the one-time jazz musician’s monetary policy acumen later came into question as critics attacked his policies for fueling a series of asset price bubbles and laying the groundwork for the 2007-2009 financial crisis.

EARLY YEARS

Greenspan fell in love with

maths through an obsession with baseball statistics, won quick plaudits for a strong response to the Black Monday stock market crash of 1987, just two months after he took office.

He also steered the US economy through the 1990-91 recession, the 1997-1998 Asian and Russian financial contagion, the collapse of the dot-com stocks bubble in 2000, and the turbulent economic aftermath of the September 11, 2001, attacks.

Along the way, biographer Sebastian Mallaby detailed, he became a consummate Washington power player able to manoeuvre presidents and cabinet secretaries into making the decisions he felt were best, sometimes without them realising who pulled the strings.

He was 80 when he left the Fed in 2006 but moved smoothly into a new career as a consultant and adviser with his own firm, Greenspan Associates, offering insights on where he thought the economy was going for big fees.

Greenspan was often referred to as the second most powerful person in the country, after the president, because of the central bank’s ability to influence the economy through changes in short-term interest rates.

Mumbai

Tata Motors’ decision to raise commercial vehicle prices by up to 2.5 per cent from July 1 comes at a delicate time for the sector.

While manufacturers continue to grapple with elevated input costs, logistics companies say repeated truck price increases are becoming harder to absorb, particularly when freight rates are rising at a much slower pace.

The move by India’s largest commercial vehicle manufacturer follows a 1.5 per cent increase implemented in April and could set the tone for rival truck and bus makers including Ashok Leyland, Eicher Trucks and Buses and Mahindra & Mahindra, all of which followed Tata’s earlier pricing action.

Compared with pre-April prices, the cumulative hikes add nearly ₹1.2 lakh to the cost of a ₹30 lakh truck, increasing replacement costs by about ₹6 lakh to ₹12 lakh for fleet operators buying five to ten vehicles, a typical order size for many small and mid-sized transporters.

For large fleet owners purchasing more than 100 trucks, the impact is sub-

SETTING THE TONE. Tata Motors decided to raise commercial vehicle prices by up to 2.5 per cent from July 1

stantially higher. The latest increase takes the cumulative price hikes to roughly 4 per cent within a quarter.

GROWTH FOCUS

The move is notable because Tata Motors Commercial Vehicles had signalled as recently as May that it would prioritise growth over margin protection.

“We are working on a cost-management agenda to protect growth momentum and avoid disrupting demand,” Girish Wagh, Managing Director and CEO of Tata Motors CV, told analysts on May 14.

The recent increase suggests those cost-management measures may no longer be sufficient to offset higher raw-material costs, particularly steel, aluminium and copper. For an industry that has largely relied on in-

ternal efficiencies and selective price increases to protect profitability, Tata’s latest move signals that the room for cost absorption may be narrowing.

Tata’s move will be closely watched across the industry given its roughly 35 per cent share of the domestic commercial vehicle market.

Historically, pricing actions by the market leader have often been followed by competitors seeking to protect profitability and avoid margin erosion. That pattern was visible after Tata’s April

increase, when Eicher Trucks and Buses, Ashok Leyland and Mahindra & Mahindra announced their own price hikes.

The challenge for rivals now is whether market conditions can support another round of increases. While raw-material costs remain elevated, demand growth has become less predictable, making aggressive price hikes harder to execute.

This pricing action also comes amid signs of moderation in commercial vehicle demand. According to FADA data, commercial vehicle retail sales declined in May from the previous month, reflecting continued caution among fleet operators and transport companies.

“Freight rates have gone up only around 5 per cent, but our overall operating costs have increased by nearly 20 per cent,” said Reema Jogani, Director of Reema Transport Pvt Ltd, which operates a fleet of more than 200 vehicles

sourced from Tata Motors, Eicher, Ashok Leyland and Mahindra.

If vehicle prices continue to rise across the industry, replacement decisions could become increasingly difficult for many operators. For fleet operators, however, the concern is different. After successive rounds of vehicle price increases, many are questioning whether freight rates can rise fast enough to justify fresh investments in capacity.

India in talks to sell BrahMos missile to UAE

Reuters

New Delhi

The government is in talks with the UAE to sell some of its flagship defence systems, including the supersonic cruise missile BrahMos, four Indian sources said, as the Gulf nation steps up arms procurement following the war in West Asia.

The discussions, which have not been previously reported, include the potential sale of India’s air defence system Akashteer, two sources with direct knowledge of the matter told Reuters. “UAE has shown interest for a number of our weapon systems including BrahMos and Akashteer. The talks between India and UAE are at initial stages and are progressing fast,” said a third source with direct knowledge of the matter.

Indian officials and the UAE Foreign Ministry did not respond to requests for

comment. BrahMos, jointly developed by India and Russia, is among the world’s fastest cruise missiles and can be launched from land, sea and air platforms, while Akashteer is a fully automated air defence system developed by Bharat Electronics Ltd and the Indian Army.

The UAE is considering buying defence equipment from India and other sources after the Gulf nation was heavily attacked by Iran during the war.

Before clinching any BrahMos sale to the UAE, India would require Russia’s approval, as the 290-km range missile is jointly developed.

NOTICE FOR THE ATTENTION OF SHARE HOLDERS

Dear Member(s),

1. It is hereby informed that the 15th Annual General Meeting of the Company will be convened on Wednesday, the 5th August 2026 at 3.00 P.M. to transact the business as set out in the AGM Notice, through Video Conference ("VC") / Other Audio Visual Means ("OAVM") in compliance with the applicable provisions of the Companies Act, 2013 and Rules framed thereunder and the SEBI (Listing Obligations and Disclosure Requirements) Regulations, 2015 read with Ministry of Corporate Affairs (MCA) Circulars & SEBI Circulars without the physical presence of the Members at a common venue.

2. The Notice of the 15th AGM and Annual Report including the financial statements for the year ended 31st March 2026 ("Annual Report") will be sent only by email to all those Members, whose email addresses are registered with the Company or with their respective Depository Participants ("Depository"), in accordance with MCA and SEBI Circulars. Members can join and participate in the AGM through VC / OAVM only. The instructions for joining the AGM and the manner of participation in the remote electronic voting or casting vote through the e-voting system during the AGM by shareholders holding shares in dematerialized mode, physical mode and by shareholders who have not registered their e-mail addresses will be provided in the Notice of the AGM. Members participating through the VC / OAVM shall be counted for the purpose of reckoning the quorum under section 103 of the Companies Act, 2013. The Notice will also be made available on the websites of the Company, www.pricol.com and also on the website of Stock Exchanges, BSE Limited(www.bseindia.com) and National Stock Exchange of India Limited (www.nseindia.com) and on the website of National Securities Depository Limited (NSDL) (agency for providing the Remote e-Voting facility) www.evoting.nsdl.com.

3. Members holding shares in demat form are requested to update their e-mail address, bank details etc., with their Depository.

4. Members who have not registered their email addresses with the Company / Depository can obtain soft copies of the Notice of the 15th AGM, Annual Report and / or login details for joining the AGM through VC / OAVM including e-voting, by sending scanned copy of the following documents by email to "einward@integratedindia.in".

a) signed request letter mentioning your name, folio number, complete address, email address to be registered;

b) copy of the share certificate (front and back); / Client Master copy.

c) self-attested copy of PAN; and

d) self-attested copy of Driving Licence / Passport / Bank Statement / AADHAR, supporting the registered address of the Member

5. The Board of Directors has not recommended final dividend for 2025-26. To receive credit of future dividends to the bank account through ECS (Electronic Clearing Service), holders of shares in physical form are requested to provide details of account number, name of bank and branch and address to our RTA "einward@integratedindia.in". For Shares held in demat form Bank account particulars are to be informed directly to your DP. Also, as dividend income is taxable in the hands of shareholders effective 1st April 2020, please update your residential status, PAN & category as per Income-Tax Act with your DP or our RTA.

6. The above information is being issued for the information and benefit of all the Members of the Company and in compliance with the MCA and SEBI Circulars as stated above.

Gold gains on encouraging US-Iran peace talks

Gold rebounded on Monday supported by positive progress in US-Iran talks, even as the Federal Reserve's hawkish stance kept investors on edge. Spot gold rose 0.9 per cent to \$4,199.07 per ounce by 1400 GMT. US gold futures for August delivery fell 0.7 per cent to \$4,216.30. Silver rose 2.4 per cent to \$66.46, and platinum gained 1.7 per cent to \$1,691.54. Palladium was up 0.9 per cent at \$1,269.08. REUTERS

Base metals buoyed by hopes for US-Iran deal

London: Industrial metal prices rose boosted by optimism that the US-Iran talks could end the war. Benchmark copper on the LME traded 1.2 per cent higher at \$13,760 a tonne. Aluminium added 0.2 per cent to \$3,405 a tonne, zinc gained 1.5 per cent to \$3,610, and lead firmed 0.1 per cent to \$1,956. Tin climbed 3.3 per cent to \$55,050 and nickel rose 1.2 per cent to \$17,775. REUTERS

Crude oil slips after peace talks conclude

Singapore: Crude oil prices slid after US-Iran talks concluded in Switzerland with Tehran saying it had secured waivers for oil and petrochemical exports, easing worries about a supply shortage in global markets. Brent crude fell \$1.53 to \$79.04 a barrel by 0656 GMT. US WTI crude futures were at \$76.53, down 7 cents, ahead of the contract's expiry. The more active August contract fell 55 cents to \$75.30. REUTERS

Platinum, palladium lose glitter, but may gain by the end of third quarter

THE DECIDING FACTOR. Prices may rebound, but may drop another 10% if the war in West Asia continues

Subramani Ra Mancombu
Chennai

After a sizzling start to the year, platinum and palladium have dropped by 19 per cent and 23 per cent, respectively, this year. However, both precious metals are likely to gain by the end of the third quarter this year, analysts said.

“Platinum and palladium prices will return to levels above \$2,000 an ounce (oz) and \$1,500/oz, respectively, by the end of Q3 2026. However, if talks (between the US and Iran) break down and the conflict escalates further, platinum and palladium could decline by another 10 per cent this year on fears of a global recession,” said research agency BMI, a unit of Fitch Solutions.

At the moment, the BMI macro team predicts a 45 per

cent probability of the Iran war escalating further.

Bank of America said the rally in the platinum group of metals (platinum and palladium) had lost steam since late January, largely tracking moves on gold.

Further, ongoing macro headwinds from the conflict in West Asia add downside risk to the demand for industrial metals.

BULLISH FOR Q4

“That said, we remain bullish on gold into 4Q, which we expect will draw investors back into the PGM market and add upward pressure to prices,” it said.

Currently, platinum is quoted near a six-month low of \$1,668/oz, and palladium is ruling near an 8-month low of \$1,263.5 an ounce. Both metals have lost steam after gold peaked at \$5,608 an ounce on January 19.

MUTED TRADE. Currently, platinum is quoted near a six-month low of \$1,668/oz, and palladium is ruling near an 8-month low of \$1,263.5 an ounce

The World Platinum Investment Council (WPIC) said the platinum deficit this year is forecast at 297,000 oz.

“Further above-ground stocks have depleted to just under three months’ worth of cover to meet global demand projected by the end of 2026,” it said.

Bank of America forecast a shifting demand in PGM markets, as platinum is expected to see a small deficit this year while palladium is forecast to see a small surplus.

PRICE FORECAST

“We forecast platinum and

palladium prices to average \$2,000/oz and \$1,500/oz, respectively, in 2026,” said BMI.

Bank of America expects platinum prices to average around \$3,000 oz by the fourth quarter of 2026 and through the first half of 2027. Palladium prices are forecast to average around \$2,200 an ounce in the last three months of the year.

BMI said the sentiment in the PGM market is being dampened by concerns of inflation, a stronger dollar and diminished hopes of US Fed rate cuts.

“Our economists have lowered their 2026 global growth forecast to 2.4 per cent, down from 2.8 per cent before the US-Iran conflict began, while increasing their global inflation forecast to 4.1 per cent from 3.1 per cent previously,” said the research agency.

Kharif sowing exceeds 120 lakh hectares, no impact of deficient monsoon yet

Our Bureau
New Delhi

The sowing of crops during the ongoing kharif season was up 1.7 per cent with most of the crops reporting higher coverage from a year ago.

Only the acreage of cotton, soybean and urad (black matpe) is lower, which may shift to other crops even if it recovers in the coming days as the monsoon resumes its progress.

According to data, the area

reached 119.90 lakh hectares (lh) as of June 19, up from 117.95 lh year-ago. While sugarcane planting, which started much earlier but is considered under the kharif season, has reached 57.31 lh against 56.64 lh year-ago, there may be a revision at end of the season.

Kharif season's main cereal paddy has been transplanted on 12.36 lh against 8.09 lh a year ago, while pulses acreage reached 7.21 lh from 6.39 lh, and that of oilseeds was down at 7.24 lh from 8.11 lh.

The coverage of nutri/coarse cereals was reported 26.5 per cent higher at 12.43 lh.

ARHAR AREA UP

Cotton acreage is 25 per cent lower at 17.13 lh, while soybean is at 1.30 lh from 2.50 lh, and urad (black matpe) at 0.62 from 0.98 lh.

Among pulses, arhar (pigeon peas) sowing reached 1.61 lh (1.59 lh) and moong (green gram) 4.08 lh (2.86 lh). Groundnut acreage is higher at 5.25 lh (5.09 lh).

Among the coarse/nutri

cereals, jowar area reached 1.74 lh (1.40 lh), bajra 4.05 lh (2.14 lh), ragi 0.31 lh (0.27 lh) and maize 5.69 lh (5.34 lh).

ERRATIC PROGRESS

Monsoon progress has been erratic since its onset over Kerala on June 4. As of now, it has revived after nearly a fortnight; there are expectations of some improvement in sowing, where there is assured irrigation.

However, as rainfall deficiency is very high at 43 per cent so far, officials are

closely monitoring the sowing activities.

The India Meteorological Department (IMD) on Monday said that the conditions were favourable for further advance of the South-West Monsoon into some more parts of Maharashtra (including Mumbai), remaining parts of Telangana and Odisha, and more parts of Chhattisgarh, Jharkhand and Bihar by June 24. Heavy to very heavy rain is predicted over the North-East region as well as West Bengal during the week.

BREAKING THE HIATUS. A surge in winds from the seas from Monday morning translated into rainfall (dark blue) along the West and East Coasts

Monsoon nears Mumbai as Bay system holds the key to wider revival

Vinson Kurian
Thiruvananthapuram

After a fortnight-long pause, the monsoon has resumed its advance, reaching Alibag, less than 100 km south of Mumbai, the India Meteorological Department (IMD) said on Monday.

The conditions are becoming increasingly favourable for its arrival over Mumbai within the next couple of days.

The renewed advance is expected to carry seasonal rain deeper into Maharashtra, the remaining parts of Telangana and Odisha, and further into Chhattisgarh, Jharkhand and Bihar, marking the beginning of a broader wet spell across East and Central India.

KEY PHASE

The revival comes as the Arabian Sea branch regains strength and a potentially crucial low-pressure area begins to take shape over the Bay of Bengal. Together, they could trigger a significant phase of monsoon advance since onset, bringing relief to deficit-hit regions and improving rainfall distribution across large parts of the

country. Roughening seas have prompted fishermen's warnings on both coasts. The increasing churning over the Bay is also seen as a precursor to the formation of the crucial 'low'.

Two atmospheric features are now under close watch. The first is the seasonal monsoon trough stretching from Rajasthan to Bihar through Uttar Pradesh.

The second is an upper-air cyclonic circulation over the north and adjoining central Bay.

Meteorologists believe the two could reinforce each other, creating an atmospheric corridor that channels moisture-laden winds from the Bay deep into Central and North-West India.

EL NINO WATCH

Much hinges on whether the Bay spawns the expected 'low'. If it does, it could anchor a monsoon revival and sustain rain activity beyond the near term.

Several weather models point to a 'low' formation with some even hinting at a successor system. Yet, the outlook warrants caution, with a strengthening El Nino casting a long shadow from the equatorial Pacific.

Wheat procurement by govt tops 35.5 million tonnes target

Our Bureau
New Delhi

The government's wheat procurement has exceeded its revised target of 35.54 million tonnes (mt), reaching 35.76 mt as of June 21, up by 19 per cent from 29.95 mt in the corresponding period last year. While Rajasthan set a record in procurement, Uttar Pradesh bought more than double the quantity than last year.

The current year's procurement target was revised twice from the initial 30.3 mt to 34.5 mt in the last week of April and further enhanced in June after some States sought extension of the purchase period amid demands from farmers.

In 2025, the government procured 30 mt of wheat, but expected higher purchases

after the Agriculture Ministry estimated the production at a record 120.66 mt.

According to the government's third advance estimates of agriculture crops, the current projection of wheat production is higher by 2.3 per cent from 117.94 mt in 2024-25.

RELAXED NORMS

Procurement data show that out of 35.76 mt bought by the government, 24.25 mt (or nearly 68 per cent) were under relaxed quality specifications. The wheat in the Central Pool stock, maintained by the Food Corporation of India (FCI), was 53.41 mt on June 1 against the buffer norm (as on July 1) of 27.5 mt. The current stock is highest since 2021 when it was over 60 mt.

According to the data, the purchase in Rajasthan had

reached 2.71 mt against 2.11 mt a year ago and in Uttar Pradesh 2.16 mt from 1.03 mt a year ago, data show.

In Bihar, the procurement reached 40,364 tonne, more than double from 18,087 tonnes a year ago.

The Centre had also raised the purchase target in Uttar Pradesh from the earlier 1 mt to 2.5 mt, in Rajasthan from 2.1 mt to 2.85 mt and in Bihar from 18,000 tonnes to 0.18 mt.

EXTENSION SOUGHT

Sources said that the Rajasthan government is under pressure from the Opposition as former Chief Minister Ashok Gehlot had sought extension of the procurement, which ended on June 19, till June 30.

The previous record in Rajasthan was 2.34 mt in 2021-22.

Natural gas: Go long on dips to ₹306 and ₹302

Gurumurthy K
bl. research bureau

Natural gas prices have risen very well last week, snapping its two-week fall.

The contract traded on the MCX made a low of ₹286.20 per mmBtu and has surged about 8 per cent from there. The contract is currently trading at ₹309.

COMMODITY CALL.

The bounce last week that happened from around ₹286 is significant. It happened from an important trendline support that keeps intact the short-term uptrend which has been in place since late April. The rise also marks the beginning of a new leg of up-move within this trend.

Supports are at ₹302 and ₹299. Immediate resistance is at ₹314. We see high

chances for the contract to break this resistance. Such a break can take the contract up to ₹328 initially. A further break above ₹328 will then see an extended rise to ₹340.

Failure to breach ₹328 in the first attempt could trigger a corrective dip to ₹315-₹313. Thereafter, a fresh leg of upmove could target ₹340 on the upside. A strong break below ₹299 is needed to turn the near-term outlook negative. Only then the downside will be open for a fall to ₹288-₹286. But such a fall looks less likely.

TRADE STRATEGY

Traders can go long on dips at ₹306 and ₹302. Keep the stop-loss at ₹294. Trail the stop-loss up to ₹309 as soon as the contract goes up to ₹312. Revise the stop-loss higher to ₹316 and ₹321 when the price touches ₹319 and ₹324, respectively. Exit the long positions at ₹326.

Greenply launches ‘Kisan Saathi’ farmer engagement programme

Our Bureau
Mangaluru

Greenply Industries Ltd has launched Kisan Saathi, a structured farmer engagement programme designed to put expert know-how directly into the hands of the communities it works with.

Through Kisan Saathi, farmers around Greenply's manufacturing units receive hands-on guidance on which clones and species to plant, fertilizer and soil management, and certification requirements.

These are delivered jointly by Greenply's own field experts and specialist third-party institutes.

A media statement said that the programme is active around Greenply's plants at Tizit (Nagaland), Vadodara and Rajkot (Gujarat), Sandila (Uttar Pradesh) and Kri-

parampur (West Bengal), and will extend to the upcoming Semiliguda (Odisha) facility.

QUALITY MATERIAL

It said that Greenply provides quality planting material of various suitable species, including high-yielding clones, and guides

It is designed to put expert know-how directly into the hands of the communities it works with

farmers on intercropping with locally adopted seasonal agricultural crops to generate additional income during the plantation cycle.

Quoting Sanidhya Mittal, Joint Managing Director of Greenply Industries Ltd, the statement said, “Kisan Saathi reflects a true partnership with farmers around our manufacturing units. Crossing 90 million trees and moving closer to our 100 million goal reflects the trust we've built with them, and we remain committed to deepening this collaboration in the years ahead.”

Delayed monsoon, global price rally lift cotton

Vishwanath Kulkarni
Bengaluru

The rise in international futures, coupled with the delayed progress of the monsoon in Central India, has boosted sentiment in the cotton market, with prices rising over the past few days, stakeholders said.

Prices quoted by the Cotton Corporation of India (CCI) have cumulatively increased by about ₹1,100 per candy (356 kg) during this period. Per the latest Agriculture Ministry data, sowing stood at 17.13 lakh hectares (lh) as of June 19, down about 25 per cent from 22.82 lh a year ago, as weak monsoon progress delayed sowing activities.

Atul Ganatra, Chairman of the Crop Committee at the Cotton Association of India (CAI), attributed the price rise primarily to the firming trend in international futures. “ICE December fu-

FIRMING UP. The Cotton Corporation of India has raised cumulative prices by ₹1,100 per candy over the past few days

tures have risen from 75 cents a pound to 80 cents a pound,” he said.

VIDARBHA SITUATION

ICE July futures were hovering around 76.05 US cents a pound, while December futures were trading at around 79.67 cents.

“Delayed monsoon arrival is the main reason for prices firming up,” said Arun Khetan, a broker in Akola.

In Vidarbha, a key cotton-growing region, sowing is yet to begin, though a few farmers with access to drip irrigation have started planting, he said. “Cotton sowing can continue until July 15 in the region. Overall, we expect acreage to increase by about 10 per cent this year,” Khetan said.

Ramanuj Das Boob, a sourcing agent in Raichur, said the rise in ICE futures,

uncertainty over the monsoon's progress and its impact on sowing had supported cotton prices. However, the increase in prices was not matched by a corresponding rise in yarn prices, he added.

DEMAND FOR CCI

The CCI has witnessed strong demand for its cotton in recent days, with about 7 lakh bales sold last week, Das Boob said. Multinational companies were quoting prices around ₹1,000 per candy above CCI rates, while resellers are offering cotton at a premium of ₹300-500 per candy. CCI prices are currently hovering around ₹62,500-63,200 per candy.

Anand Popat of CotYarn Tradelink LLP estimated total cotton stocks at about 182.5 lakh bales (170 kg each), comprising 94 lakh bales with spinning mills, 25.5 lakh bales of unsold CCI stocks, and 63 lakh bales with MCX warehouses, ginners and traders.

BioPrime improves crop nutrition by promoting efficient fertilizer use, raising nutrient uptake

Subramani Ra Mancombu
Chennai

Pune-based BioPrime AgriSolutions Pvt Ltd has been able to improve crop nutrition by enhancing plants' nutrient uptake and promoting more efficient fertilizer use, said Co-founder and CEO Renuka Diwan.

The company's initial studies have shown enhanced nutrient concentration in grains with reduced fertilizer inputs, she told *businessline* in an online interaction.

“A study of two years of successive fertilizer reduction of 25 per cent showed 10 per cent improvement in nitrogen storage in grain, 6 per cent increase in phosphorus, 3 per cent improvement in potassium, and 10 per cent improvement in iron storage in grain,” said Diwan.

Renuka Diwan, CEO, BioPrime AgriSolutions Pvt Ltd

By reducing the fertilizer application by 25 per cent, the nutrient uptake was improved.

Nitrogen efficiency improved by 26 per cent, while that of phosphorus improved by 46 per cent and potassium by 37.7 per cent, she said, adding that the improvement was in kg per hectare.

DROP IN NUTRIENT

In the case of iron and zinc,

the uptake was up 68.8 per cent and 33.7 per cent, respectively. “This helped address zinc deficiency across major Indian rice-growing belts due to soil conditions,” said Diwan.

Over the past 50-70 years, the nutritional quality of fruits, vegetables and staple crops has significantly degraded globally, leaving modern foods less nutrient-dense than those eaten by previous generations.

“Decades of historical data analysis show median declines ranging from 5 to 40 per cent or more across essential minerals, vitamins and proteins. Calcium content dropped by 16 per cent, iron by 15 per cent, and phosphorus by 9 per cent,” she said.

NUE BLOCKS

At the same time, protein levels in staple crops such as

wheat dropped by 23 per cent between 1955 and 2016.

Improvement in crop nutrition was achieved by increasing the intake of nitrogen, phosphorus, potassium and key micronutrients such as zinc and iron.

BioPrime has discovered several molecules that help unlock nutritional use efficiency (NUE) bottlenecks, such as availability, uptake and use efficiency, she said.

The technology, to enhance crop productivity and nutrition value of food, is supported by Intellectual Property Rights (IPR) protection, and the company has been working on NUE challenges over three years.

“Fertilizer use efficiency in India is below 20 per cent, compared to global averages of about 30 per cent, signalling significant value to unlock,” the company's Co-founder and CEO said.

Fly ash rail corridor could prove a win-win for Railways, industry

GAME CHANGER. It will reduce dependence on road transport; cement sector will gain

T E Raja Simhan
Chennai

The Railways' plan to develop a dedicated logistics network for transporting fly ash from thermal power plants to industrial users could become a game changer for both the transporter and key consuming sectors, such as road construction and real estate, industry experts feel.

To improve utilisation and reduce dependence on road transport, the Railways has announced a green logistics initiative, involving specialised containers and dedicated rail corridors for fly ash movement.

INDUSTRIAL INPUT
According to the Railways, the initiative seeks to transform fly ash from an environmental challenge into a valuable industrial input.

Lalit Chandra Trivedi, former General Manager of the Indian Railways, said the

BYPRODUCT. India generates nearly 340 million tonnes of fly ash every year from coal-fired thermal power plants

initiative had the potential to create an entirely new bulk freight segment for the Railways.

"India generates about 340 million tonnes of fly ash annually, but only a part of it is gainfully utilised. Fly ash

sources and consumption centres are often separated by 300-1,500 km, making rail the most economical long-distance transport mode," he said.

The move also aligns with the Railways' strategy of di-

versifying freight revenue beyond coal. If even 25 per cent of the country's annual fly ash generation, or about 85 million tonnes, is transported by rail, it would translate into around 1,300-1,400 full rake movements every month, creating a sizeable new freight stream.

The environmental gains could also be significant. A single rail rake can replace about 60-70 heavy trucks, reducing diesel consumption, traffic congestion and carbon emissions.

CEMENT INDUSTRY
The cement industry is expected to be among the biggest beneficiaries.

"Assured rail-based fly ash supply reduces dependence on local sources and enables optimisation of clinker-to-cement ratios," Trivedi said.

He estimated that a cement plant consuming one million tonnes of fly ash annually could save ₹20-50 crore a year in logistics costs alone.

TN ammonia leak death toll rises to 5

Press Trust of India
Chennai

The toll in the ammonia gas leak tragedy in Tamil Nadu's Tiruvallur district mounted to five, with arrangements on to shift the mortal remains of the workers to their home towns, State Labour Welfare Minister J Mohamed Farvas informed the Assembly on Monday.

State health officials said two women died on June 21, and three more women migrant workers succumbed on Monday.

Responding to the tragedy, amidst disruptions and heated exchanges between Speaker JCD Prabhakar and AIADMK members over the subject, the Minister said Chief Minister C Joseph Vijay had constituted a joint team, comprising officials of the Health Department and the Pollution Control Board, to submit a preliminary report in 24 hours and a comprehensive report in three days.

He said the Chief Minister had already announced solatium of ₹2 lakh each to the families of the victims.

Data centres could raise water stress, cautions Moody's report

Our Bureau
New Delhi

Moody's on Monday cautioned about water stress due to the rapidly growing demand from data centres. It also said that India's 'fragmented' water management framework raises fiscal and credit risks.

"Rising demand from water-intensive industrial operations and data centres can further strain water systems already contending with source and treatment concentration. The physical architecture of water supply systems matters because concentration in a single source or treatment pathway can magnify the effect of supply stress," Moody's said in a report on water management.

Though the report did not mention India in terms of water stress on account of data centres, but India focus on developing more data centres indicates what could happen here. It may be noted that many of the Indian big cities are facing water problems. Only last week, Mumbai had to announce rationing of water.

"Rapidly growing demand from data centres, driven by the expansion of cloud computing and artificial intelligence, is adding a further source of water-intensive industrial pressure that governments and utilities will increasingly need to accommodate," the report added.

which govern how water supply is prioritised, priced and distributed across households, industry and agriculture, are becoming a more important determinant of economic resilience in water-stressed systems because they influence how shortages are absorbed and how quickly supply stress translates into fiscal pressure.

"Such frameworks can result in more prolonged shortages, higher costs and greater industrial and public service disruptions. The result is higher risk of sustained fiscal pressure, delayed adjustment and persistent credit strain," Moody's said.

WATER COST
Water governance in India is largely controlled by individual State governments. "Pricing is highly subsidised (especially for agriculture, which consumes about 80 per cent of the country's freshwater), reallocation among sectors is slow and many regions lack the resources to invest in necessary infrastructure," Moody's said.

Quoting from the World Resources Institute report, Moody's said India had high credit exposure to heat stress, flooding and monsoon variability, while its water management category had very high credit exposure, driven by ageing water infrastructure and excessive groundwater depletion.

'Indians to spend more for having a good time than purchases'

Our Bureau
Bengaluru

Indian household spending on experiences is projected to outpace expenditure on physical goods between 2025 and 2030, according to a report released on Monday by real estate services and investment firm CBRE.

The report revealed that Indian spending on experiences — recreational and cultural activities, restaurants, hotels and travel — is expected to increase at a compound annual growth

rate (CAGR) of 10.3 per cent while spending on physical goods is projected to expand at a lower CAGR of 9.1 per cent over the same period.

Within the experiential market, hotel accommodation spending leads to the highest projected growth at a 10.6 per cent CAGR.

This structural shift has been accelerated by the Covid-19 pandemic, which fuelled long-term pent-up demand.

This trend is fundamentally driven by Generation Z (born 1997-2012), currently the largest demographic bloc

The shift is backed by significant pricing power

across the Asia-Pacific (APAC) region. As Gen Z achieves financial independence, its spending is forecast to expand faster than that of other generations. The report highlights that travellers demand social-media-friendly designs, activated communal spaces, wellness integration and seamless technology.

To answer this generational demand, CBRE proposes lifestyle hotels — properties that combine localised, independent designs with the backend loyalty programmes and distribution networks of major chains.

PRICING POWER
The shift is backed by significant pricing power. Regionally, lifestyle hotel supply is projected to grow at a 10 per cent CAGR through 2030, outpacing the broader hotel market, while upscale lifestyle properties already command 13 per cent revenue

per available room premium over traditional hotels, despite smaller rooms.

Anshuman Magazine, Chairman & CEO of India, South-East Asia, Middle East & Africa at CBRE, noted that the segment offers investors a "capital-efficient conversion pathway that maximises long-term asset value".

While markets like Singapore and Hong Kong have established lifestyle hotel sectors, India's low penetration highlights a significant near-term supply gap. Ada Choi, CFA - Head of Research, Asia Pacific at CBRE, said rising

incomes and a maturing Gen Z consumer base are currently converging with a "significant undersupply of lifestyle hospitality product" across India.

Driven by rising land and construction costs, regional hotel investments are shifting away from new builds toward the conversion of older, unbranded properties. This aligns with broader market liquidity, where transactions under \$100 million grew from 31 per cent of total APAC hotel investment volume in 2020 to 42 per cent in 2025.

Health insurance claim process 'functional, not frictionless', reveals Policybazaar study

PT Jyothi Datta
Mumbai

A recent study mapping patient and patient-family experiences in claiming their health insurance has pointed to "transparency" as a key ask from customers who, for example, would like to have granular details on why their insurance claim was rejected rather than merely being told their claim was rejected, says Policybazaar.

GREATER CLARITY
Customers seek greater clarity and proactive communication, among other things, the second edition of PB's claims study revealed. In fact, a 'Health Claims Experience Index' launched by the study pegs the overall claims journey score at 82.8 on 100, indicating the "claim process (was) functional, but not frictionless," the report said.

The index, said to be an industry first, will be launched this week.

"While claim settlement ratios remain the industry's most widely tracked metric, there has been no standard framework to evaluate the actual customer experience during claims. The HCX Index seeks to bridge this gap by measuring both operational efficiency and customer sentiment across the claims journey," explained the report, titled *Is India happy with health insurance*

claims? 2.0. Cashless health insurance fared better with an index score of 86.7, driven by process improvements that are real and measurable, noted Sarbvir Singh, Joint Group Chief Executive, Policybazaar.

The study surveyed 2,228 individuals across metros and small towns who had filed a health insurance claim between August 2024 and September 2025, including non-customers. About 70 per cent of those surveyed opted for a cashless service.

Many claimants opted for reimbursement when cashless was unavailable, delayed or not worth waiting for at discharge, the study said. "This becomes more stressful when customers must arrange funds upfront," it said, adding that 76 per cent of reimbursement claimants reported borrowing funds during treatment, up from 68 per cent last year. "Lack of

upfront cashless support can quickly create financial pressure, even if claims are later reimbursed," it said.

Reimbursements' lower Index score at 73.7 reflected the "effort-heavy journey". "Cashless approvals are getting faster and smoother. Yet for too many policyholders, the emotional and administrative burden remains as heavy. To bridge this gap, the industry must move from "reactive processing" to "proactive protection", it said.

EASY DISCHARGE
The study suggested measures, including greater visibility on consumables and "hidden deductions", and a shift from a "patient collateral to a good-faith discharge" approach, where the patient's physical hospital discharge was decoupled from final administrative closure.

PM E-DRIVE e-ambulance scheme cuts electric vehicle costs by ₹13 lakh

Amit Vijay Mohile
Mumbai

Hanif Qureshi, Additional Secretary, Ministry of Heavy Industries

The Ministry of Heavy Industries (MHI) has launched an incentive programme for electric ambulances under PM E-DRIVE that could reduce the acquisition cost of a typical electric ambulance by up to ₹13.3 lakh, bringing many models close to diesel price parity.

For a typical M2-category electric ambulance equipped with a 70 kWh battery pack and priced around ₹38 lakh ex-factory, the subsidy could lower the acquisition cost to about ₹24.7 lakh before medical equipment fitment, placing it within the same price range as comparable diesel ambulances, which typically cost between ₹20 lakh and ₹30 lakh.

The economics become even more compelling when operating costs are factored

in. Industry estimates suggest electric ambulances can cost as little as ₹2-3 per km to operate compared with ₹9-11 for diesel vehicles.

Hanif Qureshi, Additional Secretary, Ministry of Heavy Industries, said the government had allocated ₹500 crore to support an indicative target of 3,811 electric ambulances across FY27 and FY28.

WHAT HAS CHANGED
The June 2026 notification creates an entirely new cat-

egory within PM E-DRIVE, introducing ambulance-specific performance standards and creating a dedicated localisation roadmap for manufacturers. The programme targets deployment of 1,797 vehicles in FY27 and 2,014 units in FY28.

Among manufacturers, Force Motors appears the best positioned to benefit. The company's Traveller platform dominates India's ambulance market.

Tata Motors is also expected to gain from its established EV supply chain and commercial vehicle portfolio, while Mahindra & Mahindra could find opportunities in smaller M1 and M2 ambulance segments, targeted at urban and rural healthcare applications.

The ₹500 crore programme aims not only to accelerate ambulance electrification but also to build a domestic electric ambulance manufacturing ecosystem.

At least 14 students killed in Lucknow fire

Press Trust of India
Lucknow

At least 14 students were killed and four injured after a massive fire blazed through a three-floor commercial building housing an animation centre in north Lucknow on Monday.

Eyewitnesses said several people jumped out of the building as fire engulfed the structure. Fourteen fire tenders, including a hydraulic platform vehicle, were deployed to control the blaze reported around 3 pm from the building at Usha Mehta Marg in Aliganj area. Deputy Chief Minister Brajesh Pathak, who was at the site, briefed reporters.

Prime Minister Narendra Modi expressed his condolence and announced an ex-gratia of ₹2 lakh to the next of kin of each deceased. The injured would be given ₹50,000.

Kashmir apple farmers face crop risks amid increasing hailstorms

Gulzar Bhat
Srinagar

CROP HIT. The recurring hailstorms have battered apple farms across the Valley, causing significant damage to the fruits

Over half a dozen apple-producing villages in the upper belt of south Kashmir's Kulgam district were lashed by a hailstorm last week. It was the third time in the month that hailstorms hit apple orchards in south Kashmir, spelling fresh trouble for growers already struggling with erratic weather patterns.

"The marble-sized hailstones caused bruises on the apple surface," said Rayees Ahmad, an apple cultivator from Keegam in Shopian. He said that within minutes, all his hopes for a good harvest were shattered.

TERRIBLE HAILSTORM
This was for the first time Ahmad had witnessed such a

terrible hailstorm, which lasted for at least 20 minutes in his area. Officials at the India Meteorological Department in Srinagar said the region recorded around six to seven spells of hailstorm in the past month. Izzan Javed, an apple and cherry grower and CEO of Fruit Master Agro Fresh Pvt Ltd, said, "This season, we have witnessed six to

eight hailstorm episodes, which is unprecedented."

Mohammad Anees, Assistant Professor at the University of Kashmir, also acknowledged the rising frequency of extreme weather events in Jammu and Kashmir. "Unusual weather patterns driven by climate change continue to damage standing crops," he said.

US notifies sale of support services for Apache copters, howitzers

Press Trust of India
Washington

The US has formally notified the proposed sale of sustainment support services and related equipment for India's Apache helicopters and M777A2 ultra-light howitzers for an estimated \$482.2 million.

The Defence Security Cooperation Agency (DSCA), which administers the Foreign Military Sales (FMS) programme of the US, issued the arms sales notification in the Federal Register on June 17.

On May 18, the Department of State informed the US Congress about the possible sales of services for Apache helicopters and

M777A2 ultra-light howitzers to India.

"The following non-major defence equipment items will be included: ancillary items, spares, repair and return, training, technical assistance, field service representative, depot capability and other related elements of logistics and programme support. The estimated total cost is \$230 million," the notification said.

The estimated cost of the Apache support package is \$198.2 million.

The principal contractors for the Apache support services deal will be Boeing Company and Lockheed Martin, while BAE Systems, located in Cumbria, UK, will be the principal contractor for the M777 howitzer support programme.

'During DMK regime, TN lost 25 major investment projects worth ₹3.3 lakh cr'

Our Bureau
Chennai

Tamil Nadu Industries Minister S Keerthana on Monday said 25 major investment projects worth ₹3.3 lakh crore moved out of Tamil Nadu to seven other States during the previous DMK-led government's five-year tenure, resulting in the loss of an estimated 2.03 lakh employment opportunities for the State's youth.

Addressing reporters outside the Assembly after the debate on the Motion of Thanks to the Governor's address, Keerthana said that no investment project had left Tamil Nadu during the first 40 days of the TVK-led government, contrary to the allegations made by the Opposition.

The Minister rejected

claims that major industrial investments were shifting from Tamil Nadu to neighbouring Andhra Pradesh, and said the Opposition had walked out of the House before the government could place facts and evidence on record regarding industrial projects.

MARQUEE PROJECTS
Reacting sharply to the Opposition's charge that the present government was acting as the "NDA's B-team", Keerthana said several marquee projects had moved to BJP-ruled States during the previous government's tenure.

"Projects such as Tata Semiconductor, Micron and Suzuki went to Gujarat during the previous regime. Yet they are now accusing us of losing investments to Andhra Pradesh within just

40 days," she said.

The TVK government remains committed to attracting fresh investments and creating employment opportunities across Tamil Nadu, she said.

Keerthana added that institutional mechanisms for investment promotion were being strengthened.

Tata Electronics hit by cybersecurity breach

New Delhi: Tata Electronics said on Monday it had detected a recent “cybersecurity incident”, after researchers said World Leaks posted purported component design and specification papers of Apple and Tesla, both customers of the group. The ransomware group has posted more than 2,00,000 files on the dark web, the security researchers said. “A few weeks ago, Tata Electronics identified a cybersecurity incident on some of our systems. Our response protocols were deployed immediately, and the incident has had no impact on our operations across businesses,” Tata Electronics said. Apple was investigating the breach and a “full analysis was going on”, a source said, adding that Tata had received a ransom demand related to the incident. REUTERS

IT companies see increase in average learning hours per employee in FY26

EMBRACING CHANGE. Firms ramp up training in response to the growing integration of artificial intelligence

Rohan Das
Chennai

As they increasingly adapt to working with artificial intelligence (AI), Indian IT employees are clocking in more training hours.

Major Indian IT service firms reported significant uptick in average learning hours per employee in FY26, as indicated by data from company annual reports.

Speaking to *businessline* analysts and corporate learning companies suggested that the increase was driven by companies moving beyond mere GenAI literacy to training workers who can design, manage, coordinate and collaborate with AI agents.

BIG SURGE
TCS, the largest IT employer in India, saw average learning hours go up by over 25

Skills boost			
Average learning hours per employee			
	FY26	FY25	y-o-y change (in %)
TCS	120	96.4	24
Infosys	113	71.0	58
Wipro	79	83.0	-5.2
LTI Mindtree	312	238.0	31

per cent in FY26, with employees logging in 120 hours against 96 hours in the preceding fiscal.

For Infosys, the increase was even more pronounced with average learning hours going up by 58 per cent to 113 hours.

Similarly, LTI Mindtree saw an increase of 31 per cent at 312 hours.

BUCKING TREND
Wipro, meanwhile, bucked the trend, reporting a slight degrowth in learning hours from 83 hours in FY25 to 79 hours in FY26.

Amit Goyal, Managing

Director, Project Management Institute — South Asia, a professional certification body, said he believes that beyond just teaching employees how to use AI tools, a significant share of learning and development investments are focused on building the broader capabilities required to generate business value from AI at scale.

“Organisations are investing not only in developing AI users but also in building AI-enabled teams. The strongest outcomes come from practical application, continuous experimentation and the integration of AI into

day-to-day workflows,” he said.

Ravi Kumar Gupta, Co-Founder & CEO, AlmaBetter, another corporate edtech, suggested that about 35-50 per cent of workplace training and skilling programmes are driven directly by AI with the strongest demand for competencies such as MLOps, data engineering, cloud-native engineering and full-stack AI engineers.

LEARN-AND-DEPLOY
Meanwhile, AI has also transformed corporate training from click-next mandatory video modules to “learn-and-deploy” models, where training is tightly coupled with on-the-job assignments.

Sandeep Joshi, VP, Head of Delivery India, EPAM Systems India, a digital transformation services and product engineering company, suggested that the focus today is not only on accu-

mulating training hours.

He said that at EPAM Systems India, the company had established an AI maturity baseline, where daily active AI usage and agentic adoption metrics are reviewed weekly at the business-unit level.

DECISION-MAKING
“We focus on how consistently AI is embedded into delivery and decision-making, not just how many courses employees complete,” he said.

Biswajeet Mahapatra, Principal Analyst, Forrester, echoed this, suggesting that organisations should move beyond activity metrics and track readiness through business-aligned metrics like time to competency, productivity improvement and error reduction, which better reflect whether training is translating into meaningful workplace impact.

Home Ministry’s cyber security agency issues ‘Boss Scam’ alert

Our Bureau
New Delhi

The Home Ministry’s Indian Cyber Crime Coordination Centre (I4C) on Monday cautioned against ‘Boss Scam’, a new trend in cyber-crime. This is being done in the guise of a regulator or even impersonating a CEO.

“Cybercriminals are targeting high-ranking officials and executives by delivering malicious archives via email or WhatsApp under the guise of urgent regulatory compliance. Once executed, the malware compromises the executive’s Windows device and active web WhatsApp sessions, enabling the fraudsters to message subordinate employees and orchestrate fraudulent financial transfers,” the Centre said in an advisory.

RULES VIOLATIONS
Explaining the *modus operandi*, the advisory said cybercriminals contact a CEO or a high-ranking official via email or WhatsApp, impersonating regulators such as the Reserve Bank of India (RBI). The communication falsely claims regulatory violation or mandates an urgent security improvement, demanding a response within a very short timeframe. “The message contains a compressed .zip archive. Inside this archive is a malicious executable (.exe) accompanied by a Dynamic Link Library (.dll) file,” it said.

As seen in multiple cases, the CEO forwards the message to the finance officer. When the executive extracts and executes the file on a Windows desktop or laptop, a Trojan dropper is initiated.

The malware establishes a persistent foothold, compromises the system and hijacks the active web WhatsApp session tokens.

“Armed with access to the

Sometimes the scamsters pose as a CEO and use a secondary number to instruct employees into transferring funds

executive’s real WhatsApp account, the fraudster contacts accounts or finance employees, instructing them to make immediate payments to specified mule bank accounts,” it said, while adding that sometimes the scamsters also pose as a CEO and use a secondary number to instruct employees into transferring funds.

To diffuse the cyberattack, I4C advised the Finance Departments of the companies to verify the request of any urgent financial transactions or account changes based solely on a WhatsApp text or email.

UNVERIFIED SOURCES
Verification through a direct voice call or in-person confirmation may be done.

“Do not install executables received from unknown or unverified sources. Regulators like the RBI will never distribute mandatory software updates or security fixes via WhatsApp attachments,” it said.

Further, system administrators should enforce strict software restriction policies (SRP) configurations to block the execution of unknown ‘.exe and .dll’ files originating from the user profile directories.

“Ensure Windows endpoints are equipped with up-to-date solutions that detect malware,” it said, while adding that any such incidence should be reported on phone number 1930.

Alternatively, the same can be mailed to www.cybercrime.gov.in

‘Draft satcom spectrum rules violate Telecom Act’

S Ronendra Singh
New Delhi

UNDER FIRE. The Broadband India Forum claims the rules hinder digital inclusivity

nascent sector, which holds great promise for connecting the unconnected,” TV Ramachandran, President,

BIF, told *businessline*.

According to the draft rules, satellite communication (satcom) service pro-

viders will need to get security clearance from the Centre, even after receiving licence from the DoT.

This would mean that satcom companies like Elon Musk-owned Starlink, Bharti Group-backed Eutelsat OneWeb and Jio Satcom have to go through the security clearance, before providing any internet or mobile phone services.

LEGALITY QUESTIONED
“We believe that it is an established legality that no rule can go beyond the boundaries of the parent Act, either with regard to omission, inclusion or modification of the basic terms and conditions. In essence, we opine

that such a draft rule would be ultra vires of the Act,” Ramachandran added.

NEW CONDITIONS
According to sources, telecom players such as Bharti Airtel and Reliance Jio are also going to write to the DoT on these new conditions.

According to a gazette notification last week, satellite companies will get spectrum administratively unlike through auction for other telecom spectrum and process is fixed with an annual fee of ₹30,000 to ₹50 lakh, based on the service type and there is a non-refundable application fee of ₹1,000 too.

However, as announced by

the government earlier, radiowave charges will be determined on the basis of market price (whenever they are allocated), even though spectrum is provided through administrative process. The DoT has also invited for public comments/suggestions to the draft policy in the next 30 days.

ROUTINE RENEWAL
Meanwhile, for State-owned BSNL and MTNL, the draft rules said that their existing spectrum assignments will not be eligible for routine renewal, and both will need to submit fresh applications and pay market-linked prices each time they seek spectrum.
