SEBI weighs uniform regime for options strike prices

AT-THE-MONEY. May allow bourses to add intraday options strikes to improve efficiency

Akshata Gorde
Mumbai

The Securities and Exchange Board of India (SEBI) is evaluating a proposal to introduce a uniform framework for managing options strike prices, including the possibility of allowing exchanges to add new strikes during market hours, according to people aware of the discussions.

The move follows concerns around the way strike prices are currently introduced and managed, particularly during periods of sharp intraday price movements.

The system is not always equipped to handle sudden price swings and the gap between available pre-defined strike prices and prevailing market prices may be too wide to allow efficient hedging. New strikes that are added are usually implemented with a lag.

A strike price is the fixed level at which an options contract can be exercised. The availability of a range of strikes and liquidity allows traders to take positions based on their market view or hedge existing exposures.

EXISTING FRAMEWORK...

- Assume the Nifty50 is at 22,000
- Available strike prices are at 21,900; 22,000; and 22,100
- If the Nifty50 suddenly moves up by 350 points, it creates a mismatch. The at-the-money level shifts to 22,350 but relevant strikes such as 22,300-22,400 are sometimes not readily available and may list with a lag. Traders may be forced to use either deep in-the-money or out-of-the-money contracts, with wider bid-ask spreads

... PROPOSED

- As the index moves sharply, the system will add new strike prices — say 22,300/ 22,350/ 22,400 — close to the current price, at shorter intervals, to offer more exact pricing with tighter spreads

UNIFORM FRAMEWORK

The uniform framework may allow exchanges to introduce new strike prices during market hours, especially in the direction of sharp movements in the underlying asset.

The idea is to not require any system modifications by brokers or market participants during live trading to

avoid operational disruptions.

“Most of the time, especially around at-the-money (ATM) strikes, the market is fairly liquid and trades smoothly. But when the move is very sharp and sudden, prices can sometimes jump rather than move tick by tick,” said Feroze Azeez, Joint CEO, Anand Rathi

Wealth. “In those moments, you might see what traders casually call ‘phantom prices’, where the last traded price is visible, but execution at that exact level is not always possible,” he said.

During sharp intra-day movements, trading interest typically shifts towards strike prices closer to the prevailing level of the under-

lying. However, the addition of such strikes may take time under existing mechanisms, even as a number of far-off strikes continue to remain listed, an exchange source said.

STRIKE PRICES

Market participants said that in most conditions, trading remains concentrated around actively used strike prices.

“In such situations, if an out-of-the-money strike that fits the usual trading criterion is not available, traders typically shift to at-the-money or in-the-money options to ride the move,” said Anand James, Chief Market Strategist at Geojit Investments.

In fast markets, traders need to allow for some slippage or be ready to manage positions more actively rather than relying entirely on very tight stop losses.

At present, SEBI’s regulatory framework primarily covers long-dated index options while other segments, including stock, currency and commodity options, follow exchange-specific practices, leading to differences in how the strike prices are introduced and managed.

An email sent to SEBI did not elicit a response.

While exchanges have their own rules for adding strike prices, the proposed framework will make it uniform across exchanges. It has been discussed with exchanges and intermediaries and will also be reviewed periodically through market participants, the source said.

W Asia shadow on exports

Export resilience under route disruptions is crucial

Sanjaya Mariwala

India has signed free trade agreements with several countries and is negotiating one with the EU. Market access is now no longer a problem. But the assumption that goods will move freely once markets open up is beginning to weaken.

Disruptions in West Asia are adding 10-15 days to transit times, while freight and insurance costs have risen sharply, which cannot be passed on to customers given the margin pressures. For exporters, the bigger challenge is in committing to delivery timelines.

At the same time, planning shipments has become a lot less predictable. Buyers are building in buffers or delaying decisions. For businesses operating on tight margins, even modest increases in logistics costs can shift competitiveness.

In pharmaceuticals and preventive healthcare, the pressure is more layered. India exported over \$30 billion worth of medicines last year, but a large share of key inputs continues to be imported, particularly APIs from China. This creates a clear dependency at both ends. If inputs don't arrive on time, production gets pushed back. And when outbound routes are disrupted, finished products can't move as planned. What starts as a logistics delay doesn't stay limited to transport — it begins to affect manufacturing timelines and, in regulated markets, even compliance. In sectors like pharmaceuticals, where timing is tightly controlled, these delays can have consequences well beyond just late deliveries.

ROUTE CONCENTRATION

A large share of India's exports still moves through a limited set of routes and logistics hubs. That concentration works in stable conditions, but leaves little room to adjust when disruptions occur. Smaller exporters don't have the cushion to absorb sudden cost increases, so either take a hit on their topline or bottomline.

India has built an export system that performs efficiently under stable conditions, but not one that adjusts easily when those conditions change. Alternatives are usually explored only after problems on routes show up. There isn't advanced thinking around which sectors depend on which routes, or what realistic options exist if those routes are disrupted. As a result, decisions end up being made under

EXPORTS. Take proactive steps

pressure, when both costs and timelines are already working against you. Urgent shipments like medicines don't really get treated any differently.

When freight costs rise or insurance premiums increase, exporters are usually the first to absorb the impact, even though these are outside their control. Over time, this has concentrated volatility at the weakest end of the chain. Contracts will need to evolve to reflect a more balanced arrangement, where pricing and delivery terms adjust when disruptions occur. Without that shift, exporters will continue to operate under pressure each time the system is strained.

In pharmaceuticals and preventive healthcare, resilience will depend on building flexibility into sourcing. Domestic API capacity will take time to scale. Until then, alternate sourcing and manufacturing arrangements across geographies can help reduce the risk of production being disrupted.

Exporters face immediate cost pressures, but access to additional working capital often lags. Aligning financial support more closely with the timing of disruptions would help ease that pressure.

Trade agreements, too, will need to reflect the new reality. Provisions that support faster clearances, recognise alternate routing and improve coordination across systems can strengthen trade in ways that go beyond cost or tariff advantages.

India still tends to assume that once an order is ready, it will move smoothly from origin to destination, but that's no longer always the case. In a world where disruption is becoming routine, competitiveness will be defined not just by how much a country can export, but by whether it can keep exporting when conditions deteriorate.

Need to ramp up energy storage

STILL IN INFANCY. Battery based energy storage systems are beset by execution and structural challenges

CAPITAL IDEAS.

RICHA MISHRA

India's power demand is seeing a massive surge, driven by extreme weather, industrial expansion, and rapid electrification. As part of its energy transition story, India has set a target of achieving 500 GW of installed electricity generation capacity from non-fossil fuel-based sources by 2030.

A major share for renewable energy (RE) is expected from solar and wind energy, which are inherently intermittent and variable in nature. To ease the integration of these sources, deployment of Energy Storage Systems (ESSs) is essential for storing surplus energy during periods of high RE generation to ensure 24x7 electricity supply.

According to the National Electricity Plan (2023) published by the Central Electricity Authority (CEA), a requirement of 208 GWh of Battery Energy Storage Systems (BESSs) has been projected by 2030 to enable seamless integration of the increasing share of RE in the grid. The government has undertaken a series of coordinated policy, regulatory, demand-supply side measures to promote and deploy energy storage technologies, including the BESS.

WHERE IS THE PROBLEM?

Problems arise when in the zeal to achieve the target, ground realities are ignored. According to information available, India's power grid in 2025-26 has adequate generation capacity, with over 500 GW installed and more than half sourced from non-fossil fuels. However, it is increasingly constrained by transmission and operational limitations.

It is a fact that structural power shortages have largely been eliminated, but the concern is that RE capacity is being added faster than the grid can absorb it — particularly in renewable-rich States such as Rajasthan

BATTERY STORAGE. Huge gap between planning and implementation /ISTOCKPHOTO

and Gujarat — leading to congestion, curtailment, and inefficient ramping of thermal plants. In this backdrop BESS has become essential rather than optional.

BESS enables surplus solar and wind generation to be stored during low-demand periods and dispatched during evening peaks, thereby reducing curtailment, easing congestion, and stabilising grid frequency. By limiting excessive thermal cycling, reducing reliance on volatile short-term markets, and providing localised flexibility near load centres, storage allows far better utilisation of existing grid infrastructure.

This requires large-scale BESSs and renewable-storage hybrids, additional renewable capacity risks translating into inefficiency. With storage, the same grid can reliably integrate significantly higher levels of clean energy at a lower

BESS enables surplus solar and wind generation to be stored during low-demand periods and dispatched during evening peaks

overall system cost. This has been formally recognised by the CEA, which now classifies BESS as a critical grid asset and permits its use for functions such as frequency regulation, peak shaving, ramp-rate control, and ancillary services, all key to maintaining grid security and reliability.

THE CHALLENGES

Despite a strong policy push, domestic BESSs face significant on-the-ground execution and structural challenges. While tenders are at record highs, only about 0.8 GWh is currently operational. There is a massive gap between planning and implementation.

If one takes a look back, the projects saw aggressive underbidding creating viability risks as input prices (copper, aluminium, and cells) fluctuate, making it difficult for first-time developers to deliver at promised price points. Another challenge comes from distribution companies, that often delay signing Power Purchase Agreements (PPAs) or Power Sale Agreements (PSAs), waiting for battery prices to drop even further. This, according to information, has led to the cancellation of over 6.4 GW of awarded capacity. Then there is grid inter-connection

bottlenecks — RE growth is outpacing transmission build-up.

At present, imported BESSs enjoy higher operational credibility than most Indian-assembled solutions. Observers say that even if it is made in India, there are more than 20 components required for the product, and not all are available here.

The domestic BESS ecosystem is transitioning from simple assembly to full-stack manufacturing, driven by the ₹18,100 crore Production Linked Incentive Scheme for Advanced Chemistry Cells (ACCs). Several Indian conglomerates and start-ups have jumped into the BESS components or systems business, locally. But it will take a while before they can meet the requirement.

India's General Network Access and Temporary General Network Access connectivity is seeing rising instances of curtailment in several renewable-rich regions. The grid is struggling to keep pace with rapid renewable additions, largely due to lagging transmission build-out and system flexibility. Given this, BESS emerged as a critical near-term solution. However, India's BESS ecosystem is still at an early stage compared to its PV industry.

BESS, in India, is at a stage where solar was in 2010. Besides, there are issues of customisation — each plant will be using the product for different purpose. There is also a need for skilled personnel for specialised BESS operations and maintenance (O&M) — which is significantly more complex than solar O&M.

A right approach is to create a conducive environment while moving towards Make In India, BESS. The capacity building in the near-term can leverage on established global players with proven technology, long operating track records, and robust safety standards across markets.

Such an approach would help mitigate near-term risks, uphold stringent safety standards, and preserve grid security, while domestic manufacturing and integration capabilities continue to mature — ultimately ensuring that storage strengthens, rather than constrains, India's energy transition.

Dichotomy in copper's medium- and long-term outlook

Copper finds broad economic applications — from infrastructure and mobility to household appliances — earning the moniker 'barometer of the economy'. As seen from charts below, the structural drivers for copper demand are intact. However, the energy shock brought about by the war in West Asia has weighed on its medium-term outlook, tilting it to the downside. Elevated energy costs are likely to dent global economic activity, thus dampening copper's demand. Conversely, a de-escalation in the conflict could support copper prices

EQT-backed IT firm Virtusa eyes \$1 billion in India IPO

Mumbai/Singapore: Virtusa Corp, a global information technology services firm owned by Swedish private equity giant EQT, is exploring an initial public offering in India that could value it at \$7 billion or more, four people with knowledge of the matter said. The company is looking to raise at least \$1 billion, two of the sources said. A road show in the second half of this year will help determine the listing venue, deal size, valuation and whether to proceed, one of the sources said. Citigroup, JPMorgan and Morgan Stanley have been tapped to work on the deal and more could be added later, three of the sources said. REUTERS

Debtenture trustees get more time for segregation

New Delhi: SEBI has extended the deadline by six months till October 27 for debtenture trustees (DTs) to comply with the mandate to segregate activities that fall outside its regulatory ambit. The move came after SEBI received an industry push highlighting operational challenges in establishing the necessary systems and processes for effective implementation. SEBI said, "It has been decided to grant an additional six months for compliance by the DTs. Accordingly, DTs will implement the framework's provisions by October 27." In October 2025, SEBI amended the DT rules, stipulating that a DT holding a valid certificate of registration may transfer its non-SEBI-regulated activities to separate business unit(s) within six months. PTI

Temasek, Canadian pension fund, LIC line up to sell stake in NSE IPO

MUCH AWAITED. The share sale will have a value of \$2.75 b, based on a total valuation estimated at \$55 b

Reuters
Mumbai

Singapore's State-owned investor Temasek and the Canada Pension Plan Investment Board are among 20 investors looking to sell stakes when the National Stock Exchange (NSE) goes public this year, sources familiar with the deal said. The share sale would have a value of \$2.75 billion, based on a total valuation for the NSE estimated at \$55 billion by a platform that trades its unlisted shares. It will be one of two large share-sales in India this year, along with an issue by Mukesh Ambani's Reliance Jio Platforms. The NSE has been trying to list since 2016, with key domestic rival BSE

Ltd listing in 2017. Also among the sellers will be Life Insurance Corporation, State Bank of India and homegrown private equity fund ChrysCapital, the two sources said. Overall, existing shareholders in the NSE will sell a 5 per cent stake in the IPO, added the sources, who spoke on condition of anonymity to name the investors for the first time, as they were not authorised to talk to media.

OFFER FOR SALE In response to Reuters' queries, the NSE said its board has approved an IPO through an offer for sale, but declined further comment at this stage. LIC, SBI and ChrysCapital did not respond to requests for com-

ON THE AGENDA. The NSE will now move to file the DRHP with SEBI by next month, after its financial results are announced

ment. Temasek and CPPIB declined to comment.

LONG DELAY The NSE listing was approved this year after a long delay due to litigation with SEBI.

A monetary settlement to resolve the litigation is likely, opening the way for the public offer. With 177,807 shareholders, the NSE is India's largest unlisted company by number of investors, making the of-

SEBI bars Ashok Maheshwari, 7 others in front-running case

Our Bureau
Mumbai

SEBI has barred eight entities, including Ashok Maheshwari, from the securities market for up to four years and ordered disgorgement of ₹1.29 crore in unlawful gains in a front-running case involving trades of a portfolio manager. In the final order, Maheshwari and Darshan Bakul Shah have been debarred for 48 months, including the period already served under the interim order. Khushboo Darshan Shah and Darshan Bakul Shah (HUF) have completed their

24-month market restraint, with no further debarment imposed. Benzer Department Stores and Mihir Dhirajlal Savla have been debarred for 24 months, while CHL Stock Concepts and Chirag Mahendra Shah have been debarred for 36 months. SEBI has also restrained Maheshwari, Darshan Bakul Shah and Chirag Mahendra Shah from acting as directors or key managerial personnel in listed companies or SEBI-registered intermediaries for two years.

'BIG CLIENT' TRADES Whole-time member Amarjeet Singh said the noticees

"carried out a scheme of front-running the trades of a Portfolio Management Service provider... to make unlawful gains," during April 1, 2021 to May 31, 2022. SEBI said the entities traded in "common scrips... proximate to trades of the Big Client," identified as UNIFI Capital, thereby exploiting advance knowledge of orders. They have been fined between ₹15 lakh and ₹25 lakh, totalling ₹1.52 crore. The notices have been directed to pay the penalties within 45 days. The order is in continuation of SEBI's interim action in April 2024 and comes into force with immediate effect.

Bagmane REIT plans to launch ₹3,405 crore IPO

Our Bureau
Bengaluru

Bengaluru-based Bagmane Prime Office REIT has filed its offer document to raise up to ₹3,405 crore through an IPO. The proposed offer comprises a fresh issue of up to ₹2,390 crore and an offer for sale worth up to ₹1,015 crore. The offer will open on May 5 and close on May 7. The REIT's portfolio consists of six premium Grade A+ business parks totalling 20.3 million sqft in Bengaluru. As of December 31, 2025, the portfolio boasts a 98.8 per cent committed occupancy and hosts marquee global giants such as Google, Amazon, Nvidia and Samsung.

Tata AMC launches Titanium equity long-short SIF

Our Bureau
Mumbai

Tata Asset Management has launched its second specialised investment fund Titanium Equity Long-Short Fund. The fund aims to generate medium-to long-term capital appreciation by actively managing both long and short exposures in equities and equity derivatives. The NFO closes on May 11. The fund keeps equity at the core, maintaining a minimum 80 per cent gross allocation to listed equity. It can also hedge its equity exposure through derivat-

Anand Vardarajan, Chief Business Officer, Tata Asset Management

ives and take additional unhedged short positions of up to 25 per cent of the portfolio value.

MIDDLE GROUND Anand Vardarajan, Chief Business Officer, Tata Asset Management, said the SIF

framework had opened up a very strategic middle ground between traditional MFs and AIF or PMS structures, allowing it to bring more sophisticated strategies in a tax-efficient manner. The long-short fund has the ability to morph into an aggressive long or short position and may also potentially turn into an arbitrage like positioning depending on the market situation. By actively managing both hedged and unhedged long and short positions, the SIF seeks to deliver performance that is less dependent on market direction and aims to convert volatility into opportunity across phases.

Valuations alone will not drive FPI flows: HSBC MF CEO

bl.interview

Suresh P Iyengar
Mumbai

The joyride of the mutual fund industry has been put to test by the wild swings in equity markets and negative returns due to the mark-to-market losses. However, investors have reposed their faith in MFs by pouring in more money but given the current geopolitical developments, will it sustain in the long-run? Kailash Kulkarni, CEO, HSBC Mutual Fund, on what lies ahead and market trends.

Given the long runway of opportunity, we could see more AMCs entering India in the coming years

KAILASH KULKARNI
CEO, HSBC Mutual Fund

Is the current market valuation attractive for investors? Recent market movements have led to a meaningful fall across segments, helping valuations move closer to long-term averages. The Nifty is trading at about 21 times trailing earnings, marginally below its 10-year average, indicating a moderation from earlier elevated levels. The fall has been more pronounced in broader markets, with mid- and small-caps correcting 15-22 per cent from peak levels, which has helped cool off excesses. This phase has combined a price correction with valuation normalisation, bringing valuations closer to more sustainable levels.

Is the valuation right enough to attract FPI inflows? FPIs have sold over \$20 billion of Indian equities in the past 15 months amid a tough external backdrop with tariff uncertainty, geopolitical tensions, slower earnings growth and rupee weakness, alongside a rotation towards other emerging markets. India's weight in global emerging markets (EM) funds versus its MSCI EM weight is near the lower end of the past 25 years. India's valuation premium to EM peers has fallen to below-average levels after prolonged underperformance versus the EM index. However, valuations alone will not drive flows. With high oil prices,

forex depreciation has weighed on returns and the rupee remains exposed if energy prices stay high. The pace of FPI return will hinge on global liquidity, interest-rate cycle, currency stability and India's relative appeal versus other emerging markets. If earnings growth improves and the rupee remains resilient, foreign inflows should gradually pick up.

Do you think a prolonged West Asia war will impact inflows into MFs, as SIP investments in the last two years has already turned negative? Geopolitical developments can lead to short-term volatility, but history shows that markets tend to stabilise and recover as fundamentals re-assess themselves. Domestic flows, particularly SIPs, have demonstrated resilience across cycles and the broader trend of financialisation of savings remains intact. Periods of volatility often encourage disciplined investing through rupee cost averaging rather than disrupt it. Hence, while there may be intermittent sentiment-driven fluctuations, long-term flows are unlikely to be structurally impacted.

Do you expect consolidation in the industry with SEBI tightening TER norms? The tightening of the TER norms enhances the value proposition of the industry

for end-investors by reinforcing transparency and cost discipline. While consolidation is always a possibility, it is more likely to be driven by business considerations rather than TER changes. In fact, given the long runway of opportunity, we could see more AMCs entering India in the coming years; so we should see a significant growth of new players entering this industry.

Do you think the rise in crude oil prices will impact demand and corporate earnings in the coming quarters? From an earnings perspective, the first impact is on margins in oil-sensitive sectors, as passing through these costs is often partial and delayed. Companies may attempt price hikes to protect profitability, but if higher prices persist, the burden can start to show up in consumption demand, especially discretionary categories, either through down-trading or deferred purchases. For upstream energy companies, higher crude oil prices should benefit earnings. Overall, we expect a modest impact on corporate earnings over the next couple of quarters, but a material impact is more likely if supply disruptions persist and elevated prices limit the ability to pass costs without hurting demand.

Will the increase in inflation hit demand across sectors? A sustained rise in inflation can have some impact on demand, particularly in discretionary segments. While there are pockets of concern, especially from commodity prices, India's overall demand environment remains relatively resilient, supported by improving income levels, government spending and a gradual recovery in private capex. Additionally, policy measures and supply-side adjustments have historically helped cushion the impact of inflation to some extent. Unless inflation remains elevated for a prolonged period, we believe the impact on demand is likely to be moderate rather than structural.

BROKER'S CALL.

ICICI Securities

CITY UNION BANK (BUY)

Target: ₹325
CMP: ₹275.70
City Union Bank reported strong Q4FY26 with loan growth at fresh highs, stable NIM/RoA and a multi-year improvement in GNPA/SMA2 — summing up to be a commendable farewell quarter for the incumbent MD and CEO. During his tenure (FY11-26), deposits, loans and PAT jumped 6-7x each, while net-worth and market cap surged 10-11x. Loan growth jumped to 26 per cent in Q4FY26 year on year, the highest in the last 13 years, led by gold loans. The management reiterated that the bank will likely continue to grow in mid-teens (2-3 per cent above system credit growth) driven by focus segments such as MSME, gold and secured retail business. Further, the management mentioned MSME would continue to dominate at 55-60 per cent, followed by gold loans at 30-35 per cent and secured retail would act as an incremental growth lever. The management mentioned that the bank would try to limit gold loan mix to about 30 per cent (29 per cent currently), while adding that this is not a rigid limit. The bank guided for stable NIM and 10-15 bps of RoA improvement to 1.65-1.7 per cent by Q4FY27 (vs 1.56 per cent in Q4FY26). The bank highlighted its conservatism on limiting its per gram gold price — detached from the jump in market prices. While noting macro uncertainties, City Union Bank pointed to current SMA 2 (0.7 per cent) and SMA 0+1+2 being at multi-year lows. We retain BUY; TP intact at ₹325, basis about 1.8x FY28E ABV. **Risk:** Execution challenges and gold price volatility.

Elara Securities

SUPREME INDUSTRIES (ACCUMULATE)

Target: ₹4,200
CMP: ₹3,630.80
Supreme Industries reported a strong Q4FY26 with volumes growing 16 per cent year on year to 231,889 tonnes and EBITDA margin expanding 391 bps to 17.7 per cent, aided by an inventory gain of about ₹70-80 crore from the PVC price spike in March. Plastic piping was the standout with Q4 revenue up 23.3 per cent and volume up 18.3 per cent, aided by continued capacity expansion and channel restocking. Packaging revenue grew 7.2 per cent and volume 10.1 per cent, with focus on value-added offerings. Agri demand has picked up in Q1 post PVC price correction, with no major inventory issues at the distributor or retail level. The company has committed over ₹1,000 crore in capex for FY27. All capex will be funded via internal accruals, maintaining zero-debt status. The management has guided for FY27 volume growth of 12-13 per cent overall and 15-17 per cent for plastic piping, with EBITDA margin guidance of 14-14.5 per cent. The stock has moved up 10 per cent in the past three months on the back of higher PVC prices. We downgrade SI to Accumulate and cut our earnings estimates by 8 per cent/9.2 per cent for FY27E/28E respectively, to factor in lower margins. We raise our TP to ₹4,200 from ₹3,980 as we roll forward to March 2028E with an unchanged P/E of 40x.

TODAY'S PICK.

Triveni Engg & Industries (₹405.70): BUY

Akhil Nallamuthu
bl_research_bureau

Triveni Engineering

The stock of Triveni Engineering & Industries gained 6.6 per cent last week. Consequently, it broke out of a resistance at ₹400.

While it made a high of ₹434.90 last week, the stock has seen some moderation in price so far this week. However, it remains above ₹400, and we expect the stock to resume the uptrend soon. Once the uptrend begins, the stock can see a leg up to ₹440 first. Post this, we might see a minor correction to ₹425 and then head north to ₹460. So, traders can buy now at ₹405

and accumulate at ₹395. Place initial stop-loss at ₹380. When the price rises to ₹440, alter the stop-loss to ₹420. On a rally to ₹450, modify the stop-loss to ₹435. Exit at ₹460.

Note: The recommendations are based on technical analysis. There is a risk of loss in trading

‘SBI, others creditors in Reliance Infratel case’

New Delhi: The Supreme Court on Tuesday ruled that liabilities arising from corporate guarantees squarely constitute “financial debt” under the Insolvency and Bankruptcy Code (IBC). A Bench, comprising justices PS Narasimha and Alok Aradhe, upheld the validity and enforceability of corporate guarantees and recognised a consortium of banks led by SBI as financial creditors in the insolvency proceedings of Reliance Infratel Ltd. **PII**

Energy prices to surge 24% in 2026: World Bank

Washington: Energy prices are expected to surge by 24 per cent in 2026 to their highest level since Russia's full-scale invasion of Ukraine four years ago, if the most acute disruptions caused by the war in West Asia end in May, the World Bank said on Tuesday. Commodity prices could rise even further if hostilities in the region escalated and supply disruptions lasted longer than expected, the global development bank said in its latest *Commodity Markets Outlook*. **REUTERS**

India to receive 4th unit of S-400 Triumf in May

New Delhi: India is expected to receive the fourth unit of the S-400 Triumf surface-to-air missile system from Russia in early May, sources said on Tuesday. In October 2018, India signed a \$5 billion deal with Russia to procure five units of the missile system, and three of them have already been delivered. The sources said the fifth unit of the missile that played a crucial role during Operation Sindoor will be delivered by November. **PII**

Factory output slips to 4.1% in March as manufacturing slows

CAUTIOUS OUTLOOK. External headwinds may weigh on industrial competitiveness

Shishir Sinha
New Delhi

Growth in factory output, as measured by the Index of Industrial Production (IIP), slowed to 4.1 per cent in March from 5.1 per cent in February, the Ministry of Statistics and Programme Implementation (MoSPI) reported on Tuesday. According to data from the National Statistics Office (NSO), the manufacturing sector's output growth remained subdued at 4.3 per cent in March 2026 compared to 4 per cent in the year-ago month. Mining production growth improved to 5.5 per cent from 1.2 per cent recorded a year ago. Power generation grew 0.8 per cent in March against 7.5 per cent in the year-ago period. According to Aastha Gudwani, India Chief Economist at Barclays, slower growth in manufacturing sector shaved off 120 bps from headline. Similarly, slower electricity growth shaved off another 12 bps. This offset the growth in the mining sector. Within manufacturing, 14 out of 23 sectors saw positive growth rates (same as in February).

Source: NSO

“Only chemical and chemical products saw slower year-on-year (y-o-y) and month-on-month (m-o-m) growth rates in March,” she said. Vikrant Chaturvedi, Associate Director at Brickwork Ratings, said he sees a dip in the overall industrial growth signals as a moderation in industrial momentum. “The strength in capital goods (14.6 per cent) and infrastructure goods (6.7 per cent) underscores that investment-led demand remains intact, even as consumer non-durables posted a

muted 1.1 per cent rise,” he said.

CAUTIOUS APPROACH However, he cautioned against external headwinds due to the West Asia conflict. The conflict had tightened global energy markets, raised input cost volatility and could weigh on India's industrial competitiveness. “The near-term outlook remains constructive, supported by government spending and easing supply chains. Still, the pace of recovery in electricity and consumer goods will be critical

to achieving a balanced industrial expansion in FY27,” he said.

Megha Arora, Director at India Ratings & Research (Ind-Ra), said she expects IIP growth in April 2026 will improve to around 5 per cent as the base effect will help in maintaining the growth momentum (growth in April 2025 was 2.6 per cent). “The government's continued capex is likely to keep capital goods (FY26: 8.2 per cent) and infrastructure/construction goods (FY26: 9.8 per cent) growth momentum in FY27 as well,” she said.

Oil Ministry mulls making OTP-based LPG cylinder delivery mechanism permanent

Rishi Ranjan Kala
New Delhi

The Ministry of Petroleum & Natural Gas (MoPNG) is mulling to make permanent the OTP-based domestic liquefied petroleum gas (LPG) cylinder delivery mechanism considering its utility in checking black marketing and hoarding. The MoPNG introduced the delivery authentication code (DAC)-based mechanism in the backdrop of the West Asia conflict-induced LPG supply shock.

The consumer will receive the DAC on their registered mobile number, and will be handed over the LPG cylinder only after they show the DAC received on their handset. The consumer's mobile number is linked to the customer's ID through the distributor. On Tuesday, the MoPNG said that DAC-based deliveries have increased to around 93 per cent to prevent diversion. In the last fortnight, DAC-based cylinder deliveries have averaged around 93 per cent.

PSU OMCs, on an average, have delivered around 52-55 lakh 14.2 kg LPG cylinders every day since March 2026. As of March 2026, India has around 33.40 crore active domestic LPG consumers, of which more than 10.50 crore are PM Ujjwala Yojna (PMUY) beneficiaries. India also has over 25,600 distributors of the commodity.

EXPANDING DAC BASE Earlier this month, the MoPNG said that to prevent diversion at the distributor level, the DAC-based deliver-

AUTHENTICATION METHOD. As per the system, the consumer will receive the DAC on their registered mobile number, and will be handed over the LPG cylinder only after they show the DAC received on their handset **ANI**

ies had been increased from 53 per cent (February 2026) to 90 per cent on April 4, 2026.

The MoPNG said on Tuesday that LPG supply continued to be affected by the prevailing geopolitical situation.

Goods supplied from SEZs to DTA treated as imports, duty drawback applicable on re-exports

Shishir Sinha
New Delhi

The Central Board of Indirect Taxes and Customs (CBIC) has clarified that when goods are supplied from SEZ units to the domestic market after paying applicable duties and later re-exported, they will be treated as imported goods for the purposes of disbursement of duty drawback. In an instruction, the Board took note of Section 74 of the Customs Act. According to the said section, drawback is admissible on the re-export of duty-paid goods, provided the goods are capable of being easily identified and were previously imported into India.

The term ‘easily-identified’ implies that the goods can be readily recognised, while ‘import’ means bringing goods into India from a place outside India. “For the purposes of trade operations and duties, a SEZ is treated as foreign territory within India. Therefore, movement of goods from an SEZ into the DTA may be construed as an import,” the instruction said.

UNIFORM TREATMENT According to Ikesh Nagpal, Lead-Indirect Tax at AKM Global, in practice, drawback claims on re-export of such goods were being handled differently across formations, with some allowing the benefit and others denying it.

By way of this instruction, the Board has legally settled the position, with movement of goods from SEZ to DTA must be regarded as import, and consequently, eligible for drawback under Section 74 when re-exported. “This should help bring consistency in assessments, reduce avoidable disputes, and ease cash flow issues for busi-

nesses dealing in re-export transactions,” he said. Think tank GTRI said by treating duty-paid goods supplied from SEZs to the DTA as imported goods, the instruction removes an unnecessary ambiguity that had led to different practices. “It will bring uniformity, reduce litigation, and ensure justice for exporters who have already paid applicable customs duties. There is no reason such duties should remain locked when the same identifiable goods are exported again,” GTRI Founder Ajay Srivastava said. Further, he added that the change supports fairness, improves cash flows, and provides greater certainty to DTA buyers, exporters and SEZ suppliers.

India to challenge US allegation of unfair trade practices

Amiti Sen
New Delhi

The Central government and representatives from sectors like textiles, auto parts, plastics and solar are contesting the US Trade Representative's (USTR) Section 301 investigations in public hearings in Washington that start this week.

“Indian officials and industry groups will testify over the next two weeks to push back against claims of labour violations and market-distorting overcapacity, which could potentially lead to new tariffs,” a source tracking the matter told *businessline*.

The hearings are scheduled for April 28-29 regarding forced labour and May 5-8 for structural excess capacity. The USTR launched

these probes in March 2026, alleging that trade surpluses and inadequate protection against forced-labour imports in certain economies, including India, burden American commerce through artificially low-priced competition and displaced domestic production.

‘MISCHARACTERISED’ On allegations of structural excess capacity, the Centre stated, “India submits that in each of the sectors identified in the notice, namely, solar modules, textiles and apparel, health, construction goods, automotive goods, petrochemicals and steel, the initiation notice mischaracterises India's industrial structure and does not take into account domestic demand-based capacity investment and future growth forecasts,” it said.

US Trade Representative Jamieson Greer **REUTERS**

In its submission, the Indian Steel Association argued that India's steel sector does not contribute to global overcapacity nor is it implicated in forced labour under authoritative US benchmarks.

Industry bodies, such as the Plastics Export Promotion Council, further argued that India's domestic laws already prohibit forced labour and that its top plastic imports do not appear on US

labour watchlists. Supporting this stance, Texprocil and the Indian Solar Manufacturers' Association (ISMA) noted that India's Constitution and corporate regulatory frameworks ensure supply chain transparency. They argued that commercial practices, including third-party audits and supplier codes of conduct, prevent labour abuses, making any punitive Section 301 measures unwarranted. “These requirements are further strengthened by commercial practices adopted by Indian textile companies, including supplier codes of conduct, contractual obligations, and third party audits, which prohibit forced labour and require ongoing compliance across the value chains,” the Texprocil submission noted.

Piyush Goyal assures exporters of govt support to enter new markets

Our Bureau
New Delhi

Commerce and Industry Minister Piyush Goyal has assured exporters of sustained government support, including facilitation under ongoing schemes, targeted interventions to reduce entry barriers to export markets, and steps to enhance the ease of doing business. Industry representatives raised concerns on high compliance costs, stringent testing requirements and other challenges faced by MSMEs in entering export markets in a meeting on Monday with the Minister and senior officials. Exports have been affected by the prolonged West Asia crisis that has resulted in sea route blockades, increased shipping and insur-

ance costs and intensified uncertainty. Exports of goods in FY26 from India registered barely 1 per cent growth (year-on-year) to \$441.78 billion.

GOVT MEASURES “The Minister reaffirmed the government's commitment to strengthening a facilitative trade ecosystem through ongoing reforms, targeted

support measures and close collaboration with industry to accelerate export growth and position India as a trusted global supply partner,” per a statement issued by the Commerce Department. Discussions also highlighted progress under the Export Promotion Mission (EPM), the government's flagship scheme to support exporters. “The Minister encouraged Export Promotion Centres to take steps to increase the number of active exporters,” the statement noted. Representatives from key sectors such as gems & jewellery, apparel, leather, engineering goods, cotton textiles, man-made and technical textiles, carpets, handicrafts, agriculture and processed food, pharmaceuticals, and IT and software participated in the meeting.

‘Effective deployment of public wi-fi still remains a concern’

S Ronendra Singh
New Delhi

The effective deployment of public wi-fi in India remains a concern, with success hinging on whether it can offer a significant price advantage over mobile data tariffs to motivate users to switch, experts said, even as the Telecom Regulatory Authority of India (TRAI) flagged structural, financial and operational hurdles that have slowed the proliferation of hotspots across the country. Public wi-fi or hotspots have been in question for almost two decades, largely because of the highly competitive pricing of mobile data by telecom service providers

MARKET DYNAMICS. Public wi-fi has been in question for almost two decades, largely because of the highly-competitive pricing of mobile data by telecom service providers **GETTY IMAGES**

of public wi-fi networks, TRAI noted that despite policy initiatives such as PM-WANI, the density and geographic spread of hotspots remained uneven, particularly in remote and underserved regions. “Market dynamics have moved very fast since the concept of public wi-fi was introduced. Effective deployment and monetisation still remains a concern. While mobile internet tariffs have been increasing, the success of public wi-fi de-

pends on whether or not it is able to offer substantial delta in pricing,” Faisal Kawoosa, Chief Analyst and Founder at Techarc, told *businessline*.

SHODDY NETWORK The regulator has also drawn attention to weak monetisation models as a central issue, questioning how public wi-fi providers can generate sustainable revenues while keeping their services affordable. While there are campaigns being run even now suggest-

ing users not to use public wi-fi for making payments, the new consultation paper talks about integrating UPI based payment methods for enhanced monetisation, Kawoosa said. The consultation exercise further highlighted operational challenges, including last-mile connectivity costs, gaps in fibre linkages to wi-fi access points, and the need for simplified authentication processes. TRAI has specifically asked stakeholders to examine how user onboarding, roaming, billing and authentication can be made seamless. “Public wi-fi as a concept is not bad at all, but can we deliver it as effectively as other public utilities like potable water and electricity needs to be figured out,” Kawoosa added.

POLICY CHANGES Another area flagged by the

regulator is the uneven expansion of PM-WANI hotspots despite the initial expectations of a rapid scale-up. TRAI has sought views on what policy, regulatory or infrastructure, changes are required to expand both the density and geographic reach of hotspots nationwide, particularly in rural areas where public wi-fi was envisioned as a low-cost alternative to fixed broadband. According to Paritosh Prapapati, CEO, GX Group, a simplified, forward-looking regulatory framework will be critical to scaling the PM-WANI ecosystem, enabling broader participation and ensuring affordable internet access across underserved regions. “At GX Group, we believe policy clarity, combined with strong industry collaboration, will be the catalyst for building a scalable, secure, and sustainable public wi-fi ecosystem,” he said.

Snabbit raises \$56 m for quick home services play

Bengaluru: Snabbit has raised \$56 million in a Series D funding round as it looks to consolidate its position in India's fast-emerging on-demand household services market. The round was co-led by Susquehanna Venture Capital, Mirae Asset Venture Investments' Unicorn Growth Fund and Bertelsmann India Investments. Snabbit currently facilitates over 40,000 jobs daily across 140 micromarkets, supported by a network of more than 15,000 women service professionals. **OUR BUREAU**

Oxford inks malaria vaccine pact with SII

London: The University of Oxford and the Serum Institute of India (SII) have hit a significant milestone in the global fight against malaria with a pact to develop a new multi-stage vaccine. The licence agreement was signed this week to support the development and manufacture of R78C. This builds on their previous collaboration on malaria vaccines to improve outcomes. **PTI**

Chennai records ₹1,290 cr freight revenue in FY26

Chennai: The Chennai Division of Southern Railway achieved a notable milestone in freight performance during 2025-26, registering a total freight revenue of ₹1,289.78 crore and introducing several new streams of traffic. The division handled steel pipe movement for the first time from Chennai harbour (Jawahar dock) to Ponnmalai (Golden Rock – boiler plant). **OUR BUREAU**

Bandhan Bank Q4 net profit up 68% to ₹534 crore on lower provisions

BETTER ASSET QUALITY. Bank reported fall in slippages and improvement in recovery from bad loans

Our Bureau
Kolkata

Private sector lender Bandhan Bank on Tuesday reported around 68 per cent year-on-year increase in its net profit to ₹534.14 crore for the fourth quarter last fiscal on the back of an around 46 per cent fall in provisions as asset quality improved during the period.

The Kolkata-headquartered bank's net profit for the fourth quarter of FY25 stood at ₹317.90 crore.

Its operating profit for the fourth quarter last fiscal saw a decline of 8.28 per cent year on year at ₹1,441.16 crore, according to a stock exchange filing. During the quarter under review, the lender's net interest income (NII) rose 1.43 per cent to

₹2,795.59 crore from ₹2,756.19 crore for the same period a year ago. Non-interest income witnessed a healthy growth of 10.16 per cent at ₹770.69 crore.

“This quarter marked an improvement across many key parameters, reflecting strengthening fundamentals across our core businesses. We saw encouraging momentum build through the quarter, underpinned by discipline execution and a stark focus on balance sheet quality,” Bandhan Bank MD & CEO Partha Pratim Sengupta said after declaring the results.

BUSINESS METRICS

During Q4FY26, the lender's advances and deposits grew 12.6 per cent and 10 per cent year-on-year, respectively. Net interest margin (NIM) for the period stood at 6.2

Q4 scorecard (in ₹ crore)

	Q4 FY25	Q4 FY26	% Change
Net profit	317.9	534.14	68.02
Operating profit	1,571.34	1,441.16	-8.28
Provisions	1,260.16	677.01	-46.27
Net interest income	2,756.19	2,795.59	1.43
Non-interest income	699.62	770.69	10.16

per cent, registering a 46 basis points decline.

Provisions fell to ₹677.01 crore from ₹1,260.16 crore

during the year-ago period, as the bank witnessed a fall in slippages and an improvement in recovery from bad

loans. During Q4FY26, fresh slippages were around ₹1,030 crore (₹1,750 crore).

For the third quarter last fiscal, fresh slippages stood at ₹1,310 crore.

For the Emerging Entrepreneur Business segment (erstwhile microloan segment), slippages reduced to ₹690 crore during the quarter compared to ₹942 crore in Q3FY26.

Gross non-performing assets (GNPA) ratio fell 44 bps to 3.27 per cent during the quarter from 4.71 per cent in the year-ago period. Net NPA ratio declined 31 bps at 0.97 per cent (1.28 per cent).

“We said that exit FY27, we should have a NIM of 6.46 per cent on the total assets, which roughly would be around 6.4 per cent of the total advances,” said Rajeev Mantri, Chief Financial Officer, Bandhan Bank.

Vummidi Bangaru Jewellers eyes ₹5,000 cr revenue by FY28

Rohan Das
Chennai

Chennai-based Vummidi Bangaru Jewellers (VBJ) is gearing for a phase of expansion with a revenue target of ₹5,000 crore by 2027-28.

The 125-year-old jewellery retailer closed the financial year ending March 2026 with a topline of about ₹2,700 crore.

Amarendran Vummidi, Managing Partner, VBJ, said that the company plans to achieve growth targets by expanding its retail footprint with stores in Coimbatore, Tiruchirappalli and Hyderabad.

The expansion will be driven by an internal invest-

Jithendra Vummidi (left) and Amarendran Vummidi, Managing Partners, VBJ, at its new showroom in Chennai **BUOY GHOSH**

ment of ₹500 crore and will add to VBJ's current footprint of two stores in Chennai. It also operates a store in the US, with plans to launch another one.

Amarendran was speaking to mediapersons at the launch of VBJ's flagship store here on Tuesday. The 14,000-

sq ft store is designed across multiple levels with dedicated floors for gold jewellery, diamonds, platinum and sapphire. He added that the size and scale of stores will be dynamic based on the needs of the particular market.

“Chennai and Coimbatore are large markets, so it can

take a huge, large-format store. But when we scale to smaller, tier-2/-3 cities it has to be more flexible.”

DIGITAL GOLD

Beyond retail expansion, the company is also gearing to launch a mobile app for digital gold investing within the next two weeks, Jithendra Vummidi, Managing Partner, VBJ, said.

Its business mix currently includes around 65 per cent gold, 30 per cent diamonds and about 5 per cent from platinum and other precious metals.

Interestingly, Jithendra said that given the increase in gold prices recently, there had been a marginal increase in demand for lower-purity

gold like 18 carat.

Speaking to *businessline* on the company's performance over the past year when gold and silver prices moved up significantly, Amarendran said while the volume of sales was lower, the value had gone up, with the company having posted 17-20 per cent growth for FY26.

On the supply side, he said that the company had not yet faced any significant challenges in sourcing or imports, but continued to monitor global developments.

“There are short-term fluctuations in sentiment, but the demand in India remains largely resilient due to the strong cultural and investment linkage with gold,” he added.

GIFT City to expand 15%; over 161 acres to be added

Avinash Nair
Ahmedabad

GIFT City is set to grow by more than 15 per cent, with plans to add 161 acres to its existing 1,065-acre footprint, taking the total area to over 1,220 acres, as India's flagship financial hub enters its next phase of expansion.

The increase in size will come from a mix of river-front land reclamation and allocation of contiguous government land, marking a renewed push to scale up the city after an earlier attempt to expand its notified area was rolled back by the authorities.

“We will be getting some more land through reclamation as part of the Sabarmati riverfront development. This is about 31 hectares and will entail a different master plan,” Sanjay Kaul, Managing Director and Group CEO of the Gujarat International Finance Tec-City Company — a State-owned entity that builds, plans and manages the city's core development — *told businessline* in an exclusive interaction at his office in Gandhinagar.

He added that six entities, including four global firms, were in contention, with a reputed master-planner set to be appointed.

Apart from the reclaimed land along the Sabarmati Riverfront, an additional 85 acres of government land near Shahpur village, contiguous to the existing development, will be integrated into GIFT City. “This land parcel is contiguous to the existing GIFT City. The allocation process is in motion,” Kaul said.

PREVIOUS PROPOSAL

A draft of the revised master plan is expected to be submitted to the Gujarat government within the next four months. An earlier, far more ambitious plan to expand GIFT City was proposed in 2023, when the authorities

considered increasing its footprint by around 2,300 acres — more than tripling the project size to about 3,365 acres by incorporating four surrounding villages in Gandhinagar district.

However, the proposal did not move forward in its original form and was effectively rolled back as policymakers opted for a more calibrated approach, focusing on orderly development and infrastructure within the existing limits before taking on such a largescale territorial increase.

“This year, 1.24 million sq m of commercial space will be ready and 2.36 million sq m of residential space is also expected to be completed,” Kaul said.

Of the planned 62 million sq ft of total development, around 6 million sq ft has already been completed. Allocation for another 29.1 million sq ft has been awarded and is expected to be completed by mid-2028, indicating a strong pipeline of upcoming projects.

DRA, Slate partner for AI-led construction management

Our Bureau
Chennai

Chennai-based real estate developers DRA announced a strategic partnership with California-based Slate Technologies Inc to deploy Slate AI, an AI-powered construction intelligence platform across its operations.

The platform is currently deployed across DRA projects in Chennai, covering about 3.3 million sq ft, supporting nearly 2,000 workers across construction sites and over 100 technical staff, the real estate company said.

DRA will be integrating Slate AI across key functions, including project management, quality inspection, site

monitoring, procurement optimisation, safety analytics and delay prediction.

Ranjeth Rathod, Managing Director, DRA, expects to go in for full implementation of the AI module by December 2026.

RISK FROM AI

On the risk of AI eating up jobs in the labour-intensive sector, Rathod told *businessline* that the tool would help the sector upskill their workforce. “Use of robots or other such physical AI systems is not here yet,” he added.

On the impact of the West Asia war, he said they had seen about 8-10 per cent cost increase and delivery pressures due to the situation.

Gold falls as US-Iran tensions keep oil soaring

Gold fell to a near four-week low on Tuesday as inflation concerns remained heightened after Donald Trump appeared dissatisfied with Iran's latest proposal to end the war. Spot gold dropped 2.1 per cent to \$4,585.21 per ounce, as of 1345 GMT. US gold futures for June delivery fell 2 per cent to \$4,598.40. REUTERS

Akshay Kumar to endorse Crystal Crop Protection

Mangaluru: Crystal Crop Protection Ltd, an agri input company, has announced the appointment of Akshay Kumar as its brand ambassador. The company also unveiled its first national brand campaign with Akshay Kumar, “*Desh Ka Kisan, Desh Ka Asli Hero*”. With this partnership, Crystal Crop Protection aims to strengthen its connect with farmers and help them adopt advanced solutions and improve farm profitability, a statement said. OUR BUREAU

Copper at 2-week low on stronger \$, inflation fears

London: Copper prices fell to a two-week low due to a stronger dollar, concerns about global economic growth and fears over inflation. Benchmark three-month copper on the LME was 1.7 per cent lower at \$12,985 a tonne. LME aluminium was down 1.2 per cent at \$3,535. REUTERS

UAE to leave OPEC in May as Iran war reshapes oil market

Bloomberg

The United Arab Emirates will leave OPEC and its wider alliance, dealing a blow to the group and its leader Saudi Arabia as the global oil industry grapples with the massive supply disruption caused by the Iran war.

The UAE's exit, after six decades of membership, is a significant loss for the group, which has spent years balancing global oil markets and defending prices by managing crude supplies.

‘RIGHT TIME’

The move is also the latest indication of how the war in Iran will reshape global energy markets for years to come.

While the UAE has talked in the past about quitting OPEC amid long-standing tensions with Saudi Arabia,

Energy Minister Suhail Al Mazrouei said the disruption caused by the war created an opportune time for the move.

The UAE believes that the shortages caused by the war will require agility to respond to market demands without being constrained by the collective decision-making process of the wider group, he said.

YEARS OF TENSION

The departure also follows years of tension with the leader of the Organization of the Petroleum Exporting Countries and neighbouring Saudi Arabia, both over oil output policy and political influence. The two had clashed occasionally at OPEC+ meetings as the UAE sought to deploy new investments in oil production capacity, while Riyadh pressed the group to restrain supply.

CHIKOO CHECK. The slide is most visible in Surat, where the area under the fruit has plunged by nearly 58.5% over the period

as the country's largest chikoo-growing State by acreage, continues to position the crop as a key horti-

culture strength. State-wide output has declined from 3.25 lakh tonnes (lt) in 2015-16 to 2.40 lt in 2024-

Indonesia introduces new quota for peanut imports

EXPORT FALLOUT. Aimed at encouraging domestic output, the regulation with tight quality norms is likely to affect Indian exports

Subramani Ra Mancombu
Chennai

Indonesia has come up with a quota system for peanut (groundnut) imports that could impact Indian exports as it has tightened quality norms.

Jakarta came up with a Ministerial Regulation during the weekend, which permits loading of non-quota peanuts until May 7.

“Usually, the trade gets 90 days to prepare for such changes. But this regulation has given only 14 days for preparation,” said a trading source from Singapore, who did not wish to be identified.

EXPORTS MAY STALL
The new regulation has been

introduced to help improve the domestic production of agricultural produce, such as peanuts.

However, the most difficult part of this regulation is that exporters to Indonesia have to get a global Good Agricultural Practices (GAP) certification.

“Getting such a certification takes 3 to 6 months. It is not easy to obtain,” said the source.

This will mean that no peanut exports will be possible over the next 3-6 months. “This will lead to a sharp increase in prices, maybe 60-80 per cent and even double. No country will be able to meet this requirement,” said the source.

Though this quota applies to all countries, India, as the

PRICE SPIKE LIKELY. Peanut exports are likely to halt for three-six months, with prices expected to surge 60-80 per cent and potentially even doubling

largest exporter to Indonesia, could be badly affected, said a South India-based trader.

The Singapore source said this nullifies the efforts of

the Agricultural and Processed Food Products Export Development Authority (Apeda) to export peanuts to Indonesia.

“This is because the new

regulation applies to all. The new quota regime will apply to peanut kernels as well as peanut in shell,” said the source, adding that it did not apply to roasted peanuts.

However, imports of roasted peanuts into Indonesia will not need a specific factory licence.

This would be another stiff hurdle that will force peanut imports into Jakarta to face headwinds.

Indonesia suspended groundnut imports from September 2 last year for non-compliance with quality standards, particularly high aflatoxin levels.

Exporters, however, disputed Jakarta's delayed process in notifying the presence of aflatoxins in their shipments. They said that

there were a couple of issues with Indonesia's handling of the groundnut import issue.

Indian exporters alleged that they find problems with Indonesia's testing standards, which they say do not conform to standards defined by the World Trade Organisation (WTO).

TRACK RECORD
But Indian exports resumed in November after Indonesian authorities carried out inspections in facilities across the country.

After the visit, Indonesia came up with norms such as geo-tagging. It also tightened norms for aflatoxin.

The maximum limit for aflatoxin was fixed at 15 parts per billion (ppb), which exporters said would

be tough to meet. The procedures were stiff, and Jakarta reduced the list of exporters to about 75. This led to some shippers losing interest in exporting peanuts to Indonesia.

The country imported a third of India's groundnut shipments over the past few years. In 2024-25, it imported 2.77 lakh tonnes of peanuts valued at \$280 million, of the total 7.46 lakh tonnes valued at \$795 million shipped out by India.

During the April-February period of 2025-26, Jakarta purchased 1.54 lakh tonnes of peanuts valued at \$161.52 million.

India's peanut exports during the period were 6.34 lakh tonnes, valued at \$655.54 million.

Pricey copper sulphate raises cultivation costs for coffee and arecanut growers

AJ Vinayak
Vishwanath Kulkarni
Mangaluru/Bengaluru

A sharp increase in copper sulphate prices, driven by higher copper and sulphuric acid prices, is set to result in higher cultivation costs for coffee and arecanut growers, who are gearing up to apply fungicide sprays ahead of the monsoon.

“Copper sulphate prices have gone up by a whopping 70 per cent from ₹270 per kg last year to over ₹450 now. Copper sulphate is required for the preparation of a crucial organic plant protection fungicide called Bordeaux mixture, which is used mainly in arabica coffee to prevent various fungal diseases, such as leaf rust and black rot,” said Sahadev Balakrishna, Chairman of the

UPASI Coffee Committee.

“In areas with very high rainfall during monsoon, the Bordeaux mixture is imperative in controlling a whole lot of fungal infections,” he added.

BS Jayaram, a grower and former President of the Karnataka Growers Federation, said the spike in inputs like copper sulphate will add to the cultivation costs this year.

“Lack of adequate labour and rise in input costs are a challenge for coffee growers to take up activities like spraying and other field practices,” he said.

Sahadev said migrant labour is slowly trickling in. “We will know in a couple of weeks if the migrant labour strength is back to normal. Otherwise, several vital field operations like pruning, spraying, manuring and

weeding will be delayed,” he said.

RATES DOUBLE
Mahesh Puchhappady, President of the All India Arecanut Growers' Association, told *businessline* that farmers will have to pay a minimum of ₹450 for a kg of copper sulphate this year. Depending on the quality of the product, it ranges up to ₹530. The minimum price of copper sulphate was around ₹290 last year.

Arecanut plantations are already facing issues such as diseases and tender nut dropping due to high temperatures.

Growers lost almost 50 per cent of their yield due to fruit rot disease in the last season. In such a situation, an increase in the price of copper sulphate will have an impact on the income of

farmers. Many small farmers may find it difficult to manage their plantations under such conditions, Puchhappady said.

Though there are some alternatives to copper sulphate solution in the market, a small farmer would not want to take the risk by spraying them as he would not know the impact of such sprays, he said.

SR Satishchandra, President of the Central Arecanut and Cocoa Marketing and Processing Cooperative (Campco) Ltd, said that the co-operative is supplying at a subsidised rate of ₹450/kg to its grower members.

Farmers are eligible to purchase 2 kg of copper sulphate at a subsidised rate for every 100 kg of arecanut sold to Campco in the last season. Others can buy it at ₹490 a kg.

Basmati farmers and exporters forum seeks ‘measure of reasonableness’ from shipping companies

Subramani Ra Mancombu
Chennai

The Basmati Rice Farmers and Exporters Development Forum (BFEDF) has criticised the role of shipping lines in dealing with shipments of basmati rice stranded at inland container depots (ICDs), transshipment hubs such as Jebel Ali in the UAE, and also mid-sea. The situation is a fallout of the Iran war that has resulted in the Strait of Hormuz being blocked.

BFEDF Chairperson Priyanka Mittal told *businessline* that shipping lines have behaved “hypocritically” on the whole issue. “Shipping lines are taking a very asymmetrical position concerning *force majeure*. They are saying we can't deliver the product because it's *force majeure*; we invoke it because of war,” she said.

Shipping lines, particularly the large international ones, have taken a rather “extortionist” stance in continuing to charge for stranded containers. It is more stressful for MSMEs (micro, small, and medium-sized enterprises) because the cargo value is low.

LAUDING GOVT'S ROLE

“In 40 days, the cargo is sitting either at the port, at the ICD or at the transshipment hub. In some cases, 70 per cent of the cargo itself becomes the average charge of the liner, which is onerous on the exporter,” said Mittal.

“As far as port detention is concerned, in some cases, there are temporary waivers for the first 15 days, and the government will issue a subsequent waiver,” she said.

Shipping lines are dropping containers at intermediate ports, such as Khor Fakkan or Fujairah, and declaring the voyage as over.

Priyanka Mittal, Chairperson of the Basmati Rice Farmers and Exporters Development Forum

This is forcing exporters to pay massive sums — sometimes \$9,000 to \$16,000 — for secondary trucking to the final destination, she said.

Containers were left stranded at Jebel Ali port too, leaving exporters to find their own transport to take rice to Saudi Arabia, Kuwait or other destinations.

The Directorate General (DG) of Shipping, now the

DG of Maritime Act (DGMA), has taken a very proactive role and set up a call last week, inviting all the aggrieved parties. “They heard the matter case by case and said they would follow it up. None of the shipping lines, surprisingly, were present. There were only two associations,” said Mittal.

Basmati exporters requested that a “measure of reasonableness” be applied to the current situation. “If there's a *force majeure* that is being pleaded to by the shipping lines, it should apply reciprocally. It can't apply to the shipping lines alone,” she added.

NEED FOR REGULATOR
The charges on the exporting community should be retracted. Shipping lines should defend the charges they impose. “They're holding containers. They are not releasing them. Internationally, there is also a law of enabling

commerce, mitigating... They should release the containers to the relevant exporters and then start disputing,” said Mittal.

Stressing the need for a maritime commercial regulator alongside the DGMA to prescribe commercial rules, she said it should be based on the laws prescribed by the Federal Maritime Commission of the US. In the case of shipping lines not handing over basmati rice containers, the issue is that rice is at risk in view of temperatures soaring to 40°C, and it needs to “breathe” and cannot stay in containers indefinitely, said Mittal.

She said the government should make use of its new powers to prescribe transparent commercial rules for the maritime sector. On the other hand, shipping lines should release containers first, make reciprocal waivers and not charge anything retrospective.

Telangana to procure 15 lakh tonnes of maize

KV Kurmanath
Hyderabad

With maize prices ruling below the minimum support price, the Telangana government has decided to intervene and procure at least one-third of the estimated output of 43.2 lakh tonnes (lt).

The government will spend ₹4,173 crore to procure 14.89 lt of maize at the MSP of ₹2,400 a quintal.

The Cabinet has cleared the proposal and agreed to provide the required guarantee to help the Telangana State Cooperative Marketing Federation Limited (TS MARKFED) raise the required funds.

Telangana, which is among the top maize-producing States in the country, has grown the crop on about seven lakh hectares, with an estimated yield of 65.66 quintals per hectare.

BELOW MSP
Though the MSP stands at ₹2,400 a quintal, maize prices fell to ₹1,600 in most mandis due to the softening global prices, resulting in a loss of ₹800 for farmers.

Farmers in areas like Khammam organised protests, demanding that the State government step in and procure the commodity to bail them out.

The government has so far procured 2.42 lt from over 45,000 farmers through 209 centres by spending ₹580.80 crore.

In view of falling prices, the State government recently appealed to the Union government to provide financial support to the farmers.

Sweet no more: Gujarat's chikoo acreage shrinks, production slips

Output down from 3.25 lt in 2015-16 to 2.4 lt in 2024-25, while acreage slips from 29,562 ha to 24,622 ha

Avinash Nair
Ahmedabad

Chikoo (sapota) cultivation in Gujarat has been on a steady downtrend over the past decade, with production dropping by nearly 25 per cent and acreage shrinking by about 16.7 per cent, according to the Directorate of Horticulture.

The slide is the most visible in Surat, where the area under the fruit has plunged by nearly 58.5 per cent over the period — the steepest fall among the major growing districts.

KEY CROP
The contraction comes even as Gujarat, which the State government projects

CHIKOO CHECK. The slide is most visible in Surat, where the area under the fruit has plunged by nearly 58.5% over the period

25. Over the same period, the area under cultivation has fallen from 29,562 hectares to 24,622 hectares.

Surat's acreage dropped sharply from 2,150 hectares to just 892 hectares. Other major regions mirror the trend — Bhavnagar is down about 42.3 per cent and Valsad by around 20.2 per cent. Junagadh, at 3,660 hectares, has remained broadly stable.

AN EXCEPTION

Navsari stands out as an exception. With 8,052 hectares, it continues to anchor chikoo cultivation in south Gujarat, posting a modest increase of around 4 per cent over the past decade and retaining its position as

the State's largest producing district.

In an official statement on Tuesday, the government said Gujarat remains India's second-largest producer of chikoo and the largest by acreage, with over 25,000 hectares under cultivation and production of about 2.4 lt in 2024-25.

GOVT SUPPORT

It also pointed to ongoing support under the Integrated Horticulture Development Programme, including 90 per cent assistance for planting material and ₹22,000 per hectare, aimed at improving productivity and strengthening the horticulture value chain.

Buy aluminium futures on a dip to ₹360

Akhil Nallamuthu
bl. research bureau

Aluminium futures have been in an uptrend.

On Monday, the April contract hit a high of ₹380.60, and the May contract touched a peak of ₹379.65.

Since the former is about to expire on Thursday (April 30), we shall consider the latter for analysis.

COMMODITY CALL.

The chart shows that the uptrend is steady and there are no signs of a bearish reversal. However, there is a possibility of a corrective decline since ₹380 is a hurdle. The temporary moderation could drag aluminium futures (May) to ₹360. The

downtrend could extend to ₹350. Once the rally resumes, the contract could rise to ₹395. However, if the support at ₹350 is breached, the price could drop to ₹328.

TRADE STRATEGY

Buy aluminium futures when the price drops to ₹360. Place stop-loss at ₹345.

When the contract rises to ₹385, alter the stop-loss to ₹370. Book profits at ₹395.
