Why This Recovery Deserves Your Attention

Markets have a peculiar way of humbling pessimists, sometimes within a week. That is exactly what we have witnessed recently. Just days ago, the headlines were all doom: geopolitical tensions, a weakening rupee, and growing doubts about India's economic future. But we did not panic. After four decades of analysing markets, we have learned that volatility often creates opportunity, not just danger. So, in this same space as well as in our stories, we stuck to our conviction and told our readers that this is your chance to build wealth for the long term. And then something expected happened.

After six brutal weeks of losses, the market suddenly roared back to life. Nifty 50 jumped nearly 6 per cent in a single week, its biggest weekly gain in five years. Even more striking, about 23 per cent of stocks in the broader Nifty 500 universe delivered double-digit returns in just days. Major names like ICICI Bank and Bajaj Auto surged over 10 per cent. The reason? A simple news headline of potential ceasefire talks between the U.S. and Iran. One piece of news, and suddenly the India VIX plummeted 26 per cent.

This was not luck. When markets are drowning in fear and pessimism, the opportunity for sharp reversals becomes real. History has taught us this lesson repeatedly, and this week proved it once again. Recovery was broad-based too, banks bounced back, select IT stocks rebounded, infrastructure names benefited. That is the kind of recovery we want to see, leadership across the board, not just a handful of winners. But here is where things get interesting, and why you need to stay alert.

We are now entering the full earnings season for Q4FY26, and this is crucial. Earnings reports and what management teams say about the future will tell you far more truth about the impact of recent turmoil than any headline ever could. Do not get caught up worrying about whether companies beat or missed earnings targets. That is not the point. Instead, focus on the deeper story. Is their revenue growth genuine, or is it being masked by a weaker rupee? What are they saying about client demand going forward? Are they optimistic about FY27, or are they being cautiously guarded? Listen carefully to what they are NOT saying, that silence often speaks volumes.

Now, let us be honest about what still concerns us. Foreign investors are still pulling back, and domestic institutions are trying to fill the gap. But here is the reality: domestic money can stabilise the market, not necessarily propel it higher. Then there is the oil situation. Yes, the ceasefire gave crude prices some relief, but they are still elevated compared to where they were before all this tension began. For a country like India that depends heavily on imported oil, this matters directly to you in every aspect of your life, whether it is your grocery bill or even your job. The truth is, everything is not settled yet. There are still things to watch carefully.

After more than four decades in this business, I have learned something important, your success does not depend on predicting the market's direction. It depends on your discipline during volatile times. The worst of this conflict appears to be behind us, and the recovery we are seeing is not just noise, it is a signal that opportunities lie ahead for those patient enough to invest. Focus on what you can control, building conviction through earnings reports and staying invested through volatility. History rewards those who do so.

The market's biggest enemy has always been our own emotions, fear and greed swinging wildly and rapidly. The next few weeks and months will test your character as an investor. The real question is not whether markets will go higher. It is whether you will be positioned correctly when clarity finally emerges. Keep following us for insightful suggestions as we track the opportunities ahead for you.

PSUs: Stability, Dividends, and Outlook

I am highly bullish on Indian PSUs and believe they have been relatively resilient amid the current market weakness. Could you please share your outlook on the future prospects of PSUs?

- Vrushabh Prathamshetty

Editor Responds: Thank you for writing to us. Public Sector Undertakings (PSUs) remain a crucial pillar of India's economy, playing a key role in infrastructure, banking, energy, and defence. One of their biggest attractions for investors is the consistent dividend payout, offering steady income even during volatile market phases. March is particularly important, as many PSUs tend to announce dividends or see increased activity due to year-end considerations and government disinvestment targets. Despite broader market weakness, PSUs have shown relative resilience, supported by strong balance sheets and policy backing.

Going ahead, their outlook remains linked to government spending and reform momentum. We will be covering this theme in detail in our upcoming magazine issue. Stay tuned for deeper insights!

Market Watch

Markets Recover, But Tensions Refuse to Fade

After weeks of persistent weakness, the past fortnight offered a much-needed breather for investors. Indian benchmark indices staged a steady recovery across most trading sessions, initially displaying resilience despite Trump's threat that "a whole civilisation will die," and later gaining stronger momentum as tensions eased with Iran and the U.S. moving towards a ceasefire and diplomatic negotiations. After surging past USD 110 per barrel, oil prices retreated sharply to hover in the USD 90-95 range, easing a key overhang for global markets.

The cooling of crude prices, coupled with receding geopolitical tensions, triggered a broad-based rally across international equities. The improving sentiment was mirrored domestically as well, with the Nifty VIX, a key gauge of market fear, plunging nearly 30 per cent during the period, signalling a marked reduction in volatility and investor anxiety. Against this backdrop, benchmark indices BSE Sensex and Nifty 50 delivered strong gains of around 5-6 per cent each over the fortnight. The optimism was even more pronounced in the broader markets, where mid-cap and small-cap indices surged by 7-8 per cent, reflecting improving risk appetite among investors.

Encouragingly, mutual fund flows reinforced this positive trend. Despite the earlier phase of market weakness, equity mutual funds across categories witnessed a notable surge in inflows in March 2026. This trend underscores a maturing investor mindset, where market corrections are increasingly being perceived as strategic entry opportunities rather than triggers for exit. Sectoral performance remained buoyant, with all major indices trading

in the green and posting strong recoveries. Beaten-down sectors such as real estate, metals and auto witnessed robust buying interest and sharp rebounds.

In contrast, relatively defensive pockets like healthcare and FMCG delivered modest gains, reflecting a gradual shift in investor preference towards cyclical and high-beta segments amid improving market sentiment. Tracking institutional flows, foreign institutional investors (FIIs) remained persistent sellers during the period, pulling out nearly ₹50,000 crore from domestic equities. In contrast, domestic institutional investors (DIIs) stepped in with comparable inflows, effectively cushioning the market and lending much-needed stability amid

Markets rallied on ceasefire optimism and easing crude, but failed talks and renewed threats have kept sentiment fragile, suggesting that volatility could resurface anytime.

sustained foreign outflows.

In other developments, at its April 2026 monetary policy meeting, the Reserve Bank of India kept the repo rate unchanged at 5.25 per cent, maintaining a neutral stance amid global uncertainties. Market conditions remained largely stable through the weekend, before sentiment took a hit on fresh geopolitical developments. The Iran-U.S. talks in Islamabad ended without any resolution, followed by renewed tensions as Trump threatened a U.S. blockade in the Strait of Hormuz. While there are indications that both sides may consider a second round of negotiations, the situation remains uncertain. These evolving developments are likely to play a crucial role in shaping the market's future trajectory. **Stay tuned!**

Equity

Cummins India Ltd

POWERING INDIA'S ENERGY BACKBONE

HERE IS WHY

Strong Return Ratios
Robust Balance Sheet
Sustained Demand Visibility

The India Industrial Engines Market continues to benefit from structural tailwinds driven by infrastructure expansion, data centre investments, and rising power reliability needs. With increasing electrification and backup power requirements across sectors such as manufacturing, healthcare, real estate, and digital infrastructure, demand for reliable power solutions remains strong. Against this backdrop, we recommend Cummins India as our Choice Scrip.

Cummins India is a subsidiary of the global Cummins Group and is among the country's leading manufacturers of engines and power solutions. The company operates across four key segments: Engines, Power Systems, Components, and Distribution. Its engines cater to a wide range of industries including railways, marine, construction, mining, oil and gas, defence, and industrial applications. The company designs and manufactures diesel and alternative fuel engines ranging from 2.8 to 95 litres, along with generator sets of up to 3,000 kW, supported by a strong distribution and service network.

The Engine business continues to remain

CHOICE

1 YEAR INVESTMENT HORIZON

the dominant contributor, while the lubricants business operates through its joint venture with Valvoline. The company also benefits from a diversified geographical mix with a strong domestic presence and a growing export footprint.

For Q3FY26, the company reported revenue of around ₹3,006 crore, broadly stable year-on-year, while maintaining strong profitability. Net profit stood at ₹453 crore with margins remaining healthy at around 15 per cent. While domestic demand continues to remain resilient, export markets have shown some moderation due to geopolitical uncertainties and uneven global demand. However, management expects exports to stabilise over the medium term, while domestic growth is likely to remain the key driver.

On the financial front, the company

stands out with a debt-free balance sheet. Return ratios remain robust, with ROCE at 36.3 per cent and ROE at 28.2 per cent. Over the last three years, the company has delivered a sales CAGR of 19 per cent and profit CAGR of 34.9 per cent.

From a valuation perspective, the stock is currently trading at a P/E of 59.4x, which is higher than the industry average of 38.8x and above its three-year median P/E of 48.8x. The PEG ratio of 1.70 suggests that the stock is trading at a premium to its growth, reflecting strong investor confidence in its long-term earnings visibility and business quality. Despite the premium valuation, the company's strong balance sheet, high return ratios, leadership in the power solutions space, and visibility of demand across key sectors justify a structural re-rating. The company also continues to reward shareholders with consistent dividend payouts, with a payout ratio of over 70 per cent.

Going forward, key triggers include continued growth in data centre demand, government infrastructure spending, expansion in distribution and aftermarket services, and gradual recovery in exports. Additionally, new energy solutions such as battery energy storage systems (BESS) could open up incremental growth opportunities over the medium to long term. Cummins India combines strong fundamentals, high return ratios, and long-term demand visibility driven by structural growth in power solutions. While valuations remain elevated, the company's consistent execution, debt-free balance sheet, and leadership positioning make it a compelling play on India's infrastructure and energy growth story. Considering these factors, we recommend a **BUY**.

Insolation Energy Ltd.

A SOLAR BET WITH ROOM TO SCALE

HERE IS WHY

Strong domestic solar tailwinds

Backward integration underway

Capacity expansion can aid margins

India's solar manufacturing industry is entering a stronger phase of growth. What was once largely a policy-driven theme is now becoming a serious industrial opportunity, supported by import substitution, rooftop solar adoption and rising utility-scale installations. As India pushes for cleaner power and greater energy self-reliance, companies with scale, execution ability and broader product reach are likely to benefit. In this backdrop, Insolation Energy has emerged as a solar manufacturer trying to move beyond modules and build a more integrated renewable energy business. That gives it a relevant place in an industry where capacity, credibility and expansion could shape the next phase of growth.

Insolation Energy Limited is a Jaipur-based renewable energy company operating under the INA Solar brand. Incorporated in 2015, it started as a solar panel manufacturer and has expanded into solar modules, batteries, power conditioning units and EPC services. The company serves more than 15,000 customers, works with over 800 channel partners and has a presence across more than 100 districts in India. Its solar-module capacity stands at 5.5 GW. It is also pursuing backward integration through proposed capacities of 4.5 GW in solar

LOW
PRICED SCRP
1 YEAR INVESTMENT HORIZON

cells and 18,000 MTA in aluminium frames, which could improve margins and strengthen supply-chain control.

In terms of manufacturing scale, Insolation Energy holds a mid-tier position among India's listed solar manufacturers. Its 5.5 GW solar-module capacity puts it ahead of smaller listed peers such as Solex and Alpex, though it remains below larger players like Premier Energies and Waaree. This means Insolation is no longer a fringe player, but it is not yet among the industry heavyweights. Its planned move into solar cells and aluminium frames could help narrow that gap and improve its standing within the domestic solar manufacturing space.

Growth could be driven by rising participation in rooftop solar and KUSUM-linked opportunities, along with domestic manufacturing rules such as Approved List of Models and Manu-

facturers (ALMM) and the expected cell-manufacturer framework from June 2026, which can improve demand visibility for local players. Over the medium term, solar-cell and aluminium-frame expansion can improve integration, reduce reliance on outside suppliers and support margins. The main risk is execution. Any delay in commissioning or ramp-up of new capacities can postpone the expected benefits. The business also remains exposed to policy-led demand, working-capital pressure during expansion.

Financially, Insolation Energy has reported a sharp improvement in scale and profitability. In FY25, consolidated total income rose 81.17 per cent YoY to ₹1,343 crore, EBITDA increased 102.35 per cent to ₹170.3 crore, and PAT surged 127.48 per cent to ₹126.2 crore. Operating profit margin stood at 12.08 per cent, while net profit margin came in at 9.46 per cent. The company also reported healthy return ratios, with ROCE at 24 per cent and ROE in the low twenties. Its debt-to-equity ratio remains low at about 0.2 times, suggesting that the balance sheet is relatively comfortable for a fast-growing manufacturing business.

At 16.3 times earnings, Insolation Energy trades at a discount to the industry average of 33.9 times. That valuation appears reasonable considering the company's improving scale, healthy profitability, planned backward integration and exposure to domestic solar tailwinds. The story is not without risk, as execution will be critical and expansion has to translate into timely capacity ramp-up and sustained demand. Still, the stock offers tailwinds, improving scale and undemanding valuation. On balance, the risk-reward appears favourable enough to support a **BUY** view.

Welspun Corp Ltd is a multinational company and a part of the Welspun Group, specializing in line pipes and building materials. It is among the world's leading large-diameter pipe manufacturers, offering diversified solutions including steel pipes, ductile iron pipes, and TMT bars, supported by strong manufacturing capabilities and global project execution expertise. During Q3FY26, the company delivered a healthy performance, with revenue surging 25 per cent year-on-year to ₹4,532 crore. Although profit for the December 2025 quarter declined, this was largely due to a high base of other income in the corresponding period last year rather than any operational weakness. Notably, the operating profit margin improved from 12 per cent to 14 per cent. The company has secured a large pipe supply order worth approximately ₹1,000 crore from its U.S. facility, taking its consolidated global order book to ₹24,700 crore, ensuring strong

Lenskart Solutions Limited is a technology-driven eyewear company founded in 2008, focused on making quality vision care affordable and accessible. It operates an omnichannel model, combining online platforms with a large retail network across India and international markets. The company designs, manufactures, and sells a wide range of eyewear, including prescription glasses, sunglasses, and contact lenses. During Q3FY26, the company delivered a robust performance, with revenue rising 38 per cent year-on-year to ₹2,308 crore. Profitability improved sharply, as net profit surged to ₹133 crore from just ₹2 crore in the corresponding quarter last year. The international segment is outperforming India's historical profitability curve, delivering superior returns with a smaller footprint. Investments in AI, automation, and data science create a strong competitive moat, enabling market expansion at lower costs while improving unit economics. Given the vast opportunity, strengthening fundamentals, and AI-driven advantages, the company holds significant growth potential. Hence, we recommend **BUY**.

NIFTY Index Chart Analysis

Is It a Relief Rally or a Real Turnaround for Nifty?

The Nifty 50 posted its sharpest weekly gain in more than five years, snapping a six-week losing streak. The rally was driven largely by a two-week ceasefire between the U.S. and Iran, which cooled crude oil prices and lifted risk appetite across equity markets. However, sentiment turned cautious again over the weekend after the two sides failed to reach a peace agreement despite hours of talks, leading to a sharp gap-down opening on Monday.

Roadmap for the Next 15 Days			
Ideas	Nifty Levels	Action to be Initiated	Probable Targets
Resistance for the medium-term	24,075	Close above the level of 24,075 would be positive for Nifty	24,303 — 24,414
Support for the medium-term	23,553	Any slip below 23,553 on a closing basis would result into resumption of down move.	23,153

has improved meaningfully.

From here, the immediate resistance is placed at last week's high of 24,075. A sustained move above this level could

Put simply, the market has bounced back sharply, but it has not yet reclaimed the zone that would confirm a complete restoration of trend strength. As long as Nifty remains below the 24,414-25,170 band, where the 200-day moving average is also placed, intermittent profit-taking and resistance-led hesitation cannot be ruled out. A decisive move above this zone would strengthen the technical setup considerably. Until then, any failure to hold near support levels could bring volatility back into the picture.

Momentum indicators also suggest that the recovery, while strong, is still incomplete. The 14-period daily RSI has moved into neutral territory, while the weekly RSI has turned up from lower levels but remains below the 50 mark. This shows improving momentum, though not a fully bullish setup yet. The weekly MACD is still below its signal line and remains in negative territory, indicating that the broader momentum trend has not fully reversed despite the recent rebound.

Over the coming fortnight, market direction is likely to be influenced by both geopolitical developments and the onset of the earnings season. In that environment, stock-specific action is likely to dominate. Fresh buying should remain selective and focused on technically strong names that are either improving in structure or showing relative strength against the broader market. Chasing every rise may not be the best approach, especially with the index nearing overhead resistance, the weekly chart still undergoing repair, and geopolitical uncertainty continuing to hang over sentiment.

Despite the weak start, the index staged a solid intraday recovery, bouncing nearly 300 points from the day's low to close above the 23,800 mark. ICICI Bank, HDFC Life and NTPC were among the key contributors to the rebound. Volumes stayed above average and were stronger over the last three sessions, which points to active participation. Even so, the fact that Nifty closed below the previous day's low remains a mild negative. On the positive side, the index found support near the 8-day EMA and managed to recover from there.

What stands out is that the index has met several conditions that typically signal the end of a corrective phase. It has closed above last week's high, sustained above its short-term moving average, and retraced a 13-session decline in just four sessions. The break in the earlier pattern of lower highs and lower lows on the daily chart further suggests that the market structure

open the door for a rally towards 24,303-24,414, which marks the March 10 high and also coincides with the downside gap area of March 9, 2026. On the downside, the 8-day EMA at 23,553 remains the key support to watch. If the index fails to hold above this level, it could slip towards the April 8, 2026 upside gap zone and potentially retest 23,153 over the short to medium term.

From a pattern perspective, Nifty has attempted a rebound after testing the lower Bollinger Band and has remained comfortably above its 200-week moving average. That keeps the broader long-term structure intact for now. However, the index is still trading below an important medium-term resistance zone, which means this rebound still needs follow-through before it can be treated as the start of a fresh uptrend. For now, it is an encouraging recovery, but not yet a full trend reversal.

STOCK RECOMMENDATIONS

SONA BLW PRECISION FORGINGS LTD. BUY CMP ₹569.20

BSE Code : 543300 | Target 1 ₹640 | Target 2 ₹675 | Stoploss....₹516 (CLS)

Sona BLW Precision Forgings Limited (Sona Comstar) is one of the world's leading mobility technology companies. It has built a strong global presence through its manufacturing and assembly facilities, R&D centres, and engineering capability centres spread across India, the USA, Serbia, Mexico, and China. The company designs, manufactures, and supplies highly engineered, mission-critical systems and components to mobility OEMs. It is also a leading supplier of driveline and traction motor solutions to the fast-growing global electric vehicle market. In addition, the company has a presence in the railway segment through its brake systems, couplers, and suspension systems. Its business remains well diversified across geographies, products, vehicle segments, and customers.

On the technical front, the stock has broken out of an almost 11-month horizontal trendline on the daily chart. This breakout is supported by above-average volumes and the formation of a sizeable bullish candle, which adds strength to the move. Interestingly, the Relative Strength (RS) Rating stands at 90, indicating clear outperformance compared to most other stocks. The 14-period daily RSI has crossed the 60 mark for the first time since late February and continues to move higher. The daily MACD also remains in a strong uptrend and is diverging from its nine-period average, which further supports the positive bias. In short, the stock has delivered a convincing breakout backed by strong volume and a high RS Rating of 90. Hence, we recommend buying the stock for targets of ₹640 and ₹675, with a stop loss at ₹516.

MULTI COMMODITY EXCHANGE OF INDIA LTD. BUY CMP ₹2,766.45

BSE Code : 534091 | Target 1 ₹2,980 | Target 2 ₹3,040 | Stoploss....₹2,620 (CLS)

Multi Commodity Exchange of India Limited (MCX) is India's largest exchange in the commodity derivatives segment. It is also the country's first exchange to introduce commodity options and futures on bullion, base metals, and energy indices. MCX operates under the regulatory framework of the Securities and Exchange Board of India (SEBI) and holds a dominant position in the domestic commodity derivatives market.

Technically, the stock has broken out of an 11-week ascending triangle pattern and closed at a fresh lifetime high. Its Relative Strength line has also moved to a new high, reflecting strong market leadership. Higher volumes further validate the breakout. The stock is trading well above all key moving averages and is currently placed 11.79 per cent above its 50-day moving average. Bollinger Bands have started expanding, signalling rising momentum and the possibility of further price movement. The weekly MACD has generated a fresh bullish signal, while the RSI remains in a strong bullish zone across multiple time frames. In addition, the KST indicator has also flashed a fresh bullish signal. The Stochastic RSI continues to remain positive, and the Elder Impulse System has formed a strong bullish bar. Overall, the technical setup remains firmly positive. The stock can test the ₹2,980–₹3,040 zone, with a stop loss at ₹2,620.

Ather Energy Ltd.**The Tortoise That Started Sprinting**

Ather Energy is positioning itself to lead India's electric two-wheeler transition. The business is improving, but is the stock still worth buying?

Why Ather Matters Right Now

The excitement around India's electric two-wheeler industry is no longer being driven only by subsidies or the promise of a cleaner future. It is now being fuelled by something more durable, the segment is turning into a genuine mass market.

Rising fuel prices, sharply lower running costs of electric scooters, improving battery performance, and a rapidly expanding charging network have together made electric scooters a practical everyday choice, not just an aspirational one. The numbers reflect this. India sold approximately 1.4 million electric two-wheelers in FY2026, up 22 per cent year-on-year and more than seven times the volume sold just four years ago. Electric two-wheelers now account for about 57 per cent of all EVs sold in the country, and yet penetration sits at just 6.5 per cent of total two-wheeler sales. Over 93 in every 100 scooters sold in India still run on petrol at roughly ₹2 per kilometre, versus about 30 paise per kilometre for an electric. The cost case for switching has never been clearer. The question now is simply, who captures that shift?

Since its May 2025 IPO at ₹321, Ather's share price has more than doubled, touching ₹803 in March 2026. Since then, while its nearest rival Ola Electric has seen sales collapse by over 50 per cent, Ather recorded 2,39,124 units in FY2026, 82 per cent year-on-year growth rising to a 18.8 per cent market share as on Q3 FY26 and cementing its place as the No. 3 player in the country.

This analysis unpacks how Ather makes money, where its unit economics stand, how it compares with competitors, and what

the stock's sharp move already prices in.

What is Ather: The Business

Founded in 2013 by Tarun Mehta and Swapnil Jain, two IIT Madras graduates, Ather is an Indian electric two-wheeler company headquartered in Bengaluru. It designs, manufactures, and sells premium electric scooters built around a technology-first philosophy, connected dashboards, over-the-air (OTA) software updates, navigation, fast-charging infrastructure, and performance-oriented riding modes.

Its current product lineup consists of two families, the Ather 450 series (450S, 450X, 450 Apex) targeting performance-oriented urban riders, and the Ather Rizta, a family-oriented scooter launched in April 2024 that has quickly become the company's highest-volume product. Together, these span a price range from roughly ₹1.05 lakh to ₹1.9 lakh (ex-showroom), placing Ather firmly in the premium segment of the market.

Manufacturing is done at its facility in Hosur, Tamil Nadu, which has an installed capacity of 4,20,000 units per year. A 3.0 plant in Maharashtra (Chhatrapati Sambhajinagar), with a capacity of one million units annually, is expected to begin phased production from May 2026.

Beyond the vehicles, Ather has built a supporting ecosystem, Ather Grid, its network of 5,000 fast-charging points spread across India, Nepal, and Sri Lanka, the widest two-wheeler fast-charging network in the country, and AtherStack, its proprietary software platform that delivers connectivity,

navigation, and ongoing feature updates to customers post-purchase. Over 600 Experience Centres serve as its retail and service touchpoints across India.

In simple terms, Ather is a premium electric scooter brand that sells vehicles, software-driven experiences, and charging access under one roof, rather than a low-cost EV player chasing volume at any price.

How Ather Makes Money

Ather is not simply a scooter seller. It is building a multi-layered revenue model where the vehicle is the entry point and the software, services, and charging network form the long-term engine. The analogy that best captures this is the 'iPhone and the App Store'. The device is the starting point, but the ecosystem and recurring updates keep customers engaged and paying over time.

The revenue mix currently looks like this:

Revenue Stream	What It Includes	Share (9M FY26)
Vehicle Sales	450S, 450X, 450 Apex, Rizta deliveries	~87%
Non-Vehicle Revenue	Software subscriptions (AtherStack Pro), Ather Grid charging, accessories, service packages, spares	~13%

The vehicle business remains dominant, but the non-vehicle slice is growing and matters disproportionately for margins. Software subscriptions carry far higher margins than scooter hardware, and 91 per cent of Ather's customers opted for AtherStack Pro in Q3 FY26, the company's paid software suite. Non-vehicle revenue stood at 14 per cent of total income in Q3 FY26, up from 12 per cent a year earlier.

The key idea is this, Ather is transitioning from a pure hardware business toward a hardware-plus-services model. Every scooter sold is effectively the beginning of an ongoing customer relationship, not a one-time transaction. That shift materially improves the quality and stickiness of earnings over time.

Unit Economics: Is It Getting Better?

Unit economics is the most important question for any pre-profit growth company - is each unit the company sells getting more profitable over time, or is it getting worse? For Ather, the answer is clearly and demonstrably improving, and this among other facts underlies much of the stock's re-rating. The table below shows how the key per-vehicle metrics have evolved from FY25 through Q3 FY26:

Metric	FY25	Q1 FY26	Q2 FY26	Q3 FY26
Vehicles Sold	1,55,394	46,078	65,595	67,851
Market Share	11.7%	14.3%	17.4%	18.8%
Revenue per Vehicle (₹)	1,28,295	1,23,106	1,19,694	1,20,867
COGS per Vehicle (₹)	1,20,777	1,12,440	1,11,304	1,09,681
Gross Profit per Vehicle (₹)	7,518	10,666	8,390	11,187
EBITDA per Vehicle (₹)	-34,152	-23,004	-13,827	-4,407
Non-Vehicle Revenue	12%	12%	12%	14%
* Gross profit is calculated as Revenue per vehicle - COGS per vehicle				
* EBITDA per vehicle is calculated as EBITDA/ number of vehicles sold.				

Three things stand out from the data:

- **Cost reduction has outpaced price pressure** — Revenue per vehicle has declined from ₹1,28,295 to ₹1,20,867 as Ather pushes more volume through the Rizta, which is lower-priced than the 450 series. But COGS per vehicle has fallen even faster from ₹1,20,777 to ₹1,09,681 driven by higher localisation, better scale on the motor and battery, and more efficient manufacturing. The net result is that gross profit per vehicle has improved from ₹7,518 in FY25 to ₹11,187 in Q3 FY26.
- **EBITDA losses are shrinking fast** — The per-vehicle EBITDA loss has narrowed from ₹34,152 in FY25 to just ₹4,407 in Q3 FY26. This is not a small move, it represents an improvement of nearly ₹30,000 per vehicle in a single year. In Q3 FY26, the company's overall EBITDA margin narrowed to -3 per cent.
- **Software is becoming a meaningful contributor** — Non-vehicle revenue (subscriptions, charging, accessories, services) has grown to 14 per cent of total income in Q3 FY26, up from 12 per cent in FY25. With over 91 per cent of customers opting for AtherStack Pro, this recurring layer is expanding without adding proportional costs, which is what drives margin improvement at scale.

Why the Stock Has Rerated

Ather listed in May 2025 at ₹321 per share with a somewhat muted debut, the stock actually settled 8.5 per cent below the issue price on Day 1. Within months, the narrative changed completely. By March 2026 the stock had touched ₹803, an all-time high, representing a return of over 150 per cent from the IPO price in under a year.

Three things drove this rerating:

- **From story to numbers** — When Ather listed, investors were largely valuing it on potential. What followed was a series of quarterly results that showed actual execution, volumes up 67 per cent year-on-year in Q2, then 50 per cent in Q3, market share climbing from 11.7 per cent in FY25 to 18.8 per cent in Q3 FY26, revenue hitting a record ₹995.7 crore in Q3 FY26, and EBITDA losses narrowing dramatically. Numbers replaced promises, and the market re-priced accordingly.
- **Ola's collapse created a vacuum** — Ola Electric, which had been the dominant player with 35 per cent market share in FY25, saw sales collapse by over 51 per cent in FY26, dragged down by quality issues, service failures, and loss of consumer trust. That vacuum benefited players with stronger brands and better service networks, and Ather was one of the clearest beneficiaries, absorbing a meaningful share of premium-segment buyers who had moved away from Ola.
- **Premium positioning proved its value** — In a market where Ola's aggressive discounting strategy was destroying value, Ather's refusal to compete on price

turned from a potential weakness into a strength. Its brand loyalty, customer satisfaction scores, and software ecosystem held firm, and investors began pricing in a higher-quality business model, one that earns through experience and ecosystem rather than sticker-price volume.

In short, the stock rerated because what was once seen as a 'premium but loss-making niche EV start-up' is now perceived as a high-quality, structurally improving mobility business with a credible path toward profitability.

Competitive Landscape: Where Ather Stands

India's electric two-wheeler market has consolidated sharply. TVS, Bajaj, Ather, Ola, and Hero together account for over 85 per cent of industry sales. Within this group, the competitive dynamics have shifted significantly over the past year, with legacy OEMs gaining ground and Ola losing it.

problem is that China controls the vast majority of global rare earth mining, refining and magnet production, leaving Indian EV makers structurally exposed to geopolitical and supply-chain disruption.

This risk is not theoretical. In FY26, Bajaj Auto's Chetak production was disrupted in July and August due to rare earth magnet supply issues, a real-world example of the vulnerability. Ather was not immune either, and the company deferred certain PM E-DRIVE claims during the disruption period.

Ather's response has been proactive and technically substantive. The company has developed Heavy Rare Earth Free (HREF) motors that eliminate the most sensitive and expensive elements dysprosium and terbium while retaining lighter rare earth formulations that are easier to source. These designs have received ARAI approvals and PM E-DRIVE eligibility, confirming they meet performance standards without the highest-risk inputs.

Brand	FY26 Market Share	Price Band (₹)	Positioning	Fast Charging	Software / Experience
TVS iQube	24%	1.1-1.6L	Mass-premium commuter	Limited	Practical, improving
Bajaj Chetak	21%	0.96-1.35L	Reliability-first, value	Dealer-based	Functional, simple
Ather Energy	17%	1.05-1.9L	Premium, tech-first	Strongest (4,357 pts)	Industry-leading OTA, apps, UI
Ola Electric	12%	0.99-1.3L	Mass-volume, affordable	Growing, patchy	Feature-rich, inconsistent delivery
Hero Vida	10%	0.83-1.4L	Value, young urban	Dealer-based	Basic, rapidly improving

* FY26 Retail Registrations (FADA/Vahan data, April 2, 2026)

Ather's competitive position is structural rather than price-based. It does not compete for the cheapest-scooter buyer, instead, it targets urban riders who value build quality, software richness, and the convenience of Ather Grid fast-charging. This creates what can fairly be called an 'experience moat', a narrower but stickier and higher-margin customer base.

The Rizta has been a critical move in this context. While the 450 series speaks to performance enthusiasts, the Rizta, a family-oriented scooter with the largest seat in its class and generous storage, has broadened Ather's appeal without meaningfully compromising its premium image. As of Q3 FY26, the Rizta accounted for approximately 70 per cent of Ather's sales volumes.

Where Ather trails is distribution depth. TVS and Bajaj operate through thousands of existing dealer points, Ather's 600 Experience Centres are growing but remain concentrated in South and West India. Expanding this network, particularly into North and Central India, is both the biggest growth opportunity and the biggest execution challenge ahead.

The Rare Earth Magnet Risk And Ather's Response

Rare earth magnets are a core component of the high-efficiency electric motors used in most premium e-scooters. They deliver strong torque and performance in a compact form factor. The

Beyond HREF, Ather is also developing rare-earth-lite and alternative magnet architectures for its next-generation EL platform, reducing long-term exposure further. The company has also incorporated a Hong Kong subsidiary to support procurement and build supply chain resilience within the Asia-Pacific region.

For investors, this matters because it signals that Ather is engineering hardware-level resilience into its business, not just riding the EV wave and hoping the supply chain holds. It is an area where Ather appears better prepared than most of its peers.

Growth Triggers Ahead

Ather's growth story over the coming years is not dependent on a single catalyst. It is a combination of product, geography and platform expansion that together could drive meaningful incremental volume and margin improvement.

- **The EL Platform (Festive Season 2026)** — Ather's most important near-term launch is its new EL scooter platform, designed specifically for the ₹1 Lakh to ₹1.3 Lakh segment that accounts for roughly 50 per cent of the total e-scooter market. The EL platform is engineered for lower mechanical costs and faster assembly, targeting the volume tier without compromising software quality. The first EL-based scooter is expected to launch in the festive season of 2026, with production at the new Chattrapati

Sambhajinagar plant.

- **Entry into Electric Motorcycles (Zenith Platform)** — Motorcycles account for 63 per cent of India's total two-wheeler market, a segment where EV penetration is currently negligible. Ather is developing the Zenith platform for electric motorcycles targeting the 125–300cc equivalent segments. If electric penetration in motorcycles hits even 5 to 10 per cent by 2030, it represents a market multiple times the size of the current e-scooter opportunity. Ather getting in early, with a software-defined product, positions it well for this transition.
- **Geographic Expansion: Middle and North India** — Ather's current stronghold is South India, where it commands 24 per cent market share. Its fastest-growing region is now Middle India (Gujarat, Maharashtra, MP, Odisha), where share has climbed from 8.8 per cent to 17.4 per cent in a single year. North India Punjab, UP, Rajasthan is the next frontier, with market share still in low single digits. As the Chattrapati Sambhajinagar plant reduces logistics costs for North and West India, this expansion becomes more economically viable.
- **Deepening the Software Revenue Layer** — With 91 per cent of customers on AtherStack Pro and non-vehicle revenue at 14 per cent of total income, Ather is building a recurring revenue engine on top of its hardware base. As the cumulative installed base of Ather scooters grows, the company crossed 5,00,000 cumulative deliveries in October 2025, the subscription and services layer compounds with each additional sale.
- **Fleet and B2B Opportunity** — Last-mile delivery demand from e-commerce and food delivery companies is driving strong B2B electric two-wheeler adoption. This segment values total cost of ownership above all else, and electric scooters win clearly on operating costs. Ather's premium positioning and charging network make it a credible option for corporate fleet buyers looking for reliability over price.

Risks and Challenges

Ather's improved execution does not make it risk-free. Several real challenges could slow or complicate the growth story. Intense competitive pricing pressure. TVS, Bajaj and Hero are all gaining share and deploying their existing dealer networks aggressively. If Ather is forced to cut prices across the board to defend share, particularly once legacy OEMs launch more capable, software-equipped products, ASP compression could outpace cost reduction and delay the path to EBITDA breakeven.

- **Brand dilution during scaling** — Ather's valuation premium rests on its image as a premium, tech-first brand. As it pushes higher volumes through the Rizta and the upcoming EL platform and expands into lower-tier cities, maintaining consistent build quality, software updates and service standards across a larger, more distributed network is a real operational challenge. Any

deterioration in customer experience could erode the 'experience moat' and reprice the stock toward a more commoditised valuation.

- **Subsidy and policy risk** — The PM E-DRIVE scheme, which provided subsidies of ₹5,000 per kWh of battery capacity, was scheduled to expire in March 2026. Any meaningful withdrawal of EV incentives could temporarily widen the price gap between electric and petrol scooters, slowing adoption and compressing volumes. Ather's ability to offset this through its own cost reduction is improving but not yet certain.
- **Rare earth supply disruption (residual risk)** — Although Ather is developing HREF and rare-earth-lite motors, a portion of its current production still relies on rare earth inputs. A sudden Chinese export restriction or supply shock could push up motor costs and create a short-to-medium-term margin headwind before the redesigned motors scale to full production.
- **Execution risk on new platforms** — The EL platform launch, the Zenith motorcycle programme, the Chattrapati Sambhajinagar plant ramp and the geographic expansion into North India are all happening simultaneously. Executing across all four at once, while improving unit economics and managing working capital, is operationally demanding.

Valuation and Conclusion

Since its May 2025 IPO at ₹321, Ather's share price has more than doubled, with a market capitalisation of approximately ₹29,000 crore. Since the company is yet to make profit, the most relevant metric is EV/Sales, not PE. At current prices, Ather trades at roughly 9x trailing twelve-month sales, compared to Ola Electric, which trades closer to 5x. That premium reflects the market's view of Ather as a higher-quality, better-managed and more execution-credible business with a clear path to profitability.

At 9x sales, the market is not betting on another cheap rerating from IPO levels, it is pricing in a continuation of high-volume growth, steady margin improvement and the successful execution of the EL platform and geographic expansion. The easy upside from the listing price has already played out, and further upside will need to come from delivered results, EBITDA breakeven and expanding market share, not from valuation expansion alone.

Ather has made a genuine transition over the past year, it entered the public markets as a credible but loss-making premium EV brand and now looks more like a structurally improving mobility business with improving unit economics, a growing installed base and a clear roadmap for the next few years.

For a long-term investor comfortable with pre-profit growth exposure, the appropriate stance is a monitored **HOLD**, keep the position if already in and track quarterly execution closely. The story remains intact, but the margin of safety has narrowed significantly since the IPO.

Infrastructure Sector

India's Infrastructure Story: Growth, Grit, and Ground Realities

From highways that redefine distance to digital infrastructure that powers a digital nation, infrastructure is shaping how India grows, competes, and connects with the world. Beneath the surface lies a complex mix of ambition, capital, and execution. For investors, decoding this evolving landscape could be key to identifying the next phase of long-term wealth creation

Amid ongoing geopolitical conflicts, a clear pattern often emerges. Nations increasingly target each other's infrastructure, as seen in the recent U.S.-Israel-Iran tensions, where energy facilities, transport networks, and critical civilian assets have come under attack. Why infrastructure? Because it represents far more than physical assets. It is the backbone of an economy, sustaining essential services such as power, transport, water, and communication, while also enabling industrial activity and trade.

Disrupting infrastructure does not just weaken immediate capabilities, it creates widespread economic dislocation, hampers recovery, and impacts civilian life at scale. At a time when global uncertainties continue to influence capital flows and economic momentum, India's infrastructure sector stands out as a critical anchor of stability and long-term growth. What makes this particularly significant is the consistent policy emphasis on capital expenditure, which has kept infrastructure at the forefront of the growth agenda.

This sustained focus has not only improved visibility of project pipelines but also reinforced confidence among investors and industry participants. As India seeks to strengthen its manufacturing base, enhance logistics efficiency, and deepen its integration with global supply chains, the quality and scale of infrastructure will play a decisive role. Against this backdrop, a closer analysis of the infrastructure space becomes essential to understand the emerging opportunities, evolving dynamics, and key risks shaping its trajectory.

The Expanding Ecosystem of Infrastructure

India's infrastructure sector is not a monolith. It is a complex and interconnected ecosystem that spans multiple segments,

each with its own dynamics, opportunities, and challenges. Broadly, the sector can be divided into transport infrastructure, energy infrastructure, urban infrastructure, and digital infrastructure. Transport infrastructure forms the largest

component. Roads and highways have been a major focus area, with construction activity accelerating over the past decade. The emphasis has shifted from building isolated stretches to developing economic corridors that improve freight efficiency and reduce travel time.

National highways now form a critical backbone for both passenger and goods movement. Railways represent another key segment undergoing transformation. Electrification, track doubling, station redevelopment, and the development of dedicated freight corridors are reshaping the sector. The government's push towards modernising rail and urban transport is evident in initiatives like Vande Bharat trains and metro expansion. Vande Bharat has enhanced intercity travel with improved speed, comfort, and efficiency, connecting key economic hubs.

Meanwhile, metro networks are expanding rapidly across cities, easing congestion and improving urban mobility. Airports and ports are also witnessing expansion. Rising passenger traffic, driven by increasing incomes and regional connectivity, has necessitated capacity additions in airports. Ports, on the other hand, are being modernised to handle larger vessels and

improve turnaround times, supporting trade growth. Energy infrastructure is equally critical. India's power sector has evolved from a capacity-deficit scenario to one where the focus is on reliability and sustainability.

Renewable energy is a key growth area, with solar and wind capacities expanding rapidly. Investments in transmission and distribution networks are ensuring that generated power reaches end users efficiently. Urban infrastructure addresses the needs of a rapidly urbanising population. Housing, water supply, sanitation, waste management, and urban transport systems are central to this segment. The challenge is not just to expand capacity but to improve the quality of life in cities.

Digital infrastructure is an emerging pillar. Data centres, fibre networks, and telecom infrastructure are essential for supporting the digital economy. With increasing data consumption and digital adoption, this segment is expected to see significant investments. In terms of scale, the infrastructure sector commands one of the largest shares of public investment in India. Growth in infrastructure drives demand in core industries, which in turn supports manufacturing and services. This virtuous cycle underscores its importance in the broader economic framework. Let us now examine how these segments have performed on an aggregate basis to better understand the overall performance of the sector.

Financials in Focus

To assess the infrastructure sector's performance more closely, we analysed the financial performance of the top 20 infrastructure companies by market capitalisation, which together account for a combined market value of around ₹9 lakh crore. This basket comprises companies operating across key segments such as roads, railways, airports, engineering, renewable energy, and urban infrastructure. At an aggregate level, the sector delivered a decent performance in Q3FY26, reporting revenue growth of around 10 per cent year-on-year.

A majority of companies posted double-digit growth in their topline, reflecting both scale-up in ongoing projects and faster conversion of orders into revenues. This growth was supported by strong execution momentum, a healthy order book position, and improved project clearances. Continued government spending on infrastructure and better working capital cycles also aided execution across segments. One of the standout performers during the quarter was Waaree Renewable Technologies, which reported an exceptional 136 per cent year-on-year growth in revenue.

The sharp rise was driven by robust traction in the renewable energy segment, particularly solar EPC projects, along with a low base in the corresponding period last year. Increasing capacity additions in solar energy and a strong pipeline of orders have significantly boosted its growth trajectory. On the profitability front, the sector's performance appeared weak at first glance, with aggregate net profit declining by around 47 per cent year-on-year. However, a closer look

Special Feature

Financial Performance of Leading Infrastructure Companies by Market Capitalization

Company Name	Latest Market Cap. (₹ Cr.)	Revenue (₹ Cr.)		Y-o-Y Growth (%)	Net Profit (₹ Cr.)		Y-o-Y Growth (%)

Ceigall India Ltd.	4,992.71	991.14	830.54	19.34	72.39	70.79	2.25

reveals that this decline was largely influenced by an outlier, IRB Infrastructure Developers, which reported a sharp 96 per cent fall in profit.

This was not reflective of core operational weakness but rather a high base effect, as the December 2024 quarter had included an exceptional gain of over ₹5,800 crore arising from the monetisation of three BOT assets. Adjusting for this one-off impact, the sector reported a modest profit growth of around 3-4 per cent year-on-year. The relatively muted growth in profitability can be attributed to factors such as rising input costs, especially in commodities like steel and cement, and some pressure on margins due to execution mix and competitive bidding in certain segments.

Additionally, interest costs for highly leveraged players continue to weigh on bottom lines, even as revenues expand. Looking ahead, the March quarter typically tends to be stronger for infrastructure companies, driven by accelerated execution as projects near completion and budgetary spending peaks towards the fiscal year-end. This seasonal uptick often results in improved revenue recognition and better operating leverage. Therefore, the sector remains well-positioned for sustained growth, despite near-term pressures on margins. Let us explore the factors that have driven the sector's growth and those that could potentially limit it.

Government's Big Bet on Capex

The government's continued emphasis on infrastructure development is reflected in the scale of budgetary allocations and long-term planning frameworks. Over the past few years,

capital expenditure has remained a key priority, with the Union Budget 2027 allocating ₹12.2 lakh crore, marking a sustained increase and accounting for a notable share of GDP. A cornerstone of this strategy is the National Infrastructure Pipeline (NIP), which envisages investments of over ₹111 lakh crore across sectors such as energy, roads, railways, and urban development.

The pipeline provides visibility into project execution and helps align investments across the public and private sectors. Complementing this is the PM Gati Shakti National Master Plan, an integrated approach to infrastructure planning that brings together multiple ministries on a digital platform. The objective is to enhance coordination, reduce project delays, and optimise logistics efficiency across the country. In the roads sector, the Bharatmala Pariyojana focuses on developing economic corridors, border roads, and coastal connectivity.

The programme has achieved significant progress, with over 21,700 km of roads constructed across the country as of December 2025. Similarly, the Sagarmala Programme focuses on port modernisation and connectivity. The Union Budget FY27 has earmarked a record ₹2.78 lakh crore for Indian Railways, underscoring the government's continued focus on modernisation and capacity expansion. Urban infrastructure is being supported through schemes such as the Smart Cities Mission and AMRUT (Atal Mission for Rejuvenation and Urban Transformation), with combined investments running into several lakh crores, targeting improved urban mobility, water supply, and sanitation.

In the energy space, the government has set an ambitious target of achieving 500 GW of non-fossil fuel capacity by 2030, supported by schemes for solar parks, green hydrogen, and transmission infrastructure.

Overall, the government's approach reflects a combination of higher allocations, integrated planning, and innovative financing mechanisms, providing a strong policy backbone for the sector.

Engines of Infrastructure Growth

- **Urbanisation Tailwind:** Urbanisation remains a key growth driver, with expanding cities driving demand for housing, transportation, and essential services. This sustained demand is creating broad-based opportunities across construction, real estate, and urban infrastructure segments.
- **Manufacturing and Logistics Push:** The focus on manufacturing growth and supply chain efficiency is accelerating investments in industrial corridors, logistics parks, and warehousing. Improved logistics infrastructure is reducing costs, enhancing efficiency, and strengthening India's global competitiveness.
- **Energy Transition Momentum:** The shift towards clean energy is unlocking new opportunities across renewable projects, grid upgrades, and electric mobility infrastructure. This transition is not only supporting sustainability goals but also driving long-term economic value creation.
- **Improved Funding Environment:** A stronger financial system has improved access to capital for infrastructure projects. Healthier bank balance sheets and supportive regulatory frameworks are enabling increased lending, thereby facilitating project execution and sectoral growth.
- **Rising Private Participation:** Private sector involvement is gaining momentum as corporate balance sheets strengthen. Increased investments across sectors such as renewable energy, airports, and logistics are complementing public capex and accelerating overall infrastructure development.
- **Technology-Led Efficiency:** Technological advancements are transforming infrastructure development. The use of advanced construction methods, digital tools, and data analytics is improving execution efficiency, reducing costs, and enhancing overall project productivity and profitability.

Roadblocks to Growth

Despite strong tailwinds, the infrastructure sector faces several challenges that need to be addressed for sustained growth. Land acquisition remains one of the most significant hurdles. Delays in acquiring land can stall projects and lead to cost escalations. While policy reforms have been introduced, implementation challenges persist. Regulatory and approval processes can also slow down execution. Multiple clearances across different levels of government often lead to delays. Streamlining these processes is essential for improving efficiency.

Execution risks are inherent in large infrastructure projects. Delays, cost overruns, and coordination issues can impact profitability. Funding remains a concern, especially for projects with long gestation periods. While new financing mechanisms are emerging, access to affordable long-term capital is still limited for certain segments. Environmental and social considerations are becoming increasingly important. Projects must balance development with sustainability, which can add complexity to planning and execution.

In the power sector, structural issues such as distribution losses and the financial health of utilities continue to pose challenges. Global factors such as commodity price volatility and geopolitical tensions can also impact the sector. Rising input costs and supply chain disruptions can affect project timelines and margins. Addressing these issues is critical for ensuring the viability of the sector.

The Way Forward

The outlook for India's infrastructure sector remains optimistic, supported by strong policy backing and structural demand drivers. The focus is gradually shifting from quantity to quality, with greater emphasis on efficiency, sustainability, and integration. Over the long-term, infrastructure is expected to play a central role in driving economic growth. Investments in transport, energy, and urban infrastructure will enhance productivity and support industrial development. Green infrastructure is likely to gain prominence. Renewable energy, energy-efficient buildings, and sustainable transport systems will be key areas of focus. This aligns with global trends and environmental commitments.

Digital infrastructure will also see significant growth. As the economy becomes more digital, investments in data centres, connectivity, and technology platforms will increase. Private sector participation is expected to deepen further. Improved regulatory frameworks and better risk sharing mechanisms will attract more investors. Asset monetisation and innovative financing models will continue to play a crucial role. For investors, the sector offers a wide range of opportunities. Companies with strong execution capabilities, healthy balance sheets, and diversified portfolios are well-positioned to benefit from the growth cycle. Ancillary industries such as cement, steel, and capital goods also stand to gain.

However, selectivity remains important. Not all segments will grow uniformly, and companies with weak fundamentals may struggle. A careful assessment of project pipelines, financial health, and management quality is essential. In conclusion, India's infrastructure sector is entering a phase of sustained expansion. The combination of policy support, rising demand, and improving execution creates a strong foundation for growth. While challenges remain, the overall trajectory is encouraging. As the country continues to invest in its future, infrastructure will remain at the heart of its economic transformation, shaping growth, enhancing competitiveness, and creating long-term value for stakeholders.

Key To

Databank
Updated InformationSubscribers can access the complete databank consisting of more than 3500 companies on our website www.dsij.in*** All financial data are taken on standalone basis**

- **Face Value:** Actual cost of the stock assigned by the security issuer and shown in the certificate.
- **Year:** First two digits shows Year while last two digits show month of calendar, eg. 1103 shows March 2011 results.
- **CEqt.:** Current paid up capital of the Co..
- **B.V:** Book Value Per Share: Equity capital plus reserves to the number of equity shares.
- **Sales:** Sales figures includes Excise duty.
- **NP: Net Profit :** Profit after tax but before investment allowance reserves.
- **EPS:** Earnings Per Share: Ratio of net profit less preference dividend to the number of equity shares (Annualised).
- **Div (Rs.):** Indicates the dividend per share.
- **D/E Ratio :** A measure of a Co.'s financial leverage calculated by dividing its total Debt by stockholders' equity.
- **RONW (%) :** Net Profit Divided by Total NetWorth.
- **Latest Quarter:** Indicates the recent quarterly filing of the Co. with the stock exchange.
- **YearToDate :** Latest Results (qtr, half or Nine) of the Co..
- **Sales Growth % :** Indicates the % growth of sales on year-on-year basis.
- **NP Growth % :** Indicates the % growth of Net profit (NP) on year-on-year basis.
- **Promoter Holding:** Indicates the % of equity holding with the promoters of the Co..
- **Promoters pledged shares :** Indicates the % of shares Pledged by promoters.

Institutional Holding: Indicates the % of equity holdings in the Co. held by Financial Institutions, Banks, Insurance companies, MF's and FIIs.

- **NoShold:** Indicates the Number of Share Holders of the Co.. (In Thousands)
- **Market Cap:** Current market price multiply no. of equity shares.
- **Price:** Current Market Price.
- **52 Week H/L:** High/Low range is taken for the market prices during the 52 week H/L.
- **Enterprise Value :** Current Market Cap Plus Debt Minus Cash and Bank Balances.
- **Trail.P/E Ratio:** Current market price to Trailing 12 months EPS.
- **Ticker:** BSE Scrip Code
- **U:** Unaudited.
- Companies with an (*) following their equity capital have increased their capital after the last financial year.
- Companies with an (*) Before the name of the Co., indicates new addition/ update/correction made during the fortnight.
- CB: Cum-Bonus XB: Ex-Bonus.
- EX: Ex-Rights wherever the price is indicated a Ex-bonus or Ex-rights, the corresponding figures for equity. Reserves, Book value and EPS are adjusted as per the bonus or the Rights ratio.

Notes: (A) The Profit figure reflects the performance of the current year. We have made the necessary adjustments for the prior year's entries in P/L A/c to reflect the true performance of the current year. Thus our figures may not be comparable with those published elsewhere unless they represent the same thing. (B) Source of information is Co. press releases and Annual Reports.

Tracking the Next Big Rotation

When the market turns choppy, the smartest money does not panic, it rotates. This piece explores how sector leadership emerges before the broader market recovers, and why relative strength, earnings momentum, sector breadth, and institutional accumulation matter more than market noise. Using recent examples from metals, CPSE, and energy, it shows how investors can identify the next winning cluster, separate real leadership from false rallies, and spot opportunity while others are still reacting to the correction

The Indian equity market has given a very lacklustre return in the last eighteen months. In the quiet, frustrating months of a market correction, most investors are looking to book profits or contain their losses and exit. But for the smart investors and institutions, these periods of pain are the most productive weeks of the year. They are not watching what is falling; they are hunting for what refuses to go down with market correction.

Chart of different indices in last six months

For example, in the above, over the one-year period from April 2025 to April 2026, Nifty sectoral indices displayed divergent performance. Nifty Metal emerged as the clear winner with an impressive 50.1 per cent return, followed by Nifty PSU Bank at 41.4 per cent and Nifty India Defence at 32.1 per cent. In

contrast, the broader market indices remained relatively subdued, with Nifty 50 delivering only 5.1 per cent and Nifty 500 returning 7.5 per cent. The year witnessed significant volatility, particularly in the Defence and Metal sectors, which showed strong rallies in the latter half of 2025 before correcting and recovering sharply in early 2026. Overall, thematic and PSU-linked indices significantly outperformed the broader market during this period.

Identifying the sector that will lead the next rally is not about predicting the future; it is about observing the present with clinical detachment. True market leaders, the stocks and sectors that do not just participate in a bull market but explode within it, often reveal themselves while the broader indices are still reeling. This is the art of sector rotation, a disciplined framework that separates the lucky from the consistently profitable.

The Lifecycle of Leadership: Understanding Market Character

To understand where the next rally may come from, you first need to accept that markets do not behave the same all the time. Research suggests that bull markets and bear markets need to be handled very differently. In a bull market, the goal is to stay with the strongest trend and make the most of it. In a bear market, the focus changes to protecting your capital and knowing when to move to safety.

Market leadership is rarely accidental. It is the result of a fundamental convergence: macroeconomic tailwinds meeting institutional demand, reflected through the lens of share price

Special Report

action. Historically, as noted by research spanning from 1926 to 2024, industry-based long-only trend-following strategies have significantly outperformed the broad market. This 'Timing Industry' approach achieved an average annual return of 18.2 per cent over nearly a century, compared to just 9.7 per cent for the general U.S. equity market. The secret sauce was not just picking 'good' companies; it was being in the right industry at the right time.

Sectors move in cycles that often mirror the broader economy. In the early stages of an economic recovery, cyclical sectors like Financials and Industrials typically reclaim leadership as growth outlooks strengthen. This shift is often catalysed by monetary easing or fiscal policy support that provides the fuel for margin expansion. For instance, in early 2026, we saw banking stocks drive momentum as monetary and fiscal support began to take hold globally.

The Blueprint: A Practical Framework for Spotting the Shift

To find the next leadership cluster, investors must move beyond simple price tracking and adopt a multi-layered scanning process. This is characterised by a significant price gain on volume higher than the previous few weeks' averages. This is the institutional green light.

Relative Strength: The Refusal to Fall — The most reliable indicator of future leadership is Relative Strength (RS). This is not a measure of whether a stock is up or down, but how it performs compared to a benchmark like the Nifty 500 or the Nifty 50.

During a market correction, the potential leaders are the sectors that hold steady or trend upward while the indices hit new lows. This divergence is the fingerprint of where the smart money is moving. When the market finally finds its footing and records a gain in the following days, the sectors with the highest RS lines, often those already making new price highs before the index, are the ones that will lead the charge. Research suggests that the top-performing sectors often reside in the top 10 per cent of the market in terms of RS before the major move begins.

The most compelling evidence of the RS principle at work emerges when comparing sector performance against the Nifty 50 and Nifty 500 benchmarks over the January-April 2026 period. While the broad markets contracted, Nifty 50 fell 7.4 per cent and Nifty 500 declined 6.1 per cent, three sector indices delivered positive returns, creating a stark divergence that is the hallmark of relative strength leadership. Nifty CPSE (10.9 per cent), Nifty Metal (10.2 per cent), and Nifty Energy (6.9 per cent) all advanced while the benchmarks retreated, demonstrating that institutional capital had already begun migrating into these segments before the correction intensified. This 17-18 percentage point spread between sector leaders and Nifty 50 is precisely the kind of divergence the RS framework identifies as a precursor to future market leadership. The benchmarks' weakness acted as a gravitational anchor on the broader market, yet select sectors managed to break free, a signal that wherever these indices were heading, smart money was already positioned.

The mid-March correction, when Nifty 50 plummeted from 25,178 to 22,819 (a 9.4 per cent decline over four weeks), provides a textbook case study in divergence. During this severe drawdown, Nifty CPSE held relatively steady, declining only 2.2 per cent from its February peak and bouncing back sharply by early April. Similarly, Nifty Metal, though volatile, posted a new high of 12,229.7 by April 9, after the benchmark's low. This pattern indicates that the sectors with the highest RS were also the ones most insulated from downside pressure, and they recovered fastest once volatility subsided. In contrast, Nifty 50 required until April 9 just to recapture 4.7 per cent of its losses, while the leading sectors were already trading at multi-week highs. Investors employing the RS framework would have correctly identified CPSE, Metal, and Energy as the top 10 per cent of the market, the very cohort research suggests leads the next impulse higher. For investors watching this data in real time, the message was unambiguous: when the market finds its footing, these three sectors were primed to spearhead the advance.

The Fundamental Catalyst: SMR and Guidance

Price action tells you when, but fundamentals tell you why. Emerging leaders typically display superior SMR ratings, Sales, Margins, and Return on Equity.

- **Earnings Momentum:** True leaders often show quarterly earnings growth of 25 per cent or more.
- **Margin Expansion:** Watch for sectors where profitability is increasing despite inflationary pressures, signalling pricing power.
- **Management Guidance:** A real trend is confirmed when multiple companies within a sector raise their full-year outlooks simultaneously. This broad-based optimism suggests a structural tailwind rather than a company-specific fluke.

To understand the above, we analysed the constituent of Nifty

Metal and compared it with the benchmark, Nifty 50.

Across the 15 companies in the Nifty Metal index, aggregate performance points to a steady improvement in both revenue and profitability. Total sales for the full year rose 4.82 per cent year on year to 12,17,670.73 from 11,61,673.06, reflecting moderate sector-level growth. Operating profit increased 4.62 per cent to 2,08,867.11 from 1,99,642.63, indicating that operating performance largely moved in line with revenue. Profit after tax, however, expanded at a much stronger pace, rising 16.40 per cent to 88,972.55 from 76,440.10, which suggests better earnings conversion at the net level.

The latest quarter presents an even stronger picture. Aggregate sales climbed 13.93 per cent to 3,07,975.36 from 2,70,310.83, while operating profit rose 20.18 per cent to 51,820.37 from 43,120.47. Profit after tax showed the sharpest improvement, surging 48.59 per cent to 23,160.80 from 15,587.29 in the corresponding quarter last year. This indicates that profitability momentum within the metal pack has strengthened meaningfully in recent months, well ahead of the full-year trend.

The contrast becomes even more striking when Nifty Metal is compared with the Nifty 50 excluding banks and finance companies. In the latest quarter, Nifty Metal delivered sales growth of 13.93 per cent, operating profit growth of 20.18 per cent, and PAT growth of 48.59 per cent, compared with 11.50 per cent, 6.98 per cent, and 5.44 per cent, respectively, for the Nifty 50. So, while the ex-financials benchmark reported stronger full-year topline growth, Nifty Metal stood out on net profit growth and demonstrated much stronger profitability momentum in the most recent quarter.

Sector Breadth and the Power of Clusters

A real leadership trend is never a solo act. If only one or two stocks in a sector are rising, it is a fluke. If the entire sector index is breaking out from a long consolidation base on heavy volume, it is a rotation.

Data mining studies on the Indian National Stock Exchange (NSE) highlight that re-ranking the 15 sectoral indices at regular intervals (monthly or quarterly) allows investors to identify high-performing clusters. By grouping indices into tiers based on historical returns, one can systematically move capital into the top-performing group. This cross-sectional momentum is what drives professional portfolios to triple-digit gains while the average investor breaks even.

Company	Relative Strength (RS)
Hindalco Industries Ltd.	94.05
Hindustan Copper Ltd.	98.06
National Aluminium Company Ltd.	99.38
Vedanta Ltd.	97.30

What is Relative Strength

Relative Strength Rating (Usually from 1 to 99)

- 99 means the stock has outperformed 99 per cent of stocks over the chosen period.
- Stocks with 80+, 85+, or 90+ RS Rating are generally considered strong leaders.

Why it matters

Importance to RS because the best winning stocks often show leadership before or during a breakout. Strong RS suggests:

- Institutional buying interest
- Market leadership
- Better probability of sustained momentum

The relative strength profile within Nifty Metal adds weight to the argument that this is not a one-stock story but a broader leadership phase. When multiple frontline names from the same sector are simultaneously posting very high RS readings, it usually signals institutional accumulation across the space rather than speculative buying in an isolated counter. In the current case, National Aluminium Company Ltd stands at 99.38, Hindustan Copper at 98.06, Vedanta at 97.30, and even Hindalco Industries, the lowest among this set, is still a strong 94.05. That means all four are comfortably in the market's leadership zone, with three of them above 97. Such clustering of high relative strength within one sector is exactly what sector rotation looks like in practice; leadership is broad, participation is deep, and money is moving into the group rather than into a lone outperformer. For an analyst, this kind of internal confirmation is far more reliable than a single stock breakout, because it suggests the metal pack is emerging as a genuine leadership cluster.

The Invisible Lead-Lag Effect in Indian Markets: The Text-Based Advantage

One of the most overlooked sources of alpha in the Indian equity markets lies not in official Nifty sector classifications, but in the economic peer relationships that exist beneath the surface. When a sophisticated investor reads the annual reports, quarterly concall transcripts, and regulatory filings of Indian companies, a far more nuanced picture emerges than what traditional indices like Nifty Metal, Nifty Energy, or Nifty Auto can reveal. Research into the product descriptions and supply-chain narratives that can be gleaned from Annual Reports filed with stock exchanges reveals economic peer links between companies that are not officially in the same Nifty sector but share critical business dependencies. For example, a specialty steel manufacturer supplying to renewable energy companies, an industrial pump manufacturer serving water infrastructure projects, and a bearing producer dependent on manufacturing capex all move as an invisible cluster, yet they are scattered across separate sector indices (steel, engineering, and industrials respectively). Shocks to one ripple through the

Special Report

others weeks or months before the broader market recognises the connection. The general investor, whether FII or domestic retail, remains largely inattentive to these links because they require reading beyond financial statements into the operational reality of Indian business. For the sophisticated investor willing to do this work, identifying leadership involves mapping these connected companies and watching for lead-lag momentum that often precedes broader sector rallies by 4-8 weeks. This is where the deepest alpha is hidden in the Indian equity market.

Lead-Lag Dynamics in Indian Supply Chains and Infrastructure Ecosystems

Consider the practical example embedded in India's infrastructure boom. When the Ministry of Roads announces accelerated capex spending on highway construction, the immediate beneficiary, the construction and engineering company, does not rally in isolation. Instead, the cascade begins weeks earlier, the cement manufacturers start outperforming, followed by steel producers, then equipment rental companies, then concrete mix suppliers, then labour-intensive construction services.

Yet because these companies reside in separate Nifty indices (Nifty Metal, Nifty Infrastructure, Nifty Industrials), most investors treat them as unrelated. A text-based analysis of quarterly results reveals the causal chain: the infrastructure company explicitly mentions increased cement and steel procurement in their guidance, cement companies disclose record order books from infrastructure projects, and equipment rental companies highlight utilisation rates at decade highs. These are the invisible threads that connect the momentum. During India's renewable energy transition, the sequence often unfolds as:

1. Specialty aluminium and steel manufacturers for solar structures outperform first
2. Equipment manufacturers for solar installations follow weeks later
3. Power generation companies surge as projects commission
4. Finally, the broader Nifty Energy index catches on

The lead-lag window represents a concentrated alpha opportunity for investors who have identified the economic peer links through careful document reading and supply-chain mapping.

Practical Application: Mapping the Alpha

For Indian equity investors seeking to exploit this edge:

1. **Read Annual Reports with Supply-Chain Intent:** When reviewing a company's Business Segment or Products and Services section, explicitly map where their customers and suppliers sit within the Nifty taxonomy. Note any mismatches, companies that should move together but reside in different indices.

2. **Track Government Order Announcements:** India's infrastructure spending and PSU capex cascades create traceable momentum chains. When the government announces a highway project or renewable energy target, map which companies will benefit in what sequence, this is your lead-lag roadmap. The other way round is also actually true. For example, last year shares of WPIL lost one third of its value in a span of a couple of weeks. The reason being weak financial results. The decline is heavily linked to a slowdown in project execution directly attributed to reduced fund disbursement and delays under the Jal Jeevan Mission. Other companies that were drawing major revenue from this mission also saw a similar fate.
3. **Monitor Rupee Levels and Concall Guidance:** Companies that are export-dependent signal shifts in competitiveness through concalls and guidance updates. Use this as a leading indicator for the domestic suppliers who feed these exporters.
4. **Build Peer Clusters, Not Sector Portfolios:** Rather than buying the Nifty Energy index, identify the 3-4 economically linked companies (equipment suppliers, commodity providers, infrastructure partners) that will move together during the next capex cycle. These invisible clusters often outperform broad sector plays by 300-500 basis points.

The lead-lag effect, the invisible momentum chain that connects economically linked companies across official sector boundaries, is where the deepest alpha hides in the Indian equity market. For investors willing to read beyond price charts and official classifications, this is the text-based edge that separates consistent alpha-generators from index-followers.

The Execution: Scanning for Success

How does an investor practically scan for these leaders? The process must be disciplined:

1. **Start with the Index:** Rank sectoral indices by 3-month and 6-month performance.
2. **Filter for Quality:** Create idea lists or buy watchlists to find stocks within those sectors that are showing better EPS growth and are also ranking higher in relative strength.
3. **Technical Monitor:** Look for cup-with-handle or flat base patterns according to technical chart. The best leaders breakout to new highs at the very beginning of a bull market.
4. **The Volume Signature:** Institutional buying leaves a trail. Look for volume spikes that are 50 per cent to 100 per cent above the average daily volume on breakout days.

Separating the Real Deal from the Dead Cat

Not every spike is a new rally. The primary risk for investors is the false positive, a temporary bounce in a declining sector. To distinguish between a dead cat bounce and a leadership change, look for these three factors:

- **The 50-Day Line:** A true leader will hold its 50-day moving average on its first pull-back after a breakout. If it slices through that line on heavy volume, the rally was a trap.
- **Sector Breadth:** In a real leadership move, even the second-tier stocks in the sector start performing well. If only the mega-cap name is rising while the rest of the industry is flat, it lacks the institutional depth required for a sustained rally.
- **Persistence of RS:** The RS line should be trending upward. If price is rising but the RS line is flat or falling, the stock is merely being dragged up by the market rather than leading it.

Practical Closing: What Investors Should Watch Now

To find the next leaders, keep a clean watchlist of sectors that

have outperformed the index over the last 3 to 6 months. Currently, as we navigate shifting economic conditions, watch for the first movers out of the next correction.

- **Watch the New Highs list:** True leaders often hit new 52-week highs while the broad index is still 10 per cent below its peak.
- **Monitor Institutional Accumulation:** Look for stocks where you can see the institutions are increasing the stake.
- **Keep an eye on the Macro:** If interest rates are peaking, watch sectors that are sensitive to capital costs, such as Industrials and high-growth Technology.

The goal is not to be the first person to guess the next trend, but the first person to recognise it once the evidence begins to mount. In the words of the great momentum investors, do not be afraid of new highs, they are often the starting line, not the finish.

Lessons Learnt From FY26: Winners, Losers And Key Market Trends

FY26 was not the year Indian markets expected. After two years of exceptional returns, investors walked into April 2025 with confidence and walked out of March 2026 with hard earned lessons. The Nifty 50 fell 4.33 per cent. India VIX nearly doubled. FII outflows crossed ₹3.32 lakh crore. But beneath the index level pain, some sectors surged, some collapsed and a handful of stocks delivered triple digit returns. This is the full account of what happened, why it happened and what every investor must carry forward

FY26 in Context: The Year Volatility Became the Story

Every financial year leaves behind a lesson. FY21 taught investors about the power of central bank liquidity and the speed of recovery from panic. FY24 reminded everyone that India's domestic growth story could drive markets even when global conditions were difficult. FY26 taught something different and arguably more fundamental, that markets built on optimism alone are fragile and that geopolitical forces, not economic ones, can define an entire year of equity returns. The Nifty 50 ended FY26 with a loss of 4.33 per cent. On the surface, this may not appear catastrophic. But context changes everything. In the prior year FY25, the index had returned 4.74 per cent. Before that, FY24 delivered a stunning 28.11 per cent. The cumulative expectation built over those years was one of persistent progress. FY26 broke that expectation not through a slow drift downward but through a year defined by violent swings, concentrated selling and months where liquidity itself seemed to disappear. To understand the full picture, the Nifty 50 number alone is insufficient. The broader market told a more complete story.

Index	April 1, 2025	March 31, 2026	FY26 Return
Nifty 50	22,514.65	21,964.53	-4.33%
Nifty Midcap 150	19,081.45	19,430.9	1.83%
Nifty Smallcap 250	15,068.10	14,288.45	-5.17%
Nifty 500	21,227.10	20,528.05	-3.29%

The mid-cap index was the quiet outlier, delivering a marginal positive return of 1.83 per cent for the full year, suggesting that the pain in FY26 was not uniformly distributed. Large caps and small caps bore the brunt. Mid caps, supported by selective domestic institutional buying and earnings resilience in certain pockets, managed to stay in positive territory. This divergence itself is a lesson, in difficult years, segment selection matters as much as market participation. But the most telling data point of FY26 was not any index return. It was the India VIX.

Metric	April 1, 2025	March 31, 2026	Change
India VIX	12.72	27.89	119.30%

The India VIX, the market's own measure of expected volatility, more than doubled during FY26, rising from 12.72 to 27.89, a jump of 119.30 per cent. A VIX of 12 to 14 reflects a calm, orderly market. A VIX approaching 28 reflects a market in genuine stress, one where participants are paying a significant premium to hedge risk. This single number captures what no index return fully communicates: FY26 was not just a down year. It was a year of deep, sustained uncertainty.

Historical Context: Where FY26 Sits in the Long Arc

Before examining what drove FY26, it is worth situating this year within the longer history of Nifty 50 annual returns. Markets have short memories. Investors who entered in FY22 or FY24 may have had unrealistic benchmarks for what a normal year looks like.

Financial Year	Nifty 50 Return	Character of the Year
FY17	18.86%	Demonetisation recovery, reform optimism
FY18	9.69%	GST transition, moderate growth
FY19	14.50%	Election year, stable macro
FY20	-26.30%	COVID-19 pandemic crash
FY21	71.14%	Liquidity driven V-shaped recovery
FY22	18.02%	Reopening trade, strong earnings
FY23	-0.44%	Global rate hike cycle, FII outflows
FY24	28.11%	Domestic growth story, capex super cycle
FY25	4.74%	Valuation fatigue, global uncertainty
FY26	-4.33%	Geopolitical shock, VIX surge, FII exodus
10-Year CAGR	11.21%	Long-term wealth creation intact

The 10-year CAGR of 11.21 per cent for the Nifty 50 is the most important number in this table. It reminds investors that FY26 is not a verdict on India's equity market. It is one chapter in a long story. The investor who has held a diversified large-cap portfolio for ten years has still earned over 11 per cent annually, a return that comfortably beats inflation and most fixed income alternatives over the same period.

What the historical data also reveals is that negative years are not anomalies. In the last ten financial years, the Nifty 50 has delivered negative returns in three of them, FY20, FY23 and now FY26. Roughly one in three years produces a loss. Investors who understand this going in are far better equipped to stay the course when it happens. Those who do not are the ones who exit at the bottom and re-enter at the top.

The Real Cost of Exiting in Bad Years

An investor who stayed invested through all ten financial years from FY17 to FY26 earned a CAGR of 11.21 per cent. An investor who exited during FY20's -26.30 per cent fall and re-entered a year later would have missed the FY21 rally of 71.14 per cent, the single best year in this dataset. An investor who exited in FY26 after the VIX crossed 25 would have locked in a loss and faced the question of when to re-enter, a question that markets rarely answer helpfully. The cost of exiting bad years is not just the loss avoided. It is the recovery missed. In equity markets, the best days and the worst days are almost always clustered together.

What Made FY26 Different: The Geopolitical Shift

In most difficult market years, the primary driver is economic. A rate hike cycle, a banking crisis, a growth slowdown, a currency collapse, these are the familiar culprits that investors have learned to monitor and analyse. FY26 was fundamentally different. The dominant force shaping markets throughout the year was not economic. It was geopolitical.

This distinction matters because geopolitical risk behaves differently from economic risk. Economic cycles are, to some degree, predictable. Central bank policy, inflation data, GDP growth estimates, these variables move slowly, are measured regularly and can be modelled with some confidence.

Cover Story

Geopolitical events are binary, sudden and non-linear. They cannot be modelled. They cannot be predicted with consistency. And they affect market sentiment in ways that are disproportionate to their actual economic impact.

The West Asia conflict involving escalating tensions between the United States, Israel and Iran was the dominant geopolitical factor of FY26. Its market impact operated through multiple channels simultaneously. Crude oil prices spiked, as they almost always do when West Asia tensions rise, given the region's central role in global energy supply. For India, an economy that imports approximately 85 per cent of its crude oil requirements, every sustained move higher in oil prices directly widens the current account deficit, depreciates the rupee and adds to inflationary pressure.

Beyond oil, the conflict created a broader risk-off environment in global capital markets. Foreign institutional investors, who manage global portfolios and must respond to changes in global risk appetite, began reducing exposure to emerging markets including India. This dynamic was not specific to any Indian company's earnings or any domestic policy decision. It was a global capital allocation shift driven entirely by events outside India's control.

The India-Pakistan tensions that surfaced during the year added another layer of domestic uncertainty. While the direct economic impact was limited, the psychological effect on market sentiment was significant, particularly among retail investors who had entered the market in large numbers during the post-pandemic bull run and had limited experience navigating periods of genuine geopolitical stress.

The Flow Story: FII Exodus and the DII Anchor

The most dramatic financial story of FY26 was not told by index levels. It was told by capital flows. The combination of geopolitical uncertainty, a stronger U.S. dollar and relatively attractive valuations in other markets drove foreign institutional investors to exit Indian equities at a pace and scale that had few historical precedents.

Month	FII Net Flow (₹ Cr.)	DII Net Flow (₹ Cr.)
April, 2025	2,735	28,228
May, 2025	11,773	67,642
June, 2025	7,489	72,674
July, 2025	-47,667	60,939
August, 2025	-46,903	94,829
September, 2025	-35,301	65,344
October, 2025	-2,347	52,794
November, 2025	-17,500	77,084
December, 2025	-34,350	79,620
January, 2026	-41,435	69,221
February, 2026	-6,641	38,423
March, 2026	-1,22,540	1,42,960
FY26 Total	-3,32,687	8,49,758

The numbers are striking on multiple levels. FII outflows for the full year crossed ₹3.32 lakh crore, one of the largest annual foreign selling figures in Indian market history. But the distribution of those outflows is equally telling. The first quarter of FY26, April, May and June, actually saw net FII buying.

Foreign investors entered the year with some optimism. It was from July onwards, as geopolitical tensions escalated and global risk appetite contracted, that the selling began in earnest and did not stop.

March 2026 deserves particular attention. In a single month, FIIs sold ₹1,22,540 crore of Indian equities, by far the largest monthly outflow of the year and one of the largest in absolute terms ever recorded. This concentrated selling in the final month of the financial year explains much of the index's underperformance and the spike in VIX toward year-end. When selling of this magnitude arrives in a compressed period, liquidity thins rapidly, bid-ask spreads widen and prices fall faster than fundamentals justify.

The counterweight to this extraordinary selling was equally extraordinary domestic institutional buying. DIIs pumped ₹8,49,758 crore over the year into domestic equity, more than double the FII outflows. This is the structural story of Indian equity markets in FY26, a market that would have declined far more sharply without the anchor provided by domestic mutual funds, insurance companies and pension funds, all funded by the steady monthly inflow of SIP contributions from retail investors.

This DII resilience is not accidental. It reflects a decade-long deepening of India's domestic investment culture, where SIP inflows have become largely immune to short-term market movements. The retail investor who continues a monthly SIP regardless of index levels is, collectively, providing the most powerful stabilising force Indian equity markets have ever had.

March 2026 - The Month That Defined the Year

FII outflows in March 2026 alone: ₹1,22,540 crore. DII inflows in March 2026: ₹1,42,960 crore, the single largest monthly DII buying on record. The fact that the market did not collapse in March despite this scale of foreign selling is a testament to the depth and resilience of domestic institutional participation. A decade ago, FII selling of this magnitude would have produced a market crisis. In FY26, domestic investors absorbed it not without pain, but without panic.

Sectoral Report Card: Where the Money Was Made and Lost

Index level returns are a blunt instrument. The real story of FY26 lies in the extraordinary divergence across sectors. While the Nifty 50 fell 4.33 per cent, individual sector indices ranged from 26.61 per cent to -23.59 per cent, a spread of over 50 percentage points between the best and worst performing sectors. In a year where the benchmark went nowhere, sector selection was everything.

Sector Index	FY26 Return
Nifty PSU Bank	26.61%
Nifty Metal	23.54%
Nifty Auto	12.24%
Nifty Commodities	8.59%
Nifty Pharma	5.44%
Nifty Healthcare	3.95%
Nifty Oil & Gas	2.82%
Nifty Bank	-1.76%
Nifty Financial Services	-5.37%
Nifty Private Bank	-5.59%
Nifty Consumer Durables	-7.01%
Nifty Media	-14.41%
Nifty FMCG	-15.06%
Nifty IT	-20.21%
Nifty Realty	-23.59%

PSU Banks Patience Finally Rewarded

+26.61
per cent

The best performing sector of FY26 was also one of the most unloved for most of the previous decade. Public sector banks spent years dealing with the aftermath of the NPA crisis, cleaning balance sheets, raising capital, rebuilding provisioning buffers and rebuilding credibility. For most of that period, investors stayed away, preferring the better governed, better managed private sector banks.

FY26 was the year that patience was rewarded. PSU banks entered the year with balance sheets that had been through a decade of restructuring. Gross NPA ratios had fallen to multi-year lows. Return on equity had recovered meaningfully. And critically, valuations remained deeply discounted relative to private sector peers. As private banks struggled with slowing credit growth and margin pressure, PSU banks, supported by government capex-driven credit demand and their lower valuation base, delivered the strongest sectoral returns of the year. The lesson is clear: turnaround stories take longer than investors expect but deliver when the underlying restructuring is genuine.

Metals The New Economy's Old Backbone

+23.54
per cent

For years, metals were the sector investors kept in the portfolio reluctantly, cyclical, commodity price dependent and seemingly at odds with the digital, asset-light future that markets were pricing. FY26 delivered a sharp correction to that narrative. The Nifty Metal index gained 23.54 per cent in a year when most of the market was falling.

The reason is structural and worth understanding deeply. Metals, copper, aluminium, steel, zinc and rare earth metals, are no longer just inputs for construction and manufacturing in the traditional sense. They are the physical foundation of every

major technology transition underway in the global economy. Every electric vehicle requires significantly more copper than a conventional car. Every solar panel requires aluminium and silver. Every data centre, the infrastructure backbone of artificial intelligence, is metal intensive in its construction and cooling systems. Every defence system, from missiles to ships to fighter jets, requires specialised metals and alloys.

The world is decarbonising, electrifying and rearming simultaneously. All three trends are deeply metal intensive. Supply, constrained by years of underinvestment and tightening environmental regulations, is not keeping pace with this demand. India's metal producers, Tata Steel, JSW Steel, Hindalco, NALCO, Hindustan Copper and Hindustan Zinc, sit at the intersection of this global structural shift. FY26 was the year the market began pricing this reality. The lesson: never dismiss old-economy businesses simply because their vocabulary is unfashionable.

FMCG Big Brands, Shrinking Relevance

-15.06
per cent

The Nifty FMCG index fell 15.06 per cent in FY26. The conventional explanation offered by most analysts is urban consumption slowdown, inflation pressure on household budgets and rural demand weakness. These factors are real, but they miss a more interesting and more structural story that is unfolding beneath the surface.

India's premium consumption market, the segment that covers personal care, health foods, specialty beverages, premium personal products and lifestyle categories, is actually growing strongly. This is not a story of consumers pulling back from quality. It is a story of consumers changing where they buy quality. And increasingly, they are not buying it from Hindustan Unilever, Nestle, Dabur or Britannia.

A new generation of Indian brands, focused, direct-to-consumer, digitally native and built around solving one specific consumer problem exceptionally well, is capturing the premium demand that the large FMCG conglomerates assumed was naturally theirs. A consumer buying premium skincare is increasingly choosing a homegrown brand they discovered on Instagram over a product from a multinational's portfolio. A consumer buying health snacks is choosing a startup focused entirely on that category over a large company's health sub-brand that competes alongside dozens of other products in the same catalogue.

The large FMCG companies are not standing still. They are acquiring startups, launching direct-to-consumer channels and investing in digital marketing. But the fundamental challenge is structural; a portfolio company trying to be everything to everyone is at a growing disadvantage against a focused brand trying to be everything to a specific consumer. The FY26 FMCG decline reflects the early market pricing of this

Cover Story

transition. The lesson is that competitive moats built on distribution and shelf space are being challenged by new moats built on community, specificity and digital reach.

IT

The AI Reckoning Arrives

The Nifty IT index fell 20.21 per cent in FY26, the second worst sectoral performance of the year. For a sector that had been the pride of Indian equity portfolios for two decades, this decline was both financially painful and philosophically important. It was not caused by Indian IT companies making operational mistakes. It was caused by something far more consequential, the rapid advancement of artificial intelligence is beginning to challenge the very model on which Indian IT's global competitiveness was built.

The traditional Indian IT model is built on labour arbitrage. Large workforces of engineers in India performing software development, testing, maintenance and business process work at a fraction of the cost of equivalent talent in the United States or Europe. This model generated extraordinary wealth for two decades. It built Infosys, TCS, Wipro and HCL Technologies into global giants. But it was always, at its core, a people-intensive model. Artificial intelligence is changing this equation with a speed that has surprised even the most forward-looking observers in the industry.

AI-powered coding tools can now generate, test and debug code at a fraction of the time and cost of human engineers. Large language models are automating significant portions of business process work. Global technology clients, the companies that outsource work to Indian IT firms, are beginning to question how much of that outsourced volume they actually need in a world where AI can perform it faster and cheaper.

The early evidence is already visible. Global technology companies have been conducting significant workforce reductions, much of which directly impacts the Indian IT supply chain. Hiring at Indian IT majors slowed sharply in FY26. Revenue growth guidance was cut. Discretionary technology spending by global clients, always the most sensitive indicator of IT demand, remained under pressure throughout the year.

The lesson from IT in FY26 is not that Indian IT companies are finished. Several of them are investing aggressively in AI capabilities, repositioning their service offerings and rebuilding their value proposition around higher-value work that AI cannot easily replicate. But the lesson is that no business model, however successful for however long, is immune to technological disruption. The companies that adapt fastest, building AI practices, acquiring capabilities and retraining workforces, will survive and potentially thrive. Those that protect the old model will find the market deeply unforgiving.

-20.21
per cent

Realty

When Tailwinds Become Headwinds

-23.59
per cent

The Nifty Realty index was the worst performing sector of FY26, declining 23.59 per cent. The real estate sector had enjoyed an extraordinary run in FY23 and FY24, driven by post-pandemic housing demand, low interest rates and a surge in premium housing launches. By the time FY26 began, valuations had stretched significantly and the sector was priced for continued perfection.

The correction in FY26 had multiple causes. The most direct was the slowdown in the IT sector and the associated layoffs and hiring freezes in technology companies. Indian real estate, particularly in cities like Bengaluru, Hyderabad and Pune, has a deep structural link to the IT sector. When IT hiring slows and job confidence weakens among technology professionals, residential real estate demand in these cities softens quickly. The IT sector's pain was transmitted directly into real estate sentiment.

Beyond the IT linkage, rising interest rates in the earlier part of the cycle had already made home loans more expensive, reducing affordability for first-time buyers. And the premium residential segment, which had been the strongest performer in the post-pandemic cycle, began showing signs of inventory build-up in several markets. The lesson from Realty in FY26 is one that the sector has taught investors multiple times before, real estate stocks are among the most cyclically sensitive in the market, and when the cycle turns, it turns sharply.

The Stock Scorecard: What Worked, What Did Not

Within the BSE 500 universe, FY26 produced a deeply asymmetric outcome. Of 500 companies, 193 delivered positive returns and 299 delivered negative returns. Twenty-six stocks gained more than 50 per cent. Eighty-one stocks fell more than 30 per cent. This was a market that rewarded the right bets generously and punished the wrong ones severely.

Top Performers FY26 (BSE 500)		
Company	FY26 Return	Theme
GE Vernova T&D India	133.55%	Power infrastructure, energy transition
Multi Commodity Exchange	124.92%	Commodity trading surge, volatility beneficiary
National Aluminium (NALCO)	119.96%	Metals re-rating, energy transition demand
Force Motors	114.52%	Defence, auto sector recovery
Gujarat Mineral Dev. Corp.	113.46%	Minerals, PSU re-rating
Hindustan Copper	105.40%	Copper demand, energy transition
Netweb Technologies	104.59%	AI infrastructure, data centre buildout
Hitachi Energy India	91.53%	Power T&D, grid modernisation
CCL Products	87.60%	Coffee export growth, global demand
Kirloskar Oil Engines	84.63%	Industrial recovery, defence adjacency

The winners of FY26 tell a coherent story. Power infrastructure, energy transition materials and defence adjacent businesses dominated the top performers. GE Vernova T&D India, a power transmission and distribution business, returned 133.55

per cent as India's grid modernisation and renewable energy integration drove demand for T&D equipment. Hitachi Energy India delivered 91.53 per cent for identical reasons. These are not speculative stocks. They are businesses solving a genuine, large-scale infrastructure problem that India must address over the next decade.

The metals theme was equally visible. NALCO at +119.96 per cent and Hindustan Copper at +105.40 per cent both reflect the structural re-rating of metals discussed in the sectoral section. Netweb Technologies, at +104.59 per cent, is perhaps the most instructive winner, a domestic data centre and AI infrastructure company that benefited directly from the global AI buildup while Indian IT services companies were being punished for their exposure to the same AI disruption. The distinction between building AI infrastructure and delivering traditional IT services was one of the most important investment lessons of FY26.

MCX at +124.92 per cent is a different kind of winner. As volatility surged and commodity markets became more active, India's primary commodity exchange saw trading volumes surge. MCX is a direct beneficiary of market volatility, a rare category of business that does better precisely when conditions are difficult for most others.

Top Losers FY26 (BSE 500)		
Company	FY26 Return	Theme
Embassy Developments	-65.94%	Real estate sector correction
Blue Jet Healthcare	-63.02%	Specialty pharma disappointment
Newgen Software	-59.62%	IT mid-cap, AI disruption fear
Ola Electric	-57.02%	EV execution concerns, competition
Vedant Fashions	-54.76%	Discretionary consumption slowdown
Inox Wind	-53.03%	Renewable energy execution delays
Reliance Power	-52.63%	Debt concerns, governance questions
CE Info Systems	-52.58%	Tech valuation de-rating
Transformers & Rectifiers	-52.56%	Capex cycle concerns
KPIT Technologies	-51.45%	Auto-tech, IT sector de-rating

The losers of FY26 are an equally coherent group, though their lessons are harder to absorb because many of these companies were among the most celebrated growth stories of FY23 and FY24. Ola Electric fell 57.02 per cent as execution challenges mounted and competition in the electric two-wheeler market intensified. The business remains early stage in a market that is still developing the infrastructure and consumer habits to support mass EV adoption. FY26 was a reminder that narrative and execution are different things, and markets eventually price the latter.

KPIT Technologies, down 51.45 per cent, represents the IT sector's broader de-rating playing out at the mid-cap level with amplified intensity. Newgen Software at -59.62 per cent tells a similar story. Mid-cap IT companies, which had been valued at premium multiples during the growth phase, saw those multiples compressed sharply as the sector outlook deteriorated. Inox Wind at -53.03 per cent reflects a different lesson, that even businesses operating in structurally growing sectors can disappoint when execution timelines slip and working capital concerns emerge.

The Pattern Across Winners and Losers in FY26

Winners shared three characteristics: exposure to genuine structural demand (power infrastructure, metals, AI hardware), reasonable or undemanding valuations at the start of FY26, and business models with visible near-term cash flow. Losers shared a different three characteristics: high valuations built on growth expectations that got revised downward, business models facing structural headwinds (traditional IT, legacy FMCG, narrative-driven EV stories), and limited near-term earnings visibility.

The market in FY26 was not irrational. It was brutally rational. It repriced hope and rewarded reality. The investor lesson, in volatile years, the question to ask about every holding is not 'is this a good story?' but 'is this a good business at this price with earnings I can see?'

Key Lessons for Every Investor Carrying FY26 Forward

Financial years pass. Lessons should not. FY26 was rich in instruction for portfolio construction, risk management, sector analysis, and behavioural discipline. Here are the lessons that deserve to be carried into every investment decision going forward.

Lesson 1

Geopolitical Risk Cannot Be Modelled, Only Respected

Every difficult year has its dominant cause. FY26's dominant cause was geopolitical, and this matters because geopolitical risk requires a fundamentally different response than economic risk. Investors who tried to model oil price scenarios or predict conflict timelines found the exercise futile. What worked was not prediction but preparation: portfolios with liquidity, diversification, and the absence of leverage survived the volatility without being forced into panic selling. Geopolitical uncertainty will remain elevated beyond FY26. The lesson is to build portfolios that can survive surprises rather than portfolios that require the absence of them.

Lesson 2

Domestic Investors Are Now the Market's Foundation

₹8,49,758 crore of DII inflows against ₹3,32,687 crore of FII outflows. The numbers speak definitively. The era in which FII flows determined the direction of Indian equity markets is behind us. Domestic institutional investors funded by the SIPs of millions of retail investors have become the primary price-setting force in Indian equities. This has profound implications for how investors should interpret market movements. FII selling no longer means what it once meant. A market that can absorb ₹1,22,540 crore of FII selling in a single month, as it did

Cover Story

in March 2026, without a systemic collapse, is a structurally different market than the one that existed a decade ago.

Lesson 3

Sector Selection Delivered Alpha That Index Investing Could Not

In a year where the benchmark fell 4.33 per cent, PSU banks gained 26.61 per cent and metals gained 23.54 per cent. A 50 percentage point spread between the best and worst sectors is not a marginal difference. It is the entire investment outcome. FY26 was a year that rewarded investors who understood where they were invested, not just that they were invested. The lesson is not to abandon index investing, the 10-year CAGR of 11.21 per cent makes a compelling case for it. The lesson is that active sector awareness, even within a largely passive portfolio, creates meaningful outcome differences in challenging years.

Lesson 4

Old Economy Is the New Economy

Metals up 23.54 per cent. Power infrastructure companies delivering triple-digit returns. PSU banks leading the market. These are not the sectors that filled the cover pages of financial magazines during the 2021 bull run. They are businesses with tangible assets, physical products, and cash flows that have been generating value for decades. FY26 was a year in which markets rediscovered the fundamental truth that the physical world still runs on physical things, steel, copper, electricity, fuel. The energy transition and AI revolution are not making these businesses obsolete. They are making them more essential. Portfolios that had written off old-economy businesses entirely underperformed significantly in FY26.

Lesson 5

Narrative Without Earnings Is a Ticking Clock

Ola Electric. Inox Wind. Several high-multiple IT mid-caps. What these very different businesses shared in FY26 was a valuation built substantially on future expectations rather than current earnings. When those expectations were revised by execution delays, sector headwinds, or simply the passage of time without the promised inflection arriving, the de-rating was severe and fast. This is not a new lesson. It is the oldest lesson in equity investing, rediscovered in each cycle. But it bears repeating because each cycle produces a fresh generation of stocks where narrative gets substantially ahead of fundamentals. In FY26, the market collected that debt with characteristic ruthlessness.

Lesson 6

Stay the Course, The CAGR Belongs to the Patient

The Nifty 50's 10-year CAGR of 11.21 per cent belongs entirely to investors who did not exit in FY20 (-26.30 per cent), FY23 (-0.44 per cent), or FY26 (-4.33 per cent). It does not belong to

the investor who was in the market only for the good years. The mathematics of compounding are unforgiving in this regard: missing the recovery after a bad year erases the benefit of avoiding the bad year itself. FY26 was a test of patience. The investor who passed that test by staying invested, continuing SIPs, avoiding panic sales, and maintaining long-term conviction will collect the returns that FY27 and beyond are likely to deliver.

Conclusion: FY26 Was a Teacher, Not a Verdict

Financial markets have a way of humbling the overconfident and rewarding the disciplined. FY26 did both simultaneously. Investors who entered the year with concentrated bets on high-multiple narratives, no liquidity buffer, and an assumption that the bull market of FY24 would simply continue learned expensive lessons. Investors who maintained diversification, understood their sector exposures, and continued systematic investing through the volatility added to positions that history suggests will be rewarding in hindsight.

The year produced a -4.33 per cent return for the Nifty 50 but a 119 per cent surge in the VIX, a historic FII exodus, the emergence of metals and PSU banks as structural winners, the beginning of a genuine reckoning for IT services in the age of AI, and a clear signal that India's FMCG market is being reshaped by new-age brands that the old giants have not yet figured out how to compete with.

None of these trends are finished. The AI disruption in IT is in its early chapters. The metal super cycle driven by energy transition has years of runway. The new-age brand challenge to established FMCG is accelerating, not slowing. PSU bank re-rating has further to go as earnings quality improves. The lessons of FY26 are not backward-looking. They are a map for understanding where the next cycle of value creation and destruction is already beginning.

India's long-term equity story remains intact. The 10-year CAGR of 11.21 per cent is not an accident. It is the result of economic growth, corporate earnings expansion, and a deepening domestic investment culture that is now strong enough to absorb the kind of foreign selling that would have destabilised markets a decade ago. FY26 tested that strength. The market passed the test, not without scars, but without structural damage.

For investors, the most important takeaway is not which sector to buy or sell as FY27 begins. It is something simpler and more durable: markets reward investors who understand what they own, stay invested through difficulty, and have the patience to let compounding do what compounding was always designed to do. FY26 was one year. The journey is decades long. And on that journey, the lessons learnt in difficult years are invariably more valuable than the complacency earned in easy ones.

CATCH IT EARLY

OneSource Specialty Pharma
BSE Code: 544292
CMP: ₹1,543.30

OneSource Specialty Pharma is shaping up as a one-stop specialty pharma CDMO, with capabilities across DDC, biologics, sterile injectables and oral technologies such as soft gelatin capsules. What is catching the market's eye is the scale-up story.

Management has guided for USD 400 million revenue and USD 160 million EBITDA by FY28, and the runway seems to be built on larger batch sizes, better utilisation and improved cost competitiveness for partners. The company is also working closely with clients to wrap up scale-up activities and secure regulatory approvals across multiple markets. That is crucial, because FY27 is expected to mark the start of meaningful CSA revenues, with H2 likely to be much stronger than H1. If the Q4FY27 exit run rate starts mirroring FY28 guidance, the stock could begin pricing in that next leg early—so, aboard the flight before it takes off.

BUILT TO BREAK OUT

Kajaria Ceramics
BSE Code: 500233
CMP: ₹1,122.25

Kajaria Ceramics remains the heavyweight in India's tiles space, backed by a three-decade track record, a trusted brand

and a distribution network of over 2,000 dealers across the country. North India continues to be its strongest market, giving the company a solid base in a key consumption belt. What is adding spice now is the technical setup. Market watchers say the stock is emerging as a potential dark horse for the coming fortnight, with price structure turning favourable for an upward move. Volumes since the start of the month suggest steady accumulation. In a market where quiet charts often turn loud without warning, Kajaria may be one to keep on the radar.

A HIGH-ENERGY PORTFOLIO PICK

Sarda Energy & Minerals
BSE Code: 504614
CMP: ₹579.45

Sarda Energy & Minerals is quietly shaping up as a proxy on India's infrastructure push. What makes the story interesting is its diversified engine—

high-margin power generation, steel and ferro alloys—which helps soften single-sector risk while keeping it plugged into the capex cycle. The bullish case rests on operating leverage. As captive power capacity expands and ferro alloy output rises, margins could get stronger, especially with demand support coming from steel-hungry sectors such as construction and automobiles. In a market that is constantly scouting for businesses with both scale and integration, Sarda seems to tick a few important boxes. Brokerages are turning constructive, and the optimism is not without reason. This is one of those industrial stories where capacity, demand and margin triggers may start working together.

THE STREET SMELLS A BLOCKBUSTER

Prestige Estates Projects
BSE Code: 533274
CMP: ₹1,304.30

Prestige Estates ended FY26 with the kind of number that makes the market sit up—record pre-sales of ₹30,024 crore, up 76 per cent YoY. Even Q4FY26 held its own, with ₹7,697 crore of pre-sales, up 10 per cent YoY. The strength was

broad-based, with Bengaluru, NCR, Mumbai, Hyderabad and Chennai all doing the heavy lifting. More importantly, this is the first time the group has crossed the ₹30,000 crore annual pre-sales mark, underlining the scale it now commands across key property markets. Adding fresh fuel, Prestige has also marked its entry into a ₹9,000 crore residential opportunity in Versova, Mumbai. Street murmurs now suggest the next trigger could be a bumper Q4FY26 and full-year earnings print.

Why International Funds Are No Longer Optional

Diversification beyond borders is no longer just a fashionable idea for Indian investors. It is increasingly becoming a sensible risk-management strategy. When geopolitical tensions in West Asia pushed crude oil prices higher, India felt the impact almost immediately because the country imports nearly 85 per cent of its oil requirement. A sharp rise in crude does not remain confined to the energy basket alone. It quickly feeds into inflation, shapes interest rate expectations, pressures corporate margins, and eventually weighs on equity valuations.

This is precisely why Indian investors need to think beyond a purely domestic approach. Over the last few quarters, global markets have also been driven by themes such as artificial intelligence. While these trends have created significant opportunities overseas, India has relatively few listed companies with meaningful exposure to such themes. That has been one of the factors behind the relative underperformance of Indian equities during certain phases.

Against this backdrop, international mutual funds merit closer attention. They allow investors to participate in different currencies, sectors, and economic cycles, thereby reducing dependence on a single-country macro story. The recent return profile of international equity funds also strengthens the argument. The category has delivered 7.36 per cent, making it one of the best-performing segments within the equity fund space. In fact, among equity fund categories, only a handful have delivered positive returns, and international funds have stood out among them.

In our special report in this issue, we have examined in detail why international funds can work in a portfolio, how they are taxed, and the different types of options available within the category.

For Indian retail investors, the message is simple, keep the core portfolio domestic, but consider allocating 10 per cent to 20 per cent of the equity portion to overseas markets such as the U.S., Europe, and other developed or emerging economies. International funds are best suited for long-term goals, ideally those that are at least five years away.

Chasing Small-Caps: Smart Move Now?

With mutual fund inflows in March hitting a multi-month high, including strong traction in small-cap funds, should I consider starting investments in small-caps given the improving sentiment?

- Kanishka Agarwal

Editor Responds : Strong inflows into small-cap funds in March do indicate improving investor sentiment, but timing alone should not drive investment decisions. Small-caps tend to be more volatile and can correct sharply after phases of strong inflows. Instead of chasing momentum, assess your risk appetite, investment horizon, and portfolio allocation. If you have a long-term horizon and can tolerate volatility, small-caps can offer meaningful growth potential.

A staggered approach, such as SIPs, is often more prudent than lump-sum investing in this segment. Also, ensure diversification across market caps to balance risk. While sentiment has improved, valuations in pockets may still be stretched, so disciplined investing remains key rather than reacting solely to short-term inflow trends.

International Mutual Funds: When the Rupee Falls, Your Returns Rise

Rethinking Expected Mutual Fund Returns

Investors often build mutual fund expectations around a single return number. This story explains why that can mislead. By looking at rolling returns across large-cap, flexi-cap, mid-cap and small-cap funds, it shows that expected returns are not promises but ranges shaped by risk, volatility and investor temperament

An Indian investor looking at their mutual fund portfolio today is staring at a difficult truth. As of April 2026, on a year to date basis, all major categories are in the red, showing that the recent market phase has been challenging across the board. Large-cap funds are down 11.04 per cent, flexi-cap funds have declined 10.13 per cent, mid-cap funds are lower by 9.37 per cent, and small-cap funds have slipped 9.56 per cent. The five year picture tells a very different story. Large-cap and flexi-cap funds have delivered 11.15 per cent and 11.75 per cent returns respectively, while mid-cap and small-cap funds have stood out with much stronger returns of 16.40 per cent and 16.92 per cent respectively.

Category	YTD Return	5-Year Return
Large-cap	-11.04%	11.15%
Flexi-cap	-10.13%	11.75%
Mid-cap	-9.37%	16.40%
Small-cap	-9.56%	16.92%

These are not the numbers that populate SIP calculators or fuel wealth creation fantasies. They are, for many investors, a rude awakening. But here is what makes this moment particularly

instructive. Rewind to September 2024, just 18 months ago, and the picture looked entirely different. Five year returns ending September 2024 stood at 18.3 per cent for large-cap funds, 20.6 per cent for flexi-cap funds, 27.9 per cent for mid-cap funds, and a striking 32.4 per cent for small-cap funds. At that point, returns were running far above the long term averages many investors had come to treat as normal, especially in the broader market categories. The optimism was easy to understand. Performance was strong, sentiment was buoyant, and the belief that higher returns would continue seemed almost natural. But that is precisely what makes the present phase so important. In just 18 months, those elevated trailing return figures have cooled sharply, reminding investors that exceptionally strong return periods often sow the seeds for future moderation. What looks normal at the peak of optimism can, in hindsight, turn out to be an unsustainable stretch.

This is not a story about a crash. It is a story about expectations. Because for all the attention paid to trailing returns, the truth is that investor experiences are defined by ranges, not averages. And the range of outcomes across market history, the good, the bad, and the painfully ordinary, is the only honest guide to what you should expect from your mutual fund investments.

The Comfort of a Single Number

Most investors anchor their expectations on a handful of simple, powerful ideas: 'Equity funds deliver 12 to 15 per cent over time,' 'Small-caps outperform in the long run,' 'SIP karte raho, wealth banegi.'

In September 2024, those beliefs felt validated. Small-cap funds were showing 5 year returns well above 30 per cent. Flexi-cap funds were cruising. The market was confirming the narrative.

Today, with YTD returns deep in the red and 5 year numbers hovering near or below long term medians, the same investors are questioning everything. Did they make a mistake? Is equity still worth it?

The problem is not the market. The problem is the expectation that a good trailing return is a promise of more to come.

The Snapshot Problem

A trailing return, the number you see on every fund fact sheet, is a snapshot. It tells you the annualised performance between one fixed starting point and now.

In September 2024, that snapshot was flattering. The starting point was the 2019, where markets were not at the best of their performance and it was soon followed by the Covid-19 fall. The ending point was a market peak. The result was a 5 year return that looked heroic.

Today, the same 5 year window now includes the market correction of late 2024 and early 2026. The snapshot is less flattering. The fund is the same. The manager is the same. Only the start and end dates have changed.

Every bull market creates a familiar illusion. Categories that are leading the charge begin to look like the obvious choice. Investors see recent returns, compare charts, and slowly start believing that the best performing category of the moment will continue to deliver the same magic in the years ahead. That is where expectations often go wrong.

In mutual funds, returns do not arrive in a straight line. They arrive in phases. One category may dominate when liquidity is abundant and risk appetite is high. Another may hold up better when markets turn uncertain. Looking only at trailing returns can therefore create a distorted picture. It may tell us what happened recently, but not what an investor should realistically expect over time.

That is Why Rolling Returns Matter

By studying 5 year rolling returns across Large-cap, Mid-cap, Small-cap and Flexi-cap funds, a clearer picture emerges. Not just of returns, but of temperament. Not just of upside, but of variability. And that distinction is crucial, because investors do not merely invest in categories. They invest in experiences. Some journeys are smoother. Some are more rewarding. Some

are both exciting and exhausting.

Rolling returns solve that problem by looking at multiple five-year periods. One can consider other rolling periods too; however, we selected five years as a reasonable investment horizon for equity investors, rather than relying on a single fixed start and end point. In effect, they answer a more useful question: across market cycles, what kind of return range has a category typically delivered?

That is a far more practical lens for investors. It shifts the conversation from hope to probability.

The data makes one thing very clear, the right category is not simply the one that offers the highest return. It is the one whose return profile matches the investor's patience, risk appetite and ability to stay invested through discomfort.

Large-Cap Funds: The Discipline of Stability

Large-cap funds rarely win the popularity contest in euphoric markets. They do not usually offer the sharpest upside, nor do they generate the kind of cocktail party bragging rights that high flying Small-cap stories can create. Yet, when viewed through the lens of rolling returns, they reveal a very important strength, consistency.

The median 5 year rolling return for large-cap funds stood at around 11.4 per cent, while the 10th to 90th percentile band ranged from 5.6 per cent to 17.5 per cent. The probability of beating 15 per cent over a 5 year period was relatively modest at 20.8 per cent.

That may seem underwhelming at first glance. But the real message is different. Large-cap funds have historically offered a narrower range of outcomes. In other words, investors have usually had a more predictable experience. The return ceiling may be lower than in riskier categories, but so is the uncertainty around it.

For the investor, this matters more than it appears. A category that compounds at a moderate pace, but allows the investor to remain calm and committed, can be more useful than a higher return category that constantly tempts them to exit at the wrong time.

Large-cap funds are not built for drama. They are built for durability.

Flexi-cap Funds: The Middle Path That Many Investors Overlook

Flexi-cap funds often sit in a curious position. They are neither marketed as defensive in the way large-caps are, nor celebrated for explosive upside in the way mid and small-caps often are. Yet their rolling return profile shows why they deserve serious attention.

The median 5 year rolling return for flexi-cap funds came in at around 13.6 per cent, with a 10th to 90th percentile range of 7.1 per cent to 19.5 per cent. The probability of beating 15 per cent was 35.5 per cent.

This places flexi-caps in a very interesting zone. They have historically delivered better central outcomes than large-cap funds, while avoiding the full swing in outcomes seen in mid and small-cap categories. That balance is their core strength.

Flexi-cap funds are not just a category. They are a philosophy of adaptability. Because managers can move across market capitalisations, they have more room to respond to changing opportunities. For investors, that often translates into a return profile that feels more rounded.

In a market where investors are constantly pulled between the comfort of stability and the temptation of higher returns, flexi-caps quietly offer a compromise that is both sensible and effective.

Mid-cap Funds: Where Ambition Meets Volatility

If large-caps are about discipline and flexi-caps about balance, mid-caps are about ambition.

The median 5 year rolling return for mid-cap funds stood at around 15.3 per cent, noticeably higher than both large-cap and flexi-cap categories. Their 10th to 90th percentile range stretched from 7.4 per cent to 26.4 per cent, while the probability of beating 15 per cent was 54.0 per cent.

These numbers tell a compelling story. Mid-cap funds have historically offered a meaningful step up in return potential. But they also demand a broader acceptance of uncertainty. The wider range of outcomes means investors need to be prepared for longer stretches of uneven performance.

This is the part often ignored in the sales pitch. Investors are usually attracted to the superior return record, but less prepared for the emotional cost of holding through volatility. Mid-caps can create wealth impressively, but they do not do so with the same calm rhythm as large-caps.

An investor entering the category with the right expectations can benefit. An investor entering with only return in mind may find the ride harder than expected.

Mid-cap funds reward conviction, but they test it too.

Small-cap Funds: The Seduction of High Returns

No category captures investor imagination quite like small-caps. The promise is obvious. Higher growth, sharper re-rating potential, and in the right phase, eye catching wealth creation.

The rolling return data supports that appeal, but with an important caveat.

Small-cap funds delivered the highest median 5 year rolling return at around 17.2 per cent. Their 10th to 90th percentile range, however, was the widest of all, stretching from 7.3 per cent to 31.1 per cent. The probability of beating 15 per cent stood at 61.4 per cent.

This is the purest expression of the risk-return trade off. The upside is strong. The probability of high returns is meaningfully better than in other categories. But so is the spread of possible outcomes. Small-cap investing is not merely about earning more. It is about tolerating more uncertainty along the way.

This is where many investors confuse potential with inevitability. They look at the median return and assume the journey will naturally lead there. In reality, the path can be far more volatile, both in price behaviour and in investor emotion. Small-cap funds can be powerful creators of long term wealth. But they demand patience, resilience and a strong stomach. Without those, even good return potential can go unrealised because the investor exits too early.

Return Is Only Half the Story

Based on the 5 year rolling return data, the risk profile clearly rises as one moves from large-cap and flexi-cap funds towards mid-cap and then small-cap funds. Large-cap funds showed the lowest variability in outcomes, with a standard deviation of about 4.6 per cent, which suggests that return expectations in this category have historically been relatively more stable. Flexi-cap funds were not far behind, with standard deviation of roughly 4.9 per cent, but what makes them stand out is that they delivered better average rolling returns than large-caps while still keeping risk under control. In fact, on a risk adjusted basis, flexi-cap funds came out best among the categories studied, as their return earned per unit of risk was the most efficient. This makes them an interesting middle path for investors looking for growth without taking the full volatility of mid and small-caps.

The picture changes meaningfully once we move into mid-cap and small-cap funds. Mid-caps generated stronger average rolling returns, but this came with visibly higher volatility, as reflected in a standard deviation of about 7.1 per cent. Small-caps were the most aggressive category in the study. They delivered the highest average rolling return, close to 18 per cent, but also carried the sharpest swings, with standard deviation of about 8.7 per cent. Their worst 5 year rolling return was also weaker than flexi-cap funds, and the range of outcomes was much wider. In simple terms, the return potential improves as one climbs the risk ladder from large-cap to small-cap, but so does uncertainty. That is the core trade off investors need to appreciate, categories like small-cap can create wealth faster, but they demand a much stronger ability to handle volatility and stay invested through uncomfortable phases.

Investor Dashboard: What Return Should You Realistically Expect

Based on 5 year rolling returns across Large-Cap, Mid-Cap, Small-Cap and Flexi-Cap funds. This view helps investors set return expectations by showing realistic ranges, consistency and target hit rates.

Section 1 - Realistic Return Band

What return should you realistically expect?

- Categories: Flexi-cap, Small-cap, Mid-cap, Large-cap
- X-axis: Annualised 5 year rolling return
- Values: 15%, 20%, 25%, 30%
- Caption: Read this as the likely range of annualised returns an investor might have experienced over different 5 year holding periods. The dot marks the median outcome. The line shows the 10th to 90th percentile range.

Section 2 - Return Variability

How widely can outcomes vary?

- Y-axis: Rolling return
- Values: 35%, 30%, 25%, 20%, 15%, 10%, 5%, 0.0%
- X-axis: Fund category
- Categories: Large-cap, Mid-cap, Small-cap, Flexi-cap

Section 3 - Chances Of Clearing Return Targets

How often did each category clear common return targets?

- Y-axis: (percentages from 0% to 80%)
- X-axis: Fund category
- Categories: Large-cap, Mid-cap, Small-cap, Flexi-cap
- Target returns: >10%, >12%, >15%, >18%
- Caption: This view answers a very practical question: how often did each category be a common return thresholds such as 10%, 12%, 15% and 18%?

Category snapshot cards:

Large-cap

P10 to P90: 5.6% to 17.5%
Median: 11.4%
Chance of beating 15%: 20.8%

Mid-cap

P10 to P90: 7.4% to 26.4%
Median: 15.3%
Chance of beating 15%: 54.0%

Small-cap

P10 to P90: 7.3% to 31.1%
Median: 17.2%
Chance of beating 15%: 61.4%

Flexi-cap

P10 to P90: 7.1% to 19.5%
Median: 13.6%
Chance of beating 15%: 35.5%

What this means for investors

- Large-cap looks the steadiest, with a median 5 year rolling return of about 11.4%.
- Flexi-cap sits in the middle, with a median near 13.6% and a more balanced spread.
- Mid-cap raises expected returns to about 15.3%, but the outcome range becomes wider.
- Small-cap offers the highest median at about 17.2%, with the broadest return dispersion.

Source: Analysis uses historical 5 year rolling return (Starting Jan-14 to Dec-19, first period) observations and is meant for expectation setting, not prediction.

Category-level return and risk across 5-year rolling returns

Metric	Large-Cap	Mid-Cap	Small-Cap	Flexi-Cap	Interpretation
Observations	1,782	1,782	1,782	1,782	No. of rolling windows
Average 5Y rolling return	11.42%	16.04%	17.99%	13.19%	Higher means better typical outcome
Std. Dev. of rolling return	4.55%	7.07%	8.72%	4.87%	Lower means more stable rolling outcomes
Coefficient of variation	0.40x	0.44x	0.48x	0.37x	Risk per unit of return; lower is better
Minimum 5Y rolling return	-2.85%	-1.00%	-1.83%	-1.67%	Worst observed 5Y outcome
5th percentile return	3.26%	4.17%	3.40%	4.43%	Bad-case outcome excluding extreme tail
Median 5Y rolling return	11.42%	15.33%	17.18%	13.62%	Middle observed outcome
95th percentile return	18.95%	28.31%	33.11%	21.24%	Strong-case outcome excluding extreme tail
Maximum 5Y rolling return	24.16%	32.35%	37.69%	26.27%	Best observed 5Y outcome
Range (Max. - Min.)	27.01%	33.35%	39.52%	27.94%	Spread between best and worst outcomes
Negative windows %	1.12%	0.39%	1.23%	0.39%	Share of windows with negative 5Y CAGR

What this analysis highlights is that investors often focus on the wrong number.

They ask which category delivered the highest return. A better question is, what kind of return journey comes attached to that number?

A category with a high median return but wide dispersion may not be suitable for every investor. Equally, a category with a lower return profile but narrower outcomes may be exactly what another investor needs.

That is why expectations must be built not just around upside, but around variability.

- Large-cap offers lower return potential, but greater steadiness.
- Flexi-cap provides a more balanced path between growth and comfort.
- Mid-cap raises return expectations, but also raises volatility.
- Small-cap offers the highest wealth creation potential, but demands the highest tolerance for uncertainty.

This is not simply a performance ranking. It is a behavioural map.

The Real Risk is a Mismatch in Expectations

A great deal of disappointment in mutual fund investing does not come from poor products. It comes from poor expectation setting.

An investor who chooses small-caps but expects large-cap like comfort will almost certainly feel disillusioned. Another who invests only in large-caps but expects spectacular wealth creation may also end up dissatisfied. The issue, in both cases, is not the category. It is the mismatch between what the category is designed to offer and what the investor imagined it would deliver.

That is why rolling return analysis is so valuable. It strips away

the glamour of short term performance and replaces it with a more grounded understanding of historical behaviour. And that is exactly what investors need. Not excitement. Not exaggerated promises. Just a clearer sense of what the investment is likely to feel like over time.

So, What Should an Investor Expect?

The answer depends less on market fashion and more on investor temperament. An investor seeking a relatively smoother experience should expect large-cap funds to deliver moderate but more stable long term outcomes.

An investor looking for a sensible blend of growth and flexibility should see flexi-cap funds as a balanced allocation route. An investor willing to take on more fluctuation in search of stronger compounding can reasonably look toward mid-cap funds.

And an investor with a long horizon, emotional discipline and genuine tolerance for volatility may find small-cap funds rewarding, provided expectations remain realistic. The common thread is simple, each category has its own character. Success lies not in chasing the best looking number, but in selecting the return profile one can live with through a full market cycle.

The Final Word

Mutual fund investing becomes wiser when investors stop asking, 'Which category gave the highest return?' and start asking, 'Which category am I truly prepared to hold?'

That is the real lesson from the rolling return data.

Large-caps remind us that steadiness has value. Flexi-caps show that balance is often underrated. Mid-caps prove that higher growth comes with a wider emotional range. Small-caps demonstrate that great opportunity and great discomfort often travel together.

In the end, investing is not just about maximising returns. It is about choosing a path you can stay on. And in mutual funds, the ability to stay invested is often what separates a good outcome from a great one.

PMS and AIFs: Finding the Right Habitat in India's Expanding Investment Ecosystem

Think of the financial market as a vast ecosystem. Just as forests, rivers and grasslands sustain different forms of life, the investment universe hosts a variety of opportunities, each suited to different kinds of investors. Some thrive in the familiar terrain of mutual funds and fixed deposits, while others gradually move towards more specialised habitats that offer different possibilities for growth.

The Alternative Ecosystem - In India, Portfolio Management Services (PMS) and Alternative Investment Funds (AIFs) have increasingly come to represent these specialised corners of the investment ecosystem. Over the past decade, they have emerged as important platforms for investors seeking a more curated approach to wealth creation.

Let us consider the example of Arjun, a second-generation entrepreneur in his early forties. For quite some time, the pattern of his investment was quite routine: bank deposits, mutual fund investments in equities and direct stocks. These options played an important role during the initial stages of building wealth and helped him participate in financial markets in a structured manner. As his wealth grew and his financial goals became more nuanced, however, he began to explore additional avenues that could complement his existing investments and offer a different style of portfolio management.

Arjun's case is an extension of the financial landscape of India as a whole. As financial literacy and wealth creation grow, many

investors gradually expand their horizons and explore a wider range of investment avenues that provide different structures, strategies and degrees of customisation. PMS and AIFs often enter the conversation at this stage of an investor's financial journey, alongside more familiar investment options.

Decoding the Nuances of PMS - PMS can be defined as an orchid garden that is specially maintained and tended to. Instead of a pooled investment structure, investors hold individual securities under their personal account, which a professional manager operates in accordance with a predefined strategy. PMS is more likely to provide clarity to investors like Arjun as the portfolio can be tailored according to individual needs, whether it is long-term capital appreciation or a more concentrated approach to quality businesses.

Simplifying the Concept of AIFs - AIFs, meanwhile, resemble a different part of the ecosystem altogether, perhaps more like a fertile valley where new and unconventional opportunities emerge. AIFs provide access to investment themes that are often outside the scope of conventional mutual funds. These may include venture capital, private equity, private credit, infrastructure investments or specialised trading strategies.

Assessing the Ongoing Rise in Interest - The growing interest in PMS and AIFs reflects the maturity of the Indian financial ecosystem. With the passage of time, regulatory control has become more stringent, investment practices more structured and fund managers more specialised. Together, these factors have led to the exponential growth of the alternative investment space. However, as in any ecosystem, the need for balance is essential. PMS and AIFs were not meant to be alternatives to traditional investment products. Mutual funds, equities and debt have always been and will continue to be the mainstay for most investors. PMS and AIFs are meant for investors who have a higher investible surplus.

Arjun eventually allocated a portion of his portfolio to both a PMS strategy and an AIF focused on emerging businesses. For him, it was not a choice of pursuing novelty but rather of broadening the scope of potential returns while depending upon professional expertise. The rest of his portfolio remained rooted in diversified equity funds and debt instruments. This is where he follows an important lesson, the focus should not be on exploring all the opportunities that are available in the ecosystem, it is about getting the right mix of them.

Conclusion

The emergence of PMS and AIFs is a result of the evolutionary growth of the Indian investment landscape. As the economy grows and the population becomes financially savvy, people are slowly learning how to navigate the various habitats of the financial ecosystem. For those who are keen to understand them and their role in the overall scheme of things, specialised investments like PMS and AIFs are a good way of tapping into the exciting Indian growth story.

Reason for recommendation

Value funds tend to come into their own in volatile markets because they usually hold fundamentally sound businesses available at reasonable valuations, giving investors a margin of safety when sentiment turns shaky. At the current juncture, this makes the category particularly relevant, as investors are looking for downside resilience without giving up long-term upside. HSBC Value Fund stands out well on performance. Over 1 year, the fund delivered 11.31 per cent versus the category average of 8.82 per cent, an outperformance of 2.49 percentage points. Over 2 years, it returned 9.07 per cent against 5.84 per cent; over 3 years, 21.69 per cent against 16.19 per cent; over 4 years, 17.19 per cent against 12.26 per cent; over 5 years, 19.36 per cent against 14.23 per cent; over 7 years, 17.31 per cent against 13.55 per cent; and over 10 years, 16.31 per cent against 13.14 per cent. This shows consistent alpha generation across market cycles rather than just a short-term burst. The portfolio is tilted towards sectors where value opportunities are meaningful. Financials form the largest allocation at 30.51 per cent, followed by Energy at 10.02 per cent, Metals and Mining at 8.63 per cent, Technology at 6.87 per cent, and Consumer Staples at 6.42 per cent. This mix gives the fund a balance of cyclical recovery, earnings visibility, and defensive support. Its risk-return profile is also

Top Holdings

COMPANY NAME	% TO NET ASSETS
State Bank of India	3.91
NTPC Ltd.	3.58
Karur Vysya Bank Ltd.	3.42
Reliance Industries Ltd.	3.38
HDFC Bank Ltd.	3.33
Shriram Finance Ltd	2.93

Here's How To Review Your Portfolio

Hemant Rustagi

Chief Executive Officer, Wiseinvest Pvt Ltd.

Portfolio review is an important activity in your investment process, and doing it the right way can contribute significantly to achieving your investment goals over varied time horizons. That's why you must have clarity in how to go about monitoring and reviewing your portfolio through your defined time horizon.

While selection of suitable funds ensures a great start to your investment journey, monitoring the progress of the portfolio keeps your investment process on track, which helps you avoid any disappointments in future. However, considering the risks and uncertainties associated with market-linked products, you must be prepared to face challenges from time to time.

Remember, reviewing the portfolio is an on-going process, and the key is to avoid either tweaking the portfolio in a hurry or remaining invested for years in the hope of an improved performance from funds performing poorly for a prolonged period. Also, avoid looking at the NAVs of funds every day as it can make handling volatility in the market quite stressful.

Considering that reviewing the performance is an on-going exercise, you need to put performance in perspective and understand the reasons for non-performance. As an investor, you must know how to differentiate a fund manager's poor performance from the stock market's poor performance. Remember, in a falling market, a fund manager can't be expected to give positive short-term returns. In fact, if the fall in NAV of the fund is lesser than the peer group, it demonstrates the fund manager's ability to protect your investments during turbulent markets.

Besides, reviewing fund performance in a haphazard manner can compel you to make some irrational investment decisions that could have a significant negative impact on your financial future. Therefore, you must follow the right process to do so.

Here are some guidelines you may consider while reviewing the performance of your portfolio -

- Your focus should be on how the portfolio is performing

from the viewpoint of your personal goals. If you are uncomfortable with the level of volatility that may have occurred while achieving that performance, you must have a close look to ascertain if your asset allocation requires any realignment.

- It's a proven fact that different segments of the market, i.e. large-cap, mid-cap and small-cap, perform differently at different times. As the tide shifts in favour of a particular segment, the performance of funds focusing on that segment improves dramatically. Therefore, making changes in the portfolio every now and then based on short-term performance of a particular segment can backfire in the long-term. The key is to focus on your allocation to different market segments as that helps in earning returns commensurate to your risk profile.
- Another important aspect is to compare the performance of the funds with their benchmarks as well as with the peer group average over different time periods. If a fund is not keeping pace with its peer group for, say, 4-6 quarters, it makes sense to consider exiting from it and move the money to another fund that deserves a look from long-term point of view. By doing so, you can enhance your chances of improving returns over time.
- As is evident, you must hold a fund long enough to evaluate its performance. Avoid making the mistake of either holding onto funds for too long or exiting in a hurry. Remember, a wrong decision can either expose you to the risk of missing out on good rallies or getting out too early, thus missing out on potential gains.
- You must do a thorough analysis before making a decision to sell. Many investors err on the side of selling funds without giving them time to show what they can do. That's why proper selection of funds becomes an important activity. If you select well at the start, you can avoid these situations occurring frequently.

International Mutual Funds: When the Rupee Falls, Your Returns Rise

Most investors track markets. Very few track currency. What if your returns had a hidden boost you never tracked? Beyond stocks and sectors, currency movements can quietly enhance your wealth. Here's how international mutual funds make that possible

Ever noticed how one part of your portfolio quietly performs when everything else feels uncertain? No strong rally. No big trigger. Yet, there it is, holding steady or even inching higher. It feels almost counterintuitive, especially when domestic markets are struggling to find direction. For many investors, that “something” is not a stock or a fund manager’s call. It is the currency.

When you step beyond Indian markets and invest globally, you are not just buying into businesses across the world. You are also stepping into a different currency zone, most often linked to the U.S. dollar. And over time, that shift can make a surprising difference. Here is where it gets interesting. While markets move in cycles, currencies often follow longer, structural trends. For Indian investors, this has historically meant one thing: a gradual weakening of the rupee.

And when that happens, your global investments can get an additional push when converted back into rupees. This is the part many investors miss. International mutual funds are not just about diversification. They carry a built-in currency dynamic that can influence returns in ways domestic investments cannot. Before you think of global investing as simply adding another geography to your portfolio, it is worth

asking a deeper question. Are you only investing in markets, or are you also investing in currencies without realising it?

The Hidden Currency Effect

Let’s simplify how currency impacts your investment. When you invest in an international mutual fund, your money is converted into a foreign currency, usually the U.S. dollar. The value of your investment then depends on two factors: how the underlying assets perform and how the exchange rate moves. Imagine you invest ₹1 lakh when the dollar is at ₹75. Your investment becomes roughly 1,333 dollars. Now assume that over time, the value of those investments in dollar terms remains unchanged. However, the exchange rate shifts to ₹85 per dollar.

When you convert your investment back into rupees, its value increases to about ₹1.13 lakh. You earned a return without any change in the underlying assets. Now flip the scenario. If the rupee strengthens, your returns could reduce even if global markets perform well. This dual impact makes currency an important variable in global investing. For long-term investors, this effect compounds. Small annual currency movements, when combined over years, can significantly influence the final corpus. Ignoring this factor means missing a key driver of returns in international funds.

Why the Rupee Tends to Depreciate

The Indian rupee has steadily depreciated over the years. Even over the past decade, it has moved from below 65 per U.S. dollar in 2018 to touching an all-time low of around 95 in 2026. This long-term trend highlights the structural weakening of the currency, which has quietly enhanced returns for investors with exposure to global assets. Before understanding the long-term benefits of currency movement, it is important to address a basic question: why does the rupee tend to weaken over time?

USD INR Chart (Source: Trading Economics)

One of the most structural reasons behind the rupee's long-term depreciation is India's trade deficit. The country consistently imports more than it exports, with crude oil being the single largest contributor. Since oil is priced in U.S. dollars, India must continuously buy dollars to meet its energy requirements. This creates a steady demand for the dollar in global markets. When demand for a currency rises relative to supply, its value strengthens, which in turn puts downward pressure on the rupee.

Inflation is another critical factor. India has historically experienced higher inflation compared to developed economies like the United States. Higher inflation erodes the purchasing power of the domestic currency. In simple terms, if prices in India rise faster than in the U.S., the rupee tends to lose value relative to the dollar to maintain purchasing power parity.

CPI Inflation (Source: Trading Economics)

Capital flows also play a significant role. Global investors often move money across markets based on risk perception, interest

rates, and growth outlook. During periods of uncertainty, funds tend to flow out of emerging markets like India into safer assets such as U.S. treasuries. This outflow increases demand for dollars and weakens the rupee. So far in 2026, foreign institutional investors (FIIs) have pulled out around ₹1.9 lakh crore from Indian markets. As seen in the table, they have remained net sellers in 8 of the last 10 years.

FII DII Activity (₹ Cr.)		
Year	FII	DII
2025	-3,06,419	7,88,184
2024	-3,02,435	5,26,545
2023	-16,511	1,84,650
2022	-2,78,430	2,76,699
2021	-92,280	94,575
2020	65,246	-35,663
2019	39,881	42,257
2018	-73,212	1,09,662
2017	-44,109	90,738
2016	-10,582	35,363

That said, currency movements are not linear. The rupee can strengthen during periods of strong capital inflows or favourable macro conditions. However, over extended cycles, these structural factors have generally resulted in a gradual weakening trend.

When Currency Works Like a Return Booster

Now, let's combine market returns and currency movement to see the bigger picture. Suppose your international mutual fund delivers an 8 per cent annual return in dollar terms. At the same time, the rupee depreciates by 3 per cent annually against the dollar. Your effective return in rupee terms is not just 8 per cent. It becomes closer to 11 per cent. This additional return is not the result of better stock selection or higher risk. It comes purely from currency movement. Over long periods, this can create a meaningful difference in wealth creation.

Scenario	What Happens	Impact on Investor
Market rises + Rupee depreciates	Both market and currency gains align	Returns get a strong boost
Market falls + Rupee depreciates sharply	Currency gain offsets market loss	Returns can still be positive
Market falls + Rupee depreciates	Currency gain is limited	Returns remain negative
Market falls + Rupee appreciates	Both factors work against you	Losses can deepen further

Consider a 15 to 20-year investment horizon. Even a small annual currency depreciation can significantly boost the final corpus due to compounding. This is one reason why global investing often appears more rewarding when viewed from an Indian investor's perspective. The return is not coming from a single engine. It is powered by both market performance and currency movement. However, it is equally important to remember that this benefit works best over longer timeframes. Short-term currency fluctuations can be unpredictable and may not always support returns.

The Tax Angle

Taxation remains an important consideration when investing in international mutual funds, and recent changes have made it slightly more nuanced. Unlike domestic equity funds, most international mutual funds in India do not qualify as equity-oriented schemes. As per the latest rules, gains on international mutual funds are treated based on the holding period. If held for less than two years, gains are classified as short-term and taxed as per the investor's income tax slab.

If held for more than two years, gains are treated as long-term and taxed at 12.5 per cent, without indexation benefits. This marks a shift from earlier regimes where indexation benefits were available, making long-term investing more tax-efficient. The removal of indexation has reduced that advantage, placing greater emphasis on pre-tax returns. At first glance, this may seem less favourable compared to domestic equity funds, which enjoy concessional tax rates.

However, investors should look at post-tax returns in totality. The combination of global market performance and currency depreciation can still deliver competitive outcomes over long periods. Understanding the tax framework helps set realistic expectations and enables better planning, especially when aligning international investments with long-term financial goals.

Diversification Beyond Borders

Another key advantage of international mutual funds is the diversification they offer. Indian equity markets, despite their depth, remain concentrated in a few dominant sectors such as financials, energy, and IT services. These sectors have delivered strong growth over the years, but they represent only a slice of the global economic landscape. International markets open the door to a far broader opportunity set. Investors gain access to industries that are either underrepresented or entirely absent in India.

This includes global technology innovators, semiconductor leaders, multinational consumer brands, and advanced healthcare companies driving cutting-edge research and development. Such exposure allows investors to participate in themes that are shaping the future of the global economy. Diversifying geographically also reduces reliance on a single market cycle. There have been multiple instances where Indian markets have moved sideways or faced short-term headwinds, while global markets, particularly in developed economies, have delivered strong returns.

In such scenarios, international funds can help stabilise overall portfolio performance and reduce volatility. When combined with the potential benefit of rupee depreciation, the case becomes even stronger. Even moderate global returns can translate into attractive outcomes in rupee terms. This blend of global diversification and currency advantage makes international mutual funds an essential component of a well-balanced, forward-looking investment portfolio.

Not Always in Your Favour

It is important to approach international investing with balanced expectations, especially when currency plays a role in returns. While rupee depreciation has historically acted as a tailwind, currency movements are not linear or predictable in the short-term. There are phases when the rupee strengthens against the U.S. dollar, driven by strong capital inflows, improving macro fundamentals, or favourable global conditions. During such periods, the currency effect can work in reverse.

Even if global markets deliver healthy returns, a strengthening rupee can partially offset those gains when converted back into rupee terms. For example, a 10 per cent return in dollar terms may translate into a lower return in rupees if the currency appreciates meaningfully during the same period. This highlights a key challenge. Timing currency movements is extremely difficult. Exchange rates are influenced by multiple variables, including interest rates, inflation, geopolitical developments, and global liquidity conditions.

Even seasoned economists struggle to consistently predict short-term trends. The practical takeaway is to maintain a long-term perspective. Currency should not be viewed as a tactical bet, but as a structural element of global investing. Over extended periods, these fluctuations tend to even out, and for Indian investors, the broader trend has often worked in their favour.

How Much Should You Allocate

Once you understand the role of international funds, the next step is deciding the right allocation. How much of your portfolio should be exposed to global markets? A commonly recommended range is 10 to 20 per cent of your equity allocation. This level provides meaningful diversification while ensuring that your portfolio is not overly dependent on external markets. It allows investors to benefit from global opportunities without diluting their core domestic exposure.

Allocation, however, should not be uniform for everyone. Younger investors with a longer investment horizon and higher risk tolerance may consider leaning towards the higher end of this range. On the other hand, conservative investors or those nearing key financial goals may prefer a more measured exposure. The objective is not to replace Indian equities, but to complement them. International funds should act as a balancing component, adding resilience and broadening the opportunity set.

Equally important is aligning this allocation with your financial goals. Whether it is retirement planning or funding education, global exposure can enhance long-term outcomes. Regular portfolio reviews ensure that allocations remain relevant as markets and personal circumstances evolve.

Choosing the Right International Fund

The universe of international mutual funds has expanded

rapidly, offering investors a wide range of choices across geographies, sectors, and strategies. Today, investors can access region-specific funds focused on markets, or thematic funds targeting sectors such as technology and healthcare. For beginners, index-based funds that track global benchmarks are often a sensible starting point. They provide broad market exposure at relatively lower costs and minimise dependence on fund manager decisions. As investors gain experience, they may explore actively managed funds or allocate to specific regions based on their outlook on global markets.

Fund selection, however, should go beyond themes and past returns. Key factors such as expense ratio, underlying index, portfolio composition, and consistency of performance deserve careful attention. Chasing recent winners can often lead to suboptimal outcomes. A disciplined, goal-oriented approach works best. Choosing funds that align with your investment horizon and risk profile can significantly enhance long-term returns and portfolio stability. We are sharing a list of international mutual funds, categorised into segments such as U.S.-focused, Europe-focused, Asia/Emerging Markets, and diversified global funds. These are not investment recommendations and are shared for educational purposes only.

The Final Takeaway

International mutual funds offer far more than just access to global markets. They combine two powerful drivers, diversification and currency advantage, creating a unique return profile that domestic investments alone cannot offer. While rupee depreciation is often viewed as a macroeconomic concern, for global investors it can quietly enhance returns and act as a hedge against domestic uncertainties. The key lies in clarity of purpose. International funds should not be seen as tactical bets on currency or short-term global trends. Instead, they should be integrated thoughtfully into a long-term asset allocation strategy.

Discipline in allocation, patience through market cycles, and a focus on long-term goals remain critical. As financial markets become increasingly interconnected, limiting investments to a single geography may mean missing out on broader opportunities. The world today offers access to innovation, growth, and resilience across borders. The real question, then, is not whether you should invest globally, but whether your portfolio is prepared to participate in opportunities beyond your home market. What are your thoughts? Will you look at international investing as part of your portfolio?
