Aarati Krishnan

With the Iran conflict stretching on and foreign portfolio investors selling stocks as if there is no tomorrow, the market mood has gone from cautious optimism to unremitting gloom. This makes it a good time to nibble at equities. But once you decide to buy, deciding what stock to buy can be a mind-boggling exercise for a retail investor.

Should you buy crude oil-sensitive paint, airlines and oil marketing companies, on the hope that the war will end quickly? With Trump in the driving seat, that's a dicey call. Or look at defensive sectors such as IT or banking that have nothing to do with oil? They seem to be facing other headwinds such as margin pressures and AI disruption. Domestic consumption stocks have the looming El Niño threat to contend with.

If you would rather not try to decipher all this, there's an easier route to capitalise on the market fall. Just buy passive funds. Indian fund houses now run a large roster of 677 index funds and Exchange Traded Funds (ETFs). We sifted through this varied menu to identify six index funds you can start investing in, based on whether you are a newbie, an aggressive risk-taker or defensive investor. It's important to note that, given no one can predict when and at what level markets will bottom in the current downturn, investors must have a minimum time horizon of five years when they buy into these funds.

NEW TO EQUITY

Are you a young investor looking to make a start on equity funds? A mid-life investor who missed the post-Covid rally in stocks and now wants to jump in? A senior citizen who wants an equity allocation in her debt-heavy portfolio? You can make your equity debut through a Nifty100 index fund or a Nifty LargeMidcap 250 fund.

Nifty100 fund

The Nifty100 index owns the top 100 stocks in the listed space ranked by their total market capitalisation. These stocks are also the official large-cap universe for mutual funds as defined by SEBI.

Why should you buy the Nifty100 and not its more popular sibling Nifty 50? Because it has a better return record and is more diversified.

Analysis of five-year rolling returns over the last 20 years (March 2006 to March 2026), shows that the Nifty 100 has slightly higher average returns than the Nifty 50 at 12.6 per cent versus 12.2 per cent over the last two decades, with a much lower probability of losses (0.05 per cent of the times against 0.11 per cent in the Nifty50). (See Table 1). The top five stocks in the Nifty50 hog a 38 per cent weight in the portfolio (as of end-February), whereas they take up a 31 per cent weight in the Nifty100. Both indices are financially heavy, but the Nifty100 has a financial weight of 35 per cent against the Nifty50's 38 per cent.

The Nifty100 is also at a slightly lower valuation than Nifty50 currently, its PE correcting to 20.2 times from a peak of 25.3 times in September 2024.

Which funds: Bandhan Nifty100 Index Fund has the lowest expense ratio at 0.10 per cent and operates with a tracking difference of 0.20 per cent (difference between annualised fund and index returns). Axis Nifty 100 Index Fund comes next with 0.21 per cent expense ratio and 0.29 per cent tracking difference.

Nifty LargeMidcap 250 index fund

If you're willing to take on higher risks for a better return, you can bypass the Nifty100 and jump straight to the Nifty LargeMid-cap 250 index. This index bundles together the top 100 and next 150 stocks into a neat package with a 50 per cent weight in each segment.

This is a superior alternative to owning the Nifty100 and Nifty 150 separately, because it first divides its portfolio into equal buckets for large- and mid-caps and then allocates weights based on the free-float market-cap of

Rare elements that power the future

 This refers to Big Story article published in *bl.portfolio* edition dated February 22, 2026. The strategic play is clear: mine-to-magnet integration is no longer optional — it is national industrial policy.

Niranjan Kumar

This article isn't about minerals. It's about the industrial power shifting quietly. It implies some uncomfortable truths: 1. Rare earths are the invisible backbone of AI, EVs, Defence, Robotics etc; 2. Mining is overrated, processing and magnet manufacturing are the real choke points.

Arun Prasath

Gift City's dividends for Indians and NRIs

 This refers to Big Story article published in *bl.portfolio* edition dated March 1, 2026. The article was informative and insightful.

Ashish Mitta

Stocks in the line of fire

This refers to Big Story article published in *bl.portfolio* edition dated March 15, 2026. Drawing parallels with the Russia-Ukraine war is a useful way to understand how energy markets and state-owned oil companies respond to geopolitical shocks.

After receiving representations from the industry and deliberations with stakeholders, SEBI came up with a consultation paper on nomination for demat accounts and mutual fund folios last week. The paper aims to simplify a few aspects of the nomination process which were originally prescribed in its circular in January 2025. SEBI has kept it open for public comments until April 7 and will notify an effective date in the future.

‘Nomination’ often brings a few questions along for investors. So, in the first half, we answer a few of the common ones and in the second half, we deal with the consultation paper itself.

What is the role of a nominee, if the nominee is different from the legal heir?

The concept of nominee and legal heir are very different. While the legal heir is the person actually entitled to the estate/ property of the deceased, the nominee simply plays the role of a receiver/ trustee till the assets are transmitted to the rightful heir. A legal heir should be identified as such in the Will or in its absence, through the operation of succession laws. A nominee could be a legal heir in some cases, but not always.

Why are nominations for demat accounts and mutual funds important?

Nomination largely exists to ease the operational friction for institutions such as banks, depositories and asset management companies (AMCs). In the absence of nomination, the transmission of assets to the legal heirs can take a painfully long time, as there could be court disputes among the heirs.

This could result in funds getting locked up forever with these institutions. To overcome this, nominations have been made mandatory.

Nomination norms simplified

BL EXPLAINER. SEBI’s proposals are aimed at encouraging investors to nominate while making the process friction-free

GETTY IMAGES/ISTOCKPHOTO

Nomination helps quick release of funds, while in its absence, heirs would be required to produce a succession certificate or a probate (when a Will is certified by a competent court) which could take months.

How does the transmission of ownership of a share or mutual fund happen on the death of the investor?

According to Sonam Chandwani, Managing Partner at KS Legal & Associates, transmission of shares and mutual fund units, upon the death of an investor, is governed by a mix of statutory law and succession principles. In practice, if a valid nomination exists, the AMC or depository will transmit the securities to the nominee as a trustee or custodian.

However, such nomination does not override the rights of legal heirs unless expressly backed by a testamentary instrument like a Will. In the absence of both nomination and Will, transmission becomes documentation-

heavy and is effected in favour of legal heirs based on succession certificates, probate or letters of administration.

How do the Hindu Succession Act and the Muslim Personal Law affect ownership rights in shares and mutual funds?

As per Chandwani, the succession laws become relevant only in the case that an individual dies intestate (without having left a Will). Under the Hindu Succession Act, a male’s estate initially devolves on Class I heirs such as spouse, children and mother in equal proportion. If none of the Class I heirs are alive, it passes on to Class II heirs, with the father occupying the foremost position in the Class II hierarchy—meaning, a surviving father inherits the estate in full. In the case that the father is also not alive, the estate then devolves on other Class II heirs such as siblings.

For a Hindu female, it is more nuanced. The identification of be-

KEY PROPOSALS

- Nomination to be default mode, optional for joint holding
- Use of Power of Attorney mechanism for those who are incapacitated
- Maximum four nominees for demat accounts and mutual fund folios

neficiaries depends on the manner in which the asset was acquired—whether self-acquired/ derived through her husband or inherited from her parents.

For individuals governed by the Indian Succession Act, 1925 (such as Christians and Parsis), the assets devolve either in terms of a valid will, or in its absence, through intestate succession typically prioritising the spouse and lineal descendants in defined proportions.

Under Muslim Personal Law,

succession opens immediately on death, and the estate is divided as per fixed fractional shares among legal heirs, leaving no scope for nomination to alter that distribution.

Thus, while the transmission process may operationally recognise a nominee for efficiency, the final entitlement is always subject to testamentary instruments or succession laws.

What was the proposal regarding operating the accounts of those who are incapacitated in the January 2025 circular? What is the change SEBI is proposing now and why?

The January 2025 circular allowed investors to empower nominees to operate accounts if they become incapacitated. Conventionally, a nominee becomes trustee of the assets only upon the demise of the investor and therefore, can have no power over the assets while the investor is alive. This causes confusion. Hence, SEBI

now proposes withdrawing this facility and use the existing Power of Attorney (POA) mechanism instead.

What are the nominee details to be provided, as per the recent SEBI consultation paper?

The recent paper requires just two details for nomination—the name of the nominee and his relationship with the investor; additionally date of birth will be required in case of a minor nominee. Other KYC details such as address, phone number, e-mail, personal identifier and percentage share of nominee which were earlier mandated have now been made optional. Where percentage shares are not specified, the assets in the account/ folio shall be apportioned among the nominees equally.

This move does simplify the onboarding process and encourage prompt completion of the nomination process. However, details such as personal identifier help

ensure funds are handed over to the persons originally intended to. Whether this relaxation turns out to be a double-edged sword remains to be seen.

What is the procedure if an investor wishes to opt out of providing nominations?

Under the earlier January 2025 circular, investors were required to submit a declaration for opting out of nomination either by a signed physical form authenticated by a one-time password or a video recording. This made opting out onerous.

The new proposal simplifies this by making nomination the default mode. Nomination in case of joint holding is optional, though. To opt out, investors will now simply select the ‘opt out’ option, which will trigger a pop-up message explaining the benefits of nomination and the risks of unclaimed assets. Investors just need to provide consent within this pop-up to proceed.

Further, the paper suggests the depositories and AMCs to regularly send e-mail/ messages to investors who opted out, encouraging them to file nomination details.

What is the maximum number of nominees proposed in the consultation paper? Does this align with the maximum number of nominees in bank accounts and deposits?

SEBI’s recent paper proposes that the maximum number of nominees for demat accounts and mutual fund folios be set at four. This proposal aligns with banking norms, where depositors can now provide up to four nominees.

Earlier, the January 2025 circular had increased the limit from three to 10 nominees. On review of sample data, SEBI learned that less than 0.2 per cent of investors had opted for even three nominees, leave alone 10. Also, industry participants had represented to the market regulator that increasing nominees to 10 may create a strain on the system.

Stability in the times of volatility

NCD-WISE. Muthoot Fincorp is looking to raise ₹200 crore, with a greenshoe option to retain a further ₹400 crore

GETTY IMAGES/ISTOCKPHOTO

Venkatasubramanian K
bl. research bureau

Gold loans have been growing at a healthy pace even in the phase when the yellow metal’s prices weren’t surging sharply. With the rise in gold prices in the past couple of years, the rise in gold loan business has grown even more strongly for banks and NBFCs.

In just the past one year to the December quarter of 2025, gold loan disbursements grew 94 per cent on-year to ₹8.16 lakh crore. Within this, the gold loan disbursements for NBFCs rose a whopping 189 per cent to ₹2.53 lakh crore.

The relatively-secure nature of gold disbursements, higher yields for lenders and relatively-shorter tenors of loans have made these a focus for many banks and specialised NBFCs.

In this regard, Muthoot Fincorp, a leading NBFC in the space, is coming out with an NCD (non-convertible debenture) issue with varied tenors and coupons.

The company is looking to raise ₹200 crore, with a greenshoe option to retain a further ₹400 crore (aggregating to ₹600 crore in overall). The issue is rated AA-/Positive by CRISIL, indicating very low credit risk and a high degree of safety in servicing interest and principal obligations.

In a situation where the war in West Asia shows no sign of an end and equities look shaky in light of the energy, business and supply chain disruptions the conflict has brought about, at-

tractive bond issues may be worthwhile for investors.

Given the slow rise in inflation and with escalating global energy prices likely to translate to higher prices for domestic consumers eventually, it is likely that the bottom of the downward interest rate cycle may have been touched already.

Bonds and fixed-income instruments offering safety and higher-than-FD returns may be suitable for investors with moderate risk appetites.

HIGHER PAYOUTS

The Muthoot Fincorp NCD offers multiple tenors and payout options for investors.

There are 24-month, 36-month, 60-month and 72-month tenors available. Multiple coupon payment options exist.

For each of these options there are monthly and annual interest payment choices and cumulative options as well.

The coupons for the monthly payout range from 8.37 per cent to 8.75 per cent, translating to yields of 8.7-9.1 per cent. The annual payout option gives similar yields as does the cumulative option.

Data from Kotak MF (Refinitiv) as on March 17, 2026 indicates that one-year, three-year, five-year and 10-year AA-rated corporate bonds trade with a spread of 171 basis points, 146 basis points, 123 basis points and 77 basis points over corresponding G-Secs of same tenor.

The Muthoot Fincorp NCD issue offers even higher spreads. The three-year tranche (with annual payouts) offers 8.84 per

Muthoot Fincorp NCD coupons and yields

Tenor (months)	Frequency of interest payment	Coupon (% per annum)	Effective yield (% per annum)
24	Monthly	8.37	8.70
24	Annual	8.70	8.69
24	Cumulative	NA	8.70
36	Monthly	8.52	8.85
36	Annual	8.85	8.84
36	Cumulative	NA	8.85
60	Monthly	8.65	9.00
60	Annual	9.00	8.99
60	Cumulative	NA	9.00
72	Monthly	8.75	9.10
72	Annual	9.10	9.09
72	Cumulative	NA	9.10

OVERVIEW

- Balances growth and asset quality
- Rated AA-/Positive by CRISIL
- Suitable for investors looking for higher yields with a tad more risk

cent yield (spread of 266 basis points), while the five-year tranche offers 8.99 per cent yield (spread of 257 basis points).

For fixed income investors, these NCDs offer higher yields than the five-year NSC with 7.7 per cent interest and cumulative payout and the seven-year RBI Taxable Bonds with 8.05 per cent interest (semi-annual payouts). Of course, NSC and RBI bonds must be accorded a much

higher weightage in your debt portfolio.

The Muthoot Fincorp NCD issue is suitable for investors looking for higher yields with a tad more risk. However, it must only take a small portion of your fixed-income holdings as a diversifier. Investors can consider the 24-month or 36-month option in this issue as they ensure reasonable payoffs.

Longer lock-ins are best avoided, especially as we have dynamic interest rate scenario with interest rate rising and the possibility of rate reductions evaporating.

The monthly or annual coupon payout choices can be taken as those would ensure regular cash flows for investors rather than the cumulative option.

STURDY FINANCIALS

Muthoot Fincorp operates

across 25 States in India, alongside in Union Territories. As of December 2025, the company had 3,757 branches.

The NBFC is mostly into disbursing gold loans, which account for almost 85 per cent of its lending book as of December 2025.

Other products offered by the company include business loans to small businesses, loans against property and the like.

From the limited financials made available in the prospectus, the company does appear to have reasonably sound financial parameters.

While the loan book size grew at over 20 per cent over the past few fiscal years, the rise has been strong in 9MFY26. From March 2025 to December 2025, the loan book has grown 43.2 per cent, with gold loans leading the charge.

Despite the growth, the company has improved its asset quality steadily over the past few years.

The gross non-performing assets (GNPA) ratio has fallen from 2.11 per cent in FY23 (March 2023) to 1.34 per cent as of 9MFY26 (December 2025).

Muthoot Fincorp’s capital adequacy ratio is also healthy at 18.17 per cent as of December 2025, as against RBI’s mandate of 15 per cent for such NBFCs.

Overall, the company has been able to balance growth and asset quality reasonably well.

The issue is open till March 23. As of March 18, it is subscribed 112.64 per cent.

With the green-shoe option, it is allowed to go up to 300 per cent.

Mining brain at a fair price

IPO WATCH. Central Mine Planning & Design Institute’s prospects are good, but it’s only for patient investors with longer time horizon

Kumar Shankar Roy
bl. research bureau

Ranchi-headquartered Mini Ratna (category I) firm Central Mine Planning & Design Institute (CMPDI) has hit the markets with a ₹1,837.84-crore IPO on March 20 and it will close on March 24. This is after the government directed Coal India Ltd (CIL) to list all subsidiaries by 2030. The CMPDI public issue is an offer-for-sale (OFS) of up to 10.71 crore shares –, i.e., an offloading of a 15 per cent stake, at a price band of ₹163-172/share (excluding the ₹8/share employee discount). At the end of Day 1, the IPO has been subscribed 7 per cent.

As a specialised mining consultancy, CMPDI is the technical brain behind much of the mining industry. If a miner wants to know where to mine, how to mine, how deep to go, what the reserves are, what clearances are needed and how the project should be designed, etc., the over 50-year-old CMPDI is the kind of specialist consultant it hires.

At the upper end, the IPO values zero-debt CMPDI at a trailing P/E of 17.5x and a trailing EV/ EBITDA of 11.3x. This is a reasonable valuation relative to RITES (23.9x and 11.4x) and Engineers India (18.6x and 16x), given the mining consultant’s faster growth, superior margins, balance sheet strength, better return ratios and market dominance. The management is confident of sustaining historical growth rates.

All this, however, does not make the IPO attractive in and of itself. CMPDI’s strongest advantage could also be its biggest risk. It is a high-quality, structurally concentrated, government-linked mining consultancy whose economics are supported by deep CIL relationships, public-sector demand and a niche technical position.

RITES and Engineers India show that PSU consultancy stocks do not always rerate immediately; in today’s fragile, geopolitics-hit market, CMPDI may suit patient investors better, given its stronger

financial profile & reasonable valuation.

BUSINESS
With over 2,650 staff, CMPDI has seven regional institutes positioned near key mining and natural resource-holding locations. CMPDI operates one of India’s largest coal-exploration infrastructure. It is also developing infrastructure for critical minerals, including rare earth elements. Its services are primarily for the coal industry, but are also for other minerals such as lignite, bauxite and manganese. It is one of the largest coal and mineral consultancy companies in India.

Services span the entire lifecycle of mining operations, from initial exploration to mine closure. CMPDI classifies its business into four buckets: geological exploration and resource evaluation (46 per cent of revenue), mine planning and design services (21 per cent), environment services (17 per cent), and geomatics and survey services (16 per cent). Geological exploration and resource evaluation identify and assess mineral deposits; mine planning and design prepare mine layouts and extraction plans; environmental services handle clearances, compliance and monitoring; geomatics and survey services provide mapping, spatial data and field measurements.

Fifty upcoming Coal India mines/expansions through FY30, higher activity in commercial coal blocks, rising expenditure under

IPO rating

Central Mine Planning & Design Institute	
Business	★★★★★
Financials	★★★★★
Management	★★★★★
Valuation	★★★★★
Overall	★★★★★
Rankings 1 to 5, 1 denoting lowest and 5 highest	
Offer period	Mar 20-24, 2026
Price band	₹163-172
Market cap approx.	₹12,281 cr

the National Mineral Exploration Trust (NMET), and policy support for critical minerals through the National Critical Mineral Mission imply ongoing business demand for CMPDI.

But CMPDI’s strongest advantage could also be its biggest risk. It is deeply embedded in the Coal India ecosystem and many government-related entities. For a technical-services business, such anchoring can be a major moat. But investors need to resist the easy assumption that dependence equals safety. While revenue dependence on Coal India and its subsidiaries has dropped, they still accounted for 66 per cent in the nine months ended December 2025. The broader concentration is even sharper. The top 10 clients contributed 93.8 per cent, while government entities or agencies accounted for 96 per cent in the nine months ended December 2025. This means CMPDI is not

only a Coal India-linked company; it is overwhelmingly government system-linked.

FINANCIAL PROFILE

CMPDI’s recent financial performance is the clearest positive in the IPO. Revenue from operations rose from ₹1,386.1 crore in FY23 to ₹1,732.7 crore in FY24 and ₹2,102.8 crore in FY25, which is a healthy CAGR of about 23 per cent.

In the nine months ended December 2025, revenue was already up 9 per cent year on year at ₹1,489.7 crore.

Most government approvals and contracts come through late in the financial year, lifting last-quarter execution, billing and revenue in line with client budget cycles.

EBITDA has more than doubled in FY23 to 25 period, a CAGR of about 52 per cent. This was driven by massive margin expansion (28 per cent to over 40 per cent), helped by optimisation of employee benefit expenses (which as a share of operational revenue dropped from 50 per cent in FY23 to 30.6 per cent in 9MFY26). 9MFY26 EBITDA margin stood at over 38 per cent.

PAT increased from ₹296.7 crore in FY23 to ₹503.2 crore in FY24 and ₹666.9 crore (30.6 per cent net profit margin) in FY25. In 9MFY26, profit after tax stood at ₹425.4 crore (27.6 per cent margin).

Other income (₹75 crore annually) has helped. Net cash of over ₹1,400 crore, accounts for over 11 per cent of CMPDI’s implied m-

cap. Annually, its dividend rate has been 30-45 per cent.

Note that trade receivables stood at ₹924.69 crore (229 days) as of December 31, 2025. Collection cycles remain long for a consultancy business. Government backing may reduce default risk, but not delay risk. Relief may come from strict enforcement of CIL’s direction that subsidiaries to pay 75 per cent of CMPDI’s bill value within 15 days.

VALUATION, RISKS

While the CMPDI IPO valuation is reasonable, it is not outright cheap. The peer set is not perfectly comparable. Engineers India is more closely linked to oil and gas and petrochemical engineering. RITES has a rail infrastructure consultancy. Plus, both peers have 43-44 per cent of their revenue from non-consultancy businesses. Since their IPOs, they have also underperformed markets.

Note the key risks. If nomination-based awards change, Coal India’s spending shifts, or project flow weakens, CMPDI could be hit. Most revenue came from government entities, while exploration funding depends on the Central Sector Scheme and NMET. Receivables remain stretched, and contingent liabilities (mainly tax related) were ₹210.8 crore as of 9MFY26, or 32 per cent of FY25 PAT. Despite new opportunities, CMPDI remains exposed to coal-cycle, environmental and regulatory risks. Thus, only long-term oriented investors should subscribe to the CMPDI IPO.

Battle scars

Nishanth Gopalakrishnan
bl. research bureau

The past three weeks since the start of the US-Israel-Iran war have been quite painful for global markets. Equities, commodities, bonds and currencies have been invariably volatile. Secularly, equities have declined, bonds have cracked as yields spiked. Commodities except crude and natural gas have fallen too. As the dollar strengthened, other major currencies depreciated against it. Here we take stock of the same visually.

WHO AM I?.

Are you an avid investor? How well do you know corporate India?

Here’s a challenge. Using the five clues below, identify the company that is being talked about here

- 1 My founder graduated from IIT and spent 20 years working with industry leaders before partnering with his wife to become an entrepreneur.
- 2 While my journey began 40 years ago, I got listed only in the last decade to offer an exit to a brave private equity investor who invested in me during the height of the global financial crisis.
- 3 While my stock price declined below the offer price only during Covid times, I have grown 10 times since then.
- 4 My sales growth over the last 10 years, at a 15 per cent CAGR, without diluting my return on equity of 15 per cent, enabled me to deliver a 15 per cent CAGR return to shareholders during the period.
- 5 I must be the only company in my industry to have an annual net profit of above ₹500 crore with fewer than 200 permanent employees, and still deserve an almost billion-dollar market capitalisation.

Formulae intact for the long term

CHEMICALS. Growth across three segments provides operational leverage for Navin Fluorine’s margin expansion

Sai Prabhakar Yadavalli
bl. research bureau

Navin Fluorine’s growth prospects were initially highlighted with our accumulate call in November 2023 when the stock was trading at ₹3,609 and followed up with a hold call in May 2025 when it was trading at ₹4,242. Our positive stance was based on margin expansion prospects from new projects and capacities the company undertook in the last five years. This has played out as expected. The stock of Navin Fluorine has returned 47 per cent from our May 2025 call. In line with expectations, the valuations have corrected from 47 times one-year forward earnings then to 42 times now. But owing to superior execution across three verticals along with improved operating leverage reflected in expanded margins, the stock has outperformed.

The company is geared to sustain the growth momentum across segments with capacity addition in the next two years. Post the stock’s good run in the last three years, we reiterate our hold call on the stock for investors to benefit from earnings growth in the long run, even as operational impact from energy price volatility is at a heightened level currently.

SEGMENT DRIVERS

Navin Fluorine operates across three segments — Specialty Chemicals (33 per cent of 9MFY26 revenues) manufactures intermediates for APIs across agrochemicals and pharmaceuticals; High Performance Products (HPP) division (51 per cent) manufactures Hydrofluorocarbons (HFCs), which includes client-specific facilities; Contract Development and Manufacturing Outsourcing division or the CDMO (16 per cent) addresses clients in agro and pharma space in developing and

Segment revenue performance (in ₹ cr)

Operational leverage aids margin expansion

manufacturing key and advanced intermediates.

Specialty chemicals growth has been driven by fluoro-specialty products for agrochemical clients from a dedicated plant built at a cost of ₹540 crore. The facility that was commercialised in December 2024 has been utilised to only half the extent in the first phase. The company is engaging in initial discussions with clients to utilise the remaining half in the

next one year. With strong outlook on orders, it is also debottlenecking its existing multi-purpose plant (MPP), which is expected to generate revenues of ₹140-170 crore at full utilisation that will start from Q3FY27. The company expects to start production of Opteon by Q1FY27. This is a proprietary product of client Chemours, which is used as a cooling fluid in data centres. The \$14-million facility was part fin-

HOLD

Navin Flourine
₹6,124.5

WHY

- Growth outlook across three sectors
- Expanded margins seem sustainable
- Valuations relatively lower but still at a premium considering macro risks

anced by the client of up to \$5 million. The product has high potential and should ramp up production after the initial phase.

The HPP division has benefited from strong prices and demand for R32 gas used for room air conditioners, both domestically and internationally. The expanded R32 facility also aided the strong growth. The company is further expanding the facility with an investment of ₹237 crore, which should be operational by Q3FY27 and expected to deliver revenues of ₹600-825 crore at full utilisation. It has also commercialised a facility for producing AHF (Anhydrous Hydrogen Fluoride), which is used in R32 production. But the company aims to utilise the output internally, in trade channels and also to explore high value-added applications in electronics grade. This is the advanced material segment Navin Fluorine is exploring with base material (AHF), CDMO operations with clients and its fluorine chemistry expertise.

The CDMO division has an aspirational target of \$100 million in revenues and the company is on its way to meeting the target with revenues of ₹360 crore in 9MFY26 or \$40 million. The company has commercialised a new cGMP-4 facility along with validation from a European client.

This product should have a strong three-year visibility with client molecule expanding in market potential after FDA approval.

FINANCE AND VALUATION

The company reported an EBITDA margin of 32 per cent in 9MFY26, which is a 930-basis point improvement over FY25. High utilisation of assets (refrigerant gases, speciality chemicals’ fluoro-agchem products, CD-MO’s cGMP facilities) allowed for operational leverage to play out, which aided margins. In the next wave: Facility expansion (R32 facility, new cGMP 4 facility, debottlenecking) and high-value projects (Chemours, advanced materials with AHF) should support the higher EBITDA margins and continue the operating leverage from sustained revenue growth. With a very comfortable net debt to equity of 0.03 times as of December 2025, the company balance sheet is supportive of further expansion.

While company factors of high growth and margin expansion are positive, the risk is from macro-environmental factors. Risk stems from energy price volatility, which can hamper normal functioning of operations or from downstream demand from CDMO, data centres, agro-chemical sectors — which is only recently recovering from over stocking post Russia-Ukraine conflict.

Navin Fluorine is trading at 42 times one-year forward earnings, which is a discount to its past five-year average of 47 times but is still a premium valuation. This stems from higher value-added operations in fluorination, CDMO segment and strong client engagement. With growth, risk and valuations on an even keel, we recommend investors with a three-five-year perspective and willingness to withstand volatility, to hold the stock for long-term earnings growth.

Gurumurthy K
bl. research bureau

Nifty 50, Sensex and the Nifty Bank index witnessed a very good bounce in the first half last week. But the sharp fall in HDFC Bank share price on Thursday played a spoilsport. The benchmark indices fell giving away all the gains to close the week in red.

On the charts, there is room for the Nifty, Sensex and the Nifty Bank index to fall more from here. At the same time, important supports are also coming up which will need a close watch. We will have to wait and see if the benchmark indices can find a bottom at this support.

Among the sectors, the BSE Oil & Gas index fell the most last week. It was down 3.3 per cent. The BSE Telecom index, up 2 per cent, outperformed last week.

FPIs SELL
The Foreign Portfolio Investors (FPIs) are on a selling spree. The equity segments witnessed a net outflow of about \$3.84 billion last week. For the month of March, the equity segment has seen a net outflow of about \$9.57 billion so far.

NIFTY 50 (23,114.50)
Short-term view: The outlook remains weak. Intermediate support is around 22,900. A break below it can drag the Nifty down to 22,300-22,200 in the short term. We expect the Nifty to bounce back after this fall.

In case, the index manages to sustain above 22,900, a rise to 23,800-24,000 can be seen. In that case, a range of 22,900-24,000 is a possibility for some time.

As mentioned last week, 24,000 is a crucial resistance. Nifty has to surpass this hurdle to ease the downside pressure and bring back the chances of re-visiting 26,000 levels.

Medium-term view: We repeat that 22,200-22,000 will be a crucial support now. A bounce from there and a subsequent rise past 24,000 can take Nifty higher to 26,000-26,400. Such a bounce can continue to keep it in a sideways range as seen from the quarterly candle chart.

For now, Nifty has to sustain above 22,000 and breach 26,400. Only then the chances of the rally to 28,000 and 30,000 will come back into the picture.

Nifty will come under danger

Failed attempt

INDEX OUTLOOK. The benchmark indices have room to fall more from here before finding a bottom

GETTY IMAGES

Nifty 50: Struggling to bounce

KEY SUPPORTS

- Nifty 50: 22,200, 22,000
- Sensex: 72,800, 72,250
- Nifty Bank: 52,200, 52,000

is no major disruption in our view. The only change will be in terms of time.

SENSEX (74,532.96)
Short-term view: The resistance at 77,000 mentioned last week has held very well. That keeps the downside open to see 73,000-72,800. We can expect the Sensex to bounce back after this fall. That bounce can take the index back up to 76,000-77,000.

As mentioned last week, 77,000-77,500 is an important resistance zone. Sensex has to surpass this hurdle in order to get some breather and turn the outlook positive.

Medium-term view: The levels of 72,800 and 72,250 are very crucial to watch now. A strong bounce from either of these levels and a subsequent rise past 77,500 will bring back the earlier bullishness. That in

of more fall only if it breaks below 22,000.

NIFTY BANK (53,427.05)
Short-term view: Nifty Bank index is now poised near a crucial support level of 53,300.

The price action on the chart indicates that the index can break this support. Such a break can take it down to 52,200-52,000, the next key support zone.

We expect the Nifty Bank index to bounce back from around 52,000. That can take it back up

to 54,000-56,000 in the short term.

Medium term view: As long as the index stays above 52,200-52,000, there is no threat for the broader bullish view. The expected bounce from around 52,000 mentioned here, will have the potential to take the Nifty Bank index up to 60,000 in the coming weeks.

It will also keep the doors open to see 64,000-65,000 in the medium term and 68,000-69,000 in the long term.

As mentioned last week, there

MOVERS & SHAKERS

AKHIL NALLAMUTHU bl. research bureau

Akums Drugs and Pharmaceuticals (₹483.75)

Signs of bullish reversal

After being in a long-term downtrend, the stock of Akums is now showing signs of reversal in trend. If not a long-term trend reversal, the scrip is likely to witness a rally over the medium term. The price action since July last year shows that from forming lower lows and lower

highs, the stock has now started to form higher highs and higher lows. The chart shows formation of a good base at ₹460. The stock is likely to begin a fresh rally which can lift it to ₹600. Buy at ₹483 and at ₹460. Place stop-loss at ₹425. When the price raises to ₹550, tighten the stop-loss to ₹520. Liquidate the longs at ₹600.

Ather Energy (₹783.25)

Hits new highs

The stock of Ather Energy hit a fresh high of ₹795.90 on Friday before closing at ₹783.25. Last week, it gained nearly 11 per cent and broke out of a key resistance at ₹750, which has been blocking the uptrend since October last year. In the upcoming sessions, there

could be a price drop to ₹750. But the uptrend can resume after this and the stock can rally to ₹950 over the medium-term. So, traders can consider buying this stock now at ₹783 and on a dip to ₹750. Place stop-loss at ₹680 at first. Raise the stop-loss to ₹775 and ₹850 when the price rallies to ₹850 and ₹900 respectively. Book profits at ₹950.

Jindal Steel (₹1,187.30)

Uptrend to resume

The stock of Jindal Steel, after hitting a life-time high of ₹1,270 last month, has seen a moderation in price. From the current level, there could be further decline in price. But it is likely to be arrested at ₹1,090, a strong base where a long-term trendline support coincides.

Considering the prevailing price action, the stock can resume the rally from either the current level or after dropping to ₹1,090. Once the uptrend begins, the price can surpass prior high and go up to ₹1,400. So, buy now at ₹1,187 and ₹1,100. Stop-loss can be ₹1,050. Alter the stop-loss to ₹1,240 when the price hits ₹1,300. Exit at ₹1,400.

TECH QUERY

GURUMURTHY K
bl. research bureau

I have Reliance Industries Ltd(RIL) shares purchased at ₹1,570. Should I hold or exit?

Akshay Pavan

RIL (₹1,414.55): The stock is consolidating within its long-term uptrend. Strong supports are at ₹1,280, ₹1,100 and ₹1,000. Resistance is around ₹1,600. A strong break above it can take RIL share price higher to

₹2,500 in a year or so. From a multi-year perspective, RIL has the potential to target ₹6,000. Hold the stock for long term. Buy more at ₹1,340 and ₹1,180, if a dip happens. Keep the stop-loss at ₹920. Move the stop-loss up to ₹1,540 as soon as the stock goes up to ₹1,880. Revise the stop-loss higher to ₹2,200 and ₹4,400 when the price touches ₹3,800 and ₹5,300 respectively. Exit the stock at ₹6,000. Please note that this is a multi-year outlook. So, you need to have patience to hold the stock.

Is it a good time to buy Indian Energy Exchange (IEX)? I intend to invest in it for long term.

M Sivakumar

IEX (₹120.50): Charts look weak. Strong resistances are at ₹126 and ₹132. The stock has to rise and sustain above ₹132 to get some relief. As long as the stock stays below ₹132, the bias will remain negative. There is the danger of the price

falling to ₹110-108 from here. From a long-term perspective the stock has to first rise above ₹155 and then cross ₹210. Only then the long-term outlook will turn bullish. Even if that happens, it may take a very long time. So, it is better to stay out of this stock now. You may consider investing in RIL which looks good for the long term. Follow the strategy mentioned in the above query.

I have purchased Tata Consultancy Services (TCS) at ₹3,075. Can I accumulate now?

P V Ramana, Guntur

TCS (₹2,390.60): The stock is in a strong downtrend since September 2024. Immediate support is around ₹2,345. A bounce from there can trigger a corrective rise to ₹2,900. Failure to rise past ₹2,900 and a fall thereafter will drag it

back to ₹2,345. A break below ₹2,345 will then see the price tumbling to ₹2,000 or even ₹1,800. This will be the worst-case scenario. You have two options. One is to exit now and accept the loss. Second is to keep a stop-loss at ₹2,310 and hold the stock. Exit the stock on a rise at ₹2,850. Always have a stop-loss when you enter any position. That will help in minimising the loss and get out of wrong trades quickly.

I have bought Tarsons Products at ₹400. What is the long-term outlook?

Nooveeksha Reddy

Tarsons Products (₹184.15): The stock is in a strong downtrend since September 2022. There is no sign of a trend reversal. Strong resistance is in the ₹220-240 region. The stock has to rise above ₹240 to get a rise towards ₹330-350. But

even then, that will just be a corrective rally. To become bullish, the share price has to go above ₹350. But that looks unlikely at the moment. There is no major support visible on the chart. So, the extent of the downside is unknown. Exit the stock and accept the loss. Do not enter any trade without a stop-loss. That will help you minimising the loss and also avoid getting stuck in a wrong trade.

BANDU'S BLOCKBUSTERS.

On April 1, four years back, piqued by the incessant jokes in the village at his expense, Bandu Barve decided he'd had enough. It was time for him to turn 'smart'. His dead granny's voice rang in his ears — "Read the papers, Bandya, they tell you all." So, off went Bandu to the stash of newspapers on his father's desk. By Wednesday noon, mail us your pick and its expected price rise to bandublockbuster@gmail.com with your name, mobile number and address. One lucky winner will get a prize of ₹2,000.

Scan to know the winner selection process

turn can take the Sensex up to 85,000-86,000 in the medium term. It will also keep the broader sideways range intact.

Eventually, Sensex has to rise above 86,000 to see the rally to 90,000 (medium-term) and 98,000-99,000 (long-term) that we were expecting earlier.

NIFTY MIDCAP 150 (20,226.90)
Short-term view: The resistance at 21,000 is holding well. On the weekly chart, the outlook remains mixed. Support is around 19,800. As long as the index stays below 21,000, it will remain vulnerable to break 19,800. Such a break can drag it down to 19,200-19,000. Thereafter we can expect a bounce back move to 21,000 again.

A decisive break above 21,000 is needed to clear the way for re-visiting 22,800 levels. The index has to surpass 22,800 eventually in order to bring back the earlier bullish view. Only then the bullish outlook of seeing 26,000-26,500 in the medium term and 28,000-28,500 in the long term will come back into the picture.

In case the index declines below 19,000, an extended fall to 18,300-18,000 is possible.

NIFTY SMALLCAP 250 (14,791.95)
The index failed in its attempt to rise back above 15,000 last week. That keeps alive the chances of seeing 14,000 on the downside.

As mentioned last week, 14,000 is a strong support. A bounce from there can indicate the beginning of a new leg of uptrend. A rise from 14,000 and subsequent break above 16,000 will strengthen the bullish case. It will also keep intact our view of targeting 22,500-23,000 in the long term. This bullish view will go wrong only if the index breaks below 14,000. In that case an extended fall to 13,000 and even lower can be seen going forward.

Free fall

US MARKET OUTLOOK. US benchmark indices are being beaten down badly

GETTYIMAGES/ISTOCKPHOTO

Gurumurthy K
bl. research bureau

GAINING MOMENTUM

The US 10Yr Treasury Yield has potential to target 4.6 per cent

The Dow Jones Industrial Average, S&P 500 and the NASDAQ Composite indices continue to get beaten down. All the three indices were down for the fourth consecutive week. They were down about 2 per cent each last week. The Dow Jones, down about 6 per cent, has tumbled the most in the last four weeks.

The US 10Yr Treasury Yield has surged for the third consecutive week. But surprisingly, this has not aided the dollar index to move higher. Indeed, the dollar index fell about a per cent last week. How low can the US benchmark indices fall from here? Will the dollar index rise back? Here is our analysis:

DOW JONES (45,577.47)
As expected, the Dow Jones fell breaking below the support at 46,450. This has cleared the way for the fall to 45,000 that we have been expecting for some time.

The region between 45,000 and 44,900 is a strong support zone. There are good chances for the Dow to bounce back from this support zone. Such a bounce can take the index higher to 46,000-46,500 in the short term. We will have to wait and see if this corrective rise can extend beyond 46,500 or not.

Can the Dow Jones break 44,900? The chances cannot be

ruled out. If that happens, 44,200-44,000 can be seen on the downside.

Our preference will be to see the Dow sustaining above 44,900 on its first test and get a bounce.

S&P 500 (6,506.48)
The resistance at 6,750 capped the upside last week in line with our expectation. The break and fall below 6,600 has happened as expected.

The downside is open to see 6,400-6,380. After this fall, we can expect the S&P 500 index to bounce back towards 6,600 again. Intermediate support is around 6,460-6,450. If the index manages to bounce back from here this week, then a corrective bounce from here to 6,550-6,600 is possible first. Subsequently, the aforementioned fall to 6,400-6,380 can happen.

NASDAQ COMPOSITE (21,647.61)
A crucial support is coming up at 21,350-21,200 which can be tested this week. The price action thereafter will need a close watch. A bounce from this support zone can trigger a corrective

rise to 21,900-22,000. But, thereafter, the index can fall back again. That leg of fall can drag the NASDAQ Composite index down to 20,300-20,000 in the coming weeks.

DOLLAR OUTLOOK
The dollar index (99.50) seems to have failed to get a strong follow-through rise last week. It oscillated around 100 all through the week.

The bias remains positive. Strong support is in the 99-98.85 region which can limit the downside from here. A fresh leg of rise from this support zone can take the dollar index up to 101 in the short term.

As mentioned last week, the broader bias is positive. The dollar index has potential to breach 101 and rise to 103-104 in the medium term.

TREASURY YIELD
The support around 4.18 per cent mentioned last week held very well. The US 10Yr Treasury Yield (4.38 per cent) touched a low of 4.17 per cent and then has surged from there. Indeed, it has risen well beyond our expected level of 4.3 per cent.

The outlook remains bullish and the momentum looks strong. The region around 4.3 per cent will now be a good support zone. As long as the 10Yr Yield remains above this support, there is potential to see 4.6 per cent on the upside.

Valuation Radar: The Good, The Bad, The Ugly

Nifty 50 was down 0.2 per cent last week while the Sensex remained flat. BSE Auto gained the most by 1.6 per cent, followed by BSE Metal 1.2 per cent, followed by Tech 1 per cent. BSE Oil & Gas and BSE Realty declined the most by 3.3 and 1.9 per cent respectively last week.

The sector indices are disseminated by S&P BSE.

Trump mulls ‘winding down’ war

RISING TENSIONS. Iranian media: Natanz enrichment facility targeted; Israel steps up airstrikes on Hezbollah

Reuters
Dubai/Washington

President Donald Trump said the US was considering “winding down” its military operation against Iran, as Iran and Israel traded attacks on Saturday and Iranian media said the nuclear enrichment facility in Natanz had been attacked.

In a social media post, Trump said the US was close to meeting its goals but insisted that other countries should take the lead in policing the vital Strait of Hormuz, whose near-closure threatens a global energy shock.

MIXED MESSAGING

Trump and his administration have sent mixed messages about the US’ goals throughout the war, now entering its fourth week, leaving its traditional allies struggling to respond.

In less than 24 hours, Trump suggested the war could wind down as the Iranian threat was being eliminated, while at the same time US marines and heavy

SHELLED OUT. At a site in Tehran after a strike by US/Israeli forces on Saturday **REUTERS**

landing craft were headed to the region on a mission whose goals were not immediately clear.

“We are getting very close to meeting our objectives as we consider winding down our great military efforts in the Middle East with respect to the terrorist regime of Iran,” Trump said on *Truth Social*.

LASHES OUT AT NATO

Trump had also accused NATO allies, which had not been consulted about the war, of cowardice over their reluctance to help open the Strait of Hormuz.

As the fighting continued, the Iranian media said US-Israeli forces had attacked the Shahid Ahmadi-Roshan Natanz enrichment complex on Saturday morning.

Technical experts found no radioactive leak and nearby residents were not at risk. Israel said it was unaware of such a strike.

Israel also attacked Beirut, saying it was targeting the Iran-backed Lebanese militia in the deadliest spillover from the war on Israel since Hezbollah fired on Israel in support of Tehran on March 2.

Telcos engage with Mumbai Metro body for network infra along new line

Vallari Sanzgiri
Mumbai

The Cellular Operators Association of India (COAI) is in talks with Mumbai Metro authorities on setting up network infrastructure along the newly built aqua line, per sources.

Industry sources confirmed discussions between the COAI and the Mumbai Metro Railway Ltd (MMRCL) on managing ACES infrastructure following the scrapping of its third-party contract.

EXPLORING OPTIONS

The metro authority can offer the ‘right of way’ to telecom service providers to build joint infrastructure with one TSP as the lead operator. Based on the commercial feasibility of existing infrastructure, MMRCL will call afresh for a service provider with lower charges for use of space for telecom equipment. Earlier, telcos had complained of unviable rates offered by MMRCL selected partner for using its network equipment. Until then, Vodafone Idea (Vi) and BSNL that were providing services via ACES were switched off on the metro line.

“Vi services on the Mumbai metro line are currently impacted. As per the MMRCL arrangement, Vi’s con-

nectivity was being provided via ACES, whose primary contract with MMRCL is now terminated... We remain committed to working with MMRCL and exploring options to reinstate our services at the earliest,” said Vi spokesperson.

Meanwhile, ACES has written to Chief Minister Devendra Fadnavis and the Union Ministry of Communications for a meeting on the matter. Indus Towers

has also been seeking a comfort letter from all telcos to engage with the metro authorities for in-building solutions. ACES asked Indus to take a ‘wait and watch’ approach until they speak to the government. However, telcos are optimistic of a favourable response, considering earlier government orders recognising metros as ‘public spaces’ where established TSPs get preference for providing service.

Airtel ‘mobile connects’ Navi Mumbai airport

Airtel has become fully functional at Navi Mumbai International Airport Ltd with Jio Infocomm’s network soon to follow, per sources.

Adani Airport CEO Arun Bansal on Friday confirmed Airtel’s services in the area via a LinkedIn post that read, “Finally, fantastic in-building coverage at Navi Mumbai airport by leading Mobile Operator. Thanks Airtel for giving great consumer experience.”

Jio is also expected to operationalise its services soon, per sources that said the telco is addressing a few dark spots within the airport building. Both companies will also have their in-building solutions (IBS) set up for inauguration of the Noida International Airport on March 28.

The developments conclude right-of-way (RoW) conflicts in

two major airports of India with airport authorities arguing that they had already procured and installed mobile network infrastructure after multiple talks with telecom service providers.

However, the Department of Telecommunications (DoT) recognised airports as a “public entity,” and directed them to allow telecom companies to set up mobile network infrastructure.

According to Faisal Kawoosa, Chief Analyst and Founder, Techarc, disallowing TSPs from setting up network infrastructure would have resulted in service degradation, as WiFi connectivity cannot support lakhs of users at the premises. After the airports, the telcos now await resolution on a similar conflict in Mumbai’s new metro line.

India to confront ‘deep divisions’ on key issues at WTO Ministerial in Cameroon next week

Amiti Sen
New Delhi

For India, the World Trade Organisation’s 14th Ministerial Conference (MC14) in Yaoundé, Cameroon, next week will be a critical battleground for defending policy space and securing development priorities. According to a recent report by the Global Trade Research Initiative (GTRI), the summit is defined by deep divisions across agriculture, digital trade and institutional reforms, with limited scope for compromise among the member nations.

E-COM TRANSMISSION

A central flashpoint will be the e-commerce moratorium, a 1998 provision that bans Customs duties on electronic transmissions for a limited period and needs to be extended at every MC. The US, this time, has sought a permanent extension of the moratorium but India and several developing na-

tions are poised to strongly oppose it. “For India, the issue is about preserving policy space and avoiding a widening digital divide, not just revenue loss. A key dispute at WTO is also definitional as there is no clarity on what constitutes ‘electronic transmissions’ or whether services are included,” the report noted.

AGRICULTURE ISSUES

Agriculture remains the most politically sensitive pillar of the negotiations with no convergence in sight on important issues. India is pushing for a permanent solution for Public Stockholding (PSH) programmes, which is essential for national food security and supporting small-scale farmers, but has so far not got a direct mention in the draft Ministerial Declaration on Agriculture.

The US, the EU and the Cairns Group of agricultural exporters, on the other hand, are resisting broad PSH exemptions while pushing for

tighter transparency and subsidy cuts. A group of countries, led by the US, has demanded a new approach to tackle agriculture but developing nations remain wary of it as this might sidestep long-standing issues.

“With no agreed negotiating text and positions deeply divided, a breakthrough at MC14 appears unlikely. The temporary ‘peace clause’ agreed in Bali in 2013, shielding such programmes from legal challenges (subject to stiff conditions), will likely continue as a stopgap, while members defer decisions to

future negotiations,” the GTRI report underlined.

FISHERY SUBSIDIES

In the fisheries sector, the focus is now on curbing subsidies that drive overcapacity and overfishing. India argues that its subsidies support artisanal fishers and should not be equated with the industrial-scale subsidies of large, distant-water fishing nations. It has sought a 20/25-year transition period to protect the livelihoods of its coastal communities.

The very structure of the WTO will come under scrutiny at the MC14. While the US and the EU advocate ‘plurilateral’ agreements to speed up rule-making, India staunchly defends the consensus-based model. Requiring agreement from all members is the only way to ensure developing nations have an equal voice and to prevent the global trade system from being dominated by a few major powers, is its stance.

US lifts sanctions on Iran oil for 30 days to tame crude prices

Reuters
Washington/New Delhi/Singapore

The Trump administration waived sanctions on the purchase of Iranian oil at sea for 30 days in its latest attempt to ease oil prices that have been driven up by the US-Israeli war on Iran.

The waiver will bring some 140 million barrels of oil to global markets and help relieve pressure on energy supplies, US Treasury Secretary Scott Bessent posted on X.

The move reflects White House worries that the surge in oil prices after nearly three weeks of strikes on Iran will hurt American businesses and consumers ahead of the November midterm elections, when President Donald Trump’s fellow Republicans hope to retain control of Congress.

The licence, posted to the Treasury Department’s website after market hours,

said Iranian oil can be imported into the US under the waiver when necessary to complete its sale or delivery.

Cuba, North Korea and Crimea are among regions excluded from the licence, which will remain in effect until April 19. The move is expected to benefit Asia, the top buyer of West Asian oil.

US Energy Secretary Chris Wright said supplies could get to Asia in three-four days and hit the market after being refined over the next 45 days.

INDIA EYES IRAN OIL

Indian refiners land others in Asia looked to resume buying Iranian oil after Washington temporarily removed sanctions, traders said on Saturday.

Three Indian refining sources said they will buy Iranian oil and are awaiting government directions and clarity from Washington on details such as payment terms.

PM calls Iran’s President, iterates need to keep open shipping lanes

Our Bureau
New Delhi

Prime Minister Narendra Modi spoke with Iranian President Masoud Pezeshkian on Saturday, extending Eid and Nowruz greetings, while stressing the urgent need for peace and stability and safeguarding freedom of navigation in a volatile West Asia.

“We expressed hope that this festive season brings peace, stability and prosperity to West Asia. Condemned attacks on critical infrastructure in the region, which threaten regional stability and disrupt global supply chains. Reiterated the importance of safeguarding freedom of navigation and ensuring that shipping lanes remain open and secure,” Modi said in a post on social media platform X on Saturday. The PM also appreciated Tehran’s continued support for the safety and security of Indian nationals in Iran, per the post. With an estimated 9,000 Indian citizens residing in Iran for work, study and trade, their safety remains a top priority for New Delhi as war rages.

Restaurants body flags LPG shortage in States; seeks ‘essential’ status for industry

Our Bureau
New Delhi

The National Restaurant Association of India has flagged concerns about the impact of the shortage of commercial LPG on the industry in many States. It has been pointed out that the industry should be considered among the “essential” sectors for allocation of commercial LPG.

In a social media post on X on Friday, NRAI stated, “We thank the Central Government for its efforts and appreciate the Delhi Government for allowing 42 per cent LPG supply to restaurants. However, restaurants across other States continue to face severe shortages... we urge the Central Government to extend this support across all States and recognise restaurants as essential.”

STATE-LEVEL ISSUES

Sources said that despite directions from the Centre to States to allocate LPG to the restaurant industry, many States have been unable to do so, leading to a severe shortage. Industry bodies have also been engaging with Chief Secretaries of various States to seek respite on the allocation of commercial

Significant business losses, estimated at 25-30 per cent across India, says Shetty

LPG, sources added.

Earlier this week, Pradeep Shetty of Hotel and Restaurant Association (Western India) had said that the LPG shortage has led to significant business losses, estimated at 25-30 per cent across India, with widespread operational disruptions including shorter service hours, limited menus, event cancellations... and declining occupancy levels in hotels. The crisis has also led to higher operating costs as businesses attempt to manage limited resources and explore alternative arrangements, he added.

The Association has also written to the Maharashtra government requesting an extension or staggered payment of the Annual Licence Fee in the wake of the ongoing disruption in commercial LPG supply, which has severely impacted the hospitality sector across the State and the country.

Veranda Learning gets NCLT nod to demerge commerce vertical

Our Bureau
Chennai

The National Company Law Tribunal (NCLT) Chennai Bench has asked edtech firm Veranda Learning Solutions to convene a meeting of its equity shareholders to consider and approve the demerger and separate listing of its commerce vertical J.K. Shah Commerce Education Ltd (JSCEL).

The meeting has been scheduled for April 24, via

video conference, the company said.

“In a move that streamlines the process, the NCLT has dispensed with multiple stakeholder meetings across VLS, VXLs and JSCEL, accelerating the path forward,” the company said.

Announced in September 2025, the demerger aims to simplify the group’s structure while enabling a sharper strategic focus on the fast-growing commerce segment through a separate listed entity.

Divi’s gets ₹570 cr I-T order for FY23

Our Bureau
Hyderabad

Divi’s Laboratories has been directed by the Income Tax Department indicating an addition of ₹570 crore for FY22-23 (assessment year 2023-24).

“The company has received the Draft Order for FY22-23 wherein certain additions/disallowances amounting to ₹570.51 crore with respect to returned income has been proposed,” Hyderabad-based Divis informed the Bombay Stock Exchange on Saturday.

The additions proposed were on account of Transfer Pricing adjustments on specified domestic transactions and corporate tax adjustments. As per the Draft Order, penalty proceeding will be initiated separately for alleged under reporting of income in respect of the addition, it said. “The company is evaluating the Draft Order and prefers to file an appeal against the same with appropriate authority within the stipulated time,” it added.

Sri Lanka looks to revive Trincomalee oil tank farms as energy crisis looms

Meera Srinivasan
Colombo

Redeveloping the World War II-era oil tank farms in Sri Lanka’s eastern Trincomalee district is the “permanent solution” to the energy crisis, Foreign Minister Vijitha Herath said, adding that the government was taking steps to expedite the project backed by India and the United Arab Emirates.

“Temporary solutions are not sustainable, we need a long-term strategy to deal with oil storage and distribution given the global energy situation,” Herath told *The Hindu* on Saturday, reiterating his recent Parliament address.

BIG SHIFT

“That is why at the very beginning our government signed the MoU with India and the UAE,” he said, referring to the Memorandum of Agreement signed by the three parties in April 2025, during Prime Minister Nar-

Vijitha Herath, Sri Lanka’s Foreign Minister

endra Modi’s visit to the island nation, to develop Trincomalee as an energy hub.

The move drew attention as one of the first major MoUs on strategic projects, signed by the Anura Kumara Dissanayake administration after its big win in the November 2025 general elections. The move is widely perceived as a big shift, since the leftist Janatha Vimukthi Peramuna, the main constituent of the ruling National People’s Power, had long opposed Indian involvement in the project.

After the signing of the MoU nearly a year ago, the three parties have met once, and Sri Lanka has put forward a concept note for the

other two partners to respond to, sources familiar with the discussions said.

“There are some technical aspects being addressed by the Energy Ministry. Once that is done, a tender process will be initiated to bring in investors,” Herath said, adding that the government was working to “expedite the process”.

Amid the escalation in the West Asia war, Sri Lanka switched to a digital QR code-based system to ration fuel sales last week, in what authorities called a “precautionary measure.”
